Fire in the business district of South Bend destroyed nine retail establishments causing a loss estimated at $1,200,000. While the downtown fire was burning a blaze destroyed the Standard Oil company office building in the southeast section of the city with a loss of $300,000. John Devleschower, captain of a fire company, was killed when, blinded by smoke, he fell from a building. Two other firemen were injured.

Condemnation proceedings, which Indiana hitherto has not found necessary in its purchase for the projected 2,000-acre state park in the dunes east of Gary, may be called upon as a result of exorbitant prices being asked by owners of small tracts. Thus far the state purchasing committee headed by Everett L. Gardner of Monticello, has about half of the land desired for the park, and plans are for construction work to begin this spring.

Garnet R. Fleming, manager of the D. L. Conrey Furniture company in Shelbyville for the last year and connected with that firm for 25 years, has resigned, effective March 1, to become the manager of the Cron company at Piqua, Ohio. Mr. Fleming has been president of the Indiana Association of Elks Lodges, was a district deputy for the central Indiana section of the lodge and was exalted ruler of the Shelbyville lodge. He also was prominent in the Masonic lodge.

Gifts totaling $1,650,000 were announced by George A. Ball, Frank C. Ball, and Dr. L. L. Ball of the Ball Brothers company of Muncie, manufacturers of fruit jars. They include $1,000,000 for a general hospital and nurses' home in Muncie to be known as the Ball Memorial hospital; $500,000 to the James Whitcomb Riley Memorial hospital at Indianapolis, contingent upon an additional $1,000,000 by June 30, 1926, and $100,000 for a girls' dormitory at Indiana State Normal school of Muncie.

Thousands of youthful voices will be raised in song and hundreds of young musicians will compete during the third annual state music contest for Indiana high schools, to be held in Indianapolis May 8, last day of "national music week." Last year more than 3,000 boys and girls in 42 musical organizations, representing 16 cities, participated. This year the Chamber of Commerce, sponsor of the contest, expects more than 5,000 voices. J. I. Holcomb, chairman of the fine arts committee of the chamber, says the entry list will be closed April 1. Prizes of $750 will be given. First place awards are $100 and second place prizes $50.

Cities and counties are more readily recognizing that a community's problems of poverty and misfortune can best be solved by the trained social worker, according to Dr. U. G. Weatherly, director of the Indiana university courses in social work. They realize that old methods, based entirely on sympathy and philanthropy, do not obviate the bad conditions. More Indiana communities each year are seeking the professionally trained workers. Under the university's system of educating social workers, the students complete their training at Indianapolis, where they have more opportunity to come in contact with the conditions which will confront them after they leave school.

Clark Milliken, age one hundred and one, is dead at his home near Sheridan, Hamilton county. He was a native of North Carolina, a Quaker who opposed slavery, and escaped from the Confederate army and came to Indiana more than 60 years ago.

Rev. Zachary T. Sweeney of Columbus, noted lyceum lecturer and Christian minister and United States consul general in Constantinople from 1889 to 1898, died in the Methodist hospital in Columbus, following an illness of several days. He was seventy-six years old.

Lesson for February 21

JESUS RAISES LAZARUS FROM THE DEAD

LESSON TEXT—John 11:1-57.

GOLDEN TEXT—"I am the resurrection and the life: he that believeth on Me, though he were dead, yet shall he live."—John 11:25.

PRIMARY TOPIC—Lazarus Raised from the Dead.

JUNIOR TOPIC—Lazarus Raised from the Dead.

INTERMEDIATE AND SENIOR TOPIC—Christ's Power Over Death.

YOUNG PEOPLE AND ADULT TOPIC—Christ the Resurrection and the Life.

I. Lazarus Sick (vv. 1, 2).

Even those who are in close fellowship with the Lord are not immune from sickness. Sorrow comes even to the homes where Jesus is loved.

II. Martha and Mary Send for Jesus (v. 3).

Those who receive Jesus into their home when all are well and happy can be sure of His love and sympathy when sickness and death overtake them.

III. Jesus' Strange Delay (vv. 4-6).

Martha and Mary sent for Jesus because He loved Lazarus. They said, "He whom Thou lovest is sick." Now, Jesus "abode in the same place" because He loved Lazarus and his sisters (v. 5). This mystery is to be explained by the fact that Jesus was divine and knew all things.

IV. Jesus Goes to the Bethany Home (vv. 7-17).

At length He turned His face toward the sorrowing home. Jesus knew and the disciples apparently knew that going into Judea meant His own death. His mission to this home was twofold: to restore to these sisters their brother and to strengthen the faith of the disciples (vv. 11-15). The word "sleep" reveals Jesus' estimate of death.

V. Jesus Teaching Martha (vv. 18-27).

As He is nearing the village Martha meets Him with a complaint because of His delay. He ignores her complaint and teaches her concerning the resurrection and life.

1. "Thy Brother Shall Rise Again" (v. 23).

Most blessed words are these to fall upon the ears of a sorrowing sister for a dead brother.

2. "I Am the Resurrection and the Life" (vv. 25, 26).

He is the source of life and all are joined to Him by a living faith. The believer cannot die. The great truth indeed to be apprehended is that here we are united to the living Christ, the source of life, and that this is a pledge of bodily resurrection and eternal reunion.

VI. Jesus Weeping With Mary (vv. 28-35).

Mary fell at Jesus' feet, uttering the same words used by Martha, but no doubt with a different tone of voice and attitude. Her words were responded to with His tears—"Jesus wept." He is now a sympathizing Savior; He can be touched with the feelings of our infirmities (Heb. 4:15).

VII. Jesus Raising Lazarus (vv. 38-44).

His great sympathy now expresses itself in supernatural power. Sympathy would be valueless without this connection with divine power. In this stupendous miracle we see an illustration of the quickening into life of those dead in trespasses and sin.

Observe: 1. He Was Dead (v. 39).

This is a type of the sinner dead in trespasses and sins, even morally corrupt (Eph. 2:1).

2. The Stone Must Be Rolled Away (v. 39).

This is the part that the human must play.

3. Martha's Protest of Unbelief (v. 39).

She insisted that Lazarus had already undergone putrefaction.

4. Christ's Intimacy and Fellowship With the Father (v. 42).

In His prayer He declared that it was not for His sake that He prayed, but for those who stood by.

5. Christ's Manner of Dealing With Lazarus (v. 43).

It was by a call. He is calling men and women today by His Spirit, Word and providence.

6. The Response of Lazarus (v. 44).

This shows that the call of Jesus is with authority and power. With the call goes the power to heal and obey.

7. The Command to the People (v. (44).

They were to remove the grave clothes and set him free.

VIII. The Effect of This Miracle (vv. 45-57).

1. Some Believed (v. 45).
2. His Enemies Sought to Put Him to Death (vv. 46-53).
3. His Withdrawal (v. 54).

The Soul of Religion

Always remember that sincerity is the very soul of religion. A single intention to please God and to approve ourselves to Him must animate and govern all that we do.—Philip Doddridge.

Holiness

Holiness is religion shining. It is faith gone to work. It is charity colored into actions, and devotion breathing benedictions on human suffering.—Bishop Huntington.

POINTS ON KEEPING WELL

DR. FREDERICK R. GREEN
Editor of "HEALTH".

(©, 1926, Western Newspaper Union.)

CATCHING SMALLPOX THROUGH THE NOSE

SMALLPOX is the original and typical germ disease. Up to the discovery of vaccination by Jenner about one hundred years ago, it was the commonest and the most terrible of all the contagious diseases. A proverb of those days said "From death and smallpox, no one escapes." It was so common that at one time, when a notorious criminal escaped from an English prison and his description was printed and distributed all over England, one of the important signs by which he could be recognized was that he had never had smallpox, and so had no pits on his face. Smallpox was so common then that anyone who was not pock-marked was conspicuous. Today, you can stand on a crowded street corner for hours and watch thousands of persons pass before seeing one pock-marked face.

Jenner heard a young dairymaid say that she couldn't have smallpox because she had already gotten cowpox from one of the cows she had milked. This was a general belief among the common people in the dairy region of England. Jenner proved by experiments with human beings that inoculation with cowpox virus would protect against smallpox. He had to make his experiments on human beings, because at that time there was no animal known that was susceptible to smallpox. Jenner's work was done nearly fifty years before Pasteur's time, and no one at that day knew how to find and study disease germs. In fact, there wasn't a microscope in the world in Jenner's day that would have made them visible. So Jenner could only develop a method for protecting individuals against this disease without attempting in any way to find out what caused it.

Strangely enough, in all our progress in discovering the cause and preventing the spread of tuberculosis, yellow fever, cholera, malaria, diphtheria, wound infections and other serious diseases, our knowledge today regarding smallpox is little greater than it was in Jenner's time. We know it is some kind of a microscopic germ, but what it is, where or how it exists outside the body or how it gets into the body, no one knows.

In a report of the medical research council of England appears the result of some work just completed by Dr. M. H. Gordon, which at last increases our knowledge. Gordon finds that rabbits and some breeds of monkeys are susceptible to smallpox and that the disease probably begins with symptoms very much like a bad "cold in the head." This means that smallpox is probably one of the great group of respiratory diseases and that infection occurs not through the skin as has always been supposed, but through the discharges from the throat and nose of the smallpox patient.

OUR DEADLIEST WEAPON

AT THE close of the year, an estimate made by the automobile industries shows that there are now in use in the United States 20,200,000 automobiles. These vehicles were responsible, in 1924, for 15,528 deaths in the registration area. As this area now includes 88.5 per cent of the total population, it is estimated by the United States public health report that the total number of deaths from automobile accidents for 1924 would be 17,565. This is a death rate of 15.7 per 100,000, a steady increase for the last five years. In 1923 it was 14.9; in 1922 it was 12.5; in 1921 it was 11.5, and in 1920 only 10.4. So the death rate from automobiles has increased over 50 per cent in five years.

As the federal bureau of the census assigns the cause of death from collisions in all cases to the heavier vehicles, these figures do not include deaths due to collisions between automobiles and electric cars or railroads. So this total of 17,585 should be increased by the addition of all deaths due to railroad accidents involving automobiles.

The Interstate Commerce commission reports that in 1924 there were 1,688 deaths due to collisions between automobiles and railroad trains. This added to the total number of deaths due directly to automobiles would indicate that the total death list for automobile accidents for 1924 was 19,283.

Nearly twenty thousand lives lost through automobiles in one year.

The distribution of these accidents by states shows curious differences. Any comparison of the exact number of deaths is, of course, unfair, as the population in different states varies widely. The only fair basis is that in which all our mortality statistics are figured, namely, the rate per 100,000 of population.

On that basis the rate for automobile deaths in California is 32 per 100,000, over twice the country's average rate of 15.7, while the rate in North Dakota is only 6.6, only one-fifth that of California. Naturally the rate for cities is higher than for the country.

In time we may learn to live with the automobile, as we have learned to live with the railroad train, but the present price is a truly expensive one.

Tanlac builds strong bodies

"A severe attack left me weak and wasted. I lost 20 lbs. After seven bottles of Tanlac I gained back my weight, strength and looks. Am now using Tanlac to build up against coming winter." Mrs. W. H. Packman, So. Milwaukee, Wis.

There's nothing like Tanlac to purify the blood, put the stomach and liver in working order and build up a run-down body.

Millions of men and women have been benefited by this great tonic and builder that is compounded after the famous Tanlac formula from roots, barks and herbs.

If you are nervous, suffer from indigestion; have rheumatism, torpid liver, buy a bottle of Tanlac at your drug store today. See how you start to improve right from the first. Take Tanlac Vegetable Pills for constipation.

Garfield Tea

Was Your Grandmother's Remedy

For every stomach and intestinal ill. This good old-fashioned herb home remedy for constipation, stomach ills and other derangements of the system so prevalent these days is in even greater favor as a family medicine than in your grandmother's day.

IF MOTHERS ONLY KNEW

During these days how many children are complaining of Headache, Feverishness, Stomach Troubles and Irregular Bowels and take cold easily. If mothers only knew what Mother Gray's Sweet Powders would do for their children no family would ever be without them for use when needed. These powders are so easy and pleasant to take and so effective in their action that mothers who once use them always tell others about them. Used by mothers for over 30 years. Sold by druggists everywhere. Trial Package sent FREE. Address Mother Gray Co., Le Roy, N. Y.

Chains for French Women

In Paris a curious caprice of feminine fashion is illustrated in the jewelers' windows. The long pearl necklace, formerly much favored by smart women, has developed into a huge chain which, in everything but weight, resembles the sort of thing worn by slaves in ancient times. Bracelets have assumed an equally massive appearance. The clasps of these strange ornaments are knobs of ornamental stone roughly carved in quaint figures and looking as if they might have been dug from some long-forgotten haunt of prehistoric man.

It takes a genius to compel himself to like the disagreeable tasks he has to perform.

Clothes do not make the man, yet a man may owe a great deal to his tailor.

Colds Fever Grippe
Go Stop them today

Stop them quickly—all their dangers and discomforts. End the fever and headache. Force the poisons out. Hills break colds in 24 hours. They tone the whole system. The prompt, reliable results have led millions to employ them. Don't rely on lesser helps, don't delay.

Russel R. Reidenour

ATTORNEY

Auburn, Ind.

Stanley Means was at Fort Wayne, yesterday.

Howard Shilling and wife spent Sunday with relatives at Hicksville

Notary work of all kinds attended to promptly at News office.

Miss Dorothy Ginther was a Sunday guest in the H. J. Renner home.

For Sale or Rent: Business rooms with residence in connection. Call on Chas. Fry. 47tf.

Martin Tustison, who is staying at Garrett, is suffering with three carbunkles, and is not feeling very good.

Mrs. Dio Dermott and daughter of Coldwater, Michigan, were guests of relatives here a few days last week.

The Coburn's Corners Ladies Aid society will meet Friday with Mrs. Reed Place. Pot luck dinner will be served.

John Beard, wife an daughter, Murial and Miss Anna Deubener of Waterloo, were Sunday guests in the Wm. Randall home.

Mrs. Howard Williams, Miss Sling, Miss Miner and Miss Cour, all of Fort Wayne, spent Saturday and Sunday with W. E Henley and family.

Harold Waltz was operated on last Friday at South Bend, for appendicitis Mr. and Mrs. Waltz visited him Sunday and report him to be getting along fine

The Home Bureau club will meet with Mrs. Ross Watt Friday afternoon. Besides the regular program there will be a play by the Concord ladies. All members are urged to be present. A special effort will be made to have an interesting meeting.

Lester Coburn was in South Bend, Saturday, where he attended a reunion of the 109th Trench Mortar Battery A. E. F. This is the outfit with which he was attached during the World War. He reports a good attendance and a fine time. The 109th expect to make this an annual affair.

Carl Bassett and wife of Fort Wayne are the parents of a daughter, born last Thursday.

Read the Sale Notices in this issue. There is only four and you may want to attend one of them.

Cedarville residents are soon to have lights. Work is now being done to connect them on the Leo line.

The Lutheran Missionary Society will meet at the home of Mrs. Esther Bowman this afternoon (Thursday) at 2 o'clock.

Sunday Herald-Examiner on sale at News office. Phone your order and we will save you one. The real paper with many features.

Frank Leighty left Tuesday for his home at Wymore, Nebraska He will return by March 1st., to resume his duties as Game Warden

The Home Missionary society of the Methodist church, will meet this (Thursday) afternoon with Miss Phyllis Rickett at 2 o'clock

Burl Rude, now living in the Tom White home, has purchased the property formerly owned by James Harter, and will move to town as soon as some repairs can be made

Mr David Sauers, a brother of Mrs Adam Shilling, died last week at his home in Allen county, and was buried Tuesday of this week. Mr. and Mrs. Adam Shilling and daughter and Howard Shilling and wife attended the funeral.

Nine members of the R. H. C. met Thursday afternoon with Mrs. Matie Gee Mrs. Ruth Buas and baby and Mrs. Sylvia Gee and children were guests. The hostess served lunch The club will meet in two weeks with Mrs. Harry Waltz.

Ray Herrick had a little accident Saturday evening as he was coming home from Fort Wayne. Just as he was coming down the hill north of Leo, his lights went out and before he could stop he collided with the cement abutments. The damages were slight.

WHY

Yawn Is Contagious Explained by Physicians

People have a natural tendency to yawn, to cleanse waste products from the blood with a gulp of oxygen, strongest when tired, but always present. The sight of another indulging in the luxury of a yawn is all that is needed to stimulate this unconscious craving.

It is not only the power of suggestion, that turns this latent desire into an irresistible impulse, but even more the element of mimicry. Man, like the monkey and all other animals, has a tendency to imitate the actions of another, especially if such actions appeal to any subconscious desire on his part.

Such is the explanation of the trait offered in the physiological laboratory of the Middlesex College of Medicine and Surgery by Dr. Francesco Maurielle, assistant to the head of the department, and Dr. A. Edward Balboni, professor of neurology at Middlesex, after Dr. Walter B. Cannon, of Harvard, had admitted his inability to answer the question.

Why Cross Is Regarded as Symbol of a Kiss

Whatever your sex, at some time or other you have probably written a letter and put some "crosses" in it—for kisses. But have you ever wondered why a cross should be used as the written symbol of a kiss?

This story takes us back to the times when few could read, and still fewer could write. In that respect the nobility were no better off than those of a lower station in life, but deeds transferring property, wills and other documents had to be signed somehow. So those who could not write their names "made their mark," and this, in an age when religious symbolism was very much in evidence, almost invariably took the form of a cross. From motives of reverence the shape used was not that of the cross of Calvary, but the St. Andrew's cross, which resembles the letter "X."

Having duly made their mark, the signatories of a document then kissed it—partly as a pledge of good faith and partly as an act of reverence. And so a cross put on paper became associated with a kiss.—London Answers.

How Tuberculosis Acts

The public health service says that races differ very much in their resistance to tuberculosis. The colored population of the United States has a death rate from tuberculosis approximately three times as great as that of the white. The American Indian, likewise, is extremely susceptible to both pulmonary and other forms of tuberculosis. The disease often runs an extremely rapid course to a fatal termination. The Jew, on the other hand, among whose race tuberculosis has been present for many centuries, resists the disease well, and though frequently of frail physique, often makes a recovery under adverse conditions. The Irish, on the other hand, do not resist tuberculosis well, while the Italians do.

How to Waterproof Clubs

A new process for treating wooden golf clubs makes them waterproof and extremely hard, says Popular Science Monthly. Heads of seasoned persimmon wood are subjected to a vacuum that extracts every particle of air and moisture from the wood, which then is impregnated with the newly discovered chemical. The club heads then are dried and hardened.

Clubs treated in this manner are said to have greater driving power than other wooden clubs and not to shrink or expand with varying atmospheric conditions. Inserted face plates are not required, since the chemically treated wood is itself harder than fibre, bone or ivory.

How Ghost Stories Start

"Haunted houses," of which almost every community has had one or more at some time or another, may be simply old untenanted houses or houses with loose water piping, according to a theory advanced by water company engineers. Noises are frequently transmitted from one house to another when water is drawn. Vibrations are set up in the pipe and if the pipe is not securely fastened it and connecting pipes will hammer against the joist or wall. The noise is most perceptible when the water is turned off quickly and the "watch hammer," as it is called, makes considerable racket.—Utility Bulletin.

Why "Fizz" Is Valuable

The fizz in the pop bottle has gone up in the world, says Popular Science Monthly, for surgeons are considering seriously its use as an anesthetic in the operating room. At a clinic recently held in Philadelphia Dr. Benn Morgan of Chicago demonstrated its use before the Eastern Society of Anesthetists. Carbon dioxide, Doctor Morgan explained, is the nonpoisonous anesthetic used by nature itself. If you are hurt badly in an accident your breathing is lessened, and an excess quantity of carbon dioxide in your blood makes you fall asleep.

How Dew Is Formed

Dew is moisture condensed from the atmosphere, including the air contained in soil, and gathered in small drops on the surface of plants and other bodies, which radiate heat well, but conduct it badly. Frost is formed on nights when the dew point is below freezing point.

Public Sale!

I will sell at Public Sale at my residence in ST. JOE, the second house south of the LUTHERAN CHURCH

SATURDAY, FEBRUARY 20th.

Beginning at 1:00 o'clock the following:

Household Furniture

William Brown, Prop.

Rhodenbaugh & McNamara, Auct. Elgin Curie, Clerk.

Results of the Seal Campaign

Mrs. Margaret Collett, secretary of the DeKalb County Anti-Tuberculosis society, has completed a report of the recent sale of seals in DeKalb county showing that a total of $1,926 48 was collected this year. The 1925 sales show a gain of $606 23 over last year.

The seals this year were sold entirely through the mail and this plan has proven a great success. This method will be continued from year to year.

Auburn contributed the largest amount, $680 80. Following were other amounts:

Garrett, $219 28; Butler, $174.66; Waterloo, $109.94; Ashley, $ 2.94; St. Joe, $27.82; Spencerville, $11.85; Wilmington township, $76.41; Fairfield township, $72.93; Franklin township, $60.73; Smithfield township, $53 75; Jackson township, $48 10; Butler township, $45.81; Richland township' $45.55; Keyser township, $40.05; Union township, $37.09; Grant township; $29 05; Concord township, $23.81; Spencer township, $21 71; Stafford township, $20 13; Troy township, $16 90 and Newville township, $15.35

The society greatly appreciates the interest of the community taken in the work and wishes to thank all those who have contributed to the same. There are still quite a number of seals not accounted for and the society hopes to increase the above total.

NEWS OF THE TOWN

Mrs. Pauline Jordan of Garrett, spent a few days here this week with her parents.

Rev. Otis Jones and family and Rev. Nathaniel Vice, were Monday evening supper guests in the H. M. Widney home.

BABY CHICKS

Single Comb Rhode Island Reds, Barred and White Rocks from carefully culled free range flocks $14.00 per hundred by Parcel Post, $12.00 per hundred at the Hatchery, Assorted $10.00 per hundred, custom hatching 5c per chick.

PUBLIC SALE!

The undersigned will sell at Public Sale at his residence, located 1 mile north and ¾ mile west of St. Joe and 1½ mile east of Concord

SATURDAY, FEBRUARY 27th.

Commencing at 10:00 o'clock the following property, to-wit:

HORSES: Black team 12-yr. old weighing about 3,000 pounds; Gray mare 14-yr. old weighing about 1,300, good worker.

CATTLE: Jersey cow 9 yr. old to freshen August 4; Black cow 3 yr. old freshen August 3; Brindle heifer 2-yr. old to freshen March 17; Red cow giving milk and not bred; Brindle cow, not bred and giving milk.

HOGS: 2 Chester White Brood Sows, 2 to farrow by sale and the other March 16.

15 head Sheep bred to lamb in March and April. About 50 head Brown Leghorn Chickens.

MACHINERY: 2 wagons, wagon box, tight bottom hay rack with side boards to haul grain, McCormick binder 7-ft. cut, McCormick mower 6-ft. cut, Key Stone hay loader, side delivery rake, hay tedder, Hoosier drill, Lime drill 8-ft and good as new, Rock Island corn planter, J. I. Case sulky plow, Oliver breaking plow, riding cultivator, 5-shovel cultivator, 2 spring tooth harrows lever drag, single shovel plow, Turkey Foot roller, set team harness, ½ set harness, and disc

Hay in mow. Corn in crib. Oats in bin. Some household goods.

TERMS: 9 months time, 8% from date after maturity. 5% Discount for Cash. Warm lunch served on the grounds.

A. HANER

RHODENBAUGH & McNAMARA, Auct.
CLYDE RECTENWALL, Clerk.

For WHOLESALE SUGAR BUYERS

It costs money to carry sugar accounts "on the books." Someone must pay the interest charges. And there is more or less expense attached to bookkeeping and collecting.

Delivery is another item of "overhead" that usually figures in the price of sugar.

The Isbell Wholesale Stores are operated on the "Cash and Carry" Plan. That's why prices are always lower than where sugar is sold on credit.

Don't you remember how much more you had to pay for sugar before we introduced the Isbell "Cash and Carry" Plan?

So why not make this saving?

You will find all the wanted kinds of sugar at the Isbell Wholesale Stores, and whether you buy a single case, a 100-lb. bag or a carload you may be sure of lowest possible prices, always.

There are now 57 Isbell Wholesale Stores in 25 cities, and most of them located in the vicinity of city markets for the special convenience of grocers.

SPENCERVILLE

Mrs. Beatrice Miller, who is in the hospital at Garrett, is slowly improving.

Fred High and wife of Detroit, spent the weekend in the Charles High home.

Charlie Chapman, Harvey Beam and William Allen, Sr., are numbered among the sick.

Mrs. S. D. Steffey and daughter, Miss Lillian, are both on the sick list.

Ray Baker and wife entertained a number of guests Sunday in honor of Vol Hay.

Mrs. Clarence Follis, who spent the past week in Detroit, returned home Saturday.

Mrs. Lizzie Wearley and daughter, Mrs. LeAnna Steward, will entertain the C. C. Club Friday afternoon.

Mrs. Lucy Beams and Mrs. Rebecca Beams entertained the Ladies Aid of the Lutheran church yesterday afternoon.

Its now McCall Needlework and Decorative Arts and its a fine magazine for the suggestions of home furnishings. Now on sale at News office.

The attendance at the Methodist Sunday School on Feb. 7 was 107, collection $7.00. Lutheran Sunday School, attendance 64; collection, $3 10.

Richard Culbertson of Auburn, took dinner Sunday in the R. U. Bowser home. Roy Bowser of St. Joe spent Sunday afternoon in the same home.

The Home Missionary society of the Methodist church held their annual mite box opening at the church Sunday morning. The offering was $27.06.

Mr. and Mrs. Jacob Baltz had as Sunday dinner guests their son, Frank Baltz and family. Afternoon and evening guests were Paul Adams and wife of Fort Wayne.

Members of the high school faculty and students tendered their basket ball team a reception recently, in honor of the splendid record they have made this season at the home of James Reed and wife.

Mrs. William Werner very pleasantly entertained the Home Economic club last week. Following the pot luck dinner Mrs. Cleo Reed gave a Jello demonstration which was greatly enjoyed. There was a good attendance.

Robert Bachmann and wife and Mrs. Isabel Baltzli and daughter and Mrs. Alfred Bachmann, all of Fort Wayne, called Saturday evening at the John Bachmann home. Mrs. Alfred Bachmann remained to assist in the care of Mr. Bachmann who has been ill for the past two weeks.

Why Fish Do Without Sleep

The bureau of fisheries says that fish do not sleep. They rest and remain quiet in nooks of streams, but never close their eyes.

VALVE-IN-HEAD Buick MOTOR CARS

G-10-10-NP

At Present Prices
THE BETTER BUICK
is
the Greatest Automobile Value
in the world

No other car offers so much of quality and luxury, such fine performance, such durability and such distinction, at any comparable cost.

Comparison will convince you. You will find Better Buick 4-door and 2-door Sedans, on the finer Buick chassis, with Fisher-built bodies, offered at prices asked elsewhere for coaches.

You will find *as standard equipment*, the finest braking system ever designed for a motor car—Buick *mechanical* 4-wheel brakes.

You will find easier starting, easier clutch action, easier steering and the most economical engine on earth. The most dependable, as well—the famous Buick Valve-in-Head.

You will find Controllable Beam Headlights, exclusive with Buick, which make night driving a pleasure. And the "Sealed Chassis" and "Triple Sealed Engine," two more exclusive Buick features, which protect performance and reduce operating costs.

You will find a finer motor car for a very moderate amount of money when you examine the Better Buick. We urge you to do it today. Your next car should be a Buick!

AUBURN, IND.

SPORTING GOSSIP

Spencerville high school basket ball team is surely not afraid of the number thirteen. It started its season on Friday the thirteenth, and since then has won nine out of thirteen games. The thirteenth game was played on the thirteenth and ended in a victory for th team—incidentally the first four games were won. Only two more games are on the schedule between now and the tournament at Auburn, the Anburn second team at Auburn next Saturday night, and the Woodburn team at Spencerville on the twenty-fourth.

Well, the thirteenth game was played against Waterloo last Saturday. The game was closely played, though it did not evoke the great enthusiasm that other games have. The score was tied more than once, Spencerville trailed only once, but the rest of the time kept a tied score or a little bit ahead. At the close of the first half the score was 11 to 10 with Spencerville on the heavy end. The second half ended with the score 20 to 15 with Spencerville ahead. Half of Spencerville's points were made on foul throws, one third of Waterloo's on fouls. Each team made five field goals.

Public Sale!

Having decided to quit farming, I will sell at Public Sale at my residence in Spencerville, Ind., at the J. M. Beams farm residence,

Wed. February 24

Commencing at 10 o'clock:

3 HORSES:—Black Mare, 13 yr. old, weight 1250; Black Mare, 12-yr. old, weight 1600; Bay Gelding, 13 yr. old, weight 1600.

2 COWS:—Roan Durham, 7-yr. old, to freshen in April; Jersey Cow 7-yr. old, to freshen in July.

12 HOGS:—1 Big Type Poland Brood Sow to farrow in April; 11 Fall Pigs—30 to 50 pounds.

FARM MACHINERY:—Turnbull Wagon, with tight bottom rack; McCormick Binder; McCormick Mower; Gale Check-Row Corn Planter; Ohio Riding Cultivator; Lever Harrow; John Deere Walking Plow; Double Shovel Plow; 3 Collars; Set Double Work Harness; 1 Harness for third horse; Set Leather Fly Nets; Double Trees; Single Trees; Scoop Shovels Forks, and many other small articles.

600 Bushels Corn; 80 Bushels of Oats; Shredded Fodder.

TERMS—9 months.

Warm lunch on ground.

MICKIE SAYS—

To Make Trip to Chicago Office

J. C. Hull will make a trip to Chicago next Wednesday, in response to a call from the bonding company which he is representing. A special meeting for the agents is being held and they will receive information that will enthuse them all to better service. J. C has entered a contest for the company and his fine showing in getting new business perhaps is due to this call to headquarters.

Club Work News

From Concord Boys and Girls

Attention--Seed Corn

From all reports from several sources it is believed the seed corn situation is as bad if not worse this year than it has been in the past few years.

Corn not gathered before October 28 will germinate only 40 to 60 per cent and lots of it is weak and diseased.

Now is the time to test. We have a lot who want to test. The community tester at the school house will test 2,200 ears at once. Send your samples in and the boys will test it for 1 cent per ear. Come in and test it yourself and it won't cost you anything only your time. Now is the time.

If you need any good seed corn we can locate you most any thing you want. Seed corn is scarce so the first served gets the best.

Lets improve the yield in this locality by improving the stand by testing and using better seed.

Call No. 88.

Farmers Bred Sow Sale

We will sell at public auction 6 miles northwest of Paulding, 3 miles southwest of Cecil, 5 miles east of Antwerp, 7 miles north of Briceton, on

Tuesday, Feb. 23,

beginning at 1:00 o'clock p. m,

40 head of Hampshire Gilts. These gilts are bred for April and May farrow. 15 head are bred to Big Type Poland China Boars. The balance of the ofiering are bred to Hampshire Boars. This battery of boars are the best we could find. Large smooth, prolific fellows. We will sell two of these Boars in sale.

We are not breeders of pedigreed hogs. We raise hogs for the market. These Gilts are pure breds, but we give no papers for them, and like their Dams if given the chance will produce their own papers when you sell their gets.

You will not find this offering loaded with fat. It is in good breeding condition. We have grown, fed and bred these hogs with the same care as if we were keeping them in our own herd.

So come to this sale and take your choice home with you, and we believe you will be satisfied with your buy.

You are welcome to come and spend the afternoon whether you buy or not. Sale will be held in warm building, regardless of weather.

GUARANTEE

We guarantee every sow to be in pig. If found not so, return to us, and we will re-breed her and return her to you safe in pig, or refund settlement.

TERMS OF SALE

Cash preferable, or a bankable note for three, six, or nine months, bearing a legal rate of interest. No stock to be removed before settlement.

CHAPTER VII—Continued

—12—

It was Lascelles' turn to laugh, for his word stung Steele like the lash of a whip. But unlike the Frenchman's, the face of the other reflected his thoughts solely in the swift hardening of the mouth and the glitter in the gray eyes.

"Then of course, colonel," he countered savagely, "you cannot go. You French are such careful chaperons."

Lascelles openly scowled his disappointment as St. Onge retorted:

"Oh, naturally I shall stay; so I shall wish you bon voyage and all success, Monsieur Steele." And he shook his guest's hand. "We shall expect you again before you start south."

"Goodby, sir, and my deepest thanks for your hospitality. You will send a canoe, anyway, in two weeks to meet Michel at the Feather lakes?"

"Yes, au revoir!"

Ignoring Lascelles, he stepped into the canoe, launched by Michel and David, then as if it were an afterthought, Steele called banteringly to the inspector: "And to you, sir, a pleasant stay at Walling River, and safe run to Albany, for I very much wish to meet you again."

With the lunge of three narrow blades, the canoe leaped upstream leaving two men on the shore—one with frank approval in the tired eyes which watched the broad back of Brent Steele as he followed the vicious stroke of the Iroquois in the bow; the other nervously stroking a black mustache which adorned features on which perplexity and hate were written large.

* * * * * * *

Three days later, when the canoe of Steele was far on its way to the Feather lakes in its search for the trail of the Windigo, Denise St. Onge sat in her living-room with the man who controlled her father's future with the Rectilon Freres. For two days, all that subterfuge and the plea of illness could avail to avoid being alone with him, she had made use of, but now that he was returning to Fort Albany, he would not be denied his hour.

"Mademoiselle," he was saying, "when a man travels as far as I have to visit his fiancee, is he not entitled to a somewhat warmer welcome—to a more frequent opportunity to enjoy her society than you have accorded me?"

"Monsieur Lascelles," replied the girl coldly, "I wrote you accepting the offer which you have made me many times in the last three years. In consideration that you kept my father in the employ of the company in charge of a first-class post, I agreed to marry you within a year. It was a contract of business, monsieur. The day of your arrival here you agreed to my terms."

Lascelles fidgeted under the calm, impersonal gaze of the girl's black eyes.

"It is true, mademoiselle," and he twisted his mustache in his chagrin, "but I am deeply in love with you, and it is most unusual, is it not, to be ignored—avoided? I have some rights."

"I have not promised to love you, monsieur, if that is what you mean," was her quiet answer.

"No," and the blood suddenly flushed his face, "but I have reason to believe that you have an interest in this American, Steele. Why has he stayed here two weeks? Why, except for the fact that Mademoiselle St. Onge is pretty and charming, eh?"

Denise St. Onge smiled wearily.

"Possibly, monsieur. It is not unlikely you will think so anyway. You are the type of man who always insists on the woman motive."

"Woman motive? Why not? In this case it is clear," he burst out, walking the floor, mad with jealousy, and helpless before the indifference of the woman whom he had traveled three hundred miles to see.

"Pardon me, but as a matter of fact, you are wrong. Monsieur Steele is an ethnologist and is deeply interested in this mystery which you make light of."

Lascelles snapped his fingers viciously. "You believe in this Windigo myth, too? Your father is imbecilic about it."

The dark face of the girl flamed with anger at the reference to her father. "You laugh at what has ruined this post, monsieur, because it suited your plan. Is it not so?"

He turned to her with a snarl. "Evidently you are as superstitious as the ignorant Indians."

"Possibly I am. I don't know what I believe," she said calmly. "I only know what I heard that terrible night—what the Indians believe—and where is the fur canoe? Where are your furs? Where are your men? Is that of no consequence?"

It was to the credit of the infatuated Lascelles, as he bade the woman who had promised to marry him, goodby, that what was his of right he did not demand when he entered his canoe at the foot of the carry.

"Au revoir!" he said, taking her hand and kissing it. "You will write by the Christmas mail?" And the man who had journeyed up the Albany and the Walling, exulting in his bargain with a desperate girl, returned, beaten, mystified and consumed with jealousy.

CHAPTER VIII

Driven by three iron-hard backs and pairs of arms, Steele's canoe nosed a side ripple on the smoldering surface of Big Feather lake, which opened out before them in mile upon mile of sleeping water.

A group of women, children and dogs awaited the canoe's landing at the fishing camp of the Ojibways.

"Bo'-jo', bo'-jo'!" And Michel, kicking his way through the snarling huskies, shook hands with the surprised women, curious to learn what had brought the headman at Walling River to the Feather lakes in September.

"So the Windigo cries no longer at night on the burnt ridge?" he began, in Ojibway.

To his surprise the women stared at him in amazement, which changed to fear at the thought of the possibility of the presence of a demon so dreaded, in the Feather Lake country.

"No Windigo has cried here," replied an old woman, excitedly. "We would not stay! Our men are away in the muskegs, hunting caribou. They would not leave us here to be eaten by a Windigo."

Michel looked at Steele. "She say no Windigo bin here. Why did Pierre lie to us?"

"Queer for him to bring that tale to Walling River," muttered Steele.

"Pierre, who left you to trade at Ogoke last spring," continued Michel. "Has he camped here this summer?"

"No, we have not seen his family since the moon of flowers. They went to Ogoke."

Michel nodded, as if satisfied.

"Well, Michel, it looks as if we were on a wild goose chase."

The small eyes of the Iroquois glittered. "I t'ink we ketch dis goose jes de same."

"What d'you mean?"

"Wal, we know Pierre is a liar and he cum to Wallin' Riviere to mak' talk wid Tete-Boule. Now Pierre an' Tete-Boule try mak' some trouble ovair dees

Steele Struggled to Keep at the Heels of His Man.

Windigo. We'n I go back Tete-Boule weel tell me w'at Pierre say to heem." And the lean face of Michel took on a fierceness which caused the squaws instinctively to draw back.

What motive Pierre could have had in the tale of the Windigo at Feather lake, other than the needless agitation of the post Indians, was an enigma to Steele, but it was evident that Michel had an idea of its nature which he would divulge only when ready to talk.

"Michel," Steele asked, as the three men sat by their fire smoking after-supper pipes, "what's in the back of your head regarding this Pierre? You think he knew of the dead Indian at Stooping river when he came to the post, yet made no mention of that but told this wild tale of the Feather lake Windigo scare. Why should he lie about the one and conceal the other?"

The Iroquois slowly exhaled a column of smoke before replying.

"Dees Pierre I know for long time. He alway mak' trouble. When I see heem, he tell me somet'ing or he nevaire mak' more trouble on dees riviere," was the unresponsive answer.

"But what is he driving at? Why shouldn't he report the killing of that Indian at Stooping river as well as the Windigo scare that existed at Feather lake?"

Michel shook his head. "Eet ees queer t'ing, for sure," was the laconic reply.

Steele's eyes sought David's impassive face, but the Ojibway seemed deep in a problem of his own. It was irritating to a degree, but Steele knew his Indians—knew that Michel would talk in his own time and not before—that questioning would only drive him into a deeper silence.

"How many Indians trap the Portage Lake country?" Steele asked.

"Good manee hunt dat valley, good manee ovaire on de Little Current."

"We'll start tomorrow. It looks as if Monsieur Windigo was not going to pay this country—"

From the ridges of the mainland the moaning bellow of a cow moose slowly rose and died on the frosty night.

"Dat cow holler ver' strange," said David, as the three sat with tilted heads, ears straining.

Again out across the still lake drifted the mating call.

"Huh!" muttered Michel, "dat Injun poor caller."

Rigid, the three listened to the voice in the night, and in the mind of each slowly took shape the same surmise.

Then from the burnt ridge of the opposite shore lifted a low wail, gathering in volume until it climaxed in a scream.

"De Windigo!" With a leap, Michel had his rifle and was sliding the canoe into the water.

"Come on," cried Steele, "we'll separate and stalk that ridge from three directions."

They were half-way to the shore when the voice burst out anew in sobs and maudlin mewing, and Steele pitied the terrified women and children of the fishing camp, facing the horror alone, with their men far in the caribou barrens.

Landing on the beach under the ridge, Steele left the others with the warning: "No wild firing, now! Remember the whistle! We'll meet here on this sand beach."

The canoe vanished in the shadows and the American started his stalk. Twice he stopped for a space to study the caterwauling on the brow beyond him. Blood-chilling, unearthly, the voice filled the calm night.

The danger of the hunters firing into each other was great, and he climbed cautiously, taking the cover of the down timber, ears alert for the staccato whistle of the yellow legs, their signal of identification.

At last, with skin and clothes torn by the brittle twigs of the dead spruce, he reached the flat shoulder of the ridge. For some time the night had brooded, unmarred by the voice. Cocking his rifle he crept forward, searching the area of skeleton trees, ghostly in the pale light of the stars, for some movement. He was puzzled at the failure of the Indians, whose pace should have been faster than his, to reach the brow of the ridge. If they had, perhaps even now, the roving eye of Michel already marked him out—was sighting down a rifle barrel, his crooked finger on the trigger, waiting to be sure of his target before he fired. At the thought Steele flattened out and whistled.

But the hoo-hoo of a gray owl, patroling the green timber of the lake shore below, was his only answer.

Minutes, which seemed interminable to the watcher, passed. Where were the Indians?

Then to his surprise an unspeakable mewing defiled the night. In vain he strove to locate the position of the beast. But, as the mewing merged into the shrieks of a woman, the flash and report, flash and report, of two rifles cut it short off. Something thrashed through the timber out in front.

He swung his rifle in the direction of the sound, his eyes straining for a target. The starlight gave him a fleeting glimpse of a dark object crossing the bole of a skeleton spruce, and he fired twice. Then leaping down, he plunged through the tangle of dead spruce in the wake of David and Michel who had stalked their quarry, but evidently in the uncertain light, missed.

Down over the treacherous going of the slope of the ridge the sure-footed Indians hunted the thing their rifle shots had stampeded. Tripping, falling, to rise and stumble on through the network of trunks and limbs, Steele struggled to keep at the heels of his men. But gradually the noise of the pursuit drew away from the white man, no match for those who, from childhood, had traveled the forests at night.

In an hour two grimy, battered half-breeds, bleeding from contact with the timber, appeared on the beach.

"Well, it fooled us again," vouchsafed Steele, ruefully, "did you see it?"

"We nevaire see heem," muttered the disheartened Michel, squatting on his heels at the water's edge to bathe his face, and his shoulders from which the woolen shirt hung in ribbons.

"You did not see him when you fired?" demanded the surprised Steele. "I got a look at him for a second."

David grinned at his chief. "Dat was me you shoot at. De bullet seeng close, too. Good shot!"

"What, you were out in front of me! Why didn't you whistle?" protested the chagrined Steele. "I didn't know, until you fired, that you two had got up there. From the sound, what did he travel like, Michel?"

The half-breed lifted a grave face. "He travel lak' a seek bear; but no bear holler lak' a lynx."

(TO BE CONTINUED.)

To Excavate Roman Stadium

It is planned to excavate the Circus Maximus at Rome which was the greatest stadium ever built. It seated 360,000 people and would make some of the modern stadiums such as the Yale Bowl and the Yankee stadium look like county fair amphitheaters. The Circus Maximus was three times as large as the famous Colosseum at Rome. It was first built in the time of the early Roman kings, was used during the republic and had its best days during the empire. Here Julius Caesar entertained the Roman populace on a magnificent scale. Indeed the scale was so large that he had to sell one of his private villas to pay for the games and chariot races. In this great stadium the gladiators fought in mortal combat with wild beasts imported from Africa and Asia.

GOOD ADVICE ON CARING FOR CAR

Preventive for Every Ill That Cold Weather Brings to Driver.

There is a preventive for every ill that cold weather brings to automobiles. Unfortunately, many owners do not realize that by taking ordinary care of their cars, they can save much trouble and expense.

One of the greatest inconveniences is found in battery failure due to cold. This is caused by failure to prepare the battery for the extra load that zero weather is bound to put on it. The battery should be kept fully charged and filled with water. After filling, the engine should be run for an hour or so before being left out in the cold to insure the acid and water becoming thoroughly mixed. Otherwise there is a chance of the fresh water remaining on top and freezing. A weekly inspection of the battery in winter is not too much. The charging rate should be increased slightly to compensate for the extra load.

Lightens Battery Work.

The work of the battery can be lightened by using any of the winter gasoline, marketed by most oil companies. These fuels start easier than the ordinary gas used in the summer. The oil should be changed more frequently than in warm weather, to prevent crankcase dilution. This evil is caused by the sweating of a cold engine, which allows moisture to gather inside the cylinders and drain into the oil. Dilution is caused also by too free use of the choke, which shoots raw gasoline into the cylinders. This gasoline finds its way into the crankcase and further thins the oil. If too much water forms in the oil reservoir, it remains at the bottom of the crankcase where the pump is located, and may freeze, stalling the oiling system and resulting in serious damage to the engine.

Anti-Freeze Mixtures.

The anti-freeze mixture in the radiator should be kept at the proper proportions to prevent freezing. The solution drains away or is lost from various causes, and must be renewed at regular intervals.

The experience of the service station should be utilized by every owner in preparing his car for cold weather driving. The lubrication in the transmission should be lightened, the carburetor should be adjusted, the engine oil should be changed and possibly a lighter grade used. These few precautions will keep the car operating at its highest efficiency during cold weather. The wise motorist will attend to these things.

Cracks Permit Current Leakage in Spark Plug

The most common trouble with spark plugs is caused by cracked insulators, which then allow of current leakage, causing a poor spark or none at all at the gap. Often one cannot tell by examining the outside whether the insulator is cracked, because the trouble may be in the hidden portion. The only safe way is either to dismantle the plug if it is not of the one-piece type, or test it by laying it on the cylinder head with the plug cable attached. Then by cranking the engine, the gap may be watched for a good spark. Cracks, except hidden ones, may at once be noticed if the engine is operating in a dark area; sparks will be seen on the outside of the insulator.

Cranked Car With Wheel Helps in an Emergency

The real test of motoring qualifications comes with the unexpected situations. Recently, observes a writer in the Scientific American, an owner driver stalled his engine on a busy New York street crossing. When he kicked his starting motor pedal the engine cranking mechanism failed to operate, due to a run-down storage battery. The frantic search that followed failed to disclose a hand starting crank in the tool box or under the seat. In disgust the traffic officer helped to push the crippled machine to the curb.

Just then a young man stepped out of the crowd and offered his assistance.

"If your engine is all right," he suggested, "I think I can start it for you."

"Go ahead if you can," urged the owner dubiously.

Picking up a jack the young man raised one rear wheel from the ground and threw high gear into engagement. Then he turned the jacked-up wheel in a forward direction, being careful to pull up and lean away from the car. In an instant the motor was humming, and, after throwing the gears into neutral position and removing the jack, the friend in need smiled his appreciation of the owner's copious thanks and went his way.

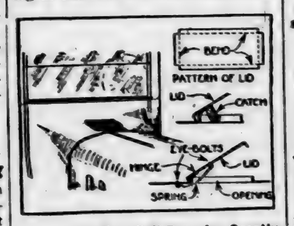
It was a simple plan, as most successful mechanical adaptations are when demonstrated.

Early last summer a New England motorist found himself on the road several miles away from any garage with a flat front tire and no jack. Noting a rail fence at the side of the road, he selected a straight, sound piece of timber. Next he built a solid pile of stones two and one half feet high in the road in front of his car. Then he laid the rail on the pile so that it made an angle of about 15 degrees with the road, and ran his car up against the incline with sufficient force to raise the damaged tire clear of the road and permit an exchange of rims. Having his wheels on solid ground, it was a simple matter to back off from the improvised jack when the repair was completed.

Gain Access to Ignition Coils by a Ventilator

Some inclosed cars require the removal of the coil-box and the detaching of the wiring in order to remove the coils from the box to replace ignition points or for truing these up.

To avoid the work necessary to remove the coils, a rectangular opening in the cowl over the coil-box will



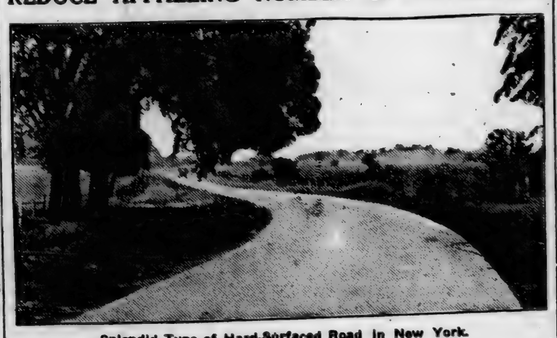
Access to the Coil-Box Is Greatly Facilitated by an Opening Provided in the Cowl Above the Box.

permit of instantly taking out the coils from above. This opening can be closed with a hinged cover and makes an especially desirable feature for ventilating this compartment of the car in warm weather.

The illustration shows the details of the hinged cover, which is also useful for giving access to coils and ventilation on converted Ford speedsters using a low cowl extending rearward.

—G. A. Luers.

REDUCE APPALLING NUMBER OF FATALITIES



Splendid Type of Hard-Surfaced Road in New York.

More careful driving and the elimination of railroad crossings will lessen the appalling number of fatalities due to motor accidents, is the opinion of B. H. Walt, formerly of the New York state highways department and an authority on highway construction. He also believes it is now necessary in the designing of roads to build them wider, do away with sharp curves, high crowns, and use a material which will give a nonskid surface.

"Skidding," continued Mr. Walt, "is the cause of many of the serious accidents, and while some of these accidents are caused primarily by careless driving, the innocent traveler, who gets hit, can be protected to a great extent if the pavement has a low crown and a nonskid surface.

"Highway engineers, in general, now realize the advantages of such a type of pavement and are now building quite extensively of reinforced concrete. This gives them a gritty surface on which the automobile tires obtain great resistance in skidding, and this material, not being affected by water lying on its surface, can be built with a lower crown than most of the other types of road construction.

"By the use of concrete the necessity for oiling and covering is eliminated, which does away with many accidents as well as damage and depreciation on cars.

"When we consider," continued Mr. Walt, "that over 11,000 lives were lost last year, enough to populate a small city, it is apparent that drastic measures are immediately necessary and I am sure that the public in the future will be protected by the highway engineers of the country, as far as possible, by the building of wider and better-class pavements.

"At the same time it will be necessary for the public to interest itself in providing money for the elimination of railroad crossings, for the building of sidewalks in suburban communities so that school children will not have to walk on the roadways, and in taking measures to curb the careless driving."

Fire Spared Painting

A curious incident of a fire that swept through a Lutheran church at Portland, Maine, was the fact that after the firemen had withdrawn their hose, leaving the interior a havoc of charred timbers and water-soaked walls, it was found that an oil painting of the "Last Supper" above the altar remained unscathed.

From School Teacher to Great Eminence

A young man who was brought up on a farm, qualified for district school teacher, then managed to save enough money to put him thru medical college.

Later, he moved to Buffalo, N. Y., and today the name of this man, Dr. R. V. Pierce, is known throughout the world. His Golden Medical Discovery is the best known blood medicine and tonic. More than fifty million bottles have been sold. If your dealer does not sell the Discovery, in liquid or tablets, you can obtain a pkg. of the tablets by sending 65c to the Dr. Pierce Clinic, in Buffalo, N. Y. Also write for free medical advice.

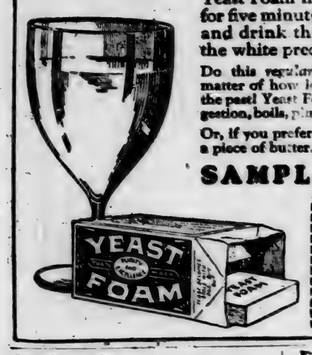
Conquer Constipation *with* Yeast Foam!



For constipation try this: drop a cake of Yeast Foam in a glass of water; let stand for five minutes; stir with spoon; let settle and drink the milky water, including the white precipitate.

Do this regularly and your constipation—no matter of how long standing—will be a thing of the past! Yeast Foam is equally effective for indigestion, boils, pimples, lack of weight and strength.

Or, if you prefer, eat the yeast with a cracker or a piece of butter.

SAMPLE CAKE FREE

NORTHWESTERN YEAST CO.
1750 North Ashland Ave., Chicago, Ill.

Send me FREE and POSTPAID your book "Dry Yeast as an Aid to Health", also a Sample of Yeast Foam without obligation.

Modern Crusaders to Visit Old Strongholds

After 900 years, England is to have another crusade to the Holy land. With full pomp and ceremony, 100 knights and ladies of the Order of St. John of Jerusalem will start on a pilgrimage to some of the ancient strongholds of the order famous in history. The countess of Cromer, the dowager countess of Airlie and Countess Haig will be among the woman pilgrims, while among the men will be Viscount Galway, Lord Lamington and Maj. Gen. Sir Percival Wilkinson. A special steamship chartered by the order will carry the pilgrims through the Mediterranean. They will embark from Venice in March. An admiralty order of 1700 directs all ships of the navy to salute the flag of St. John, and as this order has never been canceled it is presumed that the salute will be received during the cruise. The Order of St. John is the oldest and only survivor of the many orders founded during the crusades.

DEMAND "BAYER" ASPIRIN

Aspirin Marked With "Bayer Cross" Has Been Proved Safe by Millions.

Warning! Unless you see the name "Bayer" on package or on tablets you are not getting the genuine Bayer Aspirin proved safe by millions and prescribed by physicians for 25 years.

Say "Bayer" when you buy Aspirin. Imitations may prove dangerous.—Adv.

Oil Electric Locomotive

The only oil-electric locomotive in service in the United States is being used on a railroad in New Jersey at one of the terminals.

No Hurry

"Are you the little girl who said she would be a perfect lady?"

"Yes, daddy, but it isn't time yet."

Red Cross Ball Blue is the finest product of its kind in the world. Every woman who has used it knows this statement to be true.—Advertisement.

Correct

"Do you know now rats get in here?"

"Naw."

"Yes, that's right."

Traffic accidents in Berlin increased during the second quarter of 1925 to a total of 2,816, as compared with 1,927 during the first three months.

There is more volume and greater mass in the mountain of Mauna Loa on the island of Hawaii than there is in Mt. Everest in Asia.

Don't Let That Cold Turn Into "Flu"

That cold may turn into "Flu," Grippe or, even worse, Pneumonia, unless you take care of it at once.

Rub Musterole on the congested parts and see how quickly it brings relief.

Musterole, made from pure oil of mustard, camphor, menthol and other simple ingredients, is a counter-irritant which stimulates circulation and helps break up the cold.

As effective as the messy old mustard plaster; does the work without blister.

Rub it on with your finger-tips. You will feel a warm tingle as it enters the pores, then a cooling sensation that brings welcome relief.

Diagram Showing How to Construct Simple Crystal Set That Gives Results.

The receiver about to be described can be constructed with very little expense.

The panel is a piece of half-inch wood, hard rubber or bakelite. The subbase is made of wood. The panel can be any size. We suggest seven inches by nine inches as a convenient one. The subbase is attached to the panel by means of No. 6 wood screws one inch long.

The coil is wound on a cardboard tube four inches in diameter and four inches long. Get one-quarter pound of 22 d. c. c. magnet wire.

The Winding.

Start the winding and wind on one turn. Make a loop in the wire—a loop about one inch long—then wind on another turn and make another loop the same length. Continue winding on single turns and taking out loops until ten turns have been wound. After this wind on ten turns, make a loop, wind on ten turns more, make another loop, and repeat the process. Continue until a total of 60 turns have been wound on the tube. Solder leads to the switch points long enough to reach from the left-hand switch to the "units" taps. Also solder leads to switch points of the right-hand switch to reach the "tens" taps. In rotation solder these leads to the ends of the loops, after scraping the insulation from the end of the loop.

Ready to Tune In.

Connect the aerial to the post on the left and the ground to the post on the right at the top of the panel. Set the fine wire of the detector on the crystal and turn the "tens" switch until a station is heard.

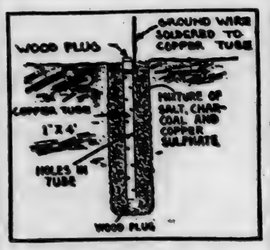
To tune in better after the station is heard turn the "units" switch. This switch gives the necessary fine tuning. The most difficult operation in using this set is to find a sensitive point on the crystal. After this point is found, it is merely necessary to vary the two switches to tune in different stations. —Cleveland News.

Have Efficient Ground and Get Satisfaction

The importance of an efficient ground connection can hardly be overestimated. If there is a resistance to the passage of the high frequency oscillations in any part of the aerial or ground circuit, you find your receiver lacks pep, oscillates badly and tunes broadly. Pep or volume, stability and selectivity are three things every fan likes to have in his set, but a large number do not realize what a strong influence a good ground connection has in obtaining results.

It is worth while doing some experimenting with ground connections and you will probably find out some very interesting facts. One of the simplest and best methods to use in testing the efficiency of various ground connections is to tune in a station as far distant as possible, then reduce the volume until you can just hear the signal faintly. Make a note of the dial setting on the rheostat controlling the volume. Now disconnect the ground and try one of the others you have arranged and compare the volume. If you cannot hear any signal, wait a minute and make sure the station has not been fading. If after a short period you still do not hear a signal, then you know that this ground is not as efficient as the first one.

In addition to comparing the volume obtained with each possible



How to Build Ground That Assures Desired Results.

ground, make a test for selectivity. It is surprising what a difference a good ground can make to the selectivity.

Try out each of the ground connections it is possible to arrange until you find one that gives better results than the others.

The most common type of ground used is a connection to a cold water pipe. This is generally O. K. if the pipe is thoroughly cleaned and a copper ground clamp used to make contact. It is generally impossible for the average man to solder a wire to a cold-water pipe, as the water must be turned off and a blow lamp used instead of a soldering iron. It is a good idea to remove the clamp every three or four months and examine the surface around the clamp to see that there is no corrosion.

If you are located where you can reach the ground within a reasonable distance from your receiver, it is possible at very small expense to install a real ground that will give maximum efficiency. Secure a length of copper pipe about one inch in diameter by four feet long and drill a number of holes in it. Fit a wooden plug into one end. For a ground wire use a length of solid insulated copper wire about 12 gauge. Clean the top of the pipe and about a foot of the ground wire, then wrap it around the top of the pipe and solder.

Dig a hole about five feet deep and one foot wide. Secure a bag of charcoal, six or seven pounds of salt and a few pounds of copper sulphate. Smash up the charcoal as small as possible, then mix charcoal, salt and copper sulphate together. Fill in the earth, packing the above mixture tightly around the pipe as you fill up the hole. This is very important. When you have filled up the hole take a hose and let water into pipe to thoroughly moisten the ground. This will give you a ground that is 100 per cent efficient.—Philadelphia Record.

Interesting Facts You Should Know About Set

A five per cent overload of filament voltage may cut the life of your tubes in half.

Operating tubes at five per cent below rated filament voltage may double the life of your tubes.

Cutting your plate voltage from 90 to 67½ saves two milliamperes of "B" battery current per tube, usually without sacrifice of volume or quality, and this step in some cases may double the life of your "B" batteries.

A "C" battery used with a two-stage audio-frequency amplifier having 90 volts plate potential, cuts its current drain from twelve to four milliamperes, a saving of two-thirds.

Not more than forty-five volts should be used on your detector tube to secure the greatest volume and the best quality of reproduction?

The use of 90 volts instead of 45 volts trebles the current consumption of your detector tube without improving results in any way.

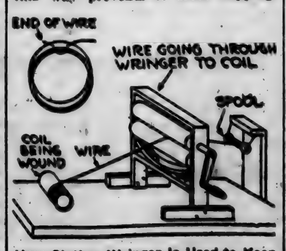
A superheterodyne drawing 50 milliamperes gives no better results than a well designed one drawing but 15 milliamperes.

If the vacuum tube does not light it may be caused by many other defects besides a burnt-out tube. The "A" battery switch or connections may be open, dirty contacts of the rheostat, socket or tube tips, or the tube may not be seated properly in the socket.

A vacuum tube regenerative set, using only one tube, will bring in signals from nearly the same distance as a set having an audio-frequency amplifier. The amplifier serves to increase the strength of signals brought in by the detector tube, for the purpose of operating a loud speaker or making the signals louder in the phones.

Wringer May Be Used in Winding Tight Coil

The method shown in the drawing does not need much explanation. In one sketch is shown how to fasten the ends of the coils by putting two small holes in the tubing. Securing the wire this way prevents it from slipping.



How Clothes Wringer Is Used to Keep Wire Taut.

The other sketch shows use of a clothes wringer to keep the wire taut. When winding coils by hand, it is usually difficult to keep the wire at just the best tension from the spool.—Radio Digest.

DR. W. B. CALDWELL AT THE AGE OF 83

Old Folks Need a Mild Laxative —Not a "Physic"

Most men and women past fifty must give to the bowels some occasional help else they suffer from constipation. One might as well refuse to aid weak eyes with glasses as to neglect a gentle aid to weak bowels.

Is your present laxative, in whatever form, promoting natural bowel "regularity"—or must you purge and "physic" every day or two to avoid sick headache, dizziness, biliousness, colds, or sour, gassy stomach?

Dr. Caldwell's Syrup Pepsin helps to establish natural, regular bowel movement even for those chronically constipated. It never gripes, sickens or upsets the system. Besides, it is absolutely harmless and pleasant to take.

Buy a large 60-cent bottle at any store that sells medicine and just see for yourself.

ST. JOE NEWS.

VOL. XL ST. JOE DeKALB COUNTY, INDIANA, THURSDAY FEB. 25, 1926 NO. 8

AMONG OUR SICK

Howard Shilling has been laid up for several days with tonsilitis. Miss Edna Jackson and Dorothea Ginther were also sick several days last week causing a loss of several days school. Edna was brought home from Butler, where she is teaching and will remain this week at home. There is quite a few people complaining of severe colds or grip.

Mrs. Chas. Koch, after having a thorough examination last week, was operated on for gall-stones and is today improving fine. The operation, disclosed two large stones and one smaller one. Because of the long standing of the trouble, the wall of the gall bladder had punctured so that a portion of the gall would get into the stomach and then cause a severe sickness of the stomach. Mrs. Koch has suffered for years with this trouble, and it is now hoped that she will soon recoved and enjoy health.

WHY NOT FILE AN EXEMPTION?

Beginning March 1st, or next Monday you can file a mortgage exemption on your property and thereby save paying taxes on $1,000. A limit of 60 days is given for this purpose and everyone ought to make claim for this exemption.

The law provides that an owner of real estate having a mortgage on his property can by filing a certified statement with the county auditor, obtain a credit not to exceed one-half the assessed valuation or more than $1,000. if the indebtedness existed prior to March I of this year.

Hundreds of real estate owners take advantage of the law and in most cases the exemption is the maximum allowed. The total amount applying on the taxes in DeKalb county payable this year is $1,388,470.

The description of the property, the name of the holder of the mortgage and its amount must be set out in the blank and the instrument must be sworn before a notary public.

The News is fully prepared to make the necessary papers out at a nominal charge of 35 cents. In order to assist in making the proper record please bring a tax receipt showing description of property. Do it now and save several dollars in taxes.

Young People Wed Go to Housekeeping

George Tustison, son of Mr. and Mrs. Frank Tustison of east of St. Joe, and Miss Lena Ernest of Jackson, Mich., but who has been staying in the F. D. Tope home here for the past six months were united in marriage at the home of Rev. S. D. Steffey, Lutheran pastor, late Saturday evening. Monday morning the young couple left for Grand Rapids, Michigan, where George has work and where he had provided a home some months ago. They have the best wishes of their many friends.

Partnership Formed

Let us introduce to the public our partner in business, Mr. Chas. Hellinger of Fremont, Indiana. We expect to be better able to give our trade real service and we expect to do our slaughtering, thus serving meats. Customers wishing ice will be cared for promptly as in past.

CALL US before you sell your Beeves, Veal, Hogs and Fowls.

St. Joe Meat Market,
HARMAN & HELLINGER, Proprietors.

It's STILL YOURS

You do not part company with your money when you place it on deposit at our bank. It is merely in a safer, more convenient form and is still at your command.

Your savings when entrusted to us are still your own, payable any time to you in cash. If you haven't an account at our Bank, won't you pleass come in and talk it over and let us show you how easy and convenient modern banking methods are? Glad to see you any time.

The St. Joe Valley Bank, A STATE BANK

REVIVAL SERVICES AT M. P. CHURCH

Next Sunday evening will conclude the two weeks' evangelistic services at the Methodist church.

Rev. N. Vice of Elkhart has been doing the preaching. The preacher uses only the plain facts and statements to prove the necessity of confessing Christ, not trying to excite the emotions of

his hearers, but rather desiring the individual to reason the thing out for hmiself. Rev. Vice has been in the service for 34 years and his past experience has taught him many things in the handling of human beings.

Already a number of accessions to the church has been made. Special services for children are held each day at the close of school, and much good is being done for the children by the local pastor, Rev. Otis Jones.

Next Sunday afternoon a general mass meting will be held at the church, the only afternoon service held during the two weeks, and the pastors are anxious for a good attendance from the citizens of St. Joe and county.

SALESMAN WANTED IMMEDIATELY

Reliable, steady, intelligent, and well recommended man, from 25 to 60 years of age, to sell farmers in this State. Knowledge of farming and farm conditions desirable. Must be willing to work six days a week. Selling experience not necessary, personal training under local manager. Big pay every week. Good territory. All year work. Permanent position. Advancement. State if now employed, when you can start and if you have a car. Address Home Office Sales Manager, Dept. CDW, Box 1632, Philadelphia, Pa. 1t3.

Contest Winners are Royally Treated

As the result of an attendance contest between class No. 4 and No. 6 of the Lutheran church class No. 4, the winners, were given a banquet by the losers, and their teacher, Mrs. Grace Dilly, in the basement of the church, Feb. 21st. At 12 o'clock were were taken to the basement where our eyes beheld a table beautifully decorated with red and white cut flowers and red and white lighted candles.

Each one was requested to hunt for their places at the table which was marked by place-cards in the form of tiny hatchets with the guest's name. The colors, red and white, being used to keep in touch with the celebration of Washington's birthday.

After all had found their respective places and were seated, Miss Bray, the toastmistress, called for the "Welcome" which was given by the class President Goebel Goodwin. Response was then given for class No. 4 by Mrs. Miser.

The dinner which was prepared by the young people was then served. It consisted of chicken, dressing, potatoes and gravy, corn, Waldorf salad, pickled eggs, bread, butter and coffee, just oodles and oodles of it, too. All fit to set before a king.

The following toasts were then given: Merritt Sechler on, "We are glad you challenged us," Lucile Curie, "Our impression of the class across the aisle," and Ralph Sechler, "The value of Christian Fellowship." They were all very good and impressive. Ice cream and cake was then served after which guests gave three rousing cheers for Class No. 6 and their most efficient teacher, who works unceasingly for the pleasure of others.

A GUEST.

Ministers of County Complete Organization

The DeKalb County Ministerial association which was the outgrowth of a temporary organization which was started recently at Garrett during the county Sunday school convention was perfected Monday at St. Mark's Lutheran church in Auburn.

At the meeting Monday the following ministers were present: Rev. M. M. Elliott, Rev. D. H. Guild, Rev. T. L. Jones, Rev. D. G. Holman of Garrett; Rev. J. N. Scholes and Rev. Otis Jones of St. Joe; Rev. J. E. Poer of Corunna; Rev. D. A. Shaw, Rev. J. B. Glick and Rev. G. H. Trinkle of Butler; Rev. C. M. Eberly and Rev. J. E. McCoy of Waterloo; Rev. S. J. Burger, Rev. C. F. Dame, Rev. P. A. Soerensen and Rev. G. F. Hubbartt of Auburn. Because of a death of a relative of the Rev. Howard M. Morgan and the illness of Rev. J. C. Boyts they were unable to be present.

Rev. Soerensen presided. Rev. Jones read the report of the committee on constitution, which, with minor changes was adopted. Provision is made in the constitution for all clergymen of the county to become members, the meetings to be held the last Monday in each month from September to June. The constitution further provides for a program committee to arrange for monthly addresses or papers.

A nomonating committee composed of Rev. Poer, Rev. Hubbartt and Rev. Shaw was appointed and the following were namad as officers. President, Rev. P. A. Soerensen of Auburn; vice president, Rev. Walter M. Elliott of Garrett; secretary-treasurer, Rev. J. B. Glick of Butler.

Rev. J. N. Scholes, D. D., who has had large experience in the application of Christianity to industrial conditions about Pittsburgh, a man who is well versed in labor conditions in the street, railroad and mining industries read a paper on "The Problems of Industry" which was freely discussed and commended by a vote of thanks.

A two course luncheon was served following the meeting by Mrs. P. A. Soerensen and a group of Lutheran ladies at the parsonage.

Makes Pumping Up Tires Unnecessary

Chicago, Ill.—F. E. Hughes, Suite 130, 2512 Monroe, this city, has perfected a new air-tight valve cap that enables auto owners to pump up their tires once and never touch them again until punctured or worn out. Leading tire manufacturers, after thorough tests, have approved Mr. Hughes' invention and banished the old theory that air escapes thru rubber. One inflation lasts the life of a tire, and tire mileage is doubled. These caps retail for $1.25 for set of five. The inventor wants agents and will send proof and samples Free. Write him today.

HOW

NATURE MAKES PROVISION FOR TRAVELS OF SAP.—How the water gets uphill in the trunks and stems of trees and plants has long been a sore puzzle to scientists. Several theories have been proposed, none of them very satisfactory. Until recently the one most commonly favored was known as the theory of "capillarity," which assumed that the water rose in a stem much as oil rises in a wick, through the natural tendency of liquids to climb up in narrow tubes and crevices. The trouble was, however, that ordinary capillary attraction could not raise water high enough or fast enough to account for all the losses through evaporation and use within the plant. Then there was another theory that took into account a supposed pumping action by the roots, or a so-called "foot pressure." This theory, however, was always very vague, and even those who claimed to understand it could not explain it very convincingly.

A comparatively recent development is a theory that seems to explain the phenomenon and at the same time to be free from the objections that have overthrown the earlier ideas. This theory is largely the outcome of experiments by a British scientist, Professor Dixon. He found that by sealing a column of water in a glass tube and using appropriate experimental means, he could make the water carry a considerable weight without breaking. Ordinarily, of course, we think of a stream of water as a thing as unstable as a rope of sand, but the trick seems to lie in getting rid of all the air; for when this was done the water column could support a strain of several hundreds of pounds per square inch.

This is exactly the condition we find in the stems of plants.

How Dust May Be Used for Making Cheap Fuel

If you pump cornstarch with air in to an inclosed tube and ignite the mixture with an electric spark it will explode. Recent government experiments have shown in dust great explosive energy going to waste. It is this that is utilized in a new fuel announced recently, according to Popular Science Monthly.

Fuel made from dust or scourings not only will make use of waste material, but will reduce a big potential fire hazard in manufacturing plants, explains W. A. Noel, an engineer of the bureau of chemistry of the Department of Agriculture. It would solve the problem of cheap fuel for factories, he adds, for it may be used in steam or gas engines.

Wood, metal, leathers, chemicals, cork, rubber, sugar, grain, cocoa and cinnamon are but a few of hundreds of products from which the inflammable dust may be obtained. Probably the most powerful of all dusts is that of aluminum, while grain dusts are available in the greatest quantities.

How Races Decay

But why this swift, continual flux? Why this incessant growth and decay, this birth, senescence and death of races? Can it be that races, like individuals, go through processes of infancy and childhood, of maturity and senility? Can it be that natural laws, such as limit the life of members of a species, limit the life of a species as well, and that tribes of plants and animals are mortal because of the very laws that brought them into being, and that their sentence of death is written in their very certificate of life? Perhaps perpetuity is not even potentially possible for any race—at least, for any race higher than the protozoa, those one-celled animals individually capable of enduring forever; perhaps there is a fixed natural period, a racial "three score years and ten," beyond which no species can normally endure; perhaps various growing diseases and weaknesses of the racial mechanism must ultimately prove fatal, just as physical defects must eventually destroy the individual.—From "The Decline of Man," by Stanton A. Coblentz.

How Wood Rots

Aided by the presence of oxygen, small plantlike growths or fungi are responsible for the rotting of wood. These organisms feed upon the starch and other materials in the cells of the timber, finally reducing it to dry powder. The plants in turn throw off billions of tiny spores or cells which are carried about by insects, the winds and in many other ways. The air is often so loaded with them that wood is liable to decay almost anywhere, if exposed, as the plant cells become attached to it and develop. In moist climates, it is practically impossible, experts say, to avoid the presence of these fungus spores and cells.—Popular Mechanics Magazine.

How Clothes Got Name

In studying the history of wearing apparel it has been ascertained that the word cap came from a hooded cape; coat from the Latin "cottis," meaning tunic; jacket from "jacquet" or coat of mail and skirt from "skyrta," meaning short. The word costume itself comes from the word custom, and pajamas from the Hindoo word "pasjama" meaning leg cloth.

WHY

Fastness of Dye Is Not Question of Color

It is a common fallacy that green, lavender, or some other color is less fast than blue or pink. Fastness depends on the chemical composition of the dye used, not on the color.

Dyestuffs are grouped into various classes according to their composition, and the dyes in some classes are more fast than those in others. Thus a green, blue, or any other fabric may have received its color from any one of a number of different dyestuffs varying widely in permanency. Without knowing just what kind of a dye was used—and it is practically impossible for the consumer to tell this—the fastness of color in two fabrics cannot be predicted. A dye that is one of the poorest of its class may have been used on one of the fabrics, while the other may have been dyed with one of the best. Green, lavender, or any one color is just as fast as another if similar dyes are used.

Why Eyeglass Lenses Call for Expert Work

Fuel control in heating operations is a very important factor in making eyeglass lenses. The temperatures that are required for the operations also are very high, which makes exactness hard to attain.

The crude glass is first melted and pressed into rough shape in an oven at a temperature of 1,800 to 1,900 degrees F. Then the glasses that have been roughly shaped in the molding ovens are placed in a glass-fired lehr at a temperature of 1,000 degrees F. Here they move about on an endless belt, which moves so slowly that no motion is perceptible.

The lenses then are ready to be ground, and the fineness of this work may be ascertained when one realizes that the maximum variation allowed is one-quarter of one-thousandth of an inch.

Why Necklaces Are Worn

We have often wondered why women wear necklaces. At last the secret is out. Beauty specialists claim that they are onto the secret. They say that aside from the decorative value of neck chains, or strung beads or pearls and all other such ornaments, they are usually worn to lend charm to the physical qualities of the feminine neck. They are not worn, in most cases, because they are ornaments. They are actually worn to make the homely neck appear beautiful and the beautiful neck appear more beautiful.

Why Moloch Was Banned

Moloch was the chief deity of the Ammonites, mentioned in I Kings 11:7, as the "abomination of the children of Ammon." The worship of Moloch, which consisted chiefly in the sacrifice of human victims, was established in Jerusalem by Solomon and abolished by Josiah. It was not abandoned, however, by the Jews until the time of the Babylonian captivity. The word "Moloch" is figuratively used to denote any pernicious influence that entails loss of life or sacrifice of principle, as the Moloch of war, the Moloch of ambition, etc.—Exchange.

Why Ripe Apples Shine

The apple has the peculiar trait of waxing its skin which makes it impervious to moisture from the outside, and also prevents the escape of juices within. This is one of the reasons why apples keep so well. The subject of the waxing of apples has not been given much study, yet it is known that it develops to the greatest extent on apples which are grown in direct sunlight and that the wax is thickest on the sunny side.

Why Sky Is Blue

The sky or air which surrounds the earth is filled with countless tiny specks of what we may call dust—particles of solid things hanging or floating in the air. These specks are of just the size and quality that they catch and absorb part of the rays of light which form our sunlight and throw off the rest of the rays, and the part which has been absorbed forms the combination of color which makes the sky so beautifully blue.

Why Hair Turns Gray

Dr. L. A. Hausman says that hair turns gray because of the failure of the little cells which form the cortex of the hair down in the base of the hair follicle and around the papilla to deposit pigment material. He asserts, therefore, that gray hair is never produced overnight.

Why Shotgun "Kicks"

A shotgun begins to kick the moment the bullet begins to leave its resting place in the gun. The reason that a person does not have to sight his target below, is because this factor is allowed in the manufacture of the gun. The gun is so made that the bullet may be aimed directly at the target.

Why Mistletoe Is Disliked

The mistletoe plant fastens itself upon the tree, penetrates its tissues and draws nourishment from it, deforming it and sapping its vitality. Yet the mistletoe is a green leafy plant; that is, it possesses the pigment chlorophyll, which gives the green color of normal vegetation.

HOW

DISTANCES MAY BE TOLD BY THE ORDINARY MAN.—If you devote your Saturdays to golfing, shooting, or taking photographs, you have, in all probability, met the problem of judging distances.

Bear in mind these few simple rules, and your difficulty will be lessened. With the naked eyes, if you have average sight, you can see the whites of people's eyes at 30 yards; at 80 yards you can just see their eyes.

When all parts of their body are distinguishable, they are 100 yards away; when the outlines of their faces are just visible, the distance is 200 yards; and when a face appears as a separate dot, you should be 400 yards away, says London Tit-Bits.

Six hundred yards away a group of people can be distinguished singly; but at a farther distance than this no detail of the human form can be determined. Yet at 1,200 yards you should be able to tell a man on horseback from a man on foot; at 2,000 yards he is simply a dot on the landscape.

The majority of people, too, are unable to determine the wind's velocity. When the smoke from a chimney moves in a straight, vertical column, it means that a one or two-miles-an hour breeze is blowing. A three-miles-an-hour wind will just stir the leaves on the trees.

Twenty-five miles an hour will sway the trunks; at 40 the small branches will break and it takes a mile-a-minute gale to snap the trunks of big trees.

How Butterscotch Got Its Distinctive Name

Butterscotch seems to have grown in public favor recently, for now, in addition to the old-fashioned butterscotch candy, there are pies, soft drinks, ice cream and many other things made with this flavor.

It seems that butterscotch was not of Scotch origin, as the word is a colloquialism meaning "to scorch." And that is just what butterscotch candy is—candy that has been scorched. In the commercial manufacture of butterscotch a great deal of care must be taken to see that the burning process does not leave the candy with any taste except that which one expects to characterize the flavor. The cooking is done by gas, and each pot contains a thermometer and stirring rod. The batch of candy must be stirred properly and the correct temperature maintained at all times. In order to do this, gas is used, as with this fuel delicate temperature control is secured.

How Pearls Are Tested

A new process for distinguishing between natural and cultured pearls was described before the French academy recently.

The method, very simple and inexpensive, requires the inserting of a miniature tube in the hole bored in the pearl for beading purposes. Within the tube are two little mirrors very close together, at right angles to each other and at an angle of 45 degrees with the sides of the tube.

When a light is thrown into the tube on the first mirror it is reflected on the second mirror if the pearl is composed of concentric layers, as is the case with all natural pearls. If the core of the pearl is not composed of concentric spheres the ray of light instead of striking the second mirror shines through the substance of which the cultivated pearl is made and appears as a tiny spot of light on the surface.

How Whales Are Warned

The simplest and most constant sound in Nature, the washing of the sea, serves as a radio beacon to warn whales, porpoises, and many fishes to keep away from the shore and below the surface in rough weather.

According to Dr. Austin Clark, formerly naturalist on the scientific ship Albatross, "The simple breaking of the waves is of immense importance to sea creatures as an index of the dangers they are running. In times of storm the repellent sound increases, and by this they are warned to keep farther from the shore and farther down beneath the surface."

How to Tell Tree's Age

The forest service says that one of the chief ways of ascertaining the age of a tree is by counting the whorls of the branches. In some species the whorls are more noticeable than in others, particularly in the Eastern white pine you will note for each year the tree sets out a whorl of branches. It has been possible to stand off and count anywhere from 3 to 75 years in this manner. The whorls come out regularly and leave clear spaces between each year. It is not possible to tell the age so well in broadleaf trees.

How Denver Got Name

Denver is named for Gen. James W. Denver, who lived from 1817 to 1892 and was the first territorial governor of Kansas. Colorado was originally included within the Kansas territory, and Denver is said to have been the one who first suggested the name of Colorado when that region was set apart. He had been a California congressman, and then commissioner of Indian affairs and served during the Civil war in the Union army.

WHY

Emotion Causes One's Hair to Stand on End

When next you read a book in which the author makes the hair of one of the characters "stand on end with terror," don't pass judgment on the expression as being a convenient but not-to-be-taken-literally way of describing the effect of fright. Our hair can, and does, "stand on end" under the stress of intense and sudden terror.

Each hair is kept in position by a tiny but perfect muscle. Unflexed, this muscle allows the hair to lie flat. Flexed into rigidity by emotion—all emotions affect the muscles—it pulls the hair, and it depends on the latter's length and the measure of fear as to whether the hair will but move slightly or stand on end.

The operating cause is exactly the same as that which makes the hair on a dog's back bristle before a fight—strong emotion causing muscular movements. The hair muscle is one we cannot control; its action is automatic.

Why Average Man Today "Has It Over" Ancestor

The average man had no last name of his own in 1426, no definite address. He had no particular idea of the hour of the day, except as the church bells tolled it. Record keepers, surveyors and clock makers have wrought some difference on that score, haven't they?

Or take it by races if you like. The French were once barbarous and ignorant, the English lazy and passionate, the Scots dirty and thriftless, the Germans impracticable and idle drunkards. Are they like that today?

Most men once lived according to their fears, not, as now, according to their hopes. There are libraries full of books that tell you all this. Read and think for yourself. You would not have dared do either in 1423, and no responsible person would have dared allow you to do so.

If man has a kinder heart and a truer soul, then his nature must have changed. Five hundred years are not so long in the history of the race, and there is much more time than that ahead of mankind. Do you think our human nature has stopped changing?—London Tit-Bits.

Why One's Hair Curls

Why should one child's hair be curly and another's straight? The explanation, where neither parents, grandparents, nor great-grandparents have had curly hair, is that "deferred heredity" is responsible. Some remote ancestor has had curly hair.

The "curly germ," if one may put it that way, has been passed along the line of life, but has not taken effect for hundreds of years. Then, for some reason it does, and a curly-haired child is born. Originally all hair was straight; curly hair was produced by wrong dieting.

The oldest hair tonic, made for an Egyptian queen, consisted of the paw of a dog and the hoof of an ass boiled in oil with dates!

How Wool Is Tested

Wool fibers are short and kinky. They give a characteristic sensation when drawn between the teeth, smolder when ignited, leaving an irregular lump of ash and giving off the odor of burning feathers. Wool dissolves when boiled for 15 minutes in a solution containing one tablespoonful of lye to a pint of water. Larger amounts of alkaline washing powder may be used instead of lye. This is an excellent way to detect fabrics made of both wool and cotton, as the cotton will not disappear under such treatment.

How Buttermilk Cures

Broken bones that have stubbornly resisted all efforts to make them knit, have been found to respond to a treatment of calves' liver and buttermilk. The experiment has been carried on at Johns Hopkins hospital, in Baltimore. It is reported that literally scores of patients who have been suffering for a year or more with unknit bones have been cured and discharged after the liver and buttermilk diet.

Why Milk Curdles

The Department of Agriculture says that milk sours when the lactic acid bacteria convert a sufficient amount of the milk sugar into acid to precipitate the casein. Certain types of bacteria produce an enzyme similar to that extracted from calves' stomachs to curdle milk for cheese making. Under some conditions these bacteria curdle milk before enough acid has been produced to give it a sour taste.

Why Trees Petrify

Petrification of trees is produced by the infiltration of water containing dissolved mineral matter as calcium carbonate, silica, etc., which replaces the organic material particle by particle, sometimes with the original structure retained.

Why Man Must "Serve"

A man's worth to a community is measured by what he contributes to its welfare. This is an age of service rendered not received. There can be no higher ambition than so to serve that fellow citizens shall "rise up and call us blessed."—Grit.

How Empire Was Formed

The foundations of the British empire in India were laid by the English East India company, which began its conquests in 1749 by driving out the rajah of Tanjore and claiming his territory for England.

HOW

MONTHS OF THE CALENDAR GOT UNEQUAL DIVISION.—Perhaps not every one is familiar with the reason why all months of the year have not the same number of days. Month really means "Moon," and originally stood for the time from one full moon to the next. As man progressed a little he began to take account of the year and to divide this second standard of reckoning into so many months. Since, however, the moon goes round the earth in 29½ days, so many hours, minutes and seconds, while the true year consists of about 365 days and a bit, the sum wouldn't exactly divide properly, and the calendar got into hopeless confusion. To put this right, Julius Caesar consulted with the most learned men of his day, and devised a new calendar giving the 12 months alternatively 31 days and 30 days apiece with a special arrangement for February in Leap year. This plan, however, was upset by the vanity of Augustus, the next emperor, who thought that the month called after him should have 31 instead of 30 days, and to get at this result rearranged the program in our present system of uneven months. Even so, the division of sun years by moon months wasn't exact, and so about a century and a half ago we had again to recast our calendar to meet the problem of what is really an attempt to divide a sum which won't divide exactly.

How Scientists Learned Secrets of the Plants

To discover how flowers feed—starve them; if you would learn why most plants grow upwards—pin them along the ground.

These are among the experiments conducted by students in the recently opened Sargant Laboratory for Plant Physiology. They study plants as living organisms, and become acquainted with the problems and dangers that beset the life of the commonest dandelion.

How plants breathe, how their food is obtained, and how they respond to imposed conditions are questions that can be answered only by experiments. The effect of supplying and withholding various "foods" is investigated; the rates at which the various plant organisms grow are measured under different conditions; so, too, is the rate of breathing.

Certain plants that require light for normal growth are placed in complete darkness, while others are bathed in light from colored arcs. Water supplies are varied and temperatures regulated. A geranium that has a curved stem is subjected to electrical treatment and made to incline a different way. In its struggles to resume its normal growth it reveals its various organs and their functions.

The Sargant laboratory is set in a small but well-stocked garden where plants are reared for experiments under almost perfect conditions.—London Mail.

How Long Fishes Live

How long does a fish live? Not out of water. Any boy can tell that from observation. But with proper food—everything it needs?

According to Popular Science Monthly, Major F. S. Fowler of England, who has been conducting a special study to find out, reports that a catfish, with which he is acquainted, is now fifty years old and is still lively. An electric eel in the London zoo, he found, lived 12 years. Other fish age figures, as given by Major Fowler, are as follows: Carp, thirteen years; goldfish, twelve years; herring, four years; salmon, three years; brown trout, six years. A bullfrog is recorded age was fifteen years; toad, eleven years, and the giant salamander, fifty-two years.

How to Pack China

Line your packing case with a good layer of straw, sprinkle it well with water before putting in each article filled and wrapped in soft paper and wound round with straw, and put a good layer of well-sprinkled straw between each layer of glass or china.

The water makes the straw expand so that each article is firmly wedged in place.

For special treasures small cardboard or wooden boxes may be provided, into which they are tightly packed before being embedded in water-sprinkled straw.

How to Soften Fur Rug

If a fur rug has stiffened after being washed, it can be softened by applying the following mixture to the wrong side of the rug: Three tablespoonfuls of castor oil, one of glycerin and one of turpentine. This must remain on for a week, when the rug, still on the wrong side, should be well rubbed with a smooth stone or block of wood.

How Steering Wheel Works

The most recent improvement over the time-honored steering wheel for ships, says Popular Science Monthly, is an electric controller that closely resembles those used on street cars. A slight turn of the control handle by the helmsman causes the rudder to respond instantly.

WHY

Milk Is a Health Giver and a Body Builder

"Every boy should have a quart of milk a day until he has attained his growth; and every girl should have a quart of milk a day until she has weaned her last baby." Quoting one of the world's greatest scientists in nutrition, H. C. Sherman of Columbia university.

Further, we are told, if we wish to remain young and have the best health, we may well follow the practice of using a quart of milk a day throughout our adult life. Using it, mind you—not necessarily drinking it. Made into cream soups, bread, custards, puddings, scalloped with other foods, in cocoa—who cares in what way, just so long as the daily quart is there.

Occasionally, but very occasionally, indeed, we find a person who cannot take milk, even when it is cooked into or with foods. These persons are exempt, but we cannot help feeling sorry that they go through life nutritionally crippled in this way.

Why milk and why so much milk?

It is the cheapest source of the needed animal muscle-building food.

It is the richest of all foods in bone-building substances; lime and phosphorus.

It contains all three—or four, if there are four—vitamins, if the milk is produced by healthy, rightly fed and cared for cows.

Milk is not a "cure all," although when it is used to replace a part of our modern white bread, meat and potato dietary, it is a "cure for much." Not every wrong can be righted by using more milk, but many of them may.

The moral of our story is to use milk if you wish the happiness of good health. Give it to children in the abundance needed to make them strong. Take a daily quart yourself. Drink it raw if it is clean and agrees with you and you like it. Boil it, if you need to. Learn to make it into attractive dishes. Spread the good news of its value.

Why World Hails New Production of Helium

A new way of getting helium has been suggested in Germany by Dr. Kurt Peters of the Physical Technical Institute of Berlin. It is to be distilled from radioactive minerals used in various industries, and mainly from monazite sand, which is used for Welsbach mantles. Although it has been known for a long time that these minerals give off helium when heated, the gas has never been recovered commercially. Doctor Peters claims it is the largest source of helium in Germany at the present time. He estimates that a production of from 15,000 to 20,000 cubic feet is available annually.

While this amount will not be sufficient for use in dirigibles, it is expected to suffice for technical purposes. Helium has been most difficult to obtain because the United States, which is the only country in the world producing the rare gas in large quantities, has stringent export laws prohibiting its sale to foreign countries except with the sanction of the War and Navy departments.

Why Dreams Are of Value

"Dreams," said a doctor, "are not only useful symptoms to the psychoanalyst—they are useful to us doctors, too.

"For many maladies have their own peculiar kind of dreams, and just as jaundice is denoted by a yellow skin, so heart trouble is denoted by dreams of floating and flying high above the earth.

"The neurasthenic dream of troubles, anxieties, death and failure. The consumptive have very happy dreams—revels, dancing and feasting. Those afflicted with liver complaint dream, on the other hand, of funerals, and the rheumatic dream of burns and blows and hard knocks."

Why Rats Leave Ships

Cats desert ships, as rats are supposed to do, but for different reasons, according to the radio operator on board the Cold Harbor. He says that they leave if they do not like the galley or the cabins, and when they look over another ship as a prospective home they investigate as carefully as any newly married couple examine their first apartment. Is it true that rats really desert a ship because of premonitions, or is it a sailor's superstition, of which there are many? Many tales are told of rats scuttling down the ropes when a vessel is in harbor, and the vessel going down on the next trip. But we have our doubts. —Baltimore Sun.

Why One Feels "Blue"

The scientific reasons for the common feeling known as "blue" are that during damp weather we do not perspire normally and our bodies retain the waste products which are otherwise thrown off. A nonenergetic feeling follows. Also during this kind of weather, the air does not contain an ordinary supply of oxygen. Oxygen is the body's fuel, and we cannot fully assimilate our food without a full supply. Hence the "heavy" feeling.

Why Snakes "Rattle"

The vibrating of the snake's tail was a common characteristic of most snakes before the rattlesnake evolved from the common ancestral stock of Pit Vipers. The habit of vibrating the tip of the tail at a high rate of speed is believed to be an escape of nervous force brought about by immediate conditions.

BASKET BALL!

Woodburn High School

VS

Spencerville High School

Wednesday, February 24th.

Woodburn grades vs Spencerville grades will play preliminary game

Last home game. Dove, Referee.

In the JUNGLE

With Cheerups and the Quixies

by Grace Bliss Stewart

THE NERVOUS GNU

IT WAS a very trying moment for Mr. Gnu. He had just began to wonder what kind of an animal he really was. All his friends were quite sure which family they belonged to. There was Mrs. Ostrich, Raffy Giraffe, Swift the Antelope, Springy Gazelle and Zippy Zebra, his jolly neighbors on the Great Plain. Each knew without a doubt where he belonged in the Animal World.

"But here am I," grumbled Mr. Gnu, "with the head and horns of a bull, the mane and tail of a horse and the body and legs of an antelope; just a mixture like patchwork. It's most embarrassing."

He took a sudden leap into the air, alighted on the ground and began to paw and wheel about like a frisky horse, which is a funny way Gnus have of doing when they are excited

"Don't Be Alarmed," Called a Voice From the Palm Leaf Roof.

and disturbed. Then, kicking up his heels and flourishing his long tail, the Nervous Gnue scampered across the Broad Sunny Plain at top speed.

Soon the Great Trees and Twisty Vines of the edge of the Jungle loomed before him. Their cool shade looked very inviting to Mr. Gnu.

"I haven't been in there for a long time," thought he. "I wonder what's going on in the Jungle these days. The same old Lions and Leopards are there, I suppose, and they would like a nice juicy something-or-other like me for supper. But I can't help that; I've just got to go in and look around for myself. It's so mysterious and exciting."

Now the Nervous Gnu is about the most curious animal in the world, so he lost no time in trotting down the Winding Way into the heart of the Jungle. He was timid and suspicious, of course, but his curiosity quite got the better of him.

"Oh, what's that?" whinnied he with a jump, as he came suddenly into the clearing and saw Cheerups' little house standing there. "I don't believe it means anything good, whatever it is, and yet I should like to know."

"Don't be alarmed," called a merry voice from the peak of the small palm-leaf roof. "I know it looks queer, but I just got up here on top of my house for a change and a better view of things. I'm Cheerups; is there anything I can do for you today?"

"Why—why—yes, sir, there is," stammered the Gnu, remembering all of a sudden the knotty question which had troubled him that morning. "I'd like to know what I am. Now there's a poser for you! You see my chums, Raffy Giraffe, Mrs. Ostrich, Springy Gazelle, Swift the Antelope and Zippy Zebra, all know who they are. We are very happy and sociable out on the Broad Plain, sir, but I am bothered about my family tree."

"What is your name?" asked Cheerups kindly.

"They call me the Nervous Gnu, Mr. Cheerups, because I am so easily flustered. But who wouldn't be if he had the head and horns of a bull, the mane and tail of a horse and the body and legs of an antelope, and didn't know at all what he is and who are his relations? It's confusing, I say."

"Now don't be disturbed, Mr. Gnu," said Cheerups, smiling and nodding his topknot merrily. "There isn't a bit of doubt in my mind what you are. You are an antelope. Don't you see that your body and legs—the greater part of you—are like those of the antelope family? So there you are! The question is settled as neatly as can be."

"Oh, I hadn't thought of that," gasped the Gnu. "It's funny how you don't think of things, isn't it? I see now that you are perfectly right, Mr. Cheerups. That's really a wonderful idea. How you have relieved my mind! Thank you, thank you!"

"Now you can go back to your happy little neighborhood on the Broad Plain and know just where you stand. Swift the Antelope and Springy Gazelle are your cousins, remember! But please do be careful about being curious, Mr. Gnu," called Cheerups.

"Curiosity carries you far
And teaches you much, I hear,
But caution tells you not to stray
Where danger is lurking near."

"I'll try to remember all you have told me, Mr. Cheerups," cried the Nervous Gnu, kicking his heels joyfully in the air, and with a final switch of his tail he made off at top speed in the direction of his friends on the Broad Plain.

SPORTING GOSSIP

BASKET BALL

Spencerville High School Basket Ball stock took another rise Saturday night. Yes, the Auburn subs bowed to the Spencerville team. Spencerville went with the idea of playing the seconds, but before the game was through it had played nearly all the subs. It was another one of those games that are won contrary to public opinion. Home and Auburn both thought Spencerville was due for a drubbing, Auburn so much so that less than a hundred came out to witness the game. One unusual feature about the game was that at no time was Spencerville headed by the Auburn team. The lead was soon made and kept with varying degrees. At the end of the first half the score stood 19 to 9, Spencerville. Auburn did its best with the aid, it seemed at times of the referee to stop the onrush, but failed. Perhaps had the Auburn coach had an hour to stop it he could have done so, but 40 minutes were too short. At that he used eleven players.

That game is now passed, the boys have played two games on the Auburn floor and have some measure of acquaintance with the floor, which was the prime reason of playing Auburn. The season score stands 10 games won out of 14 played, a percentage of .714.

Only one more game remains for the boys before the tournament—Woodburn at Spencerville Wednesday night. The Woodburn grade team plays the Spencerville grade team here the same night. Woodburn has been beaten twice by Leo, but in the Allen county tournament nosed Leo out by one point. Last week Woodburn lost to Monroeville, the Allen County Champs by a very narrow margin. The game is sure to be a very warm one.

School Observes Flag Exercises

In commemoration of Washington's birthday in the Spencerville schools, Rev. Roy S. Brown gave an interesting talk Monday morning. As another phase of the program the school gave the flag salute and pledge to the flag. In a contest to determine which of the four classes in the high school could do the salute and pledge with fewest mistakes and most in unison the seniors won.

MICKIE SAYS—

SPENCERVILLE

Miss Ada Markle spent the week end with her sister, Mrs Lyle Barr at Ft Wayne.

Mr. and Mrs. Dale McNabb, of Detroit, spent the week end with their parents here.

Miss Josephine Gorrell, who has been very sick for the last month, is reporten much better.

Miss Alberta Steward, of Garrett, spent the weekend in the Mary Jane Silberg hom .

March McCall's now on sale at News office—It's the one big magazine for the money.

R U Bowser and wife was a Saturday guest at the Homer Bowser home near Huntertown.

Roy Bowser and wife, of St. Joe, James Reed and wife were Sunday dinner guests at the R. U. Bowser home.

Miss Doris Beams, who is attending college at Muncie, spent several days with her parents, F. L. Beams and family.

Game Warden Henry Hathaway was in town Wednesday. He was on his way to the Maumee Valley Fox Ranch for inspection.

Its now McCall Needlework and Decorative Arts and its a fine magazine for the suggestions of home urnishings. Now on sale at News office.

The Ladies Aid of the Methodist Church will be entertained in a social meeting at the home of Mrs. Bert Fisher, this (Thursd y) afternoon.

The attendance at the Methodist Sunday School on Feb 21 was 89, collection $6 00. Lutheran Sunday School, attendance 68; collection, $4 12

Miss Irene Webb and Miss Frankie Allen of the Freshman Class, was able to attend school after being confined to their homes by sickness.

On last Thursday evening friends and neighbors gave a farewell party to John Moody and family who are leaving for Ft. Wayne to live. A social good time was had and at a late hour a pot luck supper was served. Those present were:—Frank Pervines and wife, Bert Wasson, wife and son Florence, Mrs Lizzie Goldsmith, Mrs. Chas McCrory and children, Frank Baltz, Mrs. Ruth Gorrell, John Timmerman, wife and son Charles, Lloyd Goldsmith and wife, and Vaugh Allen.

Why Fish Do Without Sleep

The bureau of fisheries says that fish do not sleep. They rest and remain quiet in nooks of streams, but never close their eyes.

He Saved, Why Shouldn't You?

In the days of Washington, saving money was more difficult than in the present. Yet he did save under conditions impossible nowadays. He saved because he believed it to be a good thing to do. Why shouldn't you.

If you are not taking advantage of our service, you're missing something.

Maumee Valley Fox Farm Issues Warning.

Due to the fact that the lands about the Fox Ranch near Spencerville, have been made a Federal Reserve and is now state inspected, all persons are hereby warned not to trespass or hunt on such lands or near the same. Owners of dogs are hereby notified to keep same at home or they will be shot at once if found near the farm. This done for the protection of the fox as they are a very nervous animal and in captivity, need every precaution used possible for their successful breeding. Persons will please pay strict attention to this notice and save trouble. F. W. Silberg.

In Society

The Home Bureau Club met Friday afternoon Feb. 19 with Mrs Ross Watt. The rooms were decorated with flags in honor of Lincoln's and Washington's birthdays. A short sketch of their lives were given. There were several contests and stunts which made much merriment Mrs Eva Clouser rendered a piano solo. County Agent E. E. Stinson gave quite an instructive talk on Poultry. Mr. Riggs of Whitley County, also gave a talk on Farm Organization. The committee furnished dainty refreshments.

NOTICE OF THE SALE OF BONDS

Notice is hereby given that the Trustee of Concord School Township, DeKalb County, Indiana, will offer for sale to the highest bidder, $35,000.00 par value of the bonds of the said Concord School Township, at the hour of 10 o'clock A. M. on the 20th day of March, 1926, at the school house in the town of St. Joe, said DeKalb County, Indiana.

Said bonds to be for the aggregate sum of Thirty-five Thousand ($35,000) Dollars and shall bear interest at the rate of 4½% per annum payable semi-annually, to be issued in Thirty series. Each series shall consist of two bonds numbered "One" and "Two;" each bond shall be for $588.33. Series numbered One shall be due on the 1st day of July 1927, series numbered Two shall be due on the first day of January, 1928, and one series shall fall due each six months thereafter until all shall mature.

Said bonds shall be sold for not less than par value and accured interest.

The said Trustee hereby reserves the right to reject any and all bids.

FRANK L. MILLIMAN
Trustee Concord School Township, DeKalb County, Indiana. 8t3.

NOTICE OF SALE OF CONTRACT TO CONSTRUCT SCHOOL BUILDING

Notice is hereby given that the Trustee of Concord School Township, DeKalb County, Indiana, will receive bids for the construction of a new school-house in the Town of St. Joe, said DeKalb County, Indiana, according to the plans and specifications now on file in his office, until the hour of Ten O'clock A. M. on the 20th day of March, 1926, and that the said Trustee will let a contract for the construction of said building at the school-house in the Town of St. Joe, on the said 20th day of March, 1926, to the lowest responsible bidder for the construction of said building according to the plans and specifications now on file in the office of the said Trustee.

Each bidder will be required to furnish a certified check in the sum of 5% of his bid, conditioned that he will enter into contract with the said Trustee if his bid shall be accepted and shall furnish a bond as required by law, to the approval of said Trustee, which bond shall be in the sum of his bid.

Bids will be received on the contract separately and combined.

The estimated cost of the building is Thirty-Three Thousand Five Hundred ($33,500) Dollars.

The Trustee reserves the right to reject any and all bids.

BEWARE OF EYESTRAIN

The surest guarantee against loss of sight is to treat your eyes so well that they can have no excuse for deteriorating. Headaches, neuralgia, pain in the back of the neck, sickness of the stomach, dizziness, twitching of the eyelids, redness of the eyes, a feeling of sand under the lid, all of them are among occasional symptoms of eyestrain. Each of us has just so much nervous energy. If we use it up, straining our eyes to see, we have no energy left to do other things. It is a good thing to have your eyes examined at least every two years. After 40, certainly this is a necessity. At that age there comes a natural change in the eyes to which everybody is subject. After that age glasses are likely to be needed for close work. DON'T NEGLECT YOUR EYES. They may be the center of trouble which will spread out to the whole body. Let us examine your eyes, we have helped others, we can help you.

Obituary

David Sowers, son of Martin and Mary Sowers was born in Springfield Township, Allen County, Indiana, June 12, 1858, and departed this life February 13 1926 Aged 67 years, 8 months and 1 day.

He was united in marriage to Susan Bauman October 18, 1883 To this union were born one daughter Minnie M., and one son Ray W. His wife preceded him in death, July 24, 1911. Leaving to mourn his departure, one daughter, one son, three grand children, three brothers, four sisters and a host of other relatives and friends

He was reared to manhood on the adjoining farm where he died. He was a most successful farmer and a very influential man in his neighborhood. He was a very good neighbor and was always ready to lend a helping hand to those in need; very industrious, frugal and superior as a financier but always devoted to his home and children,

During his last sickness his suffering was intense but bore it with patience. As the pastor talked to him about his future prospects, he said "he was ready and prepared to go."

Funeral service was Tuesday afternoon, Rev. Roy S Brown officiation. Burial at Scipio.

Wilson Koch was born in Concord Township, DeKalb Co., Ind., October 15, 1859, and departed this material life for the spiritual world at the Lutheran Hospital, Ft. Wayne, Ind., Feb. 18, 1926. He underwent an explorative operation for cancer of the stomach and could not survive the shock. Age 66 years, 4 months, 3 days

Wilson was the third son of Joseph and Mary Ann and was one of a family of ten children—six girls and four boys. Two of his sisters, Marguerette Stutzman and Ida Koch, one grandson; with his parents have preceeded him into the spiritual world

Wilson was a member of the Church of Christ at St. Joe for twenty-seven years having united with the church under the pastorate of Harry Clark. He also was a member of the K. of P lodge for many years and held various offices in this beloved lodge By trade he was a fence erector and carpenter.

He was a worthy citizen, a good kind neighbor and a loving husband and father.

He leaves to mourn his going his wife, after a happy married life of nearly 42 years; and one son Ray and daughter Beulah, also five grandchildren, four sisters, three brothers, with a host of other relatives and friends.

Blessed are the dead who die in the Lord.
I cannot say and I will not say
That Wilson is dead, he is just away.
With a cheery smile and a wave of his hand
He has wandered into another land.

Only Good Night, beloved, and not Farewell.
A little while and all His saints shall dwell
In hallowed union—so Good Night
Until we meet again before His throne.
Clothed in the spotless robe He gives His own.
Yes, until we know even as we are known
Good Night.

Card of Thanks

We desire in this manner to express our heartfelt thanks to our neighbors and friends who so kindly assisted us in the sickness, death and burial of our husband and father

MRS. WILSON KOCH
AND CHILDREN

K. of P. Resolutions of Respect.

In as much, as the All-wise Father has seen fit to take from our midst our brother, friend and neighbor Wilson Koch; be it resolved that, we, the St. Joe Lodge Knights of Pythias, Number 400, do extend to the bereaved brother's family our sympathy. William, as he was known, was an earnest true Knight, respected by all who knew him and he will be missed.

However, it is and always shall be, "God's will be done" and we can best respect our brother by humble submission to the Divine Providence.

Resolve, that we present a copy of the above resolutions to the bereaved family. And have same printed in the St Joe News.

ST. JOE NEWS.

VOL. XL | ST. JOE DeKALB COUNTY, INDIANA, THURSDAY MARCH 4, 1926 | NO. 9

Barbara Simanton Passed Away

The death of Mrs. Barbara Newcomber Simanton occurred Thursday morning at her home at the age of eighty-four years from complications and age. Although ailing for more than a year, Mrs. Simanton was not bedfast at any great length af time.

The deceased was born in Ashland county, Ohio, November 5, 1841, and was one of a family of seven children. She has lived in Dekalb county sixty-four years and in Auburn twenty-three years. Previous to that her residence was at St. Joe where she lived for eleven years after moving from a farm in Concord township

January 24, 1861, she was united in marriage to William Simanton who died August 12, 1905. To Mr and Mrs. Simanton were born three children, two of whom died in infancy a son, John H. Simanton, who has resided in Auburn for a few years, surviving. A sister, Mrs. Amanda Spencer of Canton, Ohio, is the only member of the original family who is living as far as is known.

Mrs. Simanton was a member of St. Mark's Lutheran church and of the Women's Relief corps and also of Crescent Rebekah lodge of Auburn

The funeral was held from her home last Saturday.

Concord Road Bonds Sold

Bonds amounting to $12,440 were sold Thursday morning by Mrs. Garrie P. Weaver, county treasurer to J. F. Wild & Co., of Indianapolis at par, the accrued interest and a premium of $121.50.

Two other bidders were the City Securities corporation of Indianapolis which offered par, accrued interest and a premium of $117 and the Fletcher Savings and Trust company of Indianapolis which bid par, accrued interest and a premium of $106 80.

The bonds were sold to finance the building of the Robertson Nicholls road in Concord township and will bear interest at the rate of four and one-half percent —Star.

Breach Of Promise Suit Filed

Mrs. Jennie B. White of Fort Wayne, a former resident of St Joe, Saturday filed a breach of promise suit in the Allen circuit court against Albert Benson, a pattern maker, of that city, demanding $6,000 damages. Mrs. White claims that in January, 1925, Benson sought her hand in matrimony and the marriage was to have taken place on February 28, 1925. The date for the wedding came and passed with Benson refusing to go through with the ceremony, she alleges. Mrs. White is the widow of the late Frank White.

WHY NOT FILE AN EXEMPTION?

Poll Being Taken on Dry Question

The poll or straw vote as now being taken by the Journal-Gazette on the modification of the Volstead act will in the end mean little as to the real sentiment of the masses of our nation, in spite of 700 papers taking this same vote. This has always been true in straw votes and will be so in this case. People in general do not yield themselves to such tactics to express their opinions, but we believe that due to the agitation of the wets on this question there will be more people who are dry, take a hand in this vote and see that the ballots are voted.

The Journal says: "This paper has no ax to grind" But they are mighty interested in the vote and if the wets cast more votes, just notice the editorial column. It is one of the wettest sheets in this section and consequently her sympathy would be expressed in that way.

Church people ought to awaken just long enough to send in their votes and see that others have an opportunity to vote also. Ballots appear each day. Clip them out and bring them to News office if you cannot use them.

Do We Want Paved Roads In County?

In an effort to learn the sentiment of the county with reference to the paving of county roads, the county commissioners Monday issued a call for a public meeting to be held at the court house Saturday, March 13, at 1:30 o'clock.

Three petitions for hard-surfacing are now pending before the board. One calls for the paving of the south Auburn-Garrett road, another for the Auburn-Ft. Wayne road and another for the route from Butler south to the Allen county line.

It would not be possible to issue bonds in an amount sufficient to improve all these roads, but a start could be made and the commissioners are anxious to learn whether the people want action at once. The commissioners do not want the different roads discussed at the public meeting, as it is obvious that people from various sections of the county favor the improvement of the roads in their respective districts. The decision as to where the start should be made will have to be left to the judgment of the county officials.

No action can be taken towards improving the roads without an appropriation by the county council and it is therefore hoped that the councilmen will attend the meeting. The commissioners expect every section of the county to be represented and to have the question thoroughly discussed so that the sentiment of the majority of the taxpayers can be guaged.

Suffers A Severe Stroke

Wm Pepple of St. Joe, was stricken with paralysis Saturday noon and is in a very serious condition. His right side is affected He has been in poor health for months although active. It is hoped that he will gradually improve and again be about.

Junior Class Play "Mr. Bob" Christian church March 5-6 at 8 P. M. Admission 20-30 cents.

Section 3 of Lurheran Ladies Aid will serve a Penny Supper in church basement, Saturday evening, March 6, from 5 to 7 o'clock. The public is invited.

"As Unto Him."

Whatever you think, both in joy and in woe,
Think nothing you would not like Jesus to know.
Whatever you say, in a whisper or clear,
Say nothing you would not like Jesus to hear.
Whatever you read, though the page may allure,
Read nothing unless you are perfectly sure
Consternation would not be seen in your look
If God should say solemnly, "Show me that book!"
Whatever you write with haste or with heed,
Write nothing you would not like Jesus to read;
Whatever you sing, in the midst of your glees,
Sing nothing that God's listening ear could displease;
Wherever you go, never go where you'd fear
God's question being asked you "What doest thou here?"

St. Joe Man to be For Fish and Game Law Violations

Clarence Hart has had a heap of trouble piled upon him and will have to prove that he is not guilty of possessing fur bearing an mals out of season and of hunting without a license.

Court will be held at the school house Friday evening, with Roy Abel sitting as special judge. The trial will begin at 7:30 and all the members of the Fish and Game Club are expected to be present to see that justice is meeted out.

Gasoline Money Is Listributed

DeKalb county will receive $14,978 58 of the more than $1 800 000 distributed Monday by L. S. Bowman, auditor of the state, as the 92 counties' share of state gasoline tax collections for the last 11 months.

Clinton county receives the largest cut of the funds, $30,746 35. while a number of other counties of the state will receive the following: LaGrange, $12,762 51; Steuben, $13,870.64; Noble, $15,246.08; Allen, $20,925.15; Whitley, $17,402.89; Wabash, $23,839 35; Huntington, $22,606 40; Wells, $29,854 00; Adams, $26,849.38; Kosciusko, $15,830 81; Jay, $21,973 19 and Blackford, $16,467 68.

This distribution covers eleven months, instead of the customary year, because of the tax of 3 cents now collected has been in force for only that length of time. Half of the money disbursed to counties is divided into 92 equal parts of $10,038 15 each, and the other half is pro rated among the counties on the basis of road mileage. This permits Clinton county, with a few more miles of road than Marion county to receive a slightly larger share.

For Sale: Some Hard Coal suitable for brooder stoves.
9t1. Howard Shilling.

The Junior class of the S. J. H. S will present "Mr. Bob" a comedy of two acts, at the Christian church, March 5-6, 8 P. M. Admission 20-30 cents. Who is Mr. Bob? Come and find out.

Two-Piece Frock Draws Attention

Blouse, in New Form, Often Becomes Tunic—Attire for Resort Wear.

The south of Europe and of this country is a playground to which the world is rushing, and couturiers accordingly are putting their best ideas into the elaborate wardrobe for the resort season, observes a fashion correspondent in the New York Times. Although Paris foretold that white would be less fashionable than heretofore, at least half the lovely things one finds among the models submitted by any modiste or in any exclusive shop are in white, though almost invariably with some point of color. The popular fancy for needlework and for colored embroidery is illustrated in many of the new white gowns for the South. On the dresses, wraps, tunics and separate blouses the needlework of European craftswomen is used with picturesque effect. It is considered smart to have a touch of this somewhere in the ensemble. Black and white, in various smart combinations is worn at the southern resorts; and in color there is beige, biscuit, "tilleul"—the new shade of tender yellow-green—apricot, peach, saffron, coral, geranium and all of the pastel shades. In materials the crepes, kasha, prunella, repp, alpaca and the sheer stuffs make up the assortment. Occasional outstanding designs revive taffeta.

The two-piece frock has given especial importance to the blouse, which in the new form often becomes a tunic, cut knee length or to a point midway between the hip and the knee. The straight, unfitted middy shape holds its own. A regulation "tailored" model is considered most modish and is copied even in the most elaborate materials. The indolent habit of dressing in the morning for all day came form Paris in wartimes for practical reasons, and the laissez faire attitude of these times has made it acceptable, nowhere more so than at the southern resorts. Two-piece frocks are of crepe de chine, crepe roma or flat crepe, of bengaline, voile, taffeta, or whatever is worn for any sort of occasion from breakfast until tea and often for informal dinners, too. The model is simple as to silhouette, but the fabrics are fine. The plaited skirt is tremendously popular because it gives chic to the appearance of almost any figure and fits well the combination with an overblouse.

Strap Collar, Wristbands.

A severely plain frock made of crepe or similar goods, with the narrow strap collar and wristbands, is the popular frock for morning and general daytime wear. The same model expressed in terms of crepe satin with a tunic is translated into a dress suitable for the tea dance, dinner or the evening. It is particularly "dressy" when the skirt is of chiffon with fluttering godets or flounces and a kerchief or scarf is worn about the neck. Among the latest things from Paris are tunic blouses of metallic brocade and of metal laces. These are gorgeous affairs. Worn with skirts of white or light tinted materials they make fantastic little suits that are liked especially for restaurant dinners and suppers, though the

Fashionable Cape Added to Two-Piece Costume of White Flannel.

model is regarded as afternoon dress. The most surprising number of variations are to be had with the same plan as a foundation. In a swagger little frock from Monjaret, the blouse, high in the neck and long in sleeves, is made in a plain color. The finely plaited skirt is of two colors, a wide stripe of the contrasting material running through the middle.

The popular idea of wearing a white or light-colored blouse with skirt of black velvet is reversed in some of the new suits, in which the tunic or blouse is worn with a skirt of white plaited crepe de chine. Lanvin has brought out an original two-piece suit of red kasha in which the contrast is created by trimming the bottom, the sleeves and collar of the upper half, which is really a jacket, with narrow plaitings of white linen. Among the creators of evening dress Louise Boulanger has done a striking yellow duvetyn model with a plain skirt, cut with a flare, and a sleeveless V-neck blouse belted in with a narrow strap and rippling over the hips. The lower part of the bodice is embroidered in several colors of floss, with a touch of the same needle work at the neck.

A relief from the tunic blouse is the bolero, which is being shown a lot by some of the best couturiers. In a charming gown from Worth, black chiffon velvet is bound with silver kid and a band of sable fur is sewn on the ends of the girdle, which is wound in soft folds about the hips and looped directly in the middle of the front. There are many attractive translations of the bolero, which in the new models is longer than the original in Spanish costumes and sometimes cape like in effect. One unusually chic sub

Sports Dress Made of Gray Kasha Cloth, Is Trimmed in Red.

in the bolero style is made in two shades of green. The frock is of flat crepe with plain, rather snugly fitted bodice fastened with a row of small buttons to the Eton collar. The skirt, which is attached to the blouse at the hip line, fits at the top and flares sharply at the bottom. The jacket is of a deeper shade of green chiffon velvet. The sleeves are made of the crepe, with elbow cuffs of velvet.

Some Unusual Things.

Among the frocks designed by artists on both sides of the water are some of especial interest to the women who prefer unusual things. A white flat crepe gown lately shown in the theater has a long straight bodice on which is appliqued at one side, near the hip, a large rose embroidered with crewels in shades of crimson and dark green leaves. A modernistic effect is introduced with bits of silver kid. The skirt is finely plaited and the sleeves, also plaited, are made in the full "bishop" model with narrow wristbands of crimson velvet ribbon. The narrow collar cut sailor fashion in front is finished with two jabot ends of the plaited silk, touched with crimson.

In a costume designed especially for the Riviera the creator departs far from the jumper type of frock. This is an ensemble of rose-beige kasha. The one-piece dress, slender in silhouette, is buttoned down one side from the hip to the hem. The sleeves are long and tight, fastened with buttons from the hand to the elbow; and a wide scarf of the kasha cloth is worn straight across the front of the bodice and crossed in the back where it forms a V neck-line. It is caught together with three buttons and hangs in loose folds almost to the bottom of the frock. With this costume is worn a close hat of kasha with a slightly rolled brim at the front and the fashionable high crown creased on the top.

Capes Are Smart.

Capes are very smart. The feeling for something to wear about the neck and shoulders, seen already in vogue of the scarf and shawl, has created demand for capes as a part of the costume. Vionnet has designed a lovely model for a young woman, in French blue. The one-piece frock is made simply, with a box-plaited flounce attached to the untrimmed blouse. The coat, which is cut exactly the same length as the frock, has a deep rolled collar and a cape. In evening dress some charming costumes are shown, usually of crepe, chiffon or georgette, in which the cape affords grace and a slight protection against evening cool. An elaborate ensemble from a Paris house of prestige has a softly draped flaring gown of white chiffon and a long cape of the chiffon, gathered toward the front and caught with a large flower of white and silver gauze. Several new and attractive illustrations of the cape costume are of two materials. Taffeta in a delicate shade of green is used in one model, with chiffon alternating in wide bands around the skirt. It has a long circular cape made of chiffon in the same shade.

THE KITCHEN CABINET

Have a good hat; the secret of your looks
Lives with the beaver in Canadian brooks.
Virtue may flourish in an old cravat,
But man and nature scorn the shocking hat.
—Oliver Wendell Holmes.

GOOD THINGS WE LIKE

When eggs are plentiful and reasonable in price is the time to serve them freely. A poached egg on toast that has been well toasted and buttered is a breakfast dish which will appeal to almost any appetite. For a supper or luncheon dish an omelet or scrambled eggs will be liked.

Curried Eggs.—Cut three hard-cooked eggs into eighths lengthwise. Melt two and one-half tablespoonfuls of butter, add two tablespoonfuls of flour, stir until well blended, then pour on gradually, while stirring constantly, one cupful of milk. Bring to the boiling point and add one-third of a teaspoonful of salt, a dash of pepper and one-half teaspoonful of curry powder; then add the eggs. Turn into a shallow buttered dish, sprinkle with one-fourth of a cupful of grated cheese, cover with three-fourths of a cupful of buttered crumbs and bake until brown.

Vassar Eggs.—Finely chop two ounces of smoked dried beef. Add one cupful of tomatoes, one-fourth cupful of grated cheese, a few drops of onion juice, a few grains each of cayenne and cinnamon. Melt two tablespoonfuls of butter, add the mixture and when well heated, add three beaten eggs. Cook until the eggs are creamy, stirring constantly. Serve on squares of buttered graham toast.

Hot Egg Sandwiches.—Mince a tablespoonful of shredded onion and add to a tablespoonful of butter in a frying pan; when hot and partly cooked add an egg, fry until cooked and place on a piece of bread which has been warmed—not toasted; cover with another warmed slice well buttered and serve. An egg sandwich and a glass of hot milk or cocoa will make a good meal.

Hard-cooked eggs, chopped while warm, mixed with butter and a little mustard to season with salt to taste, make a most satisfying sandwich for any occasion.

Use Corn.—Now is the time for all good cooks to come to the aid of their country, by using plenty of corn—corn meal dishes, such as corn-meal mush, corn breads, corn and suet puddings, spoon bread and many other good things which will be easy to find.

Everyday Good Things.

Those who are fond of sweet potatoes will like this recipe:

Sugared Sweet Potatoes.—Select medium-sized sweet potatoes, pare and slice. Place these in a buttered dish—a casserole is best; add one and one-half cupfuls of water (boiling hot) and sprinkle with one teaspoonful of salt and four tablespoonfuls of maple sugar; dot with bits of butter, using four tablespoonfuls. Bake 30 minutes and then set into a pan of hot water to wait for serving time.

Eggs in Spinach Nests.—Prepare six rounds of toast, butter well and cover each round with cooked and seasoned spinach, making a hollow in the center. Drop an egg into the hollow of each nest and place the dish in the oven until the eggs are cooked. Sprinkle with paprika, dot with butter and sprinkle with chopped ham.

Cheese Sandwich Filling.—Prepare a white sauce, using two tablespoonfuls each of butter and flour and one-half cupful of milk. Put one-half of a can of pimentoes, two hard-cooked eggs, and one-half pound of cheese through the meat grinder; add one raw egg, one tablespoonful each of sugar and one teaspoonful of salt, with one-half cupful of vinegar. Cook over water until smooth and thick, after combining mixtures. Cool and use as sandwich filling for white bread.

Betrothal Sandwiches.—Cut white bread into one-fourth inch slices. Shape with a heart cutter, spread with pimento butter, put together in pairs, press edges lightly and decorate with small hearts cut from pimentoes, using the small vegetable cutter for this purpose.

Prune Relish.—Boil together one cupful of stoned and finely cut prunes with one and one-half cupfuls of water in which they have been soaking; add three tablespoonfuls of sugar, the juice of half an orange, one-half teaspoonful of ground cinnamon and two tablespoonfuls of currant jelly. Cook all together, adding the orange juice and jelly at the last. This makes a fine relish to serve with mutton or lamb, or with sliced cold roast. Raisins may be used with the prunes if desired, adding a different flavor. Prunes are one of our versatile fruits. They add to many dishes. A little prune pulp added to boiled frosting makes a delicious cake filling. Colored with a bit of flour, lemon juice and a few raisins, the filling is especially good for filled cookies.

HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this puzzle will spell words both vertically and horizontally. The first letter in each word is indicated by a number, which refers to the definition listed below the puzzle. Thus No. 1 under the column headed "horizontal" defines a word which will fill the white spaces up to the first black square to the right, and a number under "vertical" defines a word which will fill the white squares to the next black one below. No letters go in the black spaces. All words used are dictionary words except proper names. Abbreviations, slang, initials, technical terms and obsolete forms are indicated in the definitions.

HAS NEW IDEA OF THOUGHT TRANSFER

Thought can be transferred from the brain of a human being to that of an animal. A Russian scientist named Koshinsky claims he has accomplished this remarkable feat. Koshinsky, who has been studying hypnotism and telepathy for six or seven years, says he succeeded in transferring human thoughts to animals at a distance while he was inclosed in a specially constructed box made of iron. In addition to this, he says he was able to hypnotize the animals after they had been put in a box some distance from him. Koshinsky works upon the theory that physicial rays emanate not only from the brain but also from the entire nervous system of every animal organism. Once we thoroughly understand telepathy, asserts Koshinsky, we will be able to convey our thoughts by hypnotism to human beings without actually seeing them.—Pathfinder Magazine.

GENERAL SHERWOOD LOVER OF HORSES

The horse lost a good friend when Gen. Isaac R. Sherwood died recently, says the New York Herald-Tribune. The standard-bred, or trotting horse, had the warmest place in the affections of the late congressman from Ohio, though he was fond of a good horse of any sort, and for many years he drove one of the best pairs to be seen on the streets of Washington. He could drive with rare skill, and those with a love for a nice team well turned out, never failed to stop and follow with an admiring eye General Sherwood and his horses as they passed through the streets of the capital. Though past eighty years, he never lost an opportunity thus to take the air.

The horse has done much for many men in public life in their declining years. That hackneyed phrase about nothing being so good for the inside of a man as the outside of a horse, holds good with as much force today as when it was first uttered.

Knew Her Mother

The little daughter of an artist was playing on the porch of her home when a man selling colored postcards spoke to her. "Do you think your mother would like some of these?" he asked, showing her the cards. "No, I am sure she would not," was the decisive reply. "My father makes them."

Saving

Regular, systematic saving has kept away want and brought comfort to many an old age.

Taught Political Economy

The second professorship of political economy in the United States was instituted at South Carolina college, Columbia, S. C., where Thomas Cooper, professor of chemistry, had the subject added to the title of his chair in 1826. A professorship of similar sectional influence was that in political economy, history and metaphysics filled in the College of William and Mary in 1827 by Thomas R. Dew. The separate professorship of political economy, however, did not come until after the Civil war. Harvard established a professorship of political economy in 1871, Yale in 1872, Johns Hopkins in 1876.

Destructive Tourists

Tourists are responsible for the destruction of many of our young trees, says a state forester. "Automobilists," he says, "dig up young conifers for transplanting and usually carry them with roots exposed for great distances, expecting them to take root and grow. Most of them die. The practice should stop."

Protect Painted Floor

When painting mop boards or wainscoting or walls in general, lay a strip of paper on the floor, tight against the mop board to catch drops of paint. The paper can be moved along as the work progresses and, with reasonable care, no paint will reach the floor.

A Well Marked Trail

The road leading to easy street is littered with the trimmed remains of easy marks.—Flint Journal.

A Raw, Sore Throat
Eases Quickly When You Apply a Little Musterole

Musterole won't blister like the old-fashioned mustard plaster. Spread it on with your fingers. It penetrates to the sore spot with a gentle tingle, loosens the congestion and draws out the soreness and pain.

Musterole is a clean, white ointment made with oil of mustard. Brings quick relief from sore throat, bronchitis, tonsillitis, croup, stiff neck, asthma, neuralgia, headache, congestion, pleurisy, rheumatism, lumbago, pains and aches of the back or joints, sprains, sore muscles, bruises, chilblains, frosted feet, colds on the chest. Keep it handy for instant use.

To Mothers: Musterole is also made in milder form for babies and small children. Ask for Children's Musterole.

Jars & Tubes

MUSTEROLE
WILL NOT BLISTER
Better than a mustard plaster

Porcelain Traffic Lines

A new idea for making permanent white lines for use at street crossings and for the direction of motor traffic is to be tried out soon in London, says Popular Science Monthly. White porcelain studs are inserted in holes drilled in wood paving.

The studs are inserted in a line three abreast, making a strip of white wide enough to be seen easily. The chief advantage of the porcelain is that it is unaffected by weather, oil, or mud, and thus makes a line that cannot be erased by the constant beat of traffic.

If you use Red Cross Ball Blue in your laundry, you will not be troubled by those tiny rust spots, often caused by inferior bluing. Try it and see. —Advertisement.

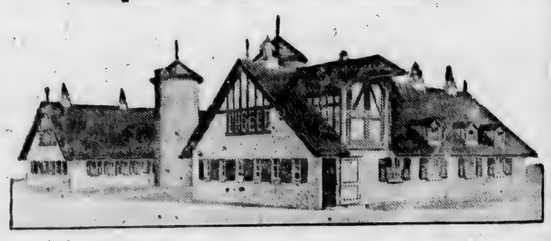
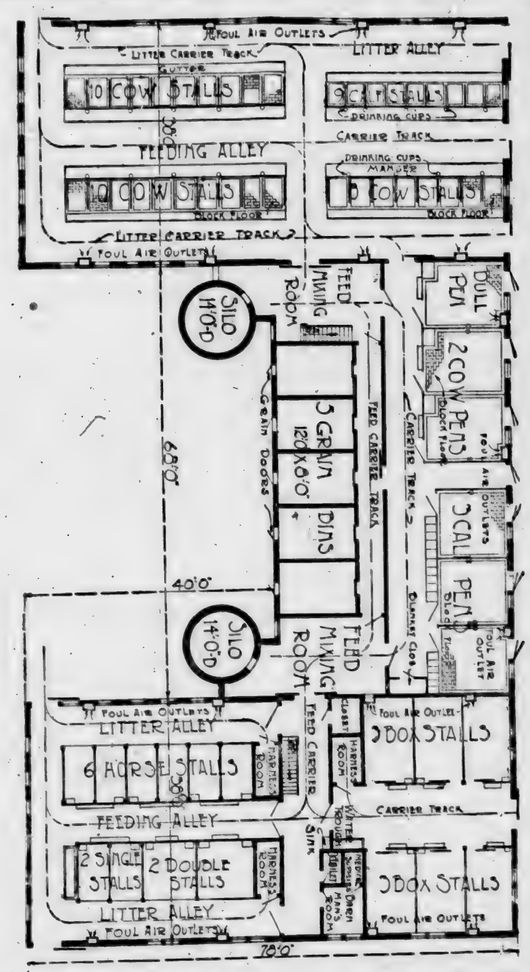
Attractive Buildings Not Expensive, Proper Planning Is Essential Point





By WILLIAM A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all problems pertaining to the subject of building work on the farm, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

While barns are primarily utilitarian buildings, and nothing should be done in planning them which will in any way interfere with their practical usefulness, it is not at all out of place to give a certain amount of attention to appearances. Nor need it be argued that this is useless or an unnecessary expense. In the first place an attractive appearance may be had with little if any extra cost by proper planning. In addition there is a very practical value in making these buildings attractive in appearance.

An attractive appearance for the barns is valuable for the same reason that it is valuable for a house. It makes life pleasanter and increases our efficiency to live amid pleasing surroundings. Attractive surroundings on the farm will be an influence in keeping the younger generation on the farm and it will also make the farm more readily salable and give it a greater sale value if at any time it is to be disposed of.

Just how much can be accomplished in making barns attractive at little expense is plain from a glance at this group. Here is a very complete farm plant built of concrete which has been made attractive by the use of good proportions, a small amount of timbering and the application of shutters to the windows. The effect is certainly worth the extra thought and cost.

Nor has the practical usefulness of this building been in the least affected. It is an excellent example of the well-planned and complete farm building. The structure is built in a "U" shape with each of the three sections serving a separate purpose, but with all so co-ordinated as to reduce labor to a minimum.

In each of the corners formed by the two end sections is a silo. These silos open onto two feed rooms which are a part of the central section and are directly connected with all parts of the building by overhead carrier tracks. Similar overhead tracks are provided throughout for the handling of litter.

The central section is devoted to grain bins on one side and bull, cow and calf pen on the other side. Each of the grain bins has an outside grain door and at one end of the center alley there is a blanket closet. Within one of the feed mixing rooms is a stairway leading to the loft above and there is a second stairway in one of the [illegible]tions.

This end section is a horse barn. It contains eight single stalls, two double stalls and three box stalls. There are also three harness rooms, a closet, toilet, and barnman's room with a special closet for medical supplies. As in all the sections the stalls are placed on each side of a central feed alley with litter alleys running along the wall back of each row. Every item of equipment is complete even to the provision of watering trough and a sink.

The section at the opposite end is the cow barn. Here are 37 cow stalls with the same arrangement of feed and litter alleys and equipped with drinking cups, gutters and every possible convenience and sanitary feature. The floors are blocks over the concrete of which the building is constructed.

All sections are most amply lighted by windows spaced along the outer walls and the ventilation is taken care of by a series of ventilating shafts which carry off all foul air through the roof ventilators.

Happy Medium Should Be Achieved in Landscaping

Because the ground surrounding the small house is usually rather limited in area, considerable care must be exercised in its improvement to obtain the best results. Frequently a person overzealous in his efforts to beautify will use too much in the way of shrubs and garden ornaments and the result is a heterogeneous mass that defeats the very object in view. On the other hand, too little is just as bad, as it is also poor taste in selection and arrangement. The ultimate goal should be a happy medium somewhere between these limits, which can be arrived at only through a careful study of the project.

New Type of Brick Provides Insulation

A new type of brick wall, known as the Ideal wall, was tested and found to be satisfactory recently in Detroit. The bricks are laid in such a way that a hollow wall is formed with air chambers which act as an insulating medium against the cold in winter and the heat in summer. The method of construction results in a decided saving in labor costs and was evolved by the Common Brick Manufacturers of America.

Iron Lanterns

An arrangement of side lights as novel as it is pretty and practical is the hanging of electric-wired iron lanterns above the bookcases. Old brass candlesticks are wired for the lamp on the long table, shaded with dull gold silk shades finished on the edge with a bit of twisted silk [illegible]olors

WARNS POLICE WHEN DRIVER IS SPEEDING

Lieut. Martin Noonan of the bureau of public safety, police department, demonstrating the citizens' protective speed control. This device is connected with car gears. When going at city limit speed a green light is lit. When car moves faster, a red light appears and a horn connected blows continually. Flag shown in photograph denotes that the car is traveling at city limit speed; when turned vertical the car is traveling beyond that speed.

IMAGINATION IS AID TO DRIVER

All Sorts of Dangers Flash Before Him Which He Carefully Avoids.

"The man with imagination will have fewer accidents than the man without this quality," says Charles M. Hayes, president of the Chicago Motor club. "The motorist who can put himself in the place of the other driver will anticipate much trouble. The man with imagination will realize that the child at play on the sidewalk may suddenly decide to chase a ball out on to the street. He imagines all the possible dangerous situations that may arise. On a hill he knows that another car may be concealed over the crown, and consequently he does not attempt to pass cars going in the same direction. He knows that a fast-traveling car may be hidden from view behind some curve on a lonely country highway. His imagination builds rather pessimistic opinions of the ability of other drivers and of pedestrians, but this attitude is a safe one, if not a complimentary one to the rest of mankind.

Demands Wide Margin of Safety.

"The pessimistic attitude makes for an awareness in driving that countenances no lapse into automatic driving. The car is guided automatically, but the driver does not allow his subconscious mind to rule the wheel. He is aware of all that happens. He is prepared for unusual conditions and his pessimistic attitude makes him demand a wide margin of safety. The reverse of this attitude is seen in the actions of the optimistic driver who never has had an accident, and who thinks that if accidents are to happen they will come to the other fellow. This driver takes no account of unusual conditions. A rainy or snowy night will find him driving as fast as he would drive on a pleasant afternoon with vision unobstructed and the streets dry. The imaginative driver does not depend upon his horn. He knows that his brakes are more effective. He slows down when he sees a group of pedestrians, and he gives them the horn when he is several hundred feet away from them, which gives them sufficient time to act. But he slows down and if they do the unexpected he is prepared.

Education Is Needed.

"Laws and regulations will not instill this habit of caution into the minds of the motorists. Examinations will not weed out those lacking in imagination. If a man thinks that he is a specially favored darling of fortune no help is in store for him unless he deliberately changes his mental attitude. This changed attitude can be accomplished only by education."

Simple Little Trick to Make Rim Fit on Wheel

When a rim with tire is mounted on the wheel, it often happens that the rim cannot be moved into place, remaining partly on and partly off. Slight springing of the rim is all that is needed and this may be done by placing the head of a jack against the hub of the wheel, and the base of the jack on the protruding portion of the rim. Thus sprung a little, a hammer blow will slide the rim over the edge of the wheel. In most cases of this kind, the mere operation of the jack will force the rim over the wheel.

Tip Offered on Driving to Lower Repair Bills

When a car that is rolling along at a speed of 25 miles an hour strikes a stone or a bad bump, every vital and moving part of the motor and mechanism receives the impact of a blow of nine or ten tons in force. Not fully realizing this, many drivers continue day after day to drive merrily along, subjecting their cars to untold punishment when by simply avoiding the bad spots much trouble might be saved. If more care were taken in motor car driving cars would stand up longer and repair bills would be fewer.

Underinflation Blamed for Much Tire Trouble

Seventy-five per cent of the motorists' tire trouble, it is estimated, is due either directly or indirectly, to underinflation. When it comes to underinflation, don't guess. Use a gauge. It is only a matter of a moment's work, but it means dollars saved in tires.

When not properly inflated tires readily rim cut. Particularly is this true over rough places, where the rim chafes and bruises the fabric. Underinflation also means an unequal tension in the fabric plies making up the carcass, which results in chafing, fabric separation and ultimately in a blowout.

While it is quite true that an underinflated tire is more elastic and more resilient, the motorist pays dearly for this. Loaded, the underinflated tire, by reason of increased flinging action near the rim and at a sharp angle, is often more or less devulcanized or softened by the resultant heat.

It pays big dividends, in freedom from tire trouble, to rigidly observe the inflation pressure recommended by the manufacturer. It is so simple a matter, requiring only a moment, but the motorist has no one but himself to blame when he neglects to test his tire pressure with a guage.

If the motorist wishes to obtain the maximum mileage built into a tire he should pay heed to this timely warning against underinflation, according to tire men. Inflation is the first cardinal principle of tire conservation. If you do not have a tire guage, purchase one today. Even after trouble has begun prompt action in taking an injured casing to a tire surgeon for repair or the use of a tire gauge will greatly prolong the life of the casing.

Good Strong Spark Very Necessary in Winter

In cold weather a good strong spark is necessary. To insure having one, the tester illustrated is valuable. Use it either with dry cells or storage battery while adjusting the vibrator to

Simple Testing Board for Auto Coil and Spark Plugs.

give a high-pitched buzz and regulate the spark-plug gaps until the strongest possible spark is given. I find this apparatus of help in winter and summer.—Clyde E. Volkers, in Popular Science Monthly.

False Economy to Save Moment by Fast Driving

It is false economy to try to save a moment by reckless speeding. The attempt may result in a smash which will lay the driver up for several months and the car for several days, if death itself is not the price. Reckless driving is not a domonstration of skill, but an illusion of foolishness.

Hurrying to get ahead of a train, a street car or another vehicle saves only a moment or two at the ultimate destination and the gain is not worth the grave danger of paying the price of a serious and perhaps fatal accident.

There are certain safety rules of the road which the careful driver observes and these precautions should always be carried out. Slow up for all turns in the road. Blind corners are dangerous. When it is impossible to see what is coming around the corner it is well to be prepared to stop.

Easy Backing

Some drivers never do learn how to back into a small space. If the driver who has trouble in parking will set his front wheels perfectly straight, and then cut a notch in the steering wheel directly in front of the driver's position, he will ever afterward be able to back in without any trouble.

Stone Axes Thought to Be Prehistoric

Two stone axes which may prove to be among the earliest antiquities thus far found within the limits of the United States have been brought to the Smithsonian institution at Washington by H. L. Straight, a brick manufacturer of Adel, Iowa. These ancient implements are crudely shaped and were discovered under 25 feet of apparently undisturbed clay, according to the information given to Neil M. Judd, archeologist of the United States National museum, who is investigating the find. The digging of a trench for the laying of a narrow-gauge railway in the clay pits used by Mr. Straight led to the unearthing of the tools. On account of the possible importance of the discovery the Smithsonian institution is planning to send a geologist to make a careful study of the site to determine whether the axes are as antique as the depth of burial indicates.

"DIAMOND DYES" COLOR THINGS NEW

Just Dip to Tint or Boil to Dye

Each 15-cent package contains directions so simple any woman can tint soft, delicate shades or dye rich, permanent colors in lingerie, silks, ribbons, skirts, waists, dresses, coats, stockings, sweaters, draperies, coverings, hangings—everything!

Buy Diamond Dyes—no other kind—and tell your druggist whether the material you wish to color is wool or silk, or whether it is linen, cotton or mixed goods.

Wage Distribution

According to recent surveys the residents of the state of New York receive about fifteen per cent of the income of the country. Seven states—New York, Pennsylvania, Illinois, Ohio, Massachusetts, California and Michigan receive as much of the wages and salaries of the country as the rest of the states combined.—The Thrift Magazine.

DEMAND "BAYER" ASPIRIN

Take Tablets Without Fear If You See the Safety "Bayer Cross."

Warning! Unless you see the name "Bayer" on package or on tablets you are not getting the genuine Bayer Aspirin proved safe by millions and prescribed by physicians for 25 years. Say "Bayer" when you buy Aspirin. Imitations may prove dangerous.—Adv.

Lamping Them

Willie—I looked through the keyhole last night when May's fellow called on her.

Pa—What did you find out?

Willie—The electric light.—Good Hardware.

IMPROVED UNIFORM INTERNATIONAL

Sunday School Lesson

(By REV. P. B. FITZWATER, D.D., Dean of the Evening School, Moody Bible Institute of Chicago.)
(©, 1926, Western Newspaper Union.)

Lesson for March 7

JESUS WASHES THE DISCIPLES' FEET

LESSON TEXT—John 12:1-17.

GOLDEN TEXT—"The Son of Man came not to be ministered unto, but to minister and to give His life a ransom for many."—Matt. 20:28.

PRIMARY TOPIC—The Loving Service of Jesus.

JUNIOR TOPIC—The Loyal Service of Jesus.

INTERMEDIATE AND SENIOR TOPIC—Jesus Dignifies Loyal Service.

YOUNG PEOPLE AND ADULT TOPIC—The Spirit of Christianity Illustrated.

With this chapter we enter into the very holy of holies of the book, namely, the inner revelation of Christ to His disciples.

I. Jesus' Amazing Love for His Own (vv. 1-3). Jesus was fully conscious of what was upon Him. He knew that the cross with all its anguish was just before Him. He knew that His disciples would shamefully forsake Him within a few hours. He knew that one of that number would be the instrument in the hands of the devil in His betrayal. He knew that all things were in His hands—was fully conscious of His deity. He did not withdraw His love from them because of their weakness and the shameful failure which He knew would soon be made manifest. "He loved them to the end"—to the uttermost. True love does not consider circumstances or the shortcomings of the person loved.

II. Christ Washing His Disciples' Feet (vv. 4-11). This act is symbolic of His amazing love for His disciples. Jesus did not regard His hands too holy to do this menial service.

1. Steps in This Service (vv. 4, 5). (1) He arose from supper. (2) Laid aside His garments. (3) Took a towel and girded Himself. (4) Poured water into a basin. (5) Washed His disciples' feet. (6) Wiped them with the towel wherewith He was girded.

These steps symbolize Christ's work of redemption. His rising from supper represents His rising from His place of enjoyment in the heavenly glory. His laying aside His garments is putting aside His vesture of majesty (Phil. 2:7, 8). His girding Himself is taking the form of a servant in the incarnation (Phil. 2:7). The water in the basin, His cleansing blood. His washing their feet, their sanctification by actual cleansing men through His Word (John 15:3; Eph. 5:26). His taking His garments again, His return to His place and position of glory (Luke 24:51).

2. Peter's Impetuous Ignorance (vv. 6-9).

He goes from one extreme to the other. His failure to understand the significance of this service caused him to behave strangely.

3. The Significance of This Service to Those Who Participate in It (vv. 10-12).

(1) It Is a Spiritual Cleansing (v 8). Fellowship with Jesus is only possible as we are continuously cleansed from our sin. "He that is washed needeth not save to wash his feet but is clean every whit" (v. 10). The cleansing here is not the washing of regeneration (Tit. 3:5), but that of sanctification (John 17:17). Even regenerate people need the continual cleansing of Christ's blood in order to have fellowship with Him. He that is regenerated—washed in the blood of Christ (symbolized by baptism) does not need a repetition of the act; he only needs the cleansing of sanctification symbolized by the washing of the feet. After regeneration, as we go through this world we are contaminated by its sin.

(2) A Badge of Brotherly Affection. This act showed His abandonment to the service of His own. This is a lesson that is much needed today. We need more and more the fulness of brotherly love. Only can true love be proved by the service it renders.

(3) A Proof of Humility.

This was a lesson much needed by the disciples and much needed by us all. They had just been disputing as to who should be the greatest in the Kingdom. Their selfish motive was expressing itself. Christ's action was a concrete expression of His Spirit.

(4) Equalization.

As they would thus stoop to serve each other in the name of Christ, there would be the sure destruction of caste among them. Such service in the spirit of Christ is the great leveler of humanity.

III. An Example for Us (vv. 12-17). The disciples of the Lord are under obligation to do to each other as He did unto them. This obligation rests upon His Lordship (v. 14). All who call Him Lord in sincerity will obey Him.

God's Way

God works in a mysterious way in grace as well as in nature, concealing His operations under an imperceptible succession of events, and thus keeps us always in the darkness of faith.—Fenelon.

Unites and Stills the Soul

Let the current of your being set toward God, then your life will be filled and calmed by one master-passion which unites and stills the soul.—Alexander Maclaren.

SILK BOOM IS ON NOW IN CALIFORNIA

Revive Industry Started and Wrecked by Frenchman.

Sacramento, Cal.—California's silk industry, which is almost as old as the state itself and was launched by a Frenchman and wrecked by a Frenchman, today is being blown toward the port of prosperity by the fickle winds of French fashion.

The name of the "Forty-Niner" Frenchman who proclaimed California "The best silk-growing country in the world" while others were marveling at its wealth of gold, is little known in California itself. He was Louis Provost of San Jose.

The name of the Frenchman who wrecked the golden state's sericulture was Louis Pasteur, the great scientist.

By 1865 silk culture was thriving in several parts of the state and the following year silk-weaving machinery was ordered. A single nurseryman in Los Angeles by 1869 was offering 100,000 mulberry trees and cuttings for sale. Louis Provost himself had a plantation of fifty acres along what is now Main street in Los Angeles.

Then news came that Louis Pasteur, miracle-working scientist, had found a remedy for the silk worm blight and saved European sericulture. Orders for California eggs, which had been bringing $10 and $12 an ounce, diminished, then stopped entirely, deflating the state's booming silk industry.

The wide margin of labor costs in the Far East and in California still remained a seemingly insurmountable obstacle, but with the development of a new and greater silk market there began to enter another element; speed to satisfy fashion.

This aided the industry in California, for the new shade or design proclaimed by Paris could be transmitted to California by cable and the novelty placed on the counters of California stores while it still was a novelty.

College Records Plant Life of Southwest

Claremont, Cal.—Mounting of 76,000 specimens of the botanical life of southwestern United States, representing five years' work, has been completed by the plant department of Pomona college.

In making this announcement, Dr. Philip A. Munz, head of the botany department, declared the herbarium to be one of the largest in the country.

Two years will be required to mount the remaining 174,000 specimens which have been collected. Efforts will be made to mount 50,000 each year until the array of 250,000 varieties is completed.

Ranchers, amateur botanists and school teachers from all over the southwest visit the Pomona herbarium to identify new weeds or native plants. Special lines of study are conducted by students and teachers from virtually all sections of the country using research statistics gleaned from botanical specimens on exhibit here.

Women Fewer as Men Increase in Japan

Tokyo.—The female population of Japan with reference to the ratio to the male population, is decreasing, figures of the last national census disclose. The census gives the population of Japan proper (excluding Saghalien, Formosa and the South sea possessions) as 59,736,704, an increase of 3,700,000 in five years, or an average annual increase of about 750,000.

Of the total population 30,012,820 are males, exceeding the number of females by 288,036. This means 100 females for every 101 males. Five years ago the ratio was 100 females for every 100.4 males.

The density of the population is shown to be 157 for every square kilometer.

The city of Osaka leads all other cities in number of population, which is 2,114,809, followed by Tokyo's 1,905,303, Nagoya's 768,560, Kyoto's 679,976, Kobe's 644,212 and Yokohama's 405,888.

Cancer Did Not Kill Napoleon, Says Physician

Leeds, England. — Napoleon the Great did not die of cancer, declared Sir Berkeley Moynihan, a well-known surgeon of Leeds, addressing the Leeds Luncheon club.

"I have had the opportunity of examining the viscera of Napoleon and found that there was absolutely no trace of cancer," he said.

Sir Berkeley, speaking of the increase in cancer of the tongue, caused chiefly by smoking, said:

"At present women are almost exempt, but I think they have a future in that direction, in view of the rapid spread of the smoking habit among girls, their mothers and their aunts."

Beggar Hires Attorney to Protect His Rights

Dallas, Texas.—To protect his "constitutional" rights to beg, an aged man reputed to be worth $7,000, hired an attorney to defend him in court here.

The beggar was under arrest for the second time. Despite his attorney, however, he was fined and sent to the workhouse when he refused to pay. He declared he is saving the $7,000 for old age. He is seventy now.

Are you coming to see "Mr. Bob?" Junior class play given at the Christian church, March 5-6 at 8:00 P. M. Admission 20 and 30 cents. Come.

W. E. Draggoo of Morristown, New Jersey, sends us a check to advance his subscription to March 1, 1927. He stated that it was 31 years last Friday that he left Indiana.

DO YOU KNOW
That I have been located in the city of Butler, Indiana, for thirteen years in the practice of fitting glasses?

DO YOU KNOW
That I sell better glasses for less than what some people sell cheap glasses for?

DO YOU KNOW
That I sell only standard merchandise that is seldom sold only by high priced houses who charge more than the average person can afford to pay?

DO YOU KNOW
That every pair of glasses that I sell is guaranteed and that if they are not satisfactory in every way, that I will give every cent of money back that you have paid me?

DO YOU KNOW
That several residents of ST. JOE have bought glasses of me in the past years and that our dealings are satisfactory or they would not continue to send their friends here. The next time you need your eyes tested for glasses it will pay you to call at my office and get your eyes fitted correctly for good comfortable vision that will also please both your eyes and pocketbook.

Hardware RADIO Implements

SPORTING GOSSIP

Spencerville closed its regular basket ball schedule last Wednesday night with a 25 to 19 win over Woodburn, the team that beat the Allen county champs. Therefore, Spencerville can beat the Allen county teams all hollow. The game was well played, fast and clean. Nothing was left to close the season brilliantly. The Spencerville boys can surely be proud of their season this year—fifteen games played, eleven won. The team has made a total of 335 points against its opponents 293. Howard Beams has been high point man with 122 points, Gale Bowser has totaled 78, George Wilmot 77 Harold Furnish 44, and a few scattering points among Vallieu and Rhoades and Hollobaugh—Hollabaugh's few points in one game won the game. The season has been successful. Next year's season should be successful. Two men will be lost to the team, but two men on the present team will be much riper in experience, and two others will be playing a brand of ball that will be hard to beat. Others will come in next year that should make the team a fine team.

The tournament is at hand. Spencerville meets Waterloo in the second game--3:00 Friday afternoon. Spencerville has both lost and won a game with this team, so the scrap should be an interesting one. After Spencerville has weathered this game it will have to meet the winner of the Angola--Fremont fray. The hopes of the Spencerville team lie in that both of these strong teams will simply kill each other off in the game at 4:00. Orland should pick Corunna off at 2:00, Garrett is easily picked to beat Ashley at 7:30 and Auburn will use its reserves and win from Butler at 8:30, all on Friday afternoon and evening. Saturday morning Pleasant Lake should win from Orland, and then will come the game between Spencerville and Fremont or Angola. We expect it to be Fremont, though there is no certainty to that. Should either team win Spencerville will have a hard fight at 10:00 to be turned the winner. At 2:00 Garrett and Auburn will tangle in the semi-finals. Auburn will win this after a good hard fight. Spencerville or Fremont will make easy picking of Pleasant Lake in the semi-finals. The finals will lie between the following three teams, Spencerville or Fremont versus Auburn. We will just have to wait and see what happens next Friday and Saturday.

Its now McCall Needlework and Decorative Arts and its a fine magazine for the suggestions of home furnishings. Now on sale at News office.

The attendance at the Methodist Sunday School on Feb. 21 was 89; collection $6.00. Lutheran Sunday School, attendance 68; collection, $1.12.

Mrs. Virgil Perry visited M. E. Leighty and wife at the county farm this week. Mrs. Leighty has been quite sick and as soon as she recovers will go to hospital for rest.

Patterson-Fletcher's Great Three-Day Sale

Three days to be remembered by all people in Northern Indiana. This store will do things for just three days that even our thousands of steady customers, when they read about them, will say, "Can it really be possible."

People who do not know that this is "The Store That Does Things," will say "Outlandish," "Ridiculous," "What is the matter with the Better Business Bureau," etc.

We say at this time—this great business has been built on TRUTH. We have offered and still offer $50 to anyone who will find an untruth in our advertisements.

"HERE IS OUR STORY IN A NUT SHELL"

We have just passed through three of the greatest months this store has ever known—doing thousands and thousands more business than we have ever done before. Our spring merchandise will be placed on sale next Monday. Our Half-Price Clothing was nearly all sold, but we have about eight hundred fine staple Overcoats—Kerseys, Meltons, Niggerheads, Montagnacs, Crombies, etc. We have about as many staple Suits left—blue serges, blue cheviots, blue unfinished gray serges, brown serges, gray unfinished, staple Scotches, cassimeres and silk mixed worsteds, besides about 100 of our choice young men's suits.

During the next three days Patterson-Fletcher's will take this lot of fine Suits and Overcoats and give you your choice of any two garments in the lot for the regular price of one—plus $1.00.

Throughout the store many lines of merchandise will be offered at prices so low that they are almost unbelievable, but Patterson-Fletcher's never carry merchandise for one season to another and during these three days, they have marked remaining lines of seasonable merchandise at prices that will clear their shelves and counters.

How Butter Fat in Milk Is Broken Up

Do you know what the word homogenization means?

Ninety-eight out of 100 housewives to whom the question recently was put admitted they couldn't answer. Can you?

But here it is explained by Miss Meta H. Given food authority doing research work at the University of Chicago.

Fat Globules in Raw Milk.

"Homogenization," says Miss Given, "is the name of the process which breaks up butter fat in evaporated milk into tiny particles so, they blend evenly with the solids. Homogenization causes the butter fat globules to adhere to the albumin and the casein of the milk. In the process, milk is forced through countless numbers of openings at a pressure of around 3,500 pounds.

"In addition to preventing a cream and skim milk line, this breaking up of fat contributes to smoothness and perfect blending of foods such as cream sauces, soups, ice cream and in baked products.

"It also has a digestive advantage for those who have difficulty in assimilating milk. Many pediatricians recommend evaporated milk as a baby food, although, like other substitutes for the natural supply, it should not be considered as a food complete in itself. Addition of orange or tomato juice, barley water or lime water are important in providing adequate diet for the infant.

"All authorities recognize that normal mother's milk is the best food for infants, but this natural milk is frequently inadequate in quality and quantity. Scientists say cow's milk is the best substiture. But cow's milk must be modified and supplemented with other foods. The fat in mother's milk is in homogeneous suspension and being flocculent forms small curds in the stomach, but the fat in cow's milk is in relatively large globules, forms large tough curds in the stomach and is much harder to digest. In evaporated milk the fat is broken up by homogenization and the curds softened until in size and digestibility they resemble natural infant food."

Globules After Homogenization.

BILL BOOSTER SAYS

He Saved, Why Shouldn't You?

In the days of Washington, saving money was more difficult than in the present. Yet he did save under conditions impossible nowadays. He saved because he believed it to be a good thing to do. Why shouldn't you.

If you are not taking advantage of our service, you're missing something.

Two Letters

The first written twenty years ago, the second recently by Mrs. J. H. Bourland, Frankston, Texas.

June 2, 1904, she writes:—

"For twenty-three years I was a constant sufferer from chronic catarrh. I had a severe misery and burning in the top of my head, a continual dropping of mucus into my throat causing frequent expectoration. My entire system became involved and I grew worse. It seemed as if I could not recover from a constant cough and frequent attacks of bilious colic. My bowels were affected, causing alarming hemorrhages. I tried many remedies and finally took Pe-ru-na. In three days I was relieved of my bowel trouble and entirely cured by five bottles. I most cheerfully recommend Pe-ru-na."

June 30, 1924, Mrs. Bourland writes again:—

"I will soon be seventy-nine years old and enjoy good health for one of my age. I still recommend Pe-ru-na and take it myself when necessary."

For more than half a century Pe-ru-na has a proud record of good done. Men and women the world over stand ready to testify to its value in the treatment of all catarrhal disorders.

Send 4 cents postage to the PE-RU-NA COMPANY, Columbus, Ohio, for book on catarrh.

Pe-ru-na in either tablet or liquid form sold everywhere.

Peterson's Ointment

"All pimples are inflammation of the skin," says Peterson, "and the best and quickest way to get rid of them is to use Peterson's ointment." Used by millions for eczema, skin and scalp itch, ulcers, sore feet and piles. All druggists, 60 cents.

The Valley of Voices

By GEORGE MARSH

Author of "Toilers of the Trail," "The Whelps of the Wolf"

(W. N. U. Service.) (Copyright by the Penn Publishing Co.)

CHAPTER VIII—Continued

—13—

"Is this the same one we heard at Walling River?"

"Mebbe. Mebbe 'nodder one. 'Jibway say plenty ov dem een valley ov de Walling."

"But what do you think, Michel?" demanded Steele hotly. "Here I am, with David, giving up my time to help you run this thing down and, if possible, save the post for St. Onge; and you don't trust me. Why don't you open your heart to me?"

Michel straightened and going to the small fire David had built on the beach, calmly examined his tattered shirt and trousers, as he dried out.

"You are good man, M'sieu Steele. Daveed tell me, but I have de eye to see. W'en you come back on de snow, I tell you somet'ing."

That was all, and Steele understood. It was evident that Michel had bound himself to secrecy. But why had he told David?

"In the morning we must hunt for a trail," Steele said, philosophically bowing to the inevitable. Now we'll have to do what we can to quiet those poor squaws."

As the canoe landed on the beach below the silent tipis, one by one, dark shapes of Indian dogs slunk from the adjacent scrub, tails between legs, to whimper at the feet of the men.

"Scared stiff," said Steele. "And from the sound the squaws are worse. Go and talk to them, Michel. Tell them it was a mad wolverine or lynx and we've hunted it out of the country. I'll get a fire going while David brings some tea from the island. It will cheer them up—the tea."

But both his patience, and his knowledge of the woods Indian's belief in the supernatural, were taxed to the uttermost before Michel succeeded in convincing the women that the Windigo they had heard on the ridge was not now luring them to their doom with the assumed voice of the headman of Walling River.

In the end, they crept from the tipi to the friendly light of the fire, horror in their shifting eyes, gray-faced children clutching their skirts. There, comforted by the tea, and heartened by the presence of the three men, who kept a huge fire going, the circle of stricken women passed the night.

In the opinion of Steele, who kept vigil with his pipe, beside the snoring David and Michel, rolled in their blankets, the coming of the beast to Big Feather before the freeze-up, was the gravest menace which the fortunes of Walling River post, and the girl who had given him until spring to accomplish the impossible, had yet encountered. For, as a forest fire runs in dry timber, so rumors of the howling of the Windigo at Big Feather would travel from hunter to hunter through the upper valley of the Walling. The tale would spread, gathering horror as it went as a snowslide gathers momentum, until in time the whole region learned that a Windigo was loose in the valley of the Walling—a fiend fierce beyond belief and hungry for the flesh of the Ojibway. Then would follow, unless the beast were killed and the terror ended, swift exodus from the valley of the families still trading at the post, the resurrection and revival of the ghastly traditions surrounding the rapids and the river below—the end of the St. Onges and the post at Walling River.

Steele's teeth bit savagely into the stem of his pipe. This might happen before the freeze-up, and until the snow made it possible to follow a trail, there was small chance of solving the mystery of the night walling.

Now, Steele mused, when the men returned from their hunt to hear of the voice in the night from the circle of half-demented women cowering there around the fire, the tale would straightway travel to the four winds, and hardy indeed would be the hunter who would drive his dog team this Christmas down the white valley of the Walling to trade at the ill-fated post. With no Christmas, and little prospect of a spring trade, unless the mystery were solved by the running down of this beast with the miraculous vocal cords, Walling River was doomed. Even if Denise married Lascelles in the spring, the post could not be continued under a taboo.

True, St. Onge had sworn that she should never make the sacrifice, but the factor was at his rope's end, and she would override him. She would not see him disgraced. Her pride would drive her to it—that fierce pride of race. She was a thoroughbred and would go to her spiritual death with a high head, in the spring.

In the morning Michel would go in search of the caribou hunters, for after that night the women would not remain alone at Big Feather. David would cross to Portage lake to learn if the Windigo had been heard on the Little Current. He, himself, would cover the country back of the ridge for a trail which he had little hope of picking up, and endeavor to hold the women at their camp until their men returned. On the return of David they would at once start for Nepigon, leaving Michel to meet the canoe St. Onge was to send.

With Michel would go two letters, explaining his change of plans. The sole hope of holding the Indians now was in scotching the Windigo terror early in the winter by tracking down the beast on the first snow; and so, strongly as his heart drew him toward the post, he made his decision.

CHAPTER IX

For three days Steele searched the ridge and back country for tracks, but without success. David returned from Portage lake with the good news that the fishing camps were taking large catches of pike and whitefish, and there was no Windigo gossip. So, in spite of the shrill protests and indignant refutation of their squaws, Steele, corroborated by his men, assured the Ojibways that what the women had heard on the burnt ridge was the caterwauling of a lynx, and at once started with David for Ogoke lake and the Nepigon.

It was on a windless day in the heart of the northern Indian summer that the canoe bound south for the Nepigon approached the islands guarding the east end of Ogoke. Like silhouettes of anchored battle fleets they rode the sleeping lake, their fighting tops and stacks of black spruce, their armored hulls of age-worn rocks.

"Where is the post, David?" asked Steele.

"Four—five hour paddle, yet. Eet lie on long spruce point. You see eet today ver' far off."

"You realize that you can't start anything at Laflamme's place now, don't you?"

Repeatedly, David's square shoulders leaned to the stroke, as his arms swept the blade through, before he turned his black head to his chief.

"David has waited ten year, he can wait leetle tam longer. We got plenty

"It Looks as if the Whole Outfit Is Out to Meet Us."

troubles dees long snow on de Walling. Daveed weel wait; you not worry for heem."

"I knew you wouldn't do anything when we have this work down river ahead of us; but I realize that it will be hard, if we stay a day or two, for you to keep your hands off of him. His gang would get you anyway if you did square it with Laflamme, and that would put me in a hole as well."

The reticent David had never divulged even to Steele the cause of the ancient grudge he bore the free-trader. He had said simply that he wished to meet him—had twice journeyed far for that purpose; once missing him, the second time finding him camped with his fur canoes. As David had no quarrel with Laflamme's men, who would have come promptly to the aid of their chief, he had bided his time. In some way, years before, Laflamme had injured the Ojibway. That was the extent of Steele's knowledge.

Gradually, as they approached, the clearing opened up and the buildings of the fur post took shape. So keen was his curiosity that Steele ceased paddling to examine them through his binoculars. Here lived the man who was waiting until the snow flew for St. Onge's answer to his offer of a partnership in the trade for the price of Denise, the man who was luring the Ojibways for hundreds of miles with his whisky.

Although the freeze-up was little more than a fortnight away, tipis squatted, here and there, on the post clearing. This, of itself, meant but one thing to the man who held the glasses—whisky. For, throughout the wide north, September finds the hunters on their winter trapping grounds, preparing for the coming of the long snows.

"Wal, w'at you t'ink ov dat place?" asked David, as Steele put his glasses in their case.

"He must have a lot of people there—big buildings, too."

"Yes, eet ees beeg place."

As they approached the long point, Steele was surprised at the number of people moving about the buildings. On the beach the post dogs already awaited the strange craft, while a group of post people formed behind them. The canoe was close in shore when two men left the massive tradehouse and drifted to the log landing stage, off which a York boat rode at its mooring.

"It looks as if the whole outfit is out to meet us."

David turned a grim face to his chief. "Somet'ing strange here!"

"They may think we're a police canoe," suggested Steele.

"Ah-hah!"

"Is that Laflamme talking to the big fellow on the landing?"

"Ah-hah! He don' talk lak' dead man." So low were the sinister words spoken that Steele, in doubt, asked:

"What's that?"

The Ojibway turned to his chief a face twisted with hate.

"He don' know—he ees—dead man!"

"Some day you can settle with him—but not now, nor now! We have a job on the Walling—you and Michel and I," hastily objected Steele, fearing this meeting with the man he hated had jarred David off his mental balance.

The set features of the Ojibway relaxed. His narrow eyes glowed as he reassured the man who trusted him. "Daveed promise to meet Michel on de November snow. We have de beeg job—you an' Michel an' Daveed; I mak' no trouble here, boss."

Under the inspection of many pairs of curious eyes, the canoe slid into the beach. Leaving David to keep the dogs off the canoe, Steele walked through the silent huskies who instinctively drew back from his approach and closed in behind him, walking on stiff legs barely out of reach of the paddle he carried, awed yet threatening. The bulky half-breed, whose sinister face wore the red gash of a scar from chin to ear, Steele dismissed with a glance, but nothing, from the heavily beaded moccasins of smoke-tanned moosehide, to the wide-brimmed stetson of the free-trader, escaped his appraising eye. To his surprise, also, the dark features which met him with a look both surly and questioning, were undeniably handsome.

"Good day, gentlemen!" said Steele affably, ignoring the coolness of his reception.

"Good day!" returned Laflamme coldly, probing the smiling face of the stranger with a sharp look in which doubt and concern patently mingled.

"I am headed for Nepigon, from Fort Albany, and need some supplies," went on Steele. "Can you sell me some stuff?"

With a curl of the lip Laflamme replied: "That depends on what your business is on this lake."

The tawny-haired American laughed in the face of the speaker.

"Business on this lake? Are you joking? You seem to have all the business here. My business is to get back to New York before I'm frozen in, and report to the American Museum of Natural History. I've spent the last five months on the Albany, collecting. Now, I'm bound for Nepigon and the railroad."

The half-breed and his chief exchanged looks. Steele realized that he was suspected of being a government agent in disguise, so, as he needed supplies and wished to study Laflamme while David circulated among the post people, he desired to relieve the mind of the free-trader at once.

"You say you're from the States—doing collecting among the Indians? I should be glad to see some of your stuff."

Laflamme was taking no chances, and Steele welcomed the opportunity to establish his identity.

"Yes, I've two packs in the canoe. My name is Steele. I've been on the Albany two years—left a thousand pounds this year, at Fort Albany, to go out by boat." Then he hazarded: "You know Lascelles, the Revillon man there?"

Laflamme's reaction to the remark was instantaneous. His face darkened with anger.

(TO BE CONTINUED.)

Tragedy of Razor Blades

Those who are puzzled to know what to do with used safety razor blades may find a hint in the following, says the London Mail. A young and pretty girl approached Battersea bridge. She held something tightly in her left hand. When she reached the middle of the bridge she stopped and looked around.

Only one man was anywhere near, and he, apparently, was not paying any attention to her doings. In a flash she raised her hand and flung something into the river below. It glittered and shone as it fell, and the man, gazing over the bridge in curiosity, saw that it was a small glass phial of the sort in which powdered bath salts are sold, twelve in a box. His curiosity overcame him, and he overtook the girl. "Do tell me what you threw into the river," he begged. "My husband's razor blades," was the astonishing answer.

IMPROVED UNIFORM INTERNATIONAL

Sunday School Lesson

(By REV. P. B. FITZWATER, D.D., Dean of the Evening School, Moody Bible Institute of Chicago.)
(©, 1926, Western Newspaper Union.)

Lesson for February 28

JESUS TEACHES RESPECT FOR LAW.

LESSON TEXT—Matt. 22:15-22; 34-40.

GOLDEN TEXT—"Ye think that I am come to destroy the law or the prophets. I came not to destroy but to fulfill.—Matt. 5:17.

PRIMARY TOPIC—A Lesson on Obedience.

JUNIOR TOPIC—Obeying the Law.

INTERMEDIATE AND SENIOR TOPIC—Obeying the Law.

YOUNG PEOPLE AND ADULT TOPIC—How to Secure Respect for Law.

It is to be regretted that the lesson committee introduced this lesson, important as it is, thus breaking up the unity of instruction in the Gospel of John. Teachers who prefer to continue in John would do well to choose John 12:1-11 as the alternative lesson.

I. The Tribute Money (vv. 15-22).

The Pharisees and Herodians proposed to entrap Jesus and bring Him into conflict with the Roman government so they came to Him with a subtle question—"Is it lawful to give tribute to Caesar or not?" At this time the Jews were galling under the yoke of the Roman government. Some even denied the right to pay tribute to the government. To have answered this question yes or no would have involved difficulty. To have answered yes would have conveyed the impression of endorsement of all that the Roman government did. To have answered no would have at once brought Him into conflict with the government. Christ's reply to this question, properly understood and applied, is the final word on the subject. Until the civil authorities demand of us that which is a violation of God's law, we are bound to render unto them obedience. "Render unto Caesar the things that are Caesar's" means that within the realm of the right of government the Christian should yield glad and full obedience. "Render unto God the things that are God's" means the highest obligation. Since enjoying His protection and care, it is our duty to own all allegiance to Him, to yield our lives to Him in service, worship and praise. Everyone who enjoys the benefits of civil government is obliged to pay the taxes which are necessary for the support of that government, and everyone who receives God's favor is placed in like obligation unto Him.

II. The Great Commandment in the Law (vv. 34-40).

1. The First Commandment (vv. 34-38).

"Thou shalt love the Lord thy God with all thy heart, with all thy soul and with all thy mind." This means that supreme and undivided love to God is the first and great commandment. Man's supreme obligation is to God. It is wrong to evaluate man's character on the basis of his morality as expressed in his relation to his fellowman. Real righteousness is doing the right thing with God. The greatest immorality of which a man can be guilty is his failure to respond to the demands of God. The one who does not supremely and with undivided affection love God is the greatest sinner.

2. The Second Commandment (vv. 39-40).

The second commandment is like unto the first in that it centers in love. It is not said that it was equal unto the first; that would not be true. A man may love himself, but not supremely. One's love for his neighbor may be either too much or too little. The measure set is love for self. We should love God better than ourselves. He is worthy of all our affections, and demands all. Love is not mere emotion, but a supreme desire for the welfare of another and a willingness to do everything possible to secure that end. The command to love our neighbor is involved in the command to love God. To pretend to love God is folly if we do not love our neighbor. To attempt to establish a brotherhood among men without the recognition of the fatherhood of God is utter nonsense. Men become children of God by faith in Jesus Christ. It is true that in the sense of being God's creatures, all men are God's children, but in the New Testament sense, men are only God's children as they are in Christ. The only way to bring in the brotherhood of man is to preach Jesus Christ to the race and secure acceptance of Him. We thus become brothers in the real sense of the term when we have God as our Father. All obligation resting upon man is embraced in these two commandments. Those who conform their lives to them are God's children and are the very best citizens.

Go and Come

There is a mighty go in the gospel as well as come. It is come, go. Go, preach and heal; go, home to thy friends; go, into the highways; go, into all the world. Many Christians do not obey; many churches have no blessing, because they do not go.—B. F. Jacobs.

The Wealthy

When a man begins to amass wealth, it is a question as to whether God is going to gain a fortune or lose a man.

Father John's Medicine

BEST FOR COLDS AND THROAT TROUBLES

NO DRUGS

OVER 70 YEARS OF SUCCESS

Insect Destroys Pines

In the last few years tens of thousands of American trees—enough to build thousands of homes—have been destroyed through the invasion of the great Pacific forests by the pine beetle, an insect that in less than one year can ruin the mightiest pine tree, says Popular Science Monthly.

Evidence recently submitted to the United States senate committee on public lands showed that in a single section of 1,000,000 acres in Klamath county, Oregon, lumber destroyed by the pests would have been enough to build not less than 8,000 American residences of an average cost of $12,500 each.

Pesky Critters

"How's your hens doing, Zeb?"

"Darn poor. They're all taking a lay off."—Dartmouth Jack O' Lantern.

Mrs. Scovill Speaks

Freeport, Ill.—"While I have taken some of nearly all Dr. Pierce's medicines at different times and they always were first class, I can especially speak of the 'Favorite Prescription,' having taken it as a woman's special tonic, and it was excellent.—Mrs. E. Scovill, 851 Elk St. All dealers. Large bottles, liquid $1.35; Tablets $1.35 and 65 cents

Your health is your most valuable asset. So why not get this Prescription today from your dealer, or write Dr. Pierce, President of the Invalids' Hotel, in Buffalo, N. Y., for free medical advice.

Bird Well Nourished

They do these things better in Canada. An employee in Alberta was presented by his employers with a turkey at Christmas. While it was being prepared for the festive board, three gold nuggets, valued at $10, were found in its crop. As might be expected, the feeding place of that bird is being kept a profound secret.—Christian Science Monitor.

Its Color Changed

"Didn't I tell you to get white bread?"

"That's white bread, mum, but I dropped it on the way home."

Possession means to sit astride the world instead of having it astride you.—Kingsley.

DR. W. B. CALDWELL AT THE AGE OF 83

Constipation! How to Keep Bowels Regular

To Dr. W. B. Caldwell, of Monticello, Ill., a practicing physician for 47 years, it seemed cruel that so many constipated men, women, children, and particularly old folks, had to be kept constantly "stirred up" and half sick by taking cathartic pills, tablets, salts, calomel and nasty oils.

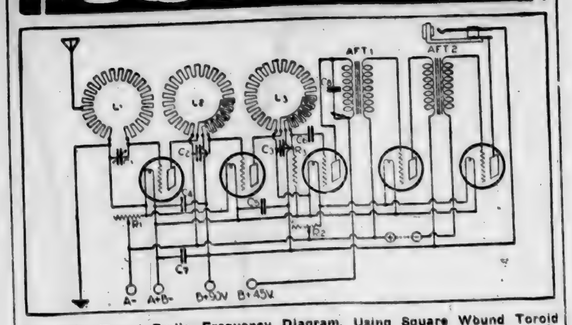
While he knew that constipation was the cause of nearly all headaches, biliousness, indigestion and stomach misery, he did not believe that a sickening "purge" or "physic" was necessary.

In Dr. Caldwell's Syrup Pepsin he discovered a laxative which helps to establish a natural bowel "regularity" even for those chronically constipated. Dr. Caldwell's Syrup Pepsin not only causes a gentle, easy bowel movement but, best of all, it never gripes, sickens, or upsets the system. Besides, it is absolutely harmless, and so pleasant that even a cross, feverish, bilious sick child gladly takes it.

Buy a large 60-cent bottle at any store that sells medicine and just see for yourself.

Dr. Caldwell's SYRUP PEPSIN

RADIO



Five-Tube Tuned Radio Frequency Diagram, Using Square Wound Toroid Coils and Straight Line Frequency Condensers.

By CARLTON E. BUTLER,
Member American Institute of Electrical Engineers and Institute of Radio Engineers.

Changing conditions make new radio circuits necessary. A few years ago the single circuit and ultra audion receivers were satisfactory and were capable of bringing in distant stations with volume. Today the same sets cannot be used, except in isolated districts away from broadcasting stations, due to their broad tuning qualities.

The receiver of the earlier day is no longer satisfactory for other reasons, principally on account of its squealing and radiating qualities and because its tone quality is poor and distorted. At the last radio conference in Washington it was agreed that in the near future the use of radiating receivers would have to be ended, even if it became necessary to pass a federal law to accomplish that result.

Today, with modern laboratory standard apparatus available, and with sets of better design, the quality attains the standard demanded by lovers of music.

The R-4 circuit, as developed for use in a new receiving set, is a good example of present day design. The most popular form of circuit was selected—the five tube tuned radio frequency—and by the use of the latest type of condensers, coils, and transformers, together with improvements in the circuit, produced a receiver that is capable of tuning through interference, bringing in stations from a distance on the loud speaker, and surpassing many receivers for all around performance and quality of tone.

To Shut Out Stray Currents.

Noteworthy of the improvements in the circuit are two by-pass fixed condensers, between the primary of each of the first two radio frequency transformers and the filament. This serves to by-pass and keep stray radio frequency currents out of the rest of the wiring, and stabilizes the circuit. A large condenser is placed across the "B" battery terminals to reduce noises and howls due to long leads or low voltage.

Refinements in apparatus include the new square wound toroid coil, with the new straight line frequency condensers which provide shielding of electromagnetic lines of force, as well as keep the instrument dustproof, a mighty important detail.

The toroidal coils eliminate the spraying effect of magnetic lines of force within the set proper, and remove the principal bugbear that radio engineers have been working for years to solve. The coils have self-contained fields that make pickup of stray current impossible. Their use in the R-4 receiver makes a set that will tune through strong interference.

The variable condensers on the first and second stages of radio may be tuned by one control as in the manufactured receiver if desired. Three condensers and three dials may be used in the ordinary manner, however, without lessening efficiency.

The Parts Needed.

To construct the circuit you will need the following parts:

1 Square wound toroid coil, type T1 indicated on diagram as L1.

2 Square wound toroid coils, type T2 indicated as L2 and L3.

3 Straight-line frequency variable condensers, preferably the All-American shielded type C35, indicated on diagram as C1, C2, and C3.

2 Rauland lyric audio transformers, type R500.

3 .002 mfd. fixed condensers, indicated on diagram as C4, C5 and C8.

1 .00025 mfd. fixed condenser, indicated on diagram as C6.

1 1.0 mfd. fixed condenser, indicated on diagram as C7.

The rheostats should each be of six ohms capacity for the use of UV 201-A or C 301-A tubes, and the grid leak R3 should be two megohms. When using the new UX amplifier tubes, break the grid return of the last transformer and insert "C" battery of voltage recommended by the manufacturer.

The first rheostat is used as a volume control, to moderate signal strength to the desired extent. For most satisfactory operation, the correct setting of this control may be determined by trial, and then allowed to remain without further adjustment.

In addition to the apparatus named above, you will need five sockets, a 7 by 24-inch panel, baseboard or subpanel, wire, screws, solder, etc., to complete the set.

The terminals of the radio-frequency transformers are unmarked in the diagram. The first coil is a coupler, with two taps taken off for long and short aerials. Both taps are marked "A" and each should be tried and the aerial connected to the one that gives the best results. The other two taps are the secondary connections and marked in the regular way. The outside terminals of the second and third coils are the primary posts, the inside terminals being the "G" and "F" secondary terminals.

Three-Circuit Is Best Short-Wave Radio Set

An easy short-wave set to build is one on the order of the three-circuit set.

The tuner for this set is made from any good three-circuit tuner about 4 inches in diameter. The secondary consists of ten turns of No. 12 D.C.C. wire, the primary of four turns of the same size wire, the two being medium coupled. The tickler has 20 turns of No. 20 D.C.C. wire.

The secondary is tuned with a .0005 mfd. condenser as shown by the

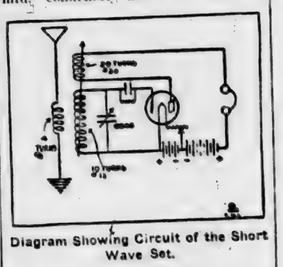


Diagram Showing Circuit of the Short Wave Set.

sketch. Another important point to note is in winding the tickler. To obtain the best results care should be taken to see that all turns are wound in the same direction and an even number of turns on each side of the shaft.

This set will receive approximately from 2,000 to 10,000 kilocycles, or from 40 to 150 meters. However, every set is different and in order to check your maximum and minimum wave-lengths you should obtain information from the standard frequency station as to when they send test programs, and with these signals you will be able to tell exactly what wave-length your set will cover.

In assembling a short-wave receiver keep in mind the fact that all leads should be just as short as you can make them. If you can get the advice or assistance of one of the many amateurs who have successfully built a short-wave receiver it will be of great assistance.—Philadelphia Record.

Straight Line Tuning Making Bid for Favor

The coming of the straight line frequency condenser and the later arrival of the S. L. F. dial converter has brought the subject of straight line tuning very much to the fore. The choice between the two instruments rests with the radio fan when he decides to simplify the tuning of his receiving set.

A straight line frequency condenser of the concentric plate type will solve the problem of obtaining simplicity in tuning by an electrical method and it is conceded that the best way of solving an electrical difficulty is by an electrical change.

The S. L. F. dial will afford one dial visibility and greatly simplify the tuning of short wave stations, and wherein a change of condensers would entail too much work, may be used. It must be remembered, however, that the S. L. F. converter dial is a mechanical device and therefore will not entirely solve an electrical problem.

To Avoid Body Capacity

A good general rule where the object is to avoid body capacity is to always make that terminal of the instrument to which your hand comes the closest when tuning, at or near ground potential. As most circuits are tuned by a variable condenser across a coil, the rotor plates should be the end connected to the filament circuit. The hand, in effect, comes closest to these plates since the rotor plates connect to the shaft and the shaft carries the dial.

Cut Down Distortion

Cut down distortion by hooking a variable grid leak across the secondary of the second audio-frequency transformer.

Like this man, thousands of people grow hard to constipation only when it is too late.

"I'll tell you why they wouldn't insure you—"

"You allowed constipation to become chronic—until finally it resulted in organic disease.

"People don't realize how insidious constipation is. Its first effects are hardly more than annoyances—headaches, loss of appetite, sleeplessness and the like. But in time, as the body is subjected to continued intestinal poisoning, it may lead to high blood pressure, rheumatism, diabetes or even Bright's disease.

"Stop constipation if you wish to live long. Take a little Nujol every day—that will keep you regular."

Nujol relieves constipation in Nature's way

Constipation is dangerous for anybody. Nujol is safe for everybody. It does not affect the stomach and is not absorbed by the body. Medical authorities approve Nujol because it is safe, gentle and natural in its action.

Nujol makes up for a deficiency—temporary or chronic—in the supply of natural lubricant in the intestines. It softens the waste matter and thus permits thorough and regular elimination without overtaxing the intestinal muscles.

Nujol can be taken for any length of time without ill effects. To insure internal cleanliness, it should be taken regularly in accordance with the directions on each bottle. Unlike laxatives, it does not form a habit and can be discontinued at any time.

Ask your druggist for Nujol today and begin to enjoy the perfect health that is possible only when elimination is normal and regular.

Nujol

Truth lies at the bottom of the well—and anglers never go there to fish.

Falsehood is cowardice—truth is courage.—Bailou.

Get back that lost weight!

When you start to waste away to a shadow, when the color leaves your cheeks and your poor, tired legs will hardly hold up your weakened body it's high time you started taking a fine tonic and builder like Tanlac.

Tanlac will build you up and make you feel that life's worth living. Made from roots, herbs and bark gathered from the four corners of the earth and compounded under the exclusive Tanlac formula, Tanlac is just what the poor, starved body needs.

First of all it cleanses the blood stream and puts the digestive organs in order. You find, after a few days' treatment, that you want to eat. Pretty soon the welcome color steals back into your cheeks and the scales tell you that you're gaining weight. From then on it's only a short time until you're feeling fit as a fiddle.

Millions of men and women have taken Tanlac with great benefit. More than one hundred thousand people have written us glowing tributes to this wonderful tonic.

When you know it has worked wonders for so many folks it's folly not to take advantage of Tanlac's help yourself. Don't put it off another day. Get a bottle at your druggist's now and start the good work right away. Take Tanlac Vegetable Pills for constipation.

Saves Health and Business

"I was so played out that I had to give up sewing. Nervousness, severe headaches and sleeplessness nearly drove me wild. My energy was gone and I had no ambition.

"I was just on the verge of giving up when a friend suggested that I give Tanlac a trial. It was marvelous the way it strengthened my nerves and built me up. would like to see other sufferers benefit by Tanlac as I have."

Obituary

William Brown was born September 15, 1842 and departed this life February 2 , 1926 at the advanced age of 83 years, 5 months and 9 days old.

He was born at Akron, Ohio, moving from there they came to Laporte, Indiana, where they lived until the Civil War broke out. He enlisted in Company A , Regiment 151 Indiana Infantry in 1865 and served until the close of the war a few months later.

He married in 1861 to Cloa Disbrow and one son was born to them, Albert, who lives at Porter, Indiana.

Following the close of the Civil War, he was united in marriage a second time. Sylvia Staly was his second wife and they had five children, they are, Pearl Effie Jackson, who lives near Butler, Wm Baxter and Grant Marion, who live in Auburn, DeForrest Earl, who has preceded the father and Blanch Edna Sebring, who lives at Auburn.

For over half a century father and mother lived happily together Death came in and robbed the father of his companion January 8, 1917. They had lived in Auburn many years but following Mrs Brown's demise, the father moved to St. Joe to live.

While living in St. Joe he was united in marriage to Amanda Shafer, October 7, 1920. This wife died about a year ago and again he was left alone. His health gradually failed until he came to the home of Mrs Jackson, December 9th to make his home. It has proven to be his last home for the Angel of Death came and took his gentle spirit home last Wednesday.

He was a member of the Christian church. He was a good father and husband. He leaves to mourn his departure two daughters Mrs. Pearl Jackson, Butler; Blanch Sebring, Auburn; Albert of Porter and Wm B and Grant M of Auburn, eleven grand children and a host of friends and neighbors.

The funeral was held Saturday afternoon at the Newville Christian church, Rev. C H Havens of Muncie, officiating. Burial in Newville cemetery.

Sheriff's Sale

No 4638

In the DeKalb Circuit Court
State of Indiana.

AUBURN STATE BANK
vs
JONATHAN C. HART, ET AL

By virtue of an Order of Sale, to me directed and delivered by the Clerk of said Court, in the above entitled cause, I have levied upon and will expose for sale by Public Auction, at the Court House Door, in said County, between the hours of 1 to 4 o'clock P. M., of the 20th day of March 1926, the rents and profits for a term not exceeding seven years, of the following described premises, viz:

A parcel of ground bounded by a line commencing at a point sixty (60) feet south of the southwest corner of Lot numbered nine (9) in Block numbered five (5) in the Original Plat, in the Town of St. Joe, Indiana; thence south one hundred fifty (150) feet; thence east fifty (50) feet; thence north one hundred fifty (150) feet; thence west fifty (50) feet to the place of beginning.

And on failure to realize therefrom the full amount of the judgment, interest thereon and costs, I will at the same time, and in the manner aforesaid, offer for sale the fee simple of the above described premises. Taken as the property of the defendant to satisy said order of sale.

WILLIAM G. MORR,
Sheriff DeKalb County.
Atkinson & Husselman, Attys.

NOTICE OF THE SALE OF BONDS

Notice is hereby given that the Trustee of Concord School Township, DeKalb County, Indiana, will offer for sale to the highest bidder, $35,000.00 par value of the bonds of the said Concord School Township, at the hour of 10 o'clock A. M. on the 20th day of March, 1926, at the school house in the town of St. Joe, said DeKalb County, Indiana.

Said bonds to be for the aggregate sum of Thirty-five Thousand ($35,000) Dollars and shall bear interest at the rate of 4½% per annum payable semi-annually, to be issued in Thirty series. Each series shall consist of two bonds numbered "One" and "Two;" each bond shall be for $588.33. Series numbered One shall be due on the 1st day of July 1927, series numbered Two shall be due on the first day of January, 1928, and one series shall fall due each six months thereafter until all shall mature.

Said bonds shall be sold for not less than par value and accured interest.

The said Trustee hereby reserves the right to reject any and all bids.

FRANK L. MILLIMAN
Trustee Concord School Township, DeKalb County, Indiana. 8t3.

Card of Thanks

We desire to thank the friends and neighbors for their kindness in the death and burial of our father, Wm. Brown. The Children.

Chubb Dale Richmond, son of Ella and A. J. Richmond, was born in Newville Township, DeKalb County, Indiana, December 24 1870 and departed this life February 22 1926, aged 55 years, 1 month and 28 days.

He was the eldest of a family of four children, all sons, and is the first to be called by the grim Reaper—Death

He spent practically all his life in or near Newville, where he grew to manhood. For a short time he resided in Missouri, where he was united in marriage to Kate Standiford. To this union were born 13 children, two of whom have preceded him in death, Lilly and an infant.

Surviving are the aged mother, three brothers, Ivan, Mack and Omo, the sorrowing wife and following children, Arthur of, Peoria, Illinois, A T of Hollywood, Florida, Mrs Iva Sucher of Butler, Jesse of Peoria, Illinois, Opal, Mrs. Daisy Brown, Helen, Ellen, Laura, Frank and Blanch at home. There are also six grandchildren.

He was a kind and indulgent husband and father, a good neighbor and friend and will be greatly missed in the home circle.

The funeral was held Thursday afternoon at 2 o'clock at the Newville Christian church, Rev. J. N. Scholes officiating. Burial at Newville.

Card Of Thanks

We appreciate the many kindnesses shown us in the lingering illness of our father and also for the words of comfort in this sad hour. Our thanks are hereby expressed to all.

The Family

Nellie A. Loucks, oldest daughter of Benj. F. and Hulda J. Dorsey was born in Scipio Township, Allen County, Indiana, May 19 1885 and departed this life February 23 1926 near St. Joe, Indiana, aged 40 years, 9 months and 4 days.

She was united in marriage to Chester Loucks September 3 1901. To this union ware born eight children, four of whom preceded her. These remain to mourn their loss, the husband, three sons, Harry, Lavan and Walter, one daughter, Alta Rupert, one grandson, Clifton, her mother and father, three brothers and two sisters and a number of other relatives and a host of friends.

She was a loving wife, a fond mother and a kind neighbor, loved and respected by all who knew her. She joined the Scipio M. E. Church when a young girl.

The funeral was conducted from the Scipio M. E. Church, last Friday afternoon, with Rev. Roy S. Brown, of Spencerville, officiating. Burial at Scipio cemetery. E. R. Kinsey, funeral director.

BEWARE OF EYESTRAIN

The surest guarantee against loss of sight is to treat your eyes so well that they can have no excuse for deteriorating. Headaches, neuralgia, pains in the back of the neck, sickness of the stomach, dizziness, twitching of the eyelids, redness of the eyes, a feeling of sand under the lid, all of them are among occasional symptoms of eyestrain. Each of us has just so much nervous energy; I we use it up straining our eyes to see, we have no energy left to do other things. It is a good thing to have your eyes examined at least every two years. After 40 certainly this is a necessity. At that age there comes a natural change in the eyes to which everybody is subject. After that age glasses are likely to be needed for close work. DON'T NEGLECT YOUR EYES. They may be the center of trouble which will spread out to the whole body. Let us examine your eyes, we have helped others, we can help you.

ST. JOE NEWS.

VOL. XL — ST. JOE DeKALB COUNTY, INDIANA, THURSDAY MARCH 11, 1926 — NO. 10

Fish and Game Club Attended by A Large Crowd

The monthly meeting of the St Joe Fish and Game Protective Association, was held at the school house last Friday night and about 100 were present.

The election of officers resulted in Ed Storer being chosen for president; S. A. Mumaw, vice president; Wilbur Yeiser, secretary; Clare Hull, treasurer. The board of directors will be C. S Hart, F. L. Milliman, Lester Coburn, Byron Widney and Sam Kees.

Regular meetings will be held at the town hall, unless otherwise announced, on the first Friday night of each month, and board of directors will arrange first program.

M. A. Hull, treasurer, since the organization was formed, made a written report. Receipts, $100 87. Expenditures, $39 09. Cash in treasury, $61 78.

J. C. F. Abel, retiring president, made a talk and in concluding he said: "I have learned that one member of this association has been charged with violating the game laws and if such is the case, I believe he ought to be made an example. Conduct of this character is strictly forbidden by this association and in order to show the public that we stand for law inforcement, I shall do all I can to have the law handle this party.

It was suggested, that if the party be present, that he be made to stand trial at once. F R. Leighty, who filed the charges stated that the party was in the audience and he proceeded to bring him forth (Clarence Hart) and read charge of having a fur bearing animal in his possession out of season. H. M. Widney and Henry Krabill were the defense attorneys. Roy Abel of Newville township served as special judge and Frank Baltz was prosecutor assisted by Clark Scholes.

It was a difficult matter to secure a jury suitable to both sides and as a result many amusing things were brought out in determining the fitness of jurors.

Judge Abel handled the case in fine style and at times he had to show his authority as judge of the court, but in spite of this Henry Krabill did his best to talk him out of his rulings.

Because of the numerous decisions by the Judge against the objections offered by the defendant's attorneys, they at last found a complaint that stopped the entire proceedings. It was discovered that the Judge and the Prosecutor were related, hence the defendants refused to continue the case, so the Judge dismissed the action, and Hart was set free.

There are now fifty members enrolled in the club and twenty-four are two year members

The St. Joe Valley Bank, A STATE BANK

Here are some superior features of the Kokomo Pioneer Fence.

99½% pure zinc galvanizing; the exclusive knot that tightens under strain; the coiled line wires that are live wires when stretched properly and that will absorb all expansion and contraction.

The knot with which the stays are fastened to the line wires puts Kokomo Pioneer Fence in a class by itself. Stays will not—CAN NOT—slip on the line wires, for the reason that the HARDER THE STRAIN, THE TIGHTER THE LOCK! Pressure and hard use merely tighten it.

It's in the knot, you see—a knot that assures you that Kokomo Pioneer Fence will not sag and get out of shape throughout its long life. For farm and poultry uses, it can't be equalled.

WILLIAM CURIE, Dealer, St. Joe, Indiana

KOKOMO PIONEER FENCE
-For Farm and Poultry

The Corn Situation For The Farmer

Indiana farmers need 1,000 community seed corn testers to assure the best possible seed for planting the 1926 crop, declared G I. Christie, director of the Agricultural Experiment Station Purdue University today. "We have more than 100 in operation at this time throughout the state but they cannot begin to test all the seed to be planted this spring. If the 1 000 testers were operated at capacity during the next eight weeks their work would mean $5,000 000 more to farmers of the state in the increased corn crop this year."

The necessity for the testers is doubly urgent this year because of the poor condition of seed corn generally, due to the frost of last fall. While odd lots of corn are fairly good, many are showing less than 50 percent germination, and real calamity threatens the corn crop this year unless a very large amount of testing is done.

"Over 1,000,000 bushels of corn will have to be tested to obtain satisfactory seed to plant the corn acreage of the state."

"The preliminary tests show that it will not be necessary to go outside of Indiana for seed. Importing seed corn from a distance is dangerons and should not be resorted to. There is a good seed to be had at home but immediate action is necessary Every community has enough good corn but it will have to be severely culled and and then tested and reculled. Farmers should do testing at home wherever possible. Those who cannot should join in the establishment of a community testing plant and have their corn tested there."

Concord Residents For Fifty Years

The sixtieth wedding anniversary of Mr. and Mrs. Wm. Staman of northeast of St. Joe, took place last Monday, although not being observed in a special way. Mr Staman is 84 and Mrs Staman 78, and they are hearty and exceedingly active, doing their work each day.

For fifty years they have lived in Concord township, and they know well the many hardships and vicissitudes of the early settlers of a half century ago. They came from Ashland county, Ohio in 1874 and settled on a piece of land near the state line one year, but not being satisfied, they came a few miles further into the state and there remained. They both learned in their early days that the first principal to success was to be satisfied and stick to their task. Today they can look back over the years and recall many discouragements, but due to their stick-to-it-tive-ness they have won the battle Today they have a splendid country home, a fine farm and practically what ever they wish for, to enjoy during their declining years.

Besides raising their family, now Mrs. Staman cares for her oldest sister, Matildia Cown, age 83, who has been confined to her bed for nearly three years.

Obituary

John D Smith was born in Ashland, Ohio, January 11, 1852 and departed this life March 1, 1926. Age 74 years, 1 month and 20 days.

He leaves to mourn Selena J. Smith, his wife—one son, Harry Smith—two brothers, James Smith of Lucas, Ohio and Florence Smith of Garrett, one sister, Mrs. Martha Hart of Spencerville—three grandchildren, Francis and Betty Jane Smith of near St. Joe and Ruth VanZile of Thelma, California, besides other relatives, friends and neighbors.

He was a member of the St. Joe Odd Fellows lodge and of the Concord M. P. Church, having joined the church March 3, 1918 during the pastorate of Rev. John C. Coons.

The funeral was held from the home Thursday morning at 10:00 o'clock, Rev. Otis Jones officiating Burial at Auburn with E R. Kinsey in charge.

W. C. T. U. NEWS

The County W. C. T. U Institute will be held Friday afternoon and evening at Auburn in the Baptist church. Mrs. Mix, state vice president, will be the speaker. A good attendance is desired from all over the county.

J. R. Shilling is at the Garrett hospital taking treatments again, and as soon as he is strong enough will have an operation.

Capes to Feature New Spring Modes

Two-Piece Dress Important; Shoulder Flare, Bloused Silhouette.

Discussing the Paris spring openings, at which the latest creations in milady's wearables are on display, a fashion correspondent in the New York Herald-Tribune says:

Every new opening witnesses an undiminished number of commercially inspired "decrees" sent over to influence what was once a gullible public.

The ethics of the situation demand that these reports be founded on truth—after which ethics are deserted and the most pernicious kind of exaggeration is indulged in. If one large hat is shown that is sufficient authority to announce that "Paris adopts the picture chapeau." If a single pair of lizard skin shoes is worn you may immediately expect some word to the effect that no costume is smart unless it includes lizard skin shoes.

During the same weeks that this propaganda is broadcast there also comes from Paris legitimate and authoritative news of the spring openings—uncolored reports from reliable observers with no axes to grind. And the difficult thing is to select the wheat from the chaff—to distinguish the real from the artificial, because it is a relatively simple matter for a skillful propagandist to ingeniously mix fact and fiction in such a way as to attract no suspicion from the casual reader. That is the specific problem to which this survey is devoted, and if you follow closely its analyses you will be guided safely past the rocks of propaganda and into the haven of chic.

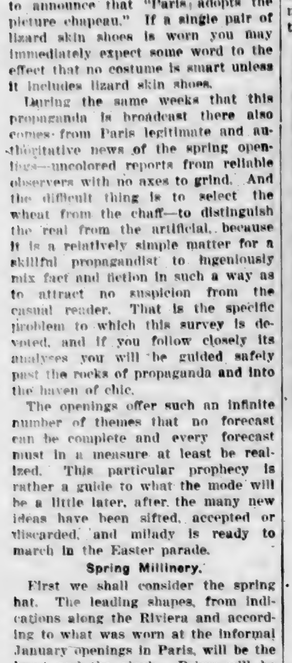
The openings offer such an infinite number of themes that no forecast can be complete and every forecast must in a measure at least be realized. This particular prophecy is rather a guide to what the mode will be a little later, after the many new ideas have been sifted, accepted or discarded, and milady is ready to march in the Easter parade.

Spring Millinery.

First we shall consider the spring hat. The leading shapes, from indications along the Riviera and according to what was worn at the informal January openings in Paris, will be the beret and the gigolo. Brims will be narrow—quite as they are at present. Crowns, on the other hand, will rise higher, but they will be draped, conforming as far as possible to the contour of the head. Trimmings will be few but unique—they should not be ornate. Materials must be soft in order to attain the draped crown effects. Grosgrain, felt, soft straws, visca, perles and ballibuntl, are certain to be well represented.

Next, geographically, comes the coiffure. The bob will be with us again, but you may now wear long hair without being considered a radical. The boyish bob will be eclipsed by a more feminine arrangement, which will feature longer and looser locks with even and uneven fringes. Long hair coifs will simulate the loose, fringed bobs.

Suits are destined to be prominent for spring, and they will pursue a course of their own, influenced in no way by the style developments of



Cape Costume of Yellow Flannel, With Gradual-Flare Skirt.

coats and dresses. To O'Rossen, man tailor of Paris, the custom of years accords the final word on the spring tailleur, and as his opening has taken place, you may form an accurate estimate of the new tailored suit.

The most significant O'Rossen feature is the uncompromising return to the straight silhouette—the godet and the various flares have been cruelly deserted. There is no question of the smartness of the straight-line suit for spring, but we must caution you against concluding therefrom that dresses and coats will also revert to the slim-line silhouette. Do not be misled on this point. The straight line is back in suits—the new silhouettes for coats and dresses will not be straight. The most modish suits at the O'Rossen opening exploited the short jacket and, of course, the short skirt, usually quite plain. Three-piece jumper costumes favored long coats, but to the rule of the abbreviated skirt there was no exception—not even a modification. A novel note was the introduction of tuxedo suits for afternoon occasions. These consist of a white silk blouse, over which is worn a gilet—a velvet jacket, black or violet, is worn over these—and the only feminizing touch is a lace ruffle. Truly an unique conception and one which may easily attain a vogue. Light gray, navy blue, brown and the beige range are the smartest colors, ranking roughly in the order named, while English woolens are the most modish of the fabrics.

The New Dresses.

Dresses are next on our list, and they are easily the most important item in the spring wardrobe. We hasten to announce that the flare, in new versions, is still with us, and that the simple, slim-line dress is not

Sports Costume of Burgundy Crepe, Pleated Skirt, Short Scarf.

going to stage a revival. It was last spring, you will recollect, that the hemline flare and the back flare were swept into the front ranks of the mode. This year neither of these themes appears, yet the flare, arriving at its second and less glaring stage, is to be more than ever the foundation of all chic. And it will be expressed in a greater variety of ways. In the first place, the skirt will always be full, but the godet flare will be eclipsed by pleated and shirred fullness. Instead of the hem-line flare—which will be most evident in cape dresses—and distensions of varying degrees beginning at the waistline. The rippling, or kinetic silhouette, which springs into being when the wearer is in motion, will also be a feature of the new outlines. Among other assured smart notes for spring will be the bloused silhouette and the semi-princess outline.

The two-piece dress will be far in the van for spring. In the jumper models, which will be with us again, the jumper itself will be longer and either belted or bloused, sometimes both. Sleeveless jumpers will also be en regle. The cape dresses will blaze a newer and quite as certain a path to smartness as the jumper, and, in our opinion, their vogue will increase as the season advances. Indicated features of the cape dress are bolero and yoke treatments, large and striking patch pockets and a graceful, attractive shoulder flare.

About Skirt Styles.

Nothing startlingly new will develop among the incidental details. There has been a little flurry of longer skirts at recent occasions du soir in this country and there is a possibility that the lengthened hemline may enjoy a welcome revival for formal evening wear. Particularly in robes de style is this greater length evident, and it has two points in its favor—it is different and it lends an infinitely more graceful and dignified appearance to the matron. Here is one instance where, in our judgment at least, the downward path has much in its favor. For sports wear and street wear the length of the skirt will remain approximately where it is in Paris—almost as high as the knees—and it will reach the usual inch or two lower on these more conservative shores.

Diverse silhouettes will be exploited in the new spring coats. In the O'Rossen collection the straight, full line has been definitely sponsored, but in our opinion O'Rossen is too much under the influence of the tailleur to be an accurate top-coat criterion. The other indicated outlines are the princess, which will be particularly attractive in silk coats—incidentally, silk coats, especially those of satin, are going to be in high favor this spring—the shoulder flare and the hemline flare. The last will be retained, and quite smart in coats, although its day has passed in frocks. The shoulder flare will be featured in the capelet coat, a heritage from last season which will be with us once more. And capes, as you may have gathered by now, will be a distinguishing mark of the season. An inevitable result of this cape introduction will be some exceedingly novel effects in coats

THE KITCHEN CABINET

(©, 1926, Western Newspaper Union.)

So we went strolling,
Down by the rolling, down by the rolling sea;
You may keep your croak for other folk,
But you can't frighten me!
—Kipling.

GOOD SEASONABLE DISHES

During the cold weather, hot dishes of various kinds appeal to the taste.

Hot soups are good for either luncheon, dinner or supper, and are of such variety that the same one need not be repeated often.

Hot Chicken Salad.—Mix one pint of cooked chicken cut into cubes, one cupful of cooked peas, one-half teaspoonful of salt, one-fourth of a teaspoonful of pepper, one tablespoonful of onion juice, one pimento, one teaspoonful of lemon juice; set aside in a cool place for at least one hour. Make a sauce using one-fourth of a cupful of butter, the same of flour, one-half teaspoonful of salt, one cupful each of cream and chicken broth. Add the seasoned ingredients and let stand over hot water until ready to serve.

Savory Smoked Fish.—Cut one pound of smoked fish into strips, put over the fire in cold water, let come to a boil, then simmer slowly for ten minutes. Heat one cupful of stock with one-fourth of a cupful each of tomato sauce and vinegar, one tablespoonful of made mustard and a few dashes of cayenne. Drain the fish saute in a little butter with two tablespoonfuls of flour; stir this into the saucepan containing the fish and stock cover and simmer for five minutes. Serve on a hot platter surrounded with split and toasted crackers.

Pork chops are very good and a little unusual served with:

Tomato Celery Sauce.—Chop one onion, one green pepper, a large bunch of celery. Mix two and one-half cupfuls of tomato (which has been drained) with one and one-half teaspoonfuls of salt, two tablespoonfuls of allspice berries and two-thirds of a cupful of vinegar. Simmer for two hours. Place the allspice in a small muslin bag and remove it before serving. If kept some time leave the spice in the mixture.

Raisin Muffins.—Beat one egg, add one cupful of sour milk, one teaspoonful of soda, one cupful of graham flour, three tablespoonfuls of melted shortening and one-half cupful of finely-cut raisins. Bake in muffin pans.

Sweets for the Children.

The candy which is prepared in one's own kitchen is far superior to the confections bought in any candy store. Here are a few good ones worth cherishing and using occasionally when the appetite clamors for sweets:

Creamy Fudge.—Take one cupful each of brown and white sugar, one-half cupful of milk, one tablespoonful of butter, one-third of a cupful of corn sirup and four tablespoonfuls of cocoa. Boil to the soft ball stage and set away in the dish to cool. When cool stir until creamy, adding flavoring and nuts if desired. Knead until smooth and then put into a buttered mold and cut into squares. If maple flavor is desired omit the cocoa and add maple flavoring.

Peanut Candy.—Take two pounds of brown sugar, twelve tablespoonfuls of butter, put over a slow heat to melt, stirring constantly; when it begins to bubble count the time and cook seven minutes. Have ready a pound of peanuts shelled, brown skins removed and rolled with a rolling pin like coarse crumbs. Stir in the peanuts with an eighth of a teaspoonful of soda. Pour out into a buttered pan and cool. Break up into small pieces and serve. This is especially delicious peanut candy and not so hard as the brittle which we all like but avoid because of danger to the teeth.

Cream Candy.—Take a cupful of cream, two cupfuls of sugar, boil to the soft-ball stage, flavor to taste, then beat until thick; drop from a spoon on buttered sheets.

College Nugets.—Take one pound of brown sugar and one cupful of water, boil to a soft ball, then pour over the well-beaten white of an egg. Continue beating until the mixture is creamy, then add flavoring of vanilla and chopped nuts. Drop by spoonfuls on a buttered sheet before it gets too hard.

French Fondant.—Take one pound of sugar, one-half cupful of water, two tablespoonfuls of corn sirup or one-eighth of a teaspoonful of cream of tartar. Boil until a soft ball is formed in cold water. Set away to cool in the same dish or pour out on a large buttered platter. When cool stir until creamy, then knead into a ball and pack into a buttered bowl to stand for several days to ripen. Melt over hot water, add coloring and flavoring and drop by spoonfuls to make patties. Mold into balls and decorate with nuts or fruits for bonbons.

Chopped pineapple added to fondant, flavored with a little vanilla or almond, made into balls and dipped into chocolate makes delicious candy. Melt the chocolate over hot water.

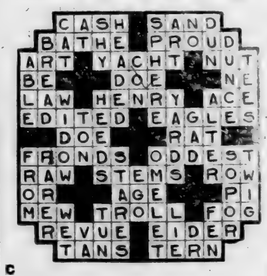
Solution of Last Week's Puzzle.



HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this puzzle will spell words both vertically and horizontally. The first letter in each word is indicated by a number, which refers to the definition listed below the puzzle. Thus No. 1 under the column headed "horizontal" defines a word which will fill the white spaces up to the first black square to the right, and a number under "vertical" defines a word which will fill the white squares to the next black one below. No letters go in the black spaces. All words used are dictionary words, except proper names. Abbreviations, slang, initials, technical terms and obsolete forms are indicated in the definitions.

AMERICAN IDEAS IMPRESS GREEKS

Athens, home of the Parthenon, whose classical style has set a standard for centuries, now is studying American architecture and construction within sight of the Acropolis. Athenian architects and building constructors have become interested in American methods as displayed in the erection of the marble library called the Gennadeion which has just been completed in the ancient Greek city by the Carnegie foundation for the American school of classical studies.

Prof. Edward Capps of Princeton university, who announced completion of the library, said that the American reintroduction of classical architecture has caused profound changes in building in Greece. American labor-saving devices and modern construction methods, he said, especially have attracted study and emulation by Athenians.

The University of Athens, he added, holds classes near the library to teach students American methods of style—using the building as an example.

HORSESHOE FOUND IN ANCIENT ELM

Edward Williamson of 31 St. Germain street, Boston, who in the past has found part of a saw blade, a broken hatchet and many nails in his firewood, recently, says the Boston Herald, drove his ax into a well-preserved horseshoe, which evidently had been embedded in the heart of an elm tree for at least seventy-five years.

The strange find came to light as Williamson, chauffeur for a Newton family, was converting the trunk of an elm into firewood. The trunk was 2 feet 10 inches in diameter and was covered by a heavy growth of bark.

After his discovery Williamson learned that the log in which the shoe was buried had been cut from the woodland of an old estate at 45 Elmwood street, Newton, where the tree had stood longer than any person in the vicinity could remember. Some of the older persons near there said they could remember the tree growing among a group of small elms, but nobody could explain how a horseshoe, with its full complement of nails, could have reached the inside of the trunk.

Optical Glass

The exact year in which optical glass was first used is not known, but it has been shown that the Egyptians who used glass as early at 5000 or 6000 B. C., knew of its power to magnify under certain conditions, and utilized the property to a limited extent. Glass of this kind is usually called crown glass. Convex glasses were invented toward the end of the Thirteenth century, probably by Roger Bacon.

Peculiar Old Laws

In England in the Middle ages the right of erecting dovecotes or pigeon houses was one of the privileges attached to manors, and as such was rigorously protected by law. In Scotland by a statute still nominally in force no person is allowed to build a pigeon house unless he owns land of a certain value within two miles of it.

Attitude Toward a Friend

Deliberate long before thou consecrate a friend, and when thy impartial justice concludes him worthy of the bosom receive him joyfully and entertain him wisely; impart thy secrets bodily and mingle thy thoughts with his; he is thy very self; and use him so; if thou firmly think him faithful, thou makest him so.—Quarles.

Friends and Enemies

Whatever the number of a man's friends, there will be times in his life when he has one too few, but if he has only one enemy, he is lucky indeed if he has not one too many. —Bulwer-Lytton.

Gold in the Arts

Something like $80,000,000 worth of gold is used annually in the manufacture of jewelry, gilding, fillings for teeth and for similar work in the fine and liberal arts.

SUFFERED MANY YEARS WITH FEMALE TROUBLE

PE-RU-NA LIKE A GIFT FROM HEAVEN

Mrs. Katie Scheffel,
R. F. D. No. 5, Lowell, Ohio

"I have been suffering for years with female trouble. Was operated on five years ago. It relieved me some but I did not regain my strength. Two years later was taken sick and bedfast several months. I treated a long while without much relief. I was discouraged, my mind affected, so nervous I could neither eat or sleep and unable to do anything.

We tried several doctors but one after another gave up my case as hopeless. Finally a good friend advised me to try Pe-ru-na. I did. It relieved me almost immediately. Your medical department said I was suffering from a severe catarrh of the system. I began taking your medicine in March, 1924, and continued until August. I took ten bottles of Pe-ru-na and three bottles of Manalin and felt like a new person. Your medicine seemed like a gift from Heaven. It was like coming from darkness into light.

We have used your medicine ever for coughs, colds and grippe with good results. We will always keep it on hand. I highly recommend Pe-ru-na to my friends. I have told many about it. I can't do enough to tell how good it is. Pe-ru-na is the greatest tonic I have ever taken. All the others are surpassed. I cannot thank you enough and will always recommend Pe-ru-na to sufferers from catarrh."

MRS. KATIE SCHEFFEL,
R. F. D. No. 5, Lowell, O.

Mrs. Scheffel is only one of many thousands of women in the world, who owe their present health to Pe-ru-na. The record of this medicine is a proud one as Pe-ru-na has held the confidence of both sexes for fifty years or more.

If your trouble is due to a catarrhal inflammation in any organ or part of the body, do like Mrs. Scheffel. Try Pe-ru-na. Insist upon having the original and reliable remedy for catarrhal conditions. You won't be sorry.

WAYS TO PREVENT GARAGE ACCIDENTS

Caution Against Use of Cigarette and Other Flames.

In spite of the great number of accidents which have resulted from gasoline explosions, drivers and garage workers continue to do things which endanger not only their own lives, but also the lives and property of others.

It seems needless to caution against the use of matches, cigars, cigarettes and other open flames near gasoline, or near oil-soaked rags and clothing.

In drawing or pouring gasoline from one container to another, static electric sparks may be developed. It is advisable always to keep the two containers in contact with each other, or to attach a chain to the pouring container which will maintain the contact. This will lead off the electric charge and prevent sparking.

Sparks often result from striking together two pieces of metal. It is best to use kerosene instead of gasoline when cleaning oil and grease from metal parts.

Carry Fire Extinguisher.

Every motor vehicle should carry a tetrachloride fire extinguisher. For garage use, probably the best fire extinguisher is one of the foam type. Never use water on a gasoline or oil fire. A mixture of sawdust and soda (about ten pounds of bicarbonate of soda to a bushel of sawdust) is good to put out oil fires. Sand is also used effectively.

The drip pan, side pans, and car in general should be kept clean and free from excessive oil. If present, excessive oil may do much to spread the flames in case of fire.

If extension cords are used for portable electric lights, it is necessary to guard against electric shock and fires resulting from electric causes. It is therefore advisable to use vapor-proof fixtures, a keyless socket, lamp enclosed in a vapor-proof globe and further protected with a rigid cage to prevent breakage. It is also advisable to have armored cable instead of ordinary electric cord; this should be kept in good condition.

When it is necessary to jack up the car and go underneath, be sure the car is held up securely. Be especially careful if any of the wheels have been removed. Block the other wheels to keep them from moving. If the support should give away, the car may fall and crush you. It is best to use a pit if possible. Never depend on jacks when it is necessary to get under car. Horses are better supports than jacks, ordinary boxes or blocks. Remember, the brakes are not operative when the rear wheels are jacked up off the ground.

Avoid Carbon Monoxide.

When in the garage, the engine should not be run longer than necessary. Carbon monoxide is contained in the exhaust gases, and unless the garage is fairly well ventilated may cause headaches, other discomforts, and even death to the persons in the garage.

If you haven't a self-starter, be careful not to break your arm when cranking. Always pull the crank up, not down, and don't spin it unless absolutely necessary. When grasping crank, place thumb on same side of handle with the fingers; then if there is a kick-back, handle will slip from hand. Keep the spark retarded until the engine has started.

Be careful when working around or using rags near rotating fan.

Keep wrenches and other tools in good condition; if badly worn they should be discarded.

Enter and leave the garage slowly. Street car motormen, pedestrians, children, other drivers and garage workers may not be looking.

Don't drive too close to the gasoline pump at garage or filling stations and always be sure to shut off the engine when the tank is being filled with gasoline.

Cars in Canada

Canada has a registration of more than 653,000 motor vehicles. Ontario is the leading automobile owner among the provinces with 308,000 cars to its credit. The prairie provinces of Manitoba, Saskatchewan and Alberta, combined account for 160,284 automobiles. More than 60 per cent of the cars in that area are owned in rural districts.

Song of the Flivver

By BLAINE C. BIGLER.

I go to haunts for which you yearn;
I make a sudden sally;
I rattle, shiver, twist and turn;
I bicker down the valley.

I run, I glide, I bumb, I jump;
I miss, backfire and quiver;
I overheat and skid and pump;
I shake your heart and liver.

I rattle underneath the stars;
I rumble on the bridges;
I squeak at many little jars;
I grind o'er sundry ridges.

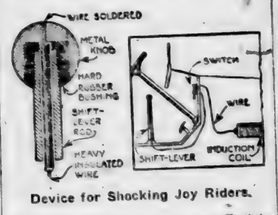
I tremble when I go to stop;
I tremble when I'm running;
I tremble till I lose my top
And then you get a sunning.

I am the flivver, don't you know?
My way's not smooth—no never.
But cars may come and cars may go
Yet I go on forever.—Farm Life.

Device for Discouraging Unauthorized Joy Riding

While many methods have been devised to prevent unauthorized joy riding, one recently installed by an electrician is especially novel.

It was done by making a special handle for the gear-shift lever with an insulating gap between the ball-shaped handle and the rod. A lead from the secondary terminal of the induction coil is brought to this ball handle through the center of the shift lever



Device for Shocking Joy Riders.

With the engine running, any effort to shift the gears causes the full intensity of the high-voltage current to pass through the driver as his foot is on the clutch pedal completing the circuit.

The current is not injurious, but is so startling that it will unnerve and weaken the most daring thief. A cut-out switch at the edge of the cowl is carefully thrown out before the owner starts to drive.—Popular Science Monthly.

Timely Tips Will Help the Careful Car Driver

Tire chains are an almost indispensable motoring accessory in wet weather, but many a car owner has ruined his tires because he did not give the chains proper consideration.

First of all, chains should be of the proper size; not so tight as to cut into the tire's tread and side walls nor so loose as to slip under strain. They should be adjusted to creep slightly so as to distribute the wear over the tire.

Put on chains when they are needed—no sooner and no later. And take them off as soon as the need is past. Keep them on the tires as long as they add to driving safety but not a moment longer. This advice is particularly applicable to paved highways.

Apply brakes even more cautiously when chains are being used. A sudden application of the brakes locks the wheels and often causes the chains to cut into the rubber.

To Prevent Sticking of Tires After Vulcanizing

The sticking of tires to the mold after vulcanization has always been a great source of annoyance to all repairmen. The best applications heretofore used as possible preventatives have been lacking in some respects. Therefore the discovery by a repair man of Perth Amboy, N. J., of the use of a material which overcomes this trouble will be welcomed by vulcanizers everywhere. Since the discovery is so simple, the wonder is that no one has reported it before.

So simple a substance as cocoa butter solves the problem. The method followed is this:

Clean the mold thoroughly with fine emery paper. Then after allowing it to warm up a little, go over it with a piece of cheesecloth saturated with cocoa butter. Next wipe till glossy and apply soapstone.

This method of preparing the mold has been tried in the Goodyear repair school and found to work perfectly.

INDIANA BREVITIES

The Huntington shops of the Erie railroad were reopened March 1.

John F. Campbell, eighty-nine years old, first mayor of Marion, died at the home of his son, Otho Campbell.

William Bivans, seventy-six years old, Monticello, infirmary inmate who slew his seventy-two-year-old rival in love, will spend the rest of his life in prison. Bivans was found guilty of second-degree murder by a jury in White Circuit court and sentence was pronounced immediately afterwards by Judge B. F. Carr.

Surrounded by her children, grandchildren, great-grandchildren and great-great-grandchildren and seated at a table filled with all of the delicacies of the season, prepared by herself, Mrs. Anna Gascho, widow of Harry Gascho, observed her ninety-ninth birthday at the home of her son, I. M. Gascho, in Atlanta.

A check for $500 has been received by Prof. Mary L. Mathews, head of the Purdue home economics department, from the Home Economics club of Indianapolis, to be used as a scholarship for young women specializing in home economics who live in Marion county. The Indianapolis organization is directed by Mrs. Lydia J. Marks.

The state Supreme court handed down decision in two appeals of George R. Dale, editor of the Muncie Post-Democrat, from action of the Delaware Circuit court. In one case the Supreme court confirmed a judgment of $500 fine and 90 days in jail for alleged contempt of court. A similar conviction was reversed by the higher court.

A bequest of $25,000 to the James Whitcomb Riley Memorial Hospital for Children was included among public bequests totaling $80,000 made by Mrs. Sarah E. Bannings, Hampton court, who died at San Diego, Cal., according to the terms of her will, which was filed for probate in Indianapolis. Her estate is valued at approximately $125,000.

Julian Sharpnack, judge of the Bartholomew Circuit court, who announced his candidacy for the Republican nomination for the same office, has withdrawn on grounds his appointment a few months ago to succeed the late Judge John W. Donaker holds until the expiration of the latter's term in 1928. The withdrawal is in accordance with a ruling by the attorney general of the state.

Mrs. James W. Fesler of Indianapolis has made a cash contribution of $500 to the Indiana university memorial fund of $50,000 from alumnae and friends of the school, increasing her total gift to $1,000. Mrs. Fesler's gift makes the total contributions of the Fesler family $2,000, half of which Mr. Fesler, who is president of the I. U. board of trustees, has pledged.

The Hoosier state is twenty-fifth in beef cattle raising and tenth among the other states in dairy cattle, according to the federal Department of Commerce, based upon the 1925 farm census. Indiana is nineteenth in total number of cattle. Of the state's 1,296,164 head of cattle 695,847 are listed as dairy animals—cows and heifers of more than one year old. The total number of beef cattle over a year old is 239,650.

Local, state and federal taxes cost each Indiana family an average of $332.55 for the fiscal year, which ended September 30, 1925, according to figures compiled by Charles Kettleborough, director of the state legislative reference bureau. Schools cost the average Indiana family $93.84 during the period, according to the compilation; highways and streets averaged $61.73 per family, and city government cost an average of $46.94.

High-topped shoes saved $1,500 for C. R. Sheffer, known as "Hammond's human bank." Sheffer doesn't believe in banks and carries his cash with him in large sums. While walking home, an auto containing a woman and a man, drew up to the curb near Sheffer and ordered him to throw up his hands. The woman went through his clothes, getting $25 in change, but failed to get the $1,500 which Sheffer had tucked in his shoe before starting for home.

An ultimatum to the Prairie club of Chicago, owner of 48 acres in the proposed Dunes state park, reiterating the terms of a previous offer as the only acceptable conditions on which the state will buy the property without entering condemnation proceedings, was authorized at a meeting of the Dunes park purchasing commission. Everett L. Gardner, chairman of the commission, was authorized to complete negotiations with the boy scouts of Gary for the purchase of 40 acres of land owned by that organization at $300 an acre, and with Frank Kossowski for the purchase of 20 acres held by him at $300 an acre.

Goldie Wiseman, Lorene Sampson and Iva Croskett, each sixteen years old, inmates of the Bartholomew County Orphans' home in Columbus, escaped from the home while Mrs. Elmira Brown, matron of the home, was sick in bed.

William V. Booker of Hamilton county has announced his candidacy for the long-term Democratic nomination for United States senator. Mr. Booker, who has been a practicing attorney for 40 years, is a native of Marion county and will make a campaign on a platform of states rights.

MOTOR TRUCKS FINALLY INVADE BERMUDA

It is only recently that motor trucks have been permitted to be used on the island of Bermuda. Photograph shows a truck at work, building a road near [illegible].

Sweet Clover Is Leading Legumes

Crop Is Entitled to Position in Front Rank as Soil Improver.

Chemical investigations which are being made on different legume plants by the college of agriculture, University of Illinois, indicate that common biennial sweet clover is entitled to the position which it has held among the front rank legumes for soil improvement, according to E. E. DeTurk, chief of soil technology.

Alfalfa is a crop of great promise as a combination feed and soil improvement crop, but it is not so well adapted to direct use for green manure as is sweet clover. Red clover, which has enjoyed more than a half-century of recognition as an old standby, is gradually giving way to alfalfa and sweet clover, in part, at least, because of the uncertainty of securing satisfactory stands. Dalea, a comparatively new crop, offers but little promise, while Korean lespedeza, which is just making its debut, bids fair to be a satisfactory acid land crop in the south half of the state, where liming is either pending or in localities where liming is impracticable.

Soil Improving Crops.

While certain nonlegume plants have value as soil improvers, through the addition of organic matter and the conversion of insoluble mineral elements into more readily available forms, the most important soil improving crops will always be restricted to the legume family, because of the added advantage of these plants in fixation of atmospheric nitrogen.

Growing crops and bacteria, like human beings, are prone to save energy. Energy is required in the fixation of atmospheric nitrogen. Consequently, both legume crops, even though well inoculated, and their nodule bacteria as well, will absorb and utilize nitrate nitrogen from the soil when it is present, in preference to working harder for the air supply. Thus soils that are already well supplied with available nitrogen do not benefit as much from the growing of legumes as do poorer soils which are more greatly in need of building up.

Most Desirable Legumes.

The most desirable soil-building legumes are all acid-sensitive crops, so that on acid land their use is conditioned upon the use of limestone. Some areas of acid land in Illinois are so inaccessible to liming facilities as to make the problem of soil improvement by means of limestone and legumes a serious one. It is probable that acid land so situated could be managed to the best advantage by either devoting it to forestry or other special uses or else building it up by the use of limestone and the proper use of legumes. It is questionable whether such land can ever be maintained permanently profitable under general farming in which the cropping system is restricted to acid land crops. There is not enough evidence upon which one can make dogmatic statements in this regard. However, it is unquestionable that the production which can be maintained permanently under such conditions is at a markedly lower level than where the acid condition of the soil is corrected.

How to Fail in Dairying Told by Iowa Specialist

A sure way to avoid having a lot of milking to do is to follow the suggestions offered below, according to Burt Okerkirk, dairy production extension specialist, Iowa State college.

Keep the milking cows in the cornstalks to dry them up before winter—it is difficulty to milk by lantern light.

Feed timothy hay, straw or cornstalks because these are low in protein, a muscle builder—the cows can be handled easier.

Don't use balanced rations.

Don't use a silo—silage stimulates production.

Have a pitchfork ready at all times to teach cows their places. Always pet them with a milk stool.

Keep 30 cows that produce 150 pounds of fat each rather than 15 that average 300 pounds of fat.

Keep a scrub bull or cow freshener.

FARM FACTS

Have the weed trees all been taken from your woodlot?

• • •

Jabbing the reins or continued tapping with the whip soon will teach the young colt to be an old loafer.

• • •

Keep calves and young stock growing in a thrifty condition. Their future usefulness depends largely upon present care.

• • •

If properly planned a crop rotation will aid materially in distributing the farm labor and will greatly reduce the amount of outside help required for the efficient operation of the farm.

• • •

The more pigs saved per litter the more profit there is in hog production, so give the brood sow plenty of exercise, enough, but not an overabundance of food, and see that her pen is clean and dry.

• • •

While trees and shrubs are dormant caterpillar nests and egg masses of various insects may be seen readily. Burn the nests with a torch of kerosene soaked rags, and paint the egg masses with a solution of creosote.

Lesson for March 14

THE LAST WORDS OF JESUS WITH HIS DISCIPLES

LESSON TEXT—John 14:1-31.
GOLDEN TEXT—"I am the way, the truth and the life."—John 14:6.
PRIMARY TOPIC—Jesus Tells of the Heavenly Home.
JUNIOR TOPIC—Wonderful Promises of Jesus.
INTERMEDIATE AND SENIOR TOPIC—Jesus Counsels and Confers with His Disciples.
YOUNG PEOPLE AND ADULT TOPIC—Christ's Last Words With His Disciples.

The hopes of the disciples were utterly shattered when Jesus told them about the cross. He had told them that He was going away and they could not follow Him. Their hearts were flooded with grief. He consoled them by—

I. Pointing to the Reunion in the Father's House (vv. 1-3).

1. He Asked Them to Trust in Him Even as God (v. 1).

Faith in the God man Christ Jesus will steady the heart no matter how intense the grief, nor how great the sorrow.

2. He Informed Them That He Was Going to the Father's House in Heaven to Prepare a Home for Them (v. 2).

He assured them that there was abundant room for all. Heaven is an eternal dwelling place. Only those can enter who have made the necessary preparation here.

3. He Assured Them That He Would Come Again and Escort Them to Heaven (v. 3).

Jesus will not wait for His own to come to Him, but will come and call forth from the grave those who have died and transform living believers and take them all to be with Himself in the heavenly home forever more.

II. Revealing the Way to the Father's House (vv. 4-11).

Jesus informed the disciples that they knew the place and the way to which He was going. To this Thomas interposed a doubt, in answer to which Christ asserts that He is—

1. The Way to God (v. 6).

He is more than a mere guide or teacher; He is the way itself. He is the door of the sheep fold; yea, the very entrance to the tree of life.

2. The Truth (v. 6).

He is not merely the teacher, but the Truth incarnate. In His incarnation the spiritual and material worlds were united. Therefore, every line of truth, whether spiritual or material converges in Him. No one can ever have the real truth about anything who does not have Christ. In Him especially we have the truth about God. To pretend to know God, while at the same time rejecting Jesus Christ is utter folly. Only as Christ reveals God can man know Him (John 1:18).

3. The Life (v. 6).

Christ is not merely the giver of life, but He is the essence of life. Only those who receive Christ have life in the true sense. This is a truth which cannot be arrived at by intellectual processes. It is a mystery which can only be penetrated by faith.

III. Assuring Them That His Work Was to Continue (vv. 12-14).

Jesus' going away was not to end the work which He had begun. This no doubt means that through the ministry of the spirit-filled disciples the work which He had begun would assume larger proportions. After the Day of Pentecost the Gospel took a much wider range. During His ministry the message was confined to the Jews, while under the ministry of the disciples it was only limited by the world itself. The disciples' ministry was ushered in by the conversion of three thousand in one day.

IV. Promises Another Comforter (vv. 15-17).

The word "comforter" means literally one called to the side of another to give help, protection and deliverance. This comforter was the Holy Spirit. Jesus was the comforter while here in the body. The Holy Spirit was to be another comforter.

V. Assuring Them of His Return to Them (vv. 18-24).

Although Christ went away He did not leave His disciples as orphans. He is spiritually present with them always. The Father and the Son make their abode with the disciples who love and obey Jesus Christ.

VI. Assuring Them That the Holy Spirit Would Aid Them in Remembering and Understanding His Words (vv. 25, 26).

This the Holy Spirit does by illuminating the minds of the disciples.

VII. Giving the Legacy of His Peace (vv. 27-31).

By His peace is meant the serenity of soul which one enjoys who knows that his sins are forgiven.

Dependent Upon God

All men, whether they know it or not, are unconsciously dependent upon God, else no man could live out a day. The religious man is one who is aware of that truth, and who seeks by active choice and will to know and do the will of Him in whose great hand he stands.—Joseph Fort Newton.

Unkind Language

Unkind language is sure to produce the fruits of unkindness, that is, suffering in the bosom of others.

FIGURES ON AGE OF EARTH ARE REVISED

Billion and a Half Years Is New Estimate.

Austin, Texas.—Geologists generally have accepted the comparatively recent calculation of physicists that the age of the world is approximately 1,500,000,000 years, according to Dr. Charles Schuchert, professor emeritus of paleontology at Yale university, who is giving a special course in stratigraphic geology at the University of Texas this term.

"As for the age of the earth, our conceptions have been greatly altered by the work of the physicists during the last twenty years," Doctor Schuchert said. "The best calculation of the earth's age comes from the rate of disintegration of radium-bearing minerals and, on that basis, the age of the earth now is estimated to be not less than 1,500,000,000 years. Such a vast length of time is beyond our conception.

"A century ago it was almost universally held that the earth was about 5,600 years old. Through the rate of disintegration of radium-bearing minerals all of our older calculations have been greatly altered. Until this discovery was made and worked out geologists the world over held that the age of the earth was of the order of about 125,000,000 years.

Basis of Calculation.

"This calculation was based on the amount of salt in solution in the oceans and the present rate of new supplies yielded by the rivers flowing into them. The rivers today, however, are yielding a greater annual average of this salt than was the rate during the geologic ages, and geologists later began to think of the age of the earth as something like 300,000,000 years."

Doctor Schuchert said that recently it was widely believed that oil production would play out, or at least be vastly reduced during the next 25 years, but that many noted geologists now saw no fear of an immediate exhaustion of this natural wealth.

"A few years ago predictions were made by the best geologists that the peak of production had been reached," he continued. "As yet, however, no decline has set in, but of course, sooner or later the supply of liquid petroleum will be exhausted. Even so, there are vast amounts of shales holding oils which can be extracted through distillation.

"More modern methods have been adopted recently by which a greater quantity of oil is obtained from a given field than formerly," he said. "In Pennsylvania old wells which were believed exhausted have been revived by pumping water or air into the old holes or into newly driven ones, thus forcing up more of the oil reserves. It is widely held that only about 25 per cent of the oil of a given field is, so far, brought to the surface. Suppose that by the adoption of improved methods this could be increased to 50 per cent, it would mean an enormous addition to production.

Old Theories Discarded.

"With the progress of scientific research and discoveries some of the old theories as to the origin of petroleum have been placed in the discard. One of these is the old belief that the natural oils are of volcanic origin. It is now well known that petroleum is the end residium of once living things and chiefly of marine plants, although some of it is also of animal origin."

Doctor Schuchert evinced much interest in the information that has come to him of the possible potash wealth of Texas.

"I understand that in the oil explorations in the western part of Texas potash salts have been found over an extensive area," he said. "If potash is present in workable quantities it means a tremendous wealth to the state, even long after the oil is gone. Not only is potash in great demand as a fertilizer, but enormous quantities of it are used in the chemical industries. Nowhere in North America are the Permian beds better developed than in the semi-arid regions of western Texas and nowhere are there greater supplies of gypsum and table salts."

Air Passengers Sleep on London-Paris Trip

London.—Lulled by the ceaseless drone of engines, so high in the air that there is little sensation of speed and with landmarks of England and the continent far below, many air passengers, it is found, fall asleep while in planes between London and Paris.

To provide greater comfort for these mid-air nappers, a new armchair has been designed for giant air-express planes now being constructed.

Luxuriously upholstered, the new seats have high sloping backs and are fitted with softly-padded head rests. These will pillow the head of the traveler who wishes to contemplate how seasick he would have been in a cross channel steamer or will ease the agony of air-sick passengers sweeping along in the mists or sunshine high above land and sea.

Want New Name

New York.—Regarding the term "waiter" as of menial significance, which does great injustice, the United Restaurant Owners' association is to conduct a prize contest for a new name.

Fined for Cruelty

Lynn, Mass.—For cruelty to the Prince of Wales, a horse, William Coyne has been fined $25.

SILK BOOM IS ON NOW IN CALIFORNIA

Revive Industry Started and Wrecked by Frenchman.

Sacramento, Cal.—California's silk industry, which is almost as old as the state itself and was launched by a Frenchman and wrecked by a Frenchman, today is being blown toward the port of prosperity by the fickle winds of French fashion.

The name of the "Forty-Niner" Frenchman who proclaimed California "The best silk-growing country in the world" while others were marveling at its wealth of gold, is little known in California itself. He was Louis Prevost of San Jose.

The name of the Frenchman who wrecked the golden state's sericulture was Louis Pasteur, the great scientist.

By 1865 silk culture was thriving in several parts of the state and the following year silk-weaving machinery was ordered. A single nurseryman in Los Angeles by 1869 was offering 100,000 mulberry trees and cuttings for sale. Louis Prevost himself had a plantation of fifty acres along what is now Main street in Los Angeles.

Then news came that Louis Pasteur, miracle-working scientist, had found a remedy for the silk worm blight and saved European sericulture. Orders for California eggs, which had been bringing $10 and $12 an ounce, diminished, then stopped entirely, deflating the state's booming silk industry.

The wide margin of labor costs in the Far East and in California still remained a seemingly insurmountable obstacle, but with the development of a new and greater silk market there began to enter another element; speed to satisfy fashion.

This aided the industry in California, for the new shade or design proclaimed by Paris could be transmitted to California by cable and the novelty placed on the counters of California stores while it still was a novelty.

College Records Plant Life of Southwest

Claremont, Cal.—Mounting of 70,000 specimens of the botanical life of southwestern United States, representing five years' work, has been completed by the plant department of Pomona college.

In making this announcement, Dr. Philip A. Munz, head of the botany department, declared the herbarium to be one of the largest in the country.

Two years will be required to mount the remaining 174,000 specimens which have been collected. Efforts will be made to mount 50,000 each year until the array of 250,000 varieties is completed.

Ranchers, amateur botanists and school teachers from all over the southwest visit the Pomona herbarium to identify new weeds or native plants. Special lines of study are conducted by students and teachers from virtually all sections of the country using research statistics gleaned from botanical specimens on exhibit here.

Women Fewer as Men Increase in Japan

Tokyo.—The female population of Japan with reference to the ratio to the male population, is decreasing, figures of the last national census disclose. The census gives the population of Japan proper (excluding Sagahalien, Formosa and the South sea possessions) as 59,736,704, an increase of 3,700,000 in five years, or an average annual increase of about 750,000.

Of the total population 30,012,820 are males, exceeding the number of females by 288,936. This means 100 females for every 101 males. Five years ago the ratio was 100 females for every 100.4 males.

The density of the population is shown to be 157 for every square kilometer.

The city of Osaka leads all other cities in number of population, which is 2,414,809, followed by Tokyo's 1,995,303, Nagoya's 768,560, Kyoto's 679,976, Kobe's 644,212 and Yokohama's 405,888.

Cancer Did Not Kill Napoleon, Says Physician

Leeds, England. — Napoleon the Great did not die of cancer, declared Sir Berkeley Moynihan, a well-known surgeon of Leeds, addressing the Leeds Luncheon club.

"I have had the opportunity of examining the viscera of Napoleon and found that there was absolutely no trace of cancer," he said.

Sir Berkeley, speaking of the increase in cancer of the tongue, caused chiefly by smoking, said:

"At present women are almost exempt, but I think they have a future in that direction, in view of the rapid spread of the smoking habit among girls, their mothers and their aunts."

Beggar Hires Attorney to Protect His Rights

Dallas, Texas.—To protect his "constitutional" rights to beg, an aged man reputed to be worth $7,000, hired an attorney to defend him in court here.

The beggar was under arrest for the second time. Despite his attorney, however, he was fined and sent to the workhouse when he refused to pay. He declared he is saving the $7,000 for old age. He is seventy now.

KILLS TWO DEER WITH ONE SHOT

Rene Fonck Distinguishes Self in Georgia.

Savannah, Ga.—The most distinguished hunting party entertained on the coast of Georgia this season was that which included Governor Walker of Georgia and Capt. Rene Fonck, famous French flying ace. Late in December they, with others, spent several days on Ossabaw Island, owned by Dr. H. N. Torrey of Detroit and Savannah. They were the guests of Howard Coffin of Detroit, and the whole hunting trip was a great success.

Besides the governor and Captain Fonck and Mr. Coffin, the party was made up of Charles Nunally of Atlanta, Governor Walker's chief of staff; Robert Woodruff of Atlanta; Peter S. Twitty, Georgia state game warden, and a few other guests.

Captain Fonck had never shot in Georgia before. He was amazed at the great quantity of game the island possessed. That the deer are plentiful is shown by the fact that Captain Fonck killed two with one shot. This is one of the remarkable stories brought back by the hunting party.

While on a stand waiting for the dogs to drive in a few bucks or to have them pass his way of their own accord, the trained eye of the man who was such a terror to German flyers during the war saw that two deer were coming toward him. They were some distance apart, but close enough for him to get a head on one and hold it until the other came in such position that he killed both deer with one shot.

It is said this is a feat never before accomplished on Ossabaw island. It made Captain Fonck the real hero of the trip.

CHILD NOVELIST

Felicia Fisher, eleven years old, daughter of Dr. Stanley A. Fisher of New York, has been writing since she was six, but has none of the queer characteristics of the usual child prodigy. She keeps a paper and pencil under her pillow, and when her thoughts will not permit her to sleep she turns on the light and writes. Later, Felicia types her "stuff," proving she is modern. Just now she is hard at work on a short novel, and from its proceeds she "hopes to buy a house in the country and a saddle horse."

Puts Fruit to "Sleep"; May End Cold Storage

London.—John MacLean Thompson, professor of botany at Liverpool university, the Daily Mail says, has discovered a method for fruit preservation which is expected to supersede cold storage and make possible the importation to this country of fruits that never have been tasted here.

Professor MacLean describes his method as "sending fruit to sleep." It consists of a simple apparatus by which even temperature and humidity are maintained in the storeroom.

He has been experimenting for three years, and says he has been especially successful in preserving American apples.

Ford Gets Old Plows

Biddeford, Maine.—Henry Ford is soon to receive at Dearborn, Mich., as a gift from Orrin D. Edwards, livery-stable keeper here, two plows, one of which is 225 years old. The other was manufactured in Portland 160 years ago. They have been in the possession of the Edwards family for several generations at a farm on the Biddeford Pool road, known as the "Whalebone."

Coal Thief Sentenced to Church for a Year

Leavenworth, Kan. — Attend church regularly for a year. This was the sentence imposed upon Clark Gibson of this city, convicted of stealing coal.

Once a month the man must report to the police and prove that he is attending church. He must go to jail if he fails to obey the order of the court.

In the JUNGLE

With Cheerups and the Quixies

by Grace Bliss Stewart

MRS. TRAPDOOR SPIDER

CHEERUPS gave a gasp of surprise when he discovered that the ground was rising under him. He was standing right in his own front yard, not a step from his little palm-leaf house; and where could any one be safer than in his own front yard? Yet there was no mistake about it, the ground under Cheerups was moving.

With a little spring he jumped to one side and then what do you suppose happened? A small piece of earth like a tiny lid popped right up just where he had been standing and out poked a little head.

"Good morning, Mr. Cheerups," said a small voice from under the lid. "I'm Mrs. Spider, Mrs. Trapdoor Spider, and your nearest neighbor, I guess, so I thought I would be friendly and make the first call." With that out climbed Mrs. Spider onto the ground and stood eying Cheerups, as if a little doubtful of her welcome.

"I Am Glad to Know You," Replied Cheerups.

"I am glad to know you," replied Cheerups as cordially as he could for his surprise, "but I never dreamed—"

"No, of course you didn't," cried Mrs. Spider with a merry twinkle in at least six of her eight round eyes. "Nobody would be expected to dream of a neighbor's house right under his nose, or his toes rather. But that's the best part of it, you see, sir! My house is tucked away so snugly under your yard that you would hardly notice that I'm there. Do you think you'll mind?"

"Not at all, not at all," chuckled Cheerups, beginning to be amused. "But I would like to know something about this curious house of yours. How do you build it?"

"I don't; I just dig it," hummed Mrs. Spider. "I dig with my fangs way down deep into the earth—oh, about two feet—then I carry away all the dirt I've dug out and hide it, so no one will know I have been digging. Now I call that clever, don't you?"

"I should say so," gasped Cheerups, growing more and more astonished every minute.

"And now you are wondering why my house doesn't get wet in a heavy shower," continued Mrs. Spider. "But you see, I always choose a location where the water will run off—the side of a bank, for instance—and I make my tunnel turn a little to one side at the bottom."

"Then it's just the shape of a stocking, isn't it?" cried Cheerups, clapping his hands.

"Well, whatever a stocking may be I don't know," sniffed Mrs. Spider, "but I find that a comfortable way to build anyway."

"Why, don't you know about stockings, Mrs. Spider?" said Cheerups. "They are such useful things! They are what boys and girls hang up on Christmas Eve and find full of sweetmeats and nuts and lovely presents in the morning."

"Bless me, but you do say funny things, Mr. Cheerups!" sputtered Mrs. Spider, growing a little cross. "These above-earth folks, with their queer ways and big words, are beyond my understanding. The sensible ones all live below ground, I guess."

"Oh, please do excuse me, Mrs. Spider," pleaded Cheerups. "I was only teasing a little, and honestly, I wouldn't miss the rest of your story for anything. I just can't wait to hear more about that wonderful house."

"Well, it isn't very polite to interrupt, I must say, Mr. Cheerups," said Mrs. Spider with a gentle little hum. "But if you be good, I'll go on; and maybe I will tell you how I furnish my house, too."

Latest Triumph in Railroading

THE completion of the new Chicago Union Station marks a noteworthy accomplishment in the history of important engineering undertakings, from which travelers from all parts of the United States will derive pleasure and benefit.

The station is without doubt one of the finest and most efficiently designed railroad terminals in the world. It forms a vital link in the realization of the "Chicago City Beautiful Plan." Simplicity, accessibility and convenience for the traveling public are the essential virtues of the new terminal. Rest and recreation rooms, ticket offices, barber shop, dining rooms, stores of various kinds, and almost every convenience known to travelers, are to be found on the one level, no steps to climb.

The main station is a low monumental type of building with a row of massive columns of classic design along the entire east front. Once inside, the traveler finds himself in a gigantic waiting room more than 100 feet high and brilliantly lighted through skylights in the great arch ceiling. Colonnades inclose the room, the walls of which are patterned after the architecture of ancient Rome. Bordering this room are the ultra-complete passenger terminal facilities. An innovation in railway terminal design is a conference room accommodating 125 people, which is available, without charge, to patrons of the Union Station lines for conferences and other meetings.

To give some idea of the immensity of the new station, it may be stated that the main building covers an area of about three acres with a concourse covering 60,000 square feet. The entire terminal facilities cover more than 35 acres and will expedite the prompt and satisfactory handling of 50,000 passengers, 400 tons of baggage and 300 trains daily with room for future expansion. Fifteen acres of glass were used in the various coverings over the train sheds, which extend more than 1,200 feet beyond the main structure. A total of 17,000 tons of structural steel, 175,000 cubic feet of Indiana limestone and 10,000 cubic feet of granite were used in the station building and concourse. The foundation consists of 449 cylindrical concrete piers from four to ten feet in diameter, reaching to a depth of more than 60 feet below the level of the Chicago river.

Those who have had the privilege of inspecting the new station pronounce it a marvel in terminal construction and are urging their friends to see it on their next visit to Chicago.

The station is used jointly by the Pennsylvania Railroad; Chicago, Milwaukee & St. Paul Ry.; Chicago, Burlington & Quincy R. R., and the Chicago & Alton R. R.

In Class by Himself.

Jud Tunkins says work is so unpopular that a man who loves it need have no fear of jealous rivals.—Washington Star.

Red Flag of the Romans.

The signal for battle of the Romans consisted of the unfurling of a red flag; the white flag has always been a sign of truce or peace.

God works in a mysterious way in grace as well as in nature, concealing His operations under an imperceptible succession of events, and thus keeps us always in the darkness of faith.—Fenelon.

Unites and Stills the Soul

Let the current of your being set toward God, then your life will be filled and calmed by one master-passion which unites and stills the soul.—Alexander Maclaren.

HORSE, 30 YEARS IN CAVALRY, IS RETIRED

"Whiskers" Now Kicks Up Heels in Pasture.

Washington.—In pleasant pastures near an army post in Hawaii, a four-footed veteran of more than thirty years of honorable active service with the colors is kicking up his heels in the peace and comfort of an old soldier.

His name is "Whiskers," and he traveled down from his Montana birthplace to join the cavalry in Texas three decades ago. He is now enjoying retirement with its regular rations and assurance that he will never be called upon to work again.

"Whiskers" is just a troop horse in Uncle Sam's cavalry. There is a long list of those faithful mounts for which troopers themselves have decreed restful old age in reward for their long years of hard duty. The appropriation for this equine roll of honor comes out of the troopers' pockets if necessary, but the deeds of hero horses of the army have been officially recorded in general orders before now.

"Comanche" Heads Hero Horses.

"Comanche" probably heads that list. He was the only survivor of the massacre of the Little Big Horn, when Custer and his gallant detachment went to their death. Legend has pictured this big charger, found wandering and almost dead after the battle with seven wounds to show the part he played. The records show he was a troop horse assigned to Troop I, Seventh cavalry, and was ridden in the fight by Capt. M. W. Keogh, who died at his chief's side. A regimental order of the Seventh, dated Fort A. Lincoln, Dakota territory, April 10, 1879, directed that Comanche be provided with suitable quarters "and that he will not be ridden by any person whatever under any circumstances, nor will he be put to any kind of work," as a tribute to comrades fallen in the fight.

That order was never violated. "Comanche" died at the cavalry post at Fort Riley, Kansas, in 1891. He lived two-thirds of his life on the retired list.

The yellowed records of the cavalry show many other famous horses, coming clear down to Pershing's "Kidron," bought from the French remount service to carry the general in France, and "Jeff," the big, amiable charger presented to Pershing on his return to the United States and on which he headed the victory parades of the First division in New York and Washington.

And among the old records there is none more striking than that of "Black Tom," the mighty coal black, on which Colonel May, the Charles O'Malley of the American cavalry in the '90s, set tongues wagging by his mad pranks. May was arrested in Baltimore once for leaping his black thunderbolt over a cart loaded with firewood. Again he spurred Black Tom up the front stairs of a Baltimore hotel and down again after a jog about the rooms. The horse won a wager with a leap of 32 feet just after the Mexican war, against a record of 34 feet for the greatest English steeplechaser. Black Tom's greatest achievement came in the war when May jumped him over a Mexican field gun to capture the entire battery and the Mexican general, La Vuga. That deed is memorialized in the coat of arms of the Second cavalry.

Black Tom stood more than seventeen hands, a jet black Kentucky thoroughbred, and his dashing master was more than a six footer.

Taylor's Mount Lost Tail.

Another army horse of Mexican war fame was Gen. Zachary Taylor's Old Whitey, who carried his master throughout the war and was never ridden again. He was sent to Washington to be exhibited after the war and was well nigh stripped of his mane and tail on the journey by souvenir hunters.

Among famous horses of the war between the states, Robert E. Lee's Traveler perhaps is best known, although Gen. Nathaniel P. Bank's Charlie is credited in a legendary way with having shaped events of the war. He was the only horse known to have thrown General Grant. The fall put the general on crutches and kept him from the battlefield at Chickamauga. Perhaps his absence contributed to the Union disaster in that fight.

Traveler, Lee's famous gray, was a West Virginia horse and was offered to the great Confederate commander as a gift by the owner, but refused. The owner, Maj. Thomas L. Broun, then sold him and Traveler served as Lee's main reliance in the war days and his constant companion afterward. The general always stood beside him when he was shod, as the horse was nervous.

Builds Three-Unit Airship Like Mother-Bird

Berlin.—A three-unit dirigible, said to be storm-proof and resembling a giant mother-bird flying with two "babies tucked, one under each wing," has been designed by Baron Boris von Loutzkov, veteran aircraft and motor builder.

Baron Von Loutzkov asserts that his three-unit ship is three times as safe as a single-unit ship. Each is a separate dirigible. The three are hitched together by steel cables. In case of accident to one or two units, he declares, passengers and crew can clamber aboard an undamaged unit and cut loose one or both of the other units.

LEARNS ABOUT INDIANS FROM BRINK OF GRAVE

Guides Over 100 Years Old Tell Ancient Legends

Washington.—J. P. Harrington, ethnologist of the Smithsonian Institution, whose discovery in California of the skull of the ancient so-called Santa Barbara man a year ago last summer raised anew the question of the antiquity of man on the American continent, is continuing his explorations in California. He is expected back in Washington in March with new and valuable ethnological and archeological information.

Mr. Harrington is one of the foremost experts on the languages of the American aborigines. He recently made a study of the language of the "white Indians" brought back from Panama by R. C. Marsh.

Mr. Harrington has sent word to Dr. J. Walter Fewkes, chief of the bureau of American ethnology, that he is rescuing rare data from the brink of the grave through old and feeble Indian guides who alone possess any information of the ancient village sites visited.

On an expedition into Lost valley Mr. Harrington went with Francisco Laus on horseback and remained several days in the mountains, discovering rare rancheria sites and filling a space hitherto blank on the archeological map of California.

Guide Very Old and Feeble.

"The Indian Francisco is very old and feeble," writes Mr. Harrington, "and the trip was very hard on him. All the information which he gave on these places was rescued from the brink of the grave and there is no one else that knows even a fraction of it."

Mr. Harrington visited a place where the Indians formerly captured eagles by letting a man down the face of a cliff by means of a rabbit net woven of the red milkweed fiber.

Another of Mr. Harrington's guides is Angel Culipe, one hundred and four years old, who accompanied him on a trip down the Canada de las Uvas.

"Many of the archeological sites we visited," writes Mr. Harrington, "apparently had not been touched since Indian times and we found without difficulty the old hut circles on the surface of the ground, either marked by rings of rocks which were formed by the Indians clearing the surface for the circular hut or by rings of raised earth which mark the former walls.

Ancient Village Is Found.

"The largest village we discovered was that known to the Mission Indians as Milyahu. This differed from the other sites in being located on a detached rocky hill, which has the appearance of a great towering citadel when seen from the arroyo. The little Indian wigwams, varying in diameter from fourteen to twenty feet, nestle all over the summit of this hill and the circles are as fresh as if the place had been abandoned yesterday."

On a hill on the Santa Maria ranch near Ramona Mr. Harrington discovered an ancient Indian fortification wall, which is evidently in much the same condition as when it was abandoned. It is made of rocks piled in the form of a parapet five feet or more in height. The wall forms a corral around the top of the hill. Commanding a fine view of the valley, it was used, according to tradition, as an outlook.

In Palm canyon he reaped a rich harvest in hitherto unrecorded place names and archeological sites. On this trip Juanito Razon, more than one hundred years old, was his guide. They went across the sand washes and rocky arroyos in an automobile—a hard trip. They visited ancient water holes, painted rocks, caves, sacred stones and magical springs.

Teachers' Pay Small, Education Cost High

Washington.—"Is the cost of preparation for the teaching profession too great in proportion to the salary returns?" An article in School Life raises a serious doubt, amounting almost to an affirmative answer.

"Single men students at Columbia in 1923-24 spent for the school year of nine months an average of $1,186," the article states. Married couples from $1,630 to $2,973.

"Basing the judgment on the figures of this investigation, the cost of attaining the bachelor degree will be $4,800, the master's degree $6,000 and the doctorate $7,800 or $8,500.

"The person who enters the teaching profession can hope to receive at most about $3,400 salary in a small university or college, $3,700 in a medium-sized one and $6,000 in a large institution. Moreover, those salaries will be reached, if at all, only after from fifteen to twenty years of successful experience."

Male Butterfly Lures Mate With Perfume

Washington.—Dr. Austin H. Clark of the United States National museum says the male butterfly, not the female, emits the sweet odors and wears the pretty colors. The gentleman butterfly uses enticing perfumes to attract the other sex.

These odors originate in the hair, or scales, grouped in patches on the hind wings and, in some, the hind legs. The scents are distributed in all directions and literally fill the air about the insect.

Doctor Clark has found that lemon, verbena, musk and many others are common. A homely butterfly may emit a variety of gay odors.

He Saved, Why Shouldn't You?

In the days of Washington, saving money was more difficult than in the present Yet he did save under conditions impossible nowadays. He saved because he believed it to be a good thing to do. Why shouldn't you.

If you are not taking advantage of our service, you're missing something.

GOOD HEALTH NECESSARY

Many Busy Women Owe Their Health to Lydia E. Pinkham's Vegetable Compound

Fifty years ago there were few occupations for women. Some taught school, some did housework, some found work to do at home and a few took up nursing.

Today there are very few occupations not open to women. Today they work in factories with hundreds of other women and girls. There are also lawyers, dentists, executives, and legislators. But all too often a woman wins her economic independence at the cost of her health.

Mrs. Elizabeth Chamberlain who works in the Unionall factory making overalls writes that she got "wonderful results" from taking Lydia E. Pinkham's Vegetable Compound. Mrs. Chamberlain lives at 500 Monmouth St., Trenton, N. J. She recommends the Vegetable Compound to her friends in the factory and will gladly answer any letters she gets from women asking about it.

If Lydia E. Pinkham's Vegetable Compound has helped other women, why shouldn't it help you?

Mothers, Do This—

When the Children Cough, Rub Musterole on Throats and Chests

No telling how soon the symptoms may develop into croup, or worse. And then's when you're glad you have a jar of Musterole at hand to give prompt relief. It does not blister.

As first aid, Musterole is excellent. Keep a jar ready for instant use.

It is the remedy for adults, too. Relieves sore throat, bronchitis, tonsillitis, croup, stiff neck, asthma, neuralgia, headache, congestion, pleurisy, rheumatism, lumbago, pains and aches of back or joints, sprains, sore muscles, chilblains, frosted feet and colds of the chest (it may prevent pneumonia).

To Mothers: **Musterole is also made in milder form for babies and small children. Ask for Children's Musterole.**

Jars & Tubes

MUSTEROLE

WILL NOT BLISTER

Better than a mustard plaster

Some of the deep living sea plants of the Black sea contain a larger percentage of green coloring matter than those that live near the surface.

CHAPTER IX—Continued

—14—

"You met that skunk, did you?" he rasped, his control gone. Then, getting himself in hand, he went on: "And the people at Wailing River—did you stop there?"

Could the free-trader have read the thoughts of the man who faced him, as he asked for news of the doomed post, he would have started as one starts at the warning of a rattler. For the mention of Wailing River stirred a fierce desire in Steele to mangle with his bare hands the man who thought to obtain Denise St. Onge by bribery. But the bronzed face of the American masked his turbulent thoughts as he intentionally drawled, watching Laflamme's eyes:

"Well, it's a long story. Queer case, Wailing River, very interesting to an ethnologist—like myself. They've had a hard summer."

Steele knew from the quick interest in the other's face that he had won—that however deep was Laflamme's distrust of his motives in taking the Ogoke trail, the desire for news of the girl at Wailing River, for an inkling of the nature of St. Onge's answer to his offer, would result in an invitation to spend the night at the post. And he smiled inwardly as the manner of Laflamme swiftly changed.

"Mademoiselle St. Onge—was she well?"

"Why, as to that, I hardly know what to say," Steele answered. "Lascelles showed up there just as I left."

"What? Lascelles at Wailing River?" exploded Laflamme, patently knocked off his feet at the news. "What—what has happened? He's not going to marry her this fall?"

"No, he's not going to marry her—this fall." So emphatic was Steele's tone—so final the statement that it drew from Laflamme a sidelong glance of curiosity, in the course of his restless pacing of the landing.

"What brought him up river then?"

"Why, this Windigo trouble," lied Steele, anxious to learn if Pierre had brought the news to Ogoke.

The eyebrows of the Frenchman lifted in surprise.

"Windigo trouble? What do you mean, Mr. Steele?"

Steele was confident that Laflamme was dissembling.

"Why, haven't you heard that the Wailing valley is overrun by man-eating Windigoes?" he laughed, closely watching Laflamme's dark face. But though, a moment before, the trader had made no effort to conceal his emotion at the mention of Denise St. Onge, Steele now looked into cryptic eyes.

"Mon Dieu, no! You mean to say that the Indians are frightened?"

"Yes, you might call it that," said Steele, facetiously, "although I think that I would make it a bit stronger. You don't believe in the Windigo, Monsieur Laflamme?"

Laflamme smiled. "You are a joker, Mr. Steele. We will discuss the Indian superstition tonight over some—a—excellent whisky, if you like. You will do me the honor to dine with me—and my—sister, Mademoiselle Rose Laflamme."

"Thank you!" And Steele, accompanied by Antoine, of the scarred face, returned to the canoe, delighted that his interview, which had started so inauspiciously, had closed with an invitation to pass at least one night at the post.

While he shaved and changed his clothes in the shack assigned to him, and whither Laflamme, with marked hospitality, had sent hot water from his kitchen, Steele held a council of war with David, who had made a hasty reconnoissance of the post.

"Did you see Pierre?"

"No, but I smell plenty whisky on de Injun."

"How many hunters are there here still?"

"Sept—seven—tipi here. Queer t'ing, w'en I ask why dey are not on de trap lines, one of dem say dey not hunt deen long snows."

"How many post servants has he got—there are eight cabins?"

"Good manee."

"Did they speak of Wailing River or the Windigo?"

"No."

"Why do you suppose he is feeding all these bush Indians—what is he using them for?"

David's dark features stiffened as his eyes sought a crack in the floor. Steele paused in his shaving to glance quizzically at his friend.

"Oh, well," he laughed, "I suppose you've promised Michel not to tell me what you think of anything you see here. I must wait until November."

The Ojibway rose, rested a hand on the shoulder of his chief. "Bot eet not so, boss; but I promise Michel somet'ing. Sometam you know."

"That's all right, David; I want you to keep your promise, but don't you [illegible] might get more out of Laflamme tonight, if I knew what you and Michel had in your heads?"

David shook his head. "Laflamme ees smart man. He tell you noding."

"Nothing about what?" demanded Steele.

"Noding 'bout sendin' Pierre to scare de Injun—'bout stealin' de fur trade from St. Onge, wid whisky."

"Well, possibly he won't talk, but I'll give him a good opening."

The living room in the comfortable quarters of Louis Laflamme was a revelation to the man who anticipated finding the rude furnishings typical of northern fur posts. The shelves of books, the furniture—much of it brought from the railroad by canoe—the large graphophone, the pictures, were indicative of tastes which hardly squared with the reputation of the trader.

"You are extremely comfortable here," he said, as Laflamme led him into the room. "You're fond of music?"

"Ah! There's where this life is barren, monsieur," impulsively replied the Frenchman. "Why, I've hitched my dogs and traveled clear to the railroad in the middle of winter to hear some music. It's the thing I miss, and the phonograph is cold; I tire of it. If I played myself, but I don't." Then Laflamme turned a tense face on Steele. "Did she play while you were at the post?"

For an instant the muscles of Steele's body stiffened. To speak, as a stranger, of Denise St. Onge with the man who had plotted ruthlessly to

"Yes, It Is My Home, but I Seldom See It."

win over her father—to buy her, sickened him. Yet menace though he was to the post at Wailing River, his hatred and jealousy of Lascelles might be put to good use if the opportunity offered, and Steele intended to play upon those passions of his host this very night.

"Mademoiselle St. Onge seemed to be greatly depressed and played little the few days I was there—then Lascelles appeared," he said.

"She despises the dog, and yet he has openly boasted at Albany he would marry her," sneered Laflamme.

"I don't think he ever will," threw out Steele, lighting the cigarette passed him and watching the play of emotion on the handsome face of the other.

"Why?"

"Because she would kill herself first."

"Nonsense! Women don't do it, monsieur," scoffed the trader, but the fleeting look of approval which Steele caught belied the words. Laflamme's nature was elemental. To him, her death was preferable to having her the wife of Lascelles.

Steele writhed in his chair as the other paced back and forth, but the welfare of the girl at Wailing River demanded that he smother all outward reflection of his thoughts, so he fought himself slowly into a state of callousness at the mention of her name, necessary, if he were to draw out his host.

"Monsieur," Laflamme stopped his pacing and glared down at the man smoking in the chair, "you are right!" Then, as he walked to the end of the room, added: "She will never marry that rat of the Revillon people—she will marry—me."

"You seem hard hit," said Steele. "Although she spent but one evening with her father and myself, I found her charming, and I congratulate you."

"She is the—Shish! Rose!" And both men looked up to see a woman enter the room. Steele got to his feet.

"Rose, this is Monsieur Steele."

The woman who joined them and—to his surprise—said graciously, in English, with an accent, "Monsieur you are veree welcome," was not at all what Steele had expected to find at Ogoke lake. Instead of belonging to a type more or less common to the frontier railroad towns, the girl posing as the sister of Laflamme was undeniably handsome, with a mass of straight, black hair, and the brilliant olive skin which so often characterizes the quarter or eighth blood. For that she was a breed, he had no doubt.

Extending a round arm, she gave Steele her hand with something more than the pressure demanded by hospitality, as her white teeth flashed in a smile.

"It is kind of you, mademoiselle, to take me in tonight," he said, and the thought shaped itself swiftly, as her thick-lashed eyes made a bold appraisal of the stranger at Ogoke, that this girl, of whom Laflamme had tired might have knowledge invaluable—almost even, by the adroit use of her evident vanity, betray the plans of the lord of Ogoke lake. For that she should be in ignorance of the infatuation of the latter for Denise St. Onge was unlikely.

"Oh, la, la! Eet ees to ourselves we are kind. Ees eet not so, Louis?"

"Yes, monsieur," replied Laflamme with a leer, "judging from the toilet of mademoiselle, one should say it is to Rose that you are kind. You have not worn that thing in months, Rose."

"No? I had reason. I do not waste myself on the blind."

"Ah! But monsieur is not blind eh?"

"No man ees blind who has been months een the north with no one but the squaws to see, eh, Monsieur Steele?" And she smiled suggestively into Steele's amused eyes. Then her face darkened. "Oh, I forgot monsieur has come from Wailing River," she said in a low tone, husky with emotion.

Good, thought Steele, she knows and will talk.

Then he gambled with: "One can never see too many beautiful women mademoiselle."

"Oh, you think her beautiful, eh?" replied Rose Laflamme, tapping the floor with the toe of her slipper. "Louis say she ees not."

"Come, monsieur," interrupted the trader, with a scowl at the speaker as an Ojibway woman stood in the doorway, announcing dinner.

As they seated themselves at the table, Steele was highly optimistic of what his stay at the post might disclose. Whether Laflamme had decided to take him at his word, or still suspected his presence at Ogoke, David had more chance of learning that night than he, but that the outraged pride of Rose Laflamme would lead her to talk, if the opportunity offered, he was now sure. Her reference to Wailing River had cleared any doubt on that score. The canker of jealousy and the flouted woman's instinct for revenge would play havoc with the half-breed in Rose Laflamme.

"You are from New York, Monsieur Steele, that wonderful city I have never seen?" the hostess was saying.

"Yes, it is my home, but I seldom see it."

"Seldom see it? And all the life there to enjoy—the theaters, the beautiful women?"

"But there are beautiful women elsewhere, mademoiselle; Ogoke lake, for instance," Steele hazarded, lifting his glass to the girl as he glanced furtively at Laflamme.

"Mon Dieu, but you are the flatterer! You are a man of thee ladies, monsieur, even eef you desert them, to travel een this wilderness."

"It is only that my inspiration is great this evening," he returned.

Laflamme laughed unpleasantly in the girl's face, kindling with pleasure at the remark. In a flash, she turned with what was near a snarl, her dark eyes flaming. "You see, from others there is appreciation!" Then, lighting a cigarette, she rested her round elbows on the table, and leaning toward Steele with a challenging look startled him with: "Say more pretty words to me, you big American!"

Steele threw a sidelong glance at Laflamme, to find only amused tolerance. He was in doubt whether the girl was making a forlorn attempt to arouse the trader's jealousy or merely set on his own conquest. Since his ready answers to a few well-chosen questions of Laflamme's regarding New York, Steele believed that the latter's suspicions had faded. But it was too early to hazard an attempt to learn anything. He was dealing with a man both ruthless and powerful. So Steele was discreet, but he saw that little more whisky was needed to loose the tongue of the girl beyond control. For that he waited.

(TO BE CONTINUED.)

Nothing but Justice

In this God's world, with its wild whirling eddies and mad-foam oceans, where men and nations perish as if without law and judgment for an unjust thing sternly delayed, dost thou think therefore that there is no justice? It is what the fool had said in his heart. It is what the wise in all times were wise because they desired and knew forever not to be. I tell thee again there is nothing else but justice; one strong thing I find here below—the just thing, the true thing. • • • If the thing is unjust, thou hast not succeeded, though bonfires blazed from north to south, and bells rang, and editors wrote leading articles, and the just thing lay trampled out of sight to all mortal eyes—an abolished and annihilated thing.—Thomas Carlyle.

Unique September

During all the variations in the calendar, September has always had 30 days.

HOW TO KEEP WELL

DR. FREDERICK R. GREEN
Editor of "HEALTH"

(©, 1926, Western Newspaper Union.)

IS ARTERIOSCLEROSIS HEREDITARY?

ONE of the great advantages of the large amount of public education on diseases that has been going on for nearly twenty-five years is that it is possible now to use terms that were formerly intelligible to doctors only but that are now understood by most intelligent laymen.

One of these is arteriosclerosis. Almost everybody knows today that this is a gradual hardening and stiffening of the blood vessels, especially the arteries, and that it is caused by the deposit of lime in the blood vessel walls, changing them from smooth, soft, flexible, elastic tubes into rough, hard and stiff vessels which break more easily than the normal vessels. The process is very much like the hardening and stiffening of a rubber tubing, which every one has noticed in old rubber tubes of gas pipes, fountain syringes, atomizers and other rubber appliances. It is found either as a cause or as a result in many forms of heart, kidney and liver diseases, in many cases of overweight and in almost all cases of extreme old age.

What is the reason for this difference in individuals and why do some people have hardened arteries in middle life while others may live to advanced years and still have soft flexible arteries? The increased frequency of heart and kidney diseases has stimulated interest in this question in recent years.

Is this tendency to hardening of the arteries due to individual habits or is it something which we each of us inherit from our parents? Many causes have been suspected, such as infections, overeating, excessive use of alcohol, tobacco or coffee, overwork and worry. Yet we find many people who have none of these bad habits who early develop hard arteries while many who have most or all of them never have it.

In a recent article in the Journal of the American Medical Association, Doctor Martinson of Battle Creek reports a careful study of nearly a thousand persons which shows that children of parents who have had high blood pressure, apoplexy, kidney trouble, sick headaches, overweight, gout and asthma were much more likely than persons whose parents had none of these troubles.

If you inherited good blood vessels from your parents thank God and keep them so. If one or both of your parents suffered from some of these afflictions you can overcome or delay the result by living simply, avoiding overeating, eating plenty of fruit and drinking plenty of pure water, avoiding constipation and trying to give your children better arteries than your parents gave you.

FIRES IN HOSPITALS

IF THERE is any place on earth where one ought to be safe from fire it is in a hospital. A person who is ill or who is recovering from an operation has enough to worry about without having any fear of fire in addition. By the same token, a well person is perhaps able to protect himself from fire under ordinary conditions. But how can an ill or disabled person be expected to escape from a burning building?

One would naturally suppose that every hospital in the country would be just as fire-proof as human skill could make it. Yet Mr. W. E. Mallalieu, general manager of the National Board of Fire Underwriters, says in a recent issue of the Journal of Outdoor Life that in 1922 and 1923 there were 85 fires in hospitals which destroyed property valued at $1,791,909. This is 425 a year or more than one every day.

There are about ten thousand hospitals of all kinds in this country which care for over a million people every year. The fire loss among hospitals each year is nearly a million dollars, which would be enough to build and equip several new hospitals.

Most of these hospital fires could be prevented either by greater care in construction or better supervision in management. This is seen when we study Mr. Mallalieu's chart showing the causes of these 850 hospital fires. Classified by the amount of financial loss caused by the fires, sparks on the roof resulted in damage to the amount of $194,039, nearly $200,000.

The second most expensive cause of fire is some defect in the heating plant. Stoves, furnaces, boilers, overheated stacks caused damages of $150,000. These defects of either installation or operation are also clearly preventable.

Next comes spontaneous combustion. This is generally the result of allowing waste, rubbish and trash of all kinds to accumulate, generally in dark corners. This is always avoidable and due to poor management and untidy surroundings. But it destroyed $95,000 worth of hospital property just the same.

Defective chimneys and flues cost $90,000. Matches and smoking burned up $78,000 worth of hospital property and gas explosions cost $56,000.

Fire is bad enough anywhere. In a hospital it should be impossible.

ALABASTINE

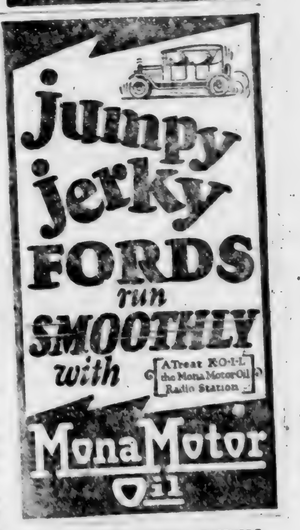
Alabastine for all your walls

For sleeping rooms—formal parlors and reception halls—dining room and living room—for the library—and for public buildings.

Properly applied it won't rub off. Ask your dealer for Alabastine Colorchart, or write Miss Ruby Brandon, Alabastine Co., Grand Rapids, Mich.

Alabastine—a powder in white and tints. Packed in 5-pound packages, ready for use by mixing with cold or warm water. Full directions on every package. Apply with an ordinary wall brush. Suitable for all interior surfaces—plaster, wall board, brick, cement, or canvas.

Better and more Economical



COLOR IT NEW WITH "DIAMOND DYES"

Just Dip to Tint or Boil to Dye.

Each 15-cent package contains directions so simple any woman can tint soft, delicate shades or dye rich, permanent colors in lingerie, silks, ribbons, skirts, waists, dresses, coats, stockings, sweaters, draperies, coverings, hangings—everything!

Buy Diamond Dyes—no other kind—and tell your druggist whether the material you wish to color is wool or silk, or whether it is linen, cotton or mixed goods.

DR. W. B. CALDWELL AT THE AGE OF 83

"Purges" and "Physics" Bad for Old Folks

While Dr. W. B. Caldwell, of Monticello, Ill., a practicing physician for 47 years, knew that constipation was the curse of advancing age, he did not believe that a "purge" or "physic" every little while was necessary.

To him, it seemed cruel that so many constipated old people had to be kept constantly "stirred up" and half sick by taking cathartic pills, tablets, salts, calomel and nasty oils.

In Dr. Caldwell's Syrup Pepsin he discovered a laxative which helps to "regulate" the bowels of old folks. Dr. Caldwell's Syrup Pepsin not only causes a gentle, easy bowel movement but each dose helps to strengthen the bowel muscles, shortly establishing natural "regularity." It never gripes, sickens, or upsets the system. Besides, it is absolutely harmless and pleasant to take.

If past fifty, buy a large 60-cent bottle at any store that sells medicine and just see for yourself.

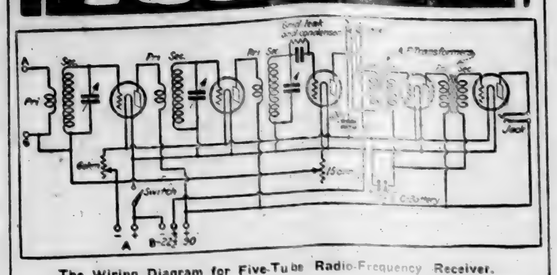
RADIO



The Wiring Diagram for Five-Tube Radio-Frequency Receiver.

By EDWARD SPIEGLER,
In New York Herald-Tribune.

For a dependable, trustworthy radio broadcast receiver, one that will work consistently night in and night out without fuss or bother, the writer believes it is difficult to find one more desirable than a straight five-tube, three-dial tuned radio-frequency set constructed with efficient condensers and tuning coils and equipped with standard accessories. The sensitiveness, selectivity and volume of an outfit of this type can be practically guaranteed in advance, and the builder can be assured that he is not spending his money on some one's notion of a freakishly "different" receiver of undetermined worth. When he has finished the wiring and connected the batteries he will hear broadcasting, and hear it well.

The writer recently completed such a receiver, incorporating in it the acceptable innovation of a few new tuning inductances, and enjoyed an instant satisfaction from it that was unusual. He had previously made a number of popularly exploited radio-frequency sets of different design, and had spent whole evenings of patient adjustment on each in an effort to obtain good results. This orthodox, unpretentious outfit, boasting nothing more radical than some straight-line frequency condensers and some different R. F. coils, produced such immediate results in the form of many and loud stations that he thinks people who want fool-proof receivers should be told about it.

Parts Required.

The average constructor will have no difficulty in assembling the set with the aid of ordinary hand tools. The parts required are a panel 7 by 24 inches, of any good insulating material; a half-inch thick wood baseboard of the same dimensions, three Gen-win Lemnis coils, three .00035 mfd. straight-line frequency condensers, three dials to fit same, one six- and one thirty-ohm rheostat, one double and one single circuit telephone jack, five standard tube sockets, grid condenser and leak, two audio-frequency transformers, one battery switch, one binding post strip and the usual busbar and other incidentals.

The set is most conveniently assembled in two units, the panel and the baseboard.

The sockets for the R. F. tubes occupy the space between the variable condensers and a little to the rear of them. The detector socket is up in the extreme upper right corner of the baseboard, and is followed by the A. F. transformers and tubes winding along the back edge of the board. The second A. F. tube is in the upper left section, its "P" post going conveniently to the telephone jack in the lower left corner of the panel. Similarly, the right-hand jack connects to the adjacent detector socket.

This U-shaped lay-out keeps all the connections very short and in their logical order.

About 90 per cent of the wiring involved in the construction of this receiver can and should be done on the baseboard instruments before the panel is screwed into position. The constructor is advised against assembling the parts first and wiring afterward, as the presence of the protruding variable condensers will make the installation of many of the wires exceedingly difficult.

No binding posts are provided for the "C" battery, as this unit is most easily connected by means of short lengths of flexible cord. The other battery connections are standard and are easily followed.

The Wiring.

The wiring of the R. F. and A. F. stages is more or less orthodox in nature. The three variable condensers are connected directly across the respective secondaries of the Lemnis coils, with stationary plates going to the grids of the tubes and rotary plates to the filament circuit.

The feature of this receiver, outside of its general effectiveness, is the type of radio-frequency tuning units employed. Each one consists of a 15-turn primary and a 103-turn secondary, the wire being wound according to the lemniscate principle. This form confines the electromagnetic field and neutralizes the tendency toward oscillation. The extraordinary length of the lemniscate curve reduces the resistance otherwise encountered in small diameter coils.

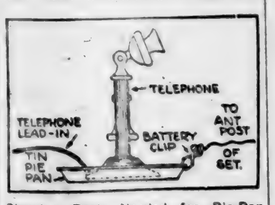
The wire used is No. 26 enameled, high turn-to-turn capacity being avoided by a system of spaced winding. Over all, a coil is just three inches long and two and three-quarters across the loops; the small diameter of the latter is one inch. An ingenious experimenter can readily rig up a winding jig made of two short curtain pole sections nailed on end of a board and produce desirable coils.

The directions which the magnetic flux of each section of these coils assume by virtue of the peculiar winding scheme are said that the coils results have [illegible] confined magnetic fields. This property precludes the necessity of mounting the coils at particular angles in a receiver in order to prevent interstage coupling. The absence of interaction also gives each coil a fixed and definite inductance value.

The last mentioned fact is responsible for a very desirable effect, namely, the almost exact coordination of the three variable condenser readings, from [illegible] meters right up to 600. Different metal lengths seem to have little effect on the first condenser reading, the variation at three different locations being not more than one point on a 100-unit scale. To select several DX stations of some sixty-five tuned in during two nights of listening, the dial readings were 70.5, 71, 70.5 for "MIA" Miami Beach, 17.5, 69½, [illegible] for WGY, Schenectady, and 55, 55, 55 for WIP, Philadelphia. It is readily possible to hear a station on a given dial setting, because of the wave control allocations and of the straight line frequency characteristic of the [illegible].

Friendly Old Pie Pan Serves as an Antenna

The only parts necessary to construct this serviceable indoor antenna are a pie pan, nearby telephone, battery clip, and from 10 to 20 feet of copper insulated wire. The battery clip should be clamped to the rim of the pan after spot on pan has been sandpapered or scraped for good contact. Wire is attached to clip, and



Showing Parts Needed for Pie-Pan Antenna Arrangement.

the other end is connected to the antenna binding post of the radio set. If wave length is too high or tuning is broad, insert a folded piece of newspaper or piece of cardboard between phone and pie pan.—Radio Digest.

Chicago Fan DX Champ; Makes Daylight Record

What is believed to be a record for daylight reception was hung up by KFI, Los Angeles, when a football game broadcast from a remote control in the Los Angeles coliseum, was received in Chicago, commencing at 2:35 p. m. Central time. With two grid contests scheduled, the whistle blew for the first game at 12:30 p. m., Pacific time, and it was reception of this game that brought a Chicago radio fan into prominence as a daylight DX champ. Undoubted proof that this daylight transmission and reception is not freakish is found in the fact that 5,000 students of the University of Iowa heard an entire Iowa-U. S. C. game in Los Angeles and broadcast from KFI. Hundreds of letters and telegrams on both days indicated that daylight reception of KFI in the Central and Midwest states is general. Daylight reception over great distances on extremely short waves is not unusual, but KFI was on its normal wave length, of 467 meters for both games.

Learn How to Solder Before Building Set

This business of soldering radio sets is easy once you get the knack of it. If possible to use an electric iron it will be found that soldering becomes still more child's play. And don't use anything but rosin core solder. You don't have to bother about applying the flux before the solder for it's already in it. Just see that the two things to be soldered are clean, then get your iron hot and touch it to the metal for a few seconds to get it hot. Now touch your iron to the solder, retaining some of it at the tip of the iron, touch the tip of the iron to the place to be soldered and the solder will run off the iron, making the joint—and it's all over.

Burnt Tubes Useful

Use your burnt-out tubes as a battery connector. Break the glass, solder leads from the battery to the wires inside the brass shell and fill the shell with sealing wax. Now connect the battery leads from the wiring of the set to a socket arranged conveniently on the back of the cabinet. It is a simple matter then to "plug in."

We want you to make this test

We want every weak, puny, fagged-out man and woman in America to make this test: buy one bottle of Tanlac at your druggist's, take it according to directions for one week and see how quickly you get started back to full strength and vigor.

We know what we are talking about. Tanlac has helped millions. In our files are more than 100,000 letters of praise from grateful users.

Don't confuse Tanlac with ordinary patent nostrums. It is Nature's own tonic and builder, compounded from roots, barks, and herbs that we gather at great expense from the four corners of the earth.

Tanlac goes straight to the seat of your trouble; cleanses and purifies the blood stream; puts your digestion in proper shape. First thing you know you have an appetite like a starved child. You rest at night and your whole body begins to feel the stir of strength and energy.

Don't you be discouraged. Don't put off testing Tanlac another day. Get a bottle now and in a week you should notice signs of real improvement. Then you will feel like your old self again. Take Tanlac Vegetable Pills for constipation.

Still Hale and Hearty at 76

"Six months ago I was just suffering torture with my stomach, and was too nervous to sleep. I had lumbago pains and rheumatism.
"Tanlac has ousted all my aches and put me to eating, sleeping and feeling like a school boy.
"I am 76 years old."

ST JOE

In the classics there is a story of Hercules wrestling with Antaeus The last named was a son of Neptune and Terra, the Ocean and the Earth. Hercules discovered that every time Antaeus touched the Earth he gained strenght so that he was unable to overcome him Therefore he held him in the air so that he could not touch the mother earth, until he was so weakened that he destroyed him. The lesson is plain. The world has no power over the child of God while the latter keeps in touch with God. But the world may allure and hold him away from God until he loses his strength, and then the world may do what it pleases with him.

The Songs I'd Like to Sing

By O. Lawrence Hawthorn

I'd like to write of humble things—
The common joys and cares of every-day.
I'd like to tell a tale that brings
A brighter smile, or drives a tear away.
I'd like to paint a little scene
Of good old-fashioned comradeship and fun,
Where life is wholesome and serene,
And restful sleep is found when day is done.

I'd like to sing the simple songs,
That children often stop their play to hear.
I'd like to talk to artless throngs
And have them understand my words of cheer.
I'd like to voice the happiness
That only humble folks can truly know;
And search for language to express
The beauty of contentment's kindly glow.

I'd like to chant love's tender lays;
And laud the charm of nature everywhere.
I'd like to sing of childhood days,
Of home, and of a mother's faithful care.
I'd like to touch the wistful chords
Of memory, and somehow play again
That gentle music which affords
Unending pleasure to the hearts of men.

Sheriff's Sale

No. 4638
In the DeKalb Circuit Court
State of Indiana.
AUBURN STATE BANK
vs
JONATHAN C. HART, ET AL

By virtue of an Order of Sale, to me directed and delivered by the Clerk of said Court, in the above entitled cause, I have levied upon and will expose for sale by Public Auction, at the Court House Door, in said County, between the hours of 1 to 4 o'clock P. M., of the 20th day of March 1926, the rents and profits for a term not exceeding seven years, of the following described premises, viz:

A parcel of ground bounded by a line commencing at a point sixty (60) feet south of the southwest corner of Lot numbered nine (9) in Block numbered five (5) in the Original Plat, in the Town of St. Joe, Indiana; thence south one hundred fifty (150) feet; thence east fifty (50) feet; thence north one hundred fifty (150) feet; thence west fifty (50) feet to the place of beginning.

And on failure to realize therefrom the full amount of the judgment, interest thereon and costs, I will at the same time, and in the manner aforesaid, offer for sale the fee simple of the above described premises. Taken as the property of the defendant to satisy said order of sale.

WILLIAM G. MORR,
Sheriff DeKalb County.
Atkinson & Husselman, Attys.

NOTICE OF THE SALE OF BONDS

Notice is hereby given that the Trustee of Concord School Township, DeKalb County, Indiana, will offer for sale to the highest bidder, $35,000.00 par value of the bonds of the said Concord School Township, at the hour of 10 o'clock A. M. on the 20th day of March, 1926, at the school house in the town of St. Joe, said DeKalb County, Indiana.

Said bonds to be for the aggregate sum of Thirty-five Thousand ($35,000) Dollars and shall bear interest at the rate of 4½% per annum payable semi-annually, to be issued in Thirty series. Each series shall consist of two bonds numbered "One" and "Two;" each bond shall be for $588.33. Series numbered One shall be due on the 1st day of July 1927, series numbered Two shall be due on the first day of January, 1928, and one series shall fall due each six months thereafter until all shall mature.

Said bonds shall be sold for not less than par value and accured interest.

The said Trustee hereby reserves the right to reject any and all bids.

FRANK I. MELLIMAN
Trustee Concord School Township, DeKalb County, Indiana. 813

AMONG OUR SICK

Miss Juanita Kinsey was off duty last week, a teacher in Jackson township, with tonsilitis.

Roy Wade is suffering an attack of stomach trouble has not been able to work for some time.

J. C. Hull and wife were guests of J O. Quance and family at Ft. Wayne, Sunday. They also called on Mrs. Arline Koch at the hospital and report her getting along fine.

Wm. Pepple continues to just hold his own, improvement not being shown to any great extent. He suffered a stroke about ten days ago and his right side is affected.

Frank Davis of Fort Wayne, was operated on Monday. Some days ago he injured his right arm and by letting it go uncared for infection set in and may cause the loss of his arm. He is reported serious.

Mrs. R W. Brodbeck is at Wolcotville assisting in the care of her father. He was operated on at Fort Wayne a few weeks ago and had recovered rapidly so as to be taken home, but a re-action has set in.

S L. Widney is confined to his bed with pneumonia and is quite sick. Later developments prove that one lung has completely filled up and a nurse has been secured to care for him. Due to his rugged condition, Uncle Sam will stand considerable, but he has completely surrendered all hopes of recovery.

Penalty Given With Some Speed

Within a period of less than 24 hours Monday seven youthful bandits, ranging in age from 17 to 21 signed confessions solving at least 25 robberies in Fort Wayne within the past three months and each received a sentence of from 10 to 25 years imprisonment in the state reformatory for automobile banditry. All pleaded guilty when arraigned before Judge Sol A Wood in the Allen circuit court Monday morning as a climax to one of the biggest crime wave cleanups on record in Allen county. The swift justice meted out in the cases is also believed to be a record for that county.

NEWS OF THE TOWN

For a real Sheriff, vote for Stgdghill. 10t5p.

You can get transfer paper at News office in large or small sheets.

Notary work of all kinds attended to promptly at News office.

Chas. Miser of Auburn, was home Saturday evening and Sunday.

Mrs. Virgil Perry and baby spent last week with her father, near Auburn.

All the late magazines at News office. Place your order—we will save one for you.

Mrs. Zay Sailer spent a few days the past week at Woodburn with Don Keller and wife.

Dave Chambers and family of Lima, Ohio, were Sunday guests in the Rolla Wiers home.

Mrs. Jennie Sechler of Auburn, was home over Sunday. She will return to St Joe in the spring.

For Sale: Fresh Jersey Cow with calf by side. Guaranteed. M. C. Hart. 10t1.

Wm. Staman, Jr. and wife are moving into their farm residence, recently vacated by Vernie Monroe and family.

Mr. and Mrs. James Rhoderbaugh visited Saturday and Sunday with Elmer Hart and family at Napoleon, Ohio

The Bowser & Read Tin Shop will be open Wednesday and Friday evenings for repair work of any kind.

Its now McCall Needlework and Decorative Arts and its a fine magazine for the suggestions of home furnishings. Now on sale at News office.

Sunday Herald Examiner on sale at News office. Phone your order and we will save you one. The real paper with many features.

Emmet Epler and family and his father have moved from Decatur to St Joe and are living in the property formerly owned by J. T. Betz. Mr. Epler expects to farm the Frank Scholes farm east of town and has moved his machinery and stock. As soon as the weather permits they expect to move or build a house on the place.

The play, "Mr. Bob," given by the Junior class was fairly well attended on Friday night but the storm on Saturday night hindered many from attending. The play was well rendered, the cast being made up of girls only. The play was a mixed up affair, Bob being taken for a boy instead of a girl and when her real identity is made known everyone is forgiven and things are O. K. The players were drilled by Merritt Maxwell and they sure did splendid work. Dorothy Ginther, Hilda Koch and Joe Woodcox furnished the music.

Gold Mine of Ideas for Farmers

Only $1.

683 Illustrations

Here's "the most remarkable book ever published for farmers," says one authority. It is remarkable in the extreme practical nature of its contents, in the wide range of farm subjects covered, in the world of illustrations it contains, and in the extremely low price.

861 Discoveries

One discovery sometimes makes a fortune. Here are 861 of them, any one of which may be of many dollars value to you. These discoveries may be classified as follows:

138 for the farm shop
76 on fencing
90 on auto, truck, and tractor
61 on farm buildings
36 on field machines
28 on concrete work
22 on orchard work
27 on poultry
15 on live stock
25 on electrical work
7 on greenhouse work
21 on farm tools
34 on garden work
34 on poultry
17 on the lawn
146 on household helps
70 on miscellaneous farm work
16 on hunting, fishing, and trapping

—and every plan has been tested and found to be a money saver. Most of the articles are illustrated with photographs or drawings. The devices described are easy to make because of these pictures and clear descriptions.

Suppose you could live your life 417 times

How you could forge ahead of other farmers in a way that would insure you liberal and steady profits! This book enables you to do the next best thing — you may have the experiences of 417 lives — experiences of successful farmers tested by themselves — briefly, clearly, completely. And many of these experiences are illustrated with accurate drawings. Imagine 250 pages chock full of ideas — 683 crystal-clear illustrations. Just think of the value to you!

Just send $1 and the book will be mailed to you postpaid

Make remittance to St. Joe News and book will be mailed direct from publishers.

Miss Beatrice Woodcox visited at Columbus, Ohio, over Sunday.

H. J. Renner and wife were Sunday guests of Orla Fee and family near Hamilton.

Stanley Monroe and family of West Unity, Ohio, Sundayed here with his parents.

Jesse Copp and wife of New Haven, are the parents of a baby girl, born last Thursday.

The J O Quance residence at Fort Wayne suffered a loss by fire last Friday forenoon. The roof was badly damaged.

Clay Coburn and family are moving from the H. M. Widney farm and locating in the Chas Fry property. Mr. Coburn will work for Orla Baker at the carpenter trade.

They All Do

We heard a woman in St Joe store a wew days ago insisting on having a certain brand of coffee. In fact, she was so insistent that we asked her why some other brand wouldn't do just as well. "I see it advertised in everything I pick up," she said, "and if it wasn't all right they would not be advertising it." And we feel sure the same rule works with everything else sold over the counter. The best advertised goods move fastest—any merchant knows that. And yet there are merchants who do not take advantage of that knowledge and advertise the goods they carry that do not move as fast as they would like to have them It's a poor rule that won't work more than one way And the columns of this paper are wide open to the merchant who wants to make a test of it.

Musical And Literary Contest

Friday evening, March 12, 1926.

In order to arouse interest in the high school contests the Parent Teacher Association has decided to put on a contest at the Hall on Friday, March 12 to consist of the following led by Mr. Hart and Mr. Baltz.

Events	West	East
Piano Solo,	Mrs. Northrup	Mrs. Coburn
Vocal Solo,	Mrs. Chapman	Glenn Hart
Reading,	Mrs. Walter	Mrs. Rhodes
Quartette,	Mrs. Wade	Mrs. Rectenwall
	Mr. Butler	Mrs. Fisher
	Mrs. Baltz	Mrs. Rhodes
	Mr. Baltz	Mrs. Widdefield
Oration,	Mr. Howey	Mr. Koch
Spelling Contest,	10	10
Bible Contest,	8	8

The Common Causes of Headache Are:

Eye strain, infected teeth, tonsils and sinuses, constipation, indigestion, kidney conditions and catarrh. Of all these causes EYE STRAIN predominates. If your EYES are defective they should be taken care of first and that may eliminate all your trouble. We have relieved hundreds of others, let us help you.

We make glasses to fit your pocket book and your eyes.

That I have been located in the city of Butler, Indiana, for thirteen years in the practice of fitting glasses?

DO YOU KNOW
That I sell better glasses for less than what some people sell cheap glasses for?

DO YOU KNOW
That I sell only standard merchandise that is seldom sold only by high priced houses who charge more than the average person can afford to pay?

DO YOU KNOW
That every pair of glasses that I sell is guaranteed and that if they are not satisfactory in every way, that I will give every cent of money back that you have paid me?

DO YOU KNOW
That several residents of ST. JOE have bought glasses of me in the past years and that our dealings are satisfactory or they would not continue to send their friends here. The next time you need your eyes tested for glasses it will pay you to call at my office and get your eyes fitted correctly for good comfortable vision that will also please both your eyes and pocketbook.

Earl E. Frisbie BUTLER, IND.

FOX FARMING

Modern Fur Farm for Indiana Locate Two Miles South of St. Joe.

You are no doubt unfamiliar with the fact, that on the River Bend farm near Spencerville, Indiana, a tract of land has been enclosed where fur-bearing animals are as contented and happy as when Columbus discovered America.

The ranch consisting of forty-two (42) pens built by the Maumee Valley Fur Farms, on a slight elevation gently sloping off on either side to the St. Joe river and a sturdy growth of timber, is the home of the wealthy little fur-bearer SILVER BLACK FOX.

Redi-made runway pens are used and an eight foot guard fence with a two foot overhang surrounds the entire ranch. The cook house built at the entrance of the ranch is equipped with electric lights, electric refrigerator, electric pump, pressure tank and heater providing hot and cold running water, lavatory and other modern conviences found only in expensive city homes. The house is finished throughout and represents the last word in expert construction. It is considered the most unique and efficient fur farm in the state.

It is only one of a number of similar ranches planned by the L. D. Richmond Company of Ann Arbor, Mich., and constructed according to their ideas of any up to date fur farm. The foundation stock furnished by them are big well furred animals full of vim and stamina and truly represent the choice selection of a company who sell and deliver the best. An experienced caretaker is also furnished and daily food and ranch reports are mailed regularly to the Ann Arbor office where they are checked and suggestions made when necessary, this is also a part of the company's service. In addition the company have their own pathologist's and medical adviser who co-operates with Dr. Baumgartner in feeding, treating, developing and sanitation, the ranch is kept under the strictest supervision at all times.

Fur Bearers Face Destruction

In the beginning of the eighteenth century, the vast area extending from the Alleghenies to the Rocky Mountains, was the home of untold millions of fur-bearers—an inexhaustive supply.

Chains of trading-posts were thrown across the continent. Man's ingenuity was pitted against the cunning of instinct—the steel trap and rifle were brought into play—the fur-bearers were slaughtered with a vengeance—still the supply remained abundant; but when the great tidal wave of settlers had spent its force, the fur-bearer was no more. Each succeeding generation has witnessed the expansion of population pushing the timber line farther and farther north—carrying with it the nautral habitat of the fur-bearers.

"Nothing in the history of creation," Professor Osborne says, "parallel the ravages of the fur and hide trade, which with the bone fertilizer trade, now threatens the entire vetebrate kingdom

The legitimate use of furs for protection in cold weather has long since passed. Furs are worn all seasons of the year, in winter for protection in mid summer purely for ornament and personal adornment, or to make a display of wealth and luxury. Many of our fur-bearers are not only paying with their lives, but with the threatened existence of their kind. The high prices which have been offered for their pelts have led to intensive trapping, to the clearing of woodland and draining of marshes and even Alaska is beginning to worry about the growing scarcity of fur-bearing animals within her boundaries.

Thirty million animals a year are being killed throughout the world to get enough furs to meet public demand.

The modern girl is more destructive of fur-bearing animals than was the caveman of 400,000 years ago, says H. E. ANOTHY of the AMERICAN MUSEUM of NATURAL HISTORY.

The big animals are nearly all exterminated, and slaughter of the smaller ones is increasing by leaps and bounds. Fashion and vanity are rapidly bringing to an end the age of mammals, which had survived three million years.

The discovery of another and new North America is very improbable therefore as population increases and man occupies more and more of that territory that is now unsettled, the area in which fur-bearers grow and thrive will be still further deminished, with a consequent deminishing in the supply of furs.

That population will increase—that man will occupy in the near future that territory which is still unsettled and from which our supply of furs comes, is as sure and certain as the rise and set of the sun.

The fur industry is facing the same situation that faces every natural resource—the situation of a decreasing supply, because of the ever present exploitating of a natural resource by a public intent only on satisfying immediate wants, and an ever-increasing demand due the increase of population and increase of wealth.

The merchants of lumber must now in accordance with Statue in many countries, reforest their timber tracts so as to enable nature to produce more wood. Interested groups of people are endeavoring daily to conserve the world's supply of coal by advocating more intelligent use of this product of nature.

One by one the gifts that nature so generously furnished man will disappear unless man shall use intelligence, foresight and patience and allow nature to recreate and replenish her supplies of commodities.

From the tragedy of the fur-bearers fate, the fur trader's relegation, was born the great opportunity for fur farming. An opportunity of profit rivalling the richest days of the old time fur trader.

An opportunity born in the depletion of a great natural resource, depriving mankind of a coveted and indispensible necessity. An opportunity for profit based upon an urgent human need—an insistent and insatiable demand for furs—at prices undreamed of by the fur trader of by-gone days. At prices dictated by an increased population—armed with the purchasing power of great wealth—eager to buy in a market with a meager supply.

The question then, is where we may look for our fur supply. Proper protection for fur-bearers and shorter trapping seasons would help maintain the annual catch but the supply from the wild can never be greater than it is now. Particularly in view of the fact that mink, civet, weasel, martin, fisher, fox, coyote, lynx, bob cat, wolverine, wolf and others, are largely predatory and very destructive in their operations among both water fowl and upland game and are therefore, considered fair targets for year round extermination rather than subjects for protection.

Several ways there are of meeting the demand. The first, in careful nursing of our wild fur supply. Second, domesticating the valuable fur-bearers, ranch raising them. Third, producing artificial furs, that is imitations. This of course has long been in practice. It was the thought which resulted in the production of plush, velvet, velure etc., but it doesn't belong to the present field of industry. The forth, putting fur on animals already domesticated has long been carried on with goats, cats, dogs, rabbits, sheep, calves, cattle and ponies.

The other two answers to the question are our immediate concern. It is perhaps, unnecessary to set out with the premise, that this, like most other problems is a purely economic one. As soon as people find out that it pays better to leave land waste as a nursery for fur-bearers rather than to plough it for the growing of wheat, we may be sure the wheat will be forgotten. Now that the price of fur is high enough to justify the expense of ranching you may be sure ranching will boom.

Fur farming is bound to become a great national industry, for the supply of wild fur is decreasing yearly and the demand increasing ever more rapidly. Thus the economic pressure will soon force thousands into it. A lessening of any one article or class of articles has seldom resulted in a lessening demand, more often in the reverse of that, since luxuries have ever seemed more desirable than necessities, rare chattels to be coveted than those of ordinary abundance.

What will be the situation in the future as the number of motor cars increase, wealth multiplies and population grows, creating greater and greater demand for furs, with a constantly deminishing supply from the wilds, with the passing of the years? There can be but one answer, therefore if you engage in fur farming you will engage in the production of a product the demand for which is growing greater and greater and the supply of which is growing smaller and smaller.

The Silvery Future of the Silver Fox.

You have read of the sly and crafty fox
That old time foe of poultry flocks.
But have you heard the story that today is told
Of the Silver Fox that will turn to gold?
Because our ladies choose to wear
This softest fur with the silver hair,
The Silver Fox has come into its own
Placing its keeper on a golden throne.

Honored Citizen Passes Away In the Death of Samuel Lynn Widney.

Samuel Lynn Widney was born June 26, 1839 and died March 12, 1926, age 86 years, 8 months and 16 days.

Samuel Lynn was the first child born to John Patterson Widney and Jane Lynn Widney, his wife. He was born on the farm now known as the Richmond farm just west of the village of Newville The father and mother came to this farm in 1836, homesteaded the same and started to clear the forest therefrom for the new home. Samuel was not long the only child for in due time there came into the home Oliver Hanna, Melissa Juan Patterson, Charles Jefferson and Angeline Jane. As brothers and sisters all of these have preceded our beloved to the Land Eternal. Samuel the eldest, being the last of said family to remain.

The family moved from the homestead to the Old Widney farm near St. Joe about October 11, 1843. Here on this farm, now known as Spring Brook Fruit Farm, his early boyhood days were spent In 1851 the father, John Patterson, was elected County Clerk and the family moved to Auburn, where on October 12, 1851, the mother passed away. After the father had served his time as County Clerk he again moved back to the farm. At a later date the father, John Patterson Widney married Mary Henderson Widney. To this union were born five children: Mary Alice (Widney) Lewis, who now lives on South VanBuren Street, Auburn, Indiana; John Morris Widney, Indiana Avenue, Auburn; Cyrelia Arvill (Widney) Kaley, deceased; Mervin Widney, who died in infancy and Cora (Widney) Lodewick, now living in Roswell, New Mexico. Thus we find but three, the half brother and two half sisters surviving the deceased.

Charming Apparel for Paris Misses

Tailleur and Party Frocks Are Given Especial Attention.

Possibly you are among those for whom the girlish sixteen-year-old of yesterday holds a greater appeal than Miss Smart-Sixteen of today. It is hardly to be expected than any fin-de-siecle enfant, once accustomed to shrink indignantly from the merest mention of cosmetics, can gaze with an applauding eye at the modern versions of Miss Twelve-to-Eighteen. The sophisticated silhouettes and complexions of the contemporary pre-debs offer a tremendous contrast to the ingenuous girlish costumes of the youngsters who once waltzed so decorously to the strains of "The Blue Danube." And the comparison, if we may venture an admittedly prejudiced opinion, says a Parish fashion writer in the New York Herald-Tribune, is not to the advantage of the smarter demoiselles of this enlightened day.

Yet it is manifestly unfair to criticize. In this age of ageless women, when grandmothers and dowagers maintain at any cost the slim tradition of youth, when matrons become younger every year, why should the budding generation be expected to remain quiescently in status quo? Youth was ever ready to go half way, and if the post-adolescents insist on tearing down the barriers of Time they can hardly complain if the sub-deb does a little poaching on her own account. The reformation, when it comes—and it is coming—must begin at the top. When older women adopt more generally the dignified dress that maturity requires—without in any way reverting to the colorless mode that was the portion of matrons in the Victorian era—it will be time enough to hark back to those impeccable "when I was a girl" days.

Children Are Smartly Dressed.

There is probably no great city in the world where children are more smartly dressed—in the modern connotation—than they are at the French capital. This does not mean that a great deal of money is spent on their clothes, for the French woman of every class is far too thrifty to care to make a considerable outlay on little garments that are so soon to be cast aside. It is her natural and inborn good taste and clever fingers that make a gathering of children in Paris such a delightful picture.

Even on rainy days the Paris children go for their morning walk in the Avenue du Bois de Boulogne. They wear leather leggings buttoned right up to their small thighs. Above these all that is seen is the jolly little cape reaching to within an inch or two of the knees—the same cape which will mean so much to their mothers this spring.

Some of the proudest tots carry minute umbrellas that are miniature copies of mother's Tom Thumb model. They have amusing little carved handles in the form of a cat's or dog's head and are usually made in gay-colored silks, though some children like to look very grown-up and carry a black one.

Little girls' frocks and coats are most often cut with a kimono sleeve all in one with the dress, as the wide

Tailored Suit of Beige Flannel, Pink Shirt and Rose Felt Hat.

armhole gives freedom of movement and full scope for play. Everyday frocks are made in supple woolen fabrics, such as duvetyn, kasha or tolle de laine. Serge, popeline and repp make practical little dresses, and for hard wear corduroy velvet and English velveteen are extremely serviceable. Their simple trimmings consist of yokes into which plaits or gathers are set in order to give freedom of movement without superfluous fullness.

Gay-Colored Embroideries.

Another idea is to encrust bands of the material edged with a narrow piping of a contrasting color. Simple embroideries in gay colorings are very popular for children's frocks; for instance, a green kasha dress has a border at the hem of purple and yellow crocuses embroidered in fine wool; that give the effect of flowers growing on a grassy field. The belt, where it is used, is often regarded simply as a decoration and is made as loose as the frock without holding it in at all. Large and small-checked materials are most popular for children's clothes, for they need no trimming of any kind.

Party frocks are developed in light colored velvet, satin, crepe de chine, taffeta, tolle de soie and chiffon. The sheer fabrics are trimmed with plaits, gathers and smocking. Ribbon is very popular as a trimming. It is plaited or gathered into tiny flounces, cockades or rosettes, or it is looped in festoons and sometimes used in long fringes.

Woolen mixtures in neutral tints, burnfyl, cheviot and grankellaine are used for coats, which are worn with a small stitched hat of the same mate-

Pale Yellow Taffeta Party Dress for the Little Miss of Six.

rial. This type of ensemble is used for small boys, as well as girls. The most usual shape of children's coats is raglan, widening toward the hem and very short, for the French believe in plenty of freedom for small legs which are covered only by ankle-length socks except when winter gaiters are worn. Bolero and pinafore effects are often chosen for little girls and their elder sisters as well.

When the high school age is reached the Paris sub-deb becomes a diminutive edition of her older sister or her mother. The regulation evening dress and wrap might easily be a model for the debutante—the tailored suit adheres to all of the latest O'Rossen specifications.

Flowered Spring Fabrics.

Each season in Paris it appears that the summit of beauty in fabric, coloring and design has been attained, and each succeeding year the great cloth manufacturers show spring collections that prove they can surpass all their former achievements. The spring of 1926 is no exception to the rule. Every flower of the field has been gathered to give inspiration to the dye-makers. Jewels and sunsets have been studied. The rich territories of ancient and modern art have been explored, and the results are some of the most exquisite tints that have ever enhanced the loveliness of woman.

This season there is a new peridot green that has been launched by the great house of Bianchini Ferrari. It is an exact replica of the precious stone that bears its name. Incidentally, the jewelers are now working hand in hand with the dressmakers and fabric manufacturers so that your ornaments shall match your gowns—a happy, if somewhat expensive, inspiration.

Pale pastel tints are again to be the rage, but they are clearer, fresher colors than those worn last year. An adorable sky blue has been invented by M. Rodier, who shows some wonderful varieties of that remarkable kasha of his which always forms the basis of his Paris sports clothes. Pale pink, beige, light apple green, hunter's green, nattier blue, rodier red, pastel mauve and gray are the colors most in favor at this house, and there is also a green which resembles the peridot green.

The Permanent Plait.

The greatest novelty of the Rodier collection is the plaited kashatolle, crepella and miliply silk and wool, which is made up into the finest imaginable plaiting and does not crease. Neither does the plaiting come out in cleaning, which is a great consideration. It is so closely plaited that more than 50 per cent of the material is taken up.

A visit to the house of Bianchini Ferrari proves that printed chiffons, crepes de chine and voile de soie will have an even greater vogue than last year. Some people have declared they are tired of printed fabrics. They have only to see the Bianchini Ferrari collection to change their minds. The designs are more beautiful and varied than ever. Polka dots and a fine pin check, also a slightly larger check, form the basis of the conventional and futuristic designs. Small field flowers in tiny bouquets such as one sees on 1830 prints and chintzes are much used on chiffon and silk, sometimes on black grounds, more often on white, yellow and pale pink and blue.

The Kitchen Cabinet

(©, 1926, Western Newspaper Union.)

Our thoughts determine our acts and therefore our lives, as well as the influence of our lives upon all about us, either by way of good or by way of hindrance, with absolute precision.—Ralph Waldo Trine.

EVERYDAY FOODS

When you have a nice slice of ham and wish to serve it a little different, try:

Ham en Casserole.—Take a thick slice of ham, wipe and remove the outside edges of fat, put into a frying pan, cover with tepid water and let stand for several hours. Prepare sufficient potatoes thinly sliced, for the family. Put a thick layer of potatoes in a casserole and cover with the ham. Pour over enough milk to cover the potatoes and cover, cook slowly in a moderate oven for two hours. Season with pepper and salt if needed before taking from the oven.

Angel Food Pudding.—When fresh eggs are plentiful, this makes a delightful pudding and it is not expensive. Bake an angel food in a large sheet. Cut into rounds or oblongs and dip in fondant and cool. Serve with crushed strawberry sauce, fresh or canned. If canned, the juice may be strained and the sauce thickened a little with flour and butter cooked together.

Belmont Minced Chicken.—Melt one-fourth of a cupful of butter and add one-fourth cupful of flour, stir until well blended, then pour on gradually while stirring, one and one-half cupfuls of chicken stock. Bring to the boiling point, season with one and one-half teaspoonfuls of salt and a teaspoonful of paprika. Add one cupful of cream, one cupful of minced chicken, two-thirds of a cupful of cooked sweet breads cut into cubes, one-half tablespoonful of truffles or chicken livers finely minced. Let stand in a double boiler to heat. Serve in a dish garnished with a border of mashed potato; brown in the oven before serving.

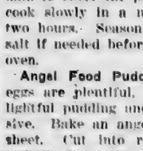
Orange Pie.—Bake a shell of rich pastry and heap into it sliced oranges that have been standing in sugar until well sweetened. Cover with whipped cream or floating island and serve. The juice from the fruit will need to be drained. For shortcake, the juice will be sufficient to moisten the cake well.

Apple Pancakes.—Mix and sift together two cupfuls of flour, four teaspoonfuls of baking powder and one teaspoonful of salt. Add one and one-fourth cupfuls of milk, one tablespoonful of fat, two tablespoonfuls of sugar, two beaten eggs and one cupful of grated tart apple. Bake the cakes and stack them, spread with butter and grated maple sugar between the layers. Serve very hot.

Egg and Tomato Luncheon Dish.—Brown six slices of bacon cut into small pieces and pour over it, one one can of tomato soup. When the mixture simmers, break four eggs into it and let them poach until firm. Remove the eggs to a platter, pour the sauce around them and garnish with parsley or bits of sweet pickles.

Fruit in the Diet.

The importance of fruit cannot be overestimated. The natural fruit is always preferable and usually more digestible, yet when cooked it gives variety and that is always an important factor.



Apple Snow.—Pare and quarter tart apples, add boiling water and cook until tender. Press through a sieve. To two cupfuls of the pulp add one-half cupful of honey, the juice and grated rind of half a lemon. Heat to the boiling point, add one and one-half tablespoonfuls of granulated gelatin softened in one-third of a cupful of cold water, stir until the gelatin is melted. Chill and when the mixture begins to thicken add the stiffly beaten white of two eggs and beat with a dover beater until firm. Turn into a mold and when firm serve unmolded with cream or boiled custard.

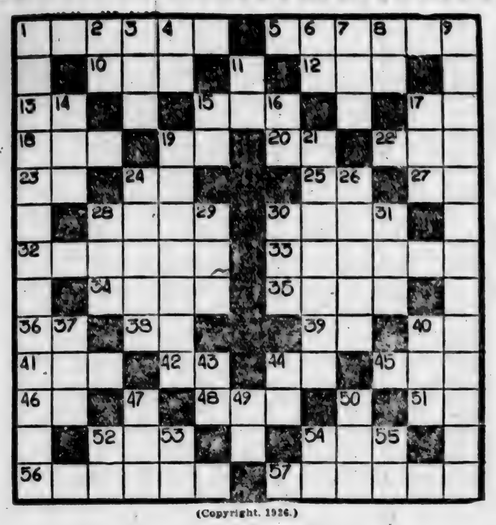
Compote of Bananas.—Make a sirup of sugar or honey and half a cupful of water. Peel and scrape two or three bananas, then cut them into thin slices; add to the sirup and boil, shaking the pan to have all sides equally cooked. Add a little grated lemon or orange rind for flavor. Skim the banana slices to a plate as they soften. When all are cooked continue to boil the sirup until thick, cool and add the banana slices and serve with whipped cream.

Fruit Salad.—For each service take a slice of pineapple, the pulp of one-fourth of a grapefruit, half a canned pear, three heart leaves of lettuce, two tablespoonfuls of olive oil and one-fourth of a teaspoonful each of salt and paprika. Arrange the fruit on the lettuce, beat the salad dressing until thick and well blended, pour over the fruit and serve at once. Chill the dressing with a bit of ice while mixing. Garnish with a cherry.

Crumbs mixed with grated chocolate and heated until the chocolate melts, then served with sweetened whipped cream, make a very good emergency dessert.

Nellie Maxwell

CROSS-WORD PUZZLE



(Copyright, 1926.)

Horizontal.

1—Plaits
5—Beasts of burden
10—Aloe
12—A hard-shelled fruit
13—At
15—To jump
17—Either
18—Part of the body
19—Another form of "I"
20—By
22—To do wrong
23—That thing
24—A preposition
25—Royal observatory (abbr.)
27—To exist
28—To quote
30—Action of washing
32—Ascends
33—Astounded
34—To cancel (printer's term)
35—To think
36—A negative
38—A preposition signifying separation
39—Doctor (abbr.)
40—Weight (abbr.)
41—Sick
43—Delivered (abbr.)
44—Belonging to me
45—Fifty-two (Roman numerals)
46—An advertisement (abbr.)
48—Eggs of fish
51—To proceed
53—A spring month
54—To possess
56—Small reproductive bodies produced by plants
57—Arab chiefs

Vertical.

1—Those affected with a mania for acquiring books
2—By
3—An electrified particle
4—To perform
6—Upon
7—A track worn by a wagon wheel
8—Street (abbr.)
9—Clandestine
11—To proceed
14—Still
15—That man
16—A parent
17—A sphere
19—Spotted or streaked
21—An unfortunate happening
24—Equipped with prongs
26—Part remaining
28—Something a cow chews
29—A point of the compass
30—Naughty
31—A kind of meat
37—Aged
40—An artificial head covering
43—Doctor (abbr.)
44—Another form of "I"
47—A vehicle
49—All right (abbr.)
50—To inspire with reverence
52—Missouri (abbr.)
53—An old form of "you"
54—An exclamation
55—Nickel (symbol)

HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this puzzle will spell words both vertically and horizontally. The first letter in each word is indicated by a number, which refers to the definition listed below the puzzle. Thus No. 1 under the column headed "horizontal" defines a word which will fill the white spaces up to the first black square to the right, and a number under "vertical" defines a word which will fill the white squares to the next black one below. No letters go in the black squares to the next black one below. All words used are dictionary words, except proper names, spaces. Abbreviations, slang, initials, technical terms and obsolete forms are indicated in the definitions.

One Thing Granddad Might Boast About

It may have been a fact that granddad had never seen a movie. He may never have attended a ball game. He possibly did not own a radio and he was not in possession of a flivver. He did not go downtown every night to get the girl's neck shaved, and he only took a bath now and then. It was weeks, yes, even months, before the happenings of the city reached him, and he never thought of swimming with ladies.

He never smoked a cigarette.
He never had his nails manicured.
He never divorced grandma.
He never went to a burlesque show and took a front-row seat.
He never bought pointed-toed shoes.
He never went to the club.
He never had a dark brown taste the next morning.
He never wore a boiled shirt or one of those little go-devil necktles.
He never took physical culture or anything that did not belong to him.
He never shot a filling station bandit nor was he ever held up.
He never slept in pajamas.

There was just a lot of things that folks have now that granddad did not have. He was a real dyed-in-the-wool backwoods fossil, you might say.

But granddad was never behind with his work.

Ever think of that?

Salesmanship

Floorwalker (to clerk)—When a lady customer comes in you ask her the size of her feet. She says, for example, "Seven." You say, "Oh, no; six will suit you, madam," and then fit her with an eight.

Know What He Meant

This telegram was received by the bride of a civil engineer who took only winter flannels to the tropics with him: "S. O. S. B. V. D. C. O. D. P. D. Q."

Sloth Has Idleness Reduced to System

Unlike most animals, the sloth is indolent to such a degree that, living as it does in the midst of the densely crowded tropical jungle of South America, one wonders how it manages to hold its own and obtain sufficient food.

Quite unconcerned by all going on around it, the sloth sleeps on; even the most violent shaking will not waken it. Nothing so trivial as the waving of a scarlet rag or the sight of a climbing serpent not more than a few feet off can produce even the faintest change of expression. It is totally indifferent to any noise or strong smell in its vicinity, either of which things amongst animals in general causes a frenzy of excitement.

So impassive is the sloth that even a gun fired off at its ear will not produce any movement or indication that it lives.

River Leaves Much Silt

Farmers in the Imperial valley of California pay nearly $1,000,000 a year for dredging out of irrigation system the silt deposited by the Colorado river. Engineers have estimated the Colorado river carries past Yuma 196,700,000 tons of silt annually, and that an average of 185,000 cubic yards of it goes into the Imperial valley district every month.

Poet's Tomb Neglected

In the political confusion which marked the reign of Charles I, the tomb of the poet Ben Jonson remained unmarked until a casual visitor, Sir John Young, had "O Rare Ben Jonson" cut on it.

Break from English Church

The first Dissenting chapel "meeting house" in England was at Wandsworth, Surrey. It was used as a place of worship on Nov. 20, 1572.

CORNS

Lift Off—No Pain!

Doesn't hurt one bit! Drop a little "Freezone" on an aching corn, instantly that corn stops hurting, then shortly you lift it right off with fingers.

Your druggist sells a tiny bottle of "Freezone" for a few cents, sufficient to remove every hard corn, soft corn, or corn between the toes, and the foot calluses, without soreness or irritation.

New One

A new excuse for the busy office man has been invented. Instead of replying, "He's in conference," a young lady secretary in Wall street coined a new "turn-away" phrase, "He's in a temper."—The Outlook.

Earned

Father (reading letter from son at college)—"I'm a quarterback of the football squad now."

Mother—Send him two bits to get out of debt, Pa.—Texas Ranger.

When you decide to get rid of Worms, or Tapeworm, get the medicine that will expel them with one dose—Dr. Peery's "Dead Shot." 372 Pearl St., N. Y. Adv.

Radio Over the Phone

At The Hague, in Holland, a telephone subscriber can have radio also, says Popular Science Monthly, for a unique installation has been made that enables telephone subscribers to get broadcast music over the wire by calling up a special radio number. The radio connection is broken off automatically if the subscriber's telephone number is called.

The Cuticura Toilet Trio.

Having cleared your skin keep it clear by making Cuticura your everyday toilet preparations. The Soap to cleanse and purify, the Ointment to soothe and heal, the Talcum to powder and perfume. No toilet table is complete without them.—Advertisement.

Culture, like virtue, grows from an inward desire, not an outward application.

The bone of contention usually has little meat on it.

Colds

Will stop tomorrow

Colds break in 24 hours for the millions who use Hill's. Fever and headaches go. La Grippe yields in 3 days. This is the quick, the scientific way to end these dangers and discomforts. Don't trust lesser helps, don't wait. Get back to normal at once.

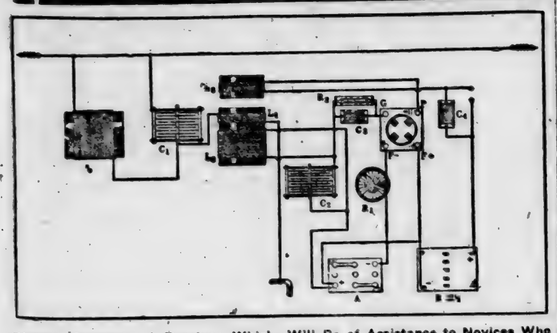
RADIO



Picture Diagram of Receiver Which Will Be of Assistance to Novices Who Desire to Construct Voluminous DX Set.

By HERMAN BERNARD
Associate, Institute of Radio Engineers.

Once upon a time one saw variable condensers that had about 43 plates and were rated at .001- mfd. capacity. Do you remember the days? That value of capacity was extremely popular. But as receiver design improved and a higher ratio of inductance to capacity was thought advisable, such values as .00025 and particularly .00035 mfd. came into favor. Now the .00035 and the .0005 mfd. condensers are the most popular, and as they fall in nicely with schemes of space conservation they well deserve their hour.

But the .001 mfd. tuning condenser still has its use. It is in the antenna circuit. There are several ways of including it, but the one shown in the diagram is as good as any.

The Aerial is Tuned.

The condenser is used to tune the aerial circuit. The reason for the abnormal capacity is that it is perfectly normal in the position where it is incorporated. It is in the aerial circuit and the antenna system capacity is across it. To be sure the coil L would seem to be short-circuiting that antenna capacity, but that is not quite the case. The inductances L and L1 are in the antenna-ground system, and the aerial-ground capacity plays its important part in that lead, this joint contribution constituting the reactance of the circuit. A .0005 mfd. condenser might be used instead of .001 mfd., if one were sure of what one's aerial capacity was, but the .001 gives a wider margin of safety.

The object of the large capacity tuning condenser is to insure a sufficient ratio between maximum and minimum capacity, so that the entire broadcast band will be tuned in.

The circuit is inherently simple. Any one familiar with radio can construct it (modifying the grid return if necessary.)

A comfortable panel for this set would be 7 by 14 inches and it would be so laid out that the aerial tuning condenser is at left, the secondary tuning condenser at right, and the three-circuit tuning coil, L1L2L3, in center. Between the three-circuit coil and C1 would be the rheostat, R1. The jack is placed at the opposite point. The tickler would not require a dial. A small knob would suffice, or a two-inch dial, while four-inch vernier dials should be used on the two condensers.

A baseboard, if used, would be 8 by 13 inches, secured to the panel bottom by wood-screws. The coil L would be placed horizontally, 3 inches behind the end plate of C1, while the 3-circuit coil would be mounted perpendicularly on the panel. A socket shelf 2½ by 13 inches would be just as suitable.

Coil Data.

L1L2L3 may be a commercial 3-circuit tuning coil, the capacity of C2 depending on the coil used. Most often this would be .0005 mfd. For those desiring to wind their own 3-circuit coil, a 3-inch diameter stator form, 4 inches high, may be employed, the primary L1 consisting of 10 turns. Leave ¼-inch space, then wind 45 turns for the secondary L2. The tickler is wound on a 2-inch diameter, 2 inches high and consists of 22 turns. The wire is No. 24 double cotton covered. It is often more convenient to use smaller wire on the tickler, say No. 26, for it doesn't matter there, on the resistance score. As a shaft must penetrate the stator and be secured to the rotor, part of the rotor winding will be separated, at least the width of this shaft, and finer wire makes it easier to put on enough turns to get regeneration on the highest receivable wave.

The secondary is to be tuned with .0005 mfd. For .00035 use 55 turns, for .001 use 33.

As for the coil L, that will require some experimenting. My own aerial has a capacity of .00027 and the proper coil, in conjunction with a .001 condenser for C1, happened to be one comprising 31 turns on a 3-inch diameter tuning, No. 24 DCC wire being used. But some antenna systems will require a greater number of turns, some a lesser numoer. It is a good plan to put on 40 turns, then peel 'em off, as necessity dictates.

The set operates efficiently on any of the popular types of tubes, including dry-cell tubes.

Mount the condenser C1 on the panel, also the condenser C2. Then mount the coil in the center and next put on the rheostat and jack. Put the baseboard temporarily against the panel bottom and provisionally place the coil L, and the socket. The coil is set left, behind the first condenser, the socket at right. The aerial post will be at left rear, the ground post at rear center. A battery cable avoids the necessity of binding posts.

Wiring Directions.

Connect the "A" battery wiring on the baseboard parts first. Join "A" battery plus to the F plus post of the socket and to the rotary plates of C2. Connect A minus to one side of the rheostat, R1, the other side of R1 to the F minus post of the socket. The —99 type tubes have their filament, grid and plate posts differently positioned from the standard base tubes, so see that you correctly read the post designation on the socket.

After mounting L, connect aerial to one of L's terminals and to the stator of C1, while the rotor of C1 and the remaining terminal of L go to the beginning of the primary L1, the end of which goes to ground.

The end of the secondary goes to the lead that was connected to the rotary plates of C2 (the A plus lead), while the other terminal of L2 goes to one side of the grid condenser, C3. The other terminal of C3 is connected to the grid post of the socket, marked G on the socket. Across the grid condenser, which has mounting or clips for the purpose, is placed the grid leak, normally 2 meg., although the —99 type tube will stand a higher value of resistance, say 5 meg. The plate post of the socket, marked P, goes to one terminal of L3, the other terminal of which is connected to the hooked spring of the jack.

It will be noted that in the picture diagram and in the text the grid return is designated as A plus, and this is correct for nearly all tubes, although in some few instances the grid return to A minus, will work better.

The correct return is important.

The Parts Needed.

1 impedance coil, L.
1 3-circuit tuning coil, L1L2L3.
1 .001 mfd. variable condenser, C1.
1 .0005 mfd. variable condenser, C2.
1 .00025 mfd. grid condenser, with clips, C3.
1 .00025 mfd. fixed condenser, C4.
1 Single-circuit jack.
1 20-ohm rheostat, R1.
1 5-meg. grid leak, R2.
1 —99 socket.
1 7 x 4-inch panel.
2 4-inch vernier dials.
1 2-inch dial or knob.
1 5-lead battery cable.

Accessories: One 4½-volt "A" battery, usual "C" battery serving the purpose; 1 —99 type tube; 1 cabinet to match panel and baseboard sizes; 100 feet aerial wire; 50 feet No. 14 insulated lead-in wire; 2 aerial insulators; 1 ground clamp. Note: The use of a —99 tube is presupposed. If other type of tube is used make necessary substitution of equipment.

A National Referendum on Sunday Broadcasting

	Check Your Answers Here
1. Do you use your radio on Sunday?	Yes ☐ No ☐
2. Would you like to be able to tune in on a variety of programs any time between 9 a. m. and 10 p. m. Sundays?	Yes ☐ No ☐
3. Would you like the programs to be of a strictly religious nature	Yes ☐ No ☐
4. Or would you like good classical music and instructive features mixed in with the religious part of the program?	Yes ☐ No ☐
5. Would you object to jazz and popular music and entertainment on Sunday?	Yes ☐ No ☐

Hoosier News Briefly Told

William A. Didier has been elected exalted ruler of Fort Wayne lodge, No. 155, B. P. O. Elks.

Frank Phillips has donated $40,000 to St. Joseph's hospital at Fort Wayne to establish a nursery.

Cornelius S. Mercer has sold the Morristown Sun, weekly newspaper at Morristown, to Walter A. Beer of Milan.

John Harold, age ninety-three, the oldest continuous resident of Hamilton county, died at the home of his daughter, Mrs. Edgar Stanley, in Noblesville.

Fifteen million dollars will be spent by the Insull interests in northern Indiana in the development of their gas and electric interests within the next 12 months.

Northwestern, taking first in six events and sweeping all places in the quarter-mile and shotput, easily won the dual track meet with Purdue by a score of 51½ to 29½ at Evanston.

The Culver Military academy boxing team won all eight bouts in the third annual boxing meet with Wentworth Military academy of Lexington, Mo.

Hal G. Vanaiken, forty-eight years old, one of the best-known musicians in northern Indiana, committed suicide at his lonely lodge on the St. Joseph river, near Berrien Springs, Mich.

American No. 1 mine, Bicknell, owned and operated by the Knox Consolidated Coal company, with general headquarters at Indianapolis, has been closed on account of labor trouble.

Measles claimed its ninth victim at Bloomington in Wilbur, the six-months-old son of Grover Brashear. Authorities continued to assert the worst of the epidemic has passed.

Tyler G. Lawton, president of the Indiana district of the United Mine Workers, was sentenced to 60 days in jail and fined $200 by Superior Court Judge Edgar Durre of Evansville, who held Lawton in contempt of court.

Jack Clark, four, was burned to death at his parents' home at Logansport when he attempted to light a lamp. He died a few minutes after falling prostrate at his mother's feet with his clothing enveloped in flames.

The section of the Wright state "bone-dry" law which relates to the charge of driving an automobile while intoxicated was declared unconstitutional by William D. Schannen, municipal court judge of Fort Wayne.

Notre Dame ended its most sensational basket-ball season at South Bend with a 29-18 victory over Creighton. The victory gives Notre Dame a total of 19 wins in 20 starts this year and places Notre Dame in the lead of the western basket-ball teams in the matter of games won.

An organization called the Optional Military Training league has been formed at Bloomington by a group of students of Indiana university to combat compulsory military training, as now in force in the university. Arthur T. Hoadley of Gorport has been named chairman pro tem. of the league.

After weeks of search for a candidate to oppose Senator James E. Watson in the Republican primaries, May 4, and after several candidates apparently had declined to enter the race, including former United States Senator Albert J. Beveridge, Claris Adams, an Indianapolis lawyer, has been prevailed on by the anti-Watson element in the party to announce his candidacy for the long-term nomination. Adams is thirty-five years old.

A centennial celebration of the victory which made the Northwest territory a part of the United States is planned for 1929 by the Indiana Historical society. Five states—Indiana, Illinois, Ohio, Michigan and Minnesota—all carved from the old Northwest territory, would participate in the celebration, commemorating the capture by George Rogers Clark and his band of soldiers of Ft. Sackville, now Vincennes, from the British on February 24-25, 1779.

Peru, already the winter home of two large circuses, will be the headquarters of the greatest collections of tented organizations in the world within a year, according to plans announced by the American Circus corporation. The shows to be housed there include the Hagenbeck-Wallace, Sells-Floto, Yankee-Robinson, Howe's Great London, Buffalo Bill's Wild West, John Robinson and Gollmar Bros., all owned by the local corporation.

Governor Jackson appointed the following committee to represent Indiana at a national street and highway conference in Washington March 23-25: Frank T. Singleton, a member of the public service commission; John D. Williams, director of the state highway commission; Charles L. Henry, receiver of the Indianapolis & Cincinnati Traction company; Frank E. Strouse, safety director of the Western divisions of the Pennsylvania railroad, and J. J. Heavey, safety director of the Erie railroad.

Emlary Woodard, twenty-three, is under arrest on a charge of having killed two laborers at the plant of the Illinois Steel company in Gary on February 28, 1923. Following his arrest he is said to have admitted the shooting, but claimed it was in self-defense.

The Warrick county grand jury at Boonville, which has been investigating the coal mine riots of last month, reported 11 indictments, which are said to charge 87 persons with violations of law in connection with the disturbances.

IMPROVED UNIFORM INTERNATIONAL

Sunday School Lesson

(By REV. F. B. FITZWATER, D.D., Dean of the Evening School, Moody Bible Institute of Chicago.)
(©, 1926, Western Newspaper Union.)

Lesson for March 21

JESUS DIES AND ARISES FROM THE DEAD

LESSON TEXT—John 19:17-30; 20:1-29.

GOLDEN TEXT—Therefore doth the Father love me, because I lay down my life that I may take it again.—John 10:17.

PRIMARY TOPIC—Jesus Dies and Rises From the Dead.

JUNIOR TOPIC—Jesus Dies and Rises From the Dead.

INTERMEDIATE AND SENIOR TOPIC—Jesus Dies and Rises From the Dead.

YOUNG PEOPLE AND ADULT TOPIC—Christ Dying for Our Sins and Rising Again for Our Justification.

I. Jesus Crucified (vv. 17-30).

1. The place (v. 17).

It was on a hill called in Latin Calvary, in Hebrew Golgotha, which in shape resembled a skull.

2. His companions.

Two malefactors (v. 18, cf. Luke 23:32).

This shows how completely Jesus was identified with sinners.

3. The inscription over Him (vv. 19, 20).

It was customary to place an inscription over the cross stating the crime for which the victim suffered.

4. Gambling for the garments of Jesus (vv. 23, 24).

This is an exhibition of how men's hearts may be so callous as to plan and act for present gain under the shadow of the cross of Christ.

5. Utterances from the cross (vv. 25-30).

(1) "Behold thy son"—"Behold thy mother" (vv. 25, 26).

In this crucial hour He forgot His own bitter anguish and interested Himself in those He loved. Though He was leaving the earth and its struggles, He made provision for the dear ones left behind.

(2) "I thirst" (v. 28).

As the sinner's representative, He suffered not only untold agony of mind, but of body as well.

(3) "It is finished" (v. 30).

While no one can fathom the depth of meaning in these words, they do no doubt indicate (a) that the calumnies and indignities heaped upon Him were at an end.

6. His death (v. 30).

His death was voluntary. With full consciousness that all things which He had come to do had now been accomplished, He dismissed His spirit.

II. The Resurrection of Jesus (20:1-29).

1. The empty tomb (vv. 1-10).

(1) The testimony of Mary Magdalene (vv. 1, 2).

This woman, out of whom Jesus had cast seven demons (Mark 16:9; Luke 8:20), announced the fact of the empty tomb to Peter and John.

(2) Personal investigation by Peter and John (vv. 3-10).

The news of the empty tomb which Mary brought with breathless haste so moved John and Peter that they both ran to investigate.

(3) The manifestations of the risen Lord (vv. 11-29).

(1) To Mary Magdalene (vv. 11-18).

(a) Mary weeping at the empty tomb (v. 11).

Peter and John went home, but Mary could not—she stood weeping. She should have been rejoicing that the grave was empty, for the empty tomb was an eloquent proof of His messiahship and deity.

(b) Mary questioned by the angels (vv. 12, 13).

She viewed through her tears angels at the tomb, who inquired the cause of her sorrow.

(c) Jesus reveals Himself to Mary (vv. 12, 13).

She first saw angels, and then her eyes lighted upon the Lord. She did not recognize Him in His resurrection body but His voice was familiar to her. As soon as her name was called she recognized Him and worshiped at His feet.

(d) Jesus forbids her to touch Him (v. 17).

This shows that she was now coming into a new relationship with Him. Besides, there was no time for such familiarity while the disciples were in darkness. "Go tell my brethren," was the message for her to carry.

(e) Mary's testimony (v. 18).

(2) To the disciples (vv. 19-29).

(a) When Thomas was absent (vv. 19-23).

He came to them with the message of peace (v. 19), showed His hands and side (v. 20), commissioned them (v. 21) and bestowed upon them the Holy Spirit (v. 22).

(b) When Thomas was present (vv. 24-29).

Victory over Thomas' skepticism was realized by the sight and touch of the Lord.

To Make True the Dream

The most valuable possession which Christianity holds for me is this conviction: That the task is unfinished, that the conflict is still on, and that it is my business to invest my life in such a way as to make true the dream of the Son of Man.—Edward A. Steiner.

Depend on Jesus

Never let earthly things, not even the bitterest sorrow, blind you to the presence of Jesus.

GOOD ROADS

ELEVATED FREIGHT HIGHWAYS NEEDED

Trains of tractors and trailers controlled by air brakes and operating on a regular dispatching service over special trunk highways built above the tracks on railroad rights of way were pictured as a development of the future by Maj. Elihu Church, transportation engineer of the port of New York, in an address which he delivered at a meeting of the Metropolitan section of the Society of Automotive Engineers in New York city recently.

These trunk highways will be toll roads, he said, and will be laid out with the same care as to grades and curves as the railroads. They will be lighted, will be provided with telephones at frequent intervals, and there will be a regular wrecking and repair service. Trailer trains and convoys of trucks will be dispatched on regular schedules, largely as the army transport was handled in France during the war. Except where the roads enter cities on a second level above main railroads, they will pass around cities and towns as belt roads, so that the traffic on them will not pass through dense local traffic, and they will be carried over or under transverse roads.

The necessity for such roads will grow out of the increasing traffic congestion on the present highways and the inadequacy of the present highways to accommodate the light, fast passenger vehicles and the slow, cumbersome motor trucks at the same time.

Congestion on Manhattan island is causing a loss of $500,000 a day, and the horse is coming back, said Major Church. Seventy-three out of every hundred trucks in West street are horse drawn, because waits to load and unload at steamship and rail terminals are too long. A motor truck costs six cents a minute, whether it is moving or standing, and a trucking company charges by the hour and not by the miles traveled. Owing to congestion, the average speed of motor trucks on the island is only four miles an hour, and the average running time in an eight-hour day is only three hours, the other five being spent in waiting, loading and unloading.

New York Made Record in State Road Building

State road building for the past year set a new high record of highway construction accomplished and authorized according to a report made public by Arthur W. Brandt, state highway commissioner of New York.

According to the report, 1925 contracts calling for the construction of 551.99 miles of pavement 18 feet or more in width were awarded, as compared with about 520.47 miles for the entire season of 1924. Contracts were awarded for 110.28 miles of grading, as compared with 20.82 miles for 1924, or a total increase of 112 miles.

A letting is now advertised for 59 miles of pavement and three miles of grading, the award of which will give a total of 721 miles for the season of 1925, as compared with about 550 miles for 1924.

Fast Freight Highways as Great National Need

Maj. Elihu Church, traffic engineer of the port of New York, is authority for the statement that this country will soon be gridironed by a great system of motor trunk line highways, which will revolutionize present methods of transportation. He predicts that it is only a question of time when special roads must be built for the exclusive use of food and freight carriers.

Since this condition seems inevitable, engineers urge that a system of special motor truck highways be planned at once.

Major Church also points out that such highways, when properly built, will shorten the distance between cities and hills leveled so that a speed of 20 miles an hour or more can be maintained for long distances.

Good Roads Facts

The United States is now credited with building the finest highways in the world.

• • •

The joint board on interstate highways has designated 75,884 miles of road as United States highways.

• • •

According to the commissioner of public works of Massachusetts the state pays the federal government from $5 to $10 for every dollar Massachusetts receives in federal road aid.

• • •

It looks as if the most necessary things in this country are lower taxes and better roads, and the problem is how to get both at once.

• • •

There are 2,640,000 miles of sideroads in this country, as compared with 200,000 miles of improved roads classified as state highways.

• • •

Good roads will do more to keep the boy and girl on the farm than anything else and stop the flow of population from the rural districts to the cities.

GLAD TO SPREAD GOOD NEWS

Helped by Lydia E. Pinkham's Vegetable Compound

Cleveland, Ohio.—The friends of Mrs. Helen M. Kowalczyk of 6819 Hope Avenue were glad to hear that she has regained her health. For quite some time Mrs. Kowalczyk was quite ill and it was impossible for her to work. She took Lydia E. Pinkham's Vegetable Compound to build her up. After she had started taking it, she wrote to the Pinkham Company as follows: "I certainly boost Lydia E. Pinkham's Vegetable Compound. I feel stronger already and sleep sounder. I am very glad to spread the good news of how it has helped me."

Detroit, Michigan.—"I heard of this medicine through an advertisement in the 'Detroit News' and wrote to Mrs. Grace Gillem, whose letter was published. Then I started taking the Vegetable Compound and got the best results. I used the Sanative Wash, too. I am really happy if I can advise women to take your medicines." —Mrs. M. E. Murphy, 12163 Washburn Ave., Detroit, Mich.

Lydia E. Pinkham's Vegetable Compound has been in use by women for over fifty years. It is a vegetable tonic made from root and herbs and is sold at all druggists.

Keep your horses working with "SPOHN'S." Standard remedy for 32 years for Distemper, Strangles, Influenza, Coughs and Colds. Give to sick and those exposed. Give "SPOHN'S" for Dog Distemper. Sold by your druggist. If not, order from us. Small bottle 60 cents, large $1.20. Write for free booklet on diseases.
SPOHN MEDICAL CO. Dept. GOSHEN, IND.

Two Views

Optimist—Every cloud has its silver lining.

Pessimist—Yes, until the plating wears off.

BEAUTIFY IT WITH "DIAMOND DYES"

Just Dip to Tint or Boil to Dye

Each 15-cent package contains directions so simple any woman can tint soft, delicate shades or dye rich, permanent colors in lingerie, silks, ribbons, skirts, waists, dresses, coats, stockings, sweaters, draperies, coverings, hangings — everything!

Buy Diamond Dyes—no other kind—and tell your druggist whether the material you wish to color is wool or silk, or whether it is linen, cotton or mixed goods.

A Wish

"Blank is all taken up with this New Thought idea."

"Good! I hope he gets one."—Life.

Just say to your grocer Red Cross Ball Blue when buying bluing. You will be more than repaid by the results. Once tried always used.—Advertisement.

Slow but Sure

"So you're buying a house?"

"Yes a few bricks at a time."—Detroit Free Press.

Roman Eye Balsam is an antiseptic ointment. Hence the medication heals by penetrating the inflamed eye surfaces. Adv.

Tell a woman she's clever often enough, she'll begin to believe you. No need to tell a man.

Sometimes death is a punishment; often a gift; it has been a favor to many.—Seneca.

Build Up Your Health With DR. PIERCE'S GOLDEN MEDICAL DISCOVERY

If You Would Avoid COUGHS, COLDS, GRIPPE

A Tonic which Dr. Pierce prescribed when in active practice 60 years ago.
In Liquid or Tablets, at your Dealers. Send 10c. to Dr. Pierce's Invalids' Hotel, Buffalo, N. Y., for trial pkg. Tablets.

DON'T BE GRAY!
Darken your gray hair, gradually, surely and safely in privacy of your home. Used over 50 years by millions. Money-back guarantee. BOOKLET FREE.
Q-Ban Hair Color Restorer
At your Druggist 75¢
HESSIG-ELLIS CHEMISTS, Dept. W, MEMPHIS, TENN.

HOXSIE'S CROUP REMEDY
THE LIFE-SAVER OF CHILDREN
No opium, no nausea. 50 cents at druggists, or KELLS CO., NEWBURGH, N. Y.

THE KITCHEN CABINET

(©, 1926, Western Newspaper Union.)

It is easy to sit in the sunshine
And talk to the man in the shade;
It is easy to float in a well-trimmed boat
And point out the place to wade.
—Ella Wheeler Wilcox.

SPRINGTIME SUGGESTIONS.

In going over the closets and drawers this spring, give away to some one who can enjoy them the things that are too good to throw away or sell to the ragman.

The bits of lace and ribbon, the flowers and hat trimmings, old dishes, vases, in fact any thing that has passed its usefulness in your home pass on for some child or adult to enjoy and use. It takes will power to give up old heirlooms, but if they are to be kept in the attic, why not give them away and delight the heart of some one. When the final summons comes, as it will for all of us, do not leave the house full of things that might have brought joy to others, but give them where they will be appreciated, now.

Even in homes that are very simple as to furnishing and equipment it is most useful to have an inventory of its contents, in case of fire. A list of linens, bedding, silver, china, books, etc., is not difficult to prepare, and it is a great convenience from year to year.

Piece bags with a list of the important contents will save rummaging through other things to find that wanted. Pin the list on the bag. Label all boxes before placing them on the closet shelves. Even the most active memory will not always be able to recall in a hurry the article wanted.

Another household convenience is a card index. This may be used for the inventory as well as for recipes of various kinds. Have a set for left-over. For example, under tomato, give a few recipes in which varying quantities of tomato may be used. Every little while you will find a new one to add to the list.

Keep a list of foods that go well together, a hurry-up meal; when company comes you fail to think of many things you might have served, if you had a list to consult.

Faded hangings of silk or other materials which have become too faded to use may be dyed. Use a color which blends with the coloring of the room; often after dyeing goods that has some design which still shows, the hangings will be prettier than ever.

Ain't it fine when things are going
Topsy-turvy, and askew,
To discover someone showing
Good old-fashioned faith in you?
—Edgar Guest.

SOMETHING FOR BREAKFAST

Ready prepared breakfast foods for a large family are not economical.

They are convenient and for two or three make a reasonable breakfast food. The best of all foods for every member of the family is cream of wheat, well-washed and cooked wheat, taken right from the granary. Soak all night and cook slowly on the back of the stove nearly all day, or cook in a fireless cooker. When each grain is soft and surrounded by the well-cooked starch it is ready for food. Serve with top milk. A bowl of this food for supper is sustaining, nourishing and keeps the body functions in good condition. This wonderful food right from the hand of nature is not well enough known or appreciated. It can be bought in cans all cooked for fifteen cents, if one cares to buy rather than bother to cook it.

To begin at the beginning, each breakfast should begin with some fruit, fresh, stewed or baked, as apples or pears.

Mackerel is a most popular dish for breakfast. Fresh if you can get it, if not the salted mackerel soaked over night, flesh side down, will remove most of the salt. Wipe dry, place in a baking dish with the skin side down, dot with bits of butter if it is not fat; add a very little boiling water, cook until thoroughly heated through. Ten minutes before serving add a cupful of thick sweet cream poured over the fish and simmer until the fish is loosened from the bones. Serve very hot with the cream poured round it for a sauce.

Heavy hearty foods are not appropriate for breakfast unless you are feeding hard-working outdoor workers. When an hour after breakfast you feel dull, with a headache and feel good-for-nothing, fast a little, eat less at breakfast, drink some coffee substitute, and if unhurried all those symptoms will pass away.

We have no statistics to tell us of the tragedies caused by bolted food, not well chosen or properly cooked, but the housemother must realize that in her hands lies a great responsibility.

Nellie Maxwell

To Broadcast Sunday School Lesson.

The Hon. David Hogg will speak on the Sunday School lesson for next Sunday over Radio W. R. C. Washington, D. C., on Saturday evening from 8 to 8:15. All persons who can are urged to tune in and reap the benefit of this lecture and then go to Sunday School with a good lesson. We appreciate this work of Mr. Hogg.

Saturday To Be A Busy Day

The sale of bonds for the new proposed school house for Concord township will be held at 10:00 o'clock Saturday, also the sale of the contract for the building. This will draw quite a crowd besides those who are to bid for the job.

At 1:00 o'clock Mrs. Wm. Koch will have a sale of the tools and personal effects of her late husband at her home, this will also draw a large crowd as many valuable tools will be sold. See ad in this issue.

Between the hours of 1 and 4 at the court house, will be the sale of the Johnathan C Hart property, located south of the M. T. Bishop residence, as offered for sale by Sheriff Morr.

Parent-Teacher Association

Those who attended the exercises sponsored by the P. T. A last Friday night; were given a real treat in the form of an old fashioned literary! Perhaps we would not be justified in saying that it was in imitation of a certain manufacturer's hobby for things old, that this program was put on; only those in charge can truly tell us the reason why; suffice it to say those who are responsible did themselves proud. It was no ice-able that the young ters greatly appreciated the efforts of the older participants, who seemed to shake of the years that Father Time had laid upon their shoulders, and who in spirit at least were as young as any. As a rejuvenator of spirits and inspirator of efforts toward community betterment the P. T. A's. work should be crowned with success. One thing was in painful evidence; viz. the need of a larger room for such and similar meetings, may that need meet a popular response is the wish of

One who was there.

The United States government Monday afternoon struck its heaviest blow in history at violation of the national prohibition act. The blow reverberated from coast to coast. The federal grand jury after weeks of investigation into the activities of an alleged huge rum syndicate, nation wide in its scope, returned a blanket indictment charging 112 persons in 11 cities from Massachusetts to California with a vast conspiracy to break the dry law.

"It is an expose of the operations of what we believe to be the biggest rum ring unearthed since the adoption of the Volstead amendment," said U. S. District Attorney A. E. Bernsteen, who had charge of the probe.

A number of newspapers in this country are making adverse comment regarding a proposition of a certain jewelry firm to place upon the wrist of the Bartholdi Statue of Liberty a wrist watch of their manufacture. The objection is grounded upon the fact that it would be a cheap commercialism, showing disrespect for the donors, and place our country in an unfavorable light in the eyes of the world.

We would suggest that from the wet element in America a more appropriate decoration would be a cask of wine or a keg of beer.

NEWS OF THE TOWN

Telephone us your news items.

Miss Portia Hadsell was a week end guest of South Bend friends.

For Sale:—Fresh Jersey Cow. Frank Baker, 3 mi. north St. Joe.

Harvey Hull and wife are now residents of St. Joe, and occupy rooms in the Henry Hull residence.

Wm. Rex was given a fine of $22.50 for having fur in his possession after Feb. 15th. He pleaded guilty.

Chas. Quance and wife of Fort Wayne, spent Saturday and Sunday, with the latter's parents, Chas. Murphy and wife at Concord.

The county Farm Bureau membership drive is completed. In six townships, Union, Grant, Jackson, Franklin, Richland and Butler the drives held recently netted 226 members.

Polly Anna Curie, 6 months old daughter of Grover Curie and wife, died Tuesday night of pneumonia, being sick since last Saturday. The funeral will be held from the home on Widney Avenue, Thursday afternoon, at 2 o'clock. Rev. J. N. Scholes, officiating.

Walter Dallas of Wolcottville, father of Mrs. R W Brodbeck of this place, died last Friday morning and burial was made Sunday. He had an operation some weeks ago at Fort Wayne and he seemed to be better, but the reaction came with such force that he had to yield. Mrs. Brodbeck and family were at his bedside for the past week or more.

Keep Your Logs at Home.

People who have dogs in St Joe are hereby given notice to keep same off the streets or same will be killed. This is made in response to demands of Prosecuting Attorney and also because of Rabies in this county.

D. C. McCann, Marshal.

Dr. and Mrs. Sheffer Wedded 50 Years

Friends and relatives of Dr. and Mrs. Sheffer stole a march on them last Sunday, and while they were at church and Bible School filled their house to the number of about forty-seven, to celebrate with them the fiftieth anniversary of their wedding. They were married fifty years ago the 16th day of March, at Waterloo, Indiana, where the bride was teaching school. They were married at the residence of the bride's mother, by Myron A. Gleeson, a Disciple minister of that place.

The guests came with well filled baskets and the tables literally groaned with the many good things of life from which all partook freely and left the tables apparently little relieved of their burdens.

The afternoon was spent in social converse and visiting. In the late afternoon the visitors left with happy congratulations and many beautiful mementos to remind the happy and grateful couple of the day. They were pleasantly surprised and take this opportunity to thank all those who were instrumental in bringing about this happy event.

Those present from out of-town were, W. K. Sheffer, an only brother of the Doctor, S. E. Sheffer and wife and R. W. Sheffer and wife of Angola; James Hadsell and Harry Bushong and wife of Fort Wayne; Mrs. B. A. Hadsell, I. S. Hadsell and wife, C. J. Hadsell and wife, Mrs. Leora Thayer, C. W. Jackson and wife and George Mercer, wife and three children of Hicksville.

Relatives near by were, Mrs. Cad Shull and daughter, Nellie, Mrs. Guy Platter, Mrs. Eva Shull and daughter, Dorris, George Hart and family, S. P. Hadsell and wife, John Knight and daughter, Dorothy and Craig Sheffer and family.

Notary work of all kinds attended to promptly at News office.

The April McCall's magazine is here and is just what the housewife needs for helpful suggestions. Get one at News office.

The Home Bureau Club will meet with Mrs. Clara Foltz, Friday afternoon. All members are urged to be present.

Its now McCall Needlework and Decorative Arts and its a fine magazine for the suggestions of home furnishings. Now on sale at News office.

Sale of Baked Goods next Saturday at Zonker's Drug Store, commencing at 9 A. M. By the Ladies of the Christian Church.

Rev. Otis Jones, wife and daughter were called to Fairmount, Tuesday by the death of O. B. Roberts, an associate pastor. The funeral will take place at Fowlerton. Mr. Roberts was a man of about 40 and had been ailing for a long time, caused by paralysis.

Contracts have been entered into that will make a change in the Lilly White Garage. Don P. Hindman of St. Joe, has arranged to purchase the stock and equipment and the new firm will be known as the Hicksville Overland Sales Co., and be under the management of Bert Reasoner, of Fort Wayne.—Hicksville Tribune.

In Memoriam

In loving memory of our dear mother, Jane Hull, who departed from this earth one year ago today, March 15, 1926,

Today recalls sad memories
Of a dear one gone to rest,
And the ones that think of her today
Are the ones who loved her best.
You are not forgotten dear mother,
Nor shall you ever be,
As long as life and memory last
We will remember thee.

John Hull and Children

Wm. Pepple is improving and is able to sit up.

For a real Sheriff, vote for Stodghill. 10t5p.

Ora Baker and family were Sunday dinner guests in the George Wade home.

Fay Reichelderfer, wife and son of Fort Wayne, spent Sunday afternoon with his uncle, John Betz and wife.

The R. H. C. met last Thursday with Mrs. Waltz with seven members present. On Thursday next week they will meet with Mrs. Grace Laub.

The democratic campaign will open March 30 with a love feast in the Commercial Club rooms, Auburn. All candidates will be present and good speakers.

Salesman Wanted to solicit orders for lubricating oils, greases and paint. Salary or commission. Address The Harvey Oil Co., Cleveland, Ohio.

Just a few Klondike yellow paper tablets left at 2 for 5 cents at News office. All 10c school tablets at 8c. Buy all you need at these prices—while present stock lasts.

Only six more cross word puzzles will be run in the St. Joe News. This feature is not in demand by the public hence we will change at that time to more timely features. If you like the feature, better cut them out.

And the commissioners don't know what the sentiment of the people of DeKalb is on paving, any more than before the Saturday conference. It is true that most of the speakers were opposed but this does not give an expression of the people any more than the Journal Gazette straw vote settles the wet and dry question. Paved roads are coming and we might just as well get ready for them. This thing of talking hard times don't go anymore. If a man wants anything for himself bad enough he usually gets it.

Home-Grown
NURSERY STOCK

Apple trees, 4 to 6 feet, 25c each.
Peach trees, 3 1-2 to 5 feet, 25c each.

Master Harry Randall has the grippe and is confined to his bed.

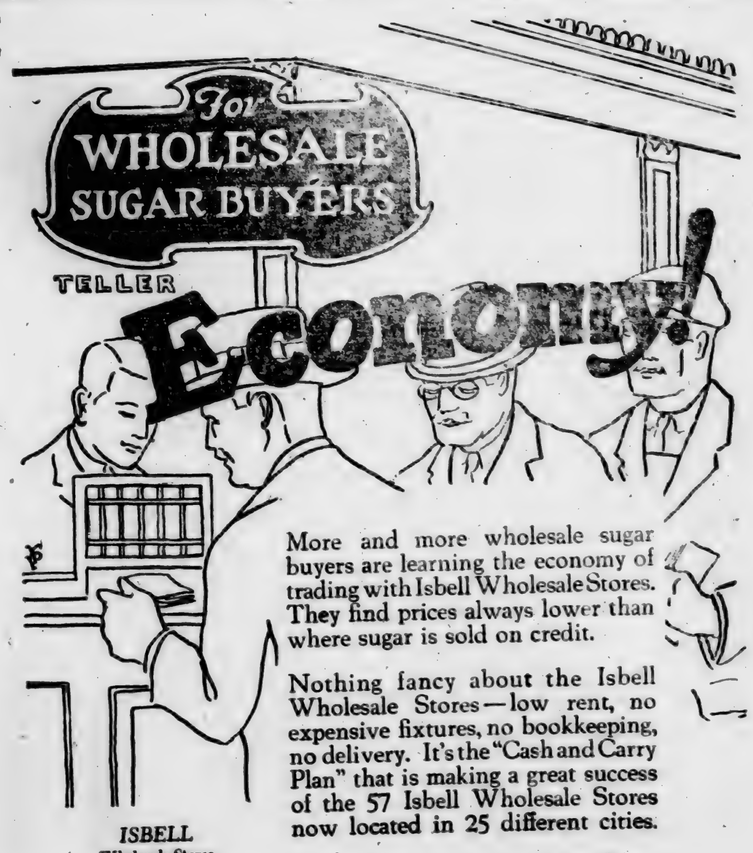
Only three candidates have announced in Noble County to date.

Somebody says March is simply trying to attract attention, and our way of thinking is, she is doing it.

J. E. Stemen and family of Middlepoint, Ohio, are now residents of Concord township, moving here just a few weeks ago, occupying the Elizabeth Ernsberger farm or better known as the Joseph Koch farm.

Come on—Let's go! To the Methodist church, April 6. A miscellaneous program consisting of musical numbers and readings, given by four Garrett girls. They have given an entertainment here before and were immensely enjoyed. Admission 25 and 10 cents. Sponsored by the Senior Christian Endeavor.

Stanley Nelson may be persuaded to run for Auditor of State on Democratic ticket, if his friends continue to urge him. He was formerly chairman of the Twelfth district organization and served as a member of the democratic state central committee. He served as district chairman during two congressional campaigns. Mr. Nelson is a former auditor of DeKalb county. After completing his term of office he entered the monument business with the A. W. Madden Co., in Auburn and several months ago established the Nelson Nonument Co., at Fort Wayne.



More and more wholesale sugar buyers are learning the economy of trading with Isbell Wholesale Stores. They find prices always lower than where sugar is sold on credit.

Nothing fancy about the Isbell Wholesale Stores—low rent, no expensive fixtures, no bookkeeping, no delivery. It's the "Cash and Carry Plan" that is making a great success of the 57 Isbell Wholesale Stores now located in 25 different cities.

If you have money to pay for Sugar as you buy it, you will certainly like the Isbell plan of doing business.

Handy location, right near the city market.

"WHITE METAL" HOAX IS UPSET BY TESTS

Bureau of Mines Finds Claims Unsubstantiated.

Washington. — The mysterious "white metal" which many mineral prospectors in the West consider to have strange properties of hardening iron and steel when heated in contact with those materials, has no existence in fact, states the bureau of mines, Department of Commerce, following repeated experiments with purported specimens of metal submitted for examination.

There is a legend that Mexicans and other old settlers in the southwest know of an "ore" which was packed around pieces of iron and steel that they wished to harden. The metal was heated in a wood fire in contact with the "ore" and then quenched in water. Axles of springless wagons so treated were said to have been made "glass hard" and to wear two or three times as long as ordinary axles, and tires so treated were described as "ringing like a bell" when suspended and struck with a hammer. This action was said to be due to a "white metal" that was extracted from the "ore" and alloyed with the iron by the treatment.

The tests by the bureau and other laboratories, following the claimants' procedures, usually have shown no hardening effect, although in a few tests some hardening of iron or steel was produced due either to case hardening from heating the metal in contact with carbon, protected from oxidation by a coating of flux, or in some instances to the formation of a crude silicon alloy. Many ordinary fusible rocks, and even fluxes without rock, will give these same results.

The bureau of mines is forced to conclude, therefore, that the various unsubstantiated claims that have been made were due to careless tests, to erroneous conclusions from these tests, or to an attempt to defraud.

TO STUDY GORILLA

Harry Rimmer, evangelist, author and lecturer, has announced his intention to head an expedition into the heart of Africa, where he will study the life and habits of the gorilla. This is the first practical demonstration of a fundamentalist minister seeking direct information on the absorbing question first propounded by Darwin in "The Descent of Man." The expedition will leave New York in June if present plans are not changed.

Ban Stag Line

Dallas, Texas.—The stag line is to be abolished at sorority dances. The pan-Hellenic congress has decided to curtail the number of unpartnered males at such affairs.

Weds Pupil

Paterson, N. J.—Another typewriter romance: Albert Tangora, world's champion typist, has married Miss Dorothy Lane, one of his pupils.

Bar Handshaking

Mantua, Italy.—Handshaking is now forbidden city employees by the fascisti. They must give the Roman salute.

Woman, 70, Finishes Walk of 1,644 Miles

London.—Miss G. Rickards, a member of a Surrey family of Cornish descent, recently concluded a walk of 1,644 miles through England and Scotland, at seventy years of age.

"I began to walk to amuse myself, after giving up my country home at the beginning of 1923," she said. "In the wild parts of Scotland I met only roadmenders, crofters, shepherds and traveling tinkers. I walked in all weathers by day, carrying a light knapsack and a haversack. I sent a suitcase with clean clothes ahead weekly.

"I lunched on biscuits and cheese, taking my other meals in hotels. I never felt lonely and I knitted and embroidered during my roadside meals." Miss Richards proposes to set out on another walking tour in the spring.

He Saved, Why Shouldn't You?

In the days of Washington, saving money was more difficult than in the present Yet he did save under conditions impossible nowadays. He saved because he believed it to be a good thing to do. Why shouldn't you.

If you are not taking advantage of our service, you're missing something.

Effectiveness in Grace

If you have a thrust to make at your friend's expense do it gracefully, it is all the more effective. Some one says the reproach that is delivered with hat in hand is the most telling. —Hallburton.

Don't Fuss With Mustard Plasters!

Musterole Works Without the Blister—Easier, Quicker

Don't mix a mess of mustard, flour and water when you can relieve pain, soreness or stiffness with a little clean, white Musterole.

Musterole is made of pure oil of mustard and other helpful ingredients, in the form of a white ointment. It takes the place of mustard plasters, and will not blister.

Musterole usually gives prompt relief from sore throat, bronchitis, tonsillitis, croup, stiff neck, asthma, neuralgia, headache, congestion, pleurisy, rheumatism, lumbago, pains and aches of the back or joints, sprains, sore muscles, bruises, chilblains, frosted feet, colds of the chest (it may prevent pneumonia).

CHAPTER IX—Continued

—15—

"But, mademoiselle, you must be surfeited with pretty words from Monsieur," he said maliciously, sure of the effect.

"Pretty words from heem?" She laughed bitterly, "that ees a joke! No pretty words from heem since the lady, who will marry Luscelles at Albany, drive heem crazee, eh, Louis?"

Laflamme scowled into her mocking eyes, but was silent. He rose and led his guest to the living room. Then the sound of voices outside attracted his attention, and shortly, the Ojibway girl appeared and spoke to him in a whisper.

"You will excuse me for a little while? I am called to the trade-house?" At the door he added with a brutal laugh, "Help yourself to the cigarettes and whisky. And—a—Rose will keep you entertained, no doubt."

Steele wondered if David had run into trouble. If the trader were free with liquor with his men, which seemed improbable, David might have been set on, but the Ojibway was too wise to imperil his chief or their plans.

Following the slam of the outer door the girl rose, placed her fingers warningly on her lips and tiptoed out of the room, leaving Steele curious, uneasy. He heard talking in low tones from the direction of the kitchen, then she returned, and walking to his chair, looked quizzically down.

"Are you as much of a man as you look?" she demanded.

"How long before Laflamme surprises us, mademoiselle?" he countered, forcing a yawn, having no intention of playing into Laflamme's hands.

"You theenk I'm working for that beast? Are you blind? Can't you see he's done with me?" She began, dramatically, then, "Why did you look at heem that way before dinner? I saw you! You stabbed heem with your eyes. You needn't deny it! You hate heem! Why?"

"You are mistaken, mademoiselle. I never met Laflamme before today."

"You lie! But you are suspicious; you theenk thees is a game—theenk he ees listening. Don't you see hat ees why I went out—to learn if he had left the house? Oh, you can trust me! This ees the naked truth. I would kill heem tonight if I could get away. But you—why do you hate heem, too?"

"Does Laflamme suspect me?" he asked, ignoring her question.

"No, he knows you are what you claim to be."

"What do you want me to do?"

"Mon Dieu! Get me out of dees place—take me with you! He's keeping me here because I know too much. He's afraid! weel talk."

"Talk about what—the whisky trade?"

She lowered her voice to a whisper. "The whisky ees not all—you would not believe me if I told—" A door closed outside, and Laflamme entered the room.

"Ah, this is most unromantic, monsieur," he protested, hand raised in mock gesture. "I return suddenly, to find you still in your chair—alone."

Steele was on his feet. "My man David in any trouble?" he snapped, ignoring the sarcasm.

"No, it wasn't his fault. Baptiste fancies he's strong, and took hold of him."

"What's happened?" Steele's blood heated at the possible harm to David, outnumbered ten to one at the trade-house.

Laflamme raised a deprecating hand. "Nothing, nothing at all. I'm glad of it! Your man cracked some of Baptiste's fingers—just squeezed his hand and Baptiste had enough. He always was a bit yellow."

"But will Baptiste follow this up? I don't want trouble here. Where is David now?" Steele was relieved; he had feared the worst. But that meant that David and he would leave the post in the morning. He knew his half-breeds. It would be dangerous to stay—and as yet nothing had been learned from the girl.

"I sent them all to bed. Baptiste won't follow it up. Antoine is with him. I'm boss here," laughed the trader.

Then Steele was aware of the attention of a pair of shining eyes. "Ah, it was magnificent, monsieur—the way you looked," said the girl. "Your eyes were like your name—of steel."

"You are embarrassing, mademoiselle."

"You must excuse Rose this evening," said Laflamme with a grimace. "She has not seen a white man in a year." Not but what she's sincere, but whisky makes her think out loud, doesn't it, Rosie?"

If the glitter of black eyes could have killed, Laflamme would have met sudden death. Instead, he refilled the glasses, while Steele's mind was busy with what the Frenchman's return from the trade-house had checked the girl from disclosing. If Pierre were Laflamme's man, as he seemed to be, Steele was curious to learn what tale the Indian had brought from Wailing River concerning the lost fur canoe and the Windigo terror. He finally decided to drive straight at the point with the hope that the girl would drop something.

"Did I tell you this afternoon that I heard a Windigo at Wailing River?" he began.

"What? You a scientist, mean to tell me that you heard a Windigo—a creature of Indian myth and superstition—a bugaboo of the medicine man?"

Steele grinned with delight into the trader's puzzled eyes. "I certainly do. I was waked by his howling on the ridge across the river from the post."

Laflamme smiled, suggestively tapping the bottle at his elbow, as he teased: "Scotch is a wonderful stimulant to the imagination, monsieur."

"You know that the Indians attribute the loss of St. Onge's fur canoe this summer to the same devil?" continued Steele, watching Rose's face.

"The loss of their fur canoe!" cried Laflamme. "You mean to say that St. Onge didn't get his fur to Albany this year?"

"Not a skin," said Steele. This was news that Pierre assuredly would have brought from down river. Then

The Face of the Girl Went Gray With Fear. "Mon Dieu! If it's Laflamme!"

he caught a furtive signal from the girl. She cautiously lowered an eyelid, as she watched Laflamme.

So the Frenchman was deceiving him. Pierre had been on the trader's business at Walling River. But why did Laflamme wish to conceal it? He could not suspect that Steele would return to the Walling.

"And you believe with the Indians, I suppose, that the Windigo got the canoe, also?" jeered Laflamme. "That's a bit too raw, monsieur! It is not the first boat to be smashed in that white-water."

"But it was not lost in the rapids. That has been proved, for no trace of boat, fur or men was ever found. They couldn't steal the fur and get out by the Albany or through the muskeg country. That leaves the Windigo as the only solution, doesn't it?"

"Well, that finishes St. Onge, then," said Laflamme.

"And helps your little plan, eh, Louis?" Rose added.

The trader's face hardened. "Yes, it helps the trade here, of course. If they quit down there. By the way, did St. Onge say anything about sending a canoe up river this fall?"

Rose Laflamme paused in the act of draining her half-filled glass, intent on Steele's answer.

"I left the post early in September on a side trip, intending to return before starting for home, but never went back." Then, seizing the opportunity to deceive Laflamme into waiting until the last minute before kreaking his vengeance on St. Onge, Steele boldly gambled: "He said something about my taking a letter to you."

"He did?" The dark face of the trader flushed with pleasure.

"Yes, now he'll send Michel."

A glass was shattered on the table. In a fury of passion Rose Laflamme, leaping to her feet, glared at the Frenchman. "Oh, you think you've got her at last, do you?" she screamed. "When do I go, then? You'll send me now, when she comes? You'll let me go, now?"

What Steele had waited for had happened. Alcohol and her hatred of Laflamme had loosened all restraint on the tongue of the maddened girl.

Infuriated, the trader rose and pointed to the door. "We've had enough of this; you're drunk! Monsieur Steele will excuse you. Good night!"

The insult drove the blood from her flaming face; sobered her. She walked to the door, where she turned and said quietly to Steele: "Bon soir, monsieur, I leave you with thees gentleman and—cutthroat."

Although pressed by Laflamme, Steele did not stay. He had failed utterly in his plan—had learned nothing. If only the trader had remained in the trade-house five minutes longer, the girl would have told him what he wished to know. And now they were leaving in the morning.

CHAPTER X

From the outside the cabin where he and David were to sleep was dark, but he entered to find David, aided by the light of two candles, busy with their bags.

"What's the trouble?" Steele asked, noticing the blankets with which David had masked the windows. "You don't think he'd dare fire in on you?"

"Maybe," and the Ojibway pointed to the contents of a large waterproofed bag on the floor at his feet. "Dey have come to see eef you are w'at you say."

"They've been through our Indian stuff?"

"Yes, dey look at dese bag and not pack dem good."

A low knock checked the conversation. David reached for a candle. "No!" said Steele, "stand by with that!" pointing to David's rifle, then opened the door.

It was Rose Laflamme.

Disapproval was stamped on David's face as he slowly shook his head.

"Monsieur Steele, I wish to talk with you in private—" she hesitated with a nod of her head toward the Ojibway.

"David, wait outside a minute," said Steele concealing from the girl a lowered eyelid.

Carrying his rifle, David reluctantly left the room.

"You needn't worry, Laflamme's asleep," she began, then approaching Steele, placed her hands on his shoulders as she begged: "Will you get me out of here, now—tonight?"

The girl's knowledge might be of vital importance to the future of Walling River—of the woman there he loved, and the American did not hesitate to dissemble.

"But, Rose, I haven't bacon and flour. You'd starve if we left tonight, unless we struck game. You don't want to live on fish."

"I can leeve on anything with you, you beeg American!" she said. "Only-lee get me away—away from that thief. Once I loved heem—but now I hate, hate, hate!"

Steele temporized: "But why can't you wait until tomorrow night? We'll have flour then."

"I'm afraid. He cursed me tonight for telling you something. Oh, you don't know that man—the cleverness of heem? He knows thees won't last—two, three years, thees hell here!"

"Of course he wants to get rid of the post down river?" Steele ventured.

"Oh, St. Onge is done for—and he'll get the girl," she muttered.

"But what was that Indian Pierre doing at Walling River?" he abruptly demanded.

"Pierre?" She turned on Steele in surprise. "You saw Pierre? He was told to keep under cover."

"Yes, he was spreading wild tales about the Windigo. Laflamme sent him to do that?"

Her large eyes lighted in amusement. "Oh, yes, of course! but what he went down river after was—Quick! the candles! There's some one coming!" The face of the girl went gray with fear. "Mon Dieu! It it's Laflamme!"

Steele pinched out the candles and she clung to him helplessly, her body trembling against his, as they listened.

There was a sound of a scuffle outside, the fall of a body, the dull impact of blows. Pushing aside the frightened girl, Steele seized his rifle and opened the door.

"I got heem!" came the low voice of David from the blackness. "Han me dat rawhide."

The man who had approached the cabin had walked into the strongest pair of arms in the Nepigon country and lay helpless on the ground, choked and beaten into insensibility. Returning with the thongs, Steele peered at the face of David's victim.

"Laflamme?"

"Yes! We feex heem and start!" urged the Indian, fiercely.

(TO BE CONTINUED.)

Handshake Guide to Love

The handshake is a correct and infallible guide to true love. This is the contention of Dr. David V. Bush, a teacher of applied psychology. "Shake hands," he says, "before you start a courtship—not because you are to start something resembling a pugilistic bout, but because if the hands don't fit perfectly, don't start it." Doctor Bush says "the altar isn't even a milestone in the course of love; it's apt to be a millstone. A marriage certificate is no guarantee of love. Marriage, looked at as the goal of love, is apt to be a grave if the game ends when the knot is tied." The exponent of applied psychology thinks trouble can be avoided by proper character analysis before the courtship advances too far.

A Pity

Some people take so much pleasure in telling what they know that it's a pity they know so little.—Boston Transcript.

POINTS ON KEEPING WELL

DR. FREDERICK R. GREEN
Editor of "HEALTH"

(©, 1926, Western Newspaper Union.)

MENTAL CONTROL OF SKIN DISEASES

THE influence of the mind, or the nerves, if you prefer, on skin eruptions and sensations is one of the strange and as yet unexplained regions of our knowledge of the human body and its disorders. Some people have strange markings or "breakings out" on their skin, under conditions which have no effect on most people. To say, as is generally done, that such people are "nervous" does not explain anything. The question still remains why are they nervous or why do things affect their nerves which have no effect on others.

In some cases, it is some article of food perfectly pure and wholesome in itself and perhaps a source of great pleasure to most people. Probably most of you have known some man or woman who couldn't eat strawberries. Most of us not only enjoy strawberries but find them exceedingly wholesome. Then some one comes along who can't eat them. Even a single berry may cause a bright red rash all over the body in a few minutes. I recall a patient who couldn't eat lobster. Her friends knew this peculiarity and never offered it to her. Visiting in the city, she was invited to a luncheon at which a salad was served which contained a small amount of lobster, so small that no one detected it. She took one forkful of the salad, was immediately taken ill and when I saw her in less than ten minutes her entire body was covered with bright red weals. Such a rash may be caused by mental conditions.

In a recent issue of the Journal of the American Medical Association Dr. Joseph V. Klauder of Philadelphia tells of many strange cases he has seen or that have been reported by others. The title of his paper is "Cutaneous Neuroses," which simply means skin markings caused by nervous or mental conditions. He tells of a case seen by Brown-Sequard, the celebrated French neurologist, of a mother who saw a window frame fall on her child's arm and immediately had a black and blue spot appear on her own arm; of a doctor who told a patient he was going to put a blister on his shoulder and instead stuck on a harmless postage stamp, yet a blister appeared under the stamp.

These peculiar skin conditions may also take the form of intense itching of the same spots at regular times, of blotches, weals or peculiar sensations as of heat and cold. Salves and lotions do little good. Sometimes relief is found in some fantastic form of treatment, anything in which the patient believes. Doctor Klauder has found that some patients are relieved or even cured by psychotherapy.

DOG EAT DOG

WHEN Pasteur, seventy-five years ago, began to study the microscopic forms of life which inhabit the invisible world he naturally devoted most of his time to hunting for those germs which are the cause of the plagues and pestilences that for centuries had killed hundreds of thousands of human beings without any check or control. His pupils and followers naturally followed the same plan. Today we know the cause of most of these contagious diseases and are hot on the trail of the others. This has created the science, entirely unkown before, of bacteriology and has trained thousands of experts. In the work which these experts have done and are doing, much knowledge has been gained about microscopic forms of life.

It was early seen that life was a perpetual warfare between the animal body on the one hand and these disease producing germs on the other, in which, as in all wars, the strongest side won and the weakest side lost. Now comes the amazing discovery that this warfare is not confined to a struggle between animal cells and disease germs, but is also continually going on between two invisible armies, the germs that attack the human body and the germs that attack the germs that attack the human body.

D'Herelle, a French bacteriologist, in 1920 found in Indo-China a germ which eats up the germ which causes the bubonic plague. Rats and guinea pigs, inoculated with this phage, cannot take the plague. Similar observations on other diseases are now being made.

This explains many things that have heretofore been very puzzling. The River Ganges is considered holy by all the people of India. Every year hundreds of thousands of pilgrims go to bathe in its waters. They also drink the river water. Asiatic cholera is always present in India. Why do not all pilgrims who drink this frightfully polluted water die in a few days from cholera? Thirty years ago Hankin found that Ganges river water would kill the cholera germs. D'Herelle now finds that the water contains a phage which eats the cholera germ. He has also found, in some rivers, a phage that eats the dysentery germs.

All of which means that man has an invisible friend which eats his invisible enemies. This is good news. Let's hope it is true.

"Little Church" and Hymen

Between 1,500 and 2,000 marriages a year are performed in the Church of the Transliguration, New York city, popularly known as the "Little Church Around the Corner."

DEMAND "BAYER" ASPIRIN

Aspirin Marked With "Bayer Cross" Has Been Proved Safe by Millions.

Warning! Unless you see the name "Bayer" on package or on tablets you are not getting the genuine Bayer Aspirin proved safe by millions and prescribed by physicians for 25 years.

Say "Bayer" when you buy Aspirin. Imitations may prove dangerous.—Adv.

Conceit often gets a small man into a large hole.

Nature's own body builder

"Six months ago life was unbearable, I was nervous and rundown. No sleep, no appetite. Since taking Tanlac I enjoy steaks, pastries, etc., weigh like a log, gained 10 lbs." Miss Helen Ferry, 1201 N. Broadway, Indianapolis, Ind.

Tanlac is Nature's greatest tonic and builder. Made from roots, barks and herbs after the famous formula, it revitalizes the blood, tones up the digestive organs and puts the whole system in lighting trim.

Don't go about your work sickly and discouraged. Take the example of millions who have been helped by Tanlac. Step at your druggist's today and get this wonderful tonic. You'll be surprised how quickly you improve. For constipation take Tanlac Vegetable Pills.

Piles Disappear
Peterson's Ointment

"Please let me tell you," says Peterson, "that for instant relief from the misery of blind, bleeding or itching piles, there is nothing so good as Peterson's Ointment, as thousands have testified." Best for old sores and itching skin. All druggists, 60 cents.

Green's August Flower
for Constipation, Indigestion and Torpid Liver
Relieves that feeling of having eaten unwisely. 30c and 90c bottles. AT ALL DRUGGISTS.

CHAPPING - SORES
One treatment soothes the irritation and starts the healing if you use
Resinol

PISO'S for coughs
Quick Relief! A pleasant effective syrup. 35c and 60c sizes
And externally, use PISO'S Throat and Chest Salve, 35c

Porter's Pain King
A Liniment
50 Years a Favorite Remedy for Coughs and Colds
Nothing Else Like It.

HOME-MADE, crisp and brown and crunchy — how the children love them!

You can get four animal cutters—goose, lamb, cat and bunny—for just what it costs to pack and mail them—only fifteen cents. With them, we will also send a Davis Cook Book.

Animal cookies are examples of the many tempting things you can make with Davis Baking Powder. Baking comes out right every time with Davis—it makes baking lighter, finer in texture and more easily digested. Biscuits feathery light, cakes and cookies so palatable and pleasing. And in addition, it costs you less and you use no more than of any other high-grade baking powder.

Bake it BEST with

DAVIS BAKING POWDER

Davis Baking Powder Co.
Dept. 575, Hoboken, N. J.

Gentlemen: As per your offer, please send me the Cookie Cutters and the Cook Book. I enclose 15c in stamps to cover postage and mailing.

DR. W. B. CALDWELL AT THE AGE OF 83

Women Need a Mild Laxative —Not a "Physic"

Countless girls and women now know how foolish and needless it is to "purge" and "physic" themselves to avoid sick headaches, dizziness, biliousness, sallow skin, colds, or sour, gassy stomach.

They have found that Dr. Caldwell's Syrup Pepsin helps to establish natural bowel "regularity" even for those heretofore chronically constipated. Dr. Caldwell's Syrup Pepsin not only causes a gentle, easy bowel movement but, best of all, it never gripes, sickens or upsets the most delicate girl or woman. Besides, it is absolutely harmless and so pleasant that even a cross, feverish, bilious, sick child gladly takes it.

Buy a large 60-cent bottle at any store that sells medicine and just see for yourself.

Dr. Caldwell's SYRUP PEPSIN

Farm Societies Have Weaknesses

Every Director Must Feel That He Has Accepted Position of Trust.

(Prepared by the United States Department of Agriculture.)

One of the serious weaknesses of many agricultural co-operatives is the tendency of members of boards of directors to shirk responsibility in the matter of management.

"Too frequently," says the United States Department of Agriculture, "the individual member looks upon his elevation to the office of director merely as a recognition of his standing in the community. Such an attitude is unfortunate and until every director comes to feel that he has accepted a trusteeship for the successful conduct of the business, co-operative enterprises will fall of attaining the full measure of success they wish to achieve."

Every Director Obligated.

This trusteeship, say the department, obligates every director to inform himself thoroughly respecting the operations of the business with which he has become vitally connected. In addition he will need to understand fully the broader principles upon a thorough working knowledge of which depends, to a large extent, the degree of success and progress of the business.

"If lack of interest is a weakness," says a department economist, "the wrong kind of interest is equally bad. Too frequently one finds the board interfering instead of directing. It is the duty of the board to formulate policies and to see that these policies are carried out by the executives. Dictation by the board of the petty detail of day to day operation is not 'formulating policies.' It is interference. Such interference can only result in unstable and unsatisfactory management."

Unwise Management.

Probably the most frequent cause of unwise management, he points out, is a lack of essential facts, or if these be at hand, an unwillingness to face the facts. To the extent that the board of directors makes a real effort to understand the demand for its products, and to formulate price and merchandising policies on the basis of all the facts, rather than on the basis of mere opinion, he says, will its activities contribute to whatever measure of success is achieved.

Opinion That Silage Is Not Fit Food for Bulls

The opinion that silage is not a fit feed for bulls that are heading herds prevails quite generally.

Whenever a sire becomes impotent one of the first questions asked is: "Do you give him silage?" This has led many to fear the feed like poison, far as the bull is concerned.

In view of this the experience of Prof. W. J. Fraser, head of the department of dairy husbandry of Illinois College of Agriculture, is enlightening. Professor Fraser says: "I have fed Holstein bulls 40 pounds of silage a day with no serious result in any way, when they were worked night and morning on the tread power. I think the amount of silage that can be fed depends entirely upon the amount of exercise the bull gets. If he stands around all the time the silage should be limited, or he will get too large in the barrel and too logy."

To Exclude Fruit Stock

The Department of Agriculture has indicated that it will confirm the recommendations made last summer by nurserymen and horticulturists to restrict the importation of fruit and rose stocks. In making these recommendations the nurserymen's statement includes the suggestion that the members of the association should heartily co-operate with the American growers of seedling fruit stocks and rose stocks in their efforts to organize and develop production to the extent that it may be reasonably depended upon as an adequate source of supply.

Plowing Under Clover

There are various opinions as to the best time for plowing under sweet clover. Some think it is best to let it grow until late April or May before plowing under. One will get more value out of sweet clover to plow it early in the spring before growth has started. Its fertilizing value at this time is mostly in the roots and quite deep in the ground. After growth has been made by late April, the clover has about the same fertilizing value.

Benefits of Mulching

Mulch for strawberry beds serves four important purposes, viz: (1) Preventing alternate freezing and thawing in late spring or when the winters are open. (2) It keeps down the weeds between the rows. (3) It conserves moisture, and the berries need all they can get at time of ripening. (4) It prevents the fruit from being soiled or splashed with sand or earth at the time the fruit is ripening.

New Males Each Year

Many poultrymen follow the practice of obtaining new male birds each year. They will trade their own males for inferior ones just for the sake of introducing new blood. Such a practice is entirely unnecessary and makes constructive breeding impossible. If your flock is giving satisfactory results, select and use the best male of your own raising.

Kentucky County Is Rid of Scrub Sires

First Community in Country to Accomplish Feat.

(Prepared by the United States Department of Agriculture.)

The manner in which Union county, Ky., disposed of its last scrub bull is described by County Agent R. O. Wilson in a report received by the United States Department of Agriculture. A survey made early in the year showed that cattle owners in Union county had in use 103 pure-bred bulls, 22 grades and seven scrubs. Through publicity and personal interviews with owners of grade and scrub bulls, the county agent succeeded in getting the last scrub bull in the county removed during the year. Of the 22 grade bulls only four remained, and their owners are planning to replace them with pure breds. This county appears to be the first in the United States entirely free from scrub bulls, and it is very close to a pure-bred sire basis with respect to its breeding stock. The present status is the result of live stock betterment work started five years ago by County Agent L. C. Brewer.

On January 1, 1926, 550 live stock owners in this county were participating in the "Better Sires—Better Stock" campaign conducted by the various states and the United States Department of Agriculture. All of these stock owners have agreed to use pure-bred males exclusively in all breeding operations. Material financial benefits already are evident in the superior quality of the on-coming young stock.

Grapevines Thrive in a Wide Variety of Soils

Grapevines thrive in a wide variety of soils. Those that are too shallow, wet or excessively dry should be avoided. Sandy loams, loams and gravelly loams grow vigorous vines that carry productive crops, says a writer in the Rural New Yorker. In commercial practice the vineyard is plowed early in the spring, then the soil is worked into a fine texture through cultivation and thus kept until the latter part of July. At this time a seeding of clover, millet, rape or rye and hairy vetch should be made. The crop thus put in is allowed to occupy the ground until the following spring, when it is plowed under. The home vineyard should be plowed or the soil spaded about the vines, and all weed growth suppressed during the active growing season. Usually frequent hand hoeing will suffice to accomplish this end.

Grapevines over a wide range of country are responding with increased growth and productiveness through the use of nitrate of soda scattered about the vines in early spring just as leaf growth is starting. The usual treatment per vine is six ounces of the material. Some commercial growers use twice this quantity per vine with good results. It might be well to begin with the smaller amount and gradually increase it if occasion requires.

Milk-Producing Cow Is Entitled to Good Feed

In order to be most profitable, all live stock must be fed for a definite purpose: For instance, a dry beef cow can be maintained very successfully and very cheaply on coarse, cheap feed such as corn fodder, corn silage, hay and straw. It would be a waste of money to feed such a cow any considerable amount of grain. A cow producing milk through the winter months, however, requires a good grain ration liberally fed in addition to a liberal supply of good roughage and it would be just as much a waste of money not to give this grain to the cow in milk as it would be to give it to the dry cow that doesn't need it. Likewise there are proper feeds and proper amounts of feed required by every type of live stock and the most economical and profitable feeding practice is to give each type of animal the kind and amount of feed needed by that type of animal.

FARM NOTES

Plan to take an inventory this year. It gives the most returns for the time spent on it of any record the farmer can keep.

• • •

Dark brown or black spots in potatoes may result from piling them too deeply in bins, from lack of ventilation, or too much warmth.

• • •

Grease is better than oil for protecting plowshares from rust when they are stored for the winter, as the grease stays where it is put.

• • •

Soy beans should be planted either with the corn planter in rows three feet apart at the rate of about 20 pounds of seed an acre, or with a grain drill at the rate of about 50 to 60 pounds an acre.

• • •

Most of the cereal crop insects confine their activities to crops belonging to the grass family. The practice of crop rotation in which a leguminous crop is used is therefore a good method of reducing insect damage.

• • •

Give a hog a chance at the cafeteria system of picking his own food and he will show more sense than many men would under the same conditions. A hog will choose enough of each of the foods offered so that he has a balanced ration.

Don't Risk Neglect!

To Ignore the Early Warnings of Kidney Trouble Is Serious and Often Fatal

ONE'S health depends upon one's kidneys. The kidneys must filter every drop of blood. If they fail to properly do this work, there's a poisoning of the whole system. Then comes backache, dizzy spells, bladder irregularities and loss of vitality. *Why wait?* Why not use *Doan's Pills? Doan's* have helped thousands. *Ask your neighbor!*

An Ohio Case

J. L. Chamberlin, E. Third St., Ottawa, Ohio, says: "My back was so bad, I couldn't lift the lightest thing and sharp pains across my kidneys left me weak. Mornings my back was stiff and lame. I had to get up often at night to pass the kidney secretions. I began using Doan's Pills and Doan's relieved me. The benefit has lasted."

Thousands of people who are sufferers from constipation do not become aware of it until they seek out the cause of their frequent headaches.

"Those bilious headaches can be prevented"

"I know how agonizing they are. For years I was a chronic sufferer.

"And the headaches were not the worst part of it. The strong drugs I used to take to relieve the pain upset my stomach and slowly but surely undermined my general health.

"Finally I found out that my headaches were due to constipation. My doctor advised Nujol. After taking it regularly a few weeks the trouble disappeared.

"Since then I have never had another headache. There is no reason why I should, for the cause has been corrected."

Nujol Corrects Constipation in Nature's Way

Constipation is dangerous for anybody. Nujol is safe for everybody. Nujol simply softens the waste matter and thus permits regular and thorough elimination without overtaxing the intestinal muscles. Medical authorities approve Nujol because it is gentle, safe and natural in its action.

You can take Nujol for any length of time without ill effects. To insure internal cleanliness, it should be taken regularly. Unlike laxatives, it does not form a habit and can be discontinued at any time.

Ask your druggist for Nujol today and begin to enjoy the perfect health that is possible only when elimination is normal and regular.

Modern Fur Farming For Indiana

(Continued from Page 1)

The domestication of the Silver Black Fox was not a matter of chance. Some men with an idea, backed by courage, patient and intelligent work, finally brought it to pass—not in a day or in a year, but in a goodly period of time.

History shows that trappers reared foxes in captivity. The custom for scores of years had been to keep litters discovered when young in confinement until they were grown, and possessed marketable pelts. On several occasions foxes were kept until the following spring when they frequently gave birth to pups.

Previous to 1914 the Silver Fox was almost exclusively the fur of the nobility. The masses knew nothing of its rarity or its beauty. It is since the above date that the United States has become a source of distribution for this beautiful fur; it is now estimated that New York City alone could easily use the entire world-production of Silver Fox skins.

The Silver Black Fox, which is the principal fur-bearing animal now kept under ranch conditions, a special reason for domestication exists which does not apply with the same force to any other animal; it possesses a matchless and striking beauty, a beauty so distinctive and superior to that of any other fur that it stands in a class by itself and is absolutely impossible of imitation. No skin can be dyed or treated to resemble it. Nature has bestowed upon the Silver Black Fox a color combination so ingeniously blended and artistic in design that it is beyond the power of man to imitate or duplicate. At the end of the hair for about an inch is a rich, dark, velvety blue-black section, next is a band of shimmering silver, then black shading off into a mouse color close to the skin. The end of the hair being black is a total absence of light or color. The silver band is the presence of an intense light, or the opposite of black, thus combining in one living hair the two diametrically opposite variations of light or color. There is no artist that can paint, no science that can produce one hair that can even remotely resemble the Silver Black Fox. Yet the great alchemy of nature has provided each pelt with thousands of these hairs; a fur is either a Silver Black Fox, gorgeous in its beauty inimitable in its design, as produced in the strange labatory of Nature, or it is something else.

Man has never succeeded in domesticating any animal that suited his purpose. Not only that, he has bred for finer meat qualities in certain animals and fowls. For milk producing qualities in certain strains of cattle, for size and stamina in his work stock, for speed and endurance in his mounts, for beauty in his pets and for a hundred various qualities in his dogs. Therefore he can and is raising a part of his fur, and not only raising it but increasing its quality by selective breeding.

There is nothing mysterious about raising foxes. Neither is it particularly difficult. One must bear in mind that every species of fur-bearer is endowed with different characteristics which must be taken into account in efforts toward domestication. A farmer does not pursue the same methids in breeding chickens that he uses in raising mules. Therefore the same system that is used for dogs will not serve as well for foxes. Consequently it is necessary to cater to its natural habits in a wild state.

The Silver Black Fox thrives well and propagates regularly with proper care and handling. It is an easily domesticated animal, that is, no exceptional difficulties are encountered in rearing them when the subject is understood and intelligently pursued. Where the fox is properly taken care of by one who understands the animal it lives a normal life, reproducing its young in healthy condition.

When six weeks old they start eating more or less solid food. Most breeders leave the young at this time entirely to the mother unless she is becoming emaciated. In such a contingency the pups are sometimes raised by cats from birth. They become attached to their pens and live perfectly normal and natural lives so long as their usual routine is not disturbed.

U. S. Department of Agriculture Bulletin No. 795.

The Silver Fox raised in captivity yields a fur and a pelt that is far superior to that of foxes trapped in their wild state. In breeding foxes it is possible, by selective matings and crossings, to achieve the finest of exquisitely marked pelts; while "many wild skins are necessarily imperfect, being unprime, worn or not well colored, but those from selected animals killed when their fur is at its best, may be confidently expected to rank as first-class goods."

The U. S. Dept. of Agriculture bulletin, just issued, states the supply of furs from the wild is rapidly decreasing; and the plea to the farmers of the country to take up fur farming, to say nothing of the publicity work now being carried on by those engaged in the industry, it certainly looks as if Fur Farming was destined to become one of the greatest commerical industries of the age.

AN OUSTANDING BLACK SILVER
Whose Breeding Value Amounts to Many Hundred Dollars

Honored Citizen Passes

Samuel Widney's education was gained in the country schools together with the advantage of village school while living at Auburn, Indiana.

January 1, 1860 he was united in marriage to Mary Ann Moore and to this union came five children: Marion, who died in infancy September 24, 1861; Byron Ellsworth, at whose home the deceased resided at his death, one mile north of St Joe, Indiana; Viola Jane (Widney) Carpenter, who now lives on a farm at Coburn's Corners; Otto Lynn, who resides at Hicksville, Ohio; Iva May Widney-Hart, deceased, having passed out at St Joe, Indiana October 7 1905. The mother and wife of our subject died at St Joe, October 20, 1905, just thirteen days after the daughter, Iva.

In the fall of 1889, the subject of this sketch, together with the family moved to St Joe, but after the death of the wife and daughter he made his home with the children, a majority of the time with Byron E. This was near the old farm and convenient to his interests.

Samuel, as we knew him best, with his wife, joined in church fellowship the Methodist Protestant church in 1886 under the pastorate of Rev. J. M. Langley. To the church he has ever been faithful and has at all times been a worthy standby. If all members would profit by his example and imitate his consecration, the church would never fail but always thrive.

Together with the brothers, sisters and immediate family, are the grandsons, three in number, the great grandchildren, two girls and two boys, children of Viola and D. L. Carpenter; the daughter of Byron E. and Rosetta Widney and the adopted daughters of Otto L and Berniece Widney, together with the more distant relatives and friends who mourn their loss

"Uncle Sammy" as he was commonly known, was in our community a real true living good samaritan. The writer, not being one of the immediate family can speak the truth without embarrassment or fear of contradiction There are hundreds of citizens who live today that would be glad for the chance to testify as to his kindly spirit to all mankind. Many a man he helped to get started in life, and we can best honor this man by exemplifying his fine traits and in our close we can truthfully say. "We know he lived to bless mankind, and his just reward will be Eternal Life."

The funeral services were held from the M. P. Church, Monday afternoon at 2:00 o'clock. Rev Samuel Heininger, of Grand Rapids, Michigan, a former pastor and confidential friend, officiating assisted by his pastor, Rev. Otis Jones Burial was made in Riverside Cemetery.

The following telegram was received by Rev. Jones from Rev. Crates S. Johnson, of Pittsburgh:

"Loyal to every principal of christian character and life Uncle Sammie Widney was a tower of strength and influence for good in his community. In the twenty five years of our acquaintance I have never known him to step aside from the path of rectitude."

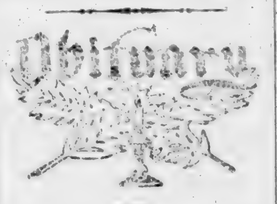
Obituary



Mrs. Martha C Hanten passed away Saturday evening February 20, at the home of Mr. E Moss near here after an illness of many years

Mrs Hannen is survived by her husband, W. H. Hannen, a brother, Edward M Shutt of Fort Wayne and an adopted son, George S Prince of Petaluma, California.

Mrs Hannen was born in Spencerville, Indiana, December 15, 1854 and was married to W. H. Hannen July 5, 1880 at Fort Wayne, Indiana She graduated from the Valparaiso College and was an accomplished musician, and assisted her husband in musical programs, as her husband served in the Civil War in the 44th Indiana Regiment as a musician.

She was a woman liked by all who knew her.

The funeral services were conducted by the Sedgewick Woman's Relief Corps. No 4, and F. M. Flanders, Christian Science reader, in Spokane, and her body was buried beside her brother in the Marshall, Washington, cemetery.

Mr. Hannen intends to start soon to California to make his home with his adopted son.

WHY NOT FILE AN EXEMPTION?

The News is fully prepared to make the necessary papers out at a nominal charge of 50 cents. In order to assist in making the proper record please bring a tax receipt showing description of property. It will save several dollars to you.

The Common Causes of Headache Are:

Eye strain, bowel trouble, tonsils and stomach constipation, indigestion, kidney disorders and catarrh. Of all these causes EYE STRAIN predominates. If your EYES are at fault they should be taken care of first and that may eliminate all your trouble. We have relieved hundreds of others, let us help you.

We make glasses to fit your pocket book and your eyes.

ST. JOE NEWS.

VOL. XL | ST. JOE DeKALB COUNTY, INDIANA, THURSDAY MARCH 25, 1926 | NO. 12

School House Contract Was Awarded

Trustee Milliman and Advisory Board let Contract Saturday After a Local Committee Agrees to Raise $2,000 to Meet the Contract Price.

Last Saturday, at the school house, was the time of receiving bids on the proposed school building and gymnasium and Fred Hershberger of Middleburg, Ind., was awarded contract after a day's deliberation, for $34,200.

Two other bids were received on the general contract from Myron Brandon, Auburn, for $42,700 and Geo. Miller Co., Stroh, for $36,995.

The bids on the heating and plumbing were taken under advisement, but the figures submitted were as follows:

Geo. Weaver, Auburn, new and old building, $12,000; new only, $7,294.

Chas. R. Lininger, Hartford City new and old building, $12,990; new only, $9,345.

B. C. Fitch, Garrett, new and old building, $13,389; new only, $8,149.

The wiring bids were received as follows and have been taken under advisement also:

Pfeiffer Electric Co., Ft. Wayne, $1,068.

Irvin Steininger, Auburn, $1,450

Fred Hershberger, the contractor, $1,000.

The $35,000 bonds were sold to the Meyer-Kiser bank of Indianapolis, for par, secured interest and a premium of $546.50. The bonds bear 4½ per cent interest and run for fifteen years.

In view of the limit to the bond issue the board delayed passing on the other bids and by agreement of local delegation to raise $2,000 in the township the board decided to go ahead with the work.

The building and equipment as proposed will give the patrons of Concord township schools the very best facilities possible according to the means of the township and will rank next to the Auburn school.

The real need for more room has been responsible for the state department suggesting to our board that more room should be provided, while their recommendation was not mandatory. Since the rural schools are all brought to St. Joe, the rooms are crowded to such an extent that the work of the classes are interferred with.

The new structure will be located about thirty feet north of the main school building, facing the east, and will house the Senior High School, while the present rooms will be occupied by the Grades and the Junior High.

The proposed building will be 54x100 feet On the first floor will be the gymnasium with a playing floor space of 41x70 feet and a stage built in. The floor will be be of concrete and maple and the room for the audience will be sufficient for 400 spectators at least during the basket ball season, and double that capacity at other events.

On the second floor will be found an assembly room, three class rooms and the principal's office.

We believe that Trustee Milliman and his advisory board have been very conservative, and are desirous of doing all in their power to give the children of Concord township, the best school advantages possible, and also that they do not wish to have the state board order this work done, as they in one instance in our county and then at such an expense that the tax payers can justly complain.

As everyone knows the bonding capacity of each taxing unit is governed by the law, and the bids made it necessary for a guarantee to be furnished for $2,000 before the board would allow the contract to be let, and because the citizens of the township were loyal to the school interests, a number of citizens felt that, if the people knew this was their last chance to secure the additional room, that they would freely give the necessary amount.

Before the day was done a number of individuals expressed themselves favorable to giving very liberally to making up the needed funds The facts of the case are, that should we fail to provide to meet this need, that it would be almost impossible to get the board to undertake letting the contract again.

People who have children should remember that this is for their benefit solely. Were this object to fail now by your refusing to give of your means, and you wish your children to complete their high school education, you will need to spend many more times the amount of money in sending them to the county seat school, than would be required to place the school at your home center. We have not inflated facts to give in behalf of this movement Look into the future just a few years and you will readily see what is coming in the way of centralization of high schools as well as grades. The cost of maintenance is steadily creeping upward and in order to meet this the powers-that-be will issue orders closing smaller schools entirely and cause consolidation.

For a number of years the county unit bill has been agitated and this seems to be the sentiment behind this measure. If a community has the equipment it will be made a center for the school districts surrounding it.

But little opposition to the raising of the funds has been met by those who are giving their time to this worthy cause. Concord township cannot lose this new building

It is a case where those who believe in home missions, give.

It is a case where real patriotism asserts itself.

It is a case where we show that the most valued asset to our township is our boys and girls.

It is a case where the principal of "not for self, but others" must apply.

It is a case where you give to help yourself.

It is a case where you must give 'til it hurts, the principal of self preservation must be exerted.

It is a case where we can educate the youth at home rather than send them away.

It is a case where you are adding worth to your farm and town property, by such educational facilities.

Now, need we say more? We believe that the homes of our township will say: "We cannot fail in this thing"

A Noble Enterprise

by O. Lawrence Hawthorne

If business men would so conduct
The program of their lives
That they could be more helpful to
Their children and their wives,
Oh, what a splendid record of
Contentment we should find,
And what a priceless benefit
Would come to all mankind!

A truly noble enterprise
Is that of bringing cheer
And peace of mind and happiness
To those a man holds dear;
And marriage is a partnership
That he should place above
All other obligations, for
Its covenant is love.

Yes, home-life should receive the best
Attention men can give,
They ought to counsel with and help
Their partners while they live;
And surely they should ever guard
Against that doubtful day
When circumstances unforeseen
May summon them away!

Lutheran Pastor Leaves April First

The resignation of Rev. S. D Steffey, pastor of Lutheran Charge will take place next Sunday morning and he will take up his new work at Deer Creek, Carroll county, south of Logansport, a former pastorate of years ago

Rev Steffey leaves his St. Joe church in excellent condition, with quite an addition in membership since his pastorate, and he feels that his work has been accomplished and that he should leave for other work.

He has been deeply interested in the church and community at large and was untiring in his efforts to meet the needs of his church in every particular. May the Lord bless him in his new work of the church.

Regional Contests Are Over

The final contest of regional winners will be held Friday evening at Auburn. Below we give the results of the Waterloo and Spencerville contests, in which our readers are interested:

At Spencerville—Oration, Spencerville; reading, Corunna, first, Ashley second, Spencerville third; double quartette, Ashley; chorus, Ashley first, Corunna second, Spencerville third; piano solo, Ashley first, Corunna second, Spencerville third; discussion, Ashley, first, Spencerville second.

Waterloo—Oration, Butler first, St. Joe second; quartette, Butler first, Waterloo second; reading, Waterloo first, Butler second; piano solo, Waterloo; chorus, Waterloo first, Butler second, St. Joe third; discussion, Waterloo.

Home Bureau Activities

The Concord Township Home Bureau Club met with Mrs. Clara Folts Friday afternoon, March 19. The hostess was assisted by Mesdames Minnie Ulm, Katie Storer and Stella Hughes. A St. Patrick party in connection with regular program and business was enjoyed by all. In spite of bad roads there were twenty-three answered to roll call. A class in reed work was organized with Mrs. Vera Jackson as leader. The club voted to have a Jello demonstration in the near future.

A dainty two course luncheon was served.

LICENSED TO WED

Laurence Wagner, 23, farmer, Spencerville, and Helen Humbert, 19, Auburn.

Married for Fifty-six Years.

Florence and Mary Buchanan, Sunday, celebrated their 56th., wedding anniversary. These two old people are very active in spite of their infirmities and it is hoped that they shall celebrate more of these pleasant events

A Wise Man Says Foolish Things.

Evidently Rev. Epringham, of the Episcopal church has sold his good name to the wets for the almighty dollar, as he again appears in the wet columns sponsoring their cause, and still saying he is dry. He is supposed to be a man of some brains and yet he states that the straw vote reflects public opinion Take the Journal Gazette vote for instance and the 700 papers are almost identical, only a vote of less than 40,000 reported, and call this a representative vote of a city of 115,000 and votes for fifty miles around were sent in and this tells the sentiment of the people—not by any means. It tells you nothing authentic.

K. K. K. Special Meeting

Auburn Bank Bids Property

The John Hart property in St. Joe, as advertised for sale in the mortgage foreclosure suit of Auburn State Bank, was bid in by the bank at a figure of $620.93. Some load we would say for the condition of the property. If some extra money could be put in repairs the property could be made desirable.

Author of "Toilers of the Trail" "The Whelps of the Wolf"

(Copyright by the Penn Publishing Co.) (W. N. U. Service.)

CHAPTER X—Continued

—16—

"No! Tie him up and put him in the shack and get our stuff to the canoe! I'll get rid of the girl!"

The die was cast. Every minute at the post spelled danger. But Steele now had an excuse for refusing to take Rose Laflamme to the railroad.

"You understand, David? Keep your knife out of him. Your turn will come on the snow. Now get the canoe!"

David carried Laflamme into the shack, and went for the canoe.

Returning to the girl, trembling in the dark, Steele said: "It was he, David knocked him out, but he's not hurt. We must get away at once."

With an impulsive movement, Rose Laflamme found Steele's neck with her arms and kissed him wildly.

"But," explained the harassed American, "we've got to travel fast; they'll follow us—we can't take you!"

"You mean you'll not take me now?" gasped the girl in her despair.

"We'll have to run the portages, break our backs to beat the Indians he'll send after us. If you go, they'll get us!" protested Steele.

"Take me, take me with you!" she moaned. "Am I not beautiful, beeg American? Don't leave me here!"

Then Brent Steele gambled: "What was Pierre doing down river?"

"I weel tell you in the canoe," she parried, and he crunched his teeth in his chagrin. "When we are in the canoe I will tell you things—things you nevaire dream of," she urged, "I know all."

She would exchange her information at a price—her freedom; and that price Steele would not pay. But it was necessary to get her back to the house.

"All rigat," he said, "go and get some heavy clothes, and be at the log landing in an hour. Don't make any noise. We don't want them to find Laflamme until morning. Now be careful!"

With a low cry, she again circled Steele's neck with her arms, kissed him and disappeared. In an hour he and David would be far down the lake on their way to Nepigon house. She had intended making a catspaw of him to escape from Ogoke and Steele wasted no sympathy on her. He wondered whether, on finding herself tricked, she would arouse the post or take to her bed, feigning ignorance of the whole business.

And he also wondered whether if Denise St. Onge ever learned of this night's work at Ogoke, she would believe that every act and word of his had been in her service.

Through the night, the churn-swish, churn-swish of the paddles of David and Steele ceaselessly marked off the miles, for with the sun might come a head wind, which meant fighting for every foot while their pursuers gained on them with a four or six-man crew. Time and again through the long hours, the keen eyes of David alone had sensed through the murk in which they traveled, the menace of a rocky point or the threat of bowlders, awash, square in their course.

"How far have we come?" asked Steele, laying his paddle on the gunwale to stretch his stiffened arms.

"Wal, does point ees ver' far up de lak'. Keen two hour we hit de inlet."

"Good! If that is so, we're thirty miles ahead of them."

The Ojibway shook his head. "We tak' no chance—we travel lak' h—l!"

On shore the tea-pail was soon boiling, while David and Steele overhauled their scant supplies. There were barely beans, bacon and flour to do a week, and Nepigon lake was two weeks' hard travel. It meant shooting their way out, unless the fish would bite, for they had given their net to Michel.

"Let's have a look at the old Mannlicher," said Steele as David watched the bacon sputtering in the pan. "We may need her before we get out of this mess. I was a fool to stop there. I might have—" He had thrown the bolt-handle up and back, when his face sobered. The startled eyes which met the inquiring gaze of the man at the fire drew a quick: "W'at you see—ghost?"

Making no reply, Steele sprang to the canoe, tore the lashings from a bag and fumbled with its contents—then emptied the bag on the beach. Taking David's rifle from the canoe, he opened the breech.

"Both guns empty!" he said in dismay. "They've got our shells—two boxes in the bag! Not a shot left—cleaned out!"

The white man looked long into the immobile face of the Indian.

"If they catch us—we're done! If they don't, we can't even shoot our way home. It's fish—or starve!"

The Ojibway squatted on his heels and resumed his frying. "Wal, boss," he said stoically, "we have beeg feed dis mornin'—den paddle lak h—l!"

For two hours the canoe was driven as only seasoned men can push maple paddles. Then, leaving the lake, they faced forty miles of the swift Rouge before they turned off on the portage to the Jackfish. Once on the Jackfish they could travel as fast as their pursuers, for from there it was all down stream to Nepigon. But the thought which added pounds to the thrust of pole and lunge of paddle through the travail and sweat of that October day was the chance of being headed by Indians sent overland to the Jackfish portage. With no shells for their rifles, they were at the mercy of the first band sent to come up with them.

So, without stopping at noon, the fleeing canoe pushed on up the Rouge, and not until dusk settled on the valley, was it turned to the shore.

There, unloading the weary crew carried boat and outfit back into the "bush" against the possible chance of their camp smoke being seen at daylight by those at their heels.

Dawn found them at their galley slavery with another back-breaking day to live through before the clearing of the Jackfish portage would open up ahead. Unless they were run down shortly, that night the fleeing canoe would ride the Jackfish, and they had won.

They were rounding a bend below a backwater when the man in the bow lifted his hand and pointed. In the shallows, not fifty yards away, stood a yearling moose.

"Meat to take us to Nepigon!" groaned Steele.

David slapped the water with the flat of his paddle. "Marche, you!" he cried, "or de cutt'roat behin' us weel get you."

"One shell would have got him!" said Steele, ruefully, as the moose slowly turned and disappeared.

"Wal, I not wast' de last shot on moose," and the Indian held up a shining cartridge for the inspection of his friend.

"Where in the devil did you get that?" cried the amazed and delighted stern man.

"I fin' eet een de grub bag."

"And you never told me! Is that fair, David?"

"Wal, eef I tell you, you fire eet at de moose."

"Why not? We would have red meat then, to Nepigon."

The Ojibway shook his head soberly: "Daveed save eet for one of Laflamme's men."

To Steele, who felt now that sundown would find them at the Jackfish portage; that their pursuers were far in the rear; the words of David sounded unduly ominous. It was possible that some of the Indians on their trail could travel the forty miles of broken, bush-grown river shore in a night and a day, but he doubted it. So he laughed loudly at the square back of his friend when, an hour before sunset, they landed at Jackfish portage.

"Well, we did it, old boy!" cried Steele, slapping the knotted shoulder of the grinning David. "Now we'll take her all over in one trip or throw this museum stuff away. Can we do it?"

David nodded. "De carry to de lak' ees short. I tak' the canoe an' de Injun stuff. You tak' de rest."

"Man alive! It will go four hundred—with the boat."

But David was busy slinging his tump-line to the largest of the bags and made no answer.

So, after further protest, which the Indian brushed aside, Steele packed the three hundred pounds of bags on the Ojibway's wide back, and on top balanced the canoe, and the thick bowlegs of the red son of Anak moved steadily up the trail.

With the dusk, the canoe was in the Jackfish and the two men gripped hands in mutual congratulation. They had set Laflamme's gang a pace over a hundred miles of lake and river which they would not soon forget. Dropping downstream they camped in the thick spruce, back from the river, and for the first time in two days, baked cornbread for their beans and bacon, and feasted.

Beside a fire which the scrub masked at fifty feet, two men, at ease with the world, pulled on after-supper pipes. With a little tuck in the pike lakes of the lower Jackfish, they could eke out their scanty food supply; and if, as seemed certain, they had left their pursuers hopelessly behind, the shell in David's rifle might bring them meat.

"Boss," said the Ojibway, after a period of silence which was characteristic, "I nevaire tell you w'y I hunt dis Laflamme."

From a revery in which Denise St. Onge again played to him on her Hill of Dreams, far in the north, Steele turned with interest to the speaker.

"No, I should like to hear."

"Eet was manee year back—ten, twelve. Dis Laflamme trade wid de 'Jibway up Los' lak' way. My brodder work for heem. He sen' my brodder an' 'noder man to mak' cache on de Pelican riviere. One day, beeg spruce log, she fall and hit heem in de back. De 'noder feller try carry heem ovair de portage but eet pain my brodder too much. He say, 'I stay here w'ile you breeng men from Los' lak. Dey tak' me ovair de long portage on de spruce pole!'"

For a long space David sat with head on hands, staring into the fire. Steele smoked in silence, waiting for the mood of his friend to change, when the rest would be told.

At length, David straightened and turned to the other, black eyes glittering, as he hoarsely demanded: "W'at you t'ink dat Laflamme say w'en de feller reach 'Los' lak'? Dees ees w'at he say: 'Dat man ovair on de Pelican ees dead by now. I got no men to sen'. You not go back; I get work for you wid beeg canoe down in Wabigoon.'"

Again David paused, his face black with his thoughts.

"So Laflamme left your brother to die alone—to starve?"

David nodded.

"Dat feller had fear of Laflamme but he go back to de Pelican w'en he get chance."

"What did he find?" asked Steele.

"Nodin'."

"What?"

"My brodder crawl to de riviere an drown heesel'—before he starve."

"David," said the man across the fire, "I want to apologize for keeping you off that snake. He was helpless and I thought if I allowed you to go back that night, and we were afterward overhauled, it would mean our finish; but now I wish you had throttled him."

"I had hard fight not to keel heem—but you're de boss," added the loyal Ojibway.

"You'll have your opportunity this winter—never fear."

"Mebbe; but dey may wait for us tomorrow at de Frying Pan."

"You still think that some of them may have been sent overland to cut us off?"

"Wal," said the cool half-breed, "eef I hunt canoe traveling dis way from Ogoke, dat ees w'ere I sen' dem."

"But they won't have had time to get there."

"Mebee not. Tomorrow we see." And the red stoic rolled himself in his blanket.

* * * * * * *

The stars still hung above the Jackfish, although there was a hint of dawn in the graying east, when a canoe slid swiftly through the shadows on the way to the Frying Pan rapids. Once over the carry around this roaring cauldron of white-water, into the spray of whose flumes and cross currents no man, red or white had ridden a canoe and come through and the two friends could snap their fingers at Laflamme's pursuing pack of wolves, for thirty miles of hard-running river, from which they would not lift their flying canoe, then lay before them.

As they paddled toward the carry above the thundering Frying Pan, Steele asked the Indian whose eyes ceaselessly searched the shore below them: "Have these rapids ever been run?"

"No! Dey are ver' bad een some place," muttered David.

"Could we run them?"

The Indian shook his head.

"Then why did you insist on our having our setting poles handy?"

David did not answer.

"You're wasting your time watching that portage," laughed Steele.

Still the Ojibway ignored the man in the stern. Then the scoffer suddenly wondered why the bowman was edging the nose of the boat, as they drifted, away from the carry. A thrill shot through him. Had David seen something suspicious?

The boat was fast approaching easy rifle range. With his paddle buried, the Indian, simulating leisurely action, and followed by Steele, was rapidly adding to the distance between the canoe and the shore. But to the straining eyes of the American the scrub told nothing.

"What is it? I can't make anything out," demanded Steele.

Back from the bow came: "Keep on paddle; dey are dere!"

The words froze Steele where he kneeled.

On drifted the craft, ever edging farther and farther from the ambush.

Stiff as stone knelt the man in the bow, outthrust arms rigid, eyes anchored to the beach, wrists alone in motion. Hunched in the stern, fingers fiercely gripping his paddle, Steele, marveling at the Ojibway's nerve, waited for his order. A hundred yards more and the suck of the first chute would draw them into the Frying Pan. The boat was now passing the portage, yet the rifles on the shore were silent. Then Steele understood. The plan was to drown them.

(TO BE CONTINUED.)

Realizing His Profits

He walked into a brokerage office several months ago, deposited $10,000 and bought some stocks on the firm's advice. No one saw him until lately when he walked in again and asked how much profit he had.

"Twenty thousand dollars, or thereabouts," replied one of the partners, after the account had been checked up.

"Sell my stocks and give me my profits in cash," the customer directed, after a few minutes.

As soon as the orders could be executed and a messenger returned from the bank, the partner counted out to him twenty one-thousand-dollar notes and some odd bills and change. He stuffed the money in his wallet and sat down. Then, after he had enjoyed for half an hour the sensation of carrying his profits in his clothes, he pulled out the money, handed it back to the partner, and said:

"Buy all those stocks back again!"
—Wall Street Journal.

Words

Words, too, are more than sounds; they are garners stored with history and the experience of generations of their users. Languages, also, have their distinctive characters, and forms of expression and meter suited to one language do violence to another. Even words seem to welcome the emotion, the rhythm which the poet brings, and respond to his touch.—Lascelles Abercrombie.

ROAD BUILDING

MORE AUTOS THAN ROADS CAN HANDLE

Construction of paved roads is lagging farther and farther behind the production of automobiles and trucks.

An interesting comparison may be drawn between the output of motor vehicles and the roads paved during the recent years by replacing the mileage of the highways built by the number of cars that can use them at the same time without too great congestion.

On each mile of two-track road built there is room for 200 automobiles, according to figures recently cited by Dean A. N. Johnson of the University of Maryland, in a paper before the American Society of Civil Engineers at New York. But with this number there can be no passing around slower-moving vehicles, and all cars must move at a uniform speed.

In this paper Dean Johnson gave fifty to sixty feet as the minimum spacing between cars—or sixty to seventy-five feet, including the length of the car itself—when the cars were moving freely at twenty-five to thirty miles an hour on a main highway. Reducing this somewhat to be conservative, 100 cars can be accommodated in use on each side of a mile, or 5,280 feet of pavement, 18 feet wide, so long as they keep in line and all run at the same rate.

On this basis last year only one-third of the 3,630,000 motor vehicles produced could be used at one time on the concrete roads built during the year. While this is a better showing, proportionately, than in 1910, when less than one-sixth of the new cars could be so accommodated, in the actual number of surplus cars the congestion is growing. In 1914 the difference between those made during the year and those that could be accommodated by the concrete roads built was only 359,000; in 1919 it was 1,031,000, while in 1924 it had risen to 2,439,000.

Automobiles Tested to Find Wind Resistance

The engineering experiment station of the Kansas State Agricultural college is working on a problem to determine the wind resistance encountered by the average automobile on the public highways. This experiment, under the direction of Prof. L. E. Conrad, head of the civil engineering department, is only one of a group of investigations being carried out by the national highway research board in an effort to discover the best material for surfacing roads.

The college has already completed a large share of its work as tests have been made of 18 different types of bodies on various cars. The experiments are being carried on in an improvised wind tunnel 50 feet long, 12 feet wide and 10 feet high. A motor-driven fan is placed in a position to offer a maximum wind velocity of 80 miles per hour. An automobile is driven into the tunnel and fitted on a swinging platform to which are attached spring balances for measuring the resistance of the car's area against the wind pressure.

The data so far taken is interesting. It has been found that a car traveling at 10 miles per hour develops a wind resistance of only five pounds per square inch, while at 40 miles per hour the total resistance of wind amounts to 110 pounds, or 22 times greater than the first speed with only quadruple speed.

Plan Widening Lincoln Way in Pennsylvania

The prospect of a 40-foot roadway on the Lancaster pike from Philadelphia to Downingtown (30 miles) is decidedly welcome. The 20-foot width has long since ceased to give effective accommodation to the large and growing stream of traffic along this section of the Lincoln highway.

The improvement, which has already begun, will be an addition of a 10-foot concrete bed on each side of the tar surface. The latter is pronounced good for years to come. This is highly questionable. But when it does become unserviceable, it will be replaced by concrete, making a 40-foot concrete pike. The policy is later to increase the width to 50 feet.

All this is a start in the right direction. Effective progress in highway building which shall accommodate the traffic of the future means the adoption of a simple policy to be applied on all through routes. It is "concrete roadways 50 feet wide." The sooner the carrying out of such a policy begins, the better. For the next few years the aim should be to be ahead of traffic requirements, not merely up to them or a little behind.

Need of Improvement

Further need of road improvements in national parks to meet the requirements of increased travel was emphasized in the annual report of the national park service, made public by Secretary Work. The road improvement work, which was begun under a congressional appropriation of $2,500,000, the report said, will be continued until the park roads are brought to the highest standard for automobile highways and will make it a pleasure to tra-

Women, Don't Suffer!

Kokomo, Ind.—"I was suffering with all kinds of aches and pains—head, back and side, dizzy spells and nervousness. The doctors tried to help me and I tried all kinds of remedies but got little relief. I was advised to try Dr. Pierce's Favorite Prescription. I hesitated on account of the failure of other treatments, but at last I tried it. One bottle helped me so much I got two more, and by the time I had taken them I was feeling like a different woman. It had relieved me of all aches and pains and made me well."—Mrs. Roy Griffey, 1225 W. Taylor St. All dealers.

Porter's Pain King
A Liniment
Quickly Checks Coughs and Colds. Used Since 1871

When You Catch Cold Rub on Musterole

Musterole is easy to apply with the fingers and works right away. Often it prevents a cold from turning into "flu" or pneumonia. It does all the good work of grandmother's mustard plaster without the blister.

Musterole is a clean, white ointment, made of oil of mustard and other home simples. It is recommended by many doctors and nurses. Try Musterole for sore throat, cold on the chest, rheumatism, lumbago, pleurisy, stiff neck, bronchitis, asthma, neuralgia, congestion, pains and aches of the back and joints, sprains, sore muscles, bruises, chilblains, frosted feet—colds of all sorts.

To Mothers: Musterole is also made in milder form for babies and small children. Ask for Children's Musterole.

RADIO

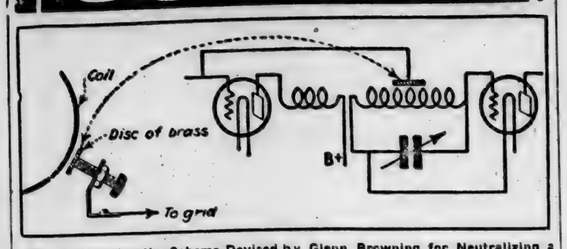

Fig. 3—Showing the Scheme Devised by Glenn Browning for Neutralizing a Radio Frequency Receiver.

By L. W. HATRY
In New York Herald Tribune.

Many home radio engineers, using the term engineer with extreme generality, design excellent little sets. That is, these home designers subtract ideas out of various articles they have read and screw them together to make a component whole including the things that they want. The men that do this sort of thing know a little of the technical and mysterious end of radio-electrics; but, much more important, they undestand a deal of the practical application of things. This is written for these men. It is hoped that it will help somewhat in their rectifying a thing often done haphazardly.

First, at the risk of being uninteresting, let us go into the theory of the Hazeltine or any neutralizing scheme. The theory fits most of them, but the specific application discussed will be Hazeltine's.

The Neutralizing Arrangement.

There is a feed-back from plate to grid in a radio-frequency tube that results in the oscillation so annoying without some annuling or neutralizing scheme. The feed-back may be reduced by sacrifice of effectiveness, by introduction of losses or by a neutralizing, so-called, arrangement. The neutralizing idea works on what is known as the bridge principle. Notice the diagram in Fig. 1. The path from input to B plus, going backward for the moment, is a double one. The current can either go by the capacity of C and the inductance of L½, or by the capacity of GP and the inductance of L½ (L½, because L is tapped in the middle). Now, if the current divided equally in both of those branches and reversed itself in one branch to result in opposition, the result at B plus would be nothing, assuming that we control the paths CL½ and GPL½, so that they are equal, and thus pass equal but opposing forces. That being the case it becomes apparent that if L½ and L½ are equal the condensor C must have the same capacity as between GP. That sounds all right, but the capacity from G to P is very small, and it is quite a trick to provide so small a capacity at C without having the wires running from L and G overdo the job.

Now, the exact arrangement of Fig. 1 is being used at present in many sets employing a single stage of radio frequency amplification. The detector coupler primary L is a coil of double winding, two wires in parallel, or a

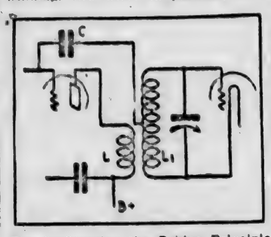

Fig. 1—Showing the Bridge Principle of Neutralizing.

single winding tapped in the center, as L indicates. Yet practical set conditions often make it impossible to put the proper capacity at C, so that the process of neutralizing is practically impossible successfully. This trouble is simple to rectify. If we express the relation mentioned in the foregoing paragraph in a mathematical formula, it will be:

½LC = ½LGP—permitting GP to represent capacity between grid and plate. It is apparent immediately that if any one member of the equation is reduced an increase of its partner will balance things again. If L is reduced, then C must be increased, or vice versa. That this is true offers a solution to the neutralizing trouble. It is general practice to use a small midget variable condenser whose capacity is .0009 mfd. or greater generally. Under the circumstances ½L could just as well become ¼L on the C side of the equation. In this case L to C would be a half of L to P in turns, since the turns ratio make the voltage present at C. Speaking concretely, where L would ordinarily be a total of 36 turns tapped in the center, it should be instead 27 turns tapped to put 18 turns between P and B plus and 9 turns on the neutralizing side to the condenser C.

The Neutralizing Current.

The method of obtaining the necessary neutralizing current, as used in the neutrodyne, is well known. It is shown schematically in Fig. 2. What the foregoing should have imparted in part is that the balancing or neutralizing side of the bridge formed did not need so much to be actually part of the primary inductance L as merely a control circuit allowing the passage of the correct opposing current to the grid of the tube to be neutralized. So, if we arrange such a control circuit from a proper source of opposing current we can effect the same thing. This was done in the commercial neutrodyne by tapping off the inductance L1, which was secondary to L2, for the voltages or currents in a secondary circuit are generally completely out of phase with those in the primary. The primary L was almost always stuck at the filament end of L1, as Fig. 2 indicates, so that the voltage transfer from L to L1 at the lower portions would be made with small loss. Thus the tap at L1 generally included the same number of turns as were present in L, giving an oppositional current whose voltage was practically equal to that put on the plate by L. Control of the neutralizing capacity C would then put the exact neutralizing voltage on G. Since L and L1 were equal the condenser C had to have the same capacity as that between grid and plate—a very hard condition to meet, as was said—in the home-made, and in many cases, the factory-made, set

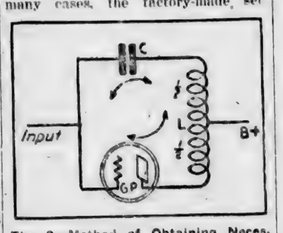

Fig. 2—Method of Obtaining Necessary Neutralizing Current.

The remedy is again as before. Have a small neutralizing inductance and a large neutralizing capacity, using the midget variable condenser. Tap off the secondary of the neutroformer L1 to include the number of turns to the filament equal to about one-half of L, the primary. Then the neutralizing condenser is safely the usual midget, but not very satisfactorily the so-called neutrodon of the sliding tube type.

To Obviate the Troubles.

Fig. 3 illustrates the simply obvious scheme devised by Glenn Browning of Browning-Drake fame, which obviates the troubles we have just mentioned. The little disk of metal coming near to the inductance coil makes of itself and the coil a neutralizing capacity and tap in a unique fashion. Of course, if it is not placed properly in relation to the voltage, at which it meets the secondary, it is possible to overneutralize and thus fail.

Sets employing a neutralized stage of radio frequency—regenerative detector and whatever necessary audio—are easy to neutralize by means of a simple procedure. Starting off with the neutralizing capacity at its maximum, adjust the tickler for oscillation with the two-tuned circuits in tune. It probably will be found that, the tickler rotates through a greater arc than the proper 90 degrees for the steady oscillating state. This signifies that the first tube is oscillating as well, and it should not. Make a slight adjustment of the neutralizing condenser. See if the result is a necessary greater increase of the tickler. Continue this until, not having changed the tuning, the adjustment of the tickler arrives at its greatest proportion of nonoscillating to oscillating portion of the arc of its swing. In other words, until it is necessary to give the greatest amount of tickler to start oscillation. When this condition has been reached the first tube is probably not oscillating and the behavior of oscillation and regeneration will be lots less erratic and more regular. This is a method of neutralizing that may be done any time of day or night, independent of both a strong signal or a buzzer and battery.

Aerials Safely Placed Will Save Much Trouble

Amateur electricians hanging aerials for radio sets often make some gross error or oversight with the result that they put themselves and their property in grave danger. In the past few months several serious accidents have occurred in different parts of New England and with the object of overcoming this and at the same time protecting their own installation, the principal electric light company of Worcester, Mass., has issued a notice that its officials will inspect all such wires free of charge, upon request of the owner. The radio owners of that city were quick to avail themselves of the opportunity and a number of antennae were found that were suspended over or near the heavily charged electric wires of the company, and in the event of falling would have been the cause of death or of serious injury and damage to the property.

DR. W. B. CALDWELL, AT THE AGE OF 83

Mother! It's Cruel to "Physic" Your Child

To Dr. W. B. Caldwell, of Monticello, Ill., a practicing physician for 47 years, it seemed cruel that so many constipated infants and children had to be kept constantly "stirred up" and half sick by taking cathartic pills tablets, salts, calomel and nasty oils.

While he knew that constipation was the cause of nearly all children's little ills, he did not believe that a sickening "purge" or "physic" was necessary.

In Dr. Caldwell's Syrup Pepsin he discovered a laxative which helps to establish natural bowel "regularity" even if the child is chronically constipated. Dr. Caldwell's Syrup Pepsin not only causes a gentle, easy bowel movement, but, best of all, it never gripes, sickens or upsets the most delicate system. Besides, it is absolutely harmless, and so pleasant that even a cross, feverish, bilious, sick child gladly takes it.

Buy a large 60-cent bottle at any store that sells medicine and just see for yourself.

***Dr. Caldwell's* SYRUP PEPSIN**

Conquer Constipation *with* Yeast Foam!

For constipation try this: drop a cake of Yeast Foam in a glass of water; let stand for five minutes; stir with spoon; let settle and drink the milky water, including the white precipitate.

Do this regularly and your constipation—no matter of how long standing—will be a thing of the past! Yeast Foam is equally effective for indigestion, boils, pimples, lack of weight and strength.

Or, if you prefer, eat the yeast with a cracker or a piece of butter.

It is easy to sit in the sunshine
And talk to the man in the shade;
It is easy to float in a well-trimmed boat
And point out the place to wade.
—Ella Wheeler Wilcox.

SPRINGTIME SUGGESTIONS.

In going over the closets and drawers this spring, give away to some one who can enjoy them the things that are too good to throw away or sell to the ragman.

The bits of lace and ribbon, the flowers and hat trimmings, old dishes, vases, in fact any thing that has passed its usefulness in your home pass on for some child or adult to enjoy and use. It takes will power to give up old heirlooms, but if they are to be kept in the attic, why not give them away and delight the heart of some one. When the final summons comes, as it will for all of us, do not leave the house full of things that might have brought joy to others, but give them where they will be appreciated, now.

Even in homes that are very simple as to furnishing and equipment it is most useful to have an inventory of its contents, in case of fire. A list of linens, bedding, silver, china, books, etc., is not difficult to prepare, and it is a great convenience from year to year.

Piece bags with a list of the important contents will save rummaging through other things to find that wanted. Pin the list on the bag. Label all boxes before placing them on the closet shelves. Even the most active memory will not always be able to recall in a hurry the article wanted.

Another household convenience is a card index. This may be used for the inventory as well as for recipes of various kinds. Have a set for left-over. For example, under tomato, give a few recipes in which varying quantities of tomato may be used. Every little while you will find a new one to add to the list.

Keep a list of foods that go well together, a hurry-up meal; when company comes you fail to think of many things you might have served, if you had a list to consult.

Faded hangings of silk or other materials which have become too faded to use may be dyed. Use a color which blends with the coloring of the room; often after dyeing goods that has some design which still shows, the hangings will be prettier than ever.

Ain't it fine when things are going
Topsy-turvy and askew,
To discover someone showing
Good old-fashioned faith in you?
—Edgar Guest.

SOMETHING FOR BREAKFAST

Ready prepared breakfast foods for a large family are not economical. They are convenient and for two or three make a reasonable breakfast food. The best of all foods for every member of the family is clean, well-washed and cooked wheat, taken right from the granary. Soak all night and cook slowly on the back of the stove nearly all day, or cook in a fireless cooker. When each grain is soft and surrounded by the well-cooked starch it is ready for food. Serve with top milk. A bowl of this food for supper is sustaining, nourishing and keeps the body functions in good condition. This wonderful food right from the hand of nature is not well enough known or appreciated. It can be bought in cans all cooked for fifteen cents, if one cares to buy rather than bother to cook it.

To begin at the beginning, each breakfast should begin with some fruit, fresh, stewed or baked, as apples or pears.

Mackerel is a most popular dish for breakfast. Fresh if you can get it, if not the salted mackerel soaked over night, flesh side down, will remove most of the salt. Wipe dry, place in a baking dish with the skin side down, dot with bits of butter if it is not fat; add a very little boiling water, cook until thoroughly heated through. Ten minutes before serving add a cupful of thick sweet cream poured over the fish and simmer until the fish is loosened from the bones. Serve very hot with the cream poured round it for a sauce.

Heavy hearty foods are not appropriate for breakfast unless you are feeding hard-working outdoor workers. When an hour after breakfast you feel dull, with a headache and feel good-for-nothing, fast a little, eat less at breakfast, drink some coffee substitute, and if unhurried all those symptoms will pass away.

We have no statistics to tell us of the tragedies caused by bolted food, not well chosen or properly cooked, but the housemother must realize that in her hands lies a great responsibility.

Nellie Maxwell

KILLS TWO DEER WITH ONE SHOT

Rene Fonck Distinguishes Self in Georgia.

Savannah, Ga.—The most distinguished hunting party entertained on the coast of Georgia this season was that which included Governor Walker of Georgia and Capt. Rene Fonck, famous French flying ace. Late in December they, with others, spent several days on Ossabaw island, owned by Dr. H. N. Torrey of Detroit and Savannah. They were the guests of Howard Coffin of Detroit, and the whole hunting trip was a great success.

Besides the governor and Captain Fonck and Mr. Coffin, the party was made up of Charles Nunally of Atlanta, Governor Walker's chief of staff; Robert Woodruff of Atlanta; Peter S. Twitty, Georgia state game warden, and a few other guests.

Captain Fonck had never shot in Georgia before. He was amazed at the great quantity of game the island possessed. That the deer are plentiful is shown by the fact that Captain Fonck killed two with one shot. This is one of the remarkable stories brought back by the hunting party.

While on a stand waiting for the dogs to drive in a few bucks or to have them pass his way of their own accord, the trained eye of the man who was such a terror to German flyers during the war saw that two deer were coming toward him. They were some distance apart, but close enough for him to get a bead on one and hold it until the other came in such position that he killed both deer with one shot.

It is said this is a feat never before accomplished on Ossabaw island. It made Captain Fonck the real hero of the trip.

CHILD NOVELIST

Felicia Fisher, eleven years old, daughter of Dr. Stanley A. Fisher of New York, has been writing since she was six, but has none of the queer characteristics of the usual child prodigy. She keeps a paper and pencil under her pillow, and when her thoughts will not permit her to sleep she turns on the light and writes. Later, Felicia types her "stuff," proving she is modern. Just now she is hard at work on a short novel, and from its proceeds she "hopes to buy a house in the country and a saddle horse."

Puts Fruit to "Sleep"; May End Cold Storage

London.—John MacLean Thompson, professor of botany at Liverpool university, the Daily Mail says, has discovered a method for fruit preservation which is expected to supersede cold storage and make possible the importation to this country of fruits that never have been tasted here.

Professor MacLean describes his method as "sending fruit to sleep." It consists of a simple apparatus by which even temperature and humidity are maintained in the storeroom.

He has been experimenting for three years, and says he has been especially successful in preserving American apples.

Ford Gets Old Plows

Biddeford, Maine.—Henry Ford is soon to receive at Dearborn, Mich., as a gift from Orrin D. Edwards, livery-stable keeper here, two plows, one of which is 225 years old. The other was manufactured in Portland 160 years ago. They have been in the possession of the Edwards family for several generations at a farm on the Biddeford Pool road, known as the "Whalebone."

Coal Thief Sentenced to Church for a Year

Leavenworth, Kan. — Attend church regularly for a year. This was the sentence imposed upon Clark Gibson of this city, convicted of stealing coal.

Once a month the man must report to the police and prove that he is attending church. He must go to jail if he fails to obey the order of the court.

NEWS OF THE TOWN

Sunday was the first day of spring.

Mrs. Mayola Kinsey is numbered among the sick.

The Henley family were Auburn visitors Sunday afternoon.

MICKIE SAYS—

Mrs. Katherine Rickett is on the sick list.

Four cents worth of color subtracts ten years.

Mrs. E R. Kinsey has been on the sick list for the past week.

The W. C. T. U. will meet with Mrs. F. M. Thornton Friday afternoon.

For Sale: 8 loads good Clover Hay at the Yeiser farm. Inquire of Geo. Keller.

Don't put off filing that exemption any longer, it means money to you. The News can handle it for you.

Ralph Sechler is in a Fort Wayne hospital taking treatments for his stomach and will probably be there a couple of weeks.

When the Eighteenth Amendment is repealed, modified or amended we will be too old to reap any of the benefits.

Mrs. Pluma Hamilton and son, James, were at Defiance from Friday until Monday, the guests of Lee Tustison and family.

No bids were received on the Fillmore Shull drainage bonds, in north part of township so it will be necessary to re-advertise

Mrs Dewey Smith of Hammond, Indiana, is here the guest of her parents, Wid William and wife, and is laid up with rheumatism.

Advance your timer, put your foot on the gas and let's go some. What's the good in poking when added momentum makes the goin' easier?

Donald Ramsey and family are again residents of St. Joe for the summer, occupying their home on Spencerville street. He still continues his work in Fort Wayne.

It is a little bit cool now, bnt it will not be long until a popular verdict will be rendered in favor of the shady side of the street. Our bench is ready for the first loafer.

A freak pig, with three eyes, two noses and two mouths is on exhibit in a store at Hartford City, Ind. The pig is the property of Oscar Cole, a farmer living near that city.

Mrs. Jennie Sechler and granddaughter, Betty Jane Mavis and Mrs Martha Quance and two children of Auburn, spent Tuesday here in the Frank Curie and J. C. Hull homes.

For Sale: Seven foot, square top Pedestal Dining Table and Buffett. Mrs C R. Price. 12t1p

While enforcing the ordinance applying to cut outs on automobile exhausts, we are moving to amend by requiring every old grouch in this town to put a muffler on his or her rusty old hammer.

Examinations for all the eighth grade classes in DeKalb county were held Saturday under the supervision of the township trustees This did not apply to St. Joe and Auburn scholars, due to the commissioned Junior High.

Not only the ungraveled roads but the county highways as well are in a very bad way for traffic, in fact there are places where help has been needed for the traffic to get through Byron Platt, highway commissioner, has been busy trying to keep the heavy trucks off the roads.

The state conservation department this week concluded negotiations by which eighty acres of land were purchased from Latta F. Hershey, in Jamestown township, for $3,200, and 28 acres from John W Orndorf, in Pleasant township, for $5,000, which will be added to the Lake James State park, making the park acreage over 650 acres.

When the six cylinder's only hittin' on four we're good an' sore. Up goes the hood and the old wrench and pliers are dragged out. Soon she's bussing again an' we settle back happy. If the old wagon happens to be an eight or a twin six, we'd throw a fit if every cylinder didn't fire. How many of our own cylinders are missing every day? Even the slowest of us, the low-geared boys, have quite a few not firing and they're trying to get the old boat up the hill under all sorts of handicaps when a little examination an' overhauling' would shoot us up on high.

Telephone us your news items.

For a real Sheriff, vote for Stodghill. 10t5p.

Frank Terman has been ailing for the past week.

210 scholars took the eighth grade examination at Auburn last Saturday.

For Sale:—Fresh cow and calf. Phone Byron Welch, Spencerville No. 34-3. 12t1.

Mrs. Lazerne Kellar and son of Woodburn, were guests over Sunday of her parents, C. H. Sailer and wife.

Editor Yeiser and family of South Whitley, were Saturday and Sunday guests of Wilbur Yeiser and family.

Mrs Samuel Gee fell while up town last week and hurt her right shoulder. Mr. Gee is home taking care of her.

For Rent:—6 room house, garden lot, fruit, pasture lot, 2 miles from St. Joe. Inquire at Drug Store.

Fort Wayne is to have a new million dollar theatre to be erected by James Keenan and has already been leased for fifteen years.

The hot lunch at school has been discontinued and the kiddies are missing their splendid dinners and the teachers are missing the work also.

All Alumni members are urged to attend meeting called for Tuesday evening, March 30, at School House Order of Donald Kinsey, President.

J. R. Shilling, who is in the Garrett Hospital is reported very low, Tuesday being unconscious all day. Wednesday we have not heard as to his condition

For your Easter bonnet, see F. D. Tope & Co.

A judgment was rendered Monday in the McClintock court, Auburn, for $36 and costs, against Joe Arnold, a former St. Joe resident, in favor of Hoodelmier Coal Co

Earl Pepple and family of Auburn, were Saturday and Sunday guests in the Wm Pepple home. Mr Pepple is improving fine, is able to stand and walk some by assistance.

The C. E. young folks had a party and feed at the Lutheran church, Tuesday evening. About 25 were present. Games were played and a good social time was enjoyed.

Public Auction of household goods next Saturday at the Harry Randall home, St Joe. Mrs Randall will go to Lima, where her mother lives. Mr Randall is away from home most of the time.

Come on—Let's go! To the Methodist church, Mar. 26 A miscellaneous program consisting of musical numbers and readings, given by four Garrett girls. They have given an entertainment here before and were immensely enjoyed. Admission 25 and 10 cents. Sponsored by the Senior Christian Endeavor.

Richmond, Ind., police officers protested so vigorously against the order of a justice of the peace to put Curley Harris of that city, the father of six children, in jail for failure to pay a fine of $14 because he did not meet his dog tax, that he was given until the latter part of the month to meet the demand. A further sentence should have been given Curley in that he shall not be allowed to own a dog hereafter.

People are never too poor or severely stressed but that they can show appreciation of kind acts even if it is in giving currants in return at Christmas, through the Junior Red Cross, a number of cartons were made up in the county schools and sent to headquarters to be sent to the children in Greece They in return sent 5,000 boxes of Dainties and DeKalb county was given thirty boxes. Miss Bessie Wilson, county chairman, made a distribution to the schools that sent gifts, three schools in Jackson township participating. The Newville and Spencerville schools filled stockings for government hospital at Chillicothe, Ohio.

Home-Grown
NURSERY STOCK

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912.

Of St. Joe News, published weekly at St. Joe, Indiana, for April 1, 1926.

State of Indiana, County of DeKalb, ss: and for the state and county aforesaid,

Before me, S. S. Widney, a Notary Public in personally appeared Fred B. Leighty, who, having been duly sworn according to law, deposes and says that he is the Editor and Publisher of the St. Joe News, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management, etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business manager are:

Publisher, Fred B. Leighty, St. Joe, Ind.

Editor, Fred B. Leighty, St. Joe, Ind.

Managing Editor, Fred B. Leighty, St. Joe, Ind.

Business Manager, Fred B. Leighty, St. Joe, Ind.

2. That the owners are:
Fred B. Leighty, St. Joe, Ind.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are:
None.

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

FRED B. LEIGHTY.

Sworn to and subscribed before me this 25th. day of March 1926

S. S. WIDNEY, N. P.

Commission expires Jan 7, 1927.

Obituary

Pollyanna Curie, daughter of Grover and Lodeama Ridgway-Curie, was born September 28, 1925 and died March 16, 1926, aged 5 months, and 19 days.

She leaves her father and mother, four sisters, two brothers and grandmother, Belle Ridgway, besides many other relatives and kind friends to mourn their loss.

The funeral was conducted from the home Thursday afternoon by Rev. J N Scholes. Burial was made in Riverside cemetery.

Card Of Thanks

Our thanks is expressed in this manner to our neighbors and friends for their kindness during the sickness and death of our infant daughter, also the minister for his consoling words.

Grover Curie and Family.

Keep Your Dogs at Home.

People who have dogs in St Joe are hereby given notice to keep same off the streets or same will be killed. This is made in response to demands of Prosecuting Attorney and also because of Rabies in this county.

"WHITE METAL" HOAX IS UPSET BY TESTS

Bureau of Mines Finds Claims Unsubstantiated.

Washington. — The mysterious "white metal" which many mineral prospectors in the West consider to have strange properties of hardening iron and steel when heated in contact with those materials, has no existence in fact, states the bureau of mines, Department of Commerce, following repeated experiments with purported specimens of metal submitted for examination.

There is a legend that Mexicans and other old settlers in the southwest knew of an "ore" which was packed around pieces of iron and steel that they wished to harden. The metal was heated in a wood fire in contact with the "ore" and then quenched in water. Axles of springless wagons so treated were said to have been made "glass hard" and to wear two or three times as long as ordinary axles, and tires so treated were described as "ringing like a bell" when suspended and struck with a hammer. This action was said to be due to a "white metal" that was extracted from the "ore" and alloyed with the iron by the treatment.

The tests by the bureau and other laboratories, following the claimants' procedures, usually have shown no hardening effect, although in a few tests some hardening of iron or steel was produced due either to case hardening from heating the metal in contact with carbon, protected from oxidation by a coating of flux, or in some instances to the formation of a crude silicon alloy. Many ordinary fusible rocks, and even fluxes without rock, will give these same results.

The bureau of mines is forced to conclude, therefore, that the various unsubstantiated claims that have been made were due to careless tests, to erroneous conclusions from these tests, or to an attempt to defraud.

TO STUDY GORILLA

Harry Rimmier, evangelist, author and lecturer, has announced his intention to head an expedition into the heart of Africa, where he will study the life and habits of the gorilla. This is the first practical demonstration of a fundamentalist minister seeking direct information on the absorbing question first propounded by Darwin in "The Descent of Man." The expedition will leave New York in June if present plans are not changed.

Ban Stag Line

Dallas, Texas.—The stag line is to be abolished at sorority dances. The pan-Hellenic congress has decided to curtail the number of unpartnered males at such affairs.

Weds Pupil

Paterson, N. J.—Another typewriter romance: Albert Tangora, world's champion typist, has married Miss Dorothy Lane, one of his pupils.

Bad Handshaking

Mantua, Italy.—Handshaking is now forbidden city employees by the fascisti. They must give the Roman salute.

Woman, 70, Finishes Walk of 1,644 Miles

London.—Miss G. Rickards, a member of a Surrey family of Cornish descent, recently concluded a walk of 1,644 miles through England and Scotland, at seventy years of age.

"I began to walk to amuse myself, after giving up my country home at the beginning of 1923," she said. "In the wild parts of Scotland I met only roadmenders, crofters, shepherds and traveling tinkers. I walked in all weathers by day, carrying a light knapsack and a haversack. I sent a suitcase with clean clothes ahead weekly.

"I lunched on biscuits and cheese, taking my other meals in hotels. I never felt lonely and I knitted and embroidered during my roadside meals." Miss Richards proposes to set out on another walking tour in the spring.

He Saved, Why Shouldn't You?

In the days of Washington, saving money was more difficult than in the present. Yet he did save under conditions impossible nowadays. He saved because he believed it to be a good thing to do. Why shouldn't you.

If you are not taking advantage of our service, you're missing something.

The KITCHEN CABINET

(©, 1925, Western Newspaper Union.)

Why is it that we so seldom think of house management as a business? Until we do so, and judge ourselves and it according to ordinary business standards, it is doubtful if we attain a great degree of efficiency.—Hazel Kewley

SEASONABLE DISHES

Ice cream is so much enjoyed that it is a satisfaction to know it is good for us. When made at home and eaten at mealtime it is the best of desserts.

Maple Parfait.—Heat one cupful of maple sirup to just below the boiling point. Beat four egg yolks slightly, continue beating and add the hot sirup slowly. Cook over hot water until the mixture thickens. Strain and cool, add one pint of heavy cream whipped with one-eighth of a teaspoonful of salt. Place in a chilled mold, cover with waxed paper and pack in ice and salt, two parts of ice to one of salt. Allow to stand three to four hours.

Coffee Mousse.—Soften a teaspoonful of gelatin in two tablespoonfuls of water and dissolve in one-half cupful of clear, black coffee. Allow it to cool and, when beginning to thicken, fold in two cupfuls of whipped cream which has been sweetened with three-fourths of a cupful of sugar; add one-fourth teaspoonful of salt and mold and pack as for the parfait.

French Pecan Ice Cream.—Put one-third of a cupful of sugar in a saucepan to caramelize; when amber-colored add three-fourths of a cupful of hot water and allow to stand until dissolved. Scald two cupfuls of milk, add slowly to the yolks of eight eggs, cook slowly until thick, adding the caramel sirup, one cupful of sugar and one-fourth teaspoonful of salt. Cool and add two and two-thirds cupfuls of thin cream and one cupful of crisped pecans. Put the nuts into the oven until crisp, break into small pieces and freeze the whole mixture as usual.

Casserole of Oxtails.—Brown two oxtails cut into two-inch pieces in three tablespoonfuls of fat. Sprinkle with flour, salt and pepper; add one small onion chopped, one stalk of celery, one carrot chopped, three cloves, a tiny bit of bayleaf, one cupful of tomato and one cupful of hot water, salt and pepper to season. Cook covered very slowly for about three and one-half hours

Costume Problem Solved by Paris

Use Ensemble and Two-Piece Jumper for All-Around Wear.

In pre-war days the number of different frocks necessary to give the smart woman a well-dressed feeling for only one day in Paris was quite formidable. Elegantes vied with one another to see which could display the most numerous and exquisitely individual gowns in the short space of 24 hours. Those were the leisurely days of luxury—but since the war all this has changed. Not only do Parisiennes lead such active and busy lives that they have not the time to change their dress half a dozen times a day, but prices have risen to such an extent that in an impoverished Europe, where the shoe pinches very tightly indeed, upon occasion, women hail with delight any fashion that is likely to prove suitable for all occasions from the morning walk in the Bois de Boulogne to the dansant in the afternoon, or even the quiet dinner in a select restaurant.

Of course, writes a fashion correspondent in the New York Herald-Tribune, there are many French women who still make dress the main occupation of life and who continue to dazzle their friends with any number of lovely gowns, but others no longer envy them. For if you have time to change your gown more than once or twice a day in 1926 it is obvious that other and more varied occupations are not filling your book of engagements.

The two great factors in keeping down the number of items necessary to a well-dressed day's wardrobe are the three-piece ensemble and the two-piece jumper dress, both of which have come to stay for a long, long time in the Parisienne's list of necessities.

Ensemble Does Good Service.

The ensemble is the salvation of the busy French woman. With two or more, according to the elasticity of her pursestrings, she feels herself equipped for any daytime occasion that is likely to arise. For Paris one of these is likely to be black, or at least black with touches of white or beige about the dress and coat trimmings. True, we have come into color as never since the war, but convention insists that for many occasions black is the most correct wear, and it also suits best certain moods, so the Parisienne is never without a black ensemble, and very smart it is, especially when the coat is trimmed with light sand-colored fur—fox or bunny—according to the state of her budget, with a lining to match the fur. With such an outfit she may vary her wardrobe by having three dresses to go with this particular coat—one all black, one black and beige and another all beige. So with one coat she has really three ensembles. Only two hats are necessary, one black and the other beige, and they will be suitable for all kinds of colored dresses.

The second ensemble must be in some light, delicate pastel tint for the spring and summer months. There is a delightful red called "Abd El Krim" that will be extremely popular for spring. As before, the coat can be

Patou Ensemble, a Beige Kasha Coat Trimmed With Lynx.

worn with two or three printed frocks that introduce the same tint into their design, provided the lining of the coat is plain. If you have a plain coat lined with a patterned material you can obviously wear only two dresses with it, one in the same pattern as the lining and the other plain, the same shade as the coat.

The Sparsely Trimmed Coat.

Add a plain ensemble with a long coat not very much trimmed—and no smart coat is heavily trimmed nowadays—and every possible contingency is provided for, from the morning's shopping and luncheon at a smart restaurant, to an afternoon call, dance, tea and even dinner at one of those open-air restaurants that make the environs of Paris so delightful in the summer months.

The two-piece jumper dress has revolutionized fashion. It suits so well the slender, active modern maid that it has the knack of making the woman in what is known as a "dressy" gown look overdressed, than which no more lamentable fate could be imagined in these days of informality. The jumper has become so popular that even evening gowns are being made on two-piece lines by such famous houses as Jenny, Lanvin, Molyneux and Patou.

Now, having seen that one can get through the day on an ensemble, or on special occasions with an ensemble and an evening gown, let us consider the possible additions to this wardrobe of elimination. A smart tailor-made suit is ultra chic for the morning, especially when cut on the new, very simple lines favored in the spring O'Rossen collection. A leather, tweed or kasha overcoat for rainy

Cape Developed in Tea-Green Ratine, Collared With Beaver.

weather or odd occasions is a wee come extra that never comes amiss. A smart and pretty afternoon gown on fluffy lines is useful for garden parties and summer weddings, and a dressy coat can also be utilized for the evening.

The clever Parisienne always keeps her quantity of gowns at a minimum so that she may follow the latest whimsicalities of fashion, and always has in readiness a good stock of smart shoes, stockings and hats in suitable fundamental colors, such as beige and black, one of which will complement the rest of her costume.

Tailored Suit for Spring.

The early spring openings of the Grande Couture in Paris present some interesting conflicts. Ever since the French couturiers abandoned the role of dictator which had been theirs in pre-war days they have offered a tremendous divertisement of styles at each new opening, and as a consequence they have shifted the burden of actually making the mode to the creative wearers—women prominent in society and the arts, who are notable for their chic and whose sartorial lead is authoritative and commands a sure following.

This season these leaders of the mode will have some knotty questions to determine. Outstanding is the problem of the spring hat—shall it be broad-brimmed and picturesque, or shall it continue narrow-brimmed and clochelike. Both types have been offered; in this country the modistes have inaugurated a tremendous and concerted propaganda to bring the large hat back into favor, and, while Paris has not joined the move, the French milliners are at least offering more sweeping brimmed chapeaux than they have in recent seasons. The solution rests entirely in the heads of the hautes mondes, both here and abroad. In Palm Beach and along the Riviera the tendency toward larger brims has found influential sponsors; in Paris the turban, beret and gigolo still prevail to almost the entire eclipse of any picture chapeaux. Our analysis of the situation is this—the vogue of the small hat is too rooted for its displacement this spring.

The Waistline Rises.

The waistline looms as another significant theme of the spring openings and one which has been subjected to the usual diversity of treatment. It is low, and high, marked or merely suggested. Smart Paris, however, has already shown a distinct preference—it favors a clearly defined line, raised to the top of the hips, and defined nearly always by a belt, usually narrow and of the same material as the costume. These, of course, are only the early indications of the haute monde verdict, but they are certain to be a definite part of the spring mode.

What of skirts—so many versions of which were seen at the Paris openings? Here again the chic Parisienne fairly decided. The godet has been dispensed with, but the full, gradually flared skirt remains, achieving its width by means of plaits, gathers or the circular cut. It flares—perhaps ripples would better describe the effect—when the wearer is in motion. And it is short—quite as short as last season.

THE KITCHEN CABINET

(©, 1926, Western Newspaper Union.)

An inspiration is a joy forever; to have many of these is to be spiritually rich.—Stevenson.

If you expect any miracles in 1926 you have got to perform them.—Sid Says.

EVERYDAY HELPS

Honey is one of our most wholesome sweets. It may be given the children instead of candy. Honey may be used in many dishes in place of sugar. Cakes, cookies and pudding prepared with it keep moist longer and are of better flavor.

When picking the feathers from game, like wild ducks, remove the heavier feathers and as much of the down as one wishes to save, then dip the birds into a deep dish of melted paraffin, letting them hang in a cool place to harden. When cold, peel off and free from pin feathers. Reheat the paraffin and use it again, using care that it is not too hot so that it cooks the flesh.

In steaming pudding like suet or plum puddings, which keep for some time, use the pound baking powder cans to steam the puddings. The slices are uniform and much more attractive and there are no broken bits to be wasted. Boston brown bread steamed in these cans is more attractive in appearance when cut.

Keep a small bottle of caramelized sugar for coloring gravies. Melt and brown the sugar in a smooth dry pan; when it is of the right color add boiling water to dilute, cool and bottle. A few drops will add much to any meat sauce.

A pinch of cream of tartar to boiled frosting or fudge will prevent sugaring and will make a nice and creamy mixture.

Cover poached eggs a moment while cooking to give them the pink glazed appearance which is so attractive.

Add a little chopped cabbage and apple to ordinary potato salad to give it a flavor that is different.

Canned pineapple juice cooked with sago or tapioca and served with cream, using a garnish of chopped pineapple, makes a most appetizing dessert.

When bits of yolk get into the whites that are to be used for frosting, remove them by using the egg shell to dip them out of the white.

If a veal or any meat loaf is wrapped in oiled paper before baking it will save loss of flavor and juices, with no hard crust.

Hashed Potatoes.—Chop cold boiled or baked potatoes into small bits. Season with salt and pepper and chopped parsley. To each quart of potatoes add three tablespoonfuls of butter, melt and add to the potatoes; stir until they begin to brown, then add one-fourth cupful of thin cream and set back on the stove to brown. Fold like an omelet and serve with the brown crust on top. Garnish with parsley. Do not use a meat chopper as it will make the potato mushy. A good hash is always chopped in the chopping bowl. Meat loaf is also much better so prepared.

Household Hints.

When hot applications are needed for earache or other troubles, use a lighted electric light bulb against the ear, being careful not to leave it there too long. If wrapped it is liable to cause a fire.

If no electricity is at hand lay a thin layer of papers on a hot cook stove or in the oven where the paper will not burn, lay the cloths wrung from hot water between the folds of paper and keep them hot while going to the patient.

Goose fat is good for shortening for cakes and cookies, biscuit or pastry.

The large cartons that may be obtained from your grocer are fine for packing away clothing. A strip of gummed paper may be placed over the openings and they will be moth proof. When labeled with the contents one may be sure to find what is wanted.

To prevent the cream pitcher from dripping cream on the linen tablecloths rub a little butter under the edge of the spout.

Save the old organ or piano stools for kitchen stools; they are easily put out of the way under table or sink—thus save kitchen floor space.

Make soap from discarded fats. Take five and one-half pounds of fat and one pound of lye. Dissolve the lye in a stone jar in cold water. Melt the fat and when the lye is cold add the fat to it. Stir constantly, adding ammonia and borax to the lye water. Use six and one-half cupfuls of water, two tablespoonfuls of borax dissolved in one-half cupful of hot water and one-half cupful of ammonia. Pour out into a mold or let stand until firm before cutting in cakes.

Water ferns with cold tea or coffee once in two weeks; it makes them grow more luxuriantly.

Patch lace curtains with pieces of net or material like the curtain by wetting the patch in cold starch and ironing it on. The edges if carefully trimmed will not show. When ironing the patch cover it with a dry cloth.

Any dish or receptacle may be sweetened if odorous by turning it upside down on the earth or sod and leaving it for a day or two.

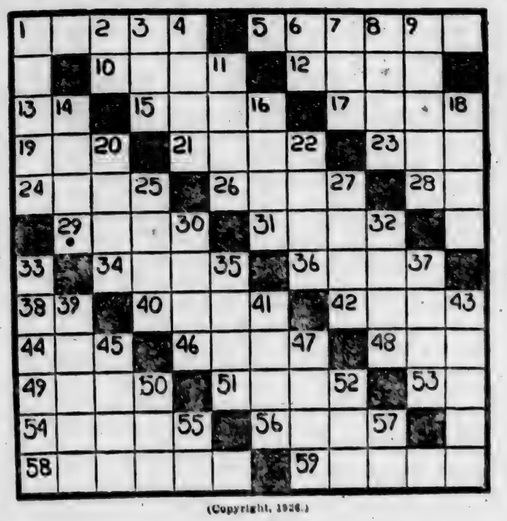
CROSS-WORD PUZZLE



(Copyright, 1926.)

Horizontal.

1—To brag
5—A general fight
10—Still open to discussion
12—Several
13—Either
15—The forehead
17—To mark the time of writing
18—Not in
21—Authoritative standard
23—A doctor's degree
24—Expensive
26—A kind of vegetable
28—Electrical engineer (abbr.)
29—Of an insignificant color
31—Necessity
34—To cease
36—A group of horses working together
38—Teddy Roosevelt (abbr.)
40—Declared
42—One who tells falsehoods
44—An old Dutch and German liquid measure
46—To study with the eyes
48—To go to court to gain legal redress
49—A child (slang)
51—Conceited
53—A southern state in the U. S. (abbr.)
54—A former Russian leader
56—Part of a plant
58—Builds
59—Periods of time

Vertical.

1—A family, as of chickens
2—Part of the verb "to be"
3—To weep convulsively
4—Ripped
6—While
7—A man's nickname
8—To ensnare
9—A river in the land of the dead
11—An implement
14—Regretted
16—A small bird
18—Paradise
20—Sailors (slang)
22—Come together
25—Students
27—Part of a boat
30—A wild animal
32—A platform
33—A piece for keeping horses
35—Kind of dessert (pl.)
37—To handle roughly
39—More unusual
41—Obstructs as a waterway
43—Quantities, as of paper
45—The long hair growing on the neck of certain animals
47—That which one should do
50—Twitching
52—A word of command used in driving animals
55—New Testament (abbr.)
57—A parent

HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this puzzle will spell words both vertically and horizontally. The first letter in each word is indicated by a number, which refers to the definition listed below the puzzle. Thus No. 1 under the column headed "horizontal" defines a word which will fill the white spaces up to the first black square to the right, and a number under "vertical" defines a word which will fill the white squares to the next black one below. No letters go in the black spaces. All words used are dictionary words, except proper names. Abbreviations, slang, initials, technical terms and obsolete forms are indicated in the definitions.

WANTS MODELS OF DECORATIVE LIMBS

According to a news item, Patrick Kerns of Philadelphia is reported as having advertised for the 20 loveliest pairs of ankles in the Quaker city, each model chosen to sit for a portrait or statue of her shapely limbs, for his private salon.

Mr. Kerns, interviewed by reporters, who wished to ascertain whether he was going to start a "Follies" of his own, admitted that he was collecting evidence of beautiful ankle specimens for his own pleasure and for the sake of posterity; that for years he had believed them extinct in his city.

First, he said sadly, the flapper streak hit the girls, and they wore flapping galoshes which completely ruined his artistic contemplation of limbs, and then, when fashion brought ankles in sight again, there seemed to be no shapely ones. Athletics, the wide use of sandals, and the "boyish ideals" of girls, according to the wealthy Philadelphian, have been the various causes of the scarcity of decorative limbs, and despairing of seeing them in motor busses or parks any more, it appears, he decided to collect models of his own and immortalize them for his private salon satisfaction.

Bay of Little Value

The Hudson bay is not an important waterway because of the proximity of its entrance to the Arctic regions. Past the mouth of the strait flows a stream often over 100 miles wide of berg and floe ice caused by the Arctic current. This makes navigation difficult and almost impossible in the winter season. The proximity of the entrance to the magnetic pole also causes the compass needle to become unreliable. The only good harbor is at Fort Churchill.

SPINSTERS DEMAND "LEAP YEAR WEEK"

German spinsters, weary of indirect methods of snaring the elusive mate, are agitating for a recognized "leap year" week in each year during which it shall be their privilege to propose. The idea has been presented to the government marriage bureau, and proposes that there shall be each year not one but seven days dedicated to St. Catharine, the patroness of unmarried women. Several spinsters' organizations are backing the proposal.

Officials of the marriage bureau say that when a girl in Germany is twenty-seven years old and unmarried her chances of getting a husband are about one in five.

There is a large surplus of women between the ages of eighteen and forty-five, the war having caused a deficiency of men in the twenties and thirties. Men too young to have served in the war are marrying girls of their own ages. Older men take their time about marrying because they have no trouble in getting brides of less than twenty-seven. A German fraulein, however, usually celebrates her "black birthday" at twenty-five, as in many other countries. After that age she is eligible to "old maid clubs."

Presidential Yacht

President Roosevelt was the first President to use the Mayflower. The yacht was built in 1896. It was bought and delivered to the navy in March, 1898. The price paid was $430,000. The yacht was built by J. G. Thompson, Clydebank, Scotland. It was used as a dispatch boat during the Spanish-American war and was out of commission in 1901; repaired and put in commission in 1902. The first trip of President Roosevelt's was made June 28, 1902.

PE-RU-NA FOR STOMACH CATARRH

Few, if any, remedies can equal the value of Pe-ru-na for catarrh of the stomach.

At this season it is estimated that every third person is more or less troubled with this form of catarrh.

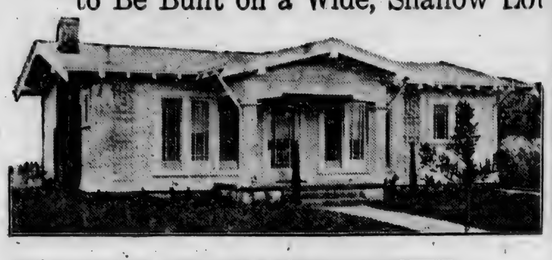
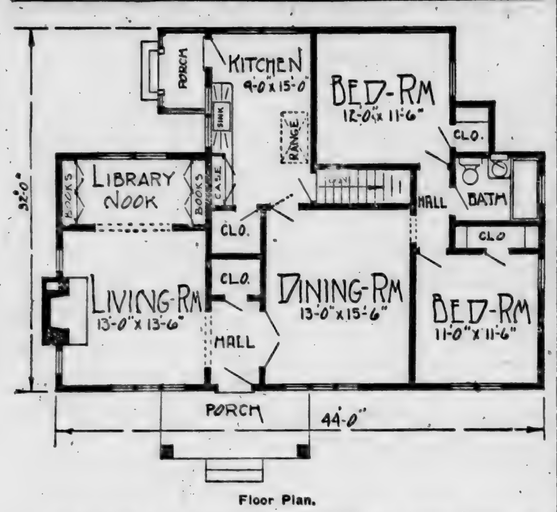
Pretty Bungalow Specially Designed to Be Built on a Wide, Shallow Lot





Floor Plan.

By WILLIAM A. RADFORD

Mr. William A. Radford will answer questions and give ADVICE FREE OF COST on all problems pertaining to the subject of building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

The wide, shallow lot presents a problem in house design which is peculiarly its own. In any home design the front of the house is of the utmost importance, but here the front is of proportionately greater consequence because of its greater expanse and the relatively small side expanse. The eye of the observer is focused almost exclusively on the front of the house.

Because of this fact the front should be especially attractive and well balanced, a failure to maintain balance will spoil the entire effect. This does not mean, however, that the entrance must be placed exactly in the center and that both sides of the center must be identical. Balance has been obtained in the house illustrated here without doing either of these things, and thereby it has avoided any effect of stiffness or formality.

The entrance, with its porch, has been placed somewhat to the left of center. It is flanked on either side by a group of three French windows which, in turn, are flanked by ornamental trellises. At the right there are, beyond the trellis, two small windows. At the left there is no room for these but the chimney, projecting from this end of the house, maintains the balance.

This house is low in effect, the roof having little pitch and the side walls being carried down almost to the grade line. It is finished in clapboard, and the ornamentation is simple, being limited to the trellises already mentioned, the exposed rafter ends, French windows and a simple well-designed entrance. The porch is of the low open style, approached by three steps, and from it one enters into a small reception hall, at the end of which, facing the entrance, is a coat closet.

To the left, the entire space is occupied by the living room with its library nook. This is in reality one large room with one end partially partitioned, but with a great arched doorway almost its entire width. At each end of this nook there are built-in bookcases and it forms a retreat where one may partially withdraw from whatever may be going on in the living room, to read or work, undisturbed. The remainder of the living room is nearly square and has a large fireplace at one side.

To the right of the reception hall is the dining room. This is somewhat smaller than the living room, but sufficiently large for any demand which may be placed upon it. From it there are two other doors, one opening into the kitchen, at the rear, the other into a small hallway still farther to the right.

The kitchen is small, compact and carefully arranged to lighten the necessary housework. It has a large closet which may be used as a pantry, is equipped with built-in cupboards and accessories and opens onto a service porch at the rear. From it there is a stairway leading to the basement.

Off of the interior hall there are two bedrooms and the bathroom. These two bedrooms, placed in the corners of the house, are of about equal size and are well lighted and ventilated by windows on two sides. Each has a large closet and each is convenient to the bathroom which is placed between them.

An Artistic Feature That Is Easily Added

There is little that makes a house more pretentious or increases its size in appearance than connecting pergolas and lattice work.

Since old-fashioned porches have been tabooed the present buildings have the inclination to appear cramped and lacking in freedom which the old rambling porches created. The old effect can be restored and enhanced by a pergola. This may be taken care of in the original plan, but always is easily added to any home without the least disturbance to the building.

The one principle to be acknowledged is its connection with the house, to it should harmonize both in structure and color of the house in most instances.

Here, too, the suggestion for single pergolas cannot be too strongly emphasized.

Far too many years have gone by in which home owners have not realized that it was possible to build a single post pergola and have it as striking and effective as any double pergola, and the cost is little more than half.

The top work of the single pergola can be made as wide as six or seven feet, with benches between the posts, which give the same seating possibilities as the double pergolas. Also little garden entrances are generally considered as being necessarily double, but instead these can be a very small, artistic arrangement of two posts with a light top over them.

Paint Masonry

A masonry house with a stone or brick exterior needs no painting on its wall surfaces and the painting, which is one of the heaviest items in a homekeeper's upkeep expense, is greatly reduced because only the wood trim on the exterior has to be painted, and [illegible] frequently.

Cheerfulness and Good Lighting Go Together

Lighting fixtures of good character and design are as important to the home apartment as fine furniture or draperies.

Beautifully decorated walls, furniture or furnishings cannot show up to their proper advantage with poor illumination. Poor illumination means nothing else but lighting fixtures totally inadequate to the needs of the room.

Modern, artistic, efficient, lighting fixtures improve the appearance of the living room and dining room and add to the joys of the home, as well as providing comfort for the eyes.

The architect and builder will find the proper atmosphere in his rooms when the correct lighting fixtures are installed. In order to obtain this result, the lighting fixtures must harmonize with the general appearance of the respective rooms, and be finished accordingly.

The selection of lighting fixtures must be planned well in advance, so as to give the manufacturer sufficient time in which to obtain the proper materials which are co-ordinated with fine taste, careful work and attention to the smallest detail.

Box Gutter on Cornice Apt to Leak at Nails

Leakage from nail holes is almost invariably encountered when a box gutter is built over the cornice. The width of the gutter lining may be ample to extend up the roof a distance that will force the water over the cornice cap before it can enter the building. However, there is no fascia board there to start the shingles with a front elevation, hence the use of plastering lath, which are generally secured in a lineup, by a nail at each end and one in the center driven through the lath on down through the metal into the sheeting.

INDIANA STATE NEWS

Frank Phillips has donated $40,000 to St. Joseph's hospital at Fort Wayne, to establish a nursery.

Mrs. Emma B. Stewart, age ninety-one, for 25 years an evangelist in the Methodist Episcopal church, is dead at her home in Princeton.

Elsie McArthur has filed suit at Huntington against the Erie Railroad company demanding $2,500 for a race-horse killed when it was hit by a locomotive.

Indiana closed its Western Conference basket ball season by winning from Wisconsin, 35 to 20, and went into a three-way tie for the Big Ten title.

Howard (Red) Wright, star back guard of Purdue's basket ball team, has been chosen captain of the 1926 quintet. Wright, whose home is at Greencastle, Ind., is a junior.

The Inland ice cream and soft drink place near the gates of the Inland Steel plant at Indiana Harbor was robbed of $4,000. The money had been drawn from a bank to cash checks for Inland employees.

Alimony in the amount of $30,000 is asked in a divorce complaint filed against Dr. George L. McNeal by Mrs. Martha McNeal. Cruelty is charged. The couple was married last June at Huntington.

Disappointment over the fact he could not witness the final game in the Laporte basket ball sectional is advanced as the reason for the suicide of William B. Baxter, age seventeen, an orphan boy at Laporte.

Paving of state road No. 1 from Edinburg through Columbus this year was assured when the Bartholomew county commissioners and the city council subscribed to requirements by the state highway commission.

State road 22, between Bloomington and Martinsville, which has been closed more than a year pending paving, will not be opened for traffic until about July 15, it was announced by W. E. Sayre, road commissioner.

H. O. ("Pat") Page, former University of Chicago star and until recently director of athletics at Butler university, will succeed "Navy Bill" Ingram as head coach at the University of Indiana.

Authority to issue $2,000,000 of capital stock to be sold to stockholders at par to pay off $2,595,413 of 5 per cent notes was asked of the Interstate Commerce commission by the Indiana Harbor Belt railroad.

Not that it settles anything, but fifty-five out of seventy-five students passing a certain place at Indiana university carried their books under their left arm. Asked why, most of them said: "So I can do things with my right hand."

Clifford Mohler, twenty-one, is under arrest for the slaying of Matthew Gephart, a policeman, and his own brother, Albert Mohler. Young Mohler admitted he had killed the policeman. Authorities believe that a stray shot fired at Gephart hit his brother.

George Alexander of Kosciusko county has filed suit at Anderson asking $10,000 damages from A. W. Brady, receiver of the Union Traction company, for injuries in a traction car wreck between Peru and Kokomo on June 5, 1925.

Mrs. Anna Jacks, eighty-six, who lived the life of a recluse at Logansport since the death of her husband twelve years ago, and to whom charitable persons often gave alms, left an estate of $30,000 in bonds and cash, it was revealed when authorities opened her lock box. She has no relatives.

Charges of first and second degree murder are contained in two indictments returned at Portland by the special grand jury, which has just completed investigation covering two days, during which the murder charge against Miss Thelma Wolfe, age twenty, daughter of Mr. and Mrs. Charles Wolfe, of Dunkirk, alleged to have caused the death of her infant daughter February 28, was investigated.

Asserting that the road is used almost exclusively as a "lover's lane," persons owning property along a road in Addison township, a short distance west of Shelbyville, have filed a petition with the board of commissioners of Shelby county, asking that the highway be vacated. The petitioners say there is only one house on the road and that at the south end. There is no traffic on the road, according to the petitioners with the exception of those bent on "petting."

Eugene Troendle, fifty-three, a chemist, musician, swordsman and editor, died at Ft. Wayne of apoplexy. Troendle, a native of Germany, came to the United States in 1898 after a colorful career at Heidelberg, where he became famous as a duelist. He was chif chemist for a Fort Wayne corporation at time of his death. His newspaper, the Fort Wayne Freie Presse, was the only German newspaper to continue publication in Indiana during the World war.

Indiana university's baseball team, champions of the Big Ten conference, will bake out sore joints in the sunny South. Twenty games are carded for the champions, six of which will be played below the Mason-Dixon line.

A warning against the spread of rabies, prevalent in Indiana to a serious extent, has been issued by Dr. William F. King, secretary of the state board of health, and Dr. R. C. Julian, state veterinarian. Since October 1, 1925, 70 persons bitten by mad dogs infected with hydrophobia have been treated by the state laboratory.

Lesson for March 28

REVIEW—THE GOSPEL OF JOHN

REVIEW—The Gospel of John.

GOLDEN TEXT—These are written, that ye may believe that Jesus is the Christ, the Son of God; and that believing ye may have life in His name. —John 20:31.

PRIMARY TOPIC—Beautiful Stories Told by John.

JUNIOR TOPIC—The Greatest Things in John's Gospel.

INTERMEDIATE AND SENIOR TOPIC—Great Scenes in John's Gospel.

YOUNG PEOPLE AND ADULT TOPIC — The Great Teachings of John's Gospel.

Happily we have come to one time at least when the quarterly review is easy and a pleasure. The teacher's supreme aim should be to make Jesus as real to his pupils as He was to the disciples when here upon earth, for the "Word made flesh" is now dwelling among us "full of grace and truth" revealing God (John 1:14, 18). The best way to reveal the quarter's lessons will be to grasp the central purpose of John in writing his book, gather the central teaching of each separate lesson and use it in proving the central proposition. John clearly states his purpose in 20:31. Two things are set forth in this verse.

1. That Jesus is the Christ, the Son of God.

2. That through believing in Him, eternal life is received.

It should be the teacher's aim to establish this truth and to accomplish this glorious purpose in the lives of all his pupils.

January 3.—In this lesson Jesus is presented as the eternal Word existing with God before all worlds, the almighty Creator, the source of light and life, made flesh in order to reveal God to man.

January 10.—John the Baptist testifies that Jesus is the Lamb of God. This truth was certified unto him by a voice from heaven and the descent of the Holy Spirit upon Him (Matt. 3:16, 17). Andrew, Philip and Nathanael corroborate John's testimony by declaring that Jesus is the Messiah of whom Moses and the prophets did write—the very Son of God.

January 17.—Jesus is the bestower of eternal life. He is the only begotten Son of the Father, who gives eternal life to those who believe on Him. Since God alone can give life, Jesus is divine.

January 24.—Jesus testifies to the Samaritan woman that He is the Messiah. His ability to disclose the secrets of the woman's heart and life convinces her that He is divine.

January 31.—The creative act by which five thousand men, besides women and children, were fed from a few small loaves and fishes, with a superabundance left over, demonstrates the deity of Jesus.

February 7.—Jesus is divine, because He opened the eyes of the man born blind. So unusual was this miracle that such a thing was never heard of "since the world began." The man whose eyes were opened, confessed Jesus and worshiped Him as the Son of God.

February 14.—Jesus is the Messiah, the Son of God, because He is the Good Shepherd. In the Old Testament, Jehovah is set forth as the True Shepherd (Ps. 23, Ezek. 34). The true shepherd devotes his life to the welfare of his sheep, even to the extent of laying down his life for them. This Jesus did, therefore He is the promised Messiah.

February 21.—Jesus is divine because at His command, Lazarus, a man dead four days, was raised to life.

February 28.—Undivided love to God is man's supreme obligation. The Second Commandment is like unto the First, in that it centers in love.

March 7.—Jesus is divine, because He came from God and went to God (John 13:3). Though Jesus boldly claimed to be the Lord, yet He stooped to render the most menial service to His disciples.

March 14.—Jesus claimed equality with God and therefore asked His disciples to place their faith in Him as the divine being, just the same as in God.

March 21.—Jesus proved his deity by coming forth from the grave. This is the unquestioned seal of His deity.

Water of Life

If ye know what He is preparing for you ye would be too glad. He will not, it may be, give you a full draught till ye come up to the well-head and drink, yea, drink abundantly, of the pure river of the water of life that proceedeth out from the throne of God and from the Lamb.—Samuel Rutherford.

Moody on Enthusiasm

Enthusiasm means "in God"; and I can't understand how any man can realise his standing before God and not be on fire 365 days in the year. Any man who goes into business and doesn't throw his heart into it doesn't succeed. Now, why not go into the Lord's work as earnestly as into athletics?—D. L. Moody.

Purpose of Prayer

The purpose of prayer is to get God's will done.—S. D. Gordon.

Your New Home

should be made artistic, sanitary and livable.

These walls should be Alabastined in the latest, up-to-the-minute nature color tints. Each room should reflect your own individuality and the treatment throughout be a complete perfect harmony in colors.

The walls of the old home, whether mansion or cottage, can be made just as attractive, just as sanitary, through the intelligent use of

Alabastine

Instead of kalsomine or wallpaper

It is absolutely necessary if you expect Alabastine results that you ask for and secure *Alabastine.*

Avoid kalsomines under various names and insist on the package with the cross and circle printed in red. That is the only way to be sure you are getting the genuine Alabastine.

Alabastine is easy to mix and apply, lasting in its results, and absolutely sanitary.

Alabastine is a dry powder, put up in five-pound packages, white and beautiful tints, ready to mix and use by the addition of cold water, and with full directions on each package. *Every package of genuine Alabastine* has cross and circle printed in red.

Better write us for hand-made color designs and special suggestions. Give us your decorative problems and let us help you work them out.

Alabastine Company
1653 Grandville Ave., Grand Rapids, Mich.

Like this man, thousands of people give heed to constipation only when it is too late.

"I'll tell you why they wouldn't insure you—

"You allowed constipation to become chronic—until finally it resulted in organic disease.

"People don't realize how insidious constipation is. Its first effects are hardly more than annoyances—headaches, loss of appetite, sleeplessness and the like. But in time, as the body is subjected to continued intestinal poisoning, it may lead to high blood pressure, rheumatism, diabetes or even Bright's disease.

"Stop constipation if you wish to live long. Take a little Nujol every day—that will keep you regular."

Nujol relieves constipation in Nature's way

Constipation is dangerous for anybody. Nujol is safe for everybody. It does not affect the stomach and is not absorbed by the body. Medical authorities approve Nujol because it is safe, gentle and natural in its action.

Nujol makes up for a deficiency—temporary or chronic—in the supply of natural lubricant in the intestines. It softens the waste matter and thus permits thorough and regular elimination without overtaxing the intestinal muscles.

Nujol can be taken for any length of time without ill effects. To insure internal cleanliness, it should be taken regularly in accordance with the directions on each bottle. Unlike laxatives, it does not form a habit and can be discontinued at any time.

Ask your druggist for Nujol today and begin to enjoy the perfect health that is possible only when elimination is normal and regular.

Nujol
THE INTERNAL LUBRICANT
For Constipation

Let Tanlac restore your health

If your body is all fagged-out and run down, if you are losing weight steadily, lack appetite, have no strength or energy—why not let Tanlac help you back to health and strength?

So many millions have been benefited by the Tanlac treatment, so many thousands have written to testify to that effect that it's sheer folly not to make the test.

Tanlac, you know, is a great natural tonic and builder, a compound, after the famous Tanlac formula, of roots, barks and herbs. It purges the blood stream, revitalizes the digestive organs and enables the sickly body to regain its vanished weight.

You don't need to wait long to get results. Tanlac goes right to the seat of trouble. In a day or so you note a vast difference in your condition. You have more appetite, sleep better at night and the color begins to creep back into your washed-out cheeks.

Don't put off taking Tanlac another precious day. Step into the nearest drug store and get a bottle of this world-famed tonic. That's the first important step back to health and vigor. Every day's delay means unnecessary suffering, for Tanlac starts to clean out and tone up the system right away. And by acting promptly you will avoid further loss of energy and weight due to your present run down condition. Take Tanlac Vegetable Pills for constipation.

Sick for Years —Now Healthy

"For five years I was so nervous I could hardly sleep at night. My stomach was weak and almost always disordered.

"Now, thanks to Tanlac, I never have the least trouble, I am always eager for mealtime and enjoy doing my housework."

Mrs. Essie Reed Ray
Evansville, Ind.

WHY SHOULD I
BUY AT BUTCHER SHOP

BECAUSE

You want good meat, of course. And as we do our own butchering we use only selected stock--therefore serving you only the choicest meats at all times from our market.

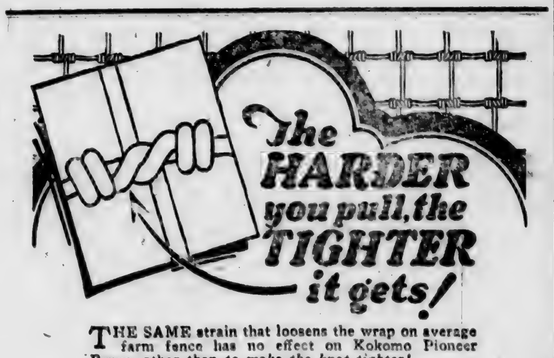
St. Joe Meat Market,
HARMAN & HELLINGER, Proprietors.
Notice: Pay your account, it is due now.

TIME
IS MONEY

There are at least two times when time is money—while you are working for money and while money in the way of savings, is working for you.

Many a man has missed his opportunity for a good investment simply because he didn't have the ready cash when the chance came. The time to prepare for such opportunities is NOW. We invite you to open an account at our bank, where your money will be safe until you need it.

The St. Joe Valley Bank, A STATE BANK



THE SAME strain that loosens the wrap on average farm fence has no effect on Kokomo Pioneer Fence, other than *to make the knot tighter!*
It's all in the way the knot is made. Note the illustration above, which will give you an idea of this exclusive feature. This is a semi-hinge knot. Better still, examine Kokomo Pioneer Fence stretched in your neighbor's field. Pull on it—put your foot on it—try to loosen the knot!
Then you'll understand why Kokomo Pioneer Fence will not get out of shape, why the stay wires can not slip on the line wires—why you are assured of GOOD fence for a long period of years.
The wire used in the manufacture of Pioneer Fence is 99¼% pure zinc coated.
Why not try it and be convinced.

WILLIAM CURIE, Dealer, St. Joe, Indiana

KOKOMO PIONEER FENCE
For Farm and Poultry

In the Red Flannel Days.

"Women of the red flannel days were more sensibly dressed than the women of today," declares a St. Joe merchant. But he doesn't want his name mentioned for obvious reasons. "In those days," he declares, "we used to sell 20 yards of silk for one dress Now a woman buys three yards and considers that more than enough. Then there were only three or four shades of silk; now there are hundreds. The men of 50 years ago were superstitious in the matter of what they wore. In winter it had to be red flannel underwear and only a few people of the richer class could be induced to wear white merino. Today, manufacturers tell us, there are 4800 different articles of women's underclothing and 1800 different kinds and shades of stockings. But in the matter of genuine comfort and happiness the old red flannel days had it all over the age in which we now live."

THE KITCHEN CABINET

(©, 1925, Western Newspaper Union.)

Now is the time; ah, friend,
No longer wait
To scatter loving smiles and words of cheer
To those around whose lives are now so dear.
They may not meet you in the coming year—
Now is the time.

HINTS AND DISCOVERIES

If members of the family are fond of it, serve half a grapefruit for dessert with an after dinner mint in the center of each.

When serving toast and egg to a child or to an invalid, place the egg well poached on the soft toast that has been buttered and cut into cubes, keeping the shape of the slice undisturbed. It is so easy to handle with spoon or fork.

Drop the egg into a muffin ring in the water when poaching; it will be shapely when removed and may be placed on a round of buttered toast.

Season mashed potatoes for a change, with onion juice—one teaspoonful—and one-fourth teaspoonful of nutmeg to each quart of seasoned potato.

When making cookies or doughnuts using sour cream or milk, mix them up the night before and set them on ice. They will roll out with less flour, and will keep moist much longer.

After cooking carrots until tender, put them through a ricer, season and beat as one does mashed potatoes Those who do not like carrots will enjoy these. For variety add a dash of nutmeg and a little lemon juice.

A small line on the porch for hanging small things will be a great step-saver; use the doll clothespins instead of the usual ones.

When sending handkerchiefs to the laundry, sew a corner of each to a strip of tape; they will all come home together.

Clothes that need to be ironed at once should be sprinkled with hot water.

When re-covering your ironing board use two thicknesses of cotton batting if you lack an old blanket to pad it.

Two or three new clean bushel baskets will be as useful for laundry baskets as the more expensive ones and they are much lighter to carry

When hanging pictures have them on the level of the eye of the person of average height.

Nellie Maxwell

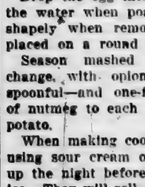
THE KITCHEN CABINET

(©, 1925, Western Newspaper Union.)

The causes of failure are: No positive aim in life; no special preparation; lack of appreciation of the many opportunities for self-improvement in youth; desire to be in the swim of fashion and pleasure, haste to get rich, selfishness.

CAKES GALORE

No good housewife desires to find an empty cake box. The following are a few good ones: When the loaf cake becomes a bit stale, steam it and serve with a snappy lemon sauce for dessert; it will be eaten to the last crumb.



Sunshine Cake.—Take one-fourth of a cupful of shortening, one cupful of sugar, two eggs, one-half cupful of mashed potato, one and one-half cupfuls of baking powder, one-half cupful of hot milk and a teaspoonful of lemon extract. Mix as usual, add the hot milk at the last with the flavoring. Bake as a loaf or in layers.

Sour Cream Cake.—Cream one-half cupful of shortening with one cupful of sugar, add one-half cupful of molasses, two eggs, one teaspoonful each of cinnamon and nutmeg, one-fourth teaspoonful of salt, one and one-half teaspoonfuls of soda, two cupfuls of pastry flour, one cupful of sour cream. Add the raisins and the same amount of chopped nuts at the last. Beat well, pour into a large loaf pan and bake three-quarters of an hour.

Chocolate Drop Cookies.—Cream one-fourth of a cupful of butter, add one-half cupful of sugar, one well-beaten egg, one cupful of flour, one-half teaspoonful of soda, one-fourth cupful of milk, one and one-half squares of melted chocolate, one-half cupful of raisins and one-half teaspoonful of vanilla. Mix and drop from a teaspoon on a buttered sheet and bake in a moderate oven. Cover with boiled frosting.

Fruit Cup Cakes.—Take three well-beaten eggs, one and one-half cupfuls of sugar, creamed with the shortening; two cupfuls of flour, one teaspoonful of soda, one-half cupful of hot water, to which add the soda, one cupful of coconut, one pound of dates cut fine, one teaspoonful of salt, one-half teaspoonful each of lemon and vanilla with one teaspoonful of cinnamon. Bake in small gem pans. This recipe makes about forty. Cover with icing if desired, frosting them the day of serving

We feel safe in saying that there is not one man or woman in St. Joe who would like to see another war break out, no matter where the battles might be waged. The last one taught us to put a higher value on peace than we had on it before, and we are willing to go a long way and stand for a good deal rather than have the peace we now enjoy snatched from us.

But somehow the world war doesn't seem to have affected the present ruler of Italy that way. Mussolini, if newspaper reports reaching this country are to be believed, is trying to grab enough additional territory to establish an empire. The downfall of the Kaiser doesn't seem to have served as a warning to Mussolini So he has sent a threatening note to Germany, realizing of course that she is about the last nation in the world that could wage a war, saying that it is his intention to put the Italian flag still farther out, and into territory in which Germany is more or less interested.

It is a cowardly threat and the threat of a coward. London papers declare it shows that Mussolini is anxious to succeed the Kaiser as the old world's biggest bully. It is a direct slap at the League of Nations and the World Court—and civilization. The United States is not particularly interested, further than to feel sorry for any government that has a bothead for its ruler. But the United States has a right to take a moral stand in such matters.

ST. JOE NEWS.

VOL. XL — ST. JOE DeKALB COUNTY, INDIANA, THURSDAY APRIL 1 ,1926 — NO. 13

School Hous Is Assured

Citizens Respond Liberally to Solicitors for the $2,000.00 needed by Advisory Board to be able to meet Contract-A Worthy Spirit Indeed.

The new school house is an assured fact for Concord township, such is the good news coming from the soliciting committee, Wm. Curie and Harry Kees. As was stated last week, the trustee and advisory board were short of funds to the amount of $2,000.00, to insure the construction of the proposed new school building, and rather than see the project fail, the two gentlemen were selected to manage the campaign for funds.

With the amount of money subscribed to date and the extra reliable promises for this week, makes us say to the people of our township that the building will be a go, should the bonds be accepted, which will be determined when the company views the papers setting forth the proceedings of the board. This point we feel sure has met the requirements of the law and will require only a few days to assure the fact that the bonds are accepted by the Meyer-Kiser bank at Indianapolis.

The success of the solicitors is more than some folks really expected and why they should feel as they do, we cannot say. People of Concord township have always been patriotic and why they should refuse now to help themselves, is more than can be explained by one who does not know.

The fact that some love their money more than childhood (especially when a call of this kind is made) has again been made public. Many who have no children to attend and take advantage of the school possibilities gave liberally, while others were not so liberal.

Someone has said "It's a shame that the taxpayers of Concord township has this burden to carry, and the answer came back, well the people are not objecting, because $2,000.00 in cash has been raised in less than a week, besides the tax and that looks as though they were pretty well satisfied."

And that is correct.

If plans carry as expected, by our next issue, we shall be in a position to herald the glad news of another worthy act from some Concord township folks.

Remember this, every worthy enterprise the people in general will support.

Christ, Our Lord, Has Risen

EASTER SUNDAY

St. Luke 24: 1. Now upon the first day of the week, very early in the morning, they came unto the sepulchre, bringing the spices which they had prepared, and certain others with them.

2. And they found the stone rolled away from the sepulchre.

3. And they entered in and found not the body of the Lord Jesus.

4. And it came to pass, as they were much perplexed thereabout, behold, two men stood by them in shining garments:

5. And as they were afraid, and bowed down their faces to the earth, they said unto them: Why seek ye the living among the dead?

6. He is not here, but is risen: Remember how He spake unto you when He was yet in Galilee,

7. Saying, The son of man must be delivered into the hands of sinful men, and be crucified, and the third day rise again.

8. And they remembered his words,

9. And returned from the sepulchre, and told these things unto the eleven, and to all the rest.

RESURRECTION JOY

"Thro' the golden sunlit air, hear the music ring;
As we sing the triumphs great of our risen King;
Hope hath banished every fear, Death can not dismay;
For our blessed Lord arose on this Easter Day."

Remember the Sabbath Day to Keep It Holy.--Exodus 20: 8.

Go to Church Sunday.

Life of Mrs. Elizabeth Davis Ended

Mary Elizabeth Jones Davis was born on a farm in Tuscarawas County, Ohio, June 18, 1843, and departed this life at the home of her daughter, Mrs. Lee Smith, Portsmouth, Ohio, Saturday morning, March 27, 1926 at 9:45 o'clock, age, 82 years, 9 months and 9 days. The cause of her death was pneumonia.

Mary Elizabeth was the daughter of Nancy Conwell and James Williams Jones. She was the third born in a family of eleven children all of whom are now deceased with the exception of Lucy Frances Shull of near Coburntown, Indiana. Her father died when she was but twelve years of age after which time she made her home with her grandparents, Mr. and Mrs. Prettyman Conwell.

She became wedded to Samuel S Davis on March 16, 1865. In the fall of 1866 she drove with her husband and infant son, Judson McKenzie, to Indiana where they settled one mile east of Coburntown on what is now known to the family as the "the old home farm."

Here were born Harriett Alma, Ressa Elma, Minta Mae and Carrol Ray, all of whom with Judson McKenzie survive. Her husband preceded her in death, November 29, 1923.

At "the old home farm" she faithfully discharged the duties of a settler's wife and patiently endured the hardships incident thereto. It was here that the children were raised to the age where they married and went to themselves. In the fall of 1920 she and her husband were compelled to leave the farm due to the infirmities of age.

The latter years of her life were spent in the homes of her children, principally her daughters, Harriett Alma and Minta Mae. In the last days of her failing health, she took a great interest in the welfare of her family and bore the responsibilities of motherhood to the last.

Mary Elizabeth became united with the church in early childhood and was a devoted christian throughout her life. After coming to Indiana she was enrolled in the membership of the old Wesley Chapel M. E. Church at Cole's Corners near their home. She was a devoted reader of the scriptures and in the sunset of life gained much solace from the promises of God.

The deceased is survived by her son, C. Ray Davis of Auburn, another son in Chicago, J. B. Davis, three daughters, Mrs. H M. Widney of St. Joe, Mrs. Lee Smith of Portsmouth, Ohio, Mrs. A. J Flynn of Chicago and by a sister, Mrs. Joseph Shull who resides near St. Joe. The grandchildren are: Blanchard Vondale Widney, Dorris Davis Widney deceased, Opal Mae Thomson, Rose Ann Davis, Gloria Marie Davis, and the following great grandchildren, Eloise Mae Widney deceased, Lee Swinney Thomson and Sara Frances Thomson.

Her death closes the chapter of another pioneer home founded in hardships, blessed with love and prosperity, and leaving a bereaved and devoted family. "Blesaed be the Lord."

Her body was brought to St. Joe, Monday on the B. & O., and taken to the home of H. M. Widney, where the funeral was held Tuesday afternoon, with Rev. Otis Jones officiating. Burial in Riverside cemetery. E R. Kinsey, funeral director.

Card of Thanks.

We wish to express our sincere appreciation and profond gratitude to all who assisted, the friends and sympathizers, who offered words of condolence, also for the many beautiful floral tributes, we are truly grateful.

To the Revs. Jones and Scholes for their consoling words, to Mrs. Paul Curie for the beautiful songs rendered, to Mr. Kinsey for the excellent and efficient manner in which he conducted the funeral—Again to all, we are profondly grateful. The Davis Family.

Easter Cantata Sunday Evening

As has been the custom for the past few years, the St Joe Choral Society will render its Easter Cantata entitled "King of Glory" at the Methodist Church, Sunday evening at 7:30.

This is an organization composed of members from all the churches and is given hearty support by all. The public is invited to attend.

The program follows:

He Was Despised
Chorus

Our Wounded Lord

The chief trouble with the approaching Easter parade is that now nobody walks.

The only way coffee will break down your health is losing sleep in trying to find a decent cup of it

Mrs. Ann Abel of Newville township, who suffered a light stroke of paralysis at her home last Friday, was taken to the home of her daughter, Mrs. Philip Carper in Jackson township Saturday by E. R Kinsey, for treatment and care. Mrs. Abel observed her seventy-third birthday Tuesday.

HOME, DAD AND THE BOY

By FRANK H. CHELEY

Are You "Dad" or the "Old Man"?

THOUGHTFUL Fathers Do Not Compel the Respect of their boys, but rather strive to be eminently worthy of it. Consequently, it never occurs to such sons ever to think of their fathers as "the old man," or "the old gent."

Dads Win Because They Are Convinced Vital Character is as contagious as the measles and never lose an opportunity to "expose" the boys and themselves to it, and—

Because They Do Not Blame the Boys for every occasional falling in love with the girls. They did it themselves, and are convinced that comradeship with the right sort of girls is the greatest tonic in the world for right living, and—

Because They Believe that boys must actually both earn and spend money in order to learn practical thrift and so take pains to provide them with ample opportunity for both, not forgetting to have them give, too, and—

Because They Understand Perfectly that a broken will is a greater misfortune than a crippled body to a boy; while a directed will is the greatest of boy possessions.

Cape Coat Newest for General Wear

Flares and Military Ideas Prominent in Popular Outer Garment.

There was a time when men aped women in their dress. They wore all the satins and laces, frills and furbelows of the most elegant grand dame. But those times have gone long ago. Men now array themselves thus only for dress balls. In everyday life it is the women who copy the men. She who would be considered in the height of the mode must see that her garments are fashioned along mannish lines.

In the tailleur consisting of jumper and skirt—an informal, popular outfit—the jumper resembles a man's shirt. The skirt, too, is severely plain, a wrap-around or knit. The sports skirt, the seldom changing "tailor skirt" and the coat frock are equally masculine in effect. Even the more elaborate type of dress has been influenced by the tailored idea. For years this mood in styles has been traced, and now at last, says a fashion writer in the New York Times, we have emerged from the tube, preferring rather the tunic, the tailored blouse and the cravat.

The mannish coat has always had a place in the wardrobe of a woman with chic, and its variants are many, according to the trend of styles in general. The ulster, the strictly tailored modern version of the Newmarket and Inverness, are all translations of the topcoat originally designed for a man of fashion. All of ancient lineage and distinguished background, they are brought to the front every so often.

The cape coat is the newest model of this season, introduced in Paris and accepted with enthusiasm on this side of the water. The cape came in with the autumn, reproducing in evening and occasional wraps the models shown last spring. The best couturiers are establishing a number of designs in coats with capes attached that have a definite appeal, because of a certain dashing style as well as utility. For these two reasons the tailors to the elite have found themselves pressed to the limit of accomplishment to turn out copies of the latest models in cape coats.

Mannish Coats.

Whatever the Parisienne may elect to wear, the cape has always taken with Americans, even those most fastidious in matters of style. The Inverness, the military, even the Shaker cape have been fads and some women who go in for individuality always have the cape in some form. There is something intriguing about a genuine army or navy cape which a woman of certain type wears with distinction and with a certain obvious consciousness, because it is the real thing and an unvarying mode. Add the cape, large or small, to the straight ulster or Newmarket and you have the latest wrap of the season.

The coat itself is built on widely different lines and the shape of the cape may be any one of numerous models, but there is a relation of one to the other which makes a wrap "de style." In some of the designs presented by prominent Parisian houses in their spring collections the cape and coat are cut in one, in a subtle, effective composition. In others the wrap, which is really a coat, appears to be a voluminous cape. A swagger model

Attractive Cape Coat Made of Sage Green Kasha.

has a long cape depending from the neck of a straight coat, to be gathered around as an extra protection, while another, directly reversed, has a short cape which gives to a long tailored coat the appearance of a deep collar.

All of the best designers have contributed to the cape coat vogue offering many variants bearing the hallmark of Paris authority. Worth, a name that for some of the more exclusive carries authority with it, makes a cape coat in which both the conventional tailleur and a garment of elegance are illustrated, done in cafe-au-lait kasha, lined with flat crepe in the same shade, with a touch of coral and threads of gold in a passementerie band, with which the collar and wide coat sleeves are faced. A short cape, sewn at the back of the collar and across to the point of each shoulder tip, hangs rippling to the waist.

This cape has no significance except for its picturesque effect and a certain element of dash that it adds to the coat. The model has been received so well that one exclusive New York establishment is having it copied in crepe and bengaline, in black and in the newest shades of gray, brown and beige. A black coat is lined with a glowing shade of tanager scarlet. The standing collar is of antelope hide. One uncommonly attractive model is made of gray crepe Elizabeth, with a collar of fluffy gray fox. The cape on this coat is cut rather longer, with a rounded point, hanging several inches below the waistline. Its material is of light weight and supple

Cape Coat of Heather Mixture for Sports Wear.

texture. This cape coat meets the demand for late spring and early summer in town.

For the Younger Set.

Madeleine Vionnet, who swings the mode for the younger set in many matters of dress, has plunged into the new idea of cape coat. Her creations follow a trail of art and grace, from beach cape and storm coat to the most swagger feminine version of an Inverness. A wrap that meets the demand of the hour is a cleverly arranged coat and cape combined. The coat is loose and box-like, with the air of English traveling wraps. It has a high collar, deep shawl revers and roomy pockets sewn on the sides. A cape is fitted in at each shoulder to fall in a ripple over each sleeve, covering it to the cuff.

This cape coat is made of a smart checked wool, without trimming. It is cut on a generous plan, folding well around the figure, and is fastened with one large button below the waistline. Another of Vionnet's all-around wraps is a long, full affair with the appearance of a cape, though it serves as a coat. This is built of plain gray worsted with the front of the cape cut like a full-length waistcoat and the back flaring to cover the arms, dolman fashion. The whole is faced with a black and white plaid which is turned on the outside to form a short shawl collar.

A cape coat that speaks the very last word in chic is shown by a prominent New York shop. It is a black and white check, lined with a flame-colored crepe. The coat is cut on the usual straight lines, is double-breasted and fastened with black bone buttons. The cape hangs to the hipline, but swings in fullness toward the back. Box plaited, very full ruching of black taffeta is used to trim the neck in lieu of a collar.

Utility and Appearance.

Some of the couturiers have gone so far in adapting the cape to the coat, and some are achieving styles of interest and originality. In these days of wide travel and of varied activities in social life, it is necessary to provide wraps of many different fabrics, suitable for all climates, seasons and occasions. Among the latest models, Paquin has done some cape coats that answer the demand for a garment in which utility and appearance are combined.

In his design a new tweed in two shades of blue is used. The coat-ensemble is made like a coat frock, with a deep box plaited flounce set on across the front. The back is straight and plain, and a cape fitted slightly with flat plaits over each shoulder is cut with a slight dip hanging well below the waistline, but not covering the sleeves. It shows a lining of blue crepe, matching the lighter shade of blue in the material. A full, round collar is of blue fox. The coat fastens with a fashionable deep shawl revers. This cape coat is a complete costume that will prove a happy solution of dress problems to the woman who is traveling and who will wish to be ready for the bright days of spring in town.

The KITCHEN CABINET

(©, 1926, Western Newspaper Union.)

"In men whom men condemn as ill
I find so much of goodness still;
In men whom men pronounce divine
I find so much of sin and blot,
I hesitate to draw the line
Where God has not."

CHOCOLATE

Chocolate and cocoa are almost universally well liked. They may be served in various ways.

Adding a tablespoonful or two of cocoa to a cake or pudding will give a different flavor. One-fourth cupful of cocoa added to an angel food recipe will make a most tasty chocolate cake.

Cocoa Tutti-Frutti Cream.—Use the following recipe for cocoa cream, adding one cupful of macaroons which have been dried and pounded, one cupful of candied cherries, cut into small pieces, one-half dozen marshmallows cut into bits, one-half dozen raisins, one tablespoonful of citron and the same of orange peel chopped fine; add the last just before putting into molds.

Cocoa Cream.—Mix one-half cupful of cocoa with one-half cupful of sugar and the yolks of two eggs, beaten; add two cupfuls of cream and one-fourth-inch of cinnamon; cook in a double boiler until thick. Add two tablespoonfuls of gelatin softened in one-fourth cupful of cold water, and stir until dissolved over hot water. Add one-fourth teaspoonful of salt, one teaspoonful of vanilla and one cupful of heavy cream, beaten thick. Cool the first mixture before adding the cream. Mold and chill; serve with cream.

Chestnuts With Chocolate Cream.—Boil one quart of large chestnuts, remove the shells and press through a ricer; add four tablespoonfuls of powdered sugar, one-half teaspoonful of salt, four tablespoonfuls of cream and three tablespoonfuls of maraschino sirup. Whip one cupful of heavy cream, add two tablespoonfuls of maraschino sirup, three of powdered sugar and four of melted chocolate. Fill molds with the blended mixture; chill and serve with a garnish of chopped nuts.

A chocolate sauce to serve on ice cream seems to be especially well liked. Here is a good one:

Good Things to Eat.

Salads are always acceptable and those a little out of the ordinary will never lack a welcome.

Italian Salad.—Cut one carrot and one turnip into slices and cook in boiling broth until tender. When cold add two cold boiled potatoes and one cooked beet cut into strips. Mix all together with a tablespoonful of scraped onion and pour over the following sauce:

Lombardy Sauce.—Cook one-fourth of a cupful of flour in one-fourth of a cupful of melted butter, add one-half teaspoonful of salt, one-fourth teaspoonful of paprika and one cupful of jellied chicken broth; stir until boiling hot. Set over boiling water and beat in one-fourth of a cupful of butter, beaten with two egg yolks and the juice of half a lemon. As soon as the egg is cooked beat in three-fourths of a cupful of thick tomato sauce. When cold and ready to use, add one teaspoonful of parsley chopped very fine.

Fried Onions and Apples.—Slice two onions very thin and cook in a tablespoonful of hot fat until yellow, then add half a dozen sliced tart apples; cook until soft, adding a bit of water and fat if needed. Just before serving add a teaspoonful of sugar. Serve with roast pork, sausages or chops. If the onions are not liked, slice the apples after coring without peeling and fry in a little hot fat, turning until well browned. Sprinkle a little sugar over them—that helps to make a nice brown. Serve in overlapping slices around the platter of meat.

Dinner Salad.—Remove the sections from grapefruit and take off the connection tissue. Arrange on crisp lettuce, sprinkle with finely shredded green peppers and serve with mayonnaise dressing, or a good, well-seasoned French dressing.

A delicious cake filling is prepared with a cupful of maple sirup stirred thick with powdered sugar and used between the layers—for the top add a few chopped nuts.

Fresh Fish Salad.—Flake baked or boiled fish while hot. For a pint of fish cut six olives very thin lengthwise; to them add a tablespoonful of capers, a teaspoonful of the pulp of an onion, half a teaspoonful of salt, a tablespoonful of lemon juice, and two tablespoonfuls of olive oil. Mix and pour over the fish; mix with a fork to avoid crushing; let stand in a cool place until ready to serve. Serve on lettuce leaves with mayonnaise, passed in a bowl. Garnish with pickled beets.

Raisin Fruit Cake.—Pour one cupful of boiling water over one pound of raisins, let stand for twenty minutes and then drain. To one cupful of sugar add one-fourth cupful of butter, one egg, one teaspoonful each of soda, nutmeg and baking powder. Add one-half cupful of sour milk and flour to make a batter, adding the raisins last. Bake in a loaf in a slow oven.

HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this puzzle will spell words both vertically and horizontally. The first letter in each word is indicated by a number, which refers to the definition listed below the puzzle. Thus No. 1 under the column headed "horizontal" defines a word which will fill the white spaces up to the first black square to the right, and a number under "vertical" defines a word which will fill the white squares to the next black one below. No letters go in the black spaces. All words used are dictionary words, except proper names. Abbreviations, slang, initials, technical terms and obsolete forms are indicated in the definitions.

OMAR VERSE FOUND IN ENGLISH LIBRARY

A discovery of interest to lovers of the "Rubaiyat" of Omar Khayyam has been made by Doctor Mingana, curator of manuscripts at the John Rylands library, Manchester, England. In the library's Arabic manuscript No. 284 the curator has found an apparently unique work entitled "Nukhbat esh Shakib," a free translation of which is "the drinker's draught and horseman's hasty meal."

The manuscript, which is anonymous, consists of about 500 quatrains. Proof that it was written between 1258 and 1282 is seen in the fact that it was dedicated by the author to Ali ed Din ata Malik, the son of Beha ed Din el Juriani, the famous author of Johan Gusha, who died in 1282 A. M.

The third quatrain is quoted in Persian, as from Omar Khayyam, and is followed by an Arabic translation by the author. The quatrain contains a complaint that God should find fault with his work and destroy it.

Distinct Benefit of Trees on City Streets

In a discussion of the effect of trees on temperature Wesley Bailey Leach, city forester of New York, points out that if our streets and parks were well supplied with vigorous trees we should have much cooler summers and warmer winters.

He gave as his chief reason for this theory the fact that the temperature of a tree never varies, in summer or winter, from 54 degrees Fahrenheit. "If we cross one of the avenues on a hot day," states Mr. Leach, "when the temperature is 100 degrees Fahrenheit, and pass under the shade of a tree we are refreshed by the cool air that meets us. What makes the change? Not the shade alone, but chiefly the fact that we are in the presence of a body that has a fixed temperature of 54 degrees Fahrenheit, or 46 degrees cooler than the street temperature."

Likewise, on a cold winter day, in passing from the zero temperature of the street into a group of trees, the warmth experienced is due not only to the shelter afforded by the trees but to the warmth of the trees themselves.

First Flat Buildings

Large buildings or flats have been in existence in some European cities like Paris, Berlin and Rome for many years. In Paris, blocks of apartments were erected under the Second empire (1852-70). In Germany and Austria, similar apartment houses were built, generally of the French model. In the United States, the earliest apartments were built in New York between 1870 and 1875, to meet changed conditions following the Civil war.

Peary's Flags at Pole

Peary planted five flags at the North pole in 1909. They were: A silk American flag, given him by Mrs. Peary 15 years before; the colors of Delta Kappa Epsilon, his fraternity; the "World's Ensign of Liberty," with red, white and blue in a field of white; the Navy league flag, and the Red Cross flag.

Man of Mystery

"Seen any mysterious strangers around here lately?" asked the city detective. "Well," said the village constable, "there was a fellow with a circus last week that took a pair of rabbits out of my whiskers."—San Francisco Argonaut.

Importance of Color

Color proportion is more important than color harmony. For the largest areas in the room such as the walls, floor and ceiling use neutral tones, and as areas decrease in size, use brighter colors such as curtains and upholstery pieces and brightest colors perhaps in runners, lamps, pottery, etc.

Modern Precautions

Never give the boy all the allowance you can afford. Keep back some to bail him out.—Baltimore Sun.

MOTHER OF SEVEN CHILDREN

Helped in Caring for them by Taking Lydia E. Pinkham's Vegetable Compound

Glasgow, Ky.—"I am the mother of seven children, the eldest being only 12 years, and I feel that Lydia E. Pinkham's Vegetable Compound has helped to pull me through the roughest places of my married life. At one time I was so downhearted that life was a misery. A friend in Indianapolis, Indiana, told me of the Vegetable Compound, and after taking a few bottles of it I became myself again and it was a pleasure to do my housework and gardening. Since then I always use your medicine when I feel weak from overwork and it straightens me out."—Mrs. Melissa Barbers, Route 2, care of O. F. Steenbergen, Glasgow, Ky.

New Orleans, La.—"I could not do a thing after my first boy was born. I was so weak, I had no appetite, lost weight and was not able to do my work. I was this way for seven weeks, then I took Lydia E. Pinkham's Vegetable Compound and got wonderful results from it."—Mrs. C. Faurie, 4014 Dauphine St., New Orleans, La.

Lydia E. Pinkham's Vegetable Compound has been growing in popularity among women for over fifty years.

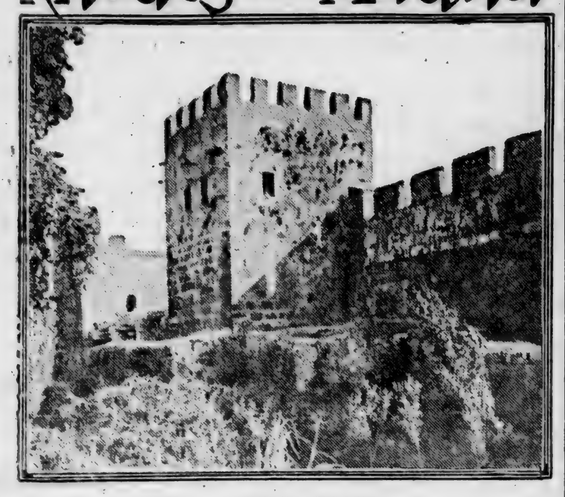
Rhodes and Adalia



Ancient Walls of Adalia.

(Prepared by the National Geographic Society, Washington, D. C.)

RUMORS in European diplomatic circles that Great Britain may consent to Italy's taking over a part of southwestern Asia Minor seem to revive plans formulated toward the close of the World war whereby Adalia and the surrounding country were to become Italian territory.

In this region Italy already possesses the sizable island of Rhodes off the southwestern corner of Asia Minor and the little island of Kastelorizo, 75 miles farther east and close to the mainland. The mainland here forms a blunt peninsula, known as Lycia in the days of Greek supremacy in Asia Minor. The city of Adalia is at the eastern base of this peninsula, at the head of the Gulf of Adalia.

In almost every era since the dawn of history Rhodes has had its years of importance. It was in the favored location in early times, at the crossing of the marine highways between Byzantium, Greece and Italy on the one hand, and on the other Egypt southeastern Asia Minor and Syria, gateway to the East. Inevitably a great maritime and commercial community grew up on Rhodes; it took the torch of Mediterranean commerce from Phoenicia to pass it on later to Byzantium, Rome, Genoa and Venice.

As a result of Rhodes' dominant commercial position, its laws and coinage were the standards of their day throughout the Mediterranean. The Rhodians, too, were colonizers and planted their stations on the shores of Asia Minor, Africa, Greece, Italy and even Spain.

Like Washington, D. C., the city of Rhodes was laid out, on its establishment in 408 B. C., according to an ordered plan, by an architectural engineer, Hippodamus of Miletus. The new city was given a sort of "commission form" of government consisting of a group of six executives. When Rhodes was destroyed by earthquake in 227 B. C., it received the practical sympathy of its world as Tokyo did in 1923; relief funds were sent from all the Hellenic states to repair the damage. Even the Great Colossus was a "victory statue," made of enemy catapults and other war engines—the "gun-metal" of the day.

Stronghold of Crusaders.

Perhaps the most picturesque era in Rhodes' history was from 1309 to 1522 when it was the stronghold of the crusading Knights of St. John and the bulwark of Christendom against the Moslems. The old Greek city had practically disappeared when the knights came and they built anew: great moats and walls, bastions and towers, and staunch stone dwellings. They evacuated the city to the Turks in 1522, but the deep marks their two centuries of occupancy left remain today. It is doubtful if in all Europe is to be found a more perfect example of a European fortified city of the Fifteenth century than is to be seen in Rhodes, geographically and climatically the quintessence of the Near East.

In the city's main thoroughfare, the Street of the Knights, are the same fine old windows, even if most of them are disfigured by superimposed lattices to shield harem ladies from unauthorized view. Built into the walls of the old knights' residences are the coats-of-arms of some of the most famous noble families of Europe.

No trace of the famous Colossus of Rhodes remains today. This bronze statue, more than a hundred feet high, which ranked as one of the seven wonders of the world, was toppled over by an earthquake in 224 B. C., after standing only 56 years. The pieces lay where they had fallen for nearly 900 years when a more ignominious fate overtook them. They were sold to a junk dealer.

In May, 1912, an Italian fleet landed a force on the island of Rhodes, and in a short time compelled the small Turkish garrison to capitulate. According to an Italian census of the city of Rhodes taken soon after the occupation, the population numbered 13,744; namely, 4,890 Moslems, 4,290 Jews and 3,564 Greeks, making practically an equal division among the three nationalities. The Jews and Moslems are crowded, for the most part, within the walls, while the Greeks are spread around among the little suburban villages.

An excursion along the coast to the ancient site of Ialysos, which was one of the earliest Dorian settlements on the island, affords an opportunity to see something of the country people of the island, who are for the most part Greek. The Greek schools and churches are very good, considering the fact that the people practically live from hand to mouth. Farming methods are wholly primitive. The ancient plan of irrigating from wells is still in vogue. The water is lifted and poured into ditches which lead from the well in different directions over a field.

The climate of Rhodes is splendid, and the island is sought by many as a summer resort. The bathing is excellent, and a fairly good hotel has been built for the accommodation of strangers. The commerce of the island consists chiefly in an export trade in fruit and vegetables.

Whoever makes the trip by steamer from Rhodes to Adalia by clear weather has added a chapter to his experiences which will undoubtedly be classed among the fondest recollections of later life. To the right lies the broad expanse of the Mediterranean stretching away to the shores of Palestine and Africa, while to the left, the snow-capped mountains of ancient Lycia pierce the azure blue. The scene is varied by a changing view of immense precipices over which plunge thundering torrents of melted snow into deep gorges, cut into the lower hills which separate the higher ranges from the plain and sea.

A stay at Fineka near the point of the Lycian peninsula enables one to study the life and customs of the natives in a section of Asia Minor seldom visited by a stranger. Everything is primitive, and, with the exception of a few large estate owners, the people are wretchedly poor. They live in miserable huts, which neither keep out the cold of winter nor the heat of summer. In this section are a large number of genuine African negroes who have lived and intermarried with the Turks for generations past. They are all Moslems in religion.

Adalia Is Interesting.

Few towns in Turkey can vie with Adalia in real genuine interest from the viewpoint of presenting to the stranger a deep insight into the habits and customs of the people. The harbor itself is small but deep, and only little coasting steamers can anchor well in toward the quay.

The town has been built upon a cliff 120 feet high, which commands the sea and over which tumble innumerable streams of clear, cold water that have their sources far up among the distant snow-clad mountains. These streams serve at the same time to irrigate magnificent orchards of figs, pears and mandarins.

One sees in every part of Adalia pieces of ancient sculptures used as adornments in the walls, street corners, doorways, courtyards and fountains. About the only antiquity, however, that has retained its original position is the splendid wall, which had been preserved almost in its entirety, although belonging to different epochs of history, and which has naturally been patched and repaired frequently during the hundreds of years of its existence. The wall around Adalia is similar in many respects to the one at Wisby, on the island of Gotland, in the Baltic sea.

Adalia is noted for its dancing dervishes. Greeks of this section have lived so exclusively among themselves for generations that they have retained many ancient habits of their race. This is also true of the Jews who reside here. The bazaars and mosques are also extremely interesting, inasmuch as they have retained their distinctly Turkish character since medieval times. In some places the streets are very narrow, and the balconies of many of the houses project outward one above the other to such an extent that two persons can almost join hands across the street from the upper stories.

Adalia also has a considerable silk industry, as the climate of this section is conducive to the growth of the mulberry tree. The cocoon sheds are erected outside the city limits and are interesting, for the reason that the laborers employed are made up of the different nationalities residing in the district.

POINTS ON KEEPING WELL

Editor of "HEALTH"

(©, 1936, Western Newspaper Union.)

ANGINA PECTORIS

THERE is probably no disease that causes as much terror in the public mind as angina pectoris, and with good reason, for anyone who has ever experienced or even witnessed an attack of this dread condition cannot forget the awful pain and the feeling of impending death which characterize it.

The first record we have of it, is in the case of the earl of Clarendon, who died suddenly during an attack in 1632. Heberden, the English physician, described and named it in 1772. The name, angina pectoris, simply means a pain in the breast, or as it is popularly called "breast pang."

The uncertainty of its appearance only adds to the terror it causes. The victim is generally apparently in perfect health. Suddenly, without warning, sometimes after eating, or while walking after eating, the patient is seized with a sharp pain in the chest, so severe that death seems imminent. This pain starts in the chest, runs up to the left shoulder and down the left arm to the heart. The patient is pale, and covered with cold perspiration, is generally nauseated and frequently vomits. The attack may last for a few minutes or for several hours. The victim may die during the first attack, or may have successive attacks for years, finally dying from some other trouble.

It is this very uncertainty that makes this condition so alarming. One never knows when an attack is coming on or what will be the outcome.

In most cases of angina pectoris, the patient is found to have a high blood pressure, although in 179 cases, studied by Dr. John Phillips of Cleveland, it was found high in 94, normal in 70, and below normal in 10. It has generally been regarded as due to narrowing and thickening of the arteries of the heart. This cuts off the blood supply of the heart walls.

The attacks are generally relieved by nitro-glycerin or amyl nitrate, both of which drugs dilate the blood vessels and lower the blood pressure. Persons subject to attacks are generally given a supply of tablets of nitro-glycerin or capsules of amyl nitrate to carry with them for use in case of need.

Between attacks, patients should lead quiet lives, avoiding excitement, violent exertions, overeating, and excessive use of tobacco. Over-weight persons should reduce gradually and should avoid heavy foods, rich dishes, pies and puddings. Tea, coffee, and tobacco should be reduced, plenty of sleep and the avoidance of worry should be insisted on.

HEALING THE MIND BY WORK

WE HEAR much today about physio-therapy and occupational therapy, and many people, impressed by these long and unfamiliar words, doubtless imagine that there is something new and mysterious about them. Yet they are both as old as the human race and only seem strange because they appear in an unaccustomed form.

Physio-therapy is the use of physical methods in the treatment of disease, such as hot and cold baths, massage, electricity and the different forms of light we know about. Occupational therapy is treating the person who is physically or mentally handicapped by teaching them some kind of work to occupy their hands and their minds.

Neither of these ideas is new. Yet of late years we have heard much more about them than ever before.

The examination required by the draft showed that there were many young men who needed special training. The training camps proved that there were many more who could not stand the strain of mental and physical discipline. Then the strain of active service broke down some more and wounds and disease wrecked more.

So the surgeon general of the army established a division of reconstruction to look after the shell-shocked and war-shattered men, and as a result the public has heard more about this way of helping defective and handicapped persons than ever before.

It isn't new. Right after the Revolution which probably brought much the same burdens and problems to the new nation that the World war brought to us, Dr. Benjamin Rush, the leading physician of Philadelphia and one of the signers of the Declaration of Independence, said in 1798 that one of the best ways of treating some mental conditions was by giving the deranged patients something to do, such as spinning, sewing and churning for women; grinding corn, cutting straw, digging in the garden and sawing and planing boards for men.

Present-day occupational therapy is exactly the same thing. It was one hundred years ago, except it is better understood and more elaborate. Almost all state and public hospitals for the insane now have departments with specially trained teachers, in which weaving, farming, gardening, basket making, carpenter work and other forms of light work are taught. Our best authorities now agree that work of some kind is needed for every one, sick or well, and that the busy brain is happier than the idle one.

Hoosier State Happenings

William W. Timmons, eighty-one, former postmaster of Portland and for many years a newspaper man, is dead.

Indiana university's new football coach, to succeed Navy Bill Ingram, is H. O. (Pat) Page, former mentor at Butler college.

Ralph Houser, thirty-one years old, head sawyer at a sawmill at Brazil, was injured fatally when he fell on a circular saw.

Boynton Garman, thirty, jumped to safety when the locomotive of a Big Four freight demolished his automobile at a crossing near Claypool.

It is estimated that there are 500 cases of influenza at Anderson. The outbreak is the worst since the World war. There have been several deaths.

Paul D. Hinkle, former University of Chicago star, has accepted a three-year contract as athletic director of Butler university. He succeeds Pat Page.

L. L. Danner, Kokomo, was awarded the contract for a new city school at Anderson, his bid being $121,000. The entire cost of the structure will be $145,000.

A rural relations division has been formed by the Kendallville Chamber of Commerce with a view of bringing the city into closer relationship with the farmer.

Mrs. Mary J. Keith, widow of I. N. Keith, was burned to death when her apron caught fire as she was stirring the fire in the grate at her home at Washington.

A meeting of the ten churches comprising the Decatur County Baptist association was held at the Liberty Baptist church, six miles southwest of Greensburg.

Charged with stealing two automobile tires from the wreck of a machine in which Clement C. Cullers, Syracuse, was killed, Dewey McPherson of Syracuse was arrested.

Thirteen tubercular cows were found among 186 cattle given the tuberculin test by Dr. Floyd M. Hopper, county veterinarian, at Warsaw. The infected cows will be killed.

Pleading guilty to having attempted to steal chickens on the Carl Becker farm near Kendallville, Harold Bloomfield was fined $1 and sentenced to 90 days on the state penal farm.

Harvey Kreider has been chosen president of the Farmers' State bank of South Whitley to succeed John Swihart, who died as a result of injuries received in an automobile accident.

Mrs. Ethel L. Johnson, thirty-six years old, wife of Dr. E. E. Johnson, was found dead in the bathtub at the family residence at Vincennes. A note left to her husband said she had ended her life because of ill health.

The grand jury returned an indictment against Leland Phillips of Richmond, wanted in connection with the death of Frank Buck, who was killed with a shot through the window of his house several weeks ago.

O. H. McNary, vocational instructor in the public schools at Morristown and former county agricultural agent of Putman county, was elected by the Pulaski county board of education as county agricultural agent at Winamac.

Howard Bennet, Columbus, Ohio, a former member of the Indiana state police department, was sentenced to serve six months on the state farm on a charge of compounding a felony, by Judge James A. Collins of Criminal Court at Indianapolis.

Motion for admittance to bail of Miss Thelma Wolfe, daughter of Mr. and Mrs. Charles Wolfe of Dunkirk, charged with murder of her infant daughter last February 28, was sustained by Judge R. D. Wheat in the Jay Circuit court at Portland.

Senior fees will be $13.50 this year, an increase of $1, it has been decided by the senior class at Indiana university. The increase was necessary to care for a $300 deficit from the junior prom last spring. The debt must be paid thirty days before graduation.

Mike Becsel, fifty-one, of Leesburg, Pa., was sentenced to seven years in the state prison at Michigan City by Judge Fred Bingham. He pleaded guilty to deserting his wife and seven children, leaving them destitute. Joseph Fucsik, twenty-six, was sentenced to 120 days on the penal farm for failure to support his wife.

Common council of Indianapolis passed an ordinance providing for segregation of white and colored residents of the city. According to the ordinance it shall henceforth be unlawful for any white person to establish a home in any portion of the city inhabited principally by colored people and vice versa, except on the written consent of the majority property owners of such district. Fines and imprisonment are provided for violations.

George Foster is under a bond of $1,000 at Ft. Wayne awaiting a hearing on a charge of soliciting bribes on the promise that he was in a position to give police protection to bootleggers.

The sentences given three members of the Consolidation Realty and Theaters corporation fraud are being held until April 14, pending final disposition of all the defendants in the case. The three men sentenced were, Oscar Olson, six months; H. B. Harang, three months, and C. M. Ortner, three months.

IMPROVED UNIFORM INTERNATIONAL

Sunday School Lesson

(By REV. P. B. FITZWATER, D.D., Dean of the Evening School, Moody Bible Institute of Chicago.)

(©, 1936, Western Newspaper Union.)

Lesson for April 4

JESUS APPEARS TO HIS DISCIPLES

LESSON TEXT—John 20:24-29; 21:1-23.

GOLDEN TEXT—Because thou hast seen me, thou hast believed: blessed are they that have not seen, and yet have believed.—John 20:29.

PRIMARY TOPIC—Thomas Happy to See Jesus Alive Again.

JUNIOR TOPIC—Jesus Appears to His Disciples.

INTERMEDIATE AND SENIOR TOPIC—Jesus Appears to His Disciples.

YOUNG PEOPLE AND ADULT TOPIC—Loving and Serving the Risen Lord.

I. Jesus Manifests Himself to the Disciples—Thomas Present (20:24-29).

Thomas was absent at the first appearance of Jesus—just why we may never know. His absence deprived him of a vision of the Lord. The other disciples went to Thomas with the glad news of the Lord's resurrection but he would not believe. His stubborn disbelief was such that he doggedly declared that unless he saw the prints of the nails and put his finger in the print of the nails and thrust his hand into His side, he would not believe. Note:

1. The Lord's kindness to those who have difficulties (vv. 26, 27).

Thomas deserved rebuke, but the Lord kindly supplied the evidence which he demanded.

2. The Lord revealed Himself to Thomas (vv. 27, 28).

When He thus revealed Himself, Thomas was transformed from a doubter into a confessor. He cried out, "My Lord and my God."

3. The superior blessing of belief without sight (v. 29).

Jesus patiently furnished Thomas with tangible evidence of His resurrection, but assured him that belief on Him without the tangible evidence was to be in a frame of mind to receive the blessings of the Lord.

II. Jesus Manifests Himself to Seven Disciples at the Sea of Tiberius (21:1-14).

1. The occasion (vv. 1-3).

At Peter's suggestion the disciples go fishing. They do not go back to their old calling without hope in Christ. They should not be accused of forsaking their Lord—they were poor men, therefore obliged to work. Furthermore, honest toil should not be considered incompatible with witnessing for Christ. Sensible men and women will be busy at so-called secular occupations until called from them by the Lord. Indeed, when the Lord wants men to work for Him, He goes to those who are busy. The disciples toiled all night and got nothing.

2. The risen Lord the supplier of the disciples' needs (vv. 4-14).

At daybreak the Lord appeared on the shore and inquired as to their success. The Lord appears at the point of their extremity. When the disciples confessed their failure, He directed them and success followed.

III. The Charge of the Risen Lord to Peter (21:15-17).

Christ put to Peter the thrice repeated question, "Lovest thou me?" before He gave to him a commission. This shows that supreme love to Christ is the one essential qualification for serving Him. "Lovest thou me more than these?" means, no doubt, "Do you love me more than you do these disciples and all things besides?" Three classes in the church need special care and food adapted to their several estates.

1. Feed My lambs (v. 15). This first charge relates to those who are beginning the Christian life, the babes in Christ. The word "feed" means more than instruction. It means in addition to instruction, surroundings, influences, examples, etc.

2. Tend My sheep. (v 16).

This charge shows a different class. It means to shepherd the sheep. The duty here enjoined is to deal with the mature class. He must feed them, give them the proper instruction, guide them, lead them and correct them.

3. Feed My sheep (v. 17).

This third charge means the caring of aged Christians. The word "feed" is much the same as in the first case. It means that for the aged Christians the instructions ought to be such as will be suited to their needs.

IV. Follow Me (vv. 18-23).

Christ here gives a prophecy concerning Peter's death. It was to be by crucifixion (v. 18.) Peter once shrank from the cross, but now the Lord holds it up before him. It is not the Lord's death on the cross, but Peter's own. Whatever may be before, even the cruel cross, the disciples are directed to follow Him.

Worldly Joy

Worldly joy is like the songs the peasants sing, full of melodies and sweet airs. Christian joy has its sweet airs, too; but they are augmented to harmonies, so that he who has it goes to heaven, not to the voice of a single flute, but to that of a whole band of instruments, discoursing wondrous music.—H. W. Beecher.

Our Lives

Our lives are like a garden, they grow either weeds or flowers.

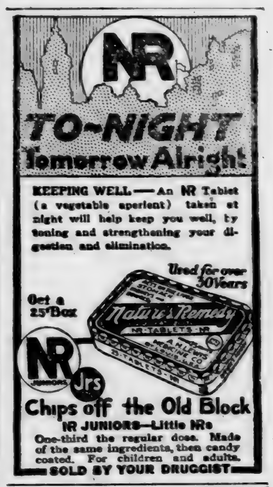
New health in Tanlac

"Long hours broke my health; I was physically "down and out." In constant pain from chest down, could not eat or sleep. Tanlac gave me new stamina, made me a new man." Earl W. Goodman, Indianapolis, Ind.

This statement merely backs up what over one hundred thousand grateful users have said about Tanlac. Our files are packed with such testimony.

If your system is run down, if you can't seem to eat or sleep, have lost weight or suffer from trying pain, why not let Tanlac start you back to vigorous strength and health.

No long, wretched wait to get results! Tanlac starts right in to build you up. It cleans the blood, revitalizes digestive organs, fixes up the liver and makes you feel like a new person. For constipation take Tanlac Vegetable Pills.



A fire insurance company considers a conflagration the best thing out.

"DIAMOND DYE" ANY GARMENT, DRAPERY

Just Dip to Tint or Boil to Dye

Each 15-cent package contains directions so simple any woman can tint soft, delicate shades or dye rich, permanent colors in lingerie, silks, ribbons, skirts, waists, dresses, coats, stockings, sweaters, draperies, coverings, hangings—everything!

Buy Diamond Dyes—no other kind—and tell your druggist whether the material you wish to color is wool or silk, or whether it is linen, cotton or mixed goods.

Hazard not your wealth on a poor man's advice.—Manuel.

Little Children

Need a tonic now. Growing children use up a lot of the nutriment which they get from their food in building new bone and muscle, and therefore they often suffer from a lack of nourishment.

FATHER JOHN'S MEDICINE

contains the nourishment your children need. It is a pure food tonic which builds new tissue, flesh and strength. 70 years in use. Contains no alcohol or dangerous drugs.

Not Much Change

"What will the modern girl be a decade hence?" inquired a contemporary.

Oh, a couple of years further along.—Boston Transcript.

Too Weak To Work

LeRoy, Mich.—"I was troubled with a pain in my right side and in the small of my back. I could not sleep soundly and had no appetite—it seemed that nothing looked good to eat. I was so weak I could scarcely do any work. I wrote to Dr. Pierce, and, upon his advice, took three bottles of 'Golden Medical Discovery,' two of 'Favorite Prescription,' and two of the 'Anuric Tablets,' and occasionally a 'Pleasant Pellet' at bedtime, and I gained nine pounds."—Mrs. Arthur Ruppert, Route 1, Box 15a.

Send 10c to Dr. Pierce, Buffalo, N. Y., for a trial pkg. of any of his medicines in tablet form.

NEWS OF THE TOWN

Sherman Meek of Newville township, is a Democratic aspirant for the nomination of trustee.

Mrs. Ethel Shilling spent several days last week at Hicksville with her parents. On Friday, her uncle of Hillsdale, Mich., was brought to Hicksville for burial.

Rev Otis Jones, pastor M. P Church, is at Elkhart assisting Rev N. Vice in a two weeks revival campaign in the Calvary Church. He left Tuesday afternoon and will return Saturday each week and care for his work here.

Saturday is the last day to file for office. J. H' Benner of Newville township, democrat, wants nomination for J. P. and Benj Markins, republican, candidate for sheriff. Read the announcements in news.

Frank Wallace, state entomologist, says that if people would proceed to care for their fruit trees in the spring as they should, that the frosts would do but little damage. As soon as the frost appears, people have hysteria, consequently fail to give the proper care.

Mahlon Baker of Auburn is quite sick from kidney and blood poisoning which has spread over his entire system. Mr and Mrs Hoker spent several weeks at St. ... this winter but because of his condition they returned to their home in Auburn a week ago Wednesday —Star.

At the meeting of the DeKalb County Ministerial Association at Auburn, Monday, the subjects of the observance of Passion week, and benefits derived from same were discussed. During the business session, they went on record as preferring other days than the Sabbath for funerals, but it is not to be understood that they will not officiate on Sunday. The next meeting will be held the last Monday morning in April.

Mrs. Mary Betz spent Thursday and Friday with Fort Wayne friends.

Fred Quance of Fort Wayne, is spending his spring vacation with relatives here at St. Joe.

Mrs. J. P. Buckingham spent the past week with her mother, Mrs. Margaret Foltz at Holgate, Ohio.

Easter flowers will be on sale beginning Friday at News office. You can not have a real Easter without a spring plant for the home.

Mrs. Leon Sechler of Ft. Wayne, is ill with paralysis of the throat. While she is not confined to her bed she is compelled to keep very quiet.

Saturday was the day set for examination for attendance officer in the office of County Superintendent Clarence Green, but no applicants appeared.

Next Week Curie will have car of fertilizer in for onions, potatoes and garden vegetables. See him now and place your order.

Mrs. W. E. Henley went to Durant, Mich., Thursday morning, returning Saturday evening with her mother, Mrs Vina Fish, who spent the winter with her daughter.

The Butler Ladies Band assisted by Spencerville talent will give an entertainment at the Spencerville Community Hall on Saturday eve, April 3 at 8 o'clock. Proceeds for the benefit of the Hall. Admission 15 and 25 cents.

Bonds in the sum of $8,800 will be offered to the highest and best bidder on April 23 by Miss Carrie Weaver, county treasurer. The bonds will provide funds for the construction of the Roscoe H. Co... nine road in Newville township and will bear interest at the rate of 4½ percent. Also an issue of bonds in the sum of $10,200, proceeds from which will be used to build the Stanley E. Davis road in Newville township, will be offered to the highest bidder.

Home-Grown
NURSERY STOCK

Apple trees, 4 to 6 feet, 25c each.
Peach trees, 3 1-2 to 5 feet, 25c each.
Cherry trees, 3 1-2 to 4 feet, 50c each.
Raspberry Plants, $1.00 per 100.
Strawberry plants, 25c per 100.
Apricot trees, purple, 3 to 4 feet, 25c.
A good assortment of roses at 50c. guaranteed to bloom the first year.
J. W. EVERETTS, Hamilton, Ind.
11t4p

Mrs Gladys Hart entertains the Coburntown Aid in an all day meeting, today.

If you want to know who the candidates are turn to the announcements in this issue.

FOR SALE:—Bay mare, 7-yr. old, weighing 1510 lbs.
B. W. Dwyer, 45-21.
Spencerville, Ind. 13t1.

Chas. Benjamin, wife and two sons of Peru, were Saturday night and Sunday guests of Mrs Ann Abel near Newville, and Roy Wades' of this place.

The R. H. C. met last Thursday afternoon with Mrs. Grace Laub, with eight present and Mrs Fred Gee as a guest. In two weeks Mrs. Minnie Gee will entertain.

The DeKalb County Federation of Women's Clubs will meet Thursday afternoon, April 15, at the First Methodist church in Auburn. A cordial invitation is extended to all rural and city women interested in federated work to attend this meeting.

Russel R. Reidenour
ATTORNEY
Auburn, Ind.

AMONG BEST OF HIS DISCIPLES

Mary of Magdala an Early Follower of the Savior.

There is a quite common opinion that Mary Magdalene was "the woman who was a sinner" mentioned in St. Luke 7:36-50. That woman was evidently notorious for her sinful life, and on account of that opinion the Magdalene has come to be considered a kind of patron saint of depraved womanhood. Even the clergy sometimes use her as an example of the possibility of repentance bringing the vilest of the vile into the company of the blessed.

For this opinion there is not a vestige of proof in the Scriptures, nor does the most ancient tradition support it. We have not the faintest reason for thinking that Mary Magdalene was ever an abandoned woman! To every careful reader of the New Testament it must be a matter to regret that the honorable name of the thankful, good woman, who was the first witness of the Resurrection of Jesus Christ, should have been besmirched carelessly.

No doubt the mention of Mary Magdalene in the chapter next to the one that tells us of the sinful woman at the house of Simon the Leper (Luke 8) has had something to do with the forming of this wrong opinion. Certain authorities were in some cases inclined to identify that woman with Mary the sister of Lazarus, but that is not a popular opinion now with the commentators.

No doubt Mary was known as the Magdalene to distinguish her from the many other Marys, because she came from the town or village of Magdala, now el-Mejdel, on the west side of the Sea of Galilee. It may be that, as a lady of means, the title showed her local importance.

Mary's Call.

When encountered by our Lord, Mary was one of those afflicted with that awful and horrible complaint known as "possessed by the devil." Exactly what that was we do not know, for the disease is no longer in existence, but it was probably something resembling epilepsy, caused by a devilish assumption of power over humanity by Satan, at that time when the great conflict for the mastery of the world was at its extreme height.

Mary of Magdala was a sufferer from such possession to an unusual degree. "Seven devils," were cast out of her by Jesus Christ, either successively or at once, and her relief must have been excessive when Satan's power over her suffering body was broken, and she was a normally healthy woman again.

That she became from henceforth a disciple or follower of her Savior, along with some other women, was not to be wondered at, nor was it strange that in thankfulness, "she ministered to him of her substance."

Whether she proclaimed the good news of the Savior's presence to the mothers of Salem we are not informed, but so devoted a disciple, and thankful a believer could hardly be expected to keep silence about Him in general conversation.

At any rate she followed after Jesus with faithfulness, and if on that dark betrayal night she was unaware of the treachery against Him, she followed along the way of sorrows to Calvary with His mother, and stood in anguish with her beside the cross of suffering.

At the Grave Side.

When Joseph of Arimathea had rescued the sacred body from ignominy, and with Nicodemus laid it decently in his new, rock-hewn tomb, the evangelists especially tell us Mary of Magdala was there, and witnessed the hasty entombment.

For a time she and another Mary sat and wept beside the tomb as loving, mourning women will, until the duties of that last of the old Sabbaths called them away.

They had made their plans, however, and as soon as the Sabbath had passed—at sunset—hastened to buy, mix and prepare a great amount of spices, and no doubt more fine linen, to preserve, attire and do all honor to their Master's body.

Morning found them still at their tasks, and very early, before it was yet light, they stole out with their burdens to Joseph's garden in which was the sepulcher.

That the Roman governor's seal had been impressed upon wax over the sides and lintel of the doorway, a seal not to be broken with impunity, they would not know. Nor could they be aware of the guard of soldiers, Pilate, at the solicitations of the sanhedrin, had placed about the sepulcher!

To their horror and surprise they found the stone rolled away, the sepulcher wide open, and timidly peeping in they saw no sign of the sacred body of their Lord!

Fearful that still further indignity had been offered Him, they hurried back, fast as their feet would carry them, to the house where Peter and John were lodging, breathlessly announcing "They have taken away the Lord out of the sepulcher!"

With headlong haste the two ran through the streets in the early dawn, dashed through the garden, and, Peter now in the lead, entered the tomb, to find grave clothes and head wrap all neatly folded, as though there had been no unfriendly haste about that departure from the grave. To the disciples came remembrances of His talk of "rising from the dead," and wonder as to what marvel might have occurred! The others must be told at once, and they hasten back to them with their news and surmises.

The Risen Lord.

The women had followed the two disciples to the sepulcher, and accompanied them back to the city. But not Mary Magdalene! Wondering, fearing, weeping, she stood in Joseph's garden, not knowing which way to turn in her grief.

A voice inquiring "Why weepest thou? Whom seekest thou?" only aroused a trifling interest. Without raising her head she made answer: "They have taken away my Master out of the sepulcher. If thou hast borne Him hence, tell me where thou hast laid Him, that I may take away that sacred body!"

"Mary!" came the reply. The old familiar accent of tender care, of gentle sympathy, of command, which she had such good reason to remember, was in the word! In a very agony of joy and amazement the woman was prostrate at His feet in adoration, while all she could make her lips to utter was the one word "Rabboni;" My Master; My Master!

Jesus in actual verity, back from the dead! The marks of death still in side, hands and feet, but the same Jesus! And yet not quite the same! The glory of the risen life, of the resurrection, of the world of heaven to which the way was wide open, now shone in His face. He was clad in the resurrection body, able to breathe the air of heaven or the atmosphere of earth, to eat earthly food or exist without it, to move all independently of mundane laws so as to pass where He would. But the same Jesus of Nazareth still!

First Apostle of Gospel.

And Mary of Magdala was the first to see it—she the physical shipwreck, miraculously salvaged by His divine power from the sevenfold bonds of Satan's ruin!

Seldom has mortal experienced deeper, purer joy than that which found Mary in devotion at her Savior's feet in Joseph's garden, on that first Easter morning!

Wonderful are the ways of our God! The first apostles of the Savior's name and birth were a few poor shepherds of Bethlehem; the first apostle of the Gospel of the Resurrection was a woman, one who had been on the threshold of hell, fast bound by Satan's power!

The Resurrection
Matthew 28

In the end of the Sabbath, as it began to dawn toward the first day of the week, came Mary Magdalene and the other Mary to see the sepulcher.

And, behold, there was a great earthquake; for the angel of the Lord descended from heaven and came and rolled back the stone from the door, and sat upon it.

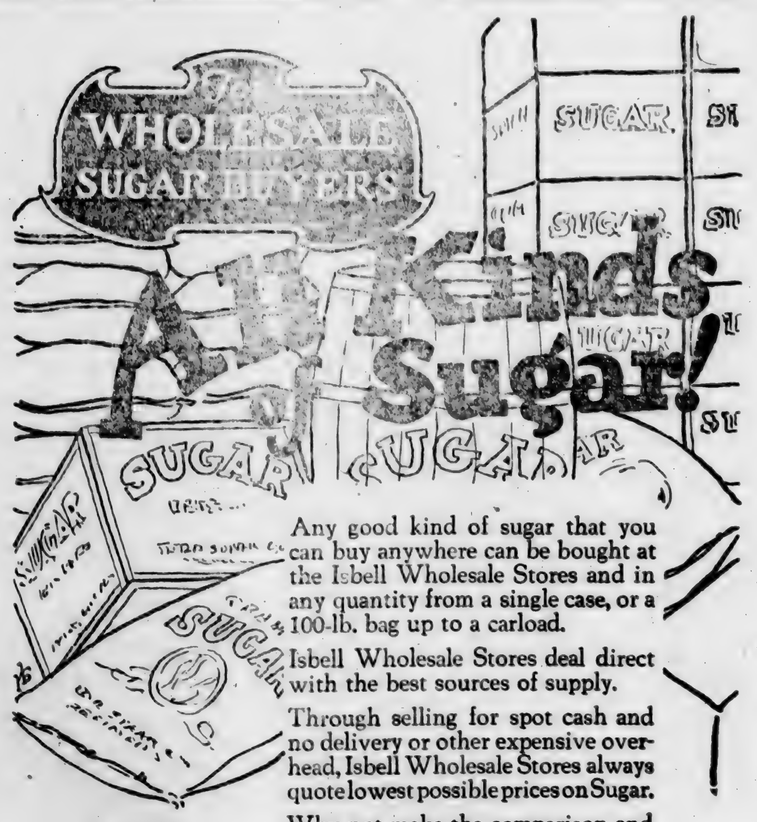
His countenance was like lightning and his raiment was white as snow.

And for fear of him the keepers did shake, and became as dead men.

And the angel answered and said unto the women, Fear not ye; for I know that ye seek Jesus, which was crucified.

He is not here: for He is risen, as He said. Come, see the place where the Lord lay.

And go quickly and tell His disciples that He is risen from the dead; and, behold, He goeth before you into Galilee; there shall ye see Him; lo, I have told you



Any good kind of sugar that you can buy anywhere can be bought at the Isbell Wholesale Stores and in any quantity from a single case, or a 100-lb. bag up to a carload.

Isbell Wholesale Stores deal direct with the best sources of supply.

Through selling for spot cash and no delivery or other expensive overhead, Isbell Wholesale Stores always quote lowest possible prices on Sugar.

Why not make the comparison and satisfy yourself that here is a sure saving of money for you?

In this city and 24 others, Isbell Wholesale Stores are located near the markets, specially convenient for the retail grocers.

Gust Hafner and wife entertained the following guests Sunday: George Henderson, wife and daughter, Miss Esther, Harry Brinsley and family of Fort Wayne, Edward Billman and wife and Frank Wertman and wife.

Obituary

Mrs. Beatrice Irene Miller was born September 18, 1906, at Fort Wayne, Indiana, and died Wednesday, March 24, 1926, at her home, 623 Prospect Ave., Fort Wayne at the age of 19 years, 7 months and 6 days.

Mrs. Miller was the daughter of Mr. and Mrs. Gerry Wasson of the County Line. She was united in marriage to Clesson Miller September 18, 1924, and to this union one daughter, Evelyn June, was born, age 7 months. Mrs. Miller leaves her husband, one daughter, her parents and a host of relatives and friends.

The funeral was held from Forest Park Methodist church, Rev. Herbert Clugston officiating, assisted by Rev. Roy S. Brown of Spencerville. Interment in Odd Fellows cemetery near New Haven.

Card Of Thanks

We wish to thank our many friends for their words of sympathy and floral offerings, as their token of esteem for the one who has gone from us.

Real Store News For the Public

There can be no surer sign that people have a community spirit and pride, than when folks patronize their local merchants. Perhaps we are to blame to a certain degree, by not being more up to date and active in the advertising of our store and the goods we handle. Frank Beams, general store, Spencerville, is preparing his store so that he can ask the buying public this question: "Why shop around, when you can find the latest styles in footwear, and at prices that are below competition?"

Now this statement is not said to just be saying things but we can prove it, if you will call at our store.

In one strap pumps and pumps of patent, vici kid and tan, latest styles, $2.38, $3.45, $3.75 and $4.45.

Childs' Slippers in patent at $2.00, $2.25 and $2.75.

Now for men we have a full line of both work and dress shoes and especially the comfortable Wolverine Work Shoe. We've sold lots of them and can tell you every customer. A nice line of Men's Dress Shirts, Underwear and Work Clothes.

While everyone thinks of the necessary wearing apparel, they must think of their eats and we pride ourself on the clean, staple stock of Groceries we carry.

The farmers' cream and eggs provide many wants of the home and we will pay you the highest market price for either in cash if you wish or trade out what you want. Try us for a real honest test.

If you want to raise 100% of your batch, use a complete food, and this is found in feeding Chamberlain's Perfect Chick Feed. It can't be beat. We have sold it for years and people know what it is.

To prove to our trade that we mean business, NEXT SATURDAY ONLY, April 3, we will sell a regular $1.50 rope stripe Overall for $1.39, and plain blue Shirts at 79c.

Frank Beams,
Spencerville, Ind.

Card Of Thanks

Last Sunday closed a very pleasant pastorate of four years and two months of the Spencerville-St. Joe churches. I take this way of thanking the pastorate for their kindness to me and also to the people at large for their kindly consideration and help. And I am especially thankful to the St. Joe News and its Editors for the assistance rendered and feel sure that the home paper was a factor in whatever success I may have had

Yours thankfully,
S. D. Steffey

ST. JOE.

Don't put off filing that exemption any longer, it means money to you. The News can handle it for you.

Ralph Sechler is improving at Ft. Wayne hospital, where he is taking treatment for ulcers of the stomach.

Mrs. Ann Abel, mother of J. C. F. and Wallace Abel of St. Joe, died Tuesday afternoon of old age, at the home of her son Wallace. The funeral has been set for Thursday at 1:30 from the house, with burial at Cheesetown.

A very pleasant gathering was that which was held at the residence of Derwood Ridgway and wife on Sunday, March 28. It was the birthday anniversary of Mr Ridgway and quite a number gathered in honor of the occasion. A most excellent dinner was served and the guests enjoyed themselves hugely. Among those present besides Mr. and Mrs. Ridgway and family were: A. R. Mason and wife and Duvon Mason of Auburn, Grover Curie and family, Mr. and Mrs. John Wineland, Floyd Ridgway, wife and son, Mrs Belle Ridgway and Glenn Wineland and daughter, Patrice.

He Saved, Why Shouldn't You?

In the days of Washington, saving money was more difficult than in the present. Yet he did save under conditions impossible nowadays. He saved because he believed it to be a good thing to do. Why shouldn't you.

If you are not taking advantage of our service, you're missing something.

A St. Joe merchant told us yesterday that everything is coming down. Yes—everything but print paper and postage stamps.

Well, the democrats sure have a wet candidate for Congress, W. E. Eickhoff of Wayne, making his statements Wednesday morning to the effect that the enforcement of the Volstead Act is a colossal failure, and that while he is opposed (?) to the saloon traffic and bootleg industry, he goes on to say "I declare for a moderation of the Volstead Act to license the sale of beer and wine sold under government supervision." If the real true American democrats stand for such slush as this they are to be pitied—"Ikey" has another guess coming.

Notary work of all kinds attended to promptly at News office.

Loosen Up That Cold With Musterole

Have Musterole handy when a cold starts. It has all of the advantages of grandmother's mustard plaster WITHOUT the blister. Apply it with the fingers. You feel a warm tingle as the healing ointment penetrates the pores, then a soothing, cooling sensation and quick relief.

Made of pure oil of mustard and other simple ingredients, Musterole is recommended by many nurses and doctors. Try Musterole for bronchitis, sore throat, stiff neck, pleurisy, rheumatism, lumbago, croup, asthma, neuralgia, congestion, pains and aches of the back or joints, sore muscles, sprains, bruises, chilblains, frosted feet, colds of the chest. It may prevent pneumonia and "flu."

The Valley of Voices

By GEORGE MARSH

Author of "Toilers of the Trail," "The Whelps of the Wolf"

(W. N. U. Service.) (Copyright by the Penn Publishing Co.)

CHAPTER X—Continued

—17—

"Can we run it?" he called, above the thunder of the white-water, muscles set in a crouch, nerves raw with suspense.

"Down, flat!"

With a fierce lunge of his blade, David swung the nose of the craft toward the beach as an Indian rose to his feet in the low scrub. In mockery of his victims the assassin laughed as he deliberately raised his rifle. But the Mannlicher with the lone shell spat first and the surprised Ojibway crumpled where he stood.

"Down!" cried David. A rifle exploded on the shore, and the men in the boat again flattened, as a bullet splintered the gunwale. Then, caught in the pull of the first pitch, the canoe slid sidewise, until straightened by the lunge of two paddles, and nosed down, out of range of the beach, into the white half-mile of the boiling Frying Pan.

The thought of two women who would wait for his coming—the mother at home and the girl far on the Wailing—wait while two battered bodies lay stiff in the ice somewhere along the Jackfish, flashed through Steele's brain, then the battle was on.

As the boat shot down the first flume, the stark despair which had gripped Steele when they had been sucked into the head of the rapid, gave way to desperate hope. For it was clear, from the insistence of David on the poles being free in the boat, that he had foreseen the possibility of being driven into the Frying Pan. He believed the fight to get through worth making.

On leaped the canoe, like a runaway horse, ever seeking the black water channels, hanging momentarily on the lip of disaster, only to be lifted and swung off by the pole of the fighting bow-man; burying its nose in the spume of broken water, to rise, shake free, and plunge on into the white riot beyond.

Finally, as the rock walls of the gorge swept past in a gray blur to eyes which hunted the water trail ahead, David's right hand shot up and circled in the air, then regripped his paddle.

"Whirlpool!" gasped Steele, the hope which had grown with the passing moments, dying.

A matter of seconds and they would take the big chute ahead; beyond this, the suck of the whirling water. Once in the grip of the eddy, the canoe would up-end and go down—into the maw of the vortex.

From braced knees the bow-man, leaning far out-board, with bowed back, fought the nose of the boat inshore as it plunged and took the chute; then, as it shot with the current for the pool below, two madmen battled with their blades for the inches—inches which meant victory or—

With a leap the canoe hit the pool; wavered, caught in the lip of the eddy; but held by the lunging blades, sheered off, was free, and shot on; then, charging through a stretch of broken water, rode the "boilers" below the last pitch and out into the easy going of the open river.

With legs awash in the slop picked up in the rapids, panting, spent, the two men smiled into each other's drawn faces.

"We licked 'em both, Laflamme and the Frying Pan!" gasped Steele.

"Good job, dat!" grunted the Ojibway, proudly, between breaths. "Dey say we lie—w'en we tell dem—at Nepigon. Now we cum back—an' get de Windigo!"

"And Laflamme!"

"We get heem anyway—de Windigo, mebbe."

"Thought you said it couldn't be run?"

"Wal, I look her ovair one tam, and I t'ink eef you keep lef' side ov dat eddy, you can run eet."

"We beat it, but I thought it had us when we struck it. I heard but one shot from the shore when we started; do you suppose that there were only two there?"

"Onlee two, I t'ink. Dey wait for us to come een. W'en I hit dat one, de odder get scare. He not know 'bout dat shell. Dat ees w'y he miss."

"That was good shooting, David! You fired so quickly, you couldn't have seen the sights—and our only shell."

"Wal, we drop down piece, get de water out, and patch her up. I got two bad leaks under me."

"Suppose that Indian follows down the gorge, he'll get a pot shot at us if we go ashore here."

David laughed loudly. "W'en he see us haid for de Fryin' Pan, he say: 'Bo-jo! Dere go two dead men!' He weel not follow."

CHAPTER XI

For a week the two voyageurs had traveled on half rations eked out with an occasional pike or dore, which had been lured with much patience from their winter lethargy, but each morning as they ruefully surveyed the fading food supply, Steele had reiterated: "You can't starve two men who've run the Frying Pan!"

Then followed silent hours of paddling in which the thoughts of David centered largely on the future consumption of savory moose steaks at Nepigon House, while for Steele, heart hunger and the necessity for an early solution of the problem at Wailing River had served as anodyne to his craving for food.

Another week and Steele was hurrying east on the Canadian Pacific. Arriving in New York and reporting at the museum, he readily obtained permission to follow up this most amazing example of the abnormal in the habits of Canadian mammals, inextricably involved with Indian superstition in so baffling a manner as to defy any ordinary methods of solution.

On the way west, Steele made frequent trips to the baggage car to talk to a long-eared, wrinkle-faced hound.

"If I had had you, old boy, last September, up on Big Feather lake," he often repeated regretfully, rubbing the ears of the great black and tan beast, "there would be one less Windigo in the Wailing River country. I don't know what you can do on the snow. You may freeze in that country, with your short hair, but you're surely going to have a chance to help us out when we lose a trail. The huskies haven't got your nose, and won't hold to a trail as you will. And when that fog-horn bay of yours booms out over the hills, there's going to be a general scramble for cover among the beasts and devils that hear it."

The bloodhound, trained in the Tennessee hills, had arrived in New York in response to an urgent telegram from Steele to a friend who bred the man-hunters on his southern plantation. There was no doubt in Steele's

"Whirlpool!" Gasped Steele, the Hope Which Had Grown With the Passing Moments Dying.

mind that the riddle of the Windigo would have been solved in the autumn, had he had a bloodhound at Wailing River. But the ability of the southern-bred dog to hold a trail on the strange medium of snow or ice was a matter outside the experience of those he had consulted. However, as there would be no crust until March, daylight tracking would be easy in the new snow. It was for night work when the absence of shadows obliterates a snow trail, and when a trail followed wind-swept ice, that Steele had gambled on the sensitive nose of the bloodhound to aid them.

In his wallet he carried a sealed letter of instruction from the Montreal headquarters of the Revillon Freres, addressed to Lascelles at Fort Albany, supplementing orders to be sent with the Christmas mail packet by the Abbitibi route. But, as he was informed, "business was business," and the payment to the company of the value of the fur lost by St. Onge would not justify the management, against the advice of their inspector at Albany, in keeping the post open, as it had never done well.

At Ottawa, Steele had been assured that a police canoe would be despatched to Ogoke in the early spring, but that all available men would be on duty elsewhere during the winter on more pressing matters.

So, as his train carried him west through the white wilderness to Nepigon station, where David was to meet him with the best dog-team obtainable, the problem he faced continued unchanged by his trip east. It still remained for Michel, David and himself unaided, to run down the beast or beasts which had spread terror through the valley of the Wailing, and to hold the Indians on their traplines. There was yet the mysterious tragedy at the Devil's Mile to be solved before the taboo would be lifted from the lower river.

At Nepigon station a five-dog sled, driven by a half-breed, waited in the snow for the passenger with the bloodhound, and only the swift use of David's long, caribou-hide whip saved the dazed beast from speedy annihilation by the team of half-wild huskies.

"Hello, David!" cried Steele, keeping his dog at a distance from the white fangs which threatened him. "Are the trails open?"

"De Jackfish bin close onlee few day. You cum back queek, boss," answered the Ojibway, a wide grin furrowing his face.

"We've got plenty of planning to do at Nepigon house before we start. Guess how many shells I've got for your Mannlicher."

"Wal, I need one for fr'en' ov yours, an' 'noder for bear dat seeng ink de cat—two ees all, I t'ink."

Steele laughed. "Oh, I've got a few more than that for you. You may need moose, or meet someone at the Frying Pan some time, so I've brought you three hundred. How's the family? Does your wife object to your going?"

"She say she t'ink I got girl down at Wailing Riviere."

Three days of sledding over a good trail, for the snow was not deep, brought the team to Nepigon House at the head of the great Nepigon lake which was partly iced over. There, while the bloodhound, wearing a blanket, became somewhat more acclimated to the cold, and the huskies were forcibly taught to respect him as a permanent member of the party, David and Steele made their plans for a campaign on the snow.

Each white mile they put behind them, each camp they made at night, meant to the impatient Steele, one mile, one day, nearer the girl who needed them. But, as he broke trail ahead of the team, when they cut back from the shore to circle rapids or quick-water, or rode in the easy going of the river ice, the task he had set for himself and his two friends appeared more and more difficult of accomplishment. Suppose the Windigo were not again to appear in the valley; or, they might not again cross its trail? What then? The harm had been done, and the Indians would continue to desert the Wailing as the rumors spread.

In that case, it was a lost cause—hopeless. Only in the event of the early reappearance of the beast at the post when they could speedily take up the trail and stay on it until they came up with the owner of the voice, could a swift solution of the mystery be possible. The future looked gray to Steele.

However there was one ray of light in the gloom of his fear of failure. Michel had definite suspicions, of some nature or other, which he had promised to share on Steele's return to Wailing River. And as Steele and David nightly sat under their shed tent before a fire in the heart of a spruce thicket, and talked over after-supper pipes, the optimism of David was so marked that the American knew that the clue which had, for some reason, been kept from him deeply impressed the Indian.

At last, through the early dusk which shut down on the valley one November afternoon, gleamed the yellow lights of Wailing River.

The pulse of Steele speeded as he made out the blurred shape of the house which Denise St. Onge called home. The morning he went away she had come to him with mist in her eyes. Would they shine again, he wondered, with that new light, now that he had come back to fight for her, or would she freeze into that other self—hold him at a distance because of her quixotic bargain with Lascelles?

Steele opened the door of the trade-house, followed by David. At their entrance, St. Onge turned in his chair behind the slab counter where he sat in conversation with his head man.

"Good evening, gentlemen!" The voice of Steele rang in the silent room.

With eyes wide with amazement and surprise, St. Onge slowly rose to his feet, while the lean face of the Iroquois thrust forward, tense, apprehensive, as if he feared a trick of vision.

"Bo'-jo', Michel! W'at you t'ink you see, de Windigo?" And David advanced with outstretched hand.

"We have returned as we promised, monsieur!" added Steele, approaching the counter behind which the startled men stood staring at the booded apparitions.

Then, with a yell and a bound, Michel cleared the counter and was hugging the blocky Ojibway.

(TO BE CONTINUED.)

Growth of Law Library

A law library which would have been complete, with all of the volumes of American decisions and all of the volumes of American statutes, has recently been calculated to have contained one hundred years ago about 180 volumes of decisions and 60 volumes of statutes, says the Nation's Business magazine. Today, it is said, a library which would be complete in the same sense would contain 18,500 volumes of decisions and 5,500 volumes of statutes. One hundred years in the future, if the increase during the last century is maintained, such a library would have to contain 1,350,000 volumes of decisions and 550,000 volumes of statutes.

GOOD ROADS

HARD ROADS WILL HELP MERCHANTS

Merchants invariably report an increase in their volume of business when a hard-surfaced road leading to their town is opened for traffic. This has been clearly demonstrated in many communities. The following editorial from the Oshkosh (Wis.) Northwestern cites a specific instance:

"Without question the hard-surfaced highways helped to increase the volume of local holiday trade. Many shoppers came to Oshkosh from points thirty and forty miles away, some of them in private autos, and others in the auto busses now in operation. These bus lines were taxed to the limit, and with the favorable combination of good weather they maintained their schedules with gratifying regularity. The growth of this business during the past season has been a revelation of what can be accomplished along this line.

"When the highways are properly improved, it is a safe prediction that a similar service will reach every section within fifty miles of Oshkosh. All this territory naturally is tributary to Oshkosh as a marketing and shopping center, and Oshkosh is naturally interested in obtaining and holding the trade of this rich and populous section. The way to do it has been disclosed by what already has followed the improvement of the public highways, and the people and business interests of Oshkosh have good reason to favor and encourage further improvement of the highways until a perfect system of good roads is obtained.

"The benefits and advantages will be mutual, for quick and easy transportation is a convenience that promotes the welfare of all. Of course, we appreciate the service of the railroads and the electric lines, but modern, improved highways throughout this section is the next big development, and it will do much to add to the success and prosperity of Oshkosh and all adjacent sections."

Highway Research Board Seeking Low-Cost Road

Natural earth roads, which compose 85 per cent of our rural highway system, have been the subject for a series of studies by the federal highway research board.

"We realize what a great economic waste this is," says Prof. S. S. Steinberg of the University of Maryland, "when we consider that one-third of all the automobiles in use are owned by farmers, most of whom are compelled to use the earth roads.

"Many attempts have been made to solve this problem. North Carolina has used a sand asphalt surface, made up of a mixture of 93 per cent sand and 7 per cent of asphalt.

"Realizing that this is one of the most important problems confronting highway engineers, the highway research board is attempting to co-ordinate completed and current research on the subject with the hope of developing a low-cost road surface that will be suitable for light traffic."

Illinois Paves Roads to Save Maintenance Costs

The vast saving in annual maintenance charges resulting from the paving of Illinois' roads is indicated by comparing the cost of maintenance in Illinois and Iowa. The report on Lincoln highway maintenance in Iowa shows that it cost $201,371 to keep in repair the 380 miles of the Lincoln highway in Iowa last year. Eighty miles of the transcontinental road are paved, subtracting greatly from the total expenditure, but even then the average cost of upkeep was $529.92 a mile. In Illinois where the entire mileage of the Lincoln highway is paved the maintenance cost is estimated at $17,646.20 for the same period or an average of $102.80 a mile. Apparently if the Lincoln highway were paved entirely across Iowa a yearly saving of $426.12 a mile would be effected, or over $162,000 a year.

Good Roads Notes

Highways, roads and streets cost America one and a half billion dollars annually.

• • •

Good roads are not being constructed fast enough to take care of the increase in vehicular traffic.

• • •

Secondary only in importance to the necessity of a more extensive road building program in the United States is that of keeping those roads open for traffic 12 months out of the year.

• • •

Better highways are proving trade builders for the traveling salesmen and customers and with automobiles are enabling the commercial men to cover larger territories with greater comfort and convenience and at less expense.

• • •

A total of more than $8,000,000 will be received for the eleven months of Michigan's 2-cent gasoline tax which went into operation last February 1. The eight months' receipts from Minnesota's tax effected May 1 will aggregate $3,750,000, it is estimated.

Backache Wearing You Out?

Every day find you miserable with backache? Suffer sharp, stabbing pains? Feel lame and stiff—always tired, nervous and dispirited? Then look to your kidneys! Your kidneys are the blood filters. Perhaps they have failed to properly rid the blood of body poisons. Naturally, then, you suffer the injurious effects of this slow poisoning. Don't risk neglect! If your kidneys need help, use *Doan's Pills*. No other kidney diuretic is so well recommended nor so successful. *Ask your neighbor!*

An Ohio Case

Mrs. John Park, 114 Jackson St., Port Clinton, Ohio, says: "A cold settled on my kidneys. I also had backaches. My back was lame and weak. Severe dizzy spells came on at times and I had to lie down. Two boxes of Doan's Pills rid me of the trouble. My back has been free from pain and I got rid of the dizzy spells."

DOAN'S PILLS 60c
STIMULANT DIURETIC TO THE KIDNEYS
Foster-Milburn Co., Mfg. Chem., Buffalo, N.Y.

New Absorption Treatment for Piles

PILE REMEDY Send your name for our FREE TREATMENT. It will give quick relief. It absorbs the pile tumor by giving permanent relief. If you want the complete guaranteed treatment, send $1, or we will accept 50c and two names of friends suffering with piles. Oglo-Evans Co., 323 W. Lake St., Minneapolis, Minn.

A Liniment
Porter's Pain King
Checks Colds and Coughs. Relieves Aches and Pains. Heals Sores, Cuts and Burns
Used Since 1879

KEEP YOUR SCALP Clean and Healthy WITH CUTICURA

Green's August Flower for Constipation, Indigestion and Torpid Liver
Relieves that feeling of having eaten unwisely. 30c and 90c bottles. AT ALL DRUGGISTS.

CORNS

Lift Off—No Pain!

Doesn't hurt one bit! Drop a little "Freezone" on an aching corn, instantly that corn stops hurting, then shortly you lift it right off with fingers.

Your druggist sells a tiny bottle of "Freezone" for a few cents, sufficient to remove every hard corn, soft corn, or corn between the toes, and the foot calluses, without soreness or irritation.

The man who gives up goes down.

DEMAND "BAYER" ASPIRIN

Aspirin Marked With "Bayer Cross" Has Been Proved Safe by Millions.

Warning! Unless you see the name "Bayer" on package or on tablets you are not getting the genuine Bayer Aspirin proved safe by millions and prescribed by physicians for 25 years. Say "Bayer" when you buy Aspirin. Imitations may prove dangerous.—Adv.

A smile strikes in as well as out.

Claims Stomach Souring Causes Bad Breath

New York City, Mr. Ben Loheide writes:—"I was formerly a victim of constant upset stomach, bad taste in the mouth and very disagreeable breath. My bowels were constantly constipated and nothing helped except temporarily. After using Carter's Little Liver Pills I have overcome all troubles and I am especially happy because of a sweet clean healthy breath."

Carter's Little Liver Pills are small, sugar coated, easy to take by every member of the family. Their action on the bowels is gentle. 25c & 75c red pkgs. Druggists.

DR. W. B. CALDWELL AT THE AGE OF 83

Old Folks Need a Mild Laxative —Not a "Physic"

Most men and women past fifty must give to the bowels some occasional help else they suffer from constipation. One might as well refuse to aid weak eyes with glasses as to neglect a gentle aid to weak bowels.

Is your present laxative, in whatever form, promoting natural bowel "regularity"—or must you purge and "physic" every day or two to avoid sick headache, dizziness, biliousness, colds, or sour, gassy stomach?

Dr. Caldwell's Syrup Pepsin helps to establish natural, regular bowel movement even for those chronically constipated. It never gripes, sickens or upsets the system. Besides, it is absolutely harmless and pleasant to take.

Buy a large 60-cent bottle at any store that sells medicine and just see for yourself.

Dr. Caldwell's SYRUP PEPSIN

To give is the business of the rich.—Goethe.

Watch Cuticura Improve Your Skin. On rising and retiring gently smear the face with Cuticura Ointment. Wash off Ointment in five minutes with Cuticura Soap and hot water. It is wonderful what Cuticura will do for poor complexions, dandruff, itching and red, rough hands.—Advertisement.

A man never gives much thought to the ups and downs of life until he strikes the downs.

Why Eggs Were Cracked

"So many of your eggs are cracked."

"Well, you know eggs dropped yesterday," explained the ready dealer.

Snowy linens are the pride of every housewife. Keep them in that condition by using Red Cross Ball Blue in your laundry. At all grocers.—Advertisement.

Some men spend half their time in making promises and the other half in making excuses.

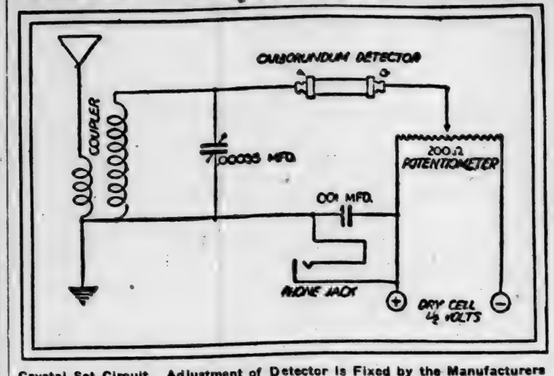
RADIO



Crystal Set Circuit. Adjustment of Detector Is Fixed by the Manufacturers and Remains Permanent.

By WILMER S. TRINKLE
In Philadelphia Public Ledger.

One of the greatest drawbacks in the average crystal receiver is the lack of selectivity. To separate successfully broadcasting stations when several local stations are on the air is an absolute necessity if good uniform reception is to be obtained.

The set here described is one designed to meet the above requirements. The selectivity is quite good and testing this set in the heart of the city the writer was able easily to separate the Philadelphia stations and also to receive programs from WJZ, when that station was broadcasting through 2XAR, its 50-kilowatt station at Round Brook.

The detector circuit here shown will be familiar to the old operators who regarded it as one of the most reliable in a fixed type and is shown in the circuit diagram. It may be used in the usual type of circuit, which does not require a battery, but detector sensitivity is materially increased by the use of an applied voltage that can be regulated to a fine degree. This is regulated in the set here described by a potentiometer.

The adjustment of this detector is fixed by the manufacturers and remains permanent. The crystal here used is of the carborundum type and the contact pressure is quite heavy.

The Parts Needed.

The parts used to construct the set here described are as follows:

One fixed carborundum detector.
One aero-coil coupler.
One variable condenser .00035 mfd. capacity.
One fixed condenser, .001 mfd. capacity.
One potentiometer, 200 ohms.
One single-circuit jack.
Four engraved binding posts marked as follow:
Ant., Gnd., A—, A+,
One panel, 7 by 10 inches.
One wooden sub-base, 7 by 8 inches.
One 4-inch dial.
Two lengths of No. 14 bus wire.
One dry-cell, one and a half volts.

The coupler used is of the single-layer solenoid type of the air-core variety and consists of two windings. The outside coil is the secondary, is three inches in diameter and consists of 61 turns of No. 22 double cotton-covered wire. The primary is wound inside of the secondary and near one end. It consists of seven turns of the same size wire as the secondary and is space-wound. This coupler covers the broadcast wave-length band when tuned with a .00035 condenser.

The condenser used is of the new straight-line frequency type and has a maximum capacity of .00035 mfd. It is quite compact and requires but little more room than the old-fashioned, straight-line capacity type. The use of this condenser in conjunction with the specified coil gives uniform frequency spacing on tuning dial.

The crystal detector used is a fixed carborundum and is completely sealed in. The user does not need to make any adjustments at all. One terminal is marked A and the other G. These figures are indicated in the circuit diagram, and the detector hooked up in that fashion. However, try the detector both in the position shown and also reversed to ascertain which way it works the better in your own particular set. The voltage of the battery used in this particular detector circuit is varied by the use of the potentiometer so that the best operating point may be found.

Laying Out the Panel.

The laying out of the panel is quite simple, and the drilling is cut down to a minimum. Starting from the left of the panel, measure in three inches and up three and one-half inches to locate the center of the condenser.

The potentiometer is mounted two and one-half inches in from the right hand edge of the panel and is on a line with the center of the condenser. The phone jack is mounted four and one-quarter inches in from the right-hand edge and one inch and a half up from the bottom. By studying carefully the rear view of this receiver, the other instruments can very readily be mounted in their respective positions.

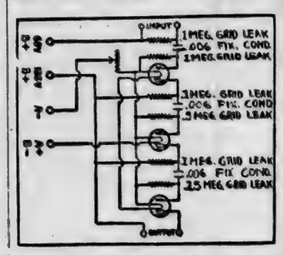
Wiring the set may then be begun, and by carefully following the circuit diagram, no trouble should be experienced.

After the entire set has been assembled and wired, the antenna and ground should be connected to their respective posts, and a one and one-half-volt dry cell connected to the A posts. By manipulating the tuning dial and potentiometer adjustment, it should now be possible to tune in broadcasts. It is then time to try reversing the polarity of the dry cell and also of the crystal detector. After the best combination is found, do not change it.

Best Amplifier for Reducing Distortion

No doubt there are a number who have one-tube sets with which they would be quite satisfied if they gave more volume. Adding amplification will accomplish this object.

The resistance coupled amplifier is one of the best amplifiers for distortionless reception. It is a very easy amplifier to build, costs less than any other form of amplifier, takes up little



Resistance Coupled Amplifier Best for Distortionless Reception.

room, and compared with other amplifiers, draws less current from the "B" batteries.

On the other hand, it has some disadvantages. It requires three tubes to give about the same results as are secured with two tubes in a transformer coupled amplifier. Another disadvantage of this amplifier is that it takes more "B" battery voltage, up to 135 volts, as against 90 volts required for other types.

As you can see by the circuit diagram shown, it consists principally of a series of resistances. The condensers used vary from .006 to .05. The best capacity will be found only by experiment. However, in most cases .006 is correct. If you are using dry cell tubes, you will have to vary the resistors which make up the secondary until you find those that give the best

Slow Charge Is Best for Your Radio Battery

Storage batteries are charged by sending a direct electric current through them in the opposite direction to the current flow on discharge.

For the usual six-volt battery, the charging current ordinarily used will be from two to five amperes.

In order to obtain such a rate of current flow various types of battery chargers are used.

These convert the source of supply to which they are connected into direct current, if the source is alternating current, and reduce the voltage to the proper value for charging the battery at the current rate it requires.

Cells should not be overcharged, because of the danger of buckling the plates, due to surface expansion.

If the plates become sufficiently buckled, internal short circuit may be caused, resulting in bad sulphation. Overcharge, however, is not nearly so liable to damage the battery as overdischarge.

How to Tell Values of Different Grid Leaks

A suitable set of values for a grid leak would be one megohm, two megohms, three megohms, five megohms and seven megohms. A means may be provided for bringing these values in action which may be secured by wiring a tap switch so that it may be used to switch any one of a number of grid leaks into the circuit. This will provide a definite, positive value of grid resistance to suit the requirements of various groups of stations, according to their distance and power.

How Condenser Operates

The fixed condenser in the grid circuit of a resistance coupled audio-amplifier is an important part of the apparatus, as it allows the radio frequency current on the plate of the previous tube to reach the grid of the next, but prevents the D. C. plate battery voltage from reaching the grid

—and there's a set of these Cookie Cutters for YOU!

CHILDREN can hardly wait until cookies are out of the oven when they're made with these animal cutters. Four in the set—cat, lamb, goose and bunny. And they'll cost you nothing but the packing and mailing cost—15c. With them we'll send a Davis Cook Book, too.

The cookies you'll make are examples of the many good things made with Davis Baking Powder. Davis is *pure* and *sure*—it makes biscuits feathery light, cakes and cookies so palatable and pleasing! And in addition, it costs you less and you use no more than of any other high grade baking powder.

Bake it BEST with

DAVIS BAKING POWDER

WHY SHOULD I
BUY AT BUTCHER SHOP

BECAUSE

You want good meat, of course. And as we do our own butchering we use only selected stock--therefore serving you only the choicest meats at all times from our market.

St. Joe Meat Market,
HARMAN & HELLINGER, Proprietors.
Notice: Pay your account, it is due now.

The Ghosts of Waste

Out from the night of the grayish penetrating mists of heedlessness of the morrow, in all its subtle clamish uncanniness, the Ghosts of Waste stalk grimly before us.

They are stalking before you.

Are you flirting with the damp, misty shadows of wastefulness without giving thought to their effect on your future—or, are you relegating "Their Grimness" to the past by taking advantage of the opportunities of today?

Don't let the Ghosts dance on the grave of one of your dollars that has been thoughtlessly murdered.

Learn to spend less than your income. The feeling of security engendered tends to greater efficency—the highroad to success.

Eliminate the waste—keep the result and let the Ghost dwell in the graveyard of the past.
Let us tell you what happiness saving brings to others.

The St. Joe Valley Bank, A STATE BANK

When the demon Rust enters, the "good bye fence"! Quality of steel and manufacturer's claims have no effect on this active enemy.

Hence the care that is devoted to the galvanizing of Kokomo Pioneer Fence—*to keep rust out.* The most modern, the most approved methods are used and the heavy coating is *99⅝ per cent pure zinc.* That means protection. That means Rust, which eats the life out of steel, can not enter to "do its dirt." You are assured of a GOOD fence for a longer period of time than you ever thought possible.

There are reasons for Pioneer Superiority: the exclusive Kokomo Pioneer Knot, that is a semi-hinge knot, and which gets tighter, the harder the strain, and the coiled line wires become live wires when properly stretched, taking care of all expansion and contraction.

WILLIAM CURIE, Dealer, St. Joe, Indiana

KOKOMO PIONEER FENCE

-For Farm and Poultry

WHY NOT FILE AN EXEMPTION?

The News is fully prepared to make the necessary papers out at a nominal charge of 35 cents. In order to assist in making the proper record please bring a tax receipt showing description of property. Do it now and save several dollars in taxes.

Sunday School, 9:30.
Prayer meeting Thursday eve, 7:00 o'clock

Easter Cards of special choice assortment at News office.

Mrs Willys Wilcox and daughter of Fort Wayne, were over Sunday guests of her parents, Chas. Cochran and wife.

George Wade and grand-daughter Phyllis, are visiting relatives in Clay Center and Topeka, Kansas, for about a month.

H. J. Renner and wife and the Misses Edna Jackson, Hilda Koch and Margaret Goodwin, were among the Fort Wayne visitors, Saturday.

The Fish and Game Club meeting as called for Friday evening of this week has been postponed on account of not being able to use the school house. Announcement will be made later, also program.

An order was made in the DeKalb circuit court Thursday by Special Judge A C. Wood of Angola, fixing the date of filing of the supplemental report by the drainage commissioners in the Daniel Hursey drain as April 7.

The Butler Ladies Band, assisted by Spencerville talent, will give an entertainment at the Spencerville Community Hall, on Saturday eve, April 3, at 8 o'clock. Proceeds for the benefit of the Hall. Admission 15 and 25 cents.

The White City Cemetery Association of Spencerville held its biannual meeting and elected the following directors for the term of two years, R. E. Furnish, Loren Means, Gust Cupp, Harvey Kimes and Roscoe Walter. The report of the treasurer shows $38 92. The work of the board in the past has been very satisfactory to the lot owners and the cemetery is kept up in good shape.

George M. Barney of St. Joe is in the race for nomination for County Recorder, on the Democratic ticket, making his declaration public last Tuesday. Mr. Barney will be remembered over DeKalb county as the son of Solomon Barney, well and favorably known in "Odd Fellowship" all over the county and state and having been engaged in the mercantile business for years, thus making his acquaintance quite general. At one time his grandfather served as county treasurer.

Local Briefs

Lightning never strikes twice in the same place because it isn't necessary.

Elmer Hart and family of Napoleon, Ohio, were over Sunday guests of relatives. They in company with J. L. Rhodenbaugh and wife, took dinner in the Rolla Wiers home.

ST. JOE NEWS.

VOL. XL — ST. JOE DeKALB COUNTY, INDIANA, THURSDAY APRIL 8, 1926 — NO. 14

To Answer Fire Calls In Country

Local Fire Company Now Available for Fire Calls within a Reasonable Distance of St. Joe.

Due to the fact that the local volunteer fire company was prohibited from leaving the incorporated limits, by authority of higher-ups, much dissatisfaction was caused in the community at large, because everyone assisted in financing this, with the thought that it would be a community benefit.

Many community calls have been made in the past, and now arrangements have been made so that when necessary, they can resume this practice.

The town board has provided new equipment in the purchase of five chemical tanks of three gallon capacity, 100 feet of new hose. It is further agreed that when a call to the country is made, that the Fire Chief delegates two men to remain at the fire house on duty, until the company returns from their call. This is the only protection that local people will have, in case a fire should start while the the company is called elsewhere on duty.

The equipment at the present is very good of a well equipped chemical truck with two tanks of 45 gallons each, 100 pails, ladders both hook and extension, axes, chains and spuds. The membership is 15 men. Three new men were added last week, Roy Bowser, M. M. Maxwell and Wilbur Yeiser. Besides this equipment the truck equipment is to be rearranged to allow more speed in handling.

Wherever a call is made, the party calling is to pay to the company the actual expense of materials used during the fire. When the company was first organized the members were paid by tax exemption of a certain amount, but now the town pays each man for the time spent in the service.

We are glad this matter is again settled, but that no fire calls will need to be sent in.

Derwood Ridgway is Fire Chief.

Change Made in R F D

A change made April 1st, in Rural Route No. 2 out of Spencerville, gives the patrons on the stone road, west of town, better service, from the Curt Watt Corners west. All of these people were served out of St. Joe before this and were compelled to walk to the corners for their mail.

Married For Fifty Years

Mr. and Mrs J. C. Bailey were married fifty years, Tuesday, but they celebrated the event on Sunday by the following being present: Mr. and Mrs. L. Bailey of Auburn, Mr. and Mrs. George Watson and children of Jackson township, Marvin Poper and family of near St Joe and R. S. Bailey and family of Springfield township, Allen county.

Mr. Bailey is 74 years of age and Mrs. Bailey is 69, and both are enjoying reasonably good health and are active in business, conducting their grocery. They were married in 1876 and have spent many years of their life in St. Joe, at the place where their business is now located

At the big dinner Sunday, very prominent among the good things to eat was a large cake, the gift of the Federal Bakery at Auburn.

Flowers and cards were sent by local friends, expressing their congratulations.

Only Half Have Passing Grade

The following is the result of the eighth grde examination held last month at Auburn:

Of the one hundred and eighty-two who took the examination, 91 were successful in passing. Sixty-five were conditioned in one of two subjects and twenty-five failed in three or more subjects. Those conditioned may write again on the subjects in which th y failed on Saturday, April 17, and those who failed on three or more may write the entire examination again on the above date. Most of the failures were in history and grammar

Card Of Thanks

We wish to thank our friends and neighbors for their kindness shown us during the illness and death of our father, also for the floral offerings and words of comfort.

B. E. Widney.
Viola Carpenter.
O. L. Widney.

HOME, DAD AND THE BOY

By FRANK H. CHELEY

Are You a Regular Dad?

IF YOU Are; It Is Because You Believe that it is a far greater thing for a boy to make a life than to make a living, and that what a boy is, is, after all, his only just claim to greatness and so train your boys accordingly.

Because You Would Rather Be Known any time as a successful father than as a successful business or professional man, for to be so known is to be measured by much the larger "measuring stick."

These Are But a Few of the Reasons why many boys, grown tall and straight and true, declare that they wish to be men "just like their dear old dads."

Is Not That Better by Far than having a whole column in "Who's Who in America," a cigar named after you, or even a statue erected to your memory in the city park?

All Such Men Are Real Fathers, true to themselves, true to their sons, true to their country and their God.

ARE YOU SUCH A MAN? YOUR SONS KNOW!

(By F. H. Cheley, Denver, Colo.)

BULLETIN

Wayne Provines Killed By Motor Bus.

St. Joe relatives received word Monday evening of the death of Wayne, the five year old son of H. G. Provines and wife of Oklahoma City. While the facts are not known in detail, the boy was struck by a motor bus, while on his way home from Kindergarden and soon died from his injuries.

Wayne was their only child. Another son dying of appendicitis a few years ago, after spending his vacation at St. Joe with his parents, only being returned home about 10 days, when he was brought to St. Joe for burial.

The body arrived in St Joe over the Wabash railroad at 6 o'clock Wednesday evening and the funeral will be held from the Lutheran Church at 1:30, Thursday afternoon.

Suffers Attack of Indigestion.

Froat Melton, aged about eighty years, was stricken Tuesday afternoon at 1 o'clock in the office of the county treasurer with an attack of high blood pressure and acute indigestion and fell unconscious to the floor.

Mr. Melton, the father of Frank Melton, an Auburn barber, had driven to town to pay his taxes on a small piece of property which he owns in Concord township. Mrs. Carrie P. Weaver, county treasurer, was making inquiry about the location of his property when Mr. Melton dropped to the floor unconscious.

Mrs. Weaver and her husband immediately went to the assistance of the stricken man and tried to revive him, in the meantime calling a physician and Mr. Melton's son. The aged man was given restoratives after the physician had diagnosed the case as acute indigestion.

Mr. Melton had evidently eaten a heavy dinner and this, together with a drive through the cold and climbing the stairs to the second floor of the court house contributed to his sudden attack.

Mr. Melton has been making his home with Mr. and Mrs Fred Hefty, three miles east of Auburn. The attending physician thought that the attack would be temporary and that Mr. Melton would recover

Late in the afternoon Mr. Melton recovered sufficiently to be taken to the Hefty home —Star.

HERE AND THERE

A bachelor says that when a man hasn't enough worry he should marry a flapper.

SHOES—For Men, Women, Children and Misses Shoes and Oxfords—A real classy assortment at money making prices—Frank Beams, Spencerville.

Glen Miller, a former St. Joe and Newville boy, of Ordway, Colo., is here for a short visit enroute to Detroit, Buffalo, Cleveland, Pittsburgh and New York City. He is representing a mellon growers association and is establishing brokers in the larger centers.

And Still The Candidates Come

The following are the last-minute candidates, having filed Saturday, of particular interest to our readers:

Ray Reasoner an Wm. J. Staman, Advisory Concord Township.

Leslie B. Meek, Republican, Concord West, and Clarence Hart, Concord East, Committeemen.

Clark Roberts, Guy Platter and Roscoe Conine, Republicans, Advisoty Board in Newville township.

Roy Abel, Democrat, Constable Newville township.

Burl Enzor and Adrian Miller, Democrats Advisory Board, Newville township.

Orange H. Herrick and George A. Kinsey, Democrats, Advisory Board Concord township. Also J. E Foltz

Vinton L. Miller, Republican, Assessor Spencer township.

Spencer, Republican: for trustee, Wm. O. Lake; for assessor, Reuben B. Renn; for the advisory board, Ralph E Furnish, Henry A. Walter, Claude D Laub.

Spencer, democratic: for trustee, Wm. G. Erick; for assessor, Arthur Wilmot; for the advisory board, Frank Baltz, Lloyd O. Wade, Edward Pflaummer.

Committeemen, Democrats Concord West, Donald Kinsey, East, Ora D. Baker, Republicans, West Walter Baker and Lessie Meek, East, Clarence Hart and Tom Abel.

There are 68 candidates for county offices and 183 for township offices, a total of 251, besides the precinct committeemen.

Parent-Teacher Association

On Friday evening, April 9, the last P. T. A. meeting of the current school year will be held at the school house.

Program:

Community Singing.
Twenty-five Minute Entertainment - - - - - Grades
Girls' Glee Club Led by - - - - - Miss Bray
Talks, "Why We Should Promote a P. T. A." - Marguerite Milliman—O. K. Shull.
Business Session—Election of Officers.

A pot luck supper will be served. Please bring sandwiches, sufficient for your family, and other dish.

Choral Program To Be Repeated

The verdict of "Well Done" has again been passed upon the rendering of the Easter Cantata by the St. Joe Choral Society at the M. P. Church, Sunday evening. The house was filled to capacity and standing room was taken up by the late comers. St. Joe people appreciate music as do few communities as is demonstrated when this organization appears in a public program. Next Sunday evening the same program will be given in the Spencerville Lutheran church.

Former Concord Citizen Is Dead

The death of David Draggoo, a brother of James Draggoo and Mrs Baker of Auburn, occurred Friday morning at 12:40 o'clock at his home in LaGrange, following an illness of five months from complications and senility.

The decedent was born in Ashland county, Ohio, seventy-nine years ago, and came with his parents to DeKalb county when six years of age. He grew to manhood in Concord township and later moved to Lagrange county where he has resided for the past forty years.

Besides the widow he is survived by a daughter and two grandchildren; one brother, James Draggoo of Auburn, and three sisters, Mrs John Baker of Auburn, Mrs. John Johnson of Fort Wayne and Mrs. Joe Link of Beulah, Mich.

Funeral services were held at LaGrange Sunday afternoon at 3 o'clock and burial was made in the LaGrange cemetery —Star.

Band Concert, April 16, St. Joe. Announcements later.

The St. Joe High School Alumni society will meet next Tuesday night, the thirteenth, at the school house. The members are urged to be present.

Chas. S. Smith, attorney of Auburn for twenty-seven years, died Monday after a short illness. He is well known over the county having practically all the ditch cases in his care, being authority on the present ditch laws. His funeral was held Wednesday morning.

Woolen Materials for New Garments

Chic Frocks and Wraps Are Built of Dainty Lightweight Weaves.

When spring comes and all things are new, women begin the ever-diverting search for fresh inspiration in dress. It is not always simple to discover novelty, nor is the response to one's efforts always immediate. This is particularly evident when a radical change in styles is just finding adjustment.

Many of the most successful styles of the present season, writes a fashion authority in the New York Times, are adaptations of extremes brought out previously. There is little that is startlingly different in line, but colors and materials are new.

Two years ago women were saying that they could not find a woolen dress in New York, meaning, of course, one of authoritative style. The craze for thin fabrics, crepes, voiles and so on was at its height. Paris was seeking to achieve the supple and lithe silhouette with a certain fragile daintiness, and America followed blindly.

Gradually American appreciation of the fitness of things called for wool for autumn, winter and spring and simultaneously the French couturiers swung over to the same conviction in creating gowns, suits and wraps for out-of-doors. There is always a certain demand for English materials for sports wear, travel and general utility, but it is too limited and individual to have any bearing upon the general trend of fashions. A compromise between these and the flimsy stuffs was sought, and this season it is to be found in the great variety of beautiful products of the looms.

Many Costumes Offered.

Parisian fashion artists have never before offered so many costumes for the street, for sports and informal wear, coats, capes and odd garments made of woolen or part woolen materials. Quantities of frocks and wraps are built of the newest weaves, which are much lighter in weight than heretofore, but nevertheless wool. Tweed is tremendously popular for suits and top coats and for separate skirts. Nothing is more satisfying for sports clothes. Molyneux and Redfern are doing some stunning things in tweed, which is shown this season in entirely new surfaces, particularly in color. These are quite different from the natural and neutral shades in the wool with which we have long been familiar.

Lanvin, stepping wide of her favorite territory, picture costumes, has conceived a striking ensemble for early spring that will find many friends among the elite on this side of the water. The material is tweed in one of the latest patterns, a diagonal stripe in brown and white zigzag lines. It has a plain wrap-around skirt and full, straight coat, seven-eighths length. Navy blue velvet is used for the jumper and for three large buttons that trim one side of the skirt. Bands of skunk fur trim the collar and cuffs.

Another decorative pattern in tweed has a geometric background, with

Hunter's Green Velvet and Metallic Material Combined in Ensemble.

stripes wide apart. Lanvin shows it in a swagger little two-piece suit. The double-breasted hip length jacket, made of this, is to be worn with a skirt of finely plaited black wool rep.

Reps in many degrees of weight, size of rib, color and quality, brought out last season and presented in delightful variants by American manufacturers, are much liked by French designers. One model delightfully adapted to early spring is a one-piece frock of black rep. It has the general character of the coat-dress, so popular two seasons ago and here and there of a detail to bring it up to the minute. From one shoulder to the hem this particular design fastens in a straight line, broken only at one point below the waist by a buttonhole fastening, below which the skirt flares at one side. A scarf is draped around the neck to form the collar. It is caught on one shoulder with a gilded flower. Narrow gilt braid is used to finish the edge of the entire frock.

This use of braid in metal, colored silk or wool is fashionable. It gives a smart finish to any of these simply tailored woolen or worsted frocks. A particularly popular finish is a narrow strip of gilt or silver leather, added in the manner of braid on collar and cuffs, as a belt or to join and outline any of the new spring frocks and informal coats.

Kasha Is Liked.

Another material established in past seasons is kasha. It improves on acquaintance, because of the fine texture of the latest weaves. In some of the best styles shown from both French and American designers kasha is combined with another material. Coats for motoring and general sports wear are made of kasha, self-lined.

Covert, twill and kasha jersey are among the important weaves from domestic looms, also a few of the "English" mixtures. These are the fabrics best liked for frocks and suits. For capes, top coats and cape coats, except in models for evening and more elaborate dress, there are cashmere and homespun in square patterns, rough woolens, "nubbed" tweeds, stripes, plaits and checks.

An Interpretation of Checks. The Coat Is Bordered With Kasha.

What is known as the occasional garment is shown in many interesting models. Much that is chic and fascinating is included in the little dress described as the jumper frock. This phase of the fashionable costume is not disdained by the most illustrious among the couturiers. They have entertained themselves by designing many that are original and artistic. One done by Paul Poiret has made a decided "hit" on the Riviera. It is a naive affair of blue kasha tolle with a finely plaited skirt and a slip-on jumper that is severely plain and high at the neck, with long sleeves. It is finished with clusters of fine tucks on the collar, cuffs, shoulders and around the bottom.

Another French creator has made a stunning little smoking jacket of white suede. It meets high at the neck, and has no fastening down the front except three large buttons below the waist. It is cut straight in line, with three pockets, and is worn with a short flaring skirt of white flannel. A narrow belt of colored suede, attached at each side of the coat, buckles in the center of the back. Lanvin goes in for these odd jumpers and unusual combinations. Her favorite is the sleeveless jumper, with kilt skirt and large silk tie.

One of the New Materials.

Of the new materials, frisca is most prominent. Some of the most stylish frocks and ensembles worn at the southern resorts are made of this material. A charming model that will have an appeal for summer in the country is a cape costume of frisca. The simple frock has a two-tiered skirt, simple, untrimmed blouse with bateau neck, and a three-quarter circular cape. Black velvet ribbon forms the belt and ties the cape at the throat. This is an exception in the season's color catalogue, since white is considered less fashionable than the pastel shades, for elaborate dress, and the richer tones, for tailored clothes.

The novelty in wool patterns is the check. The traditional check in black and white is much used and is always smart. But the newest checks are small and irregular, producing an effect of subtlety in their softly blended colors. Red, brown and ivory are woven together in equal spaces. In one, quite different, beige, blue and scarlet are spaced to produce oblong bars, the blue appearing to form a stripe. A small geometric pattern woven in gray and black is original and particularly attractive.

In recent exhibitions of American made silks the most admired of all the new patterns were the small polka dots. Of these the choicest were in black and white. All of this proves the enduring popularity of black and white. One of the most exclusive shops in New York is showing a great deal of blue.

THE KITCHEN CABINET

If you were busy being right
You'd find yourself too busy quite
To criticise your neighbor long
Because he's busy doing wrong.
—Rebecca Foreman.

SWEET BREADS

A few cupfuls of raised dough saved from the bread-making may form a basis for many kinds of cakes and sweet breads. For a loaf that is easily made, take two cupfuls of light raised bread dough; to this add one beaten egg, add one-half cupful of shortening, one-half cupful of sugar, spices to taste, with chopped fruits or nuts, or both. Cut in the shortening with the other ingredients, using two knives as in making pastry, then pour into a well-greased angel food pan and let rise until light. Sprinkle with sugar mixed with cinnamon and bake in a moderate oven. Add flour as needed. This combination makes a good coffee cake if rolled out into an oblong loaf. Cover, sprinkle with sugar and cinnamon, and when light bake.

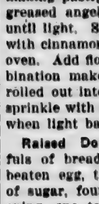
Raised Doughnuts.—To three cupfuls of bread dough add one well-beaten egg, three-fourths of a cupful of sugar, four tablespoonfuls of shortening, one teaspoonful of nutmeg or cinnamon. Cut in with two knives until well mixed; add flour to roll. Roll to one-fourth inch in thickness, cut into shapes and let rise well covered on the bread board until light. Fry in deep fat, hot enough to brown half-inch cubes of bread in one minute. For filled doughnuts, cut the cakes with a cooky cutter, place a spoonful of jam in the center, moisten the edges and fold over, pressing them well together. Let rise until light and fry as usual. Place two tablespoonfuls of powdered sugar in a bag and dust them, one at a time, before serving.

Sponge Mixture.—Soak one yeast cake in one-half cupful of cold water; pour off the water and add one teaspoonful of sugar. Warm one and one-third cupfuls of milk, adding the yeast water after it is slightly cool, stir in one teaspoonful of salt and two cupfuls of flour, with the softened yeast. Beat until thoroughly blended, then cover and let stand to rise in a warm place for several hours, until light and full of bubbles. Knead and mix and it is ready for the second rising, adding any desired fruit or sugar combination, depending upon the kind of bread to be made.

Eggless Gingerbread.—Warm together one-half cupful of brown sugar and one cupful of apple jelly with one-third of a cupful of shortening. Remove from the fire, add three-fourths of a cupful of sour milk, two and one-half cupfuls of flour, sifted with one tablespoonful each of ginger and cocoa, one teaspoonful of cinnamon, one and one-half teaspoonfuls of soda and one-half teaspoonful of salt. Mix and beat well until light, pour into a well greased tin and bake forty minutes.

Salads for the Children.

Many mothers have found difficulty in getting the children to eat all kinds of vegetables, and as we know, they are vitally important for the health of a child. It is necessary that every means should be used to start right habits.



Vegetables arranged attractively and well-seasoned with a good mayonnaise dressing, which may be prepared from olive or corn oil, will appeal to most children, and they will eat them with no protest.

Spinach which is so rich in iron when served as a vegetable or soup, becomes repellant to the child, but dressed with bits of bright vegetables, and a good salad dressing, goes without a murmur.

Such fruits as apples, oranges, and pineapples are well-liked by most children, while lettuce, cabbage, carrots, celery and other good vegetables, if dressed with a snappy well-seasoned salad dressing, will be eaten and enjoyed.

In making salad dressings for children and those who have a delicate digestion, lemon should be used instead of vinegar. The lemon juice is rich in vitamines which is lacking in vinegar.

Quick Mayonnaise Dressing.—Take one-half teaspoonful each of mustard, sugar, salt and paprika, add one egg yolk and one-half teaspoonful of lemon juice, beat well then add one tablespoonful of oil drop by drop, beating all the time, then add oil to make three-fourths of a cupful all together with two tablespoonfuls of lemon juice added alternately.

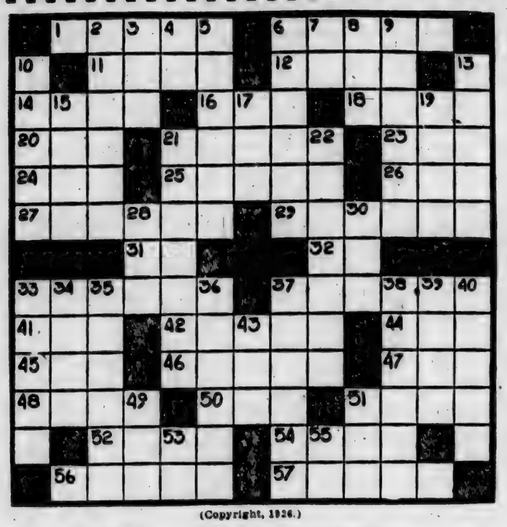
Cabbage, Pineapple and Celery Salad.—Shred firm cabbage very fine, let stand in cold water to crisp. Drain, add a few tablespoonfuls of pineapple and minced celery to each pint of cabbage. Dress with mayonnaise and serve.

Orange Salad.—Remove the pulp from two oranges, cutting them into halves and removing the pulp with a spoon. Arrange on lettuce and serve sprinkled with a teaspoonful of powdered sugar and a generous spoonful of mayonnaise.

A tablespoonful of molasses added to griddle cake batter will make the cakes brown nicely.

Nellie Maxwell

CROSS-WORD PUZZLE



(Copyright, 1926.)

Horizontal.

1—A country in Europe
6—A convent or nunnery
11—Abounding
12—A river duck
14—Having wings
16—Suitable
18—A piece of narrow cloth
20—To procure
21—Haughty
23—A writing implement
24—A unit
25—A California rockfish
26—Rested
27—A mythological king
28—Finishers
31—Belonging to
32—Therefore
33—Scheduled
37—Plates used in serving communion
41—Salt water fishes
42—A closed vehicle
44—Signifying the maiden name of a married woman
45—Aged
46—Begin
47—A man's name shortened
48—A Spanish stew
50—A point of the compass
51—Extends in a point
52—Finishes
54—Not distant
56—To conform
57—One who trains wild animals

Vertical.

2—Talks foolishly
3—Atmosphere
4—Provided that
5—Closer
6—To be in harmony
7—To exist
8—A baseball implement

HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this puzzle will spell words both vertically and horizontally. The first letter in each word is indicated by a number, which refers to the definition listed below the puzzle. Thus No. 1 under the column headed "horizontal" defines a word which will fill the white spaces up to the first black square to the right, and a number under "vertical" defines a word which will fill the white squares to the next black one below. No letters go in the black spaces. All words used are dictionary words, except proper names. Abbreviations, slang, initials, technical terms and obsolete forms are indicated in the definitions.

Sad Commentary on the Modern Husband

The man who dashed into the police station at half-past two in the morning looked as if he had been having a nightmare.

"My wife!" he gasped. "I want you to find my wife! Been missing since eight this evening! Oh, find her for me!"

"What's her description?" asked a sergeant. "Height?"

"I—I don't know!"

The husband shook his head vaguely. Color of eyes?"

"Er—average, I expect."

"Do you know how she was dressed?"

"I expect she wore her coat and hat. She took the dog with her."

"What kind of a dog?"

"Brindle bull-terrier, weight fourteen and a half pounds, four dark blotches on his body, shading gray into white. Round, blackish spot over the left eye, white stub of a tail, three white legs, and right front leg brindled, all but the toes. A small nick in his left ear, a silver link collar, with—"

"That'll do!" gasped the sergeant. "We'll find the dog!"—Chicago Daily News.

Rust Badly Affecting Famous Eiffel Tower

Unless a protective paint can be found the Eiffel tower is threatened with ultimate destruction by rust. Engineers, who have just examined it, have found that despite all precautions taken in the past, rust is rapidly eating away the huge metal structure which rises to a height of nearly 1,000 feet to the top of its flagstaff. When the tower was built in 1889 every section was coated with three layers of a special mixture of red lead and pure linseed oil, which, in their turn, were covered with thick paint. Two years later, however, the elements had eaten their way through the paint and were beginning to spread rust. In 1892 the badly rusted parts were scraped and repainted with white lead, linseed oil and ochre. Since then the tower has been repainted and varnished with various products in 1899, 1907, 1914, and 1924, but the process of disintegration of the metal goes on. The experts are striving to discover a new protective paint which, in addition to being proof against oxidization, will be a nonconductor of electricity so as to guard against galvanic action.

Persia's Real Name

Iran is the official designation of the kingdom of Persia at the present day. The name Iran was originally given to the great plateau in western Asia, comprising modern Persia, most of Afghanistan, and Beluchistan. It extends from the Elburs and Hindu Kush mountains on the north of the Persian gulf and Arabian sea on the south and from Kurdistan and the Tigris on the west to the Indus on the east.—Kansas City Star.

Seals Pie

An enterprising housekeeper has found a new use for paper tape. It is wrapped around the edge of pies to keep the juice in. It is moistened slightly before it is wound around, and since the paper shrinks as it dries, it pulls the edges of the pie tightly together. It is easily removed after baking.

All the Same to Them

"Toofus," say post trader, "I hear you had your New York crowd in the woods last night around a roaring camp fire." "That's whatever." "But I did not hear you chopping any wood." "I built the fire with old newspapers," say Toofus. "They did not know the difference."—Louisville Courier-Journal.

Add Novelists' Mistakes

Fanny Heaslip Lea in her story: "A picture of the Good Shepherd bringing home the ninety-and-nine sheep." Mrs Lea is one short in her count." R. H. points out; "it was the hundredth that was lost."—Boston Transcript.

Trained for Warfare

By a federal law of 1910, military training in Australia is compulsory on all male citizens between the ages of twelve and twenty-six, and in the cadet corps from twelve to eighteen years; in the citizen soldiers, twenty to twenty-six, with short periods of training in the field. The universal training law was continued in 1922, but its operation is restricted to the more populous centers and confined to youths between seventeen and twenty years of age.

The climate and soil of the uplands of East Africa are similar to the climate and soil of the Middle West of the United States.

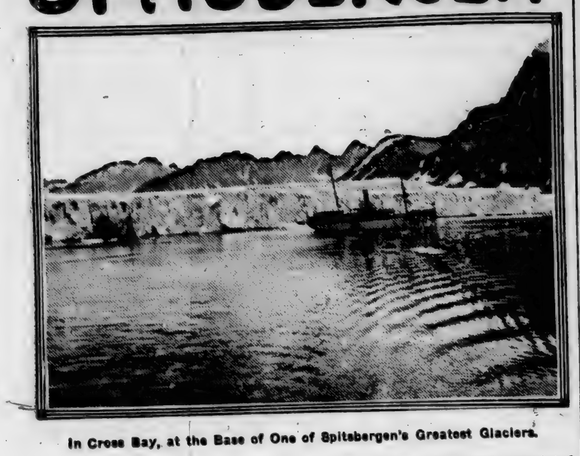
SPITSBERGEN



In Cross Bay, at the Base of One of Spitsbergen's Greatest Glaciers.

(Prepared by the National Geographic Society, Washington, D. C.)

SPITSBERGEN, which has figured several times in Arctic expeditions, is to be the taking-off point this summer for airplanes in an attempt to reach the North pole. This far northern island is one of the few Arctic or Antarctic lands that are being made to yield up minerals to the temperate zones.

The northern tip of Alaska, to which a few government officials push each summer, may seem all too close to the North pole for the average dweller of the warmer regions of the earth to live in unless he is pursuing scientific investigations. In Spitsbergen, however, which is 600 miles closer to the top of the world, several hundred ordinary men of Europe and America are making their homes the year round while they strip coal from beneath the ice-covered mountains. It is excellent coal, too, and there is every reason to believe that the mining operations will grow steadily.

The discovery early in the Twentieth century, that Spitsbergen's coal underlies large areas brought it suddenly back to the world's attention and made sovereignty over it well worth claiming after it had been abandoned for generations as a sort of No-Man's land. Barents, a Dutchman, discovered Spitsbergen in 1596, according to the usual records; but the Norwegians claim that their seamen visited the islands at earlier dates. Henry Hudson, searching for a northern passage to the Orient in 1607, learned of the vast number of whales near the islands, and as a result Spitsbergen's waters became for a time the world's greatest whale fishery.

Dutch First in Field.

The Dutch were foremost in this development. By the time of America's Revolutionary war, whalers from the Netherlands had taken about $100,000,000 worth of whale products from the region.

In the year 1620 whales frequented the bays and immediate coast of Spitsbergen in such numbers that the fishers were embarrassed to transport homeward the blubber and other products. These conditions led to the summer colonization of Spitsbergen (and Jan Mayen), where establishments for trying out, cooperage, etc., were erected, as the most economical method of pursuing the industry. They were occupied only in summer, although the experiences of Pelham and other English sailors, who involuntarily wintered in Spitsbergen in 1630-1631, led to an attempt to establish a Dutch colony. The party of 1633-1634 wintered successfully, but that of the following year perished, and so ended the experiment.

The most remarkable of the summer establishments was at Amsterdam island, where on a broad plain grew up the astonishing village of Smeerenberg. Here, nearly within ten degrees of the North pole, for a score of years, prevailed an amount of comfort and prosperity that can scarcely be credited by the visitor of today. Several hundred ships, with more than 10,000 men, visited it annually. These consisted not alone of the whalers and the land laborers, but of the camp followers who always frequent centers of great and rapid productivity.

In the train of the whalers followed merchant vessels, loaded with wine, brandy, tobacco and edibles unknown in the plain fare of the hardy fishers. Shops were opened, drinking booths erected, wooden (and even brick) tile-covered houses constructed for the laborers or visiting whalemen. Even bakeries were constructed, and, as in Holland, the sound of the baker's horn, announcing hot, fresh bread, drew crowds of eager purchasers. If report errs not, even the Dutch frau of 1630 was sufficiently enterprising to visit Smeerenberg.

Forced to Abandon Town.

The shore fisheries soon failed (about 1640) and the Dutch being driven to the remote and open seas, Smeerenberg fell into decadence; the furnaces were demolished, the cooper caldrons removed, and the tools and utensils of the cooper and whaler disappeared; only the polar bear remained to guard the ruins of the famous Spitsbergen fair.

Spitsbergen and the adjacent islands acquired a settled sovereignty for the first time in 1919 as an indirect result, strangely enough, of the World war, which was fought thousands of miles to the south, and during which both claimants to the island group were neutrals. The supreme council of the allied and associated powers gave the complete ownership of the group to Norway, but provided that the contracting parties, including the United States, should have mining rights.

For some time nearly half a million dollars' worth of furs, oil, and eiderdown have been taken from Spitsbergen annually. But the important potential values are in mining. Eighty-five per cent of the mineral areas are controlled by two British concerns. The list of minerals known to exist in Spitsbergen gives a surprising boost to Arctic lands as possible providers of supplies needed by the rest of the world. Coal heads the list—good coal and millions of tons of it. Another fuel source is oil shale, large areas of which have been located; and some geologists who have worked in the islands feel confident that petroleum will be discovered. In addition there are beds of asbestos, gypsum, lead and copper ores, and a number of unusual minerals. Recently a prospector for one of the British companies discovered the largest deposit of colored marble known to exist anywhere in the world. There are important beds of iron ore and, not far away, limestone. Where good supplies of coal, iron ore, and limestone occur together in other parts of the world, steel manufacture has sprung up, and there are optimists who believe that some day great blast furnaces will be in operation on these Arctic islands.

Delightful in Summer.

The Gulf stream, which does so much to ameliorate European climate, lends a helping hand, too, to Spitsbergen. During the three months of continual darkness when the mercury drops farthest, it seldom is lower than 20 degrees below zero Fahrenheit. It is actually warmer than in Winnipeg and other Canadian cities. Half-way around the year, of course, there are three months of continual sunlight—June, July and August. During these months Spitsbergen has one of the most delightful and exhilarating climates on earth. One traveler has compared it to May in the alps. Tourist traffic was getting to be an important factor in Spitsbergen just before the World war, when shiploads of sightseers were taken to the islands from Norway, Sweden and Germany. Those who now live in Spitsbergen find it possible to make themselves entirely comfortable.

Not the least interesting aspect of Spitsbergen is its wild life. Wild reindeer or caribou, polar bears, ptarmigan, geese, ducks, and other birds were so plentiful that hunters flocked to the islands in the summer before the World war and were threatening the extermination of several species. A party of tourists in one summer killed more than one hundred caribou, leaving the carcasses where they fell and taking with them only a few of the finest heads and antlers. This situation has been corrected since Norway was recognized as having sovereignty over the islands.

One of the most daring schemes of polar exploration ever attempted, that in a free balloon by S. A. Andre of Sweden, was made from Spitsbergen. A member of the Swedish international polar expedition of 1882-1883 and an aeronaut of some experience, Andre succeeded in commanding for his plan the active support of Oscar, king of Sweden, M. Alfred Nobel, and Baron Oscar Dickson.

The balloon, named Ornen (The Eagle), had its load of about five tons of food, ballast, freight, and men, and from measurements of escaping gas had a flotation life of about thirty days. Accompanying Andre were M. Strindberg and M. Fraenkel. On the afternoon of July 11, 1897, the lines were cut, and the balloon ascended about 600 feet. Suddenly it descended to the surface of the sea, possibly owing to an entanglement of the guide ropes, and then rose again as the ropes were cut or broken and ballast thrown out. The wind carried the balloon across the mountainous island of Vogelsang, making it necessary to rise to some 1,500 feet, whence it passed out of sight in an hour, below the northeast horizon. As the balloon had at its best a flotation life of 30 days, it is obvious that the report is erroneous of its appearance in Siberia 65 days later.

Three message buoys were found later, all dropped by Andre on July 11, the date of his departure, which furnish brief news of the course of the daring aeronaut. Beyond these buoys have been found no traces, despite repeated search in Arctic regions.

IMPROVED UNIFORM INTERNATIONAL

Sunday School Lesson

(By REV. P. B. FITZWATER, D.D., Dean of the Evening School, Moody Bible Institute of Chicago.)
(©, 1926, Western Newspaper Union.)

Lesson for April 11

THE STORY OF CREATION

LESSON TEXT—Genesis 1:1-2:25.

GOLDEN TEXT—In the beginning God created the heavens and the earth.—Gen. 1:1.

PRIMARY TOPIC—God the Creator of All Things.

JUNIOR TOPIC—The Story of Creation.

INTERMEDIATE AND SENIOR TOPIC—God the Maker of All Things.

YOUNG PEOPLE AND ADULT TOPIC—God in Creation.

Everything but God had a beginning. God the uncaused cause is the cause of all things. Let this fundamental truth, though beyond the power of the human mind to grasp, be believed and all our problems of philosophy and theology will be solved.

I. The Origin of the Universe (Gen. 1:1).

It was created by God. All things came into being by the will and act of a personal God. Create means to bring into existence that which had no previous existence.

II. The Regeneration of the Earth (1:3-25).

Between verses one and two is clearly marked an interval of perhaps wide duration. The earth which was created by God was subjected to a judgment. The Hebrew word "was" might just as well have been translated "became." Instead, therefore, of the earth having been created a void or chaos, we see that it became so through a cataclysmic judgment. In Isaiah 45:18, the prophet declares that God did not create the earth a waste, but that He formed it to be inhabited. All that real geology has to say to us harmonizes with this view. The so-called six days of creation exhibit God's rehabilitation of the earth.

The cause for this judgment upon the earth is to be found doubtless in the judgment upon Satan, who is called the prince of this world (John 12:31).

Observe that God created the species and decreed that they propagate after their kind. Such a thing as one species developing out of another is unknown to the Bible and real science.

III. The Origin of Man (1:26-28).

He was created by God. He came into being through a special creative act of God. As to nature, he bore the image and likeness of God. This image and likeness is not physical or bodily, but intellectual and moral (Eph. 4:24, Col. 3:10). God's likeness is reflected in man's three-fold nature. Man is spirit, soul and body (I Thess. 5:23). God made man with a personality capable of having fellowship with Himself—with whom He could share His glory.

IV. Adam Alone in Eden (2:7-9, 15-20).

He had a most beautiful place in which to live. God gave him surroundings in keeping with his nature. "Pleasant to the sight and good for food" describes his surroundings. He was to "dress and keep" the garden (v. 15), showing that work was God's primal thought for man. To this agrees the teaching of the New Testament. If any man would not work, neither should he eat (II Thess. 3:10). Man in Eden was desolate. Paradise with all its splendor could not satisfy his lonely heart. Animals of all kinds surrounded him, but no companionship among them was to be found for him. To make Adam conscious of his condition God caused the animals to pass before him, with the result that no helpmeet was found for him; man, being a personality, was differentiated from the animal.

V. The Origin of Woman (2:21-24).

To meet the need of man God made the woman. They had minds alike, therefore could commune together about the things that surrounded them, and about God. They had spiritual natures, therefore could commune together and with God. God took a rib from Adam's side and out of it made the woman. Man was made from the dust of the ground and woman was taken from his side—thus woman was one removed farther from the earth than man. Someone has said that the man was dust refined, but the woman was dust doubly refined. Matthew Henry says, "Woman was made of the rib out of the side of Adam, not out of his head to top him, nor out of his feet to be trampled upon by him, but out of his side, to be equal with him—under his arm to be protected and, near his heart to be loved."

VI. The Origin of Marriage (2:24).

God made man—male and female. It was His intention that men and women should marry. Marriage is the most sacred of human ties. It is of divine origin, for God Himself performed the marriage ceremony.

Give Credit to God

This act of initiative and daring, this resolute step of entire confidence, is at the same time the most reasonable proceeding that a creature may undertake. Give credit to God; no wisdom, no prudent calculation could be safer.—Charles Wagner.

Killing Doubts

Every step toward Our Lord Christ kills a doubt. Every thought, word, and deed for Him, carries you away from discouragement.

Hoosier News Briefly Told

Fire of undetermined origin swept the business section of Grand View, a town of 700 residents, destroying six business places and causing damage estimated at more than $35,000.

Ghe Mah, eighty-seven years old, the smallest and probably the wealthiest dwarf in the world, died at his home at Knox.

The Notre Dame basket-ball team, claimant of the western championship, was feted at a banquet, after which Johnny Nyikos of South Bend was elected captain for next season.

Allen Travis, South Bend attorney, has been appointed receiver for the Hoosier Motor Coach company by Judge Fred Bingham. The receivership was forced by the Sinclair Refining company.

A rural relations division has been formed by the Kendallville Chamber of Commerce with a view of bringing the city into closer relationship with the farmer.

Admissions to the 1925 junior prom at Indiana university totaled $2,480, not quite enough to pay all costs of staging the event, according to the financial report. Expenses amounted to $2,579.50.

A high-school gymnasium with a seating capacity of 5,000 for basket-ball contests is to be constructed at Logansport this year at a cost of $90,000. The funds are being raised by public subscription.

Twenty-one state departments of the American Legion have organized boys' baseball leagues, the first step in the preparation for a national boys' championship which will be held at Philadelphia in October.

About 200 school supervisors will gather at Bloomington April 15 for the third annual Indiana state conference on elementary supervision to be held under the auspices of the school of education at Indiana university.

Thomas Owens, poultry packer and onion shipper, was killed by a New York Central passenger train at Pleasant Lake, four miles south of Angola. Mr. Owens drove his car on the track in front of the approaching train.

Indiana has bought, to add to its State Dunes park, the 40 acres of improved property owned by the Prairie club of Chicago. For this land, with half mile of frontage on Lake Michigan, the announced price was $27,000.

J. L. Hauck, proprietor of the Hub furniture store at Michigan City, was arrested on an affidavit signed by Elmer E. Vrooman, investigator for the arson division of the state fire marshal's office, charging him with arson in connection with the fire in his store February 7.

After three months of negotiations between the managing board of the Purdue University Harlequin club and Florenz Ziegfeld, Jr., the student dramatic club has obtained a special concession for the production of Ziegfeld's "Sally," as the annual production of the club.

Eric Jenner, thirty-five years old, of Newcastle was identified by P. L. Branner of Hartford City as the man who robbed him twice in fifteen minutes and escaped with $180. Jenner was found at the home of his mother-in-law, Mrs. William Rathburn, where he had come to visit his children before going to Michigan.

Farmers of Indiana are annually losing $4,000,000 through the unnecessarily high mortality rate of baby chicks, according to Paul G. Riley of the Purdue university agricultural extension department, who bases his estimate on records that have been collected by poultry authorities at the university over a period of years.

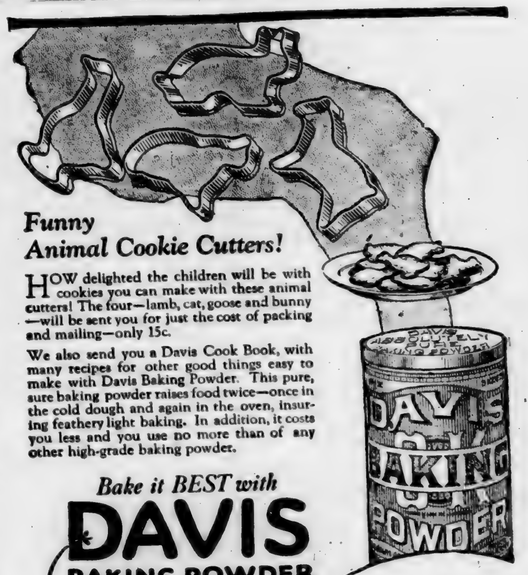
The record for rapid dealing out of justice was broken in the Circuit court at New Albany when Judge John M. Paris sentenced eight men in less than half an hour. Two were sent to the Michigan City prison, four to the Indiana reformatory, one to the state farm and one to jail. They all pleaded guilty to grand jury indictments charging larceny.

Thomas Devries, a graduate of Hope college, Holland, Mich., has taken over the work of Dr. F. O. Anderegg, who recently resigned from the chemistry department faculty of Purdue university to accept a position with the Mellon institute at Pittsburgh, Pa. Devries has been on the instructional staff of the University of Illinois and at the same time has been taking advanced work for a doctor's degree.

The Portland high-school track card has been announced, with seven meets scheduled. Last year Portland won all of its scheduled meets and won points in the sectional, state and national interscholastic meet at Chicago. The schedule follows: April 10, Richmond, there (pending); April 17, South Side (Fort Wayne), Portland; April 24, invitational meet, Portland; May 1, Muncie, there; May 1, Central (Fort Wayne) there (pending); May 15, sectional meet; May 22, state meet at Indianapolis.

The grand jury returned an indictment against Leland Phillips of Richmond, wanted in connection with the death of Frank Buck, who was killed with a shot through the window of his house several weeks ago.

Mike Becsel, fifty-one, of Leesburg, Pa., was sentenced to seven years in the state prison at Michigan City by Judge Fred Bingham. He pleaded guilty to deserting his wife and seven children, leaving them destitute. Joseph Fucsik, twenty-six, was sentenced to 120 days on the penal farm for failure to support his wife.



Funny Animal Cookie Cutters!

HOW delighted the children will be with cookies you can make with these animal cutters! The four—lamb, cat, goose and bunny—will be sent you for just the cost of packing and mailing—only 15c.

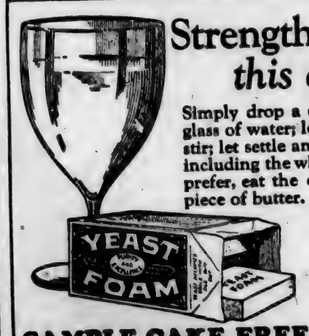
Substitute for the Sun

Dwellers in smoke shrouded cities and such as sleep by day and work by night can make up what they suffer from lack of sufficient sunshine by the use of electric sun baths according to an eminent British health authority. Prolonged periods of wet weather tend noticeably to increase the spread of sickness in large cities, and pulmonary diseases are prevalent where sunlight is lacking, as are many ailments peculiar to children. Electric sun baths, the British physician referred to declares, offer a satisfactory substitute for nature's own.

Pardonable Animosity

"Don't you like your twin brother?"

"No; I get licked for what he does."—New York Times.



Strength and Energy *this easy way*

Simply drop a cake of Yeast Foam in a glass of water; let stand for five minutes; stir; let settle and drink the milky water, including the white precipitate. Or if you prefer, eat the cake with a cracker or a piece of butter.

Easy, simple, palatable. Yet you get the full tonic value of the marvelous yeast plant.

If you suffer from constipation, anaemia, boils, pimples, indigestion—don't fail to eat Yeast Foam regularly. Its beneficial effects will amaze you!

Obituary

Sarah Ann Abel was born in New York State, Niagara County, December 6, 1832 and moved to DeKalb County, Indiana with her parents, John and Mary Milliman in the year 1839 and had been a resident of this county continuously, up until her death, March 30, 1926, age 93 years, 3 months and 24 days.

In the year 1851 she was united in marriage with George D Abel, whose death occurred in 1863 To this union was born five children: Wallace E., Charles W., John C Fremont, Melvina and Electa Ann One son and two daughters having preceded her in death. She leaves one brother, J. A. Milliman of Orting, Washington; two sons, Wallace E Abel and John C. Fremont Abel of this place; seven grand children and fifteen great grand children and numerous friends to mourn her death

She became a member of the Christian Church at Coburn's Corners at an early age and continued a member of that faith until her death.

The funeral service was held from the home of Wallace E Abel at 1:30 P. M, April 1 Conducted by the Rev. J. N. Scholes. Interment at Alton Cemetery.

This history and dates were taken from bible belonging to deceased, which had been presented to her at the time of her marriage in the year 1851 by Rev. John F. Coburn.

Hostess to The Babes

Mrs. Nina Kees was hostess last Wednesday to the mothers and members of the Cradle Roll of the Christian Sunday School. The invitations denoted that it would be a Mother Goose party and so the decorations and games carried out the idea, concluding with bright sayings the mothers remembered of their children having said, after a lunch consisting of sandwiches, salad, cup cakes, pickles and cocoa The Pprimary teacher gave a short synopsis of her work with the children in the Sunday School stressing such subjects as courtesy, obedience, unselfishness and love of God

All agreed it was an afternoon well spent Ten ladies, fourteen little ones and their teacher were present to enjoy the festivities.

Band Concert, April 18, St. Joe. Announcements later.

It's here now—that car of Fertilizer you have been wanting. Come and get your order filled at Curie's.

"HE IS RISEN!"

The three greatest words in the history of mankind.

Christ was crucified—and did rise!

The prophecy was fulfilled. Christ divine stood revealed. His case was proven for that day and for eternity.

"He is risen!"

Through the centuries that utterance of hope and salvation has been the object of many attacks. Agnosticism, liberalism—or by whatever name you may call the spirit of doubt and distrust—how their spears have been sent flying against the armor of Christ only to fall and crumple at His sacred feet.

"He is risen!"

Every Eastertime that proclamation is made anew. Every Eastertime thousands of lips repeat that immortal message and thousands of hearts are strengthened and made glad.

Every Eastertime legions of new followers enlist under the banner of Christ. Every Eastertime sees thousands of new temples erected to His glory.

Man-made things change and decay. Governments rise and fall. Systems of philosophy enjoy a short vogue and pass into oblivion. Habits of living change from generation to generation.

The human race has a genius for experimenting. The new things appeal. They are tried out of curiosity.

History is a record of change, change, change!

Yet throughout these years of revolution and evolution, with their flux of human emotions and their thousands of clashing currents—above the tumult of doubt and fear and prejudice one voice rises supreme. It is the word of the angel of God as he stands by the tomb of Jesus.

The message is simple, yet eternal: "He is risen!"

Easter Gospel Makes Christ Living Presence

Companionship is an essential of life. We are made for fellowship. Conversation is more enjoyable than oratory. But companionship is not restricted to speech, for we can enjoy the memory of absent friends. Our greatest society is the company of the unseen. On every bookshelf the finest companionship is offered to us. The great souls of the past will speak their lanermost thoughts to us. Such is the democracy of the intellectual world.

The Christian life is a companionship. Two disciples walking from Jerusalem to Emmaus the first Easter day were heavy hearted with disappointment. There came one who spoke to them and their hearts burned within them. Arriving at their home He went in with them and revealed His identity at mealtime. The two men were transformed. Instead of being discouraged they now knew the companionship of the risen Christ. They at once went back the eight miles to Jerusalem to share the news with others. The Easter gospel is that Christ is an abiding presence, a living companion to every true believer.—Montreal Family Herald.

A SOUTHERN EASTER

By L. M. Thornton

I have heard the Easter music
Through the tall palmetto trees,
Like a song of angels floating
Earthward on the vernal breeze.
And my ears have caught the meaning
As they never did before
Of the nearness and the beauty
Of the mystic Other Shore.

I have seen the Easter lilies
With their largess of perfume
Brown as from a field Elysian
Meet to grace a Savior's tomb.
And I read in them a story,
That delights me more and more,
Of the wonder and the welcome
Of the open Pearly Door.

Oh, the blessed hope of Easter!
How it floods the world with light,
Spanning Death's uncertain river,
Shining through the darkest night,
Pointing up the Path of Crosses
That Another safely trod
To the gladness and the glory
Of the City of Our God.
—Youth's Companion.

Florida Named for Easter

There are not many people who connect the name of Florida with Easter, jumping to the conclusion that the name has reference to Flora, the goddess of Flowers. Florida is called thus because Ponce de Leon, journeying in search of the fountain of youth, happened to land there on Easter Sunday (1512), the Spanish name for which is Pascua Florida. Natal, in South Africa, obtained its name in similar accidental fashion, only this time it was Vasco da Gama, who, in 1497, landed there on Christmas day (the Nativity, that is, the "Natal" day).

Easter lilies freshly bloom
O'er the open, conquered tomb;
Cups of incense, pure and fair,
Pour oblation on the air.
Easter glory sudden flows
Through the portal none may close
Death and darkness flee away,
Christ the Lord is risen today!

Shining forms are sitting by
Where the folded garments lie;
Loving Mary knows no fear
While the waiting angels hear
"They have taken my Lord away,
Know ye where He lies today?"
Sweet their answer to her cry,
As their pinions pass her by.

See the Master stand to greet
Her that weepeth at His feet.
"Mary!" At the tender word
Well she knows her risen Lord!
All her love and passion breaks
In the single word she speaks:—
Hear the sweet "Rabboni!" tell
All her woman-heart so well!

"Quickly go, and tell it out
Unto others round about
Thou hast been forgiven much;
Tell it, Mary, unto such.
By thy love within thy heart,
This My word to them impart;
Death shall touch thy soul no more,
Christ thy Lord hath gone before!"
—MARIE MASON.

Easter Tribal Dances of the Yaqui Indians

A description of last year's Easter dance by the Yaqui tribesmen is interesting at this time. The dance begins April 10:

"Lines of weird-looking Yaqui tribesmen, gathered at the ancient village of Pasqua, began their sacred Easter tribal dances at dawn in a desert stillness broken only by their mystic chanting and the rhythmatic beat of rattles and tom-toms. Until Easter the dance goes on, exhaustion being the only cause for a redskin to drop from the dancing columns twirling to the strains of semibarbaric music.

"Odd-shaped headdresses are worn by the dancers and rattles adorn their ankles. Feathered batons flaunt from the hands of the whirling group. Squaws and young braves joined the dance with the tribesmen—many of them from Mexico and the others from various parts of Arizona.

"The dance, observed annually by the Yaquis, is a picturesque mingling of pagan and Christian rites, portraying the passion of Christ in an Indian version. Christ's betrayal, the trial before Pilate and the road to Calvary, all are pictured in the dance, according to the Yaqui version. With these ceremonies is mingled the customs of their pagan fathers which have been observed for 300 years.

"Many visitors will watch the dance, —for the whites are not barred. The odd belief of the Indians against picture-taking, however, still persists, and cameramen, as usual, will not be permitted to picture the dances."

LILY AMERICANIZED

The Easter lily is being Americanized. This means American horticulturists have demonstrated that Easter lilies may be grown from American lily seeds. Hitherto, American growers imported the bulbs from Japan or Bermuda. Approximately $250,000 is expended by importers each year for Easter lily bulbs. This money may now stay in the United States. And, what is better, the American Easter lily will be the child of American Easter lilies, not of Japanese or of Bermuda parentage.

Perfect Easter Lilies.

EASTER DUTIES

God expects from men something more at such times, and it were much to be wished for the credit of their religion as well as the satisfaction of their consolence that their Easter devotions would in some measure come up to the Easter dress.—Robert South.

Resolve--

To Save Something Each Week

It will be one of the best resolutions you ever made in your life. And in later years when you may need money, if you have added regularly each week to your Savings Account, you will have the money to take advantage of an opportunity which may mean financial independence. Let us help you to get started Saving. The Interest we may pay on your balance is an amount well worth considering.

County Teachers Favor Amendment

Members of the DeKalb County Teachers' association, meeting at the community hall in Spencerville Saturday, went on record as favoring the enforcement of the eighteenth amendment. In the resolutions adopted, the teachers also recommend the county unit plan of administration for rural schools. W. S Painter, superintendent of the Garrett schools, was the chairman of the resolutions committee.

W. O Lake, trustee of Spencer township, made an excellent welcome address. Dr. Gary Cleveland Myers of the Western Reserve University at Cleveland, Ohio, spoke on the subject, "Principles of Habit Formation" in the morning and in the afternoon discussed the subject "Home and School Relationship" Miss Grace E. Storm of the University of Chicago, discussed the subject, "Informal Reading Tests in the Primary Grades."

The closing address of the afternoon session was delivered by Prof. H G. Imel, principal of the Oliver school at South Bend Prof Imel discussed junior high school work compulsory educational laws, the county unit system of school administration, vocational training, vocational guidance and vocational information.

The attendance of teachers at the meeting was very good considering the weather and condition the roads.

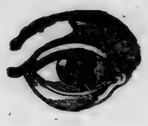
Our Hired Man

A woman's face is her fortune—when it draws interest.

The hired girl says the kitchen stove is balky. It refuses to draw, so, knocking the soot out, is another job for a rainy day.

The boss and me clean our cows twice as many times in a week as our neighbor, but only spend half as much time and got a better job all the time.

The boss and the missus had an argument the other night as to whether to get a new automobile or a fur coat for the missus. They compromised and now we got a concrete floor in the cow stable.



In buying glasses to improve your vision and assist you in doing your work always insist in getting standard frames and lenses. In addition buy of someone who is reliable and located permanent so that if you break your frame or lenses you can get them duplicated quickly and correctly.

Was Tiniest Baby

Gilbert O. McGilvary of Walla Walla, Wash., who died recently at the age of seventy-two was, when he was born at Trempeleau, Wis., in 1853, the tiniest baby on record who lived. There were no baby incubators in those days and his survival occasioned widespread interest.

Young vigor to old folks

"Six years ago bad nerves, sleeplessness, constipation, and headaches had me run down. "Tanlac sent my weight up fifteen pounds and now, at sixty-seven, I feel as fine as at forty." W. H. Steere, 1211 North Oakland Av., Indianapolis, Ind.

One of Tanlac's greatest blessings is the new life and vigor it brings to old folks. Every day men and women up in the seventies and eighties thank us for Tanlac's wondrous benefits.

Tanlac is a natural tonic, made from roots, barks and rare herbs. Harmless to man or child. It cleans the blood, stirs up the liver and puts digestive organs in working order.

If your body is weak and rundown, if you lack ambition, can't eat or sleep, you'll be delighted with Tanlac's results. Take Tanlac Vegetable Pills for constipation.

Just Begun

Merle Waterman, boys' secretary of the Hollywood Y. M. C. A., was rudely interrupted in the middle of an engrossing novel by Louis Mellet, physical director and basket ball coach.

"Have you been reading Longfellow?" Louis wanted to know.

"Naw, only about fifteen minutes," grunted Merle, turning over another page.

CHAPTER XI—Continued

—18—

"By gar! You not drown een de Frying Pan, Daveed? We t'ot you dead men. By dam! I glad to see you, Daveed, and you, m'sieu, all right, bot' you two, beeg an' strong jes de same?" The delighted Michel repeatedly wrung the hands of his amused, but perplexed friends. Then St. Onge reached Steele.

"Mon Dieu! Mon Dieu! Monsieur Steele! Welcome to Wailing River," he exclaimed in a voice, strained—unnatural. "Doubly welcome, my dear Steele! We thought we looked at the dead when you entered that door—Michel and I. An Indian brought word that you were lost in the Jackfish rapids, last month. We were hopeless—and now we are overjoyed."

"Thank you, sir, I am glad to be back. We ran the rapids—it's a long tale, colonel."

St. Onge suddenly started, turning in bewilderment from Steele to Michel.

"What was that?"

David doubled with laughter at the surprise of the Iroquois. Again, to the bewilderment of the Frenchman and his head-man, the bloodhound, outside, raised a deep-throated protest at the cold and his empty stomach, which initiated a bedlam of howls from the huskies.

"Why, that's Windigo; he's hungry!" laughed Steele. "You'd better look after them, David, before the home dogs start to fight."

"That, a dog? It sounded more like a lion."

"I've brought a bloodhound to track the Windigo; also to give him a bit of his own medicine. His name is Pete, but David and I call him 'Windigo.' If we'd had him last fall, it might have been different. But Mademoiselle St. Onge? Is she well?" Steele hastened to ask.

The face of the older man sobered.

"She has not been well," he said, pointedly, "since the news came from Ogoke."

"You mean?"

"The news of your drowning in the Frying Pan, monsieur."

Steele thrilled at the words. Then the realization of what it had meant to Denise St. Onge—this blow to her hopes—swiftly saddened him.

"I will go to her at once," said St. Onge. "The shock would be too great—and the joy," he added. "If you will follow shortly, you will find your old room, such as it is, ready."

In the living room of the factor's quarters Denise St. Onge waited for the man returned from the dead.

Entering, Steele went to her and took both her hands.

"I have come back, Denise St. Onge, as I promised," he said, as her dark eyes bravely met his, but the convulsive movement of her lips betrayed the imminence of tears.

"We are—so glad—so glad you are here!" But the strain was too great and she turned from him to hide her emotion.

"It is a happy night for Wailing River, monsieur," broke in St. Onge, as Steele turned to the factor to permit his daughter to regain her self-control.

"A happier one for me, colonel!" replied the man who yearned to take the girl, who had walked to the end of the room, in his arms and comfort her—promise her that all should be right in the end.

At supper St. Onge insisted on hearing of Steele's trip home.

"Before I begin, tell me if Laflamme has shown his hand?"

"No, we have heard nothing. One of his Indians on the way to Albany with a letter told Michel you had been drowned. That is all."

"When I met him," continued Steele, "he acted cold and suspicious, wanted to know my business, but warmed later, asking me to dine with him and the woman who passes as Rose Laflamme. He became so polite that I was under the impression that he believed my story. After dinner he was suddenly called to the trade-house. One of his men had started to bother David, who, of course, had his eyes open, which they evidently resented, and David broke some of his fingers. This worried me considerably; it meant leaving on the jump in the morning before there was trouble."

"And this Rose Laflamme, what is she like?" asked Denise.

Steele felt the blood in his face. In spite of the legitimate ends for which he had worked, the episode with Rose had left an unsavory taste.

"She is a striking-looking woman, with, I am confident, a strain of Indian blood. It was very evident that she and Laflamme were not on good terms—that she desired to leave Ogoke; in fact, she asked if we would take her to the railroad."

"She asked you, a stranger?" demanded Denise.

"You mean she is held there against her will?" broke in St. Onge.

"Absolutely! But Laflamme, from what she told me, fears she would tell what she knows—inform the authorities."

"What a situation for a woman!" deprecated Denise.

"Yes, she evidently hates him—hinted vaguely at many things, when Laflamme was absent at the trade-house. But the only information I succeeded in getting was that Pierre, the Indian, who came here in September, was sent down river partly to spread Windigo rumors."

"He talked with Tete-Boule, and left shortly after," nodded St. Onge.

"Oh, by the way, is Tete-Boule, the great sorcerer, still here?"

"Yes, although something happened when Michel came back. They had a long talk one night in Tete-Boule's shack. I heard the trouble from the beach and found Michel threatening to cut his throat."

"Why did you interfere?" laughed Steele.

"He's been useful as a hunter, and I'm so short-handed. But I am interested to hear how you left Ogoke, monsieur, and why you were so reckless as to attempt to run the Frying Pan."

"When I returned to the shack where we had left our bags, I found David repacking some of the stuff. Laflamme had had our baggage searched."

"Did you accuse him of it?"

"I never had the opportunity. Rose Laflamme came to the shack and offered to tell all she knew about Laflamme's activities if I would take her

"Laflamme Had Had Our Luggage Searched."

that night to the railroad," Steele boldly answered, ignoring the inferences which might be drawn from the statement.

"And you refused, monsieur, to aid a beautiful woman in distress? Ah, that was not gallant." Although the smile was facetious, the eyes of Denise St. Onge were grave. Steele felt that he had been put on the defensive.

"I told her that we needed flour—would starve if we left that night. At that moment David knocked a man down outside, who proved to be Laflamme. What he had come for I do not know."

"Was it not clear to you what he came for, monsieur? Learning she was not in the house, he went to the shack of the gallant American, to find it guarded by his faithful Indian?" The girl smiled disconcertingly. Steele was puzzled at her mood.

"Denise!" protested her father. "Will you permit Monsieur Steele to tell his story? You are not fair!"

Could it be possible that she did not believe him, Steele asked himself. But the seeming composure of Denise St. Onge disarmed him and he went on.

"David had choked Laflamme into unconsciousness, and of course we had to leave without our flour. We paddled all night, pushed up the Rouge and over to the Jackfish. We also discovered that they had taken all our rifle shells. I was sure we had distanced pursuit but at the Frying Pan two Indians who had traveled overland were waiting for us. Thinking we were helpless and would come ashore, they didn't fire on us until they saw we intended to run the rapids. Then one raised his rifle, but was shot by David, who had found a cartridge which Laflamme's men had overlooked."

St. Onge listened to Steele's story in amazement.

"He sent his men to kill you—keep you from getting out of the country?"

"He rightly saw that after what had happened he couldn't afford to have us leave the bush. You see, notwithstanding my two bags of Indian stuff, he suspected me of spying on his place—and probably chose the Frying Pan as a safe means of getting rid of us.

"He wouldn't anticipate our running them voluntarily, but evidently had ordered his Indians to capture and throw us in. Then, if our bodies or canoe were ever found, it would appear like a straight case of drowning. But David's shot stampeded the survivor into firing at us."

"And you went through that white water they say has never been run?

"Yes, somehow we got through, with a foot of water in her and a few leaks where we scraped some sharp ones."

They had left the supper table and were in the living room, and as Steele finished he realized that Denise, who sat with eyes on the rug at her feet, had been listening. Was it the old depression, he wondered, or—

"And without shells for your guns, you traveled clear to the Nepigon on short rations?" broke in St. Onge.

"Worse than that. We got but few fish and before we reached Nepigon House, were down to one meal a day."

Denise looked up. "I am very tired, monsieur. You will pardon me? Good night!" And she left the room.

That day Steele had traveled forty miles to avoid camping another night on the snow before seeing Denise St. Onge. He was tired from the hard day on the river ice, and disturbed and mystified by the mood of the factor's daughter.

Once he knew beyond all peradventure that this harassed girl cared for him; bound though she was, once she unreservedly placed her future in his hands and rent the veil of her former reticence—her strange aloofness, then the fight for the fortunes of Wailing River would be a battle of joy; and at last, when they met, it seemed that his dream had come true—that he had won. But her air of incredulity, the irony of her comment on his story of that night at Ogoke, sent him to his bed mortified, troubled, stung with the injustice of her attitude. Was it jealousy? He had held Denise St. Onge on too high a plane for such a descent. Had she been merely facetious, or had she, without benefit of the doubt, drawn a sinister inference from the coming to the shack of Rose, and their surprise by Laflamme? But he had frankly told the full details, he argued. That, of itself, was proof enough of the singlemindedness of his actions at Ogoke. It seemed so foreign to his conception of the character of Denise St. Onge, that, when his tired body finally drew him into the oblivion of sleep, he had attributed her manner and her silence to the strain of overtaxed nerves.

CHAPTER XII

The following morning the council of war met in the shack of Michel where, as the Iroquois was unmarried, there would be no interruption.

"Now, Michel," said Steele, "I've kept my word and come back on the first snow and I've brought a hound that will help us if we have the luck to hear that Windigo again. I've also brought these."

The speaker stripped the lashings from a canvas-covered bundle, which David had carried in from the sled the night previous, to reveal to the curious eyes of Michel two massive engines of torture, their steel jaws bristling with teeth.

"By gar! Bear trap!" exclaimed the Iroquois, black eyes glittering.

"Beauties, aren't they? God help the brute they close on!"

Then Steele lifted six smaller but no less wicked-looking devices, designed to snap on and hold in vise-like grip the paw of the unwary prowler which stepped in them.

"These are the strongest wolf-traps made, and I doubt if any Windigo could get out of one, unless he gnawed his leg off."

"Now, Michel, before making any plans, I am ready to hear what you promised to tell me when I returned—what you told David and feared to have me know."

"Dat ees right, m'sieu. You keep de word an' cum back to fight wid us. Leesten!"

Michel filled his pipe, lit it, and hastily opening the door, circled the cabin to assure himself of absolute privacy. Then he began.

"You t'ink de tam you meet ma'm'selle below at de rapids dat she was alone?"

"When David and I were packing up to the post?"

"Ah-hah! Wal, Michel was dere."

"What d'you mean?" asked Steele, puzzled. "You were taking care of her?"

"Yes."

"Did she know it?"

The Iroquois shook his head. "She not know."

"What were you afraid of, so near the post?"

"Beeg Antoine!"

Steele stared in amazement at the speaker. "Big Antoine! You mean Laflamme's man—the one with the scar on his face?"

The half-breed nodded.

(TO BE CONTINUED.)

Expected Gifts Listed

In China, a betrothal takes the form of a bridal contract, and a category of expected wedding presents is solemnly inserted in the contract that binds the engagement; but the Chinese would very much resent having this stipulation considered a "price." In Japan, it is the custom for the bride to give gifts to the bridegroom's family—and there are many other interesting forms of intra-marital exchange of presents.

HOW TO KEEP WELL

DR. FREDERICK R. GREEN
Editor of "HEALTH"

(©, 1926, Western Newspaper Union.)

PREVENTING RICKETS

RICKETS is a disease of infancy and very early childhood. It is most common among bottle-fed babies, whose food does not contain enough bone bulking matter, or in breast-fed babies where, on account of the mother's physical condition, the milk is poor in quality. This may occur if the babies have followed each other too rapidly and the mother has not had time to regain her strength after nursing one baby before she is called upon to nurse another.

The disease comes on about the time of the first teeth. The child is irritable, has fever and sweating at night and is pale, flabby and puny. There are hard knobs on the ribs in front, where they join the cartilages. The head is large and the teeth are slow in appearing and badly formed. The large bones, especially those in the legs, are bent. The child is nervous, irritable and subject to fits.

Much attention has been given to this disease in recent years. It is now known to be due to lack of proper food and especially of sunlight. A rickety child is like a plant which has grown in a dark cellar. Cod liver oil is still used in treating the disease, as it has been for many years, but we know now that the child must have sunlight if its recovery is to be either rapid or complete.

Our local health departments are much interested in rickets, not so much because it has a high death rate by itself, as because the child with rickets is weak and has no ability to resist such diseases as pneumonia and bronchitis. So while few children die of rickets, the death rate among rickety children from colds, pneumonia and bronchitis is far above the normal.

In 1923 the health department of New Haven, Connecticut decided to try and reduce the amount of rickets among New Haven children. As soon as a birth was reported, a health department nurse was sent to see the mother. As soon as she was able, the mother was asked to bring the baby to the health bureau. There the nurse showed the mother how to give the baby cod liver oil and how to give it a sun bath, beginning by a few minutes sunning of the hands and face, gradually increasing the length and the amount of the exposure until the whole body was exposed for an hour a day.

Experience for three years now has shown that, simply by sunlight and cod liver oil, rickets can be controlled and practically prevented.

OUR WEAK SPOTS

OLIVER WENDELL HOLMES was a doctor as well as a poet. So when he wrote the "One Horse Shay," he evidently had the peculiarities of the human body in mind.

The idea the old New England deacon had that the reason a carriage broke down but never wore out was that each carriage had a weak spot that gave way first. So in old legends we find the same idea about the human body. Achilles' mother dipped him in the River Styx and so made him invulnerable, except his heel, where her hand held him. Siegfried bathed in dragon's blood, only a leaf fell on his shoulder and left a weak spot which later was the cause of his death.

These old legends all recognize that the human body has its weak spots. Where are they?

This question is answered by Doctor Schweisheimer of Stuttgart, who says that the Japanese realized, centuries ago, that there are certain danger spots in the body and built their system of jui-jitsu on this knowledge.

The most sensitive spot in the body is Adam's apple. A hard blow on this point or pressure with the thumbs will interfere with breathing and swallowing and cause severe pain. Every school boy knows that the points of the thumbs, pressed into the little hollows below and behind the ears, will cause severe pain and quickly subdue the largest opponent. Every school boy also knows that a sharp blow with the edge of the open hand on the back of the neck is very unpleasant. It is known in school-boy slang as showing you "how to kill rabbits." It is not only unpleasant, but it is also not free from danger as too hard a blow may break the neck and cause sudden death.

Every boxer knows the effect of a short, sharp, upper cut to the point of the jaw. I have seen fighters "put to sleep" for more than the necessary ten seconds by a short, snappy blow to the chin, when the boxer's glove did not move more than six inches. The force was transmitted through the jaw bone to the base of the skull.

Another weak spot is the region of the back low down over the kidneys. Many a boxer has been slowly worn down and put out without a mark on his face by repeated kidney punches. Everybody knows how lanky Bob Fitzsimmons floored Jim Corbett by the famous solar plexus blow.

Some parts of the body are much more subject to injury than others. Out of 300,000 accidents of all kinds, 53 per cent were injuries to the arm and hand, 28 per cent to the foot and leg, 8 per cent to the trunk and 9 per cent to the head.

Guard Against "Flu" With Musterole

Influenza, Grippe and Pneumonia usually start with a cold. The moment you get those warning aches, get busy with good old Musterole.

Musterole relieves the congestion and stimulates circulation. It has all the good qualities of the old-fashioned mustard plaster without the blister.

Rub it on with your finger-tips. First you feel a warm tingle as the healing ointment penetrates the pores, then a soothing, cooling sensation and quick relief. Have Musterole handy for emergency use. It may prevent serious illness.

To Mothers: Musterole is also made in milder form for babies and small children. Ask for Children's Musterole.

DR. W. B. CALDWELL AT THE AGE OF 83

Constipation! How to Keep Bowels Regular

To Dr. W. B. Caldwell, of Monticello, Ill., a practicing physician for 47 years, it seemed cruel that so many constipated men, women, children, and particularly old folks, had to be kept constantly "stirred up" and half sick by taking cathartic pills, tablets, salts, calomel and nasty oils.

While he knew that constipation was the cause of nearly all headaches, biliousness, indigestion and stomach misery, he did not believe that a sickening "purge" or "physic" was necessary.

In Dr. Caldwell's Syrup Pepsin he discovered a laxative which helps to establish natural bowel "regularity" even for those chronically constipated. Dr. Caldwell's Syrup Pepsin not only causes a gentle, easy bowel movement but, best of all, it never gripes, sickens, or upsets the system. Besides, it is absolutely harmless, and so pleasant that even a cross, feverish, bilious sick child gladly takes it.

Buy a large 60-cent bottle at any store that sells medicine and just see for yourself.

Dr. Caldwell's SYRUP PEPSIN

Laws Against Profanity

In 1794 the Pennsylvania legislature passed an act providing that any person over sixteen years blaspheming, cursing, or profaning the name of Almighty God should be fined the sum of 67 cents or be confined in the house of correction 24 hours. In 1804 it was amended that the perpetration of a curse or oath involved a penalty of 40 cents or detention for 12 hours in the house of correction.

All or Nothing

A colored attorney was representing a fellow colored client before Judge Dan V. White in municipal court.

"You may advise your client as to his constitutional right of telling his story or keeping quiet," said the judge to the lawyer.

"Yes sir. You can tell the judge the whole truth and nothing but the truth, or you can keep quiet," was the advice.—Indianapolis News.

Your own physician will confirm this doctor's statements.

The real cause of bad breath

"You cannot 'cover up' unpleasant breath for any length of time. The only way to rid yourself permanently of it is by removing the cause.

"Sometimes poor teeth are responsible. But the commonest cause of a coated tongue and offensive breath is constipation. You may not realize that your intestines are slow in eliminating waste matter, or that your breath is objectionable. But others will notice it.

"Get rid of constipation, and your breath will become fresh and sweet. Even more important, you will notice an immediate improvement in your health and spirits."

Nujol relieves constipation in Nature's own way

Constipation is dangerous for anybody. Nujol is safe for everybody. It does not affect the stomach and is not absorbed by the body. Medical authorities approve Nujol because it is so safe, so gentle, and so natural in its action.

Nujol simply makes up for a deficiency—temporary or chronic—in the supply of natural lubricant in the intestines. It softens the waste matter and thus permits thorough and regular elimination without overtaxing the intestinal muscles.

Nujol can be taken for any length of time without ill effects. To insure internal cleanliness, it should be taken regularly in accordance with the directions on each bottle. Unlike laxatives, it does not form a habit and can be discontinued at any time.

Ask your druggist for Nujol today. Remove the cause of bad breath and begin to enjoy the perfect health that is possible only when elimination is normal and regular.

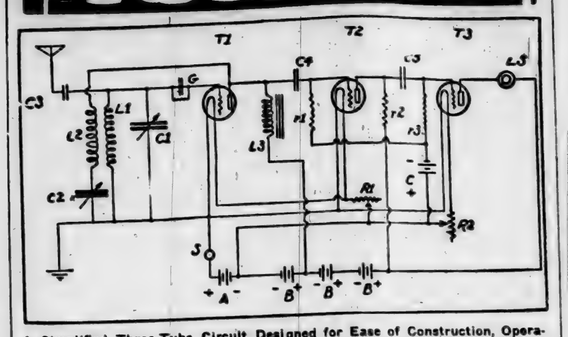
THE INTERNAL LUBRICANT
For Constipation

RADIO



A Simplified Three-Tube Circuit Designed for Ease of Construction, Operation and Superb Tonal Quality. Honeycomb Coils Used for Tuning.

By BRAINARD FOOTE
In Radio World.

Listeners who prefer moderate volume, combined with almost perfect reproduction, will be interested in the simple entertainment receiver to be described. The faithfulness of its tone output is dependent upon the system of audio frequency amplification, which, in this set, is a combination of a stage of impedance-coupled amplification and a stage of resistance-coupled amplification.

In addition, the use of the half-ampere power tube is considered in the last stage. Since this tube requires about 135 volts of "B" battery, the use of resistance coupling calls for no additional plate voltage. Impedance coupling is adopted for the first stage since this provides superior detector action and greater detector output. Moreover, with a good impedance coil for the first stage, the quality is good. A honeycomb system of tuning is shown, with a primary coil made unnecessary by the expedient of employing a small fixed condenser as the coupling medium. Thus the assembly of the outfit is not difficult. The output of volume is not so great as can be obtained by the use of more tubes and more audio amplification, but on this very account its tone qualities are better and its operation more pleasing.

Will Operate Loud Speaker.

A receiver of this character will operate a good loud speaker, either of the horn or cone type, to advantage.

In the symbolic diagram C3 is the coupling condenser whereby the energy picked up by the antenna is delivered to the set. L1 and C1 form the tuned circuit of the set, L1 being a 50-turn honeycomb coil and C1 a .0005 mfd. variable condenser. Regeneration is handled by the "shunt" plate circuit L2 and C2, L2 being another 50-turn coil and C2 another .0005 mfd. variable condenser. The two coils are mounted by means of two honeycomb coil mounts. They should be as far apart as possible, so long as sufficient regeneration is to be had on the longest waves.

G forms the combination grid and leak and condenser, a .00025 mfd. condenser and 2-megohm leak. T1 and T2 are two 01A type tubes, whereas T3 is a power tube of the 112 type, taking ½ ampere at 5 volts. L3 is the coupling impedance for the first stage. It may be a special impedance coil made for the purpose, or, with as good results, the secondary winding of a large-sized audio transformer. This stipulation is made to insure the use of an impedance coil having enough turns of wire and core iron to pass all the audio frequencies.

C4 is the coupling condenser for the first stage. A condenser as small as .002 mfd. will answer fairly well here, but better results are obtained both as to volume and range of musical tones if the condenser is made at .01 mfd. or even up to 0.5 mfd. A grid leak resistance r1 of 1 megohm or ½ megohm is required to properly bias the grid of tube T2 and to prevent it from becoming choked with negative impulses. Instead of the impedance just described, a coupling resistance is adopted for the second stage, since this is even better than an impedance when it comes to passing all the musical frequencies.

Power Stage.

Resistance r2 should be approximately 100,000 ohms (0.1 megohm). Such resistances can be purchased in the form of an ordinary grid leak and all the essential resistances may be snapped into regular resistance clip-holders. These holders, which come with the resistances r2, should be well made in order that the heating effect of the "B" battery current that must pass through it may not alter its resistance and cause noises or distortion. Condenser C5 is just like C4. The grid leak r3 should have a resistance of about ¼ megohm (250,000 ohms) to properly bias the last tube and prevent overloading or choking.

Tube T3 is a ½ ampere power tube, used because its greater power will result in somewhat greater volume of output and a very marked gain in tone quality, since overloading is eliminated. A jack is provided for the loud speaker connection, the loud speaker LS being indicated at this point.

Now for a few remarks about the battery and filament circuits. Rheostat R1 takes care of lighting the detector and first stage tubes T1 and T2, while rheostat R2 handles the power tube. A snap switch S, located at the left end of the panel, serves to turn the set on and off. Thus the rheostats may be maintained at the proper points permanently.

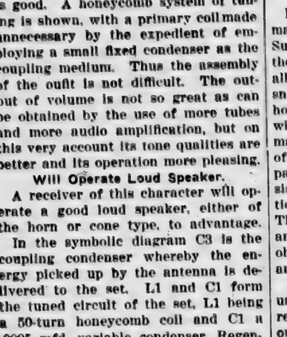
A 4½ volt "C" battery is employed, as indicated. Three 45-volt "B" units are required.

FOREFATHERS OF RADIO

By GEORGE LEWIS
of The Crosley Radio Corporation.

The beginnings of radio may be traced back to the scientific work of James Clerk Maxwell, the celebrated British physicist. Maxwell was born at Edinburgh, Scotland, and conducted his brilliant researches at a comparatively young age, dying at Cambridge, England, when but forty-eight years old.

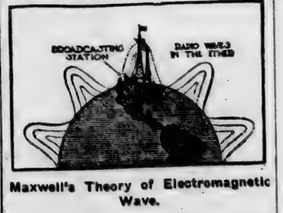
He believed that light was due to waves in an invisible medium which scientists call "ether." He believed, further, that light was some kind of an electromagnetic phenomenon. It was these ideas of Maxwell's that led Hertz later to the discoveries that made radio possible.



James Clerk Maxwell.

If Maxwell were right in his assumption that light was both a wave motion and electromagnetic in nature, the scientists could expect any vibrating electric current to send out waves of some kind, just as a vibrating violin string sends out sound waves. Maxwell's work was first published in 1873, but it remained for Hertz to establish experimental proof of his theories some fifteen years later.

Maxwell is honored among physicists as the mathematical wizard of his times. His theoretical work is the basis upon which much of modern physical science rests. Especially is this true in the realm of electrical theory, where his work is constantly



Maxwell's Theory of Electromagnetic Wave.

referred to as the great authority which has inspired modern ideas of electricity. Radio scientists have Maxwell to thank for first having opened the door to the developments that have led to the modern science and art of radio.

Hints on How to Adjust Your Regenerative Set

If the set accidentally breaks into oscillation, turn back the regeneration control at once.

Use both hands, one hand for the regeneration control and the other hand for the tuning control.

Practice on tuning powerful stations first and do not try to pick up weak, distant stations until becoming expert.

Do not force regeneration in an attempt to obtain loud-speaker volume from a set not designed for the purpose.

Never force regeneration in an attempt to hear stations beyond the range of the set; be content with those that can really be heard.

Keep the regeneration control always just below the point of oscillation; the set is then in the most sensitive condition. This is the reason for using two hands for tuning.

Do not try to find a station by the whistle. If the set is tuned just below the whistling point, the signals will come in clear and the regeneration control can then be tuned a little further to increase the volume.

WOMEN FIGHT POWERFUL FOE

Struggle Against Ill Health

Find a Faithful Ally in Lydia E. Pinkham's Vegetable Compound

MRS. ADOLPH HANSEN
HOLMQUIST, SOUTH DAKOTA

Holmquist, South Dakota.—"I can not begin to tell you how much good Lydia E. Pinkham's Vegetable Compound has done for me. I was sick for about four years. I could not sleep, and I was always worrying, so one day we saw your advertisement in a paper, and I made up my mind to try the Vegetable Compound. I bought one bottle and did not see any change, so I got another bottle. At the second bottle I began to feel better and I have used the Vegetable Compound ever since, whenever I feel badly. I recommend it and I will answer any letters asking about it."—MRS. ADOLPH HANSEN, Holmquist, South Dakota.

Could Work Only Two Hours

Encanto, Calif.—"I bless the day I began taking Lydia E. Pinkham's Vegetable Compound. I was so weak and tired all the time I could not work more than two hours each day, then had to go to bed for the rest of the day. I read so much about the Vegetable Compound and I was so weak that I decided to try it. I now do my own housework—washing, scrubbing, and ironing—and then help my husband with his garden. I do not have that worn-out feeling now. I advise every woman to give your wonderful medicine a trial, and I will answer any letters I receive from women asking about it."—MRS. STELLA LAY, 700 Jamacha Road, Encanto, Calif.

A woman who is fighting for her health and her family's happiness is a valiant soldier. She wages her battle in her own kitchen. She has no thrilling bugles to cheer her on, no waving banners.

If you are fighting this battle, let Lydia E. Pinkham's Vegetable Compound be your ally, too.

Literary Family

Clara—And what are they doing now?

George—The wife is writing poems that nobody will read, the daughter is painting pictures that nobody will buy, the son is writing plays nobody will put on the stage and the husband is writing checks nobody will cash.

Almost Stumped Pa

"Pa, what's a scintilla?"

"A scintilla? Why,—er—a scintilla is something there isn't anything of."

The Great Salt lake of Utah was discovered by William H. Ashley of St. Louis, a celebrated mountaineer, in the year 1824.

Children Cry for

Fletcher's CASTORIA

Getting the Comforts of Life

HAPPINESS reigns and a spirit of contentment prevails in the white, vine-covered cottage around the corner. It is owned by one of the regular fellows whom we all know. In front, half-hidden among the trees, awaits an auto ready to take the family out for an afternoon's pleasure. All his and all paid for.

Surely an inspiration to all that behold. It represents, as do most of the worth-while things of life, a background of hard work, study and thrift.

The comforts of life are within the reach of all. Happiness and contentment can, if you so will, belong to you.

Are you comfortable and happy in your surroundings or disgruntled with your lot in life?

Hard work and systematic savings are the graces that open comfort's door. Regularly setting aside a portion of the income, keeps it open.

We have studied these problems--these problems of life's comforts. Will you let us impart the results of our conclusions to you?

The St. Joe Valley Bank, A STATE BANK

Out in the field—there's where fence meets the test. How does it stand up under rain and wind, heat and cold, snow and sleet? Even the high-grade copper bearing steel from which Kokomo Pioneer Fence has always been made would not resist the ravages of the elements, *without protection* and scientific construction.

But Kokomo Pioneer Fence IS protected. Applied by the best known methods, the heavy galvanizing is *99½ per cent pure zinc*, and the coil in the line wires takes care of the expansion and contraction occasioned by weather extremes.

There you have the reasons for Kokomo lasting qualities.

The Kokomo Pioneer knot is a semi-hinge knot and you cannot put enough strain on the stay wires to unwrap them. You must actually b r e a k the stay wires to damage the fence.

ST. JOE NEWS.

VOL. XL — ST. JOE DeKALB COUNTY, INDIANA, THURSDAY APRIL 15, 1926 — NO. 15

Complete Convention Plans

Concord Township Sunday Schools to Have All-Day Session, Sunday, May 9th. Good Program, Good Speaker.

Sunday, May 9, will be a red-letter day in the township, because of the arrangements made for a big union program commencing in the morning and lasting until evening.

Concord has been noted as having among the best conventions of the county, and this one will be no exception, as the talent is always of the highest order.

The program as outlined will make three big Sunday Schools, divided into their respective divisions.

All children at Methodist Church 9:30, Mrs. Cora Price, Supt. All teachers of children will be present and care for their respective classes, as in their home school.

All Young People at Lutheran Church, 9:30, Stanley Means, Supt. with H. G. Rowe, State Superintendent.

All adults at Christian Church, 9:30, Ed Storer, Supt.

Following the bible School, will be appropriate Mother Day sermon and special music.

H. G. ROWE

State Superintendent of Young People's Division

The afternoon program will begin at 1, with Wid Williams as music director. Rev. Jones will have charge of the worship service and all township officers will be required to present written reports of their work. Officers will be elected for the township and other business matters attended to. The evening program will be Young People and will be arranged by the Division Superintendents of the four schools.

The speaker, H. G. Rowe, representing our state council, will be interesting. Having been in St Joe a number of times, he needs no flurishing press notice.

You'll Understand Some Day

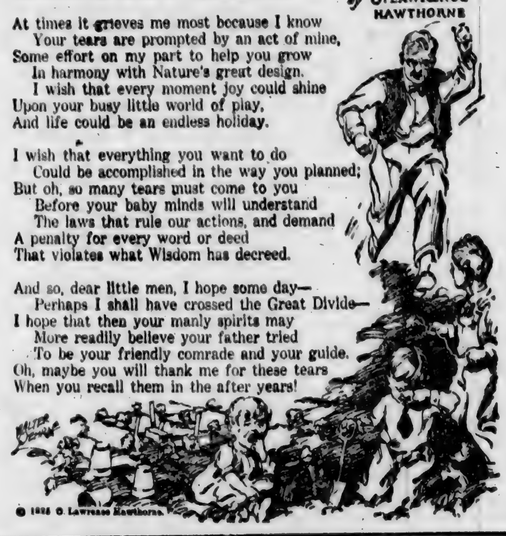
by O. LAWRENCE HAWTHORNE

Oh, little men, whom God has given me
To cherish and to nurture through the years
Of childhood, how it hurts my heart to see
Your faces clouded with unbidden tears,
Or in your trustful eyes the flash of fears
That suddenly disturb your spirits gay,
And drive the smiles of happiness away!

At times it grieves me most because I know
Your tears are prompted by an act of mine,
Some effort on my part to help you grow
In harmony with Nature's great design.
I wish that every moment joy could shine
Upon your busy little world of play,
And life could be an endless holiday.

I wish that everything you want to do
Could be accomplished in the way you planned;
But oh, so many tears must come to you
Before your baby minds will understand
The laws that rule our actions, and demand
A penalty for every word or deed
That violates what Wisdom has decreed.

And so, dear little men, I hope some day—
Perhaps I shall have crossed the Great Divide—
I hope that then your manly spirits may
More readily believe your father tried
To be your friendly comrade and your guide.
Oh, maybe you will thank me for these tears
When you recall them in the after years!



© 1926 O. Lawrence Hawthorne

Account of Wayne Provines Accident

The following account of the death of Wayne Provines was taken from the Oklahoma City Times under date of Tuesday, April 6.

"It was just one of those unavoidable accidents that happen and my sympathy goes out to the poor fellow who was driving the bus."

That was the statement made Tuesday by H. G. Provines, whose son, Wayne, 5 years old, was killed when a bus driven by R. L. Hodge, employe of the Oklahoma Railway company, ran over him at Twenty-third street and Douglas avenue Monday afternoon.

The child strayed from the path he had been taught to follow because he wanted to be with his playmates as long as possible. He started home but was killed as he darted from behind a car under the grinding wheels of the heavy bus.

"I had taught him to come straight home from kindergarten on Twenty-fifth street but he went around on Twenty-third street with some playmates and he tried to cross the street where he should not have crossed," Mr. Provines said

Mr. and Mrs. Provines left Oklahoma City Tuesday afternoon with the body of their last child for St. Joe, Ind., where burial was made.

"Then we will come back and put away his playthings and the things he wore. It has not been long since his brother died and now we have no children left," the father said.

Hodge, the driver of the bus, said that he saw the little boy dart from behind another car, applied the brakes and skidded the length of the bus, but it was too late. The front wheels had passed over his body and crushed out his life.

He was picked up and taken to St. Anthony's hospital but he was dead when he reached the hospital.

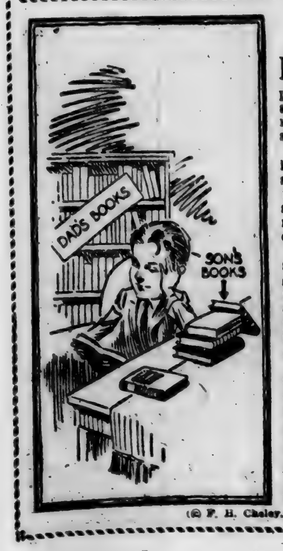
It was more than an hour before the body of the little fellow was identified.

Hodge was so nervous after the accident that he was unable to go out on the run again Monday.

The funeral service was conducted from the St. Joe Lutheran church Thursday afternoon at 1:30 o'clock, conducted by Elder J. N. Scholes. E. R Kinsey funeral director.

HOME, DAD AND THE BOY

By FRANK H. CHELEY



(© F. H. Cheley, Denver, Colo.)

Sympathetic Dads Get Results

BECAUSE They Are Wise Enough to know that a few tools and a place to build things are more of a home attraction than temporary rewards or a long list of "thou shalts."

Because They Abhor Weakness in any form whatsoever and absolutely refuse to excuse it. "Victory is to the strong" is their slogan, whether referring to mental, physical, spiritual or social life and activity.

Because They Count It Their Sacred Privilege to give the boys, step by step, the intimate sex information that they need. Best of all, they themselves practice physical fitness and have no patience with a double standard of morals for anyone.

Because They Recognize the Fact that a boy's books and magazines are his "silent comrades," and so take as much pains in seeing that these are as carefully chosen as their new clothes; that they fit as well; wear as well and make the boys as self-respecting; not forgetting that they wear out and need occasional replacing.

Editor Attends International Council.

Editor Leighty and wife left Sunday morning for Ft. Wayne enroute to Birmingham, Alabama, to attend the International Council of Religious Education, of which he is county president of this region. The paper, this week, will be published by the office force, assisted by Wm. Quance of Auburn who had charge of this paper as publisher for a year or more. We hope this edition will not be a failure and wish for your kindly forbearance toward us for any shortcomings upon our part. We have done our best.

First Anniversary of Sunday School Class.

The "Loyal Happy Hustlers" Class of the Christian Sunday School observed the first anniversary of this class organization last Sunday, April 11. Twenty-one grown persons besides fourteen children were in attendance. A feature of the occasion was a birthday cake upon which was a candle, symbol of one year's service. During a talk given by Vernon Woodcox, appropriate for the occasion the candle was lighted. This was followed by a class song. After the church service, a basket dinner was served followed by a general good social time. One dollar was donated to the class as a birthday present.

More Road Contracts Let

Four road contracts were awarded last week by County Commissioners for the Ketel road in Union township, the Stahl road in Fairfield township and the Ridge and Keller roads in Wilmington township.

The Ketel road is 2½ miles in length, the Stahl road is 2¼, the Ridge road 2½ and the Keller road 2 miles. Gravel on each is to be laid 12 feet wide and 10 inches deep.

Calvin C. Kain, county surveyor, made estimates as follows: Ketel road, $13,331 65; Stahl, $8,970.60; Keller, $10,219.76; Ridge, $10,000.45.

The bids received follow: Stahl road: Betts & Essinger of Columbia City, $8,689; Arthur Rosenberry of Wilmington township, $7,633.

Ketel road: Mr. Rosenberry, $12, 320; C. W. North of Columbia City, $12,890; Arthur Zehr of Berne, $13,152.

Ridge road: Keller & Baker of Butler, $9,496; Mr. Rosenberry, $8,724; Mr. North, $9,450; Mr. Zehr, $9,876.

Keller road: Keller & Baker, $9,465; Mr. Zehr, $9,845.

J. N. Neff of Bluffton, also filed bids, but too late to be considered.

Mr. Rosenberry was awarded the Stahl, Ketel and Ridge roads and Keller & Baker the Keller road.

Stanley O. Devitt, Democratic candidate for County Treasurer. 15t17p

Mrs. J. C. Hull while doing some work at the Fred Leighty home, fell from the top of the stairway badly bruising her face and breaking the frontal sinue of the nose. She fell from the top step to the bottom of the stairway. She is slowly improving.

Mrs. Jess D. Klopfenstein Files Suit for Separation

Jess D. Klopfenstein, well-known musician, was sued for a 10-year divorce in superior court late Tuesday by Mrs. Bessie Klopfenstein, 4130 Hoagland avenue. Her complaint charges that he has become infatuated with Estella Richardson, a singer of Huntington.

Mrs. Klopfenstein asks support money of $125 a month during the 10-year period in case the limited separation is granted. They have one child, aged eight.

She sets out in her petition that Klopfenstein, while engaged in singing at churches, came in contact with the Huntington woman and they became very friendly. Klopfenstein was invited to her home and they began to correspond, she alleges. The wife claims that he had promised several times to quit going with her but would not keep his promises for long at a time.—Ft. Wayne News.

Patou's Ideas of Milady's Apparel

White Favored for Evening; Avoids Robe de Style; Lelong Models.

Will the spring and summer of 1926 bring as many significant fashion changes as 1925? That is the important question of the moment, writes Jean Patou in the New York Herald-Tribune. If you will remember, it was just one year ago that I launched my spring collection and featured the raised waistline, at the same time entirely disregarding the low waist, which had been in vogue for so long before. Some of my good friends assured me that I was foolish—that the raised waistline was doomed to failure. Now I see all those same sturdy defenders of the lowered line slowly but surely adopting the raised waistline and declaring with a charming ingenuousness that they had always been in favor of it. That is the way of the mode. And what is laughed at today may be a tremendous vogue tomorrow. It is always important to bear this in mind.

A Mode of Materials.

If the higher waistline was the outstanding development of 1925, what will be the principal fashion feature of 1926? Let me assure you that there will be no appreciable change in the silhouette. The waistline will remain at the top of the hips, where I placed it last summer, and the outline in general will not greatly depart from last season's smart silhouette. The most important differentiation between the new mode and the oid is a material one—the employment of distinctly new fabrics. In saying new I may not be exactly correct, because one of the two outstanding fabrics of the coming season does not deserve that description. I refer, of course, to taffeta—an ancient friend which is returning vigorously to the scene of former triumphs. Personally I have used taffeta in many models from the tailored walking suit to the formal afternoon dress, and even for coats. However, and this will astonish you, I am sure, I entirely disregard taffeta for the robe de soir, because taffeta, when used in evening dresses leads inevitably to the robe de style, and I have buried that particular type of dress for many years. Nor do I favor it now, despite its apparent popularity this season. The second novelty among materials is a crepe georgette which has almost the weight of cloth and which may be employed in the making of the tailored coat and suit. This material is new in everything but name. It differs from any crepe georgette which has been used in the past.

The dominant note of my entire collection, and one which I believe you will note generally throughout the new spring models of other designers as well, is the duality of tendencies which prevails. On the one hand there is the sports influence, which is making itself felt more and more. The sweater should have a preponderant place in every morning wardrobe—it is quite the vogue for afternoons, and it has even commenced to invade the evening mode. Indeed, even last season there were several dinner dresses which were nothing more than decollete sweaters worn over jumpers. The second tendency, quite opposite and featured particularly in my collection, is the return of frilly femininity and a veering away from masculine costumes, achieved principally by using such materials as mousseline, lace and taffeta.

Chic Tailor-made Suit of Seashell Silk Gaberdine.

For Evening Wear.

My color preference for evening runs counter to what is generally accepted for spring. I favor white as the principal color and I have completely neglected black. For afternoon, beige and clear gray are the leading colors, after which come the pastel shades, always fresh and clear. For sports wear I prefer English tissues for jumpers and coats, jersey and silk for sweaters, sometimes the two combined, and invariably color contrasts. Washable crepe de chine and tussah are also excellent for the active sports frock. For the motor I use mannish tissues and in every case employ fur as a trimming. The traditional leather coat in the various beige shades I have again included for the motorist.

For the tailored suit and afternoon ensemble the most significant note is the employment of entirely contrasted fabrics. As for the tailored suit, the short jacket and the long jacket have made way in my collection for the three-quarters length type, which is more supple and better answers the needs of the moment. For afternoon many ensembles employ georgette crepe or printed crepe de chine in their dresses and then use the identical fabric again for the coat. On afternoon coats I frequently add collars of fur in order to make them more pleasing to the eye.

For the daytime frock three fabrics lead. Printed mousseline de soie, printed crepe georgette and the redoubtable taffeta. I have made it a particular point whenever using taffeta for dresses to make the model entirely modern. I have been scrupulous to avoid anything which even faintly recalls the robe de style.

Flounced Skirt, Novel Feature of Out-of-Doors Frock.

For evening, dresses of printed mousseline and of lace are both important this season. However, the most unusual evening note to which I specifically direct your attention is the dalmatique. Our Parisian summers are not always warm, particularly in the evenings, and very often in the Bois restaurants it is necessary for the fair diners to don their wraps in order to avoid a cold. This is neither pretty nor practical, because no further wrap can be added when they depart by motor. The dalmatique replaces the coat. It has all of its advantages, it is much lighter and it conserves the impression of femininity, which is the principal quality of the evening mode.

To sum up the entire situation in a single sentence, concludes Patou, the new mode is invariably rich, and its richness is nearly always obtained by the use of exquisite new materials.

Lelong's Collection.

The Lelong spring collection is versatile and varied. It opens with the type of suit one imagines would be suitable for the dashing sportswoman of Rhodesia or other exotic colonies of the British empire—a pair of leather or whipcord breeches, very slender at the knee and very wide about the hip, with a sophisticated jacket of brown and white check suiting.

Then there are some really attractive pajamas that will be the very thing for the Lido. They are made with long, straight coolie trousers, cut rather wide, in amusing crepe de chines printed in various designs, those of Dufy, which are exclusive with Bianchini Ferrari, being especially popular. They comprise a sleeveless jumper, made rather short, and a little straight overjacket.

Taffeta is used in considerable quantities both for dresses and coats. It is the soft flexible quality that can be crushed in the hand like a handkerchief and still regain its freshness without the aid of an iron. Lelong uses it in almost straight-line gowns with just a suggestion of fit near the waist, and though there is no flare, a hint of shaping toward the hem gives the necessary fullness for movement. The majority of his coats are made on straight lines.

Strapping of the same material is a very popular trimming, which lends itself to various clever uses in the graceful curving or twisting of lines. This is particularly successful in a pretty model of lacquer red forming a plain tailored gown.

There are touches of braiding, embroidery, fancy yokes, odd collars, bow ties, fanciful puffs at the wrist of a long sleeve, many silver buckles on belts, plastrons, plaits, tucks and every conceivable form of stitchery.

Lelong likes high-necked effects. He sometimes achieves these by means of a narrow scarf twisted round the throat. Occasionally he frankly makes an upright collar.

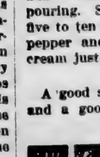
THE KITCHEN CABINET

(©, 1926, Western Newspaper Union.)

"Age is an opportunity no less
Than youth itself, though in another dress;
And as the evening twilight fades away,
The sky is filled with stars, invisible by day."

FOOD FOR THE FAMILY

For those who like the old-fashioned buttermilk soup, the following will be enjoyed:



Mulled Buttermilk—Take five cupfuls of buttermilk, stir a tablespoonful of flour into a little of the buttermilk, add and cook until boiling hot. Season with cinnamon, sugar or nutmeg.

Kidney Beans With Sour Cream.—Cook the beans until tender, then add sour cream to moisten thoroughly. Place over a slow fire and simmer one hour. Add salt and pepper to taste.

Orange and Water Cress Salad.—Arrange a nice bed of water cress on a salad plate, arrange overlapping slices of orange and serve with French dressing. Very nice to serve with game.

Baked Onions and Cheese.—Parboil half a dozen medium-sized onions until nearly tender. Drain and put them into a baking dish, then cover with a layer of white sauce and a sprinkling of good snappy cheese, repeat and finish the top with a layer of buttered crumbs. Bake in a hot oven until the crumbs are brown.

Brown Nut Bread.—Take two cupfuls of graham flour, one cupful of wheat flour, one-half cupful of molasses, one tablespoonful of sugar, one teaspoonful of soda, one-half teaspoonful of salt, one cupful of raisins, and one and one-half cupfuls of walnut meats. Mix and bake in a moderate oven.

Mock Crab.—Melt four tablespoonfuls of butter, add one-half cupful of flour, one and one-half teaspoonfuls of salt, three-fourths of a teaspoonful of mustard, one-fourth teaspoonful of paprika. When well blended pour in gradually while stirring constantly, one and one-half cupfuls of scalded milk. Bring to the boiling point and add one can of corniet, one egg lightly beaten, three teaspoonfuls of worcestershire sauce. Turn into a buttered dish, cover with buttered crumbs and bake until brown.

Onion Sandwich.—Chop a small onion, add salt, pepper, a little vinegar and oil and spread on buttered bread.

Split-Pea Soup.—Soak a cupful of split peas in two quarts of water. In the morning put the peas over the fire with a ham bone or piece of salt pork, a slice of onion, and simmer for four hours. Rub through a sieve, return to the fire; melt two tablespoonfuls of butter, add two of flour, mix well and add a little soup to the consistency of pouring. Stir into the soup and cook five to ten minutes. Season with salt, pepper and add one cupful of thin cream just at serving time.

Timely Dishes.

A good salad is always appreciated and a good salad is one which is dressed with a tasty dressing.

Lettuce With Egg Salad.—Put crisp head lettuce cut into quarters on salad plates after being well chilled in cold water and drained. Take hard-cooked eggs and put the yolks through a ricer; chop the whites very fine. Pour highly seasoned French dressing over the lettuce and sprinkle with the whites and yolks. This makes a pretty salad to carry out the color scheme of yellow.

Pear Salad.—Set half a canned pear on a few heart leaves of lettuce. Sprinkle with a few cubes of Neufchatel cheese and half as many strips of pimento. Take one cupful of double cream, two tablespoonfuls of lemon juice, four tablespoonfuls of the pear sirup, one-fourth of a teaspoonful of salt and four tablespoonfuls of honey. Beat the dressing until light and pour over the salad.

Caramel Cornstarch Pudding.—Take two tablespoonfuls of cornstarch, mix and cook with one pint of milk. Put three-fourths of a cupful of brown sugar in a smooth frying pan, melt and stir until dissolved and a golden brown, then add the boiling hot cornstarch mixture. Stir until all the sugar is well blended with the pudding, add a pinch of salt and serve in sherbet cups with whipped cream.

Cinnamon Rolls.—Take two cupfuls of light bread dough, add one-half cupful of sugar, four tablespoonfuls of shortening, cut in the mixture until well blended. Roll out, using flour to handle, then spread with butter, sprinkle with sugar and cinnamon, roll up and cut into small rings. Place to rise on a baking sheet; dust with brown sugar just before baking.

Spring Salad.—Slice crisp red radishes very thin, add sliced green onions and a little chopped green pepper. Serve on lettuce with a mayonnaise dressing.

Tomatoes and tomato juice are invaluable aids in the diet of young or old. Use the fresh tomatoes, canned, or the juice—all good for children.

Dishes made chiefly from milk, fish, meat, poultry and eggs with meat substitutes form the most important group in a well-balanced ration. Then come cereals, breads, fats, of which butter is the most important.

Nellie Maxwell

Breeders Try to Improve Flocks

More Interest Developed in Production of High Egg-Laying Strains.

(Prepared by the United States Department of Agriculture.)

For many years the efforts of poultry breeders to improve their flocks were confined largely to breeding for the type and color demanded by the "Standard of Perfection," and little attention was paid to developing high egg production. In the last few years, however, more interest has developed in the production of high egg-laying strains.

Production and Quality.

To show that high egg production and good standard quality can be combined to a high degree in chickens, and to encourage breeding along these lines, was the purpose of the exhibit displayed by the United States Department of Agriculture at the Madison Square garden poultry show held in New York city a few weeks ago.

The male birds of the department's exhibit were all of excellent standard quality and were bred from hens which had laid from 200 to 290 eggs in their pullet year. Most of them had a pedigree which included several generations of producers of 200 eggs or more. The exhibit included male birds of the Barred Plymouth Rock breed, the Rhode Island Red breed, and the White Leghorn breed, demonstrating that high egg production is not confined to the White Leghorns.

Breeding for Eggs.

Breeding fowls for high-egg production was given a great stimulus by the inauguration of egg-laying contests in this country about 15 years ago. These contests are now being held in every section of the country. A number of hens entered in these official contests have laid more than 300 eggs in one year. The highest producing hens are now coming from flocks which have been pedigree bred for egg production for a period of years. A large per cent of the hens entered in these contests are White Leghorns, but just as large egg records have been made by other popular breeds, such as Plymouth Rock, Rhode Island Red, and Wyandotte.

Gypsum Considered as a Direct Soil Fertilizer

Gypsum, according to Iowa tests, does not have the ability to neutralize acid soils even though it does contain calcium the same as limestone. It has no alkalinity, and, therefore, cannot take the place of limestone. On the other hand, gypsum does not have any injurious effect on the soil, as is sometimes believed, the Iowa station says. Gypsum should be considered as a direct fertilizer, as it supplies calcium and sulphur to plants. It also has some value in certain soils as an indirect fertilizer, for laboratory experiments have shown that it has the property of making native potassium available to plants, and hence, might, in some cases, take the place of expensive potassium fertilizers. The bulletin covering this work may be had by writing for No. 232, bulletin section, Iowa State college, Ames, Iowa.

Sowing Scarified Sweet Clover Seed in Pasture

Sweet clover may be sown in an old pasture by sowing scarified seed during the early spring, and covering the seed with a disk or harrow, or by allowing the stock to trample the seed in. It can also be seeded by sowing the unscarified seed during the late fall months, or even during the winter when the ground is not covered with snow. It should be kept in mind that sweet clover is quite sensitive to acid soils, and that when seeding in an old pasture the young sweet clover plants must compete with the sod that has already become established. Better stands are usually secured when the ground is plowed and the sweet clover seeded with a small grain crop.

Farm Hints

A load of lime makes good ballast on the trip home from town.

• • •

The biggest profits in farming go to the man who watches the so-called little things.

• • •

When planting seed potatoes be sure that it is good seed, free from diseases that will ruin crop and profit.

• • •

The bee keeper who made the right provisions for his apiary last fall needs to give slight thought to them this spring.

• • •

The European corn borer spends about 11 months out of the year as a caterpillar in the green and dried stocks of corn.

• • •

Heifers that are due to freshen in the spring should be worked with a little, so that they will be used to having their udders handled.

• • •

Farm wages will probably be just as high this year as they have been the past two seasons, and especially will this be true of the eight-month man.

• • •

General expansion in agricultural production this year might place farmers in a less favorable economic position than at present, believe many agricultural economists.

Treated Seed Will Increase Potatoes

Extensive Tests Conducted on Kansas Farms.

An average increase of 40 bushels of potatoes per acre was obtained by seed-potato treatment during the past five years, extensive tests conducted on a total of about 200 plots on the farms of Kansas growers indicate.

In some instances the increase in yield was not more than 10 or 12 bushels per acre, while in other cases it ran as high as 135 bushels per acre. Not only was the yield of potatoes increased, but the quality also was raised.

Growers are now using one of two disease control methods, either the cold corrosive sublimate, or the hot formaldehyde. For the small grower the cold corrosive sublimate is probably the best because with it potatoes can be quickly and conveniently treated.

Corrosive sublimate can be secured from almost any drug store in powdered form. It is dissolved at the rate of one ounce in eight gallons of water. The powder is dissolved first in a jar of hot water and then poured into eight gallons of water. Whole, uncut, potatoes are then allowed to soak in this solution for one and one-half hours, after which they are dried, cut and planted. This treatment will kill most of the troublesome diseases that are carried on the seed. It has been satisfactory to those growers who only have a small patch to plant.

Formaldehyde is used at the rate of one pint to 15 gallons of water. The solution is then heated to 124 to 126 degrees Fahrenheit. The potatoes are dumped into the solution and allowed to remain there for three minutes.

Consider Drilled Corn to Be Better for Silo

Except on weedy land, drilled corn seems to be rather better for silage than checked corn, the chief advantage being that it cuts a little easier with a corn binder. If the ground is weedy, it may be that the weeds can be kept down fairly well in the drilled corn by the use of a furrow opener on the corn planter followed by a rotary hoe or harrow at frequent intervals while the corn is young.

Twenty years of experimenting at the Ohio station indicate that on rich land the most food value per acre with corn for silage can be obtained when five kernels are planted per hill in hills three feet six inches apart each way, or when the corn is drilled in with a kernel dropped every eight inches. Of course, thick planting of this sort makes lots of nubbins, but five pounds of nubbins have just as much food value as five pounds of big ears when they are put into the silo. At any rate, the Ohio experiments indicate that on rich land the greatest net food value per acre for silage or corn fodder can be obtained by decidedly thick planting.

Illinois Farmers Favor Limestone to Help Soil

More than three-fourths of a million tons of agricultural limestone have been applied on over 250,000 acres of Illinois land by farmers of this state in 1925, according to an estimated report of the Illinois Agricultural association.

This 750,000 tonnage of limestone, which if loaded on a single train of freight cars would extend 123 miles, breaks all records for use in any one state in the United States during the past year. It exceeds by 50 per cent, or 250,000 tons, the Illinois record of 1924, which was also greater than any other state in the country. Illinois farmers, according to government statistics in 1924, used more than one-fourth of all agricultural limestone spread on farm lands in the United States.

Weather Bulletins Help Many Nebraska Farmers

A wholesale dealer in fruits and vegetables in Omaha, Neb., recently wrote to the weather bureau of the United States Department of Agriculture, saying that the frost forecasts received during an unseasonable fall freeze had enabled the fruit and vegetable trade as a whole to prevent an enormous loss. Not only did the weather bulletins and warnings save shippers and receivers of perishable freight large sums by giving them an opportunity to withhold shipments or protect those en route, but they accomplished the important service of maintaining a reasonable level of prices for these commodities, because any widespread loss by the producers must be offset by a corresponding increase in price.

Plowing Corn Land for Grain in Early Spring

It generally pays to plow corn land for grain, particularly if one can get plowing done in the fall. Spring plowing is about as good if one can put work enough on it to work the soil down into a good seed bed. One serious objection to spring plowing is that it delays seeding and generally early sowing is better for grain crops.

For this reason disking corn land for grain is recommended rather than plowing and late sowing. By double disking and then sowing with a disk drill one can put in a crop of grain on corn land in pretty good shape. Where one can plow and double disk and still sow early it is best to do so.

"BAYER ASPIRIN" PROVED SAFE

Take without Fear as Told in "Bayer" Package

BAYER

Does not affect the Heart

Unless you see the "Bayer Cross" on package or on tablets you are not getting the genuine Bayer Aspirin proved safe by millions and prescribed by physicians over twenty-five years for

Colds	Headache
Neuritis	Lumbago
Toothache	Rheumatism
Neuralgia	Pain, Pain

Each unbroken "Bayer" package contains proven directions. Handy boxes of twelve tablets cost few cents. Druggists also sell bottles of 24 and 100.

Nurse's Advice Rid Her of Pimples

Brooklyn, Mrs. Minnie Fensterer writes:—"My pimples and blackheads got so bad I feared it was eczema. I confided in a [illegible] friend of mine. I had been troubled with constipation and indigestion for some time. She advised me to try Carter's Little Liver Pills. You can see by my picture that the treatment has done wonders. I feel I am now free from constipation."

Chronic constipation many times causes pimples. Carter's Little Liver Pills encourage the bowels to eliminate the poisons.

Druggists, 25 & 75c red packages.

BURGESS RADIO BATTERIES

When you are using Burgess Radio 'A' 'B' and 'C' Batteries, remember that wherever the American flag flies, radio engineers of the army, navy and air service, as well as thousands of experienced amateurs, are relying on Burgess quality and dependability.

There is a Burgess Radio Battery for every receiving set. When your old batteries wear out, replace them with Burgess. Then you will know why Burgess is the choice of the foremost radio engineers.

Making the Receiver Selective—Three Methods of Connecting the Wave Trap Are Shown in the Diagram.

Selectivity, this is the battle cry that has taken the place of the watchword distance, for of what use is a set that is able to tune in the Pacific coast stations if it can't tune out the nearby locals. In the old days of not so long ago when all broadcasting was done on 400 or 300 meters and 500 watts was considered super-power, the sharp tuning qualities of a receiver were not very important factors in its construction. Now, however, come requests for information on how to tune out XYZ while ABC is on, how to tune out the locals and how to separate the locals.

If you have a manufactured five or more tube set that does not tune sharply there is little you can do to remedy it. Any good five-tube set employing two stages of tuned R. F. should be able to separate and tune out local stations that are not closer than 20 meters. If your set does not do this it is either not efficient or you are using an aerial that is too long. With a five-tube set you can use a much shorter aerial than one would suppose, and still get comfortable loud-speaker reception on most of the larger stations within 1,000 miles.

Cut Through Interference.

It is from the owners of the blooper, the two, three and four-circuit receivers that most of the complaints regarding nonselectivity come. For them we can suggest the wave trap, and if it is made with care and of low-resistance parts the user will be able to cut his path through interference with greater ease.

Wave traps in general are of two kinds: Those that are shunted across the antenna and ground and called "acceptors" and those that are in series with the antenna and ground and called "rejectors." A rejector prevents one frequency from getting into the receiver and lets all others pass.

It cuts a slice out of the stations that are on the air. An acceptor provides a convenient by-pass for all frequencies but the one that the listener desires to hear.

A wave trap is simply a good coil shunted by a condenser and designed so that it will tune from the lowest to the highest broadcasting station. A good wave trap may be made from one of the antenna couplers with condenser units that are being sold for use in a tuned radio frequency set. Three methods of connecting the wave trap are shown in the diagram. When in series with the antenna, as in No. 1 or No. 3 the wave trap may be set at the wave length of the interfering station and that station will not interrupt until the tuning of the trap has been changed. When across the input to the receiver as in No. 2, a trap will let into the set only the signal that is desired and makes tuning somewhat more complicated, but when the user becomes more accustomed to using it he will find that it helps considerably.

Converting Into Wavemeter.

A wave trap, besides its use as a filter, can be conveniently converted into a wave meter by calibrating it in wave lengths. It need only be placed near one of the coils of the receiving set to indicate the frequency of the incoming signals. When the wave trap condenser is turned a sharp decrease in signal strength for the nonregenerative receiver will be noted, and a click will be noted with an oscillating receiver when the wave trap is in consonance with the circuit of the receiving set. By calibrating the condenser settings from a few of the well-known broadcasting stations a curve may be drawn showing the relation between the condenser settings and the wave length at the various dial readings.—St. Louis Post-Dispatch.

FOREFATHERS OF RADIO

By GEORGE LEWIS
of The Crosley Radio Corporation.

In 1887, Heinrich Hertz, a German physicist, conducted the experiments which resulted in scientists accepting Maxwell's theory of electromagnetic waves as a fact, and in engineers developing the practical use of these waves in radio.

As the story goes, Hertz was experimenting with some apparatus for

Heinrich Rudolf Hertz.

causing an electric spark. Nearby he had a loop of wire, the ends of which were a hair's breadth apart. He noticed that every time there was a spark in his apparatus, another spark would jump across the gap in the loop

First Radio Transmitter and First Radio Receiver.

of wire. Hertz' sparkling apparatus was the first radio transmitter, and the little loop of wire was the first radio receiver.

Hertz believed this result to be due to electromagnetic waves sent out by vibrating electric current in the sparking apparatus and picked up by the little coil of wire. It is not difficult to understand that a vibrating current might send out waves when one considers analogies. When you drop a board into a pond of water, it splashes up and down and sends out waves. When you pound a drum, the tightly-stretched drumhead vibrates and sends out sound waves into the air.

A Battery Brief

To have a battery working at its best efficiency, the terminals should be kept free from corrosion, a scale which is formed by the electrolyte or acid. To get rid of it, scrape the terminals until there is a bright lead finish. Washing the terminals with ammonia or some other alkaline solution will neutralize any acid that may be present and prevent corrosion. Take care that none of this solution gets into the battery, as it will neutralize the acid in the battery and also stop its action.

For Perfect Contact

Any electrical connection depends for its efficiency on positive contact of the various metallic parts. Wires that are fastened to terminals should be thoroughly cleaned and then properly soldered.

ETHER WAVES

Adding new electrolyte does not charge a storage battery.

A cloth dampened in ammonia will keep the top of the storage battery clean.

With proper care a vacuum tube should give from 700 to 1,000 hours' service.

A great many parts of a set can be bought cheaper than an amateur can make them.

Input to every tube goes to grid and filament, usually negative filament or center arm of potentiometer.

The efficiency of a storage battery is measured by the ratio of an output to the input, generally in ampere hours.

If paste flux is used for soldering, it must be removed thoroughly with a cloth, so that it will not creep along the wires, and break down insulation.

Reverse the leads on the grid coil if signals are mushy and stations hard to get.

Thirty ampere hour capacity means that if one ampere is drawn from a cell every hour it will last 30 hours.

A loop antenna is supposed to intercept maximum signal strength when it is pointed toward the transmitter, but this directional property is affected by the surroundings.

INDIANA BREVITIES

David Strouse, department commander of the Indiana G. A. R., is seriously ill of influenza at his home in Danville.

Clarence Miller, twenty-three years old, living north of Cadiz near Newcastle, was killed when run over by a tractor while plowing.

William Rarick, seventy-nine, Atwood, won the old fiddlers' championship of Marshall and Kosciusko counties at a Warsaw theater.

Mrs. Erna Stafford, Rochester, was granted a divorce from John T. Stafford, accountant of the Chicago Nipple company of Rochester, on the grounds of cruelty.

A mule with a penchant for kicking delayed the Easter parade in the colored section at Jeffersonville until a teamster lassoed him and took him to police headquarters.

The drum corps of John C. Peterson post of the American Legion of Warsaw, with 24 members, will participate in the forthcoming Elks' national convention at Chicago.

O. E. Taylor, age thirty, lineman for the Indiana Service corporation, was fatally injured in a 30-foot fall from a pole. He died of a fractured skull in the Methodist hospital at Fort Wayne.

Mr. and Mrs. A. C. Goff of Dayton suffered serious injuries when an automobile in which they were riding went into the ditch and turned over three miles north of Greensburg on the Fort Wayne road.

W. Clyde Martin, principal in Palmyra's much-ballyhooed "recreational heresy" trial, has filed with the secretary of state his declaration for the Republican nomination to congress from the Third Indiana district.

James J. Davis, secretary of labor, recently elected exalted ruler of the Elwood lodge, B. P. O. E., was unable to be present to be installed. A telegram from his secretary informed Dr. G. V. Newcomer, installing officer, that Mr. Davis was ill in bed. Mr. Davis was installed by proxy.

Maintenance and operation of the general departments of Evansville cost the citizens on an average of $1.26 more in 1925 than in 1924. Maintenance and operating costs for the year amounted to $2,000,500, or $22.08 for each person, according to a summary of the city's finances prepared by the federal Department of Commerce.

The orphans' home of the Fort Wayne diocese of the Catholic church, located at Fort Wayne, will get $16,539 and the home of the aged Little Sisters of the Poor at Indianapolis will get $8,269 from the estate of Miss Elizabeth Mohan of Anderson, whose death occurred last year. Her estate is just being settled.

Election to Sigma Xi, one of the highest honors bestowed on science faculty members and advanced students at Indiana university, has come to nine graduate students of Indiana university. They include Brenton L. Steele, Pullman; Ralph Voris, Winfield; Robert R. Schrock, Bennetts Switch; William P. Morgan, Indianapolis; Sidney A. Esten, Hawey A. Zinsger, William P. Rawles and Mrs. Martha Strong, Bloomington, and O. F. Burger.

A recommendation that dogs throughout the entire state either be muzzled or kept shut up for a period of 60 days in order to check the spread of rabies, was recommended recently by Dr. William F. King, secretary of the state board of health, in a conference with Governor Jackson. The appearance of additional cases of this disease throughout the state has led Doctor King to believe such action will be necessary to check it.

Ranger Community hall is running full blast at Palmyra following the sudden ending of the trial for "heresy" of W. Clyde Martin, the manager. Martin was charged with giving the appearance of evil to the village of Palmyra by allowing roller skating to music. The three presiding judges of the church, after due deliberation handed down a decision that Martin must abide by the rules of the congregation before he is permitted to have full membership in the Church of Christ.

Stolen pigs, fed with stolen corn on a farm bounded by stolen fence, whose owner lived in a house built of stolen material with stolen instruments and fitted with stolen fixtures, were described to Rushville police by Fred Clevenger, Jr., twenty-six, when he was arrested for chicken thefts. Two hours after the confession farmers living nearby were recovering their pigs, plows, and pumps from Clevenger's four acre tract, dairymen were claiming their cows, poultry fanciers were identifying their chickens, and representatives of three lumber companies were speculating about how to dismantle the "stolen" house to recover the parts of it built with material taken from their yards.

A gift of $5,000 was made to the Greensburg Methodist church by Joshua M. Pool, age ninety, a retired monument dealer, to be used for the purchase of a set of chimes for the new church building.

Kokomo has "gone over the top" in its drive for a $50,000 new-industries fund. Successful termination of the drive makes it possible for the new industries committee of the chamber of commerce to close deals pending with several manufacturing concerns that have inspected local factory sites.

IMPROVED UNIFORM INTERNATIONAL

Sunday School Lesson

(By REV. P. B. FITZWATER, D.D., Dean of the Evening School, Moody Bible Institute of Chicago.)
(©, 1926, Western Newspaper Union.)

Lesson for April 18

THE BEGINNING OF SIN

LESSON TEXT—Genesis 3:1-24.

GOLDEN TEXT—For as in Adam all die, even so in Christ shall all be made alive.—I Cor. 15:22.

PRIMARY TOPIC—Adam and Eve Disobey God.

JUNIOR TOPIC—The Result of Disobedience.

INTERMEDIATE AND SENIOR TOPIC—Playing With Temptation.

YOUNG PEOPLE AND ADULT TOPIC—The Temptation and the Fall.

A look out upon the world proves that man is not what he should be. It is not reasonable to suppose that man is now what he was when he came from the hands of the Creator, much less an improvement. The only way of accounting for this is by the historic fall of man as given in the Bible. The introduction of sin is the only answer.

I. Man's Probation (vv. 1-5).

1. The place.

It was the beautiful garden of Eden. Man's environment was suited to his nature. The testing of the second Adam was quite in contrast. Instead of in the garden of Eden with a companion suited unto him, it was in the wilderness with the wild beasts.

2. The necessity.

Adam was created with the possibility of character, but not with character. This he could get only through testing. Alternative choice makes character possible. Free will is what made Adam a real man. Character is the resultant of choice.

3. The means.

It was most simple—just one prohibition. The tree of the knowledge of good and evil was forbidden.

4. The method.

Satan, a personal malicious being, appeared in the guise of a serpent. He did not appeal directly to the man. He chose to appeal to the woman through the serpent and through the woman to the man.

a. He found the woman while alone.

b. He insinuated doubt into Eve's mind as to God's Word and love. Satan's method is the same today. He tries to get people to doubt God's Word and then to doubt His love.

c. He appealed to innocent appetite. He argued that there would be no harm in eating, but a great advantage.

d. Eve gazed upon that which God had forbidden and lusted after that which God had prohibited.

II. Man's Fall (vv. 6-8).

The steps in the fall seem to have been rapid. From doubting God's love Eve went to doubting His word. From gazing upon and lusting after that which God had prohibited there was but a short step to indulgence.

III. The Consequence of the Fall (vv. 9-24).

God's holy nature is such that when men sin, He at once manifests Himself on the scene.

1. A disturbed relationship with God (v. 8).

The introduction of sin marred man's familiar intercourse with the Almighty. Adam and Eve not only hid from God's presence, but when summoned by Him they began to make excuse, and Adam even laid the blame on God.

2. The degradation of the serpent henceforth becoming the type of sin and Satan (v. 14; cf. Num. 21:9. John 3:14 and Rev. 12:9).

Satan's doom was pronounced without trial. In the case of the man it was not so, showing that this was not Satan's first offense.

3. The undying enmity between the seed of woman and the seed of the serpent (v. 15).

This bitter enmity has continued from that day to this.

4. The ultimate victory of the woman's seed (v. 15).

Satan harassed the woman's seed, but on the cross the final stroke was made which crushed his head (John 12:31, Heb. 2:14, 1 John 3:8). This is the first gleam of the glorious gospel of Christ.

5. The judgment upon the woman (v. 16).

This relates primarily to her as a wife and mother.

6. Man's new relationship to the earth (vv. 17-19).

The earth was cursed on his account. Man must make an increased effort to exist. With his sinful nature, man would be in a bad state without the necessity of toil.

7. Death (v. 19).

This includes spiritual and physical death. Sin brought all.

8. Expulsion from the garden (v. 24).

Then man's nature was changed, out from the beautiful garden he went.

Being Content

And we shall be made truly wise if we be made content; content, too, not only with what we can understand, but content with what we do not understand—the habit of mind which theologians call, and rightly, faith in God.—Charles Kingsley.

Personal Immortality

Without a belief in personal immortality religion is like an arch resting on one pillar or like a bridge ending in an abyss.

ROAD BUILDING

SOUTHERN STATES SPEED ROAD WORK

That the southern states are rapidly forging to the front in the construction of new paved motor roads is indicated in reports from the state highway departments of the sixteen states of the South which show that under their direction a total of $170,000,000 is available for new roads this year.

Including the construction work already under way by counties and townships the sums being spent in the South this year for road improvements will aggregate approximately $400,000,000. In the new construction the ashphaltic types of pavement predominated and construction this year will outstrip any year heretofore.

In Texas last year $3,800,000 was expended for actual maintenance and $000,000 worth of equipment was purchased. Kentucky built 400 miles of improved highways last year at a cost of $10,000,000 and will expend $7,000,000 this year. South Carolina's last year's program involved the expenditure of $5,000,000 for maintenance and new construction. Approximately $7,000,000 is available for 1926. More than $30,000,000 in road projects are under contract in Missouri and $20,000,000 worth of contracts have been completed.

West Virginia completed last year 658 miles of roads and 24 bridges at a cost of $15,800,000 and carried over uncompleted projects involving $9,900,000 into this year. Arkansas expended $9,000,000 for new roads last year. Approximately $10,000,000 will be available this year. A 5,000-mile system is maintained by Georgia. Florida in 1924 awarded contracts totaling $4,400,000 and constructed 350 miles of roads. Expenditures for highways last year in Mississippi aggregated $4,350,000.

Contracts awarded in Tennessee last year aggregated $10,500,000 and plans adopted provide for the continuation of construction. Louisiana expended $7,000,000 and completed 600 miles of all-weather highways. This year $8,000,000 is available. North Carolina is steadily advancing its big highway program. In Alabama a total of $13,000,000 of $25,000,000 worth of road bonds have been sold and the remaining $12,000,000 will be put into roads in the year 1926. The Oklahoma state highway department in the first year of its reorganization shows construction under way valued at $10,000,000

Wisdom of Federal Aid Policy of Government

In view of the question raised in some quarters as to the wisdom of the federal aid policy of the government, here are a few figures that will enable the situation to be viewed from a new angle.

Since 1918 motorists as a class have paid the federal government in the form of excise taxes on automobiles and parts the sum total of $779,885,339. Since the beginning of federal aid in 1917 the government has actually expended $276,305,407 as its share for the construction of federal aid highway projects, according to figures compiled by the Lincoln Highway association.

This means that the government has expended less than 36 per cent of the amount of motor vehicle revenue paid by the motorists as a class into the coffers of the Treasury department. At this rate the government still owes the motorists some $503,079,932. With this balance sheet there can be little doubt that they will line up 17,000,000 strong for continuation of the federal aid policy.

They have already footed the bill.

Types of Road Surfaces

In the commonwealth of Australia and also in France, after trials of various types of road surfaces have been made, asphaltic and bituminous forms of road construction have been adopted. It is a curious feature of asphalt that the bitumen, an essential ingredient, is obtained from crude petroleum from which also is obtained the motor spirit used by the very vehicles whose wheels play a large part in the wear and tear of the roads.

Good Roads Hints

Last year the government gave the states $111,000,000 to help build 11,300 miles of new roads. This is a record. An additional 12,500 miles is being completed.

* * *

The mileage of surface roads in the United States is nearing the 500,000-mile mark. In addition to surfaced roads, a considerable mileage has been graded and drained according to engineering standards.

* * *

More than half the roads of Brazil are suitable to automobile traffic.

* * *

The state highway department plans on eliminating the so-called "dead man's curve" on the Lincoln highway about four miles from Greensburg, Pa., where seven persons have been killed and many injured.

* * *

A census taken by the state highway department shows that the average traffic over the Lincoln highway in Wyoming during the present year was 474 vehicles per day.

NEWS OF THE TOWN

Patronize the advertisers.

Lloyd Douglas and wife are the proud parents of a new baby.

For Sale: Yellow Dent Seed Corn. Call O. E Inlow. 14t3p

Second car—Just in, of that new Potash Combination Fertilizer at Curie's.

Grady Woodcox and family spent Sunday with Mr and Mrs. John Simanton, at Auburn.

Ray Reasoner and wife spent Sunday with their son Floyd and wife at Ft. Wayne

Chas Jordan and family, of Garrett, spent over the week end with G. M. Barney and wife.

Mrs John Engle returned home Saturday evening from Auburn where she has been since Tuesday taking treatments.

The Missionary Society at the Lutheran Church will meet with Mrs. Mae Miser, Thursday afternoon at 2 o'clock.

John B tz and wife spent Sunday afternoon in Auburn with Sol Shearer and Chas. Rainier and family.

Mrs Hazel Steward and children Ercil and Florence, and Mrs Ada Berry spent Sunday afternoon in St. Joe.

F. L. Milliman will appreciate your support for re-nomination on Republican ticket for Trustee Concord Township at May 4, Primary. 14t1t.

The new spring McCall Quarterly is here and it is chuck full of splendid styles. Pictorial Quarterly also on sale and display at News office.

Gaining access through a basement window, thieves gained entrance to the Crescent Printing Co of Defiance, O., and breaking the combination of the safe by some heavy instrument, presumably a sledge-hammer, they obtained $17 97 in cash. Damage to safe may reach $75 00 it was believed today by Lee O Tustison, manager of the company.

Mr. Melvin Bishop reports a number of cases of vandalism perpetrated, no doubt by youngsters about town, who seek an outlet for youthful energy. A number of window lights have been stoned out of the former Al Bull and James Harter properties. These houses have been for some time vacant And it is no doubt due to this fact that these young ters, thought they were licensed to so act. Too many young-sters are running the streets today and getting an education that will not be to their advantage in future years The time to stop this business is now, before it assumes greater proportions, and will cause regret and loss upon the part of the parents concerned.

George Wilmot moved back to town, Monday.

Henry Sechler called on St. Joe relatives, Sunday afternoon.

Notary work of all kinds attended to promptly at News office.

Mrs Clare Hull, who has been sick with pneumonia, is now able to sit up some.

The Misses Portia Hadsell and Pauline Wasson were at Ft. Wayne Saturday.

Mrs. Vada Turley of South Bend, visiting at the home of her sister, Mrs. E B Smith, a few days this week

E B Smith, wife and son William and mother, M r s. Mendelsohn, were visiting at Edon, Ohio, Monday.

Don't put off filing that exemption any longer, it means money to you. The News can handle it for you

One-sixth of the people of this country are driving autos, and the remaining five-sixths are trying to keep out of their way.

SHOES—For Men, Women Children and Misses Shoes and Oxfords—A real classy assortment at money making prices—Frank Beams, Spencerville.

Ralph Sechler, who has been at the Lutheran Hospital for three weeks taking treatments, returned home. He is reported as much better.

Mr and Mrs. Howard Northrup returned to their home at St. Joe after staying with their daughter, Mrs Pluma Hamilton, nearly all winter.

FOR SALE—8 ton of Clover Hay and 200 bushels of Corn. Inquire at 206 S. Darling St., Angola, Ind., phone No. 210 Y, or call Fred Elson.

We read in a New York paper that they're now making booze out of acorns. So we suppose "great oaks from little acorns grow."

A car of Bradley's Fertilizer now in at Curie's store— Lime and phosphoric acid, the kind for alfalfa, corn and oats. It's the best too for hard or sour ground. Prices right.

The St. Joe High School Alumni Association met Tues ay evening, April 13, at the high school building, to transact business of the society. Another call meeting will be held April 20, to listen to committee reports, in regard to advertising, menu, and to complete arrangements for the banquet.

Since the main street of our town has been torn up; with every passing automobile clouds of dust fill the air. We are getting this early, a foretaste of what is in store for us when July and August's hot blasts parch things up in their usual manner. It is a good time to think and agitate the question of oil.

BAND CONCERT

St. Joe COMMUNITY BAND

Will make its first public appearance of the season at

The Christian Church, St. Joe

Friday, April 16th

The Program Will Be As Follows:

Pageant of Columbia	Band
Vocal Solo	Joe Woodcox
Si Haskin's Barn Dance	Band
Reading	Margaret Hamilton
Fallen Leaves Waltz	Band
Cornet Solo	Donald Kinsey
Vocal Solo	Miss Bray
Three Rings March	Band
Clarinet Solo	Joe Woodcox
Reading	Virginia Shull
Poet's Dream	Band
Vocal Solo	Jean Curie
Dynamic Overture	Band

Come! Admission 15c-25c Come!

Band Makes First Appearance.

In this issue you will find an advertisement of the Community Welfare Band; the first concert of the season which will be held in the Christian Church on the evening of April 16.

People of this and surrounding vicinity should realize by this time the value of this organization as a community asset as well as from the advantages to be derived as a social factor.

With the coming of better weather these concerts will be given in the open as before. Decoration or Memorial Day is not far off, and Independence Day following, will need the services of this local band; both of which would be lacking in some respects if deprived of their presence

We bespeak for them a good turn out, at this, their first concert. Come and help the boys out, and at the same time you will be helping the community as well as yourselves.

Parent-Teacher Association

The P T A met at the school house Friday evening for the regular monthly meeting

The singing was led by Miss Bray and was greatly enjoyed.

Mr. H. G Provines gave an interesting talk on his school life at St Joe, be being the organizer of the high school here.

He urged the youth to take school work serious and that every day valuable but if time was wasted it did no good

From financial stand point the boy or girl who spends his or her time profitable in high school and graduates increases the earning several thousand in life time.

We certainly appreciated the talk and inspiration and feel greatly indebted to Mr Provines. We express our sympathy for the family in their great sorrow.

The Glee Club furnished an excellent number.

The discussion "Why we should promote a P. T. A." was well discussed by Miss Pauline Wasson and Mr. O K Shull.

The business session followed and the following officers elected President, Ralph Sechler; First Vice, Principal of School; Second Vice, Ed Storer; Secretary Pauline Wasson; Treasurer, Derwood Ridgway.

An Auburn Landmark Soon to be A Memory

Auburn's old elm tree at the corner of Jackson and Fourteenth streets will soon be a memory. The beautiful tree, under the shade of which children played and travelers have found rest since the memory of the oldest inhabitant, will soon give way to the ax Disease and lack of moisture, due to the paving of Jackson street, have caused it to die. The tree trunk measured more than fourteen feet in circumference and the limbs had a spread of 66 feet. Within the memory of those who have lived in Auburn for the last sixty years, the old elm has been used as a place to hold Fourth of July, Decoration day exercises, Sunday school picnics and family reunions.

WHY NOT FILE AN EXEMPTION?

The News is fully prepared to make the necessary papers out at a nominal charge of 35 cents. In order to assist in making the proper record please bring a tax receipt showing description of property. Do it now and save several dollars in taxes.

A very important thing going on now is spring clothes.

To Present High Class Entertainment

The Order of Eastern Star will produce a t the Capitol Theatre, Hicksville, Ohio, Thursday evening, April 22, "The Selfish Giant" by Oscar Wilde and "The Little Princess" by Frances Hodgsoy Burnett, under the direction of Emily White Hull.

This will be an evening of high class entertainment, and the beautiful costumes, splendid music and graceful dancing will be worth your time and money.

Seats may be reserved at Murphy's Jewelry Store, Hicksville, Ohio, on the 21 and 22 for 35 or 50 cents.

HERE AND THERE

Wouldn't it be nice if we were as nice as we wish our friends were?

Another sign of spring is when the small boy hides the rake and the carpet beater.

The April McCall's magazine is here and is just what the housewife needs for helpful suggestions Get one at News office.

It's here now—that car of Fertilizer, you have been wanting. Come and get your order filled at Curie's.

Mrs. Cora Curie has been spending a few days at Auburn helping to care for her mother, Mrs. Jennie Sechler, who has been sick with an attack of influenza for the past two weeks. She has been living with her daughter, Mrs. Everett Mavis.

THE DISAGREEMENT

"What was the trouble between Tom and his wife?"

"A mere difference of opinion—he liked a certain blonde and she didn't."

Problem for Librarians

The New York public library for many years prohibited readers from removing their coats, even during the hot summer months. Last summer there were many protests against the injunction, and recently it was announced that coats would not be required during the next hot season. But now the library has a new problem on its hands. A few weeks ago an old man approached one of the check rooms and, after taking off his shoes, asked that they be checked. Shoes, he said, are the chief burden of modern civilization, and he was never able to enjoy a book unless he was sitting in his socks. The New York public is awaiting a ruling on the matter.

Measures Vibrations

Father C. M. De Heredia, a Jesuit priest at St. Francis Xavier's church in New York city, has perfected a machine called the "microvibroscope," which, he says, measures the infinitesimal vibration of the human body. The markings made by the machine, he asserts, analyze moods and personalities and detect ailments, according to Popular Science Monthly. Two persons suffering from the same disease, he says, will produce similar curves on their charts.

Ancient Quilt

Hazel Hannah Hitt of DeKalb, Mo., has a quilt at her home, which she never uses. It just descends from one generation to the next. It is now two hundred and ten years old, having been brought to the United States in 1715. Hannah is a favored and persistant name in the family. Six Hannahs have owned this quilt—Miss Hazel being the sixth.

Io Trouble for Tony to Get That Rabbit

A certain official on the Big Four railroad, who wishes to be saved the embarrassment of having his name associated with this story, vouches for its authenticity. The incident occurred in his younger days when he was a section foreman, having under his charge a gang of foreigners.

One morning, he said, while they were camping out along the road near the place where the roadbed was being repaired, Tony, a member of his gang, came into camp with a skinned rabbit and it was served for his breakfast. He enjoyed the fresh meat so much and expressed himself in such terms of appreciation that he was not surprised when the next morning he was served another rabbit for his breakfast. This went on for three or four days until it occurred to the foreman that not one of the men in camp had a revolver. He became curious to know how the huntsman was catching his rabbits. Calling Tony to him he inquired.

"It's easy," he was told by the obliging Tony. "I go out near here and I throw out some meat and pretty soon the animal he come and say 'meow, meow,' and I walk up to him and he brush against my leg and I knock him in the head with a club."—Indianapolis News.

ON HER LAST LAP

"It looks like Miss Passay would end her race for a man with the old geezer she's just caught."

"Yes, she's on her last lap, I'd say."

Canada's Wealth in Copper

Copper is mined chiefly in Canada in northern Ontario, largely in the Sudbury district, and in several districts of British Columbia. In 1886 the total output amounted to 3,505,000 pounds, and it was more than doubled in six years. Copper was known to exist in the Sudbury district as early as 1856, but practically no attention was paid to it until 1883, when the main line of the Canadian Pacific railway was being constructed. Soon nickel was found, and the mining of the latter has gone ahead of copper mining. In 1923 the output of copper in Canada amounted to about 88,000,000 pounds. One year's output of copper in Canada has reached the value of about $30,000,000.

Mrs. Carlyle's Farmer

Emory R. Buckner said in New York the other day:

"If prohibition were the failure that the opponents claim it is, we prohibitionists would feel like the Annandale farmer that Jane Welsh Carlyle tells about in her inimitable letters.

"It was raining, and Mrs. Carlyle wrote:

"'Rain! Rain! Rain! Oh, Lord, this is too ridiculous,' as the Annandale farmer exclaimed, starting to his feet when it began pouring, in the midst of his prayer for a dry hay time."

Refrigerator Car Iced

A newly devised elevated ice body for motor trucks, used in icing railroad refrigerator cars has greatly simplified that operation. Under the old system of icing, where flat-bodied trucks were used, three men placed two tons of ice in refrigerator compartments of a single car in 35 minutes. The new elevating body requires the services of two men and does the same work in eight minutes, thus effecting a saving of 27 minutes.

Prevent Window Frost

The formation of frost on windows can be reduced materially by rubbing the inside of the glass with a solution of glycerin and alcohol. The solution is made by dissolving a teaspoonful of glycerin in half a pint of alcohol. Apply the mixture to the glass with a clean rag.

Value of Liming in Improvement of Soil

Productivity Greatly Increased by Application.

(Prepared by the United States Department of Agriculture.)

The productivity of many soils can be greatly increased by the application of lime. Lime acts various ways; it helps to break down organic matter, it corrects acidity, and it improves the physical condition of the soil. By hastening decomposition of the organic matter, lime helps to make such matter available as plant food for whatever crops may be grown. Lime should not be applied to soils deficient in organic matter, however, especially in warm humid climates, without taking steps to maintain or increase the supply of this essential ingredient, as otherwise the outcome will be a decline in yields. The best way to increase the amount of organic matter in the soil is to apply manure or turn under green crops, such as crimson clover, cowpeas, soy beans, red clover, and hairy vetch. On some low-yielding land the turning under of a good growth of crimson clover has doubled the yield of the succeeding crop.

Lime is frequently used to correct acidity, a condition widely found in the eastern part of the United States, and detrimental to the growth of certain crops.

Another result accomplished by liming is an improvement in the physical condition of the soil. Soils of a compact nature are rendered more permeable, in consequence of which they become more retentive of moisture, less likely to wash, and more friable. Sandy soils also are benefited, being made more retentive of moisture. Application of lime is particularly beneficial in the case of leguminous crops, such as clover and alfalfa. Liming may also increase the availability of other minerals, such as potash, by rendering them more soluble.

Detailed information relative to liming soils may be obtained from state agricultural colleges or the United States Department of Agriculture.

Good Points to Observe in Raising Baby Chicks

The old adage "blood will tell" is a true one in regard to baby chicks, according to J. W. Lumb, Kansas state agricultural veterinarian. A dangerous chicken disease, bacillary white diarrhea, is transmitted through the egg of the mother hen to her offspring, according to Lumb, and while the infected hens show no visible symptoms of the disease the germ is present and affects the young. As a rule the noninfected hen will produce 80 more eggs annually than will an infected hen. While the eggs of the former have a higher percentage of hatchability and the per cent of livable chicks from the noninfected hens is four times as large as the number of chicks from diseased hens.

Cardinal points to observe in either hatching, buying or raising baby chicks are:

1. Procure eggs or chicks from tested flocks or flocks known to be free from disease.
2. Do not hatch eggs from tested and non-tested flocks in the same incubator.
3. Disinfect incubators, brooders and houses.
4. Raise chicks on ground not used for that purpose the previous year.
5. Follow a carefully worked-out system of brooding and feeding and thus maintain all the natural resistance of the chicks to disease.

Rotation Is Advisable in Producing Tomatoes

In the production of tomatoes crop rotation is advisable regardless of soil type or locality. By this means losses caused by insects and diseases are materially reduced. In an ideal rotation tomatoes will not follow tomatoes nor will there be included potatoes, peppers, or egg plant, because of the danger that the latter crops may transmit diseases affecting the tomato. In general, tomatoes should be grown in a rotation covering at least four years and including one cultivated crop in addition to the tomatoes and one or more soil-building crops.

Farm Hints

Put hens through a thorough anti-louse course before warm weather.

• • •

Plant potatoes, so as to bring on the new crop just as quickly as possible.

• • •

Some farmer is going to cash in on future horse demand, though, by raising colts now.

• • •

Poor ventilation is largely responsible for damp litter. Give the poultry house plenty of air.

• • •

If that dairy calf is to grow into a good cow giving a good milk yield and salable on the block, it must be properly fed.

• • •

Even a pig likes to be clean and the young pigs farrowed this spring will make better growth and be healthier if they are raised in clean quarters.

• • •

Breeching is one part of the harness that won't be needed much in the fields this spring. But tugs and collars will be, and your horses can get into their collars with better energy if the harness has been oiled and softened.

SPENCERVILLE

The Senior Class will give their class play on April 24 at the Community Hall.

The C C Club will be entertained Friday afternoon by Mrs. Mauc Beams.

Mr. and Mrs. King of Wayne were Sunday guests in the Herman Reasoner home.

Mrs Gertrude Markle and family moved last week to Ft. Wayne, where they will reside.

Mrs. Tressie Kelley and son Victor, spent the week end with her sister, Mrs. Alva Place and family of Ft. Wayne.

Rev. Roy S. Brown was called home from the Methodist conference to officiate at the funeral of Mrs. Roberts of Scipio, Saturday afternoon.

Chamberlain Chick Feed, 25lb. $1.40; 50lb. $2.75; 100lb. $5.50 Get it from Frank Beams, Spencerville, Ind.

The last meeting of the P. T. A will be held at the school house, Friday evening. There will be an election of officers.

Mrs. Lucile Fletcher of Wayne, who has been quite ill at the home of her parents, Raymond Rhodes and wife, is improving.

Edward Billman and wife entertained the following guests Sunday Gerry Wasson and wife, Joel Betz and wife, and Mrs. Frank Wertman.

Wm. Reed and family, of Rehobeth, were Sunday guests of their son, James Reed and wife. Vernie Reed and family, of South Bend, were afternoon guests in the same home.

John Sechler and wife, Byron Widney and wife, and Merritt Sechler, of St. Joe, were Sunday dinner guests of Jacob Baltz and wife, Ray Rodefer and wife, of Auburn, and Paul Adams and wife were evening guests in the same home.

Dr. Fred Walker of Peoria, Ill., visited his sister, Mrs. Sophia Miller, over the week end.

Vernie Reed and family of South Bend, were week end guests of Wm. Tyndall and family.

Miss Ada Markle spent the week end with her sister, Mrs. Lisle Barr of Wayne.

Wm. Sommers and wife, of Coburntown; and Mrs. Jennie Moffet were Saturday dinner guests of Jacob Baltz and wife.

Robert Bachman and family and Alfred Bachman of Ft. Wayne, were Sunday guests in the John Bachmann home.

The Ladies' Butler Band gave a entertaining concert at this place last Saturday evening, to a well filled house. Proceeds to go to the Community Hall.

The St Joe Choral Society gave a rendition of Easter hymns, or cantata at the Lutheran Church. Reports concerning this entertainment were to the effect that it was well received, and better than the first rendition given on Easter night at St. Joe.

Notice of Final Settlement of Estate.

Cause No. 2900

NOTICE IS HEREBY GIVEN to all persons interested in the estate of EMILLUS CASE, deceased, to appear in the DeKalb Circuit Court, held at Auburn, Indiana, on the 17th day of May, 1926, and show cause, if any, why my Final Settlement Accounts with the estate of said decedent should not be approved; and said heirs and all others interested, are notified to then and there make proof of heirship or claim and receive their distributive shares.

Witness, my name, this 13th day of April, 1926.

EDWARD PFLAUMER,
Executor.

H. C. Springer, Atty.

When the Cat's Away The Mice Will Play

The editor and edittress of the St. Joe News have migrated to the south supposedly to Birmingham, Alabama, to attend the International Sunday School Convention so they said, before leaving but we are under illusions. We have been informed by splendid authority that they have signed a contract with the Redpath Chautauqua Bureau whereby Fred will take the platform and Lora the piano We wish them good will along the line.

We have always had a secret desire to yeild the quill of our editor and to run the news paper in a way that would be pleasing to our town. Since they have gone and left the office in kindly hands we will avail ourselves of the opportunity to write. First, the entire first floor of the News building will be given a thorough renovation.

The Public Rest Room including the cuspidores will be sterilized with citric sodium; the composing den will be sprayed with 3.75 nitrate of sulphur, and the Devil's den be given a coat of red paint.

NOTICE

The St Joe News will be run on a strictly "Serve Yourself Plan" for one week only. We firmly believe that "charity should begin at home;" therefore any person wishing a copy of the News may have one by appearing for admission at the Court Street entrance and via of acceptance give an illustrated synopsis of why you should be on the free list. Remember for one week only. Take one.

As a confirmed reader of this paper for many years, we (singular I) believe this paper should run columns devoted to—Items of interest; lost, strayed or stolen; rooms and board; Canary bird sale help wanted (either gender); borrowed or sniped. Thus you will learn to know all about your neighbor and vice-versa.

ITEMS OF INTEREST

It will be interesting to those who live in the conjested quarters of our city to know that the Court of Justice have decided to build a much needed Train Subway Tunnel under Washington street xtending from Spencer Boulevard east and connect up with the grand submerged sewer tunnel with its terminal station at the Pickle Condensary; thus eliminating all danger to our over worked traffic cop. The officials were very fortunate to obtain the service of a Caterpillar Tractor "that went over the top in our World War" for the work of excavating. Work is progressing nicely and we hope it won't rain 'till they get under cover.

ROOMS TO LET—

Four nicely furnished rooms on second floor of the News building Cheap if taken at once. Colored family preferred.

CANARY BIRDS FOR SALE—

Those desiring full fledged canary singing birds, free from static, will do well by calling on Mrs. Grace Sheffer, Mrs Etta Hull and Mrs. Blanche Leighty.

P. S.—The birds have the latest bobbed plumage

St. Joe Locals

D. F. Benninghoff while going to his farm near Newville ran off the grade with his machine, one day this week.

The Home Bureau Club will meet in the Domestic Science room of the school house, Friday afternoon, April 16. All members are requested to be present.

The Friendly Bible Class of the M. P. Church met at the home of Mr. and Mrs. Fred Reed, Monday night, Apr. 12. Fourteen members being present, after the regular business session a social time was enjoyed by all.

NEWVILLE

The school is preparing a program for the last day.

Dewey Miller and family were guests of Mr. and Mrs. Burl Rude at St. Joe, Sunday.

Mr. and Mrs. Harry Fuller of Garrett, were the Sunday guests of John Miller and wife.

Atty Jack Benningboff of Ft. Wayne, was a Newville visitor, Saturday

Mrs Lou Rhoads went to Butler last week to stay a month with her daughter, Mrs Bessie Shaffer.

Miss Oral Richmond spent last week in Butler the guest of her sister, Mrs Iva Sucher and family.

Mrs. Hester Richmond of Hollywood, Florida, is here the guest of her parents, Frank Snellbaker and family.

Mrs. Frank Snellbaker was seriously ill last week with acute indigestion She is much better at this writing

Mrs. Kate Fuesselman, who's illness was noted last week, is improving slowly. Mrs. Frank Akins of Orangeville, is caring for her.

Mrs. Minnie Hatch, who has spent the latter part of the winter with her husband at Lansing, Mich., is now in Garrett caring for her mother, Mrs Belle Crum, who is very low with lung trouble.

Correspondence from Aunt Julia Wyatt says she is not improving but is in bed most of the time. Perhaps the old neighbors will be interested to hear from her as she was a resident of Newville for many years.

Our Hired Man

Maybe the work is hard sometimes, but it makes the food taste better.

The bose always looks at every cow in the herd like he does at the hired man. He says, "If I've got to pay for their keep and shelter, that's a bargain, provided I make a profit on them."

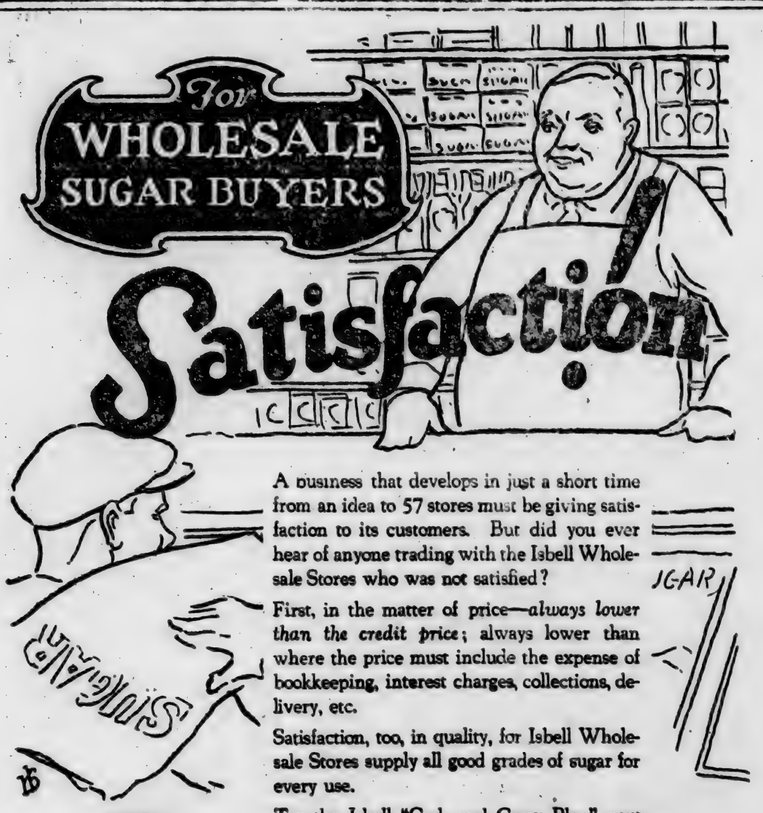
Resolve--

To Save Something Each Week

It will be one of the best resolutions you ever made in your life. And in later years when you may need money, if you have added regularly each week to your Savings Account, you will have the money to take advantage of an opportunity which may mean financial independence. Let us help you to get started Saving. The Interest we may pay on your balance is an amount well worth considering.

Farmers' & Merchants State Bank

Spencerville, Ind.



A business that develops in just a short time from an idea to 57 stores must be giving satisfaction to its customers. But did you ever hear of anyone trading with the Isbell Wholesale Stores who was not satisfied?

First, in the matter of price—*always lower than the credit price*; always lower than where the price must include the expense of bookkeeping, interest charges, collections, delivery, etc.

Satisfaction, too, in quality, for Isbell Wholesale Stores supply all good grades of sugar for every use.

Try the Isbell "Cash and Carry Plan" next time you buy Sugar at wholesale. You may as well save the difference just as thousands of other customers are doing every day.

So many retail grocers trade at Isbell Wholesale Stores while doing their marketing that our locations have been selected for their social convenience

The Reason Why

Salesman—Can I sell you a vacuum cleaner?

Lady—No, we have no vacuum to clean.—Alliston (Mass.) Recorder.

Cuticura Comforts Baby's Skin

When red, rough and itching, by hot baths of Cuticura Soap and touches of Cuticura Ointment. Also make use now and then of that exquisitely scented dusting powder, Cuticura Talcum, one of the indispensable Cuticura Toilet Trio.—Advertisement.

Too Good

She—What a gorgeous sunset!

He—Not natural. Much too ornate.—Passing Show.

Is Your Work Hard?

Is your work wearing you out? Are you tortured with throbbing backache—feel tired, weak and worn out? Then look to your kidneys! Many occupations tend to weaken the kidneys. Constant backache, headaches, dizziness and rheumatic pains result. One suffers annoying kidney irregularities; feels nervous, irritable and worn out. Don't wait! Use *Doan's Pills*—a stimulant diuretic to the kidneys. Workers everywhere recommend *Doan's*. They should help you, too. *Ask your neighbor!*

An Indiana Case

J. E. Green, prop. of barber shop, Depot St., Loogootee, Ind., says: "I think standing so much put my kidneys in bad shape and I had sharp pains in my back. I had to get up several times at night to pass the kidneys' secretions. Dizzy spells were common and specks darted before my eyes, making it hard to see plainly. I used Doan's Pills and they rid me of the trouble."

CHAPTER XII—Continued

—19—

"What would he be doing at Walling River?" But Steele already half guessed.

"He cum once een de summer—he cum wid 'noder man to tak' her to Ogoke."

"What? You mean to say that Laflamme was crazy enough to try to take her by force? Nonsense, Michel! St. Onge would have had the police at Ogoke within a month."

"Eet was crazee t'ing to try—but he try eet."

"St. Onge never told me this," said the provoked American. "It explains her fear when she saw me that day."

"She nevaire know Beeg Antoine try to get her, but she have fear."

"So you have always taken care of her since the visit of Big Antoine? Tell me about it."

"Eet was las' June, after dat Indian carry letter from Laflamme. He tell me Laflamme was goin' to get ma'm'selle, sometam. So de nex' tam she go to play at de rapide, Michel ees dere. After long tam I hear tomet'ing move een de bush. I wait an' see dis Beeg Antoine—he watch her but she don' know; she play de feedle. I don' wan' to scare her so I walk on de portage wid de beeg whistle so dey hear me an' get out. I follow dem tru' de bush an' een little tam on de riviere 'bove de pos', see Beeg Antoine talk to 'noder feller."

Michel stopped, refit his pipe, and smiled tantalizingly at the interested Steele.

"For heaven's sake, go on! What did you do? Why didn't you drill both of them?"

Michel blew a cloud of smoke before he said:

"You see dis Beeg Antoine at Ogoke?"

"Yes."

"Wal, he move hees head when I shoot. Eet was bad shot."

"So it was you who gave him that scar?"

"Ah-hah!"

"What happened to the other man?"

"He did not move," said the Iroquois, grimly.

"You hit him?"

"Beeg Antoine go back to Ogoke alone."

"And they never came again?"

"No, but we had fear."

There was a hard glint in the eyes of Steele as he turned to David.

"David," he said, "I owe you an apology. When we had that snake in our hands we should have finished the job. It would have been held self-defense by any decent jury."

David lifted his wide shoulders. "We feenish dat job sometam, boss."

* * * * * * *

As Steele had foreseen, the running down of a beast patrolling a country of the size of the Walling River valley was clearly a matter of chance.

It was decided that Steele and David, with the bloodhound, which they were anxious to test on the snow at once, should work over to the Medicine hills and Phantom lakes district with the purpose of quieting the Indians, if possible, and holding them in the country, as well as of waiting the possible reappearance of the night waller. Michel, with Little Jacques, a French-Cree, sent from Albany to work at the post after the loss of the fur canoe, and the sole Indian to volunteer for such dread duty, were to patrol the Portage Lake country as far as the traplines on the Little Current and the Drowning. Both parties were to report back at Walling River in two weeks. In the meantime, a jack pine at the junction of the Stooping with the main stream was chosen as the message center to which a man from each party was to return in a week for news of the other, and whither St. Onge would send any information from the post down river. In this manner they could cover a great area of the lower Walling.

The plan of campaign settled with the hearty approval of St. Onge, the traps were divided between the sleds, loaded with supplies for two weeks. If the beast, imitating that terror of the northern trapper, the wolverine, continued robbing the trap-lines, some night relentless jaws would yawn under the snow for his unwary feet—jaws, which, if once shut, would hold their victim in grip of steel until the freezing death brought swift relief.

Before he started, Steele returned to the house. At breakfast Denise had been gracious, affable, but impersonal, and Steele felt that the mood of the previous evening still possessed her. So, justly hurt, he made no attempt to plead his case or correct the impression she had patently suffered herself to nourish—the belief that he had lightly gone from her revelation of the secret places of her heart, that day on the beach, to a low intrigue at Ogoke; under the pretense of seeking information, had met Rose Laflamme secretly, only to escape surprise and detection by the alertness of his watch-dog, David. Thus the situation shaped itself in the mind of the smarting Steele; and, as it is ever with the unjustly suspected, he had, with a brave show of indifference, hardened his sore heart to the suffering girl whose burden was already sufficiently great.

But her welfare demanded his early departure from the post and the man whose thoughts she filled, left her that morning without an attempt at defense or explanation.

"We were going up the river at once, mademoiselle. I want you to know—in case anything happens—and trouble, that I have done what I could."

The sober eyes of the girl grew wistful. She started as if to speak, then turned her head, while he watched the blood surge to her throat, her face, then fade. Never had she seemed more lovely—more exquisite. A mad desire urged him to take her in his arms—to make her see how deeply her self-inflicted hurt wronged, his love for her; to tell her that it was all so futile—so useless, this suspicion of hers, which walled them off from each other. Then she said:

"You have been so good to us—are doing so much. We can never repay you. I wish you all success, monsieur, and a safe return."

That was all. Sick at heart he turned away to the waiting dog-teams, which, followed by the blanketed bloodhound, jingled out of the clearing and down to the river ice on their breast, drove his right sled up to Steele, the noses of his dogs white with rime.

"Get de stuff on de sled, queek!" cried the excited Ojibway. "Here ees de word from Michel!" And he thrust into Steele's hands a roll of birch bark on which, in the syllabic writing of the woods Indian, was burned the message from Michel, in Ojibway, left at the jack pine by Little Jacques.

"Come to Portage lak', fast," read David over Steele's shoulder. "Plentee work for de dog! Michel."

In his delight, Steele slapped the heavy caribou-skin capote of his friend. "The Windigo's loose over in the valley!" he cried. "When can we get there, if the snow holds off?"

"We camp at Portage lak' een t'ree sleep—mebbe two. De dogs ees tired. I leeve Wallin' Riviere onlee one sleep back," replied the Ojibway, making the bags fast with the sled lashings.

Through the day the team hurried past the silent spruce-clad hills of the valley of the Little Medicine. Through the day the men cast anxious looks at the black cloud-banks hovering in the north, for no snow had fallen in a week and it was overdue. To his delight, Steele had already learned that the dog could easily hold to a fresh trail over the ice or hard snow, packed by the wind. But a fall of new snow on a trail was another matter, and the Windigo might not stay in the country.

That night they camped on the Walling, and in the morning pushed on up the Stooping river trail to Portage lake, following the sled tracks of Little Jacques. Still the snow held off, but Portage lake and Michel were fifty miles away.

In the early afternoon of the second day from the Walling, when the narrowing of the river and the break in the hills ahead indicated their nearness to their goal, the snow they feared began to fall. Shortly Little Jacques' sled trail grew fainter and fainter on the wind-packed snow, and vanished. And by the time the team turned into Portage lake and sought a camping place in the thick scrub back from the shore, men and dogs were sheeted in white.

"Well, we've lost again!" said Steele, bitter with disappointment.

"We know bettair w'en we see Michel," replied the philosophic Indian.

Soon, as the early November night shut down, like a blanket, on the white lake, the birch logs blazed high before the shed-tent and the tea pail and the kettle of moose stew were simmering over red coals.

"If the old boy is loose now, he'll appear and sing again somewhere. There's some consolation in that," dropped Steele, as he filled his pipe.

"We strike hees trail yet, you nevaire—" David broke short off, to rise and peer suddenly into the wall of murk hemming in the fire in the scrub, then walked swiftly into the blackness beyond the circle of light from the fire.

"What is it, David?" called the man at the fire. But there was no response from the other who had faded into the night.

The excited dogs broke into a chorus of howls to the accompaniment of the bass of the hound. There was something out there in the snow-curtained gloom. Steele rose to his feet. Then a voice called: "Bo'-jo! Daveed!" And he knew that Michel had found them.

"Hello, Michel!" he cried, shaking the hand of the Iroquois, who preceded David to the camp-fire. "We did our best to beat the snow here, but it was no use. Now tell us about it!"

Seated with his friends by the flaming birch logs, the headman told his story.

When he and Jacques reached the Little Current, he had found all but a few of the most timid hunters on their trap-lines. There had been rumors afloat in the valley of the howling of the beast at Big Feather, but the Portage lake hunters had refused to listen to an Indian who claimed that he had heard the Windigo, in September, on the ridge across from Walling River post.

"Dat Pierre, he try do good job."

"It was Pierre, was it?"

"Yes, he try hard to scare dem on de Little Curren', too."

But to the surprise of Michel, he returned to Portage lake to find a camp of hunters he had left but two days before, wild with fear and preparing to leave the country. For, in his absence, the Windigo had filled the night with horror from a neighboring ridge. Michel had lost no time in finding the trail and following it down to a creek where he lost it on the ice, and although he followed the stream for miles, failed again to pick it up. Then he sent Little Jacques with the message which David found at the rendezvous.

"Well, he's in this country and we'll keep after him," said Steele, when the headman had finished his story.

There was nothing to do but patrol the country, following the trappers' camps, in the hope that some night luck would strike them, and they should wake from their warm robes to hear the voice.

As Steele rolled himself in his blankets under the shed-tent by the fire he wondered if the girl at Walling River, who had so lightly weighed him and found him wanting, had paused to consider whether the choice of a winter of toil with the dogs, on the snow of the Hudson's Bay watershed, rather than the alternative of the soft life of the city, bore any indication of the singleness of his heart.

(TO BE CONTINUED.)

"If the Old Boy Is Loose Now, He'll Appear and Sing Again Somewhere."

China has an area of 4,225,000 square miles and a population of 450,000,000.

HOW TO KEEP WELL

DR. FREDERICK R. GREEN
Editor of "HEALTH"

(©, 1926, Western Newspaper Union.)

INTESTINAL TUBERCULOSIS

SO MUCH has been written, talked, or broadcast about consumption or tuberculosis of the lungs that many assume that it is about the only form of tuberculosis that is of any importance. Yet this little enemy of the human race may and does attack practically every part of the human body.

In a recent issue of the Journal of Outdoor Life, Dr. Lawrason Brown of Saranac Lake, N. Y., has a most interesting article on intestinal tuberculosis. Probably no one in America is better qualified to write on any phase of tuberculosis than Doctor Brown. His early association with Doctor Trudeau the pioneer worker in this field, as well as his years of experience at Saranac Lake, have given him an experience with this disease such as few men have had.

Intestinal tuberculosis, he says, is usually a late complication of consumption. It used to be regarded as a practically hopeless condition, as few patients ever recovered.

It is usually caused by tuberculosis germs coughed up by the patient from the lungs and swallowed. So the first thing to do in preventing this condition is for all persons with tuberculosis to avoid swallowing any of the sputum. This cannot be entirely prevented but it should be avoided as much as possible.

This condition comes on so slowly and so imperceptibly that it is often overlooked. Loss of appetite, nervousness and failure on the part of the consumptive patient to improve where there is no reason for it are the earlier symptoms. Yet with only these slight indications the condition may exist for a long time before it is suspected. As the consumptive needs every possible chance in order to get well, the plan has been adopted at the Trudeau sanitarium of examining every patient in order to find which ones are suffering from this disease and giving them proper treatment.

The treatment of this condition was formerly just as uncertain and difficult as the diagnosis. That also has been greatly improved in recent years and by the same means—light. Only, while the X-ray from the electric apparatus is used in diagnosis the light used in treatment is plain sunlight. The body is accustomed to the sunlight by exposing first the feet and ankles, then the legs, then the shoulders, then the body from the waist down and finally the entire body for longer periods each day to the sun's healing rays.

TAKING YELLOW FEVER

HOW does it feel to catch yellow fever? Strange to say, although this once-dreaded disease swept the tropics almost every year for 400 years and millions of persons suffered from it, few of them knew exactly when or how they got it and none of these made any note of how the sickness developed.

In a recent issue of the Journal of the American Medical Association appears an article by Dr. Henry Hanson of the International Health board of the Rockefeller Foundation, giving his personal experience. In July, 1919, he was asked by the Peruvian government to investigate and report on an epidemic of yellow fever at Piura, one of the large cities of northern Peru. Arriving at this city, he found nine cases of yellow fever in the lazaretto or local yellow fever hospital. In order to rule out the possibility of any of these patients having malaria, which in some of its tropical forms closely resembles yellow fever, Doctor Hanson made a blood examination in each case.

While making these examinations, Doctor Hanson noticed that the tip of his index finger was stained with blood from one of these patients. He attached no importance to this, but in cleaning his hands with alcohol he felt a sharp sting on this finger, showing that there was a small break in the skin somewhere.

The hospital was, of course, screened so as to exclude all mosquitoes, so he assumes that he acquired yellow fever through this break in the skin, although he might have been bitten by an infected mosquito at some time without knowing it.

At any rate, five days later he developed a peculiarly sore throat, a strange feeling of uneasiness and a taste of blood into his mouth. Headache and pain in the back followed, finally prostration so great he could no longer keep on his feet. The principal sensation, he says, was general distress with distension and tenderness in the abdomen, so that it was distressingly painful even to try to speak. He was in a delirium practically continuously, and had many strange sensations, such as floating in the air, falling from great heights and roaming through endless darkness.

After the fever had run its course and he had regained consciousness, he was principally aware of an overpowering weakness and an intense hunger and thirst. Several weeks were required for recovery which was eventually complete.

WOMEN OF MIDDLE AGE

Praise Lydia E. Pinkham's Vegetable Compound

Mrs. Annie Kwinski of 526 1st Avenue, Milwaukee, Wis., writes that she became so weak and run-down that she was not able to do her housework. She saw the name Lydia E. Pinkham's Vegetable Compound in the paper and said to her husband, "I will try that medicine and see if it will help me." She says she took six bottles and is feeling much better.

Mrs. Mattie Adams, who lives in Downing Street, Brewton, Ala., writes as follows: "A friend recommended Lydia E. Pinkham's Vegetable Compound and since taking it I feel like a different woman."

With her children grown up, the middle-aged woman finds time to do the things she never had time to do before—read the new books, see the new plays, enjoy her grand-children, take an active part in church and civic affairs. Far from being pushed aside by the younger set, she finds a full, rich life of her own. That is, if her health is good.

Thousands of women past fifty say they owe their vigor and health to Lydia E. Pinkham's Vegetable Compound, and are recommending it to their friends and neighbors.

A dog that barks at night seems to have nothing to divert his mind.

The use of soft coal will make laundry work heavier this winter. Red Cross Ball Blue will help to remove that grimy look. At all grocers—Advertisement.

Modesty becomes the young.

OVER 70 YEARS OF SUCCESS

Don't Let That Cold Turn Into "Flu"

That cold may turn into "Flu," Grippe or, even worse, Pneumonia, unless you take care of it at once.

Rub Musterole on the congested parts and see how quickly it brings relief.

Musterole, made from pure oil of mustard, camphor, menthol and other simple ingredients, is a counter-irritant which stimulates circulation and helps break up the cold.

As effective as the messy old mustard plaster; does the work without blister.

Rub it on with your finger-tips. You will feel a warm tingle as it enters the pores, then a cooling sensation that brings welcome relief.

Is your car a General Motors Car?

IF YOU own a Chevrolet, a Pontiac, an Oldsmobile, an Oakland, a Buick or a Cadillac, you own a General Motors car.

"But what," you may ask, "does that mean to me?" *It means just this:*

General Motors is a family of companies building motor cars and trucks and such other famous automotive products as Fisher Bodies, Delco and Remy electrical systems, Harrison radiators and AC spark plugs. Still other General Motors products are Delco-Light electric power plants and Frigidaire electric refrigerators. There are General Motors plants in 44 cities, employing 120,000 people; and sales and service organizations in 144 countries.

General Motors uses the combined resources of this great family for the benefit of each member. It effects great savings in the purchase of quality materials; it provides the best of engineering talent; it maintains the world's largest research laboratories and proving ground for automobiles; and it assures the permanence of its various divisions and the products which they make.

In other words, General Motors has every facility and every incentive to maintain quality and to offer value for the price; and the current models of General Motors cars are offered as the greatest values in the history of the automobile industry.

GENERAL MOTORS

CHEVROLET · PONTIAC · BUICK
OLDSMOBILE · OAKLAND
CADILLAC · GMC TRUCKS

"A car for every purse and purpose"

General Motors cars and trucks, Delco-Light electric plants and Frigidaire electric refrigerators may be purchased on the GMAC Plan, provided by General Motors itself to assure sound terms and low finance rates.

DR. W. B. CALDWELL AT THE AGE OF 83

A Child's Laxative Which Mothers Can Rely On

To Dr. W. B. Caldwell, of Monticello, Ill., a practicing physician for 47 years, it seemed cruel that so many constipated infants and children had to be kept "stirred up" and half sick by taking cathartic pills, tablets, salts, calomel and nasty oils.

While he knew that constipation was the cause of nearly all children's little ills, he constantly advised mothers to give only a harmless laxative which would help to establish natural bowel "regularity."

In Dr. Caldwell's Syrup Pepsin mothers have a regulating laxative which they can depend upon whenever a child is constipated, bilious, feverish or sick from a cold, indigestion or sour stomach. All children love its pleasant taste.

Buy a large 60-cent bottle at any store that sells medicine and just see for yourself how perfectly it cleanses and regulates the bowels of infants and children.

Dr. Caldwell's SYRUP PEPSIN

EAT YEAST FOAM *for Boils and Pimples*

Don't endure an unsightly skin with this simple, effective remedy available!

Yeast Foam not only clears the skin but it overcomes constipation, relieves indigestion and most astonishingly builds up weight, strength and energy in run-down sickly people.

Drop a cake of Yeast Foam in a glass of water; let stand for five minutes; stir, let settle and drink the milky water, including the white precipitate. Or, if you prefer, eat the yeast with a cracker or a piece of butter.

TRANSJORDANIA AWAKENING

Arabs of the Desert in Their City Costumes.

(Prepared by the National Geographic Society, Washington, D. C.)

RECENT reports show that now that the Wahabis of central Arabia have gained control of the kingdom of the Hejaz with the holy cities Mecca and Medina, and the port of Jeddah, they are turning their attention to the surrounding Arabian states. Bands of Wahabis have appeared in Transjordania, which may presage the conquest of that region and the exile of Emir Abdullah to join his deposed father and brother from Hejaz.

Another name for Transjordania is the Emirate of Kerak. Geographically it is easy to locate—it is an area almost as large as the state of Maryland, lying between the River Jordan and the Syrian desert. Politically, Transjordania's affairs have been highly complicated ever since the armistice. On the borderland of French and British influence, feeling the native pull of Syria, Hejaz, Palestine and Mesopotamia, she has awakened with a jolt from her age-long tranquillity.

Perhaps it will bring the newly independent but very old country closer to Americans to realize that its capital, now Ammon, was once Philadelphia—the great-great-great-grandfather of the half-dozen or more Philadelphias, great and small, that are to be found in our postal guides. But it was only a mere matter of twenty-odd centuries ago that the city took the name Philadelphia from its new lord, Ptolemy Philadelphus. It had existed as Rabbath Ammon, chief city of the Ammonites, almost from the days of Lot, from whom the Ammonites are said to have sprung. It was after a victorious battle with these same people of Ammon that Jephtha, according to the Biblical story, returned to the fatal meeting with his daughter.

Country Not All Desert.

When Transjordania is described as stretching from the Jordan and the Dead sea toward the interior of Arabia, one is likely to call up the picture of a hopeless desert. But much of the region is steep land, a high plain supporting some flocks and even capable of tillage. Nomadism has long held the region in its grip, however, and it is as a sort of "chief of nomads" that Abdullah Ibn Hussein has found it necessary to rule. He holds his "court" not in a palace but in a group of tents which he moves with the seasons.

This land, now given over largely to nomads, is capable of development along stable lines, as is shown by its past importance. After Alexander's eastern conquests the cities to the east of the Jordan became Hellenized and the seats of prosperity and culture. In the Second century before Christ Ptolemy Philadelphus built in the city which was given his name an extensive acropolis which in the Amman of today is only a mass of fallen columns and ruined walls.

Rome's sway over Philadelphia is shown in Amman by the ruins of a huge amphitheater which seated 7,000 spectators. In the sleepy eastern town of today goats browse among the foundations of temples and public buildings, Arabian coffee shops lean against once-proud walls, and the eastern species of the village lounger sits on overturned marble pillars. Emir Abdullah has showed some interest in the ancient structures of his capital, however, by having the fairly well-preserved amphitheater cleared of debris.

Jordan Always Barrier.

The Jordan is a small river, like hundreds across which modern trains dash with scarcely a rumble to mark their passage; but it has separated Transjordania and western Palestine from the time of Moses till today.

Transjordania is the home of paradoxes, where Arab tents, long symbols of transitory residence, have persisted while rich Roman ruins, once the gathering places of cultured crowds, have disappeared; where the desert, which to so many signifies death, has furnished a welcome haven to many to whom the narrow Jordan seems an impassable gulf.

To civilization the deepest and swiftest river is only an incident; but the trackless desert is a barrier not easily passed. Not so in Transjordania. Up on its high plateau, swept by refreshing breezes, the desert is a neighbor so near that none can say just where its boundary lies. With the changing seasons, the boundary moves with the population and the crops and flocks. But the deep depression of the Jordan is a permanent barrier across which the commerce of the ages has flowed, but which has turned back the shepherd to his cooler hills and open plains.

Land of Contradictions.

Transjordania is the land of the impermanent. It thrives on changes which change it not. Cities have risen and fallen, highways been laboriously constructed only to fall into disrepair more impassable than the surrounding fields. The nomad tents continue to dot the plain while rich ruins crumble away before the ceaseless attacks of Arab or Ammonite, to whom a beautiful carving is only quarried stone.

No doubt the victorious Wahabis will turn next to Asir, which borders Hejaz on the south and is much closer to Mecca than Transjordania. This little-known state, too, is ruled over by an independent emir.

As in most other parts of Arabia, the people of Asir are Mohammedans, and fanatical Mohammedans at that. Travelers are not welcome, especially are "Christian dogs" not wanted. But the intolerance of the people of Asir is not reserved for Christians alone. The Turks, who are fellow Moslems and who were in addition representatives of the caliph, made little headway in Asir. Nominally it was a part of the Turkish empire, as was most of the remainder of Arabia; but the people never surrendered their independence. Turkish garrisons held Kanfuda and Jelzen, little ports, and Ibha, an inland station; but large districts of Asir's 30,000 or 40,000 square miles of territory were never even explored by the Turks.

Likened to Death Valley.

Along the Red sea in Asir is a strip of lowlands twenty to thirty miles wide, known as the "tehama," barren, hot and fever-ridden. In appearance it is not unlike the repellent Pacific coast of Mexico's Lower California. Even in April the thermometer registers as high as 107 degrees in the shade in the "tehama," and in midsummer it is almost as hot as in America's famous Death valley.

The inner edge of the "tehama" is marked by low mountains, some 2,000 feet high. Farther inland are the country's highest peaks, rising to 6,000 and even 8,000 feet.

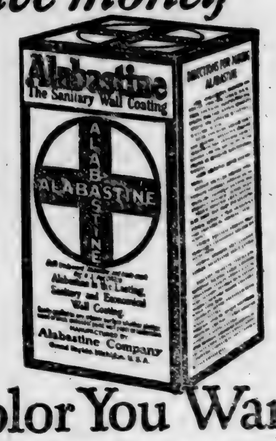
In Asir's higher mountains, according to the meager word-of-mouth reports of natives, is a land the direct antithesis of the unlovely "tehama." The rainfall in the mountains is said to be considerable and its valleys are regions of running water, trees, gardens, fields and orchards. None of the streams reaches the sea, all being swallowed up by the desert or dissipated by irrigation ditches.

Even the emir of Asir, nominal lord of the realm, is without authority in much of his wild country. He holds securely only the "tehama," the lower mountains, and a portion of the highest region. In much of the highlands the inhabitants do not acknowledge his authority. This is especially true of the nomads on the edge of the great central desert.

When Italy was at war with Turkey in 1911-12 she subsidized the emir of Asir, who was glad enough to make active his slumbering enmity toward Turkey. During the World war the emir was one of the numerous Arab chieftains who nominally joined the allies against the central powers. He received supplies from Great Britain, but accomplished little, never even dislodging the few Turkish garrisons in Asir.

Sabia, the capital of Asir, is in the lower highlands just outside the "tehama." It is described by a British Indian medical officer who visited it during the World war as "a village of huts."

Use Alabastine *to save money*



Alabastine
a dry powder in white and tints. Packed in 5 pound packages, ready for use by mixing with cold or warm water. Full directions on every package. Apply with an ordinary wall brush. Suitable for all interior surfaces—plaster, wall board, brick, cement, or canvas.

Any Color You Want

Why use expensive paper or paint when for the cost of cleaning either you can have a fresh coat of Alabastine? Why put up with half soiled walls when for a little expense your home can be made bright and cheerful? With Alabastine you can have the exact color you wish. And it won't rub off. You can match exactly rugs or draperies. You can get the most artistic results. You can do the work yourself if the decorators are not available. Ask your dealer for an Alabastine color card. Or write Miss Ruby Brandon, Home Beautiful Specialist, the Alabastine Co., Grand Rapids, Mich.

You can get four animal cutters—goose, lamb, cat and bunny—for just what it costs to pack and mail them—only fifteen cents. With them, we will also send a Davis Cook Book.

Animal cookies are examples of the many tempting things you can make with Davis Baking Powder. Baking comes out right every time with Davis—it makes baking lighter, finer in texture and more easily digested. Biscuits feathery light, cakes and cookies so palatable and pleasing. And in addition, it costs you less and you use no more than of any other high-grade baking powder.

Bake it BEST with

DAVIS BAKING POWDER

Davis Baking Powder Co.
Dept. 575, Hoboken, N. J.

Gentlemen: As per your offer, please send me the Cookie Cutters and the Cook Book. I enclose 15c in stamps to cover postage and mailing.

BEST MEATS

We carry the best meats obtrinable. We never sacrifice quality to make a low price. We use the utmost care in selecting our meats and see that they are properly kept for the short time they remain in our store.

Our prices are not high. We don't try to give as little as possible for the money, but just as much as possible. A trial order will convince you that what we advertise is true.

We will deliver your ice-arrange for it now!

St. Joe Meat Market,

HARMAN & HELLINGER, Proprietors.

Notice: Pay your account, it is due now.

A Teakettle Bank in the Cornfield.

A SLY old fellow was Farmer Brown. Hard working, honest, saving---but no faith in any one but himself.

He placed his savings in an old teakettle which he hid in his cornfield.

It was discovered by tramps---sorrowfully he learned that it was no place to keep money.

What does it profit a man to save his money and hide it in a teakettle?

Of course very few people of today literally place their money and faith in old teakettles, but countless numbers are still banking their hard earned funds in the old kettle of indifference without even a thought of the oncoming tramps of senseless buying and careless use who so often discover its hiding place.

A portion of the money you earn should be saved and properly cared for. Discard teakettles and let us show you the wisdom of a regular saving habit and placing it out of the reach of the tramps.

The St. Joe Valley Bank, A STATE BANK

Here are some features of Kokomo Pioneer quality for you to remember:

99½% pure zinc galvanizing—the coiled knot—the coil in the line wires, which, when properly stretched, makes them LIVE WIRES, effectively taking care of expansion and contraction.

Kokomo Pioneer Fence is not something new or untried. On farms all over the country, it has been known for years as the uniformly high grade product that has won for it such a fine reputation.

Not that age alone would lend merit to any kind of fence. The QUALITY is there—it's in every foot of Kokomo Pioneer Fence, and you have the pledge of a long established organization that it will be found here!

Backed by long years of proven worth and honest value, Kokomo Pioneer Fence is offered you as a farm or poultry fence that can't be excelled.

WILLIAM CURIE, Dealer, St. Joe, Indiana

Lamb Demonstration Well Attended.

A group of twelve sheep men attended a lamb management demonstration at John Brend's farm 3 miles southwest of Ashley last Friday.

"The market value of lambs is usually increased from $1.00 to $1.50 per hundred where they have been properly managed and fed," declared County Agent Stinson who conducted the demonstration. The couty agent also explained that because most western lambs are fat and of the desired weight and have been docked and castrated, they bring a premium on the market. Corn belt farmers have the advantage over other lamb producers in that they are close to the market and should produce prime lambs that the market demands.

Each farmer at the demonstration was taught how to use the 10½ inch mule shear in docking and castrating. They were also shown how to properly drench a sheep for worms, without causing pneumonia.

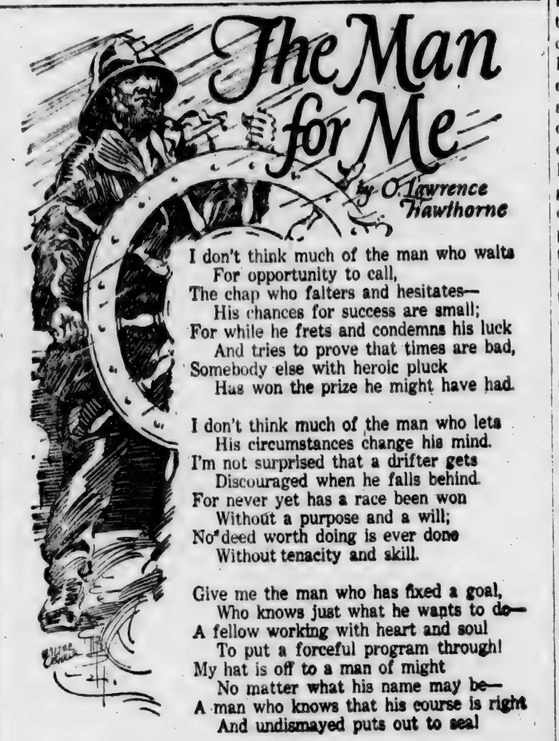
Daniel C. McCann, St. Joe.

Township Advisory Board:
Fred Elson,
Ray Reasoner, St. Joe.
William J. Staman, St. Joe.

Precinct Committeeman:

Continued on Page 8, Column 1



I don't think much of the man who waits
For opportunity to call,
The chap who falters and hesitates—
His chances for success are small;
For while he frets and condemns his luck
And tries to prove that times are bad,
Somebody else with heroic pluck
Has won the prize he might have had.

I don't think much of the man who lets
His circumstances change his mind.
I'm not surprised that a drifter gets
Discouraged when he falls behind.
For never yet has a race been won
Without a purpose and a will;
No deed worth doing is ever done
Without tenacity and skill.

Give me the man who has fixed a goal,
Who knows just what he wants to do—
A fellow working with heart and soul
To put a forceful program through!
My hat is off to a man of might
No matter what his name may be—
A man who knows that his course is right
And undismayed puts out to sea!

© 1925 O. Lawrence Hawthorne.

Broken Windows to be Replaced

Sheriff Morr was in town Tuesday investigating the breaking of the window lights in the John Hart property. A number of the youngsters were informing the public who the offenders were, some days ago, so Sheriff Morr had little trouble in rounding them up. Ten boys were taken into custody by the sheriff and he proposed to take them to jail, but the boys carried on so, that he decided if they would each agree to pay their share of the expense, he would release them. Elza Kinsey was given the contract of replacing 17 lights at a cost of $21 00, or an average of $2.10 for each boy. They are each to pay their proportion to E. R. Kinsey. It is a shame that things of this kink must happen, but "boys will be boys."

Burl Rude, now owner of the James Harter property, reports just such vandalism at his home. One day he repaired seven windows and the next week they were all broken and some others. He reports lumber taken from his shed, that was purchased to build cellar steps and door and that came up missing also some stove wood. Burl ought to invite the sheriff down for inspection and see what he can learn.

There is only one way to stop such things and that is action on the part of the law.

Allen Coburn is in Garrett following his profession as painting.

Stanley O. Devitt, Democratic candidate for County Treasurer. 15t17p

The grade schools close Friday this week while the High School continues for four weeks.

S. S. Widney, who has spent the winter at Harlan with his sister, Mrs. Wm. Reichelderfer, returned home Friday. Dick looks good, feels good and is good, (so he says) We are all glad to see Dick back on the job, in fact things don't just go as they should without him

Hindman Commences Restraining Action

Upon application of Don P. Hindman, David R Kosht, Henry W. Krabill and Walter Zenker have been restrained by Judge Endicott from selling or mortgaging a tract of land in Lagrange county. The plaintiff says he and Henry W. Krabill were partners in the real estate business, each to receive one-half of the commissions He says that Krabill collected the entire amount of the commissions and that he refuses to make an accounting to him. The plaintiff claims that Krabill owes him $1040 He says that Krabill owns the Lagrange farm and that in order to defraud him he conveyed the property to Kosht. Zonker claims to have an interest in the farm. A hearing on an application for a temporary injunction will be held April 24 in the circuit court.

In November, 1922, according to the complaint, the firm negotiated a deal for one Shaw for which Shaw paid Krabill $450 commission; that Krabill collected $400 commission in a deal for John Mitchenlatcher; $200 in a deal for Fred Otto; $300 in a deal for one Glass; $200 in a deal for Joseph and Bert Rex; $100 in a deal for Jack Beams; $300 in a deal for Mathias Schermerhorn; and $150 in a deal for Jason Olds

Garage Business Changes Owners

A change has taken place in the business activities of our town, when Daniel W. Myers of Hicksville bought the John Barger garage property. Mr. Myers will move his family here soon. Dan, as he is known, has had 17 years experience and in fact has worked and lived in St Joe, and his past business record is liked by all his customers, and he will enjoy a good business. Mr. Barger states that as soon as his wife recovers from her operation, he expects to drive thru to Miami, Florida, and engage in the same business. John has made good in St. Joe and has proven himself a very valuable mechanic. We wish both men well in their change.

Band Renders Merited Program

A splendid program was given by the local band, together with a number of special numbers by our talented folks. The band is progressing nicely under the leadership of C. A Woodcox and this was a means of getting a little money to pay expenses. The audience was not as large as should have responded, but the boys are thankful to those who came and expressed their appreciation of their efforts.

Auto Turns Over Not a Soul Hurt

"Well what happened?"

"What will dad say?"

"Why didn't that guy give the road?"

"Well we wasn't driving fast any way" these are some of the remarks made Saturday night, when a bunch of young folks were upset in the Frank Akins car, just north of the Widney Orchard. By the time six of them found their way out from under the car, fire started and damaged the car considerable. Some of the party run to Hollis Dilley home and secured a pail and threw water on the car and soon put out the blaze. We are satisfied too, that they were not driving fast, if they had been, they would have passed the place before they upset. Isn't that conclusive? Really it was a lucky spill as no one was hurt.

HOME, DAD AND THE BOY

By FRANK H. CHELEY

The Trained Dad

HE IS the man who has made it his business to study the Dad-business.

His slogan is: "It pays to know."

He is a student of his problem.

He recognizes that the more one knows about boy-nature, the less physical punishment one needs to use.

He realizes that parenthood is a profession, perhaps the noblest profession, in fact a life-calling, a fine art based upon genuine science, and seeks constantly to be increasingly skillful.

He knows that each boy is just a collection of twenty thousand wiggles, each wiggle with a meaning, and trains himself to understand the language.

He believes the boy without a "playground" will become the man without a job, and that to do too much for a boy guarantees that he will do nothing for himself.

He is determined to master the Job of Being a Dad and uses every legitimate means.

Wraps and Gowns for Evening Wear

Designs Are Complicated by Vogue of Popular Softly Draped Frocks.

The period gown, the continued popularity of crinolined and bouffant skirts, and tulle dancing frocks of many frills, have complicated the problem of designing an evening wrap, notes a fashion authority in the New York Times. This is very much to the advantage of the woman who goes in for the softly draped or fluffy sort of dress. The latest wraps for evening and for elaborate afternoon are built on lines the absolute reverse of last season's models that were designed to slip over a one-piece, straight-line gown of the most classic simplicity. Coming away from that ideal through all the evolutions of circulars, godets and flares, wraps have corresponded in type, and the latest conceptions are interesting in the extreme.

There is in them no suggestion of earlier fashions which were complicated and overornate, but a simplicity that is naive, graceful, stylish and more picturesque than the wraps worn with evening toilettes for winter. Coats are still considered smart, many coming from almost all of the important houses at Paris and others from American designers that are occasion for sincere pride. All of these coats are plain, without being in the least stiff, and most are cut upon conventional lines, with little variation or novelty of detail.

Cut Like Street Coat.

An evening coat done with success by Lanvin is cut like a tailored street coat with a simple little cravat scarf to tie at the neck and hang over one shoulder. The sleeves are long and fairly tight and the only trimming on the wrap is a ten-inch band of summer ermine sewed about the bottom, which is given a flare at each side by an inverted plait the depth of the knee. The material of this striking garment is a metal tissue brocaded in bright oriental colors, red, blue, green, in a large domino pattern arranged in horizontal stripes. The lining is of Chinese blue crepe de chine.

In striking contrast to this coat is one of sand-colored crepe Elizabeth, lined for warmth with kasha cloth in the same shade. There are no shoulder seams, the sleeves being in one piece with the coat, rather wide and straight at the hand, and all about the edge is a band of red fox. A Chinese coat model is made of chiffon brocade velvet, the background of soft beige, the embossed pattern of conventional flowers in soft shades of red. Antelope is used to trim the collar and cuffs and the coat is lined with a soft shade of Chinese red.

Kit fox is exceedingly fashionable for coat trimmings, its tones of ivory, beige and russet blending charmingly with the new spring shades. A novelty in the form of the much-discussed quilted coat is made of crepe in pastel green; the pattern formed of stitching is of scattered flowers conventionalized. Kit fox is used to finish the neck and sleeves and beige crepe printed in softly tinted flowers of large design. That gorgeous shade of orange fox called red is used to trim a wrap cut like the coat of a Chinese mandarin in pale crepe a shade between orange and lemon. The American designer of this wrap

Wrap of Beige Roma Lavishly Trimmed With Bands of Mink.

suggested several accompaniments—a frock of pale lemon yellow with garniture of flowers, a fan of majestic plumes, shoes, chiffon stockings and vanity bag all reflecting the colors one sees in a bed of marigolds.

Greens are having a tremendous vogue, every shade and quality being used in the wraps that will be worn over crepe and chiffon gowns at evening affairs during the spring and summer. Taffeta is, of course, all the rage for wraps, capes and coats as well as for frocks, though it requires a special treatment to give it a "dressy" appearance. A cape which has something of the dolman design is made of sheet metal brocade in pale gold with chartreuse shot with gold color. An evening wrap of gentle elegance is of silver lame and pearl gray taffeta, lined with white crepe brocaded with large silver flowers. The collar and wide cuffs are bordered with a band of light gray fox.

Black, Black and White.

A lot of black, and black and white, is being shown by Parisian creators. The sudden craze for black, which is the despair of importers and manufacturers, has made demand for black wraps for the ensembles and gowns of black chiffon and tulle. These are designed in cape models of different types to give greater width. Among the few exceptions shown is a slightly flaring coat of black flannel, the entire surface of which is embroidered in a Chinese pattern of scenery and figures done in fine white floss. The coat is lined with white Chinese crepe, with a huge silver flower embroidered

Wrap of Gold Lame and Sable, Lining Being of Red Velvet.

over an inside pocket, and the collar and cuffs are finished with a wide band of white fox fur.

Another coat wrap is made of black chiffon velvet, lined with black chiffon embroidered with small gilt flowers. Gold lace is introduced as panel godets at the sides, and in the flaring flounce cuffs of the sleeves. An achievement in evening wraps received from Paris is of black taffeta—a wide cape, not circular, but shirred on the shoulders and again at the hips to form a flounce below. This is held in at the lower edge by a band of white fox, with a plain fold of taffeta showing several inches beneath. A large collar is also made of the white fox.

Fine pleating is seen in some of the evening wraps of Parisian authorship with particularly happy effect in crepe and chiffon. A lovely cape which is part of an ensemble has been designed by a New York modiste of delphinium blue chiffon. The dance frock is cut with circular insets at the hips, giving a wide flare and swing to the skirt. At spaces about the bottom are sewed little tufts of fine ostrich set on with blue glass beads, the same trimming being used on the decollete bodice, all over a lining of pale rose chiffon. A wide scarf of the chiffon, with ends trimmed with the ostrich, lined with the rose chiffon, is caught in a loop at the back of the neck and finished with a long tassel of blue and silver beads and fringe.

The "Square" Caps.

The new departure in evening wraps is a cape which arrived with the title of "square." It is really not a square at all, but a long, wide piece of material, two edges of which are caught together in the middle to form a loop. A long tassel is added at the neck, one at the point of the loop and one at each corner. One of these extremely simple but picturesque capes is made by an American designer in green and gold metal brocade.

Another is of a lovely shade of hydrangea pink crepe Elizabeth, lined with chiffon several shades deeper. The possibilities for decorative effect, utility and chic in these cape "squares" are almost without number. The new chiffon and velvet brocades, soft as rose petals and beautifully tinted, the Chinese crepe and silk so much in vogue, the metal tissues and brocaded taffetas and varieties of crepe are all beautifully adapted.

Some of the handsomest scarf capes and "squares" are made of two fabrics—taffeta and chiffon, metal brocade and crepe, or taffeta and the finer crepes lined with chiffon. A pretty party wrap for a young woman is of white crepe Elizabeth on fine plaits that are drawn in very close at the collar. A band of white taffeta is added to the front edges of the cape and forms a narrow scarf with fringed ends to be wound around the neck and hang with one end over each shoulder.

A large assortment of beaded gowns—technically known as "robes"—and tunics is presented by almost every dress shop. They are said to be "flooding" the market, but they are far from being a drug, for beaded and paillette things were never more popular. The latest styles in these are done in excellent taste; lighter and more lacy than the heavily beaded gowns of winter, and are dyed in many pretty and delicate shades.

THE KITCHEN CABINET

(©, 1926, Western Newspaper Union.)

When the north wind taps my casement,
And the fields are bare and brown;
When out from the sullen leaden sky
Stray snowflakes flutter down,
What care I then for the shadows,
That the roads are deep in the mire!
I've a comrade true in my home tonight—
'Tis the light of my open fire.
—Alix Thorn.

FOODS FOR OCCASIONS

The following recipes are, like leisure, "a pleasant garment, but not fit for constant wear."

Sweetbreads With Orange Sauce.—Cover sweetbreads with ice cold water, adding a tablespoonful of vinegar. Let stand an hour, then parboil twenty minutes. Cut into cubes and brown in butter. Serve in the following sauce: One cupful of brown stock, thickened with two tablespoonfuls each of flour and butter and add one-half tablespoonful of finely grated yellow rind of an orange with a tablespoonful of the juice and one tablespoonful of orange marmalade. Let cook all together until boiling, then pour over the sweetbreads.

Currant Jelly Sauce for Game.—Slice one onion and cook in three tablespoonfuls of butter until just brown. Add two tablespoonfuls of flour, one bay leaf, a sprig of celery and stir until smooth. Add one pint of good seasoned stock, simmer twenty minutes, strain, skim off the fat, add one-half cupful of currant jelly and stir over the fire until melted.

Chicken Fillets.—Remove the fillets carefully from the breast of the fowl, sprinkle with salt and pepper and a dash of cayenne. Dip in olive oil and cook in a hot pan until a delicate brown. Add to the pan one cupful of equal parts of cream and white stock. When hot, thicken with two tablespoonfuls of flour rubbed to a paste with an equal quantity of cream. Stir until the sauce boils, then add one-half cupful of thinly sliced almonds.

Panned Chicken With Corn Fritters.—Joint a young chicken and put to roast, pour over a cupful of broth and let cook an hour and a half, basting every ten minutes. When tender, remove the chicken which has been well seasoned while cooking. Prepare a well browned sauce and serve with a garnish of corn fritters around the chicken on a hot platter.

For the Convalescent.

Easily digested food should be served those who are recovering from illnesses. Food should be attractive as well as nourishing.

Egg Soup.—Separate the yolk and white of a fresh egg and beat each. Add three drops of lemon juice and a tablespoonful of sugar to the yolk, then fold in the beaten white. Pour over the egg mixture one cupful of hot milk, beating while pouring. Flavor with a bit of nutmeg or orange juice and add a pinch of salt.

Prune Whip.—Stew half a dozen large prunes in the water in which they were soaked over night. Put them through a sieve, add a few drops of lemon juice and the beaten white of the egg. Serve heaped in a pretty glass, topped with whipped cream.

Baked Apple.—Remove the cores from nice tart apples and fill the cavities with chopped raisins or dates and sugar. Currant jelly may be used in place of the fruit. Bake in a moderate oven until tender. Serve on a pretty plate garnished with a flower.

Rice Pudding.—As rice when well cooked is easy of digestion, it makes a very good dish for the invalid. Take two tablespoonfuls of well washed rice and cook in a double boiler with one cupful of milk until the rice is tender. Stir in a beaten egg, sugar to taste, salt and flavoring. Serve with cream and sugar, or add chopped dates and butter, while hot.

Pineapple Pudding.—Place a cupful of boiling water in a double boiler. Add a tablespoonful of sugar, the yolk of an egg and a teaspoonful of cornstarch. Stir and cook until the starch is well cooked, then add a half cupful of pineapple juice or grated pineapple. Cook until hot, then fold in the stiffly beaten egg white and chill. Heap in a pretty dish and garnish with whipped cream.

Lobster Canape.—Fry one tablespoonful of minced onion in two tablespoonfuls of butter until it is a golden brown; then add two tablespoonfuls of chopped watercress, one tablespoonful of flour, one-eighth teaspoonful of curry powder and one cupful of cream. When the sauce is smooth and of the right consistency, add, to it one pint of minced lobster and heat thoroughly. Heap the mixture on rounds of bread which have been sauted in butter until a golden brown. Serve hot.

Eggs and Dried Beef.—Chop fine one cupful of dried beef. Melt two tablespoonfuls of sweet fat in an omelet pan, add the chopped meat and three-fourths of a cupful of strained tomato, a teaspoonful of scraped onion, one-half teaspoonful of salt, then add three lightly beaten eggs and cook, stirring cream throughout. Serve on buttered toast.

OLD HANSOM CAB BACK IN NEW DISGUISE

A one-man taxi, modeled after the once popular one-horse-power hansom cabs, returns in Paris as the latest contribution in automotive power.

SUGGESTIONS TO AID TIRE OWNER

Much Loss Caused Because Motorist and Repairman Fail to Inspect.

The "stretch your rubber campaign" initiated by Secretary of Commerce Herbert Hoover, received instant support from leading associations in the automobile trade and among the motoring public. In line with this policy the Chicago Motor club, in a recent bulletin, "More Tire Miles Through Management," makes a number of suggestions that will aid the car owner to combat the high prices which have been established by Great Britain's rubber monopoly.

"Thousands of tires are ruined because the repairer and the motorist fail to inspect the inside of a casing for breaks, nails and pieces of glass," says the bulletin. "Frequently some piece of foreign matter works its way through the shoe, but it cannot be seen by the eye. The repairer should inspect the casing with his fingers.

Inspect the Tread.

"After a tube has been repaired, it is also advisable to inspect the thread for breaks and foreign matter. Whatever the motorist extracts from these breaks in the way of glass, tacks, or nails, is insurance against trouble. It is advisable to fill these breaks with rubber putty to prevent the accumulation of additional breeders of punctures.

"Another source of trouble comes from wheels out of alignment. The motorist who wants to get the greatest possible mileage out of his tires will see that his front wheels are in perfect alignment, he will keep out of car tracks, he will keep his spare tire covered, and he will change his rear tires to the front wheels before the tread is worn down.

Trouble With Novice

"Still another source of undue tire wear occurs when the novice driver uses his car in traffic. He uses his brakes too much, causing the rubber to slide on the pavement. The motorist who seeks to cut the cost of his tire bills throttles down when he sees that he must come to a stop in traffic, and brings his car to a standing position with little wear on tires or brakes.

"If motorists will watch their tire wear as closely as they watch their gas consumption," concludes the bulletin, "millions of dollars would be saved in this country."

Tire Repairs Should Be Made Permanent Cures

Amateur tire patching ruins thousands of automobile tires each year. It is a common practice among automobile owners when receiving a cut or puncture in a tire to insert a patch on the inside of the casing at the point of injury, thinking that the damage is permanently repaired. Such a repair will in time ruin any tire.

It is good practice to apply patches in such cases, but a tire sleeve should always be placed on the outside of the tire opposite the patched portion at the same time. The sleeve serves to bind the tire, hold the torn and injured parts of the fabric in place and prevent further chafing and rupture.

The tire sleeve and patch are merely "first aid" appliances and should be removed at the earliest possible moment. It will pay motorists to drive to the nearest repair man immediately after the injury occurs. If allowed to run without repair, every time the wheel makes a revolution the tire quickens its pace toward the scrap heap.

Cleaning a Radiator by Using Lye and Water

A good method of cleaning a radiator is to dissolve a half pound of pure lye in six gallons of water. Drain the water from the radiator and the water jackets and refill with the lye solution. Next run the motor for five or ten minutes and draw off the mixture. Once more fill the radiator with clean water and run the engine for a few moments. To make sure that the lye solution is completely out of the system drain this water and refill once more.

Great care should be used to thoroughly cleanse the cooling system after this treatment has been used.

Did You Know—

That if you have run shy of grease when lubricating the spring bolts with a high pressure gun it is possible to make use of the grease that is still left in the flexible tube? Just put a little engine oil in the gun. This will supply a substance capable of transferring the pressure to the grease in the tube.

That your car may have some little refinements you may have overlooked? One car owner, for instance, discovered that the cap over the front end of the engine shaft could be used as the gas tank cap should the latter be lost. Every car has some little feature of its own—and these are often unknown to the owner.

That it saves straining the closed car body to allow the doors to catch in the semi-closed position, except when driving or parking the car?

Filling Gasoline Tank While Out on the Road

Every tourist and auto driver who has had occasion to pour gasoline into the tank on the road appreciates the difficulty of doing this without the use of a funnel. Still, it is hardly advisable to take a funnel along just for this purpose, as it takes much

Piece of Old Inner Tube Makes Funnel.

room and may be bent and broken. However, the motorist usually carries a gallon oilcan to get gas in, and a piece of old inner tube can readily be obtained. Cut a slit in it to fit over the opening of the can, and it will be an easy matter to pour the gas into the tank, as shown in the illustration.—Popular Mechanics Magazine.

Uninterrupted Supply of Fuel in Carburetor

It sometimes happens on cars where fuel is fed by pressure supplied by the exhaust gases that it becomes increasingly difficult to maintain the pressure at the requisite figure. As a rule pressure does not drop quickly, but seems gradually to ooze away. The first thing to do in a case of this kind is to examine the filler cap of the tank. A leather or rubber gasket is used at this point, and often the rubber becomes spongy or the leather gets hard and caked, or a small bit of foreign matter may have lodged between the cap and its seat. On the other hand, it sometimes occurs that the pressure in the system is built up to a point where the small valve operated by the carburetor float will be unable to restrain the fuel and flooding of the instrument will result. As a rule a pressure of one and a half pounds is ample to insure an uninterrupted supply of fuel in the carburetor.

Danger of Scoring

A car which has been standing idle for several days—long enough for the cylinder walls of the engine to become dry—should have a few spoonfuls of light oil injected into each cylinder by way of the petcocks; the engine should then be turned over a few times. This oil prevents any danger of scoring and assists in getting good compression.

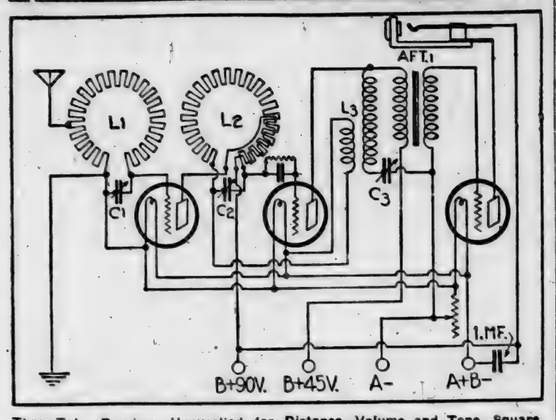
RADIO



Three-Tube Receiver Unexcelled for Distance, Volume and Tone. Square Wound Toroidal Coils Give the Circuit Selectivity.

Regeneration is one of the most wonderful things of radio, without which the entire broadcasting situation would not have reached its present day perfection. But, the regenerative receiver, as such, has almost become extinct because of its radiating qualities which spoil general reception for miles around, and because it is not selective enough to tune through a number of nearby broadcasting stations.

Regeneration is a great help to any radio set. When used in a sharp tuning receiver it will add sufficient volume to equal a nonregenerative set, using a greater number of tubes. The circuit shown here was devised by engineers of the All-American radio corporation to produce a three-tube set, employing regeneration and radio frequency amplification, combined. The radio frequency makes it a distance getter and prevents radiation, and the regeneration produces the volume and sensitiveness required to operate satisfactorily under 1926 conditions.

Make Sharper Tuning Set.

Toroidal coils make this combination possible, by eliminating interstage coupling. The magnetic field of the transformers is confined in the coils. The toroid coils also prevent the pick-up of local stations by the coils themselves and make a much sharper tuning set. The new All-American shielded straight line frequency condensers are recommended to prevent crowding of the stations on the lower waves.

Only one stage of audio frequency is provided, and if this be constructed with one of the laboratory model lyric transformers, reproduction of music and speech will be as clear and undistorted as on a one tube set.

The regenerative feature is controlled by a small variable condenser of approximately .00015 mfd. that permits the tubes to be brought gradually up to the point of oscillation, or "hot spot," where reception is best.

The Parts Needed.

Few parts are needed, and the set can be assembled with a 7 by 18 or 21-inch panel and cabinet, without crowding. Two controls, an ideal system of tuning a radio set, are used. To construct the receiver you will need the following list of parts:

One toroid coupler, type T1 (L1).
One toroid coil, type T2 (L2).
One universal coupler, type R 140 (L3).
Two straight line frequency condensers, type C35 (C1 and 2).
One variable condenser, approximately .00015 mfd. capacity (C3).
One audio transformer, type R12 (AFT 1).
One large fixed condenser, 0.5 to 1.0 mfd.
Three sockets.
One grid leak.
One .00025 mfd. grid condenser.
One 6 ohm rheostat.
Binding posts, wire, screws, etc.

The UV199 or C299 type of tubes may be used if the rheostat is 10 to 15 ohms. One rheostat controls the three tubes and it is not advantageous to provide a separate rheostat for each tube. The 45-volt "B" battery binding post is for the detector tube, which should not be of the regular UV200 or C300 type, unless the voltage is lowered to 22½ volts.

FOREFATHERS OF RADIO

By GEORGE LEWIS
of The Crosley Radio Corporation.

No one had succeeded in demonstrating how Hertz' discoveries could be made the basis of a practical system. The waves created by Hertz' coni devoted his attention to the problem. The waves created by Hertz's crude apparatus could only be detected at short distances from the apparatus. It was necessary that two things be done before Hertz' methods could be adapted to practical wireless telegraphy: First, it was essential to devise some more powerful means of propagating the waves, and, second, a better detecting device than the

G. Marconi.

simple wire loop and spark gap that he had used had to be worked out. Marconi solved both of these problems.

Very early in his experiments, Marconi made the discovery that if one electrical terminal of the transmitting or receiving apparatus were connected to the earth and the other end connected to a metal plate or wire suspended high in the air, the range over which transmission and reception could be accomplished would be multiplied many times. Marconi's earth connection is known today as the "ground," and his suspended wire or plate is what we know as an "aerial" or "antenna."

In the line of detecting devices he improved an instrument first thought of by Branly, and known as the "coherer." This instrument is a relay, enabling the feeble vibrating electric current set up in the receiving circuit by the radio waves to release current from a local battery.

By means of these improvements, Marconi was able to conduct many successful demonstrations of practical wireless telegraphy in England. In 1898, permanent stations were established for communication between Alum bay and Bournemouth, England, a distance of 14½ miles. A year later communication was maintained between England and France.

FOR THE NOTE BOOK

Put a fresh grid leak in the set about once a year.

The best solder is made of equal parts of tin and lead.

Fading is much less troublesome in daylight than at night.

Antenna insulators should be cleaned every six months.

Use a "C" battery to reduce the "B" battery consumption.

Hydrometers are not used with nickel-iron storage batteries.

Static noises are worst in a set on the approach of a storm area.

The ground is one of the most important portions of the radio circuit.

Crystal detectors operate as long as the detector is in good condition.

Excessive resin from solder can be removed with alcohol and a soft cloth.

Howling of a set may be due to filament too high, over-regeneration, improper wiring, or instruments crowded.

A condenser connected in series with an aerial will reduce the wave length of the aerial. One connected in parallel will raise the wave length.

The Grasshopper Limited

A branch railway line in western Kansas bears the undisputed reputation of having the worst roadbed in the United States. A ride on this line makes the wildest of the amusement park roller coasters and dip-the-dips seem like tame sport. One day during a particularly wild series of buck-jumps, the train came to an abrupt stop and then started to back. "What are we going back for?" gasped a breathless passenger.

"Engineer's fault," said the conductor tersely. "Has to back up on that last station. He made a mistake and hopped over it."—Everybody's Magazine.

Small Courtesies Count

In all the affairs of human life, social as well as political, I have remarked that courtesies of a small and trivial character are the ones that strike deepest to the grateful and appreciating heart.—Henry Clay.

Hoosier State Happenings

John B. Stoll of South Bend, dean of journalism in Indiana, died of influenza.

Agnes Hass, Pierceton high school girl, won the annual Kosciusko county oratorical contest held at the high school in Claypool.

Logansport will be host to the annual state convention of the Knights of Columbus lodges, May 23 and 24. Two hundred delegates at least are expected to attend.

Plans for a new city building for Bluffton have been prepared and submitted to the state board of health, the industrial board, and the board of accounts for approval.

An increase of street car fare from 5 cents to 7 cents, was granted by the public service commission to the Chicago, South Bend & Northern Indiana Railway company in Elkhart.

Lafayette and Tippecanoe county are soon to be provided with a modern National Guard armory and community center which is to be erected by the Indiana armory board at a cost of $100,000.

Henry Rose of South Bend, fifty-five, ex-minister, choir singer, and local business man, was sentenced to prison for from five to twenty-one years, following a plea of guilty of mistreating a fifteen year old girl.

Roy Sanders of Farmersburg was shot by Ervin Ray, sheriff, with a shotgun, when, it is alleged, Sanders resisted arrest on charges of liquor law violation. Nine shot struck Sanders, but he was not seriously wounded.

The eastern field trip for geography students of Indiana State Normal school, eastern division, at Muncie, will begin June 19, and return July 24, it has been announced by Prof. J. F. Breese, who will be in charge.

Eight married women in the Bluffton public schools will lose their positions at the conclusion of the present term under a ruling of the board of education that no married women shall be engaged as instructors.

Building permits for the first three months of 1926 show that $227,405 worth of improvements have been started in Anderson. Contracts were awarded for buildings to double the capacity of the Anderson Stove works.

Preparations are being made for the celebration of Foundation day, May 5, by the alumni of Indiana university in every county of the state, it has been announced by George Heighway, alumni secretary.

Dreyfus Rhoades, alias James Shumake, confessed bank bandit, who shot and fatally wounded Simon A. Carrie, Vincennes policeman, was sentenced to die in the electric chair at the Indiana state prison, July 19.

A New Testament, only one inch long, three-quarters of an inch thick, was found in a sack of paper which was being assorted at a Kokomo junk yard. The book was in a tiny box and was in good condition. On the title page is a statement, "The smallest Bible in the world."

His refusal to accede to a demand for the juggling of figures to make overhead costs of the state highway commission appear lower than the real expense of administration was given by Howard D. McClelland as the reason for his dismissal as chief clerk of the department. "Lack of co-operation" was the explanation by Charles W. Zeigler of Attica, chairman of the commission, after the summary removal.

Five $1,000 bills have been received in a letter by Rev. F. A. Meusch, pastor of St. Mark's Evangelical church of New Albany. The letter was signed, "A Member of St. Mark's." The communication directed that $4,000 be used for the church and $1,000 for the Sunday school. The same person, whose name has not been learned, once before sent a similar amount under the same conditions to the church.

The resignation of Wilfrid Grant, chief of the Gary fire department for the last twelve years and one of the oldest firemen in Indiana, has been announced by the safety board. Grant's resignation is to take effect May 1, when he probably will be succeeded by one of his two assistants, Frank Parkey or Thomas Clune. The veteran chief formerly was head of the South Bend fire department for many years.

Following the death of Newton Bonham, superintendent of schools at Coal City and a justice of peace in Plainfield, John T. Hume, prosecuting attorney of Hendricks county, said he would ask the grand jury to indict Joseph Gates for first-degree murder. Gates, who is part owner of a restaurant at Plainfield, is alleged to have struck Bonham, knocking him against an iron sill in front of the Harry Wilson grocery store at Plainfield.

The annual track, field and oratorical contest of the Wabash Valley High School association will be held at Logansport on May 8, with teams representing high schools in Wabash, Fort Wayne, Rochester, Kokomo, Peru and Logansport taking part.

An independent investigation of the transactions of the state highway commission in which a large quantity of unused war material was said to have been sold on a non-competitive basis to a group of Indianapolis junk dealers, is being carried on by an investigator for the Department of Justice.

DADDY'S EVENING FAIRY TALE

By Mary Graham Bonner

COPYRIGHT BY WESTERN NEWSPAPER UNION

INTERESTING OTTERS

"I am an interesting animal," said the Otter.

"If you are an interesting animal," remarked Mrs. Otter, "then what about me?"

"You are interesting, too," said Mr. Otter, "simply because you are an otter."

"Well, that is a good reason," said Mrs. Otter. "It's well to be interesting because one is what one is, and not because one is something different."

"There, there, careful, careful," said Mr. Otter; "don't get all mixed up in your talk."

Mrs. Otter smiled.

"I like to know I am interesting," said she.

"But," she added, "will you please give me some of the reasons?

"It's always a good plan to know why one is interesting.

"For example, someone might come up to me and say:

"'Mrs. Otter, I hear you are interesting.'

"'But will you tell me why you are interesting?'

"It would be quite too horrible for words if I could not answer."

"In the first place," said Mr. Otter, "we wander and have adventures.

"They find it hard to keep us in the zoo, for we are so apt to climb over

"We Are Safe Here."

our bars and get away—not because we are not happy here, for we are.

"We are tame and fond of the keeper."

"It's our nature to wander.

"But alas and alack! Many a poor otter has wandered to his doom!"

Mrs. Otter shed a tear, wiped her eyes with her best front paw, and Mr. Otter continued:

"But when we are free we have many a jolly time as children would have," and Mrs. Otter began to smile again.

"Often we give sliding parties just as children would give sliding parties for themselves and each other."

"I have been on many a sliding party myself," said Mrs. Otter.

"Ah yes, we would slide down a nice muddy or slippery hill, usually into some water below.

"We would give a sliding party, as a rule, where there was water at the foot of a hill."

"We would do the same," said Mr. Otter.

"Well do I remember the hunting parties we would have for fish, frogs and small creatures.

"Ah, how strong were my jaws in those days—and I believe they are still pretty strong."

So Mr. and Mrs. Otter thought of the days they had known when they were wild, but they were quite tame in the zoo now.

"Our fur is very useful and also very beautiful," said Mr. Otter, after a moment.

"Please don't speak of it," said Mrs. Otter, "for we are safe here, and no one can have our fur, so let us enjoy our safety."

"I will not mention it again," said Mr. Otter. "I quite see your reason."

"I knew you would," said Mrs. Otter, "We will talk of our sliding parties."

So they talked of sliding parties and smiled at many of their memories of funny, jolly times."

Doesn't Play Fair

"Dad, I ain't going to school any more."

"Eh, why?"

"It's no bally good—I can't learn to spell. The teacher keeps changing the words."

Following Directions

Mrs. Smith—Gracious, Mary! Why are you trying to feed birdseed to the cat? I told you to feed the canary.

Maid—Well, there's where the canary is, mum.

Riddle

Of me some folks have far too much,
Too little some folks own,
I'm bright to see and cold to touch,
I'm yellow, gray or brown.
Answer—Money.

Tea Has Busier Life

Which has the busier life, tea or coffee? Tea, because it is compelled to draw, while coffee is allowed to settle down.

Boys Going to Heaven

Sunday School Teacher—Some little boys are good and some are bad. What kind go to heaven?

Small Arthur—Dead ones.

POINTS ON KEEPING WELL

DR. FREDERICK R. GREEN
Editor of "HEALTH"

(©, 1926, Western Newspaper Union.)

WHERE IS THE WEAK SPOT?

IF YOU had an automobile with a bent axle or a cracked spring, you'd naturally watch that particular spot pretty carefully. You'd drive so as to avoid any unnecessary strain on the weak spot. You know that every machine has some part that is not as strong as the rest, and that it is impossible to construct any machine in which every part is of equal strength, and has equal ability to stand strains and shocks. The only machine of exactly equal strength that was ever built was the One Hoss Shay the old Yankee deacon made.

"Fur," says the deacon, "it's mighty plain
That the weakest spot must stand the strain
And the way to fix that, as I maintain,
Is only jest, to make that place as strong as the rest."

Oliver Wendell Holmes, who wrote the whimsical poem, was a doctor first and a literary man second. He knew that that most wonderful machine of all, the human body, has a weakest spot which must stand the strain and that if a human body could be made like his deacon's shay, that would be equally strong in every part, it would run until every organ was equally exhausted and then, as he describes the old carriage, it would go to pieces "all at once."

But this is impossible, so all we can do is to try and find out what the weak parts of the human machine are, and which organ will give way first. This is exceedingly difficult in each individual case and may be impossible. But we can tell in a large number of cases what we can't tell about the individuals.

Professor Raymond Pearl of Johns Hopkins university has made extensive study and analysis of the causes of death by age groups. The weak spots in the body, individual peculiarities excepted, vary with the age.

He found that the danger spot in the first year of life is the digestive tract. Naturally, the new body needs food for growth, 70 per cent of male infants and 40 per cent of female infants dying in the first year of life, due to some disease of the digestive tract.

From one year to fifty-five years, the lungs are the weak point. Death from this cause runs from 50 per cent in infancy to 29 per cent at fifty-five.

From fifty-five on, the heart is the weak spot, so the practical lesson in life is: In childhood watch the digestion, in middle life the lungs, in old age, the heart.

TRICHINAE FROM UNDERDONE PORK

EVERYBODY knows that trichinosis is a disease which comes from eating raw or underdone pork of some kind. Just how the disease gets into the pork is not generally known.

Trichina are little worms or parasites that are found in rats, dogs and pigs. As dogs are not eaten by civilized man, they may be disregarded as a cause of the disease. The rats become infected by eating each other or by eating scraps of infected pork. The hogs become infected by eating infected rats. When an animal becomes infected, the little sacks in which the parasites live in the muscles are dissolved in the stomach. The worm comes out of the sack and breeds in the stomach. The little worms are born and pass into the small intestines, where they start boring through the body. They finally lodge in the muscles of the animal which has eaten them and grow a sack like their parents. So the rats eat the pork and the pigs eat the rats and so the cycle goes on.

In many European countries, various kinds of pork sausages, smoked meats and other kinds of food from pigs have been in common use for centuries. In this country, meat has always been sufficiently plentiful so that the muscle parts are generally eaten, and these are usually cooked. So that trichinosis, while common in Europe, has been comparatively rare in this country.

After eating infected pork there is a period of about a week which the worm is developing in the intestine. The patient suffers from loss of appetite, nausea, vomiting, diarrhea and pain in the abdomen. At the end of ten or fifteen days, the young worms are born and start boring through the muscles. The patient now complains of pain and tenderness in the muscles, especially in the upper forearms and calves. Chewing may be painful or even moving the eyes. Then the little worms begin to grow sacks in the muscles and for from two to six weeks the patient has fever, swelling of the eyelids and face. This gradually subsides as the worms all become encysted.

Not a pleasant thing to have, is it?

So the way to avoid trichinosis is never to eat any kind of pork that has not been thoroughly cooked. Fresh pork, smoked pork, sausages, smoked and dried pork should all be cooked through. The heat kills the worms, and so renders even infected pork harmless.

CHILDREN WHO ARE UNDERWEIGHT NEED

FATHER JOHN'S MEDICINE
ALL PURE FOOD
OVER 70 YEARS OF SUCCESS

Clear The Pores Of Impurities With Cuticura Soap
Soap, Ointment, Talcum sold everywhere.

A distant manner doesn't lend enchantment to one's view of friendship.

If Worms or Tapeworm persist in your system, use the real vermifuge, Dr. Peery's "Dead Shot." Only 50 cents at your druggist or 372 Pearl St., N. Y. Adv.

Quite Right

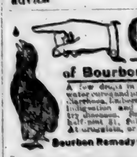
Little Jack had lost his penknife. Carefully he searched all his pockets, and then said with a sigh:

"Oh, dear! I wish I had another pocket—it might be in that one."

Mrs. Scovill Speaks

Freeport, Ill.—"While I have taken some of nearly all Dr. Pierce's medicines at different times and they always were first class, I can especially speak of the 'Favorite Prescription,' having taken it as a woman's special tonic, and it was excellent.—Mrs. E. Scovill, 851 Elk St. All dealers. Large bottles, liquid $1.35; Tablets $1.35 and 65 cents.

Your health is your most valuable asset. So why not get this Prescription today from your dealer, or write Dr. Pierce, President of the Invalids' Hotel, in Buffalo, N. Y., for free medical advice.



One Drop of Bourbon Poultry Remedy Cures Gapes
A few drops in the drinking water cures and prevents white diarrhoea, blackhead, cholera, indigestion and other poultry diseases. Small size 60c, half size $1, full size $1.75. At druggists, or postpaid.
Bourbon Remedy Co., Box 12, Lexington, Ky.

Shake into your Shoes
And Sprinkle in the Foot-Bath
ALLEN'S FOOT-EASE
The Antiseptic, Healing Powder for tired, swollen, smarting, sweating feet. It takes the friction from the shoe, prevents blisters and sore spots and takes the sting out of corns and bunions. Always use Allen's Foot-Ease for Dancing and to Break in New Shoes. Sold everywhere.

A Raw, Sore Throat
Eases Quickly When You Apply a Little Musterole
Musterole won't blister like the old-fashioned mustard plaster. Spread it on with your fingers. It penetrates to the sore spot with a gentle tingle, loosens the congestion and draws out the soreness and pain.
Musterole is a clean, white ointment made with oil of mustard. Brings quick relief from sore throat, bronchitis, tonsillitis, croup, stiff neck, asthma, neuralgia, headache, congestion, pleurisy, rheumatism, lumbago, pains and aches of the back or joints, sprains, sore muscles, bruises, chilblains, frosted feet, colds on the chest. Keep it handy for instant use.
To Mothers: Musterole is also made in milder form for babies and small children. Ask for Children's Musterole.
Jars & Tubes
MUSTEROLE
WILL NOT BLISTER
Better than a mustard plaster

FOR OVER 200 YEARS
haarlem oil has been a world-wide remedy for kidney, liver and bladder disorders, rheumatism, lumbago and uric acid conditions.
GOLD MEDAL HAARLEM OIL CAPSULES
correct internal troubles, stimulate vital organs. Three sizes. All druggists. Insist on the original genuine GOLD MEDAL.

Boschee's Syrup HAS BEEN Relieving Coughs for 59 Years
Carry a bottle in your car and always keep it in the house. 30c and 90c at all druggists.

Bills Payable	25,000 00
Total Liabilities	$188,940 10

State of Indiana,
County of DeKalb, ss:

I, Frank R. Bowman, cashier of the St. Joe Valley Bank, a state bank, do solemnly swear that the above statement is true.

FRANK R. BOWMAN, Cashier.

Subscribed and sworn to before me, this 19th. day of Apr. 1926.

[L.S.] F. B. LEIGHTY, N. P.

My commission expires Feb. 14, 1928.

Local Briefs

Mr. H. G. Provines preached at the Christian church Sunday evening.

Merle Neer and wife will move in a few days into the Ada Berry residence.

There are a number of improvements in walks that ought to be made.

It's here now—that car of Fertilizer you have been wanting. Comeand get your order filled at Curie's.

J. R. Shilling was brought home Sunday from the Garrett hospital and is improving nicely, being able to be about the house.

Foreclosure proceedings have been commenced by First National Bank of Butler, against William and Susan Malone, of north of St. Joe. A note for $900 00 due in a year and another for $300 00 due in six months were executed by James and Myra Malone, secured by the mortgage. The complaint says the interest has not been paid and the plaintiff found it necessary to pay $230 76 taxes and also the insurance on the property. A judgement of $1,800 is asked.

The game wardens are now on full duty. Frank Leighty was called to a tion Wednesday and will spend a partion of his time on the lakes of Steuben county. Let us call the attention of anglers to the closed season for small mouth and large mouth black bass and blue gills. From May 1 to June 16 it will be unlawful to catch these species, which are protected by law during the spawning season. The minimum fine for taking the protected game fishes in closed season is $10 and the maximum fine is $.0.

Notice Of Final Settlement

Cause No. 2861.

NOTICE IS HEREBY GIVEN to all persons interested in the estate of JOSEPH SAYLOR deceased, to appear in DeKalb Circuit Court, held at Auburn, Indiana, on the 17th day of May 1926, and show cause, if any, why my Final Settlement Accounts with the estate of said decedent should not be approved; and said heirs, and all others interested, are notified to then and there make proof of heirship or claim and receive their distributive shares.

Witness, my name, this 15th day of April, 1926.

ELZA KINSEY,
Administrator

H. C. Springer, Atty. 16 t 3

Mother's Day greeting cards at News Office.

Mrs Lillian Buckingham is on the sick list.

Some improvement in the main street, just like a pavement.

Don't blame the newspapers for what is printed, blame yourself.

Second car—Just in, of that new Potash Combination Fertilizer at Curie's.

The budget for the Auburn Presbyterian Church for the next year will be $7,000.

Mrs Frank Mollman was operated on Saturday at Fort Wayne and is getting along fine.

Stanley O. Devitt, Democratic candidate for County Treasurer. 15t17p

May 9, is Mother's Day, and if she is living honor her with a greeting card. See them at News office.

Eggs For Hatching: Holderman strain Plymouth Barred Rocks, large type, heavy layers. Eggs $5.00 per 100. Stock is pure blood and blood tested. Phone Mrs. Hattie Widney.

Harmon & Hellinger Co, are busy erecting an addition to their meat market, to be used as a work room.

Redena Richmond, who has worked as clerk for Tope & Co., for the past weeks, is now doing housework for Mrs W. W Zonker.

The new spring McCall Quarterly is here and it is chuck full of splendid styles. Pictorial Quarterly also on sale and display at News office.

F. L. Milliman will appreciate your support for re-nomination on Republican ticket for Trustee Concord Township at May 4, Primary. 14t17.

The state of Indiana is taking legal steps to recover nearly $300,000 from officials or former officials charged with irregularities in reports of the state board of accounts. The defaulting officers range from the former state auditor to township trustees. And what is Indiana coming to?

Eleven divorces were granted by Judge Endicott during the March term of the DeKalb circuit court, which ended Saturday. This is to be compared with five during the corresponding period a year ago and ten two years ago. A year ago twelve divorce suits were pending. Now there are twenty one.

Sea Beast, Shrine Auditorium, Fort Wayne This Week

In "Sea Beast" Warner Brothers screen classic of the sea and the whaling days of 1840, we have John Barrymore, the world's finest dramatic actor in his finest dramatic characterization, in the finest dramatic screen play of the year. From coast to coast this great picture continues to smash existing records regardless of condition of exhibitions. It seems that nothing can stop it anywhere. This superb photoplay is now playing indefinite runs in all of the leading cities from coast to coast. It has already played eleven weeks in New York, eight weeks in Pittsburgh and is still going strong. It is now booked for a seven days engagement in Fort Wayne's most beautiful playhouse, the Shrine Auditorium, twice daily, 2:15 P. M. and 8:15 P. M. ending Saturday, April 24.

The "Sea Beast" furnishes another setting for the superb technique of John Barrymore in portraying the result of powerful forces that tend to wreck men's souls. To those who love stories of the sea, the picture will cast a new light on this phrase of life. To those who do not care for the sea, it is worth seeing for its tremendous climaxes. The story is thrilling in action, seething in dramatic conflict, beautiful in its love theme and tremendous in its setting and expanse. John Barrymore outdoes himself in his characterization of Ahab Geeley, a New England whaler.

BANK STATEMENT.

F. E. Rhodes, President; L. B. Fisher, Vice-president; C. G. Rectenwall, Cashier. Report of the condition of the Farmers & Merchants State Bank, a State bank at Spencerville, in the State of Indiana, at the close of its business on Apr 12, 1926.

I, C. G. Rectenwall, cashier of the Farmer & Merchant State Bank, do solemnly swear that the above statement is true.

C. G. RECTENWALL, Cash.

Subscribed and sworn to before me this 19th day of April 1926.

[L. S.] Roscoe Walter, N. P.

My com. expires Oct 29, 1929.

Farm work is starting with oats sowing this week.

WANTED to Buy a drop-leaf Table—Phone 13-7. 16t1

C. E. Thorpe of Toledo, was a guest in the Roy Koch home, over Sunday.

Mrs. Mary Timmerman is quite poorly, being confined to her bed. She is not sick but her legs are weak and refuse to hold her weight.

The Spencerville Senior Class has engaged the new Lutheran pastor to deliver the Baccalaureate sermon on the evening of May 2nd.

C. H and Zay Sailer and their wives were Sunday guests of Don Keller and family at Woodburn. Mrs. Keller has been sick, but is some better.

Ray Sailer and wife report the arrival of a son, into their home at Chicago, Saturday, April 17th. In a short time they will again return to Elkhart, where Ray has work.

A car of Bradley's Fertilizer now in at Curie's store— Lime and phosphoric acid, the kind for alfalfa, corn and oats. It's the best too for hard or sour ground. Prices right.

What they think about it

Lawlessness And Lawbreakers

The great big county of DeKalb with its great big laws sent to the little town of St Joe its officers to round up a group of little boys from six to ten years of age for breaking window lights in an abandoned house while on their way to and from school. It was a bad thing to do and the children needed reprimanding, but not much respect for law could be inspired in those children when that Big officer's breath plainly told them that he was not a keeper of the law himself. "O consistency thou art a jewel" and if the same person who reported this violation had been one half so anxious for law and order around that part of town a few months ago as he now is the neighbors would all have sanctioned his efforts for trying to make a better community. Why was these children not warned s orely three or four times what would happen to them if they did not desist, as was one bootlegger a few years ago. But nothing like that, they had to be haled out of school and dragged all over town at the heels of that big awe inspiring officer so that all might know that our laws were being carefully enforced. Voters it is about time to look for some of the wickedness in the high places.

A P aren

Grover Ward of Albion, was in town Monday calling on friends.

For Sale: Brood sow and pigs. Phone 2202. Howard Shilling.

Dr. Price and wife attended a Dental Meeting at Fort Wayne last Wednesday.

Mrs. Fred Thornton spent Wednesday at Defiance in the Alice Warner home.

Fertilizer that meets your needs — 3 different formulas. Curie is the dealer.

Save your newspapers and magazines, tie them in bundles and The News will buy them.

Mr. and Mrs F. M. Monroe and Mrs. Alice Copp spent Sunday with their children at New Haven.

Mrs Chas. Quance of Ft. Wayne is spending the week with her parents, Chas. Murphy and wife at Concord.

Lime-Sulphur solution for your spraying in any quantity at St. Joe Drug Store.

Mrs Lela Northrup and son spent Sunday in the Howard Northrup and Joseph Shilling homes.

The May McCall's magazine is here and is just what the housewife needs for helpful suggestions. Get one at News office.

Fred Reichelderfer, wife and son Dale of Fort Wayne, spent Sunday with John Betz and wife. In the afternoon they called on Joel Betz and wife at Spencerville.

(©, 1926, Western Newspaper Union.)

The golden poppy is God's gold,
The gold that lifts nor weighs us down,
The gold that knows no miser's hold,
The gold that banks not in the town.
But singing, laughing, freely spills
Far up the happy hills,
Far up, far down at every turn—
What beggar has not gold to burn.

—Joaquin Miller.

MORE SUMMER DISHES.

Gelatin dishes are easy to prepare, are digestible and especially good for warm weather desserts.

Tomato Juice, water, seasonings and gelatin make good jelly in which to mold fish.

Lemmon jelly to which is added any fresh fruit at hand, molded, and served with cream, makes a very dainty and refreshing dessert for a warm day.

Spanish Salad.—To two cupfuls of diced chicken add one diced cucumber, a cupful of walnut meats and a cupful of freshly cooked and chilled peas. Mix with a highly seasoned salad dressing and serve on lettuce.

Blueberry Pudding.—Spread bread with butter, using as many slices as are needed, cover with fresh blueberries well-sweetened, and bake until thoroughly cooked. Serve hot or cold. The canned blueberries may be used, juice and all, left to mold and chill without cooking. Serve with cream.

There is no dessert or cake that is more popular than whipped cream cake. Prepare layer cake and fill with whipped cream which has been sweetened and flavored. Fresh strawberries crushed with sugar added to the cream makes a delightful flavor.

Add a pint of cooked chestnuts that have been mashed to a paste to a package of jello. Mold and serve with cream.

Iced Tea.—Take two teaspoonfuls each of green and black tea, pour over a pint of boiling water and cover tightly. Let stand five minutes to draw. Take a large piece of ice, place in a granite pan and pour over the boiling water. When well chilled, add more ice and fill the glasses. Garnish each glass with a section of lemon. Tea prepared this way is much more delicately flavored than that which is allowed to stand.

Add a little ginger ale to grape juice to give it snap and sparkle. The combination is good.

Nellie Maxwell

Relics of People of Long-Forgotten Age

Recent excavations in a cave site at Creswell Crags, England, have yielded astonishing results. The cave is a passage barely two feet wide, but at a depth of two feet the east wall strikes abruptly backwards, giving the lower portion a width of five feet.

Tucked away in a small cavity of the wall was found a huge canine tooth of a bear. It is perfectly preserved, stained dark brown, and when uncovered closely resembled a small banana. It weighs two ounces.

In a crevice between two slabs of rock was the greatest prize of all—a lance point fashioned from the leg bone of a large bird. It is delicately rubbed down and polished to the fineness of a well-sharpened pencil, says a writer in Discovery.

A cooking stone or pot boiler shows that the primitive Mousterian people were acquainted with the use of fire, as the deposit proves to be a gradual accumulation during the 15,000 years or more which separate our own from Mousterian times.

Meant to Be Generous, but Couldn't Prove It

"Class this under the head of 'embarrassing moments,'" advised a salesman who resides in West Grand avenue. "I was hurrying to my office the other day to draw my pay envelope when I was stopped by a rather shabbily dressed youth who asked me for a quarter to use in getting a much-needed meal. I listened to his story and then, with quite a show of authority, chided him for being in such a plight and generally criticized his condition. He looked downcast. I felt sorry for him. In a generous flourish I told him I'd help him. I reached down in a pocket for the coin. There was no coin. I rummaged in other pockets. No results. Then it dawned on me that I was hurrying to the office because I was flat broke myself. Well—I hurried away—feeling much worse than that youth ever felt. And since then I've vowed that if I ever do listen to a hard luck tale again I'll make no show of my benevolence."—Detroit News.

Coffee Controversy

"My wife and I gave a party last night to a few friends," said a Grand avenue resident, "and I discovered, from the conversation among the women present, that every housewife has a different formula for making coffee. One declared that a teaspoonful was her notion, another used a tablespoonful for her measurement. A matron, the mother of a large family, said she just poured coffee into the pot until she felt that she had enough. So it went—and after each one had told of her system, the men in the party, by a unanimous vote, agreed that none of the women ever used quite enough.—Detroit News.

London Going West

London is following great American cities like New York and Chicago in a tumultuous struggle to expand and get breathing space for its business districts. And in London the problem is pressingly acute. The whole "city" is wriggling to free itself from archaic bonds, particularly the cramped quarters near the Bank of England, where inches are worth thousands. As a result, many of the old city firms are barking defiance at tradition and going westward—to the "West End" district of shops and hotels and theaters. A new business London is entirely within the possibilities of a decade.

Touch of Nature

Senator Edge of New Jersey said at Atlantic City in an argument against the revival of Blue Sunday laws:

"A Methodist minister down in Florida caught a boy parishioner fishing one Sunday afternoon.

"'This is abominable,' the minister said sternly. 'I have no patience with you. You can fish all the six days of the week, and there's no excuse whatever for your sin in breaking the Fourth Com—Merciful powers, Jimmy! Watch yourself! Don't you see you've got a bite?'"

Increased in Size

Feminine, trim ankles and slender feet have gone the way of corsets and long tresses. "Low heeled oxfords have caused feet and ankles to grow," claims a shoe official, "until the average size of women's feet is now 6½. In 1920 it was 4½. Ankles have increased half an inch."

French Court Rules Husband May Snore

The Paris courts, in which Americans have found it comparatively easy to achieve severance of the marriage knot, have ruled that snoring does not constitute ground for divorce. Neither does the fact that one of the parties is a "hoodoo" to the other's business.

A man sued his wife because she persited in waking him up at night and she countered with a bill for divorce on the grounds that he snored so loudly that there was no sleeping in the same house with him. The judge prescribed separate rooms and dismissed both bills.

A French woman married to a Czech sued for divorce on the ground that the husband's return from the internment camp in which he had been kept as an enemy subject during the war was hurting the cafe business she had built up during his absence. She had established a large patronage among American officers during the war, she said, and retained many American customers after the peace, but these dropped off when the husband returned. The judge denied divorce, but advised the husband to stay away from the wife's cafe and get a job elsewhere.

WHERE SHE WORE IT

"It was the queerest thing! When the doctor examined me for life insurance, he had trouble in locating my heart."

"He should have looked on your sleeve."

New Anti-Knock

The German chemical firm, the Badische Anilin und Soda Fabrik, will, it is said, place on the market in the near future an anti-knocking compound having none of the drawbacks of the lead compounds that have caused such controversy.

This new component which permits of unusual compression in the automobile cylinder, is iron-carbonyl, a compound of iron and carbon monoxide. It is a brown liquid, boiling at 103 degrees C., and soluble in benzole and petrol. Although it is toxic, yet this disadvantage is almost entirely mitigated by the fact that in the atmosphere and daylight it is completely oxidized to ferric oxide and carbon dioxide.

Warf! Warf!

There are a few rebels in the movies, most of them occupying inconsequential positions, so the source of the following screen tale is, obviously, one of the lower five and not of the upper ten.

Rin-Tin-Tin, one of the intelligent canine heroes of film dramas, was standing about the studio; and in attendance upon the stellar dog, so the story goes, was a crowd of lesser lights of the species.

"What is that pack of dogs doing here?" inquired a visitor.

"Oh, they're Rin-Tin-Tin's 'yes-men,'" quoth one of the lower five.—The New Yorker.

New Test for Concrete

The United States bureau of standards has developed an electrical device, called a "talemeter," to measure accurately the stresses and changes of pressure in a solid concrete structure. The talemeter consists of a stack of carbon disks, both ends of which are connected by electric wires with recording instruments. The electrical resistance of the carbon disks varies with the pressure put upon them. A concrete dam in course of construction in California will be tested to the breaking point by the new device.—Popular Science Monthly.

Movies Draw Millions

A relatively few years ago the motion picture theater obtained its patronage from a limited section of the community, frequently that section being the cheaper part of the towns and cities. Today 130,000,000 people from all walks of life attend the motion picture theaters weekly. There are 20,189 motion picture theaters listed as taking care of this number, and more are building every month.

Primary Candidates

Continued from Page 8 Column 5

BUTLER TOWNSHIP
Trustee:
Claude Fitch, Auburn.
Township Assessor:
Perry Noel, Garrett, R. R. No. 1.
Township Advisory Board:
Gerry Gump, Garrett.
Wm. G. Wilderson, Auburn, R. R. No. 5.
Precinct Committeeman:
East Precinct:
Leland C. Hoshaw, Garrett.
West Precinct:
Fred Ballentine, Garrett, R. R. No. 1.

CONCORD TOWNSHIP
Trustee:
John C. Hull, St. Joe.
Robertson Nicholls, St. Joe.
Township Assessor:
George D. Culbertson, St. Joe, R. F. D. No. 2.
Loren M. Means, St. Joe.
Township Advisory Board:
Joseph E. Foltz, St. Joe.
Orange H. Herrick, St. Joe.
George A. Kinsey, St. Joe.
Precinct Committeeman:
East Precinct:
Ora D. Baker, St. Joe.
West Precinct:
Donald J. Kinsey, St. Joe.

FAIRFIELD TOWNSHIP
Trustee:
Isaac E. Barker, Hudson.
Elbert C. Maxwell, Corunna, R. F. D. No. 1.
Township Assessor:
Orron Bair, Corunna.
John S. Potts, Corunna, R. R.
Township Advisory Board:
William Eckert, Corunna.
Phil Mertz, Corunna.
Robert Shorlock, Corunna.
Precinct Committeeman:
North Precinct:
Len Shipe, Hudson.
Southeast Precinct:
F. M. Dellenbach, Corunna.
Southwest Precinct:
Marion Luttman, Corunna.

FRANKLIN TOWNSHIP
Trustee:
John Platt, Butler.
Township Assessor:
Chas. Newcomer, Hamilton.
Township Advisory Board:
Chas. A. Harwood, Hamilton.
Earl J. Lowe, Butler.
Albert Shultz, Waterloo.
Precinct Committeeman:
North Precinct:
Gilbert Greenwood, Hamilton.
Southeast Precinct:
James Neidic, Butler.

GRANT TOWNSHIP
Trustee:
Charles E. Walker, Waterloo.
Township Assessor:
Russell J. Dunn.
Township Advisory Board:
John Frick, Waterloo.
Karl Kutzner, Waterloo.
Denis Poorman.
Precinct Committeeman:

MICKIE SAYS—

SPENCERVILLE

Fred High and wife, of Detroit, spent the week end with Charles High and wife.

R. U. Bowser and wife spent Sunday afternoon with their son and wife at St. Joe.

Mr. and Mrs. William Summers spent Sunday at the home of Will Erick and wife.

Floyd Dean and wife and Paul Dean and wife, were Sunday guests of relatives at Hicksville.

Mrs. Gertrude Markle and family of Ft Wayne, were Sunday guests in the Dayton Webb home.

Andy Carbaugh, wife and children, of Ft. Wayne, were Sunday guests of Frank Hollabaugh and family.

Henry Beams and wife, of Detroit, were week end guests of the former's parents, Frank Beams and family.

Russell Wade, wife and babe, were Sunday dinner guests of the lady's grandmother, Mrs. Rebecca Beams.

Chamberlain Chick Feed, 25lb. $1.40; 50lb. $2.75; 100lb. $5.50 Get it from Frank Beams, Spencerville, Ind.

The Ladies Aid of the Methodist church at the home of Mrs. Audra Wade Thursday afternoon. The ladies will sew.

The following pupils took the eighth grade examination Saturday: Virgil Laux, Fern Ward, Eulalah Shilling and Serge Smith.

Earl Stiman and family, of Rehobeth, and Miss Dorothy Markle were Sunday guests of Mrs. Alice Zimmerman and daughter Bina.

Rolla Moffett and wife of Auburn and Mr. and Mrs. Jacob Baltz were guests on Sunday for dinner at the home of Paul Adams and wife at Fort Wayne.

Dr B. O. Shook appointed guardian of Catharine Hart, has qualified by filing $2,500 bond in the DeKalb circuit court, with Clyde Hart and McClellan Hart as sureties.

J. L. Farver of near Rehobeth was a Sunday dinner guest of his son, Ray Farver and family. Afternoon guests were Mrs. John Hobaugh and son, Edward Wallas and family and Mrs. Elizabeth Bishop.

August Baltzli, wife and daughter, Alfred Bachmann and wife, of Ft. Wayne, were Sunday guests in the John Bachmann home. M. Zerr, who spent the past week in the same home, returned with them to Ft. Wayne.

Fred Reichelderfer, wife and son Dale, of Ft. Wayne; John Betz and wife, of St. Joe; Owen Helf and wife, Homer Hawk and family, of Defiance, Ohio; and Melvin Betz and family of Ft. Wayne, were Sunday guests at the Joel Betz home.

At the P. T. A. meeting Friday evening at the high school building the following officers were elected for next year: President, Frank Baltz; Vice President, Clyde Hart Sec.-Treas., Ray Farver; Publicity Chairman, A. J. Smith; Program Committee, Rev. R. S. Brown, Audra Wade, A. J. Smith and Ray Farver.

On Thursday evening the Spencerville High School Alumni met at the school house Thursday evening and named the following committees for the banquet to be held the latter part of May at the Community Hall: Entertainment Committee: Mrs. Bernice Wilder, Karl Hart, Mrs. Frances Chapman and Mrs. Jennie Walter; Nomination committee, Ernest Steward, Miss Aleen Rhodes and Earl Hodges; Refreshment committee, Mrs. Cleo Reed, Miss Gaylon Markle and Mrs. Ellen Hart; Decoration committee, Mrs. LaVern Koch, the Misses Alma and Venus Beerbower, Fred Ulm, Ethel Pflaumer, the Misses Doris and Nellie Shull, Lynn Howey, Clarice Hahn and James Reed.

The Editor Makes Statement of Defence

Just who is responsible for the column in last week's News, we do not know, but as the writer's name did not appear, we are editorially bound to say the "Mice" did it Ye Editor and wife were at Birmingham just as they intended when leaving town and if there is any allusions it is due to some other influence beyond our control.

If anyone else has editorial aspirations, or otherwise, they need not wait until the editor leaves and then shower the compositors with a bunch of rambling giblets, but send them in now. "A little bit of nonsense every now and then is relished by the very best of men."

It has demonstrated that it pays to advertise, even if it is just rooms The same day the paper came out a number of colored renters phoned in for the rooms an they moved in the same day. That's service. The News was lucky too, as the colored family washed the windows to pay for their rent a month.

Mesdames Garce Sheffer, Etta Hull and Blanche Leighty are also glad for the free advertising of their "free from static" canaries, they sold out their surplus and are now hatching more Mrs. DeLora Curie reports that she has a number of Houdon's and the Polish Silver Crested Chickens with special head plumes, the kind that covers the eyes so you can catch them anytime. The kind that really act dumb.

Home Bureau Activities

The Home Bureau club met Friday afternoon in the Domestic Science room at the school house with a good attendance. The meeting was opened by club songs. The committee on entertainment was Mesdames Ann Sechler, Cora Curie, Minnie Pepple, Maud Jenkins and Lulu Brodbeck. Besides the regular program and business Mrs. James Reed and Mrs. Gus Hefner of Spencerville gave a very interesting and instructive demonstration on Jello making. Miss Bray's and Miss Milliman's classes in domestic science were invited down to see the demonstration, which was enjoyed by all especially when we got to sample and eat the Jello. One new member was voted in the club. Refreshments were served by committee. The meeting adjourned to meet with Mrs. Gladys Hull, May 21 This will be our first lesson on the nutrition work. There will be a demonstration on making Parker House rolls, Spanish Tea rolls and apple coffee rolls. Arrange and come for the first lesson.

The Valley of Voices

CHAPTER XIII

—20—

In the morning, Little Jacques was sent back to the post with a letter from Steele informing St. Onge of the reappearance in the Portage lake country of the night waller. He expressed the hope of being able, with the help of the hound, to obtain a shot at the creature if it remained near the lake. Denise, he did not mention.

With David and Michel breaking trail through the foot of new snow which had fallen over night, the party started on the ice for the mouth of Still river, a small tributary of the lake on which there was a trappers' camp which Michel had not yet visited. Arriving at the tipi of the Ojibways, they found them loading their sled preparatory to making a hasty departure, the dark faces of two men and a boy, marked with fear, while from the interior of the lodge rose the low pitiful wailing of women.

"What are you doing? Why do you leave good otter and mink water and the ridges which have given you many pelts of the silver and the black fox? There is much flour and sugar and tea; there are many trade goods at the post, which wait for you to come with your pelts at New Year's. Where are you going?" he asked in Ojibway.

Opening his arms in a dramatic gesture the older of the men replied: "How can we stay? The Windigo howls at night from the ridges and robs our traplines. He wailed and wept last night when the snow covered the moon. Our women will not pass another sleep here; we fear he will find and kill us."

"Where was he?"

"On the ridge there."

"No good!" Michel turned to Steele. "De snow cover hees track." Then he asked: "You say he robbed your traps? Did you see the trail?"

"Oh, yes, his trail was everywhere. One sleep before the new snow fell, he followed my fox and marten traps, and ate two foxes—the snow was red with blood. They were large—the tracks of the man-eater, very large, and we ran when we saw them."

"Will you stay tonight in your tipi, if we camp here? This is a great shaman from the south." Michel pointed to Steele. "He has a dog that hunts the Windigo—he has a magic howl, and the Windigo fears him. He has bewitched many Windigoes in his own country with his great voice. Tomorrow we will go with you to your traplines. No harm can come to you, because of this medicine man and his shaman dog."

The Ojibways gazed in awe and wonder at the great hound, strange to the north, with the pendulous ears and the furrowed forehead, then argued rapidly among themselves, finally calling their women from the tent.

"The Windigo will not come tonight, for he knows the shaman dog can follow his trail even through water, and in his voice there is death," said Michel gravely, to the impressed Indians. "If you will unload your sleds and camp here, near us, we will bring the skin of the Windigo to hang from your lodge poles before the moon changes."

After considerable discussion with his people the older Indian replied: "We do not wish to leave the hunting ground of our fathers. As you say, there is game on the ridges and in the creek bottoms. If you will camp here with the white medicine man and the shaman dog with the voice of the thunder, we will stay."

"We will camp here and keep the Windigo away," answered Michel, trusting that the beast would prove him a false prophet.

In the morning—leaving David at the camp to ease the fear of the women, Steele and Michel slipped into their snow-shoes and taking the hound, drove their sled with the traps to the first lines of marten and fox sets on the neighboring ridges. There, along the line which the Windigo had robbed, Michel set the six double-spring wolf traps under the new snow near the marten cabanes, chaining them to spruce logs, which he buried. Farther on, at two of the fox sets, Michel and Steele brought from their sled the two bear traps. These, also, were buried in the snow where an animal approaching the baited fox trap would step on the pan, releasing the yawning jaws.

It would take six days for Little Jacques to make the round trip to the post, and that night over the fire, while the Ojibways cowered in their tipi, the three men talked of what message he might bring. They wondered in what way Laflamme would show his teeth—for strike he would before the long snows faded; if he would dare again to send men to the post. It seemed unlikely, for he did not know that the head man was absent, the Iroquois, from Nipissing, who was known the length of the Wailing and the great Albany for the sureness of his eye over the sights and the possession of a stone-hard nerve. No, Laflamme would not send men to the post on so desperate a venture.

Five uneventful days passed. Confident of the supernatural powers of Steele and his strange dog whom they now heard in full voice in the forest following the trail of Michel, the Indians again began to travel their lines of traps. However, it was clear that a few more nights of the Windigo at Portage lake would mean a general exodus.

On the afternoon of the sixth day

of Little Jacques' absence a dog-team limped slowly up the Still river trail.

"There he is!" cried Steele. "Now we'll hear how things have been going down below." And he hurried to the ice to meet the half-breed.

"Bo'jo', Jacques! What's been driving you so hard. Your dogs are all in."

"Dere ees bad news down riviere."

"What's happened, quick? What is it?" Steele's heart skipped a beat, then started to pound, as he flinched from the answer to his question, when David and Michel, with anxious faces, joined him.

"De night we leeve Wailing Riviere to hunt de Windigo, he holler on de ridge. De people are ver' scare'."

Steele glanced at his friends to find them nodding in quiet satisfaction, then clapping the astonished half-breed on the back, burst out with:

"Jacques, that's not bad news; that's good news! He's moving around and we'll hear him yet. Where's the letter?"

The dog-runner handed Steele a letter wrapped in oil-skin which ran as follows:

"Monsieur Steele:

"Jacques brought your note. I am glad to learn that you have hope of the hound. On the night you left, the Windigo wailed again on the ridge opposite us.

"I am in fear that something has happened to Tete-Boule. He left for the caribou barrens a week before you reached us and is long overdue. Jacques tells me you did not find my

Laflamme Stepped Inside and, as She Retreated, Closed the Door, Following Her Into the Living Room.

message at the rendezvous. I sent Gaspard but he may have feared the Windigo and lied to me. My daughter and I are well and send our felicitations. Hilaire St. Onge."

"Well, what have you got to say, Michel?" demanded.

"I say w'en de dog res', Jacques go down riviere an' breeng up grub. De Windigo ees on dis lak' now. We hear heem soon."

David nodded in acquiescence.

* * * * * * * *

The day that Little Jacques left the post on his return to Portage lake with the letter to Steele from St. Onge, the factor sat in his trade-room staring with unseeing eyes at the wall. The hope inspired by the return of Steele, despaired of as dead, with his plans for the running down of the brute, whose appearances in the valley of the Wailing and in the lake districts of its water-shed were fast working the doom of the post, was at low ebb. Try as they might, he felt that the problem which faced his three loyal friends would prove beyond their power of solution in time to save the post. There would be little Christmas trade, and summer would find Wailing River deserted.

As he sat brooding with his pipe, the jingle of dog bells brought him to his feet. Could it be Jacques returning for something he had forgotten? St. Onge threw on his duffle capote and went out, to meet a panting team of huskies, the steam of their hot breaths rising in clouds in the biting air.

"Tete-Boule! We thought something had happened!"

"I see Michel at de fork of de Stoopin'. He geeve me dis for you." Tete-Boule produced from his sled a roll of birch-bark, on which were traced with a charred stick syllabic characters in Ojibway.

St. Onge translated: "Come to fork Stooping river quick when you get this from Tete-Boule. Michel."

"You met Michel upriver?" asked the surprised factor.

"Yes, he cum dere at daylight, w'ere I camp. Hees dog can travel no more. He geeve dis to me so you get dere before sun go down, and he res' hees dog. He go back Portage lak' dis sleep."

"Did he say what had happened? He gave you no letter from Steele?"

"M'sieu Steele ees ovair on de Leetle Current wid Daveed."

"But why does he want to see me tonight?"

"He foun' somet'ing on de Portage lak'. He not tell me."

Of course, thought St. Onge, Michel would not confide in the medicine man he hated. But what could they have found? If he were to make the fork before dark, there was no time to waste. Ordering his own team harnessed and provisions and blankets put on the sled, St. Onge hurried to the house.

"Denise, my dear! Tete-Boule is back with a message from Michel whom he met at the fork. I must start at once. You may expect me back tomorrow afternoon."

"Monsieur Steele sent you no message?"

"No! They are all well. I've got to travel to make the fork before dark, so au revoir, my dear girl!"

He kissed her and left. From the window she watched his dogs take the river trail at a wild gallop. The hooded driver turned and waved back at the girl at the window, and shortly, the sled reached the bend and was gone.

"It will be lonely here tonight, but I have dear old Charlotte. I shall play her to sleep in her chair."

Denise took the violin from its case and laid her cheek caressingly on the strings. "What would I do here without you?" she whispered. "Father and you! Once I thought he had joined us—was one of us. But after his admission, and this—" She took from a drawer in a desk a letter, and read it slowly. And in her face was anguish. Then she replaced it in the drawer.

The letter had been given to her in person by the Indian who stopped on his way from Ogoke to Albany in October—the Indian who had told Michel of the drowning of Steele and David in the rapids of the Jackfish. And the signature at the end of the letter addressed to Denise St. Onge was that of—Rose Laflamme.

Later, Denise and Charlotte were finishing the luncheon dishes, when their attention was attracted by dog-bells in the clearing.

"Could father have turned back?" she remarked.

The women went to a window and looked out to see a group of men and two teams of dogs in front of the trade-house.

"Who can it be? I cannot see their faces! The large man has never been here before!" cried Denise, swept by a wild fear—a premonition of personal peril. "One of them is coming here!"

Charlotte hastily left the window and shuffling to a table, took from a drawer a sinister-looking meat knife. Running a hard thumb over its edge, she calmly said: "I weel stay by de door."

There was a loud knock on the door of the factor's quarters. Then the blood of French soldiers and gentlemen in the veins of Denise St. Onge flamed in her face—proved itself. With a firm step she went to the door and opening it, looked proudly into the eyes of Louis Laflamme.

The free-trader had made his threat good.

"Mademoiselle St. Onge, I have come to talk with you."

"It is evident, monsieur."

Laflamme stepped inside and, as she retreated, closed the door, following her into the living-room.

"You will pardon me if I throw off my coat," he said.

"I do not desire trouble here in my father's absence," she protested with a confidence she did not feel, "but I shall send Charlotte to call our men and force you to leave this post."

Laflamme laughed, as he paced the floor nervously. "Your men? You might better call on your women to aid you. Two of your brave retainers are under guard now, in the trade-house. We couldn't find the others, if you have them."

It was clear to the girl, who gallantly fought with her fear of Laflamme's purpose in coming to the post when she was alone—helpless, that he controlled the situation, and would be heard.

"What have you come here for, monsieur?" she began.

The cold face of the trader flushed as he gazed at the girl whose memory had taken his peace of mind. The hardness of the mouth softened, in the dark eyes was the look of a boy as he answered:

"It is a story you have heard before, mademoiselle. But I am here to tell it at a time when you will be wise to listen. This is a ruined fur post. Your father will be forced to leave in the spring. What does that mean to you?"

(TO BE CONTINUED.)

Speaking Plainly

A farmer who had married a rich woman was constantly irritated by having the fact of his wife's wealth thrown up at him by the wife herself and by her relatives. Whenever he bought anything, or made any improvement on the farm, it was always, "If it wasn't for my money you wouldn't have been able to do that." One day the farmer brought back from market a fine cow that he had bought for a mere song. While he was exhibiting the animal to an admiring group of farm-hands, his wife came on the scene. "Well, Nellie," he said proudly, "isn't this a splendid cow?" "Yes," she replied coldly, "but if it wasn't for my money it wouldn't be here.' Exasperated, the farmer yelled out, "No, woman, and if it hadn't been for your money you wouldn't have been here yourself."

GOOD ROADS

WASTE IS BUGBEAR IN ROAD BUILDING

Few motorists as they roll smoothly over the magnificent pavements now found in many parts of the country realize the detailed and painstaking research which preceded the laying of the pavement. To many, a road is a road, and no matter what the type of surface or the local conditions, road building to them is largely a matter of smoothing the ground and providing some kind of a hard surface.

But had such a policy been followed, millions of dollars would have been wasted, and the country would today be mired in a bog of replacement, repair and reconstruction. Because of the farsightedness of engineers in charge of road building this possible waste has been prevented, and the pavements being laid today are the best possible.

Road construction, as practiced today, is a highly specialized business. Good, permanent construction insures years of earning power and the saving of millions of dollars in transportation costs. Poor construction means waste that mounts into almost countless figures.

Foremost among the possible sources of waste is the construction of roads of lower type than justified by traffic. Tests conducted in many parts of the country have proved that a road should be built according to its maximum requirements rather than to its minimum. A dirt road carrying a traffic of 110 tons per day, in general, will pay for gravel in ten years by the saving in operating costs. Traffic on a dirt road exceeding 610 tons per day or traffic on a gravel road exceeding 1,450 tons per day will, in general, pay for a concrete, brick or asphalt road in fifteen years by the saving. These figures, established by the Iowa highway commission, are today being taken as standard for determining the type of surface justified.

Scientific research has established some remarkable facts about subgrades. Formerly it was held that all soils could be drained, no matter how wet and unstable in their natural condition. On the Bates road in Springfield, Ill., two years were spent in investigating drainage. Tests firmly established the fact that in clay soils, little can be done to reduce the moisture content by drainage. The wastes in highway funds saved through this research returned taxpayers millions of dollars.

Again referring to the Bates test, which is perhaps the most comprehensive yet conducted, tests have made it possible to build a road which is permanent and able to stand up under any given volume of traffic if properly maintained. Through research the public is now protected against building road pavements too light for the volume of traffic which will use the road and which break down under traffic.

Similarly, after having determined the volume of traffic, road builders need not build a pavement too heavy for the traffic the road will carry. This saves overinvestment in road pavements.

Good Roads Challenge

Hard-surfaced roads eliminate isolation, which signifies progressive civilization. All the country is rapidly forging ahead to that much desired goal when millions of cars and trucks can negotiate the highways without wrecking their high-priced machinery and burning vast quantities of valuable fuel to force their way from place to place by plowing furrows during rainy periods, on all our dirt roads. The hard-surfaced road will present to each town or city through which it passes with remorseless persistence, this ultimatum: "Do or die; function or perish from the earth." If such there be, the builders of each city will decide its destiny and the business men its fate.

Good Roads Hints

Good roads is a matter of vastly more than convenience or political concern.

• • •

The best is the cheapest applies to road construction as well as to anything else.

• • •

Good roads are making our farm lands worth more, therefore they are a good investment.

• • •

A central system of highways has been established—the federal 7 per cent system of approximately 200,000 miles.

• • •

Eighty-eight motorbus companies are operating 800 busses and covering more than 2,000 miles on hard roads in Illinois.

• • •

Good roads can only be secured through scientific methods of construction, reliable contractors and time-tested types of pavement.

• • •

Some 80,000 miles on the federal aid system have been selected in co-operation with the states for uniform danger and direction sign posting.

A CLEW

Policeman (to bespectacled old professor who has witnessed the smash)—You say you saw the accident, sir. What was the number of the car that knocked this man down?

Professor—I'm afraid I've forgotten it. But I remember noticing that if it were multiplied by itself, the cube root of the product would be equal to the sum of the digits reversed.

SOUNDS QUEER, EH?

"Financially how much are you out?"
"Financially I'm all in."

That's Soft

He slipped upon the sidewalk and
Although he took a spill,
It didn't hurt because he only
Fell against his will

An Idiotic Life

Letty—How did your brother happen to lose his mind?

Betty—Well, every morning he jumped from under a crazy quilt after being awakened by a cuckoo clock, and after looking at himself in a cracked mirror that wasn't all there, began exercising with dumb-bells. Is it any wonder?

Anything to Pass the Time

The Family Solicitor (discussing awkward entanglement)—But what induced you to propose to her?

The Entangled—Well, I was dancin' with the girl, you understand, and—and—well, a feller can't jolly well keep on talkin' about the jolly floor and the jolly orchestra all the jolly time.—London Humorist.

Shattered Romance

"Lawsy, but Ah suttinly does hate to lose dis job," sighed the colored maid upon being discharged.

"You have a family to support?" asked her late mistress.

"No'm, but Ah's got an engagement to be broke," groaned the girl.—American Legion Weekly.

NO NUMBERED WIVES

Corntossel (at phone)—Hello, hello! Kin you let me talk to my wife?

Operator—Number, please.

Corntossel—Say, I ain't no Mormon, miss!

A Plea for Information

Oh, chemists, please investigate
And drop me just a line,
I'd like to know what carbonate?
And where did iodine?

He Loses Out

"I'll never sign up another film actress for five years."

"What happened?"

"She got fat on my hands."

A Better Talker

"And now, children, what do you suppose Balaam did when he returned home?"

"I guess I know, teacher."

"Well, Robert?"

"He traded off the ass for a parrot."

Unforgivable

Wife—I hope you will forgive me for having left you!

Husband—Certainly—but not for having come back!

Easy

"Just think of it!" exclaimed Flora the romantic. "A few words mumbled over your head and you're married."

"Yes," agreed Dora the cynical. "And a few words mumbled in your sleep and you're divorced."

Did He Have Them?

Wife—Bridge, bridge, bridge! You'll die at the bridge table.

Husband—Well, bury me with simple honors.

Alabastine instead of Kalsomine or Wall Paper

Pound for pound Alabastine covers more wall surface than any substitute.

So easy to apply you can do a satisfactory job yourself. Ask your dealer for colorcard or write Miss Ruby Brandon, the Alabastine Company, Grand Rapids, Michigan.

Alabastine—a powder in white and tints. Packed in 5-pound packages, ready for use by mixing with cold or warm water. Full directions on every package. Apply with an ordinary wall brush. Suitable for all interior surfaces—plaster, wall board, brick, cement, or canvas. Will not rub off when properly applied.

all colors for all rooms

"DIAMOND DYES" COLOR THINGS NEW

Just Dip to Tint or Boil to Dye

Each 15-cent package contains directions so simple any woman can tint soft, delicate shades or dye rich, permanent colors in lingerie, silks, ribbons, skirts, waists, dresses, coats, stockings, sweaters, draperies, coverings, hangings—everything!

Buy Diamond Dyes—no other kind—and tell your druggist whether the material you wish to color is wool or silk, or whether it is linen, cotton or mixed goods.

Tact does not remove difficulties; it merely goes around them.

Tanlac builds strong bodies

"A severe operation left me weak and wasted. I lost 20 lbs. After seven bottles of Tanlac I gained back my weight, strength and looks. Am now using Tanlac to build up against coming winter." Mrs. W. H. Packman, So. Milwaukee, Wis.

There's nothing like Tanlac to purify the blood, put the stomach and liver in working order and build up a run-down body.

Millions of men and women have been benefited by this great tonic and builder that is compounded after the famous Tanlac formula from roots, barks and herbs.

If you are nervous, suffer from indigestion; have rheumatism, torpid liver, buy a bottle of Tanlac at your drug store today. See how you start to improve right from the first. Take Tanlac Vegetable Pills for constipation.

MIDDLE AGE BRINGS NEW INTERESTS

For Women in Good Health

MRS. HARVEY TUCKER
408 WALKER STREET, SHELBYVILLE, IND.

"Grow old along with me,
The best is yet to be"

With her children grown up, the middle-aged woman finds time to do the things she never had time to do before—read the new books, see the new plays, enjoy her grandchildren, take an active part in church and civic affairs. Far from being pushed aside by the younger set, she finds a full, rich life of her own. That is, if her health is good.

Thousands of women of middle age, say they owe their vigor and health to Lydia E. Pinkham's Vegetable Compound. Those who have learned through their own experience the merit of this dependable medicine are enthusiastic in recommending it to their friends and neighbors.

"I had been in bad condition for three months. I could not do my work. One day I read what your medicine had done and just had a feeling that it would help me, so I sent and got a bottle of Lydia E. Pinkham's Vegetable Compound. I had only taken half a bottle when I got up and started to do my work. It gave me an appetite, and helped me wonderfully. I can not praise this medicine highly enough. I surely will advise all women and girls to take it, and they don't have to use rouge to look healthy. My two daughters are taking it now and one is also using the Sanative Wash. I am willing to have you use this testimonial and I will answer letters from women asking about the medicine."—Mrs. Harvey Tucker, 408 Walker St., Shelbyville, Indiana.

"I read about Lydia E. Pinkham's Vegetable Compound in the little books you give away and began to take the medicine. After the first few bottles I began to feel better and could eat better and had fewer headaches. I feel like a different person. At anytime that I don't feel good I take the Vegetable Compound again, as I always keep a bottle on hand. You may use this letter for every word is true. I will answer any letters sent to me."—Mrs. Jennie Bollerman, 516 Smith St., West Hoboken, N. J.

Salvation is free, but you have to work it out yourself.

It is better not to lose out than to have to stage a comeback.

Men have less lively perception of good than evil.—Livy.

An idle life always produces varied inclinations.—Lucan.

DR. W. B. CALDWELL
AT THE AGE OF 83

"Purges" and "Physics" Bad for Old Folks

While Dr. W. B. Caldwell, of Monticello, Ill., a practicing physician for 47 years, knew that constipation was the curse of advancing age, he did not believe that a "purge" or "physic" every little while was necessary.

To him, it seemed cruel that so many constipated old people had to be kept constantly "stirred up" and half sick by taking cathartic pills, tablets, salts, calomel and nasty oils.

In Dr. Caldwell's Syrup Pepsin he discovered a laxative which helps to "regulate" the bowels of old folks. Dr. Caldwell's Syrup Pepsin not only causes a gentle, easy bowel movement but each dose helps to strengthen the bowel muscles, shortly establishing natural "regularity." It never gripes, sickens, or upsets the system. Besides, it is absolutely harmless and pleasant to take.

If past fifty, buy a large 60-cent bottle at any store that sells medicine and just see for yourself.

Dr. Caldwell's SYRUP PEPSIN

France Is Filling Up

During 1923 and 1924 the excess of foreign immigrants arriving in France over those departing was in the neighborhood of 200,000 for each year. In the first three-quarters of 1925 it dropped to 75,433.

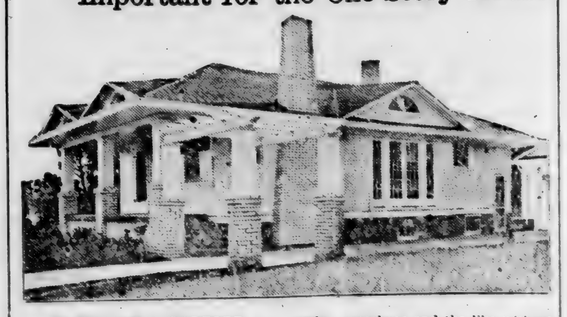
To avoid imitations, always look for the signature of Chas. H. Fletcher. Proven directions on each package. Physicians everywhere recommend it.

Compact, Modern Design Especially Important for the One-Story House



By WILLIAM A. RADFORD

Mr. William A. Radford will answer questions and give ADVICE FREE OF COST on all problems pertaining to the subject of building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

Many people prefer the one-story or bungalow type of home and it possesses many advantages, especially for the housekeeper who must do all her own work. Eliminating the need of numerous trips up and down stairs during the course of the day certainly saves much energy and when properly designed the bungalow has an air of coziness that is particularly appealing.

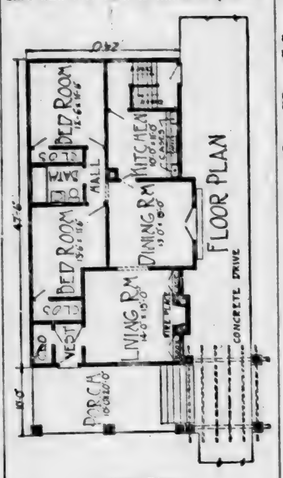
In planning a one-story home, however, care should be taken to avoid the natural tendency to spreading and irregular shapes which often materially increases the cost of building to an extent out of proportion to results obtained. Compactness is a prime virtue in the modern house and it is especially important in the bungalow. Rectangular forms are always the most compact and the more closely they approach the square the greater space is obtained in proportion to construction cost.

This plan shows a house which has a slight projection of the dining room, but otherwise conforms to the rectangular form. It is adapted to the long narrow lot, being 47½ feet deep, exclusive of the porch, and only 24 feet wide. It is walled with drop siding and set on a concrete foundation of sufficient height to give full basement windows. The open porch is also of concrete with brick foundation and pillars of brick and wood. The chimneys are of brick and the plain, tapering line of the fireplace chimney is particularly attractive, while the wide eaves add to the cozy effect and tie the house closely to the lot.

A combined walk and drive leads to the front porch and the garage at the rear. The porch steps are at the side, while the front entrance is at the other end of the porch. It leads into a vestibule off of which there is a large and convenient coat closet. This is an advantage which is frequently omitted in the present-day house, but is worth the space which it occupies. The vestibule affords an entrance which prevents a gust of cold wind sweeping into the living room when the front door is opened in the winter time and the coat closet affords an opportunity to dispose of snowy wraps, muddy overshoes and the like without trailing them through the house.

The living room is nearly square, with a bookcase-flanked fireplace at one side. Over the bookcase are small windows and one large window is placed in the front wall. Opposite this window is the arched doorway opening into the dining room. This room also is square in shape and is made cheerful by French windows filling almost the entire wall space at one side.

Back of the dining room is the kitchen, small and compact, in accordance with the accepted modern idea. It is lighted by two windows over the sink and this sink is flanked by built-in cupboards. Still farther to the rear is a back entrance vestibule containing also the basement stairs. This vestibule is perfectly designed for placing the refrigerator, which could well be built in with a provision for filling from the outside.



Floor Plan.

Access to the sleeping quarters is from the dining room. A door opens into a hallway off of which there are two bedrooms and the bathroom. The bathroom is most conveniently placed between the two bedrooms and each of the latter is supplied with an unusually large closet. One modification in the plan might well be made here. A portion of the rear bedroom closet could be used for a linen closet with hall entrance without greatly reducing the size of the bedroom closet.

Shingle Most Typically American of Materials

Architecturally the shingle is the most typically American of all materials excepting, perhaps, logs. It is particularly applicable in designs of a Colonial flavor. Moreover, with its aid, by the use of broad weathering and double coursing, the apparent height of a house can be materially lessened to enhance its artistic appeal.

The all-shingle covering is adequate from every point of view. But, more than that, an all-shingle home is a vital part of the landscape. It grows out of its surroundings. Its velvety, tapestry-like exterior harmonizes perfectly with the beauty of foliage and flowers. Clinging vines and ramblers attach themselves to it lovingly, and all growing things accept it as a comrade.

In short, an all-shingle home has character. There is about it no suggestion of the artificial. It stands not as a challenge to the neighborhood, but as an expression of good will and friendliness. Its shingled surfaces are, to the exterior, what an open hearth is to the interior; and, however simple the design, they never fail to inspire a sense of real home cheer.

Rubber Bands Take Up Shock of Hammer Blow

Hammers lined with rubber in the opening that fits onto the handle so that the shock of the blows is absorbed, have been placed on the market. Gripping the handle firmly in the socket, the rubber cushion takes up the jar of the blow before it can reach the hand of the person using the tool. Extreme tests are said to have proved the efficiency of the idea.

Gray Is Pleasing Color for Furniture Environment

Walls painted gray make an attractive background for the furnishings of the room. By using a gray paint produced by mixing red and green pigments together you can materially assist the electric luminaries which light the room. Gray, thus prepared has high light reflecting properties, while gray made from white paint and lamp black does not possess this virtue.

Gumwood Used for Oak, Birch to Save on Cost

Gumwood is rapidly taking the place of oak and birch in small homes or apartments, or in any buildings where the builder wishes to keep the cost down as low as possible.

We do not say that gumwood is as pretty as some of the harder woods, but with modern practice carpenters have been able to turn out a very good scheme of interior decoration with its use.

It can be finished very attractively, either painted or stained, and it has a certain permanency that many of the softer woods have not.

One thing in particular pertaining to the selection of gumwood for interior trim is that the wood should be properly cured before installation. If the wood either is too dry or too damp it will pull out from its fastening when the first heat is put into the house and all the nailing in the world will not get it to go back in place again.

Have Chimney Higher Than Ridge of Roof

Tops of chimneys should extend at least three feet above flat roofs and two feet above the ridge of a hip or gable roof, and should be properly capped.

The flue lining should project at least four inches above the chimney top to allow for a two-inch wash and a two-inch projection. This prevents disintegration of chimneys by freezing and thawing, as there is no chance for water to collect and remain around the top of the flue and in the cracks between the mortar and masonry.

The wash or splay should be formed of a cement mortar. The draft would be improved if this surface was concave wherever possible.

Plan for Fixtures

Plan the bathroom in advance, not at the last minute, and allow plenty of space for the fixtures, which should include tub, shower, pedestal or wall hung lavatory and a low-down tank combination. For the kitchen, choose preferably a 36-inch high, modern one-piece sink complete with drain board, and therefore easily cleaned.

Yeast Foam Good bread makers everywhere prefer it

BEST MEATS

We carry the best meats obtrinable. We never sacrifice quality to make a low price We use the utmost care in selecting our meats and see that they are properly kept for the short time they remain in our store.

Our prices are not high. We don't try to give as little as possible for the money, but just as much as possible. A trial order will convince you that what we advertise is true.

We will deliver your ice-arrange for it now!

St. Joe Meat Market,

HARMAN & HELLINGER, Proprietors.

Notice: Pay your account, it is due now.

A Teakettle Bank in the Cornfield.

A SLY old fellow was Farmer Brown. Hard working, honest, saving----but no faith in any one but himself.

He placed his savings in an old teakettle which he hid in his cornfield.

It was discovered by tramps---sorrowfully he learned that it was no place to keep money.

What does it profit a man to save his money and hide it in a teakettle?

Of course very few people of today literally place their money and faith in old teakettles, but countless numbers are still banking their hard earned funds in the old kettle of indifference without even a thought of the oncoming tramps of senseless buying and careless use who so often discover its hiding place.

A portion of the money you earn should be saved and properly cared for. Discard teakettles and let us show you the wisdom of a regular saving habit and placing it out of the reach of the tramps.

Notice of Sale of Bonds

Notice is hereby given that the Trustee of Concord School Township, DeKalb County, Indiana, will offer for sale to the highest bidder, thirty-five thousand (35000) dollars par value of the bonds of the said Concord School Township, at the hour of ten o'clock A. M., on the 8th day of May, 1926, at the school house in the town of St. Joe, said DeKalb County, Indiana.

Said bonds to be for the aggregate sum of thirty-five thousand (35,000) dollars and shall bear interest at the rate of 4½ per cent per an um, payable semi-annually, to be issued in twenty-eight series, each series shall consist of two bonds numbered "One" and "Two" each bond shall be for $625 00; series numbered one shall be due on the 1st day of July, 1927; series numbered two shall be due on the first day of January, 1928, and one series shall fall due each six months thereafter until series 25 and 26 which series shall fall due July 1st, 1940, and series numbered 27 and 28, which shall fall due on the 1st. day of January, 1941.

Said bonds shall be sold for not less that par value and accrued interest.

Said trustee reserves the right to reject any and all bids.

F. L. Milliman,
Trustee of Concord School Township, DeKalb County Indiana. No 18

Notice of Final Settlement of Estate.

Cause No. 2900

NOTICE IS HEREBY GIVEN to all persons interested in the estate of EMILLUS CASE, deceased, to appear in the DeKalb Circuit Court, held at Auburn, Indiana, on the 17th day of May, 1926, and show cause, if any, why my Final Settlement Accounts with the estate of said decedent should not be approved; and said heirs and all others interested, are notified to then and there make proof of heirship or claim and receive their distributive shares.

Witness, my name, this 13th day of April, 1926.

ST. JOE NEWS.

VOL. XL — ST. JOE DeKALB COUNTY, INDIANA, THURSDAY APRIL 29, 1926 — NO. 17

W. K. Sheffer Dies At Angola

W. K. Sheffer, 82, for many years the editor of the Angola Herald, died at about 5 o'clock Tuesday at his home in Angola. Death was due to the infirmities of age.

He was born in Morrow county, Ohio, and at the age of 20 moved to Kendallville, Ind., where he lived for eight years. He then entered the office of the Ligonier Banner as a printer. After mastering his trade he moved to Angola and purchased a half interest in the Herald and was its editor.

He was married in 1873 to Miss Eliza Pence. He is survived by two sons, Waldo, who is connected with the First National bank, of Angola, and Samuel, who is in the employe of the Steuben Republican.

Dr Sheffer of St. Joe, is a brother of the deceased

Dictrict Commercial Contest

An event in which much interest has been manifested was the District Commercial Contest, held last Saturday at the Southside High School, Fort Wayne, Indiana.

Owing to the fact that Shorthand has been added to the local high school curriculum, a team in the beginners' shorthand event was coached and entered by the commercial teacher, Miss Milliman. Dictation in both literary and business correspondence was given at the rate of sixty and seventy words per minute, and then longhand transcriptions were made from the shorthand notes. Members of the team were Martha Miser, Priscilla Borthwick and Bonnell Baker

In addition to the entrants from the local school, teams were entered from twelve other schools, all of which were larger than our own. Just what the results of the contest were, are not known, but these will be announced later. Should Concord Township not be a winner, the practice and training alone are of worthwhile value to those who participated.

Sunday School Council Sunday, May 2.

The first meeting of the county, township and Sunday School officers in DeKalb county, will meet at the Auburn M. E. Church, Sunday, May 2, 1926, at 2:30 o'clock The necessary county business will be cared for and it is necessary that workers be present in order to know what is going on in DeKalb county, and that they may be able to take an intelligent stand and assist in making the schools of DeKalb county more efficient than ever before.

We are going forward year by year in this work and if people could have a real vision of their task, the work as a whole would move forward.

Mr. Hartwell Gosney, Advertising Manager of Patterson Fletcher Co., Fort Wayne, Indiana, will be present and discuss, "Church and Sunday School Publicity." He is a man of advertising experience both in the commercial and church world. He is acquainted with the best and most profitable methods and it will be of value to our county if the people upon whom this part of the work falls will be present to hear.

Special divisional meetings will follow.

There's no place like Home

by O. Lawrence Hawthorne

Home is a garden of beautiful flowers.
Home is a playground with love keeping score.
Home is a haven of rest and contentment.
Home is a harbor on joy's golden shore.

Language could never portray its endearment;
Only the heart knows what Home truly means.
Memory treasures the pleasures of childhood,
Taking us back to its radiant scenes.

Home is the secret of manhood's achievement.
Home is our comfort when shadows draw near.
Home is a temple of endless devotion,
Growing more sacred with each passing year.

AMONG OUR SICK

St. Joe at the present time has two ladies in Fort Wayne hospitals. Mrs. John Barger, who is improving slowly from her second operation in the past few months. Mrs. Martin Poper, who was operated on Saturday for goitre, for the second time, is reported as getting along as well as they expected, due to the seriousness of her case. Mr. Poper reported that the operation revealed that the growth had surrounded her windpipe and was gradually causing strangulation, such as suspension of breathing and that a portion was found under the collar bone.

Mrs. Frank Milliman, who recently underwent an operation, was able to be brought home Saturday and seems to be getting along fine.

Willis Baker suffered a stroke of paralysis last Thursday at the home of his son, Ora, in St. Joe and today is reported considerably improved although very weak.

Tuesday afternoon about 3:30, Earl William Kinsey, fell from the hay loft on the Foster Gee lot, head first down the inside loft, lighting on his head, causing him to be unconscious for some time. As soon as this occurred Elza was called and he carried his son home (only a short distance) and about 5:30 he rallied, but hardly knew what had taken place, other than he stumbled over a can in the loft, while playing with the three Gee children. We hope the little fellow recovers rapidly.

HOME, DAD AND THE BOY

By FRANK H. CHELEY

The Swelled-Headed Dad

IN THE vernacular of boydom, he is the wise-guy and, therefore, hopeless. He needs no information, suggestions or help from anyone on any subject. He was a boy once himself (eons ago) and he knows all the tricks of the trade. He knows boys like a book, but his son has his number!

He is positively, absolutely certain, beyond any shadow of a doubt, that his son is O. K. in every particular; extraordinary, thoroughly well provided for from every angle, and can know no need—for look who his Daddy is!

All boy organizations are entirely superfluous and undesirable.

All boy gangs are bad.

All boy activity a waste of time and money, and quite unnecessary.

Yet it is invariably the son of such a Dad who knows more algebra than his mother, more religion than his father and more worldly wisdom than both of them put together, and when he gets into trouble, instead of going to his "wise" parent, he looks up a real man who is still human, understanding and sympathetic.

He doesn't understand that building boys is better than mending men.

Capes, Ensembles, Two-Piece Jumper

Garments That Are Found on Display in Prominent Paris Shops.

The outstanding quality of the Premet collection is the fact that it is essentially practical. Mme. Charlotte, observes a fashion correspondent in the New York Herald-Tribune, is herself a modernist in the best sense of the word, so she understands fully the needs and requirements of the woman of today.

The sports costumes which are an important feature of the collection are all of the two-piece jumper and skirt variety. They are made with circular-cut skirts or with plaits that are sometimes placed all around and sometimes arranged in groups. Sky blue, yellow, rose, pastel pink, all shades of green, lacquer red, brick red, parma violet, beige and maroon are all favored colors in the range of sport. The many pretty fancy woolen fabrics now on the market are freely used, including frisca, jersey, kasha, the Rodier plaited fabrics, as well as crepe de chine, georgette, shantung, repps, and mousseline de soie.

Many Capes Offered.

There are many capes, frequently forming part of the three-piece sports ensembles that are so much favored by Madame Charlotte. The semi-Inverness cape is also seen, a particularly attractive model being made of beige canvas. Another in a fancy lainage is trimmed with bands of embossed leather.

The afternoon frocks are effective and appear in a great variety of color, material and form. Taffeta is freely used—a pretty model is in small black and white check with a paneled skirt having tiny kilted frills. Another in navy blue has a sloping frill on one side of the skirt and the whole is embroidered with Vs of red silk. A green marbled fabric is used for a third, and this is bordered with plain green.

Fancy plastrons and cuffs trim many of the afternoon gowns and tassels appear on the corsage or waistline of several models. Lawn or embroidery is frequently used for these little accessories.

Evening gowns are often embroidered with paillettes. Lace and tulle are used as well as chiffon and georgette in many lovely pastel shades. The hemline is broken by points or scallops in most cases and sometimes a skirt is cut en forme. A pretty model in yellow-green mousseline de soie is trimmed with a fringe of tiny taffeta leaves. Flesh-colored georgette is embroidered with beads in a Persian design. A smart black satin gown has a trailing bow embroidered in silver sequins. A model that clings to the figure is entirely covered with sequins in pastel pink and blue relieved with gold.

Favors Plaited Fullness.

It has become a habit to look to Lenief for originality of design and a daring use of color. This season he gives both, but is clever enough to

Two-Piece Sport Tailleur With Manish Polka Dot Tie.

modify them sufficiently to produce a collection that is wearable and restrained. Sports costumes are both practical and pretty. He favors the two-piece jumper suit that is so popular one wonders how one managed in the days that preceded its invention.

Lenief's straight line is tempered with fullness. He uses plaits and a circular cut, while sometimes his skirts are gathered. The godet is not used.

A pea-green jumper is split up the sides to the waistline, where it is circled by a narrow leather belt. It is worn with a natural kasha skirt plaited in groups. A pretty tailor-made is fashioned of old gold cloth and several amusing little suits are made of voile de soie, which is an original use of this material. One is very smart in black over white.

Capes are many and varied. There is one in heavy white canvas that is delightful for the seaside, and for town wear nothing could be smarter than a black crepe de chine model trimmed with heavy vandykes of thick black silk fringe.

Evening gowns are often seen with wing draperies, and, as with Patou, white is the favorite color. One model in chiffon has a crystal bead tunic in coat of mail mesh. Another that clings to the figure is embroidered with gold spider webs. Many of them have two points that dip at the back.

Outstanding novelties do not exist in the Patou spring collection. Jean Patou has said before that he considers the present fashions the perfect expression of modern costume, so he only modifies certain details each season. His present interpretation of the higher waistline is delightful. He achieves it by means of a bolero effect which sometimes only appears at the back in the form of a little loose floating coatee from the under arm seams. Upon occasion it is even

Frock of Printed Silk to Match Lining of the Coat.

only suggested by a curved tuck on fold just above the cointure, which is either narrow or swathed.

The silhouette is slim, with a return to the straight coat, though it is often a little wider than the emaciated tube garment worn three seasons ago. Fullness exists in many forms. Sometimes it is achieved by means of plaits either in groups spaced round the skirt, or at one side or in the center front. The full, circular cut is freely adopted. Gathers are used with discretion and there are a number of godets, especially in the gowns of flimsy materials. But whatever form the fullness takes, the main effect of the whole collection is a return to the straight line.

Coloring Is Unusual.

As is usual with Patou, the coloring is unusual. He uses soft pastel "dragee" shades of pink, green, cafe au lait, mauve and blue. Navy blue plays an important part in his collection, as well as delft, gentian, sky and paler tints. Perhaps the pale pastel pink that is a development of bois de rose appears more frequently than any other color. Pale yellow is also used, and there is a good range of greens, from the bright hunter's green through sage, duck's egg, as well as the pale silvery shade that is seen in the leaves of a willow tree and the yellowish tint that appears in the markings of a green canary. Bright purple is also seen and a dark grape shade that is exquisite against the skin at night.

Patou's new georgette—a fabric with the substance of wool—is used for ensembles that have a delightfully summery look. Jean Patou was one of the first to launch the ensemble and he is too conscious of its practical value to depart from using it at the present time.

As well as the long coat, he makes some semi-three-quarter coats that have a straight line, but sufficient width to wrap over. These are equally successful in sports costumes and when worn with dresses.

The new georgette is also used to form a novel three-garment ensemble for summer dinners in the open air. Often the night air is too cool to permit dining with the low-cut evening dress alone, and Patou does not approve of dinner in the wrap which has served in the automobile.

Circular capes play an important part in the collection. They are made of kasha, cheviot and serge and in moire for the evening. One in wine color is particularly handsome with a swallowtail effect in its irregular pointed hem and an Eighteenth century touch in its high draped collar.

Every tailormade—and there are many—is made on severe classical lines, yet each has its distinctive touch and is unlike any other. A beige one has a group of plaits in front of the skirt, and the coat, fitting neatly at the hips, is fastened with three buttons. One in a blue tweed mixture has two buttons on the coat, while the plaits of the skirt are placed in four groups. A third in sage green has a wrapover skirt and is worn with a harebell blue chiffon blouse finished with a soft handkerchief bow collar.

THE KITCHEN CABINET

(©, 1926, Western Newspaper Union.)

"Go forth this day with the smallest expectations, but with the largest patience, with a keen relish for and appreciation of everything beautiful, great and good, but with a temper so genial that the friction of the world shall not bear upon your sensibilities."

SEASONABLE FOODS.

If you enjoy tripe, you know that it is without waste, easily digested and reasonable in price. When selecting, take the tender pickled tripe, wash in cold water and cut into uniform slices. Dry in a cloth, then put in sifted cornmeal. Have ready a hot pan with two or three tablespoonfuls of hot fat. Lay in the tripe and cook until lightly browned on one side, then turn and brown on the other side. Serve with boiled buttered onions.

Apricot Sponge.—Soften a tablespoonful of gelatin in one-fourth of a cupful of water and dissolve in one cupful of apricot juice and pulp, heated hot. Add one-fourth of a cupful of sugar, stir until dissolved, then when the mixture begins to thicken, add two stiffly beaten egg whites. Serve in glass cups with sweetened whipped cream. Prunes may be used in place of apricots for variety.

Baked Ham.—Take a two-inch slice of ham from the center of the ham. Place in a baking pan and parboil with water to cover. Drain, spread with brown sugar and mustard, using a teaspoonful of mustard to two tablespoonfuls of brown sugar. Cover with the mixture, add the water from the pan and bake, basting often until the ham is tender.

Scalloped Potatoes With Meat.—Prepare a dish of scalloped potatoes using plenty of butter and milk, cover with a layer of chopped meat, any left over, and bake for an hour or more until the potatoes are thoroughly done. Serve from the baking dish.

Another way of using such leftover meat is to slice the potatoes, adding a fine sprinkling of onion; add a cupful of tomato and the meat, either ground or left in neat pieces. Have the tomatoes on top to keep the moisture in the meat. With seasonings and slow baking this is a very tasty dish. Serve sprinkled with a few cooked peas for a garnish. Serve from the baking dish. Such dishes are nice for a busy day, as they form the main dish.

Good Things.

The following cakes and cookies are good as long as they last. Doughnuts made with honey keep well and are moist much longer than those prepared with sugar.

Honey Doughnuts.—Take two eggs, one and one-half cupfuls of strained honey, one cupful of sour milk, three tablespoonfuls of melted butter, one teaspoonful of soda, two teaspoonfuls of cream of tartar, and add a little salt. Roll as soft as possible and fry in deep fat.

Spice Cookies.—Cream one-third of a cupful of butter, add one-half cupful of sugar, and one cupful of molasses in which one teaspoonful of soda has been dissolved. Add three and one-half cupfuls of flour, cloves, cinnamon and nutmeg to taste, with one-half to a whole cupful of chopped raisins. Add a few chopped nuts if liked. When well mixed drop by spoonfuls on greased baking sheets. Sprinkle with sugar and bake.

Orange Cake.—Beat well the yolks of five eggs, add half of a cupful of water, two cupfuls of sugar, beating until well blended. Add two and one-half cupfuls of flour sifted with two teaspoonfuls of baking powder, add the juice and grated rind of one orange and fold in the well beaten whites of three eggs. Bake in layers, and ice with the following: To the two remaining whites, beaten stiff, add powdered sugar together with orange juice and the grated rind until the icing is of the right consistency to spread.

Chocolate Potato Cake.—Blend two-thirds of a cupful of shortening with two cupfuls of sugar; add two-thirds of a cupful of grated chocolate and one cupful of warm mashed potatoes, one cupful each of seeded raisins and chopped nuts, one-half cupful of milk and two and one-half cupfuls of flour sifted with two teaspoonfuls of baking powder. Add four eggs, whites and yolks beaten separately, one-half teaspoonful each of cloves and nutmeg and a teaspoonful of cinnamon. If baked in a loaf in a slow oven in a paper lined pan for one hour, it will keep a month.

Tongue and Eggs Tartare.—Cut the desired number of slices of cold boiled tongue into rounds, and on top of each place a half-inch slice of tomato. Cut hard cooked eggs crosswise and place a half with the yolk side down on each round. Top the egg with one tablespoonful of sauce tartare and garnish with watercress. When tomatoes are unavailable use tomato catsup spread over the tongue.

Chocolate Cookies.—Take one cupful of sugar, one-half cupful of shortening, one-half cupful of sour milk, one and one-half cupfuls of flour, one-half cupful of walnuts, one egg, one-half teaspoonful of soda and two squares of grated chocolate.

Nellie Maxwell

AUTO SHIPMENTS HELP RAILROADS

Records Show 3,040,000 Carloads Were Transported in Year 1925.

That the automotive industry was one of the large customers of the railroads during 1925 is disclosed by freight records just made public. This disclosure follows announcement that the railroads enjoyed record earnings last year.

Freight carloads of automotive products hauled by the railroads in 1925 totaled 3,040,000, according to J. S. Marvin, chairman of the traffic managers conference of the National Automobile Chamber of Commerce. This total included shipments of motor cars and parts, gasoline used in automobiles, road-building material and kindred freight. Many other items, such as building materials and equipment for factories and garages, less than carload shipments of parts and accessories and express matter, are not included, because there is no separate classification for these.

Report of Statisticians.

Statisticians find that it would take all the passenger and freight locomotives and all of the various kinds of freight cars of the railroads nearly ten days to handle this business at one time; all of which is another way of stating the fact that of 51,177,902 carloads of freight of all kinds handled by the railroads in 1925, more than three million carloads were induced by the manufacture and use of motor cars.

The importance of this business to railroads is emphasized by comparison with the shipping of other principal commodities in 1925. Coal leads with 8,800,392 carloads, followed by forest products, 3,741,008; grain and grain products, 2,300,199; ore, 2,018,854; live stock, 1,035,252. Shipments of automobiles and parts alone during the year approximated 820,000 carloads, compared with 740,578 in 1924.

Record Railroad Earnings.

"The record railroad earnings coupled with the record carload shipments of motor products are significant of the co-ordinate interest of all lines of transportation," says the automobile chamber's statement.

"Motor transport is one of the major customers of railroads and, more important still, it aids the rail lines in developing national resources and wealth. Just as the railroad is more economical in long-haul transportation, so in many forms of short-haul travel the motor vehicle is the most efficient."

Superior Driving Rules Outlined for Closed Car

With a view to familiarizing motorists with changing conditions, the American Automobile association outlines the four points for the average driver who buys a closed car:

1. Learn that you may be traveling at a higher rate of speed without realizing it, particularly where the grade is slightly downward. Speed is always a hazard when you are not aware of your actual speed.

2. Learn that physical comforts offered by the closed body in adverse weather do not alter the highway hazards. Your hands may be warm but there may be just as much ice on the road as when you formerly shivered in your open car, or stayed at home.

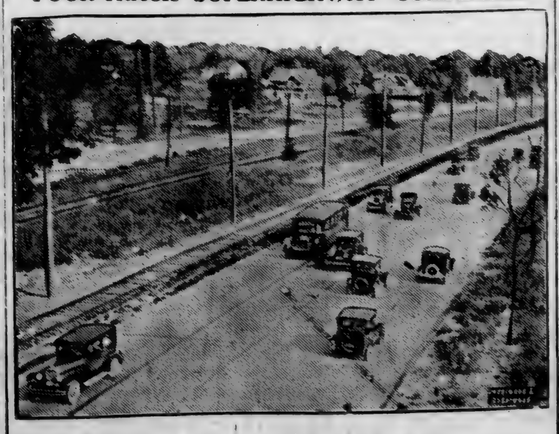
3. Learn that though you can see out better in your closed car than you could through rain curtains the few obstructions to vision, such as the body posts, are at points you are not accustomed to.

4. Learn that other drivers in closed cars are usually as unfamiliar with the new conditions as you are, and that the safest plan is always to give a bit to the "other fellow."

Proper Use of "Choker"

If mixture is thought to be too lean pull up slightly on the "choker" on the dash. This gives a richer mixture. If the engine speeds up, it shows too lean a mixture and low speed adjustment should be opened until the engine runs properly. Of course, the "choker" should be returned to its original position.

FOUR-TRACK SUPERHIGHWAY COMPLETED



The first four-track superhighway of concrete has been completed between Detroit and Pontiac, Mich., a distance of 30 miles, and more is projected. The width is 44 feet and the new road has been christened Woodward avenue. It ranks with the busiest boulevards of the world.

Do You Remember—

When automobiles could be counted about the town square as easy as buggies and wagons can now?

When "free air" could not be even given away?

When the watering trough was the "filling station?"

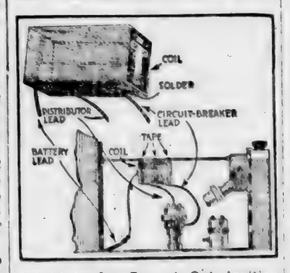
When it was possible to keep within the fifteen-mile speed limit?

When your greatest worry was meeting an automobile, not driving one?

When you were either considered "well-to-do" or downright extravagant if you owned a car?

Making Substitute for Defective Ignition Coil

While touring recently a friend of mine burned out the ignition coil. The only repair man in the neighborhood had nothing but a few spare parts for light cars, yet he fixed the ignition system fairly well with a substitute coil. This was made from one of the



Substitute for Burned Out Ignition Coil.

small box coils that are used in combination with the magneto ignition of small cars.

Three insulated wires were soldered to the contact points on the coil casing and connected, as shown in the illustration. The distributor connection was made with a high tension wire. The vibrator of the coil was bridged by screwing the contact points solidly against the core of the coil —Popular Science Monthly.

Burn Lights in Daytime to Avoid Overcharging

Because you see a car running in the daytime with the lights on do not think that the driver has been out all night and is just getting in. Perhaps he has, but lights burning in the daytime is not a sure sign. More than likely the owner is on a long trip during which he runs principally during the daylight hours. Consequently he does not have an opportunity to use the stored-up current in his battery, and in order to keep the battery functioning properly and not getting overcharged he is burning his lights to use up some of this pent-up current.

This burning of the lights in the daytime is frequently done on new cars that are being driven overland from the factory. The drivers of these machines do no night driving nor do they do much starting and stopping of the motor in the driving hours. While running they naturally are generating current and use this means of using up some of it.

Rain Frequently Cause of Mean Short Circuits

When a car stops in a heavy rainstorm, suspect the distributer, the top of the coil or the plugs and wires of being wet. Water is an excellent conductor of electricity. A driving rainstorm will enter through ventilation cuts in the hood and often manage to produce a short circuit which stops the car as effectually as if it were robbed of its spark plugs. The only remedy is to wait for the affected parts to dry or to locate them and dry them off with rags. The best remedy is prevention. Small covers of oilcloth to fit over the coil and distributer, similar in effect to the leather hood which usually protects magnetos, will keep out the fine water spray which does the damage and prevent an annoying stop under uncomfortable circumstances.

Father John's Medicine FOR COLDS and COUGHS BUILDS STRENGTH NO DRUGS OVER 70 YEARS OF SUCCESS

Food! Felt Like Vinegar In Stomach

Brooklyn, N. Y. Mr. A. Arnstan says:—"No matter what I ate, it seemed to turn to a vinegar-like acid as soon as it went down. I was bilious, belched gas and acids rose in my mouth. Appetite was poor. I took Carter's Little Liver Pills for just one week. This certainly was a fine remedy for me."

Treat a constipated condition in a sensible manner, cause the bowels to move daily free from pain. Carter's Little Liver Pills are for every member of the family. Small, sugar coated, easy to take. Druggists, 25 & 75c red packages.

Fitting Place

After one of the sessions held by the senate to consider the League of Nations and the World court, Senator Edge of New Jersey said:

"Gentlemen, before we adjourn, I move that our next conference be held on a merry-go-round." And as they gazed at him in astonishment, he added:

"We never get anywhere."

Sell It Cheap?

Jones—Are you the man that found my diamond cuff link?

Smith—Yes; what will you take for the other one?

"BAYER ASPIRIN" PROVED SAFE

Take without Fear as Told in "Bayer" Package

BAYER

Does not affect the Heart

Unless you see the "Bayer Cross" on package or on tablets you are not getting the genuine Bayer Aspirin proved safe by millions and prescribed by physicians over twenty-five years for

Colds	Headache
Neuritis	Lumbago
Toothache	Rheumatism
Neuralgia	Pain, Pain

Each unbroken "Bayer" package contains proven directions. Handy boxes of twelve tablets cost few cents. Druggists also sell bottles of 24 and 100.

PARKER'S HAIR BALSAM
Removes Dandruff—Stops Hair Falling
Restores Color and Beauty to Gray and Faded Hair
60c and $1.00 at Druggists.
Hiscox Chem. Wks., Patchogue, N.Y.

HINDERCORNS Removes Corns, Callouses, etc., stops all pain, ensures comfort to the foot, makes walking easy. 15c by mail or at Druggists. Hiscox Chemical Works, Patchogue, N. Y.

COME TO TOLEDO

The world's best known, most noted Linotype school is in Toledo. Great opportunity for young men and women to learn Linotype and fit themselves for $35 to $65 per week newspaper work. Clean, intelligent, fascinating Linotype work. Easily learned through famous copyrighted system by world's most noted operator. Practical course, six weeks, $60; correspondence, with keyboard, for home study, $25. The publisher of this paper can tell you what Linotype operators earn, in what esteem they are held. Ask him. But write today for free literature. It places you under no obligation. Address Mills Bennett's School, Dept. W, Toledo, Ohio.

STOP THAT ITCHING
You won't have to wait—relief follows the first comforting touch of
Resinol

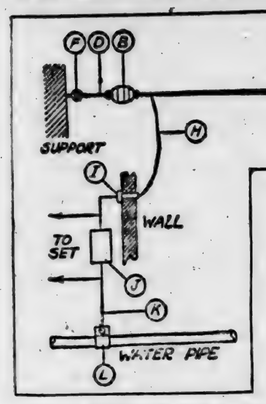
RADIO



How to Erect an Outdoor Aerial.

The outdoor aerial is conceded to be the most efficient in that it transmits to the set a stronger signal than either an indoor aerial or a loop under equal conditions.

The ideal outdoor aerial for receiving is a single wire from 50 to 150 feet long, including lead-in, installed 10 to 20 feet higher than surrounding buildings. The aerial should be erected so that one end comes near a window, to provide a short, direct lead-in.

The aerial should not be near trees, telephone wires or high-tension wires. When necessary to pass a telephone wire the aerial wire should cross as near at right angles as possible. The aerial wire should never cross either above or beneath a power line. When near a power line erect the aerial at right angles to avoid inductance noises.

Supporting wires for the aerial should extend several feet from the supports.

Large porcelain insulators, preferably of the corrugated type, should be used. The lead-in should be as direct as possible, but should be kept from the building a distance of several inches up to the point where it enters the window.

The important features of the outdoor aerial as shown in the diagram are:

A—Aerial wire.
B—Tension insulator.
C—Tension insulator.
D—Supporting wire.
E—Supporting wire.
F—Screw eye.
G—Screw eye.
H—Continuation of A.
I—Lead-in bushing.
J—Lightning arrester.
K—Ground wire.
L—Ground clamp.

At a distance greater than 50 miles from the nearest powerful broadcasting station an aerial of 150 feet, including lead-in, will be found to give the greatest volume and satisfactory selectivity. In congested areas an aerial as short as 50 or 75 feet, including lead-in, gives better selectivity and ample volume from local stations.

Many radio fans have two aerials, a long one for distance stations and a short one for tuning out troublesome near-by stations.

Obviates Necessity of Excessive "B" Battery

Questions are frequently asked regarding the use of tubes with a high amplification constant. These tubes are primarily designed for use in resistance and impedance amplifiers. We quote a few lines from one of Keith Henney's tube articles in the Radio Broadcast magazine. He writes as follows: "A low-mu tube will not 'load up' a power amplifier unless coupled to it by means of a transformer. For example, the average amplifier to deliver .06 watts power requires at least 9 volts variation on its grid. A tube with a mu of 8 coupled by means of resistance impedance to the amplifier cannot produce a variation of voltage greater than 8 volts and probably not over 6, so that the amplifier will not deliver its rated quota of power. On the other hand, a tube with a mu of 20, or a tube with a mu of 5 coupled by means of a 2:1 transformer, can easily produce the desired change in input voltage. High-mu tubes can be used as detectors and hence are useful in vacuum tube voltmeters. Their use in resistance and impedance amplifiers make the latter practical without increasing the 'B' battery voltage beyond reason. It must be said here that the mu of such tubes is not the only important constant. The plate impedance must be considered and, like all other tubes, the usefulness of high-mu tubes increases as their impedance decreases.

"In this question it must be remarked that tubes of 1926 differ from those of 1925 in the fact that their plate impedance is less. This is due to the use of better filament wire which has a higher electron efficiency. This low impedance, while it makes good amplifiers, causes trouble when the tubes are used in sets that have been neutralized for high impedance tubes. It is well known that less inductance is required in the plate circuit of low impedance tubes to make them oscillate than is the case with high impedance tubes. On the other hand, once these newer tubes are neutralized, the voltage amplification and power output are increased."

FOREFATHERS OF RADIO

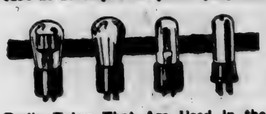
By GEORGE LEWIS
of The Crosley Radio Corporation.

While wireless telegraphy soon became quite well established, communication across the Atlantic ocean being proved practical as early as 1901, it remained for an American to make the developments which made radio telephony possible. Lee DeForest was that American. He developed the "audion"

Lee DeForest.

radio tube, now in almost universal use as a detector and amplifier of radio signals, and as a generator of oscillations at the transmitting station.

Due to certain technical difficulties, it was impossible to send voice by radio from transmitting stations using the old Marconi equipment. The radio tube as developed for power purposes,



Radio Tubes That Are Used in the Modern Sets.

supplied a current, however, which could be used as a carrier for voice and music.

As developed for receiving purposes, the radio tube may be used as a detector, replacing the crystal of Picard and the coherer of Marconi's apparatus as a means of making the received current capable of operating headphones. Additional tubes may be used as amplifiers, their action being that of relays, releasing current from local batteries when acted upon by the signal. Thus the typical radio set of today employs a detector tube, together with one or more additional tubes as amplifiers.

It is customary to distinguish between tubes used to amplify the current before it passes through the detector and those used to amplify it after it passes through the detector by calling the former "radio-frequency amplifiers" and the latter "audio-frequency amplifiers."

How to Tell Whether Receiver Is at Fault

Noise and distortion are inexcusable faults, but it is well to remember it isn't always the fault of the receiving set. Background noise which can be heard under the voice, as well as certain classes of distortion, are sometimes actually transmitted and there is little you can do to get away from it. This can be checked up by listening in to one or two other stations. If the signals come through clean-cut and free from noise, rest assured your set is O. K. and the broadcasting station at fault.

Door Makes Good Frame for Your Loop Aerial

A door makes an excellent frame for a loop aerial and it can also be turned to obtain the directional effect of a loop. This type of loop works well, even on distant signals, when using an ordinary five-tube receiver. About six turns, spaced one-half inch, will give broadcast wave range when tuned with a .0005 condenser. A smaller capacity condenser will require more turns. Insulated wire of No. 18 or 16 gauge works well.

Radio Popular in Russia

Radio is becoming popular among the Russian masses. About 1,000,000 home dwellers now have amateur wireless sets. The government charges a license fee of 50 cents a year for a crystal set and $1 a year for a tube set. Amateurs are allowed to use transmitting apparatus as well as receiving sets. Importation of radio equipment is prohibited, all apparatus being of Russian manufacture.

INDIANA NEWS

Davis Smith, a member of the Cincinnati Reds baseball club during the first three years of its existence in 1868, 1869 and 1870, is dead at Liberty.

Nondas Miller of Summitville high school, a crippled girl who stood supported by crutches and delivered her address on "Hamilton and the Constitution," won the Madison county oratorical contest in Anderson.

Hudson Jones, age fifty-two, state agent in Indiana for three insurance companies and a member of the board of directors of the Indianapolis Salvage corps, died at his home in Indianapolis after a short illness.

Stanley Coulter, dean of men at Purdue university since 1919, has resigned, and Prof. M. L. Fisher of the school of agriculture has been chosen by the board of trustees to succeed him. The change will become effective July 1.

Suit for $50,000 has been filed by Mrs. Alone Slater of near Sidney against the Nickel Plate railroad company in connection with the death of her husband, who was killed while employed by the company at Old Fort, Ohio, in December, 1925.

John T. Price, fifty-one, and his wife, Hannah Price, thirty-four, were killed when a Monon passenger train demolished their automobile at a crossing four and one-half miles northeast of Kirklin. They were married only two weeks ago.

Sixteen out of twenty-four co-eds selected for the annual freshman recognition list by the Mortar Board at Indiana university are engaged in athletics. The selection was based on scholarship and campus activities during the first semester.

Two masked bandits held up half a dozen employees at the post office in Indiana Harbor, looted truckloads of registered mail pouches believed to contain thousands of dollars in negotiable checks and cash. The bandits escaped in a small touring car.

Solution to the robbery of a dozen retail stores in South Bend was reached in the arrest of five "baby" bandits, ranging from fourteen to sixteen years old. The boys have confessed. The concerns robbed were groceries, bakeries, tea and coffee shops.

State highways will be renumbered to conform to the federal system of roads, it has been announced by A. H. Hinkle, superintendent of the maintenance division of the state highway commission. Maps showing the new system of numbering will be ready for distribution October 1.

Refusing to meet the requirements laid down by the elders of the Church of Christ of Palmyra, if he desired to remain a member of the congregation in good standing, W. Clyde Martin, convicted by the church of being a "recreational heretic," has withdrawn his church membership.

Governor Jackson announced the reappointment of two members of the state board of medical registration for terms of four years from April 23, 1926. Those reappointed are Dr. W. A. Spurgeon of Muncie and Dr. J. W. Bowers of Fort Wayne. Both have served four-year terms on the board.

Increasing use of motion pictures and lantern slides in the schools of Indiana has led Indiana university officials to offer a course in visual education especially for teachers attending the 1926 summer session. Hugh W. Norman, head of the bureau of visual instruction of the Indiana university extension division, will give the course.

Mrs. Ella Lenon, thirty-nine, wife of George Lenon of Logansport, ended her life by inserting in her mouth a rubber tube connected to a gas stove in the kitchen of her home, and turning on the gas. She was found unconscious on the floor when her husband returned home. She had been ill for a year.

Believing girls of limited financial means should have every opportunity to obtain a college education, Mrs. Anna D. Gilmore of Greencastle has announced a gift of an annuity of $25,000 to De Pauw university to aid them in their ambition. The gift was made in accordance with the wish of Frank G. Gilmore, husband of Mrs. Gilmore, who died late last year. The money is to be used only for loaning purposes to college girls in need.

A gala program is announced for the ninety-seventh annual commencement at Indiana university. Opening Saturday, June 5, with senior day exercises and closing with the graduation ceremonies on Tuesday morning, June 8, the program is replete with reunions of alumni, luncheons, athletic festivities and other features in honor of the graduating class. The baccalaureate speaker will be Bishop Joseph M. Francis of the Indianapolis diocese of the Episcopal church.

Heirs of Mrs. Benjamin E. Wallace of Peru, widow of the circus owner, have agreed to drop pending suits and make a division of the estate, estimated at $500,000. Mrs. Wallace's will was never found.

John D. Williams, director of the state highway commission; Earl Crawford, member of the commission, and four others indicted by the Marion county grand jury on charges of embezzlement, will be tried before the summer vacation of criminal court, it was announced by William H. Remy, prosecuting attorney.

HOW TO KEEP WELL

DR. FREDERICK R. GREEN
Editor of "HEALTH"

(©, 1926, Western Newspaper Union.)

THEN AND NOW

THOSE of us who write about better health and less disease always have to write with one eye on the reader and one on the editor. For we know that unless what we write gets past the editor it will never get to the reader. So it is always not only very desirable but also absolutely necessary to know just what the editor thinks about all this "health stuff."

Every once in a while, in every profession, whether it's doctors or lawyers or ministers or editors, somebody forgets all about professional prejudices and habits and talks right out in meeting. And it's always not only refreshing but also enlightening, for then you know you're hearing the facts just as they appear to a man who knows what he is talking about.

So when the editor of the Worcester Gazette frees his mind, you know you are getting it straight. Here is what he says:

"Once upon a time and not so long ago:

"Everybody drank from the same glass in a railway coach.

"A roller towel in the hotel washroom accommodated all comers.

"Thousands of people died every year from typhoid fever.

"The health officer's chief job was to inspect alleys and back yards for garbage and dead animals and to order chloride of calcium scattered about.

"The state board of health existed principally for the purpose of examining and licensing physicians.

"There were flies in every dining room.

"Nobody took a bath until Saturday night.

Lots of people thought that wearing asafetida would prevent diphtheria and smallpox.

"Red flannel underwear was all the rage.

"Consumption was an incurable disease and folks who had it were advised to drink a great deal of whisky or go West, or do both."

Now there isn't a single medical term in this editorial. It's simply the everyday things the editor has seen and remembered that are different now from what they were then and where any sensible person can see there has been a change for the better.

What's the reason? Largely, as Healthy Home suggests, because newspapers are giving increasing space today to information about health and disease, how to keep one and avoid the other.

FEWER DRUG ADDICTS

IN THE fifteen years since the so-called Harrison law was passed by congress, many sensational statements have appeared from time to time regarding the number of persons in the country who were regular and habitual users of the so-called narcotic drugs. It has been claimed that there were from one to ten million persons who were victims of these drug habits and that the number was increasing. Equally sensational stories of the capture of immense quantities of these drugs, of the methods by which they were sold and the enormous amounts made by these "dope peddlers" have added to the popular idea that we were in danger of becoming a nation of "drug fiends." Yet when you ask any individual how many persons he knows who use any of these drugs you generally find that his impressions are gained largely from hearsay.

There is and has been for many years, a drug addict problem, but it is not today and never has been as great or as widespread as has been generally believed. In contrast to the many sweeping statements made on this subject, let us set a carefully prepared report of an official body of experts.

The conference of state and provincial health authorities of North America is a yearly gathering made up of one representative, generally the executive secretary, from each of the state health boards and departments. At their last meeting, a committee on drug addiction reported that the use of opium and cocaine was declining. The federal and state laws restricting their sale were being better enforced and as a result the number of drug users was being decreased. Drug addiction, said the committee, was still serious but not as bad as had been represented. The most careful survey made under the United States public health service, showed that there were about 110,000 persons in this country who habitually used opium, morphine, or cocaine, or some form of cocaine. Heroin, the most dangerous of all the opium preparations, has been practically wiped out and its manufacture stopped.

So at the worst, less than one-tenth of one per cent of the people in this country are narcotic drug users. This is one out of a thousand.

Physicians do not prescribe as much as formerly. They do not order opium as freely. People do not take as much medicine and dangerous medicines are not as easy to get as they were twenty years ago.

DR. W. B. CALDWELL AT THE AGE OF 83

Women Need a Mild Laxative —Not a "Physic"

Countless girls and women now know how foolish and needless it is to "purge" and "physic" themselves to avoid sick headaches, dizziness, biliousness, sallow skin, colds, or sour, gassy stomach.

They have found that Dr. Caldwell's Syrup Pepsin helps to establish natural bowel "regularity" even for those heretofore chronically constipated. Dr. Caldwell's Syrup Pepsin not only causes a gentle, easy bowel movement but, best of all, it never gripes, sickens or upsets the most delicate girl or woman. Besides, it is absolutely harmless and so pleasant that even a cross, feverish, bilious, sick child gladly takes it.

Buy a large 50-cent bottle at any store that sells medicine and just see for yourself.

Dr. Caldwell's SYRUP PEPSIN

Too Bad

Doctor (to neighbor at banquet)—Do you suffer from neuralgia?

"No!"

"I'm sorry!"

"Sorry? Why?"

"Because I have invented a certain cure for it."

"DIAMOND DYE" ANY GARMENT, DRAPERY

Just Dip to Tint or Boil to Dye

Each 15-cent package contains directions so simple any woman can tint soft, delicate shades or dye rich, permanent colors in lingerie, silks, ribbons, skirts, waists, dresses, coats, stockings, sweaters, draperies, coverings, hangings—everything!

Buy Diamond Dyes—no other kind—and tell your druggist whether the material you wish to color is wool or silk, or whether it is linen, cotton or mixed goods.

Pageant of Progress

1895—Look, a motor car!
1925—Look, a horse!
1955—Look, a pedestrian!—Ziffs.

CORNS

Lift Off—No Pain!

Doesn't hurt one bit! Drop a little "Freezone" on an aching corn, instantly that corn stops hurting, then shortly you lift it right off with fingers.

Your druggist sells a tiny bottle of "Freezone" for a few cents, sufficient to remove every hard corn, soft corn, or corn between the toes, and the foot calluses, without soreness or irritation.

Past Master

"Is Willard very sophisticated?"

"Yes, he's too sophisticated to pretend he's sophisticated."—Life.

For overnight relief to inflamed eyes and sties use Roman Eye Balsam. Once tried, always preferred. 372 Pearl St., N. Y. Adv.

You can almost see the cracks in the voices of some people when they attempt to sing.

Wise men propose and fools dispose.—Anacharsis.

Use of Telephone Grows

The United States, with a population of 114,000,000, now uses the telephone 63,000,000 times every day. It is interesting to note that in 1900 but 7,000,000 conversations daily were tabulated, while today nine times this number of telephone conversations are recorded.

Sick bodies made strong

"Two years ago I was all run down. All I got from food was indigestion, bloating and constipation.

"Since taking Tanlac I sleep and eat fine. Even ceiling decorating does not tire me." Samuel L. Martin, 713½ Main Street, Evansville, Ind.

After a spell of Grippe or flu, when your system is all run down and your legs are so weak they can hardly hold up your body, start right in taking Tanlac.

It's wonderful how soon you really do improve! Tanlac sails right in and puts the system in fighting trim. It cleans the blood, revitalizes the digestive organs, gives you an appetite for solid food and makes you feel like a new person.

Nothing will turn the trick quite as fast as Tanlac, made after the famous Tanlac formula from roots, barks and herbs. Buy a bottle today and get started back to full strength and vigor. Take Tanlac Vegetable Pills for constipation.

Grandmother Knew

There Was Nothing So Good for Congestion and Colds as Mustard

But the old-fashioned mustard plaster burned and blistered. Get the relief and help that mustard plasters gave, without the plaster and without the blister.

Musterole does it. It is a clean, white ointment, made with oil of mustard. Gently rub it in. See how quickly the pain disappears.

Try Musterole for sore throat, bronchitis, tonsilitis, croup, stiff neck, asthma, neuralgia, headache, congestion, pleurisy, rheumatism, lumbago, pains and aches of the back or joints, sprains, sore muscles, bruises, chilblains, frosted feet, colds of the chest (it may prevent pneumonia).

Jars & Tubes

MUSTEROLE
WILL NOT BLISTER

Better than a mustard plaster

W. N. U., FORT WAYNE, NO. 17--1926.

In London

"I just caught a fellow going through my pockets."

"What did you say to him?"

"What could I say? He was a stranger to me."—Voo Doo.

A new ship of 6,300 tons, the first vessel built of the new material known as elastic limit steel, has been launched in England.

Let Yeast Foam *build you up!*

Everyone knows the tonic property of yeast—how it builds up your weight to normal—how it strengthens and invigorates the whole system.

Just try this: drop a cake of Yeast Foam in a glass of water; let stand for five minutes; stir; let settle and drink the milky water, including the white precipitate.

Or, if you prefer, eat the yeast with a cracker or a piece of butter.

SAMPLE CAKE FREE

NORTHWESTERN YEAST CO.
1750 North Ashland Ave., Chicago, Ill.

Send me FREE and POSTPAID your book "Dry Yeast as an Aid to Health," also a sample of Yeast Foam, without obligation.

Special Services At Coburn's Corners

Beginning May 2, the Coburn's Corners Church of Christ will conduct a meeting, continuing unti May 16.

The Rev. J. N. Scholes will preach every night at 7:30 o'clock, on subjects strictly evangelistic, but from the educational angle.

Morning and evening services wil be held each Sunday, except on May 9, when a service will be held at 2:30 o'clock to accommodate disciples and friends from other communities.

Local Briefs

For Sale: Yellow Dent Seed Corn. Call O. E. Inlow. 14t3p

Save your newspapers and magazines, tie them in bundles and The News will buy them.

Miss Pauline Wasson is clerking in the Tope & Co. store, commencing Monday morning.

Miss Irna Huffman arrived last week and will remain indefinitely in the H. M. Widney home.

May 9, is Mother's Day, and if she is living honor her with a greeting card. See them at News office.

It's here now—that car of Fertilizer you have been wanting. Comeand get your order filled at Curie's.

The average man will spend as much time telling stories about his dog as a woman will about her first baby.

Mrs W. W. Wilder entertains the Coburn'n Corners Aid society today, (Thursday) Potluck dinner is being served.

Little Frank Monroe and sister, Ila, left Saturday for Michigan, where they will spend their vacation with their father.

F. L. Milliman will appreciate your support for re-nomination on Republican ticket for Trustee Concord Township at May 4, Primary. 14t17.

After being a prisoner in the county jail several days in default of $900 bond, Wm. Goldsmith of Butler, was released Saturday, Florance B. Smith of Keyser township becoming his surety. Goldsmith is awaiting trial on liquor charges.—Star.

In order that his store may be made more up-to-date, E. R. Kinsey is continually making improvements. His latest is by covering the walls above his wall cases with beaver board and then painting. This will afford a good background for side displays.

A car of Bradley's Fertilizer now in at Curie's store— Lime and phosphoric acid, the kind for alfalfa, corn and oats. It's the best too for hard or sour ground. Prices right.

A. C. Graham, candidate for the republican short term senatorial nomination, came out against modification of the Volstead law in the keynote address of his campaign. Such men as Graham ought to receive the support of temperance people of his party. If he can be nominated he will make a strong campaign for the election.

Notice Of Final Settlement

Cause No. 2861.

NOTICE IS HEREBY GIVEN to all persons interested in the estate of JOSEPH SAYLOR deceased, to appear in DeKalb Circuit Court, held at Auburn, Indiana, on the 17th day of May 1926, and show cause, if any, why my Final Settlement Accounts with the estate of said decedent should not be approved; and said heirs, and all others interested, are notified to then and there make proof of heirship or claim and receive their distributive shares.

Witness, my name, this 15th day of April, 1926.

ELZA KINSEY,
Administrator

H. C. Springer, Atty. 16 t 3

Mother's Day greeting cards at News Office.

Second car—Just in, of that new Potash Combination Fertilizer at Curie's.

Stanley O. Devitt, Democratic candidate for County Treasurer. 15t17p

Steam is power, explosives are power, money is power—they all represent power to do if handled by a competent engineer.

The new spring McCall Quarterly is here and it is chuck full of splendid styles. Pictorial Quarterly also on sale and display at News office.

The official base ball paper The Sporting News, is now on sale at News office and can be secured each week by the lovers of this sport. Phone us and we will save it for you.

For your convenience the Daily Chicago Herald and Examiner is on sale at News office. 17 t 4

Sheriff Morr was in town Monday evening investigating the article "Lawlessness and Lawbreakers," written by Mrs. Belle Woodcox, as "A Parent" and published in last week's News. Sheriff Morr asks for retraction of the accusations made or prosecution will follow.

The R. H. C. on last Thursday, met with Mrs. Gladys Murphy and eleven members were present with the following guests: Mrs. Grace Miller and children of Auburn, Mrs. Chas Sauers, Mrs Sylvia Gee and children and Mrs. Myra Conine. On May 6 Mrs. Abner Trostel will be hostess

Nathan Grain Co., has news for St Joe in that they have leased the hay barns, near the coal sheds, from The Four Store at Hicksville, and will proceed to put in a stock of staple lumber, thus filling a much needed business for our town. Their plans are not fully made as to the extent of their new venture.

NEWVILLE

Samuel Stafford was the guest of John Seeley over Sunday.

Atty. Glen Miller was a Newville visitor a few days last week.

Wm Rex has sold his store as he is unable to continue the business, the new merchant has taken possession.

Mrs Dewey Miller and little sons Ronald and Robert, went to Elkhart last week to spend a couple of weeks with her sister, Mrs. Robbie Wyatt and family.

Mack Hatch and wife came to Newville Saturday to meet Glen Miller. Mr. Hatch and Mr. Miller were boys together and were anxious to see each other. Mr. Hatch returned Sunday to Lansing and Mrs Hatch went back to Garrett, where she is caring for her mother who is very ill.

Writing tablets and envelopes at News office, also box stationery from 10c up.

You can get transfer paper at News office in large or small sheets.

MICKIE SAYS—

Example of Foolish Craze for "Imported"

William Hetherington of Yonkers, who has been elected president of the largest carpet company in the world—a company employing 8,000 hands—said at a dinner party:

"I have no patience with people who buy foreign carpets. Our American carpets are the best. These foolish idolaters of foreign things—carpets and clothes and so on—remind me of an anecdote.

"A young man took a winter trip to Cuba. He went into a cigar store and said:

"'I'd like a good cigar, please.'

"'Yes, sir,' said the clerk, and he brought out one superb brand after another.

"The young man glanced at the cigars carelessly. He took one up and smelt it.

"'Is this—er—an imported article?' he said.

"'No, sir,' said the clerk. 'We keep nothing but domestic goods here. There's no call for imported cigars in Havana.'

"'Humph,' said the young man. 'I'll try somewhere else, anyhow. I never smoked a domestic cigar and never will.'"

Still Easy to Find Moral in Old Tale

The duke of Orsuna, viceroy of Naples, passing through Barcelona, went on board a galley, lying in the harbor, and, passing through the crew of slaves, asked several what their offenses were. Everyone excused himself; one said he was sent to the galleys out of malice, another because his enemy had bribed the judge; but all of them unjustly.

The duke came at last to a sturdy little black man, to whom he put the same question. "My lord," said he, "I cannot deny that I am justly put here, for I wanted money and took a purse near Turrogona to keep from starving."

The duke, hearing this, gave him two or three blows on the shoulder with his stick, saying, "You rogue, what are you doing among so many honest innocent men? Get you gone out of their company!" The poor fellow was thereupon set at liberty, while the rest continued to tug at the oar.—The Youth's Companion, September 2, 1829.

Matrimonial Barrier

A young man in a downtown office who has been contemplating matrimony, has changed his mind. He has discovered the high cost of hosiery. His stenographer asked him the other day to be permitted to visit a ten o'clock sale of hose. He granted permission and she returned triumphant. She had bought ten pairs and considered them a great bargain. The young man was amazed and remarked there were enough hose for a year. "Not a year," the pert young woman replied, "for just about six weeks."—Exchange.

Old Sofa Proved Mine

The proprietor of a second-hand store at Ottawa, Kan., bought an old sofa from a home where seven daughters had been courted in the parlor. Taking it apart for repairing, he found forty-seven hairpins, three mustache combs, forty-six buttons, thirteen needles, eight cigarettes, five photographs, 217 pins, some grains of coffee, six pocket knives, fifteen poker chips, a vial of headache tablets, thirty-four lumps of chewing gum, nine toothpicks and four buttonhooks.

Man Travelers Complain

The Ulster branch of the British Association of Commercial Travelers rejected a proposal that women be admitted to their association. One member declared that woman travelers absorbed storekeepers' attention so much that the man travelers, following them, missed their trains.

Radio Fans Made Kick

The city council of Vancouver, B. C., ordered all stray dogs gathered into the city pound, which is close to a broadcasting station. When radio fans complained that the howling of these dogs was all they heard when they tuned in, the council decided to move the pound.

Charming Compliment

"The prettiest thing in hats," said Mrs. Bromley the other day, "is—"

"Your face, Mrs. Bromley," said her husband gallantly; and Mrs. Bromley carried around a 9-inch smile for a week afterward.—Edinburgh Scotsman.

Museum's Fine Exhibit of Tropic Butterflies

The collection of South American butterflies in the United States National museum at Washington is now the most comprehensive in the world. Owing to the efforts of William Schaus, of the division of insects, dozens of cases of rare, brilliantly hued butterflies of the tropics are now being unpacked and arranged in the museum files. Monsieur Dognin is a wealthy French amateur entomologist who for years has had men collecting specimens for him in South America, Europe and the Orient as well as many other odd corners of the earth. Long a close personal friend of Mr. Schaus, he promised him first choice if his cherished butterflies should ever be put on the market. Financial depression following the war eventually forced Monsieur Dognin to offer his specimens for sale at $50,000. This was a figure much beyond the resources of a purely scientific institution, but Mr. Schaus set out to acquire the money by subscription. After several months he succeeded in raising sufficient funds and last June, accompanied by his colleague, J. T. Barnes, sailed for France. Once there five weeks of painstaking labor was necessary to get the fragile insects packed and ready for shipping.

THE VANISHING WHITE

"I'm afraid there will soon be no white people in Europe."

"You're joking—why?"

"Because all those who haven't turned Red are decidedly blue."

Pints, Not Gallons

Mr. B, a real estate man, wished to buy a milch cow. He saw one advertised and went to see her. The owner, a woman, said she was a good cow, and gave eight gallons a day.

Mr. B thought that was good enough and soon bargained for her.

She did not give eight gallons nor near it, so Mr. B went back to see the woman.

When he drove up she was standing in the door and before he had time to say anything to her, she said:

"Oh, Mr. B, I sees my mistake; I sees my mistake, I said the cow gave eight gallons of milk a day, and I meant eight pints."—Indianapolis News.

Where "Yes" Means "No"

What is perhaps the cause of the innumerable diplomatic misunderstandings in Albania has been discovered. When an Albanian wishes to convey a vigorous "No" he nods his head gently up and down and says "Ja." That, in German, is "Yes." And when he means "Yes" he shakes his head vigorously from side to side. One result is that when you offer an Albanian a certain price for merchandise in the public market and he accepts you think he is refusing and go on offering him more. One feels that the diplomantic technique is very highly developed in this primitive country.

Big Sum From Auto Tolls

Tolls aggregating $800,000 were collected from 861,000 motor vehicles while crossing Gandy bridge, which connects Tampa and St. Petersburg, Florida, during its first year of operation. The bridge is five and one-quarter miles long and is claimed to be the longest motor toll bridge and the longest overwater highway in the world.

Honored Donor of Bell

The bell on the church at Phippsburg Center, Maine, was bought by one of the McCobb family and was on the ground near the church when the donor was taken suddenly ill and died. Men worked day and night shifts to get the bell placed before the funeral, and the first time it rang was when it tolled at the funeral of the donor.

The Wrong Article

"What is your complaint against this salesgirl, madam?"

"She doesn't understand her business. I asked for attention and she showed indifference."

Great Activity of Associations

Render Some Essential Service Connected With Farmers' Enterprises.

(Prepared by the United States Department of Agriculture.)

There are now more than 12,000 active farmers' business organizations in the United States, the Department of Agriculture estimates on the basis of a recent survey. This number is more than twice that in 1915, when the first nation-wide survey of co-operative associations was made by the department.

Included in Associations.

The associations include those selling farm products, buying farm supplies, operating creameries, cheese factories, canning plants, grain elevators, stockyards, warehouses, or rendering some one or more of the essential services connected with the conduct of farmers' enterprises. The figures do not include farmers' co-operative banks, credit associations, nor insurance companies.

Fifty-four of the associations listed are federations with local units, 49 are sales agencies operating in central markets, 35 are bargaining associations, and 98 are large-scale organizations of the centralized type. Of the total number of associations listed by the department, 3,325 are primarily engaged in marketing grain, 2,197 handle dairy products, 1,770 ship live stock, 1,250 market fruits and vegetables; 121 perform various functions in the marketing of cotton, 91 in marketing wool, 71 in marketing poultry or poultry products, and 24 in marketing tobacco.

In North Central States.

More than 70 per cent of all the associations are in the 12 North Central states. Approximately 6 per cent are in the three Pacific Coast states, and less than 3 per cent in the six New England states. The largest number of associations reporting from any one state is 1,383 from Minnesota. Iowa is credited with 1,094 associations, Wisconsin 1,092, and Illinois 822. Missouri has 537 associations; Nebraska, 488; Kansas, 406; California, 350, and New York, 286.

The grain marketing associations are largely in the 12 North Central states, as are also the greater number of the live-stock shipping associations. The organizations engaged in marketing dairy products are scattered through the country with a fair percentage of the total number in Minnesota and Wisconsin.

Possibilities Open for Farm Storage of Grain

The farmer has the choice of three places for storing his grain in order to hold it for a favorable market. It is explained by L. F. Rickey, grain marketing specialist of the college of agriculture, University of Illinois. These three places are: (1) in cribs or granaries on his own farm, (2) elevators or cribs at his shipping point, or (3) at the terminal elevators. In order to hold his grain, it is often necessary for the farmer to borrow money upon it as collateral.

When it is in public elevators at the terminal markets he can readily borrow on the warehouse certificates, but the cost of such storage is rather high. Storage in the local elevator has advantages, but these houses are not large enough to actually store very much grain and many elevators refuse this class of business or limit the time of storage to a comparatively short period.

Farm cattle and granaries offer the cheapest storage for grain crops and this method has several other apparent advantages. However, no one would care to loan money on grain so located. Iowa has solved this part of the problem by its unbonded agricultural warehouse law. Under its provisions cribs or granaries are officially sealed and storage certificates issued which are acceptable to local bankers as collateral for loans. The grain thereby finances its holding for a favorable market.

FARM FACTS

Clean out the cistern and catch cool spring rains.

• • •

Look into bee hives and see how colonies have stood the winter.

• • •

Little potatoes make good seed only when they come from high yielding and disease-free hills.

• • •

Dry skim milk, as 40 per cent of the mash mixture, is one of the best ways to check coccidiosis of chickens.

• • •

Get early vegetables started. Onions, radishes, lettuce, peas and beets flourish in the cool damp weather of early spring.

• • •

Plow up the sod-bound orchard, and cultivate it. This loosens the soil, kills weeds and makes re-seeding more valuable.

• • •

A balance sheet is really a systematized inventory of everything a business owns and owes, and shows the health of the whole enterprise.

• • •

How many farmers know whether they lost or made money last year? And how many know on what crop or kind of live stock they lost or made the most? Farm account books come in handy for just such information.

Plans to Increase Soil Productivity

Crop Rotation as Good as Manure and Fertilizers.

(Prepared by the United States Department of Agriculture.)

In the practice of crop rotation a farmer has at his command a means whereby he can materially reduce acre costs or increase the output of his land, says W. W. Weir, associate soil technologist of the United States Department of Agriculture. Perhaps that fact is not news to many farmers who have been using rotation in their crop system; they know it is a beneficial practice.

They may be surprised, however, says Mr. Weir, to learn that crop rotation is nearly as effective in increasing soil productivity as the use of manure and commercial fertilizers. Furthermore, crop rotation can be practiced usually with no outlay of money, whereas the use of commercial fertilizers requires an expenditure of money.

A study of the long-continued soil fertility experiments of this country and of England, made by the Department of Agriculture, has brought out some important facts about crop rotation in its relation to soil productivity. In general, says Mr. Weir, they show that rotation without the use of manure or commercial fertilizers is nearly as efficient in effecting crop increases as the use of fertilizers without rotation. The beneficial effects of crop rotation are different from the benefits derived from the use of fertilizers; so that when these two farm practices are combined the one practice adds to the benefits of the other, making the resultant increase almost twice that secured by either practice used alone.

On soils long under cultivation highest yields are possible only when rotation and the use of fertilizers are practiced together.

Dairy Cow Has Financed Farmers When Needed

Farmers realized nearly as much from dairy cows during 1925 as from their corn and wheat crops combined, according to figures issued by the National Dairy council.

According to careful estimates based on investigation, the farm value of all dairy products for the year 1925 is $2,700,000,000. This is only about $200,000,000 less than the total farm value of wheat and corn, the government estimate of the combined farm value of the latter being $2,904,389,000.

"But the important fact," states M. D. Munn, president of the National Dairy council, "is that American farmers have marketed their dairy products day by day throughout the year without any accumulated surplus on their hands and have thus received funds with which they have been able to live and help finance their other farm operations, while they still have much of their corn and wheat on hand.

"This vast sum of nearly two and three-fourths billions has financed diversified farming in this country and relieved agriculture from what would otherwise have been insurmountable difficulties, especially in view of the accumulated surplus of grains together with the low prices that now prevail. In addition to the cash return to the farmer through the dairy cow he has also been supplied with dairy products for his own family use, which have materially assisted in reducing living expenses."

Sweet Clover Requires Firm, Moist Seed Bed

Sweet clover seed, being very small, should be planted shallow. In order that it may grow when planted shallow, the soil must be quite firm and full of moisture. Perhaps most of the failures with sweet clover are due to plowing, or otherwise loosening up the seed bed before planting the crop in the spring. Early spring plowing loosens and permits the top soil to dry out and so prevent a good stand of sweet clover.

Land to be planted to this crop should be fall plowed, or, even better, summer fallowed the year preceding. Where such land is not available, cornstalk land, millet or cane land is suitable, giving it only a light disking as preparation before seeding sweet clover. As much of the stubble as possible should be left standing to catch snow and prevent soil blowing.

Sweet clover should be planted as early in the spring as possible. Use eight to ten pounds of clean, scarified seed per acre. Where possible, drill in the seed, planting at the depth of one inch. Where one cannot drill so shallow, he should broadcast and harrow in the seed. No nurse crop should be used.—Wilda Kidder, Extension Agronomist, Colorado College of Agriculture.

Hens Used for Hatching Purposes Need Dusting

All hens used for egg-hatching purposes should be dusted with a good louse powder when they are placed on the eggs. The only preparation known to kill lice with one application is sodium fluoride. Put a piece of sod in the bottom of the nest to prevent excessive evaporation. Set two hens at a time so that the chicks may be given to one hen later. Feed cracked or whole grains to the biddies, being careful to avoid feeds that stimulate egg production or cause digestive disorders, say poultry extension specialists of the Pennsylvania State college.

SPENCERVILLE

Miss Edith Place of Coburntown, spent last week with Miss Ida Reed.

Fertilizer that meets your needs — 3 different formulas. Curie is the dealer.

The grade school closed Friday afternoon but the high school will last four weeks longer.

Theodore Bowser of Huntertown, is spending a few weeks with his son and family.

Paul Adams and wife of Fort Wayne were Sunday afternoon guests of Mr. and Mrs Jacob Baltz

Mrs Audra Wade very pleasantly entertained the Ladies Aid of the Methodist church, Thursday afternoon.

Chamberlain Chick Feed, 25lb. $1.40; 50lb. $2.75; 100lb. $5.50. Get it from Frank Beams, Spencerville, Ind.

Eli Baker, the hog buyer from north of Concord, moved to Spencer township and is reported very sick at this time.

A student from Wittenberg college will be pastor during the summer months, at the Lutheran church, it is reported.

The Spencerville Lumber Co., has filed a certificate of preliminary dissolution with the secretary of state at Indianapolis.

The Shugar school closed Friday with a basket dinner at the noon hour and a program in the afternoon. Miss Florence Beams of this place was the teacher.

Mrs. Nancy Rummell is quite sick.

Mrs. Maude Beams will entertain the C. C. Club Friday afternoon.

Delmar Markle and children left for Fort Wayne, Saturday, where they will make their home this summer.

Mrs. Beulah White and daughter and Joseph Summers of Akron, Ohio, were guests last week in the Jacob Baltz home.

A Marcel and Curl, 50c; Reprint, 25c; Bobbing, 25c. Mrs. LaVerne Koch. Call 284 Spencerville, Indiana. 17 t f.

Ralph Furnish is sure doing business with the new Chevrolet. He reports that since April 12, he has sold twelve cars and is now employing a special salesman.

Joel Betz and wife entertained Sunday for dinner: Walter Perkins, wife and son of near Harlan, Glenn Betz and sons of near Woodburn and Edward Billman and wife.

Reuben Renn of Spencerville, had quite a serious accident Monday morning, resulting in the loss of his third finger besides having his left arm broken near the elbow. He started work in the Frank Butler gravel pit and the men were getting the gravel loader in shape Reuben had reached in to oil the gears when one the helpers threw the loader in gear and the above injuries resulted. He was hurried to a Fort Wayne hospital, where it was found necessary to remove the finger.

Who Shall Register Before General Election

Only a limited number of the voters of DeKalb county need be concerned over the registration this year.

The election commissioners point out that the greater portion of the voters are not required to register this year because all who voted in the election of two years ago and have not since changed their precincts, are now properly qualified to vote.

Only those persons who have moved from the precincts in which they lived two years ago, who have moved into the county since that time, or who are voting this year for the first time, will be required to register.

Under the new law, the registering will be done at the county auditor's office during the period from sixty to thirty days before the election.

An impression prevailing that a vote at the primary is equivalent to registration is wrong.

Injunction Denied Don P. Hindman

A temporary injunction to prevent David R. Kosht, Henry W. Krabill and Walter Zonker from selling, or encumbering a farm of 160 acres in Lagrange county, was denied by Judge Endicott in the DeKalb circuit court Saturday. Don P. Hindman claims that Krabill owes him $1,040 for commission from a real estate partnership and that Krabill conveyed the farm to Kosht to escape payment of this debt.—Journal-Gazette.

Obituary

Joseph M. Rhoads, son of Joseph and Rebecca Rhoads, was born in Tuscarawas county, Ohio, on May 15, 1848 and passed away April 14, 1926, at the Peoria state hospital at the age of 77 years, 10 months and 30 days.

He was the last of a family of nine children. He was married at Peoria, Ill., April 7, 1872 to Philmira A. Smith. To them were born five children all of whom living. Arthur C. Rhoads and Mrs. Minnie Fails of Peoria, Ill., Mrs. Imo Miller of Newville, Mrs. Bethel Shaffer and Mrs. Ethel McCollough of Butler.

He leaves the widow, five children, twelve grand children and three great grand children to mourn his departure.

Our home is draped in mourning our hearts are lone and sad; one we loved most dearly, has crossed the mystic shore.

Sadly in the grave we lay him,
His work on earth is done,
Our Heavenly Father called him home
As he calls us one by one.

'Tis hard to part with loved ones
And to lay their friends away,
Yet we hope again to meet him
Oh! the joyous, joyous day.

He has crossed the river, that
In time we all must cross.
His spirit free--rests with it's Giver
While friends are bowed neath sorrow's cross.

Then friends why should you weep so
Would you wish him back again
In this world of sin and sorrow
Just to suffer and die again?

No! O no, it would be cruel!
He's far happier than we,
May this thought help and comfort
From suffering, Father's free.

The funeral was held from the Christian church on Saturday, April 17th, Mr. Ferman of Fort Wayne officiating.

Those from a distance who attended the funeral were: Mr. and Mrs. Arthur Rhoads and two sons, Mrs. Minnie Fails and Mrs. Berniece Doude and two children.

Card Of Thanks

We desire in this manner to express our appreciation and thanks to all those who in any way assisted during the burial of our husband and father, also for the floral offerings. The Family.

WHY NOT FILE AN EXEMPTION?

TWO HOMES MADE HAPPY

By Women Who Used Lydia E. Pinkham's Vegetable Compound

"I have taken Lydia E. Pinkham's Vegetable Compound and I think it is the most wonderful medicine I ever tried," is the statement made by Mrs. Goldie Shoup of May View, Illinois. She declares that after taking the Compound she is in better health than before.

Mrs. J. Storms of 29 Lane Street, Paterson, N. J., writes: "I can not speak too highly of your medicine and I recommend it to all my friends."

These statements were taken from two enthusiastic letters which tell of the help that has been received from using the Vegetable Compound. Both Mrs. Shoup and Mrs. Storms were in a run-down condition which caused them much unhappiness. When women are suffering from lack of strength and from weakness, their own life and that of their family is affected. When they feel well and strong and are able to do their housework easily, happy homes are the result.

Thousands of testimonial letters have been received from women in different walks of life, stating that the Compound has helped them.

Independent Young Woman

Mlle. Eve Curie, on being asked what her famous mother, Mme. Pierre Curie, thought of her daughter's abandonment of science for music, replied: "My mother's heart is with me in the career I have chosen for myself; but she hopes I will be judged by my efforts alone, and not because I am her daughter."

Every department of housekeeping needs Red Cross Ball Blue. Equally good for kitchen towels, table linen, sheets and pillowcases, etc.—Advertisement.

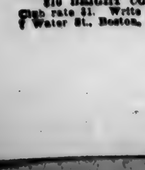
Large French Wheat Harvest

French farmers succeeded this year in raising enough wheat to meet the whole national demand, although the area cultivated was smaller than ever before. The wheat harvest yielded 180,000,000 bushels.

Backache Wearing You Out?

Every day finds you miserable with backache? Suffer sharp, stabbing pains? Feel lame and stiff—always tired, nervous and dispirited? Then look to your kidneys! Your kidneys are the blood filters. Perhaps they have failed to properly rid the blood of body poisons. Naturally, then, you suffer the injurious effects of this slow poisoning. Don't risk neglect! If your kidneys need help, use *Doan's Pills*. No other kidney diuretic is so well recommended nor so successful. *Ask your neighbor!*

An Ohio Case



Mrs. Cordella Black, 200 Dow St., Carey, Ohio, says: "My back gave out and it was a great effort to do my housework on account of the bearing down pains in the small of my back. Black specks floated before my eyes, making me dizzy. I purchased Doan's Pills and one box made my back strong and my kidneys were flushed and regulated."

(W. N. U. Service.) (Copyright by the Penn Publishing Co.)

CHAPTER XIII—Continued

—21—

"I have nothing to say," she answered, sitting with chin cupped in hand, face averted.

"Oh, do you mean to say that you prefer selling yourself to that storekeeper, Lascelles, to living in luxury in Montreal, Winnipeg—?"

"You may insult me, monsieur. I have no means of defending myself," she broke in, coldly.

Then Laflamme lost all self-control, and stormed:

"Insult you? Oh, yes! But that is the truth, is it not? You do not love this man, do you? To save your father's future you have agreed to marry him—this man you despise! Oh, I know! He's not fit to look at you—you beauty!"

White-faced, the girl sat with eyes on the floor—silent, as if she did not hear.

"True, you think you hate me now, but you would change," he ran on, talking as if to himself. "You may have heard hard things said of me, but I swear to you, if you will marry me, Denise St. Onge, I'll show you what love is. I'll make your father independent—make you," his voice broke with emotion, "yes, make you happy! I've loved you ever since you played for us that night at Albany—years ago."

Laflamme stopped and looked down with a gesture of helplessness at the woman of stone in the chair. Then he heard the low words: "You forget, monsieur, someone who is still at Ogoke."

"I know how that looks to you," he defended, "but that was over, years ago—years. I've given her a home—couldn't turn her out. But she hates me, tried to knife me, wanted to run away with that American, Steele, this October! She put on black the day she heard he had been drowned on the way home."

There was a long silence, then: "Why were you afraid to have him reach Nepigon?"

Laflamme started, then laughed. "Afraid to have him reach Nepigon? That's funny! He got some supplies and went on. What do you mean?"

Then the girl countered: "Your Indians are not faithful to their master, monsieur. We learned that you had Monsieur Steele ambushed after stealing his ammunition, and forced him to go to his death."

"Do you believe that?" demanded Laflamme, puzzled.

"Is it true?"

"No!"

The room was again silent while the man, famed for his cold nerve, his resource, bit his lips in impotency before the icy calm of this strange girl who so obsessed him. Then he played his trump card.

"So you insist on casting your lot with that rat at Albany? Then it is for me to save you from yourself. I have brought an extra sled. Pack your clothes at once!"

The girl rose to her full height and met his cynical look with resolute eyes, but in her heart was fear.

"You do not dare!" she cried. "They would hunt you from Fort Hope, from Albany, from Nepigon House. In three weeks the police would be at Ogoke. But before the police teams arrived, do you know what they would do to you? They would burn you in your trade-house! You do not dare!"

With open admiration Laflamme watched the play of color and emotion in the face of the frightened girl who confronted him.

"If you'd flush that way when I say I love you," he cried, "I'd give all I have in the world. Why, girl, I'd sell my soul, if you'd look at me, just once, and say you loved me!"

"I despise you!"

The sting of the words cut like the lash of a whip. His self-control, already at the breaking point, crumbled.

"Despise me, do you?" he snarled. "Dare me to do my worst?. Suppose I take you at your word? Mon Dieu! I'm mad enough about you to do anything! Who it is, then, you love?" He thrust his passionate face close to hers. "You hate me—you don't want Lascelles! It must be that d—d dead American you're mooning about! Well, he's at the bottom of the Jackfish, and he forgot you before he had been at Ogoke two hours—forgot even your name when he saw Rose!"

She faced his anger proudly, contempt in her bloodless face, until he mentioned Steele, then slowly her knees gave way and she sank in a chair.

"It was that American!" he stormed. "Pity I didn't finish him myself!"

Then something on the table caught his eye—held it! His face went dark with his sinister purpose when, with a quick movement, he seized the violin, raised it above his head, and brought it down with a crash on the table, then dropped it to the floor and trampled it under his feet.

With a groan the girl fell to her knees and, gathering the splintered shell of the violin to her breast, moaned over it as a mother over a stricken child.

At last he had reached her.

At the sound there was a guttural exclamation from the door and with lifted knife, a wild-eyed Ojibway woman threw herself upon the surprised Laflamme. Leaping back, he caught and parried the thrust with his forearm, then, with his uninjured hand, wrenched the knife from the maddened squaw and hurled her across the room to the floor."

Seizing his coat, he stood for an instant over the kneeling girl, clasping her beloved violin, and touched her hair—then left the room.

The dazed Ojibway crawled to the pitiful figure on the floor, and circled her with her arms.

"De music gone—all gone," she crooned. "Poor m'm'selle!"

While they huddled there on the floor—the girl, the light of whose life had been ruthlessly snuffed out, and the woman of the dark skin, who understood—dog-bells jingled in the clearing as two sleds took up the river trail.

* * * * * * *

Late that afternoon, St. Onge reached the fork of the Stooping river, but the spruce, already blue with shadow, gave back his call, unanswered. He turned into the mouth of the stream and took the Portage lake trail, searching the silent shores for the camp of Michel, but the headman was not there.

"This is very strange," he said, and cut his wood to camp alone.

Deep in the night, St. Onge waked in his blankets, as his dogs gave back the husky challenge to creatures whose scent the freezing air had carried to their nostrils. But the drowsy man did not know that two sled teams were passing below him on the Wailing River trail.

CHAPTER XIV

On the night of Little Jacques' return to Portage lake the four men sat by the fire planning their future movements. It had been a week since the beast had howled or visited the traplines in the district, for David had arranged with the upiake hunters to relay the news of his appearance immediately.

"I'd give ten years of my life if that old bird would sing up there on that ridge this evening," said Steele.

"I got plenty shell een de bag," added David. "I get tire' waitin' to shoot dat little gun ov mine."

"You'll get your chance before we're done, don't worry. How would you like to draw a bead on your friend Laflamme this evening?"

The Ojibway shook his head. "W'en I tak' Laflamme's trail I feer' heem wid de han'. I use no gun on heem. Eef I got hol' dat Black Baptiste, too, I break sometin' more dan hees fing—"

"Leesten!" interrupted Michel.

Out over the silent forest drifted a faint call like the voice of some furred night hunter. The four figures at the fire stiffened. Again the call, louder now, rose on the biting air.

"Where is it?" asked Steele, in doubt of the direction.

"On de beeg ridge," replied Michel. "Dat not soun' like heem."

But the men at the fire sat with ears alert, hoping that at last their waiting was over.

Then, when they were convinced that yet another night they were to roll into their blankets, disappointed, baffled, a long wail from the ridge behind the camp brought them to their feet, every nerve alive.

There was a swift stepping into the frozen thongs of snow-shoes and drawing of rifles from skin cases, then taking the bloodhound on the leash, Steele started with his men for the ridge. The huskies, though savage fighters, were left chained to trees, as at night they would cut off on the first game trail and their bedlam of yelping would prevent David and Michel from making the still hunt decided on. Steele with the hound was to circle and pick up the trail of the beast if they missed him.

As they swung through the blue gloom of spruce and fir, the voice shifted from its wailing to the hunting screams of the great cats, then as swiftly dropped to the yowling and mewing of the mating season, climaxing, as at Wailing River and Big Feather lake, in shrieks of agony, in moans of a creature tortured beyond endurance of blood and flesh and nerve.

Three of the men who hunted the voice on the ridge had toiled long and suffered much for this moment, but at their heels moved a short figure whose flesh was cold with the chill of fear. Little Jacques gripped his rifle grimly and followed, thinking of the wife and children back at Wailing River.

At the foot of the ridge Michel and David left Steele to make their stalk from two directions while he worked to the rear with the dog and Little Jacques. Once on a fresh trail the hound would hang until he ran down his quarry. In the soft snow his pace would be slow, so the men on shoes in time would come up with him. And he would need them if the thing turned and waited at bay—how great would be his necessity the torn body at Stooping river only too well indicated.

They had traveled for an hour when the hound abruptly stopped, sniffed the snow at his feet, and excitedly strained at his leash. To Steele's eyes the flat floor of the snow lay unbroken in the darkness, but the Indian on his knees whispered in terror: "Eet ees beeg trail!"

"Good!" And the hound free, plunged ahead into the murk. Shortly, his deep voice boomed through the forest and the hunt was on.

As they swung through, the blue gloom of spruce was less deep, the great dog left them. Again, as they followed, the voice on the shoulder of the hill defied the night. As it rose in crescendo, a rifle shot sliced it short off. Far above, the hound gave voice. Then silence fell on the forest.

"They've seen him!" said Steele. "He may back track; keep a lookout. Don't shoot too quick or we'll turn him!"

There was no reply. He looked for his companion, but Little Jacques had gone.

Throwing the bolt of his Mannlicher to clear it of frost and ease the action, Steele kept on up the ridge. For minutes now, he had not heard the voice of the hound, when again the resonant bass boomed through the silence above him. The dog had turned. The thing was headed back. Loosing his skinning-knife in its sheath, the man cocked his rifle and waited, kneeling on a shoe, his eyes boring into the blackness.

Near him, and below, was an opening in the timber. Again, the hound bayed—closer now. The beast was taking his back tracks. Then Steele saw it.

Bounding from the cover of the scrub on the edge of the opening, a dark shape stopped, and reared upright, as if listening—when the Mannlicher spat.

The beast leaped back into the black wall of spruce. Again, the rifle flamed into the murk.

Still crouched on a knee, the man listened, rifle rigid. Sights useless, he had fired by instinct. There had been no thud of bullet in flesh. Could he have missed?

Slipping two shells into the magazine, he circled in the timber, lifting his shoes to avoid the click. Blind now, for the moon was masked, he listened for heavy breathing in the scrub he faced—then the hound plunged past and he knew he had missed.

Following the dog, Steele turned down the ridge, but in an hour was distanced. So he stopped in a cedar swamp, cut wood with his belt ax, and scooping out the snow with his shoe, lighted a fire.

In the cover of the thick cedar the hot fire soon warmed him and with back against a trunk he dozed, only to waken with a start as a hand touched his shoulder. He blinked into the faces of David and Michel.

"Fooled us again!" groaned the disheartened Steele.

"At daylight we take de trail and see heem soon. De dog weel tree heem."

Heaping up the fire the three men dozed until daylight, then took the trail of the beast and his pursuer through the snow.

Somewhere ahead, Steele felt that the pursuit was over. Somewhere, miles away, the beast had tired in the black hours and turned at bay to battle in the snow with his relentless foe; or else in terror of the voice of the thunder which he could not shake from his heels, had treed.

Up over ridges and into creek bottoms traveled the anxious men, stopping to listen for the voice of the dog. But the cold silence of sunrise gripped the forest.

At last the tracks led into a heavy stand of young spruce. The men separated, and cautiously made their way through the close growth.

Suddenly the blood of Steele chilled as he heard the voice of Michel. "By gar! Poor ol' Pete!"

Forcing his way through the saplings, he found the Iroquois bending over a blood-smeared shape, stiff in death. The hide of the dog hung in strips from the slashes of terrible claws, while a torn throat marked the death snap of the fangs of the Windigo.

(TO BE CONTINUED.)

Novel Nest

At the last meeting of the British Ornithologists' club, Mr. A. L. Butler exhibited a "nest" from Trinidad, which was merely a hollow formed by the rotting out of the soft pith at the top of a broken-off sapling. The breadth of the top of the stump was only just sufficient to contain the single egg, and the egg, on the cup-and-ball principle, fitted the cavity so neatly that it could not be lifted out with the fingers. The bird incubates in a perfectly erect position with its head and neck stretched stiffly upwards, and its tail pressed to the side of the stump, of which its upright figure seems to form a part. The species have adopted the habit of sitting bolt upright on similar stumps whether incubating or not.

The Association of American Bank Women, organized only three years ago, has members in 180 cities.

ROAD BUILDING

IMPROVED ROADS HELP MOTORISTS

"Motorists of the United States save annually $1,630,000,000 in operating costs due to the construction of 230,000 miles of gravel and hard-surfaced roads," declares William H. Connell, president of the American Road Builders' association. Mr. Connell points out that the saving in motor vehicle operating costs exceeds the annual cost of improving the highways every year. In his own state of Pennsylvania, he reports that the owners of motor vehicles saved $51,750,000 by operating over 4,500 miles of hard surface in 1925 and only paid the state $29,500,000 in registration fees and gasoline taxes to support the construction and maintenance of the highway system, leaving them a net saving of $22,250,000.

"Pennsylvania today is operating on a basis that the user pays all costs for constructing and maintaining the state highway system. Motor license receipts and the proceeds from the gasoline tax are used exclusively for highway purposes and these funds pay the entire cost of all construction and maintenance, as well as all departmental salaries and wages; in fact, all highway expenses. New construction is financed principally by bond issues, but the interest and sinking fund charges are paid from the motor receipts.

"The figures which have been stated as to the saving to the owners of motor vehicles by the construction of improved roads have definitely justified the adoption of the principle in Pennsylvania that the user should pay for the road and when this idea has been universally adopted the entire highway business will be on a sounder financial basis."

Mr. Connell voiced his opinion that the increasing mileage of paved highways would not seriously affect the steam railroads but will ultimately act as a benefit, as a supplement or feeder to them. He predicted the early abandonment of short-haul rail lines which in many cases have operated at a loss, in favor of motor vehicle transportation.

To Carry Passengers on Lincoln Highway in East

A development in transportation between Philadelphia and New York which has been long anticipated is at last a fact. The People's Rapid Transit company, a subsidiary of the Philadelphia Rapid Transit company, is now operating regular bus service between the Bellevue Stratford Hotel, Philadelphia, and the Waldorf-Astoria in New York over the Lincoln highway.

The distance is slightly over 90 miles, and fares are considerably below those charged by the railroads.

Those who have made the run in the new busses say the trip is an enjoyable one over a perfectly paved road and through beautiful and historic country. Stops are made at Trenton, Princeton, New Brunswick, Elizabeth and Newark, all important Lincoln highway communities.

Nearly 1,450 Miles of State Highway in Ohio

Nearly 1,450 miles of Ohio state highway will be constructed by the state highway department in 1926, G. F. Schlesinger, director of highways announced. Of this, 450 miles will be paved, and the rest will be of gravel and other construction.

The maintenance program will extend over 7,850 miles of paved and traffic-bound roads.

During 1925, 450 miles of paved roads in Ohio were completed, and 700 miles of other roads were finished. Maintenance was provided for 6,700 miles of highway.

Twelve million dollars was expended for paved roads, $2,000,000 for traffic-bound roads, and $9,000,000 was spent for maintenance, repair and reconstruction, for a total expenditure of state highway funds amounting to $23,000,000.

Minnesota Good Roads

Minnesota will maintain nearly 7,000 miles of main or trunk highways this year, against less than 4,900 miles in the average state as reported by the government. It plans an extra large total of 170 miles of new paving, about twice as much as last year; also 250 miles of other surfacing and 242 miles of grading, compared with average state projects for 141 miles of paving, 300 of other surfacing and 180 miles of grading this year. Minnesota will have a little less than $2,000 a mile of funds for trunk routes, compared with $3,420 in the average state.

Eliminate Grade Crossings

The increasing number of accidents at highway grade crossings has led to the adoption of a policy looking to the elimination of such dangerous crossings wherever practicable on federal aid roads. The policy, which has met with the generous support of the states, is that all existing grade crossings on the federal aid highway system shall be classified for priority of elimination by agreement between the bureau of public roads and the state highway departments.

Is It Your Stomach?

Toledo, Ohio.—"It is just wonderful what Dr. Pierce's Golden Medical Discovery will do for any one who suffers with stomach and bowel trouble. I had typhoid fever and it left me in a very bad physical state of health, my bowels would not act, my food would set heavy on my stomach and did not digest properly. Gas would form and cause me great distress. I was weak, nervous, and in a rundown condition. I took Dr. Pierce's Golden Medical Discovery and it cured me of my stomach and bowel trouble and built me up in good health."—Mrs. Laura Hager, 630 Vinton St. All dealers. Tablets or liquid.

A Slam

"Does my daughter's practicing bother you much?"

"No, but tell me, why doesn't she take her mittens off?"

To Have a Clear, Sweet Skin
Touch pimples, redness, roughness or itching, if any, with Cuticura Ointment, then bathe with Cuticura Soap and hot water. Rinse, dry gently and dust on a little Cuticura Talcum to leave a fascinating fragrance on skin. Everywhere 25c each.—Advertisement.

Beautiful Desert Flower

The night-blooming cereus, one of the most beautiful flowers of the desert, is not wholly a flower of the night, as has commonly been thought. The annual exhibit of scientific work at the Carnegie institution in Washington includes two photographs of these rare plants being visited by bees that fly only in the daytime. Dr. D. T. MacDougal of the institution explains that the flower does not close with the coming of the first signs of dawn, but remains open for a time, usually giving the bees an hour or two to work.

Trust to luck—when you have to.

Real Attraction

We were talking with a friend who has just come back from a trip across the pond. (Note: One goes "across to Europe," but one returns from "across the pond.") He had a wonderful time, of course, but what do you suppose impressed him most? St. Peter's in Rome, or St. Mark's in Venice? Monte Carlo or Versailles? Notre Dame, Pompeii or the quaint streets of London? Wrong. It was a little brunette from Cedar Rapids, Iowa, he met in Naples.—Ottawa Herald.

Patience and gentleness are power. —Leigh Hunt.

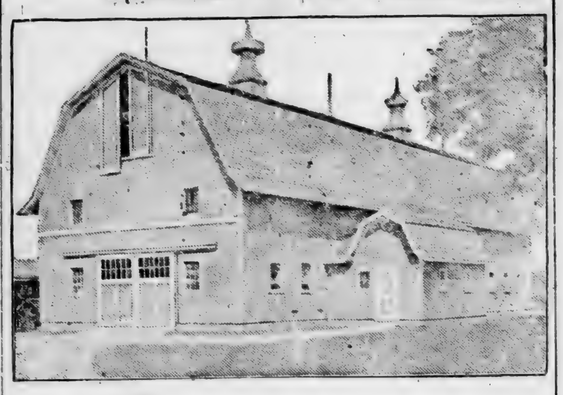
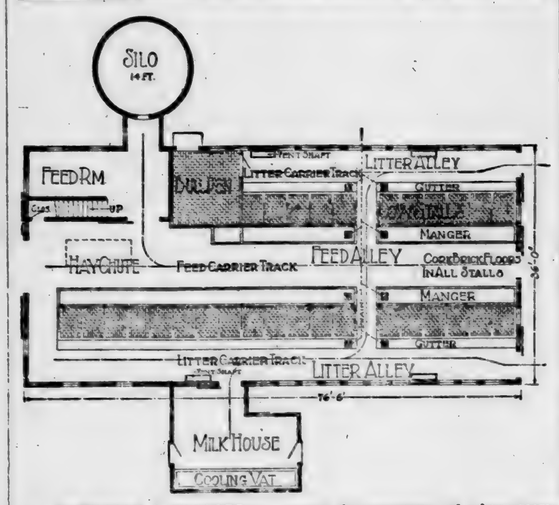
Location, Materials and Equipment Important in Well Planned Barn





By WILLIAM A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all problems pertaining to the subject of building work on the farm, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

The most conspicuous building on the farm is the dairy barn, with its big loft above and tall silo ranged alongside. Its importance is equally great for it is the income-producing plant of the dairy farm. In planning the barn, however, some really important points are often overlooked because their importance has not been realized. The five points which should all receive serious consideration are: location, arrangement, equipment, materials and appearance.

The dairy barn should be located where it will be most convenient for caring for the cattle. It should be on ground which has sufficient elevation to enable thorough drainage and it should receive plenty of sunshine. The arrangement should be such as to make it possible to do all the work with the least possible labor and to care for the stock in the most sanitary manner, giving them clean, dry stalls with plenty of light.

This applies to the equipment. Barn equipment serves but one purpose, and that is to facilitate the care of the stock with the least possible labor and expense and in the most sanitary way. The materials of which the barn may be constructed determine if it will afford sufficient protection against the weather, whether it will be easily kept clean and in good repair and whether it will be reasonably immune from fire.

When we come to the question of appearance we touch on a point which is most frequently overlooked. To many the appearance of a barn seems unimportant, but this is really a great mistake. In the first place a farmer, like a manufacturer, is turning out a product which he must sell and sell at a profit if he is to continue in business. It has been proven that neat, attractive buildings pay actual profits in any business whether it be manufacturing, merchandising, or farming. They have an advertising value which can be determined in dollars and cents. In addition, attractive buildings make the farm more salable and at a higher price if the time ever comes when it is to be sold. If given proper care to maintain their appearance they will cost less and last longer than if neglected. Add to all this the proven fact that every person does better work when he works in pleasing surroundings and the value of good appearance is pretty plainly established.

The barn pictured here meets all of these requirements. It is a well-built frame building, set on concrete foundations and floored with concrete. It is set at a good elevation and is provided with neat drives which make a good appearance and prevent the muddy barnyard which should be done away with. The stalls are all floored with cork brick, giving a warm and resilient footing for the stock. Drain gutters make cleanliness easy and the work of feeding and cleaning is facilitated by the overhead carrier tracks for feed and litter.

Feed room and silo are placed together at one corner in such a manner that feed can be delivered quickly and easily to every stall. Many windows provide ample light and sunshine and ventilating shafts carry off the foul air and odors and supply good fresh air as needed. The milk house is conveniently placed at one side with a separate driveway and in what is really a separate building.

Lights and Colors Make House a Cozy Dwelling

No matter how beautiful or ugly the exterior of your home may be, it is really the inside that counts. It is by the interior of a home that the neighbors and other friends you have visit you will base their judgment as to whether or not you belong.

All home builders, men and women, love cozy corners, and it is these same cozy corners that make a home a home.

It is really surprising just how cozy a woman can make a home with a knowledge of light effects, effects of paint, placing of furniture and the hanging of drapes and pictures. Small rooms can be made to appear large and large rooms, turn about, made to appear small.

Lights and drapes are by far the most important, although both of these will be circumvented unless one chooses a proper color for the walls. Take the living room as an example.

The beauty content of the living room is the result of skillfully harmonizing color, form and dimension, illuminated in such a way as to place emphasis where desired.

Should Be Asset

To build a house that will be an asset to its neighborhood is the aim of every real builder. Much of course, depends upon the owner, but when you have a combination of an owner willing to have something good, a builder and an architect who will cooperate with him, then the whole com-

Home Should Be Built for Coming Generations

When you build you will want to build well so that, like the descendants of the Colonists, future generations can point with pride to the work of your head and hands. This thought adds a new pleasure and a new sense of responsibility to your efforts.

In advising you to build well we do not necessarily mean that you should build expensively, although we do believe that if it is ever advisable to stretch a point, here is the place to do it. Your success will depend primarily upon your plans, your choice of materials and the honesty and skill of the workmanship employed. A good residence is simple and dignified rather than fancy and fussy. A modest home well planned, is far more desirable than a poorly planned mansion.

Shingles

If old shingles have been painted previously they can readily be painted again. But if they have been stained with creosote it is improbable that they can be painted again without special treatment unless they have been exposed to the weather for many years.

Good Products

There is no economy in using cheap finishing materials, for the cost of the material is small when compared with the cost of application, and what little you save on the gallon price you more than spend for extra labor.

—and there's a set of these Cookie Cutters for YOU!

CHILDREN can hardly wait until cookies are out of the oven when they're made with these animal cutters. Four in the set—cat, lamb, goose and bunny. And they'll cost you nothing but the packing and mailing cost—15c. With them we'll send a Davis Cook Book, too.

The cookies you'll make are examples of the many good things made with Davis Baking Powder. Davis is *pure* and *sure*—it makes biscuits feathery light, cakes and cookies so palatable and pleasing! And in addition, it costs you less and you use no more than of any other high grade baking powder.

Bake it BEST with

DAVIS BAKING POWDER

A Little Progress

Whenever we get to feeling depressed by the thought that our girls are not wearing enough to satisfy the demands of propriety we stroll into the art gallery and look at our authentic portrait of Cleopatra and return to face the situation with renewed courage, realizing that at least a little progress has been made in the course of the last 2,000 years, quite a little, in fact.—Ohio State Journal.

Turks Change Time System

In Turkey another important step has been taken to break off from the old Ottoman traditions. Beginning with 1926 the European system of calculating time from the birth of Christ rather than from the date of Mohammed's flight from Mecca in 622 A. D., took effect.

A rule may work both ways and still be a poor one.

Pure Home-made

Soap - 1c *per* Cake

Make it this easy way—no boiling

Send for your FREE copy of "The Truth About A Lye"—36 prize soap recipes and over 50 other valuable helps for home and farm.

Do you know?

—how to make hard soap without boiling?

—how to make floating soap?

—how to keep outside toilets odorless?

—how to make hard water soft with lye?

—how to remove grease stains from floors?

Answers to these and many other questions are yours for the asking in this book.

PURE home-made soap is always best for clothes. Makes them cleaner with less rubbing. Easier on your hands, too, for it has no harmful fillers or chemicals. It contains all of the natural glycerine. Send today for this fascinating book that tells how easy it is to make your own soap.

The only book of its kind. Tells how to make fine hard soap without boiling—at a cost of 1c per cake. How to make floating soap and soap chips. 36 prize recipes. Over 50 other ways to make hard jobs easy with good Lewis' Lye.

Making soap is no trick at all with good Lewis' Lye. Every batch is perfect. Because all Lewis' Lye is exactly the same strength. The only Lye that is given 15 separate tests in the making. Lewis' Lye has been the standard of satisfaction for over 75 years.

Domestic Science Experts use this book "The Truth About A Lye." A postcard will bring you a FREE copy. Nothing to pay now or later. Write today.

Dept. 8-D—The Penn. Salt Mfg. Co.
Philadelphia, Pa.

Always ask for

HARMAN & HELLINGER, Proprietors.

Homely old Stepping Stones

WITHOUT doubt it would be a very spectacular thing to cross a creek in an airplane. It could hardly be employed however, by the everyday person.

Most of us are obliged to *step* across on the well worn stones. There is no royal road. The way across is like the road to prosperity, usually accomplished by slow and sure methods--by stepping securely on each successive stone until the goal is reached.

Not a stone should be missed.

Regular and systematic savings are these homely old stepping stones. Acquiring the habit of spending a little less than the amount earned and creating a stepping stone with the difference, will make each step easier and creates a feeling of faith and confidence which grows stronger with each successive step.

We have watched many take the first timid step-watched many finish the journey full of confidence. Will you let us help put your feet on the first stone?

Patronize the advertisers.

Chas. Curie of Fort Wayne and Herbert Curie of Gary, were home over Sunday

Horace Meek has commenced work on the B. & O. section and is staying in the H. J. Renner home.

Mr. Clyde Foltz and daughter of Continental, O., were over Sunday guests in the J. E. Foltz and J. P. Buckingham homes.

Don't forget John H. Buss is a Democratic candidate for Sheriff and would appreciate the support of his many friends in this portion of the county.

Martin Tustison returned home from Garrett last week in time to start fishing with the first nice day He is glad to get home and we are glad he returned.

Mrs. Paul Curie and children went to Waterloo Saturday to visit her parents. Her husband joined her Saturday evening. They returned home Sunday evening

Stanley O. Devitt, Democratic candidate for County Treasurer. 15t17p

Mrs. John Roos of Wauseon was a Thursday and Friday guest of her sister, Mrs J. P Buckingham. Mrs Buckingham has been very ill but is some better at this time.

K. K. K.

All members Order Knight Kamellia or K-Duo are requested to be present at Auburn on April 30th, 7:30 p. m.

Important!

If you haven't paid your taxes your lease will soon expire.

The Genuine Onion Sets at Curie's. Get your supply now.

It ought to warm up now so that Young America can go fishing.

Lime-Sulphur solution for your spraying in any quantity at St. Joe Drug Store.

The road south of Kendallville is closed for paving Traffic must go one mile west.

Frank Burnside and wife of Fort Wayne, were Saturday afternoon guests in the F. D. Tope home.

The Purple Martins arrived last week in St. Joe and already a number of the houses are being occupied.

Miss Dorothea Scholes was at Fort Wayne Saturday and spent Sunday with relatives, returning home Monday morning.

The May McCall's magazine is here and is just what the housewife needs for helpful suggestions. Get one at News office.

When you hear a St. Joe man say, "I run things at my house" he probably means the washing machine and the lawn mower.

Almost any man in St. Joe who is 60 years of age would have been rich if he had all he had dropped in trying to pick up more

F. L. Milliman will appreciate your support for re nomination on Republican ticket for Trustee Concord Township, at May 4th Primary. 14t17

Chas. Jordan and family will move this week from Garrett and occupy the George Wilson property. Mr Jordan will make a trip to Virginia because of the ill health of his mother and he wished his family nearer her parents until he returns.

A summer camp for the under nourished children of DeKalb county, to be sponsored by the Red Cross, is an assured fact. $180 of the Roll Call fund was set aside by the Chapter and the balance of money needed will be raised by subscription

SHOES—For Men, Women Children and Misses Shoes and Oxfords—A real classy assortment at money making prices—Frank Beams, Spencerville.

Candidates whose names will be voted upon at the primary election in Kosciusko county, next month have been investigated by the Kosciusko County Ministerial association, and those candidates who are known to be dry will be given the support of the association.

Burl Rude is now a resident of St. Joe, moving in the Harter property last week. Chas. Collins moved from the Giuther property to the Chas. Reasoner country home and Merritt Maxwell moved Monday from the Dan Oberholtzer home to the Ginther home. Mr. Oberholtzer has moved back to St Joe.

William J. Hull of Hicksville school has the highest average grade in Defiance county on the state eighth grade test in English, arithmetic, history and geography. His grades in the four subjects averaged 83. The average of grades made by 245 students is 48.—Exchange. And why should pupils be allowed to pass with such grades? What is wrong?

When someone tries to tell you that the city merchant can sell cheaper than the merchant of the smaller towns because the former buys in su h large quantities, ask him this: How much higher are his taxes; how much greater is the cost of his light and heat; how much more expensive is his clerk hire; how much more costly is his advertising space than space in the home-town paper; how much more insurance must he carry because he carries a larger stock—and who has to pay for all this added cost in the long run? If you've been believing that old stuff about "buying in large quantities," forget it. Answer the questions above for yourself and you'll understand why the small-town merchant does not have to knock under to such sales argument as that, either in St. Joe or in any other town of like size.

ST. JOE NEWS.

VOL. XL | ST. JOE DeKALB COUNTY, INDIANA, THURSDAY MAY 6, 1926 | NO. 18

St. Joe Boy Honored At College

The following extract was taken from the Journal-Gazette of Saturday:

Lawrence Pflaumer, of St. Joe, a member of the senior class at Wittenberg College, was recently honored by election into Kappa Phi Kappa, national educational fraternity.

Ten other young men who will become educators were admitted to the fraternity, but officers declared that this class was the largest in the history of the Lutheran college.

Pflaumer, along with 140 other seniors, will be graduated June 10 on the last day of commencement week, beginning June 6, with the baccalaureate address by President Rees Edgar Tulloss, Ph D., D D., LL D.

Drug Store Changes Hands May 1st

George H Keen of Fort Wayne, has purchased the W. W. Zonker drug store, taking possession May 1st. Mr Keen has had years of experience in the drug business and we believe he has a good location for a successful business. Mr and Mrs. Keen are energetic young folks and will do all in their power to render efficient service to the community and to give us the store that is needed. They will move this week into rooms in the Dr. Sheffer residence and become citizens of our little town.

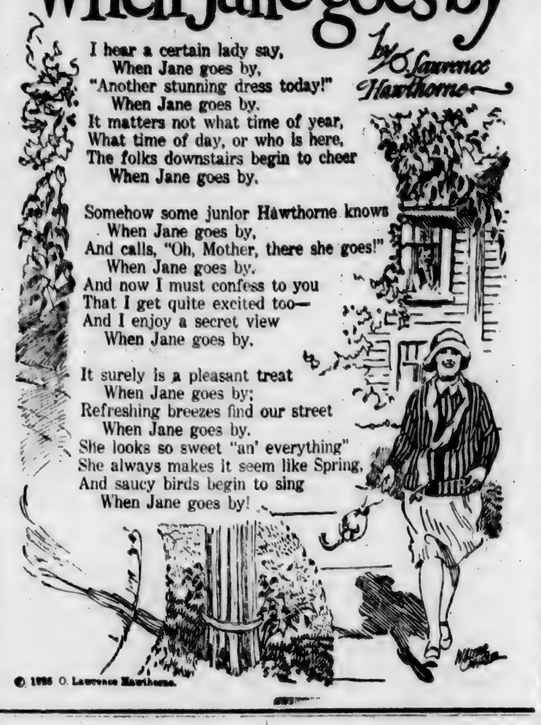
Dies In Los Angeles Hospital

Monday afternoon at 1:30, occurred the death of Mrs. Philip Smith (Fannie Milliman) former St. Joe resident, or rather of Coburntown community, at the Los Angeles hospital. Mrs. Smith had been taken to the hospital with smallpox and recovered sufficiently that it was thought the danger point was passed, but a telegram conveyed the startling news to St. Joe relatives Tuesday.

It has been about four years since Mr. and Mrs. Smith left the community, spending a year in Iowa and then on to California. This information is given by Mrs Wilson Beaber and she states that burial will be made in California. She also states that her daughter, Mrs Iva Clouse, who resided just 2 blocks from the Smiths, has been ill since February, having been in the hospital until recently and is just able to walk about.

When Jane goes by

by Lawrence Hawthorne



I hear a certain lady say,
When Jane goes by,
"Another stunning dress today!"
When Jane goes by.
It matters not what time of year,
What time of day, or who is here,
The folks downstairs begin to cheer
When Jane goes by.

Somehow some junior Hawthorne knows
When Jane goes by,
And calls, "Oh, Mother, there she goes!"
When Jane goes by.
And now I must confess to you
That I get quite excited too—
And I enjoy a secret view
When Jane goes by.

It surely is a pleasant treat
When Jane goes by;
Refreshing breezes find our street
When Jane goes by.
She looks so sweet "an' everything"
She always makes it seem like Spring,
And saucy birds begin to sing
When Jane goes by!

© 1926 O. Lawrence Hawthorne.

The following telegram was received Tuesday afternoon by The News:

Glendale, Cal., May 3, 1926

Fred B. Leight,
St. Joe, Ind.

Fanny Milliman Smith, former resident of St. Joe, and wife of Phillip F. Smith, passed away this date of smallpox after three weeks illness. Letter following.

Phillip F. Smith.

Wanted:—Some Shoats, also Pop corn for sale. Phone John Doll, Spencerville. 17 t 3 p.

Marion Miller went to Chicago Sunday to spend some time with her father, Harry Randall. She will later go to Lima.

Addie Reichelderfer, at one time maid at the Leighty hotel years a go, died last week in a Ft. Wayne hospital. She will be remembered by our older readers.

The girls of the St. Joe Telephone Co., gave a farewell party for Mrs. Helen Randall Saturday evening, who is leaving to join her husband in Chicago. Mrs. Randall has been employed at the telephone office for the past year as night operator. A very delicious lunch was served at the office and the girls gave her some nice and useful presents.

Results of Game Wardens for Year

Approximately 94 per cent of persons arrested during the six months from Oct. 1, 1925 to April 1, 1926, for violation of the state game laws were convicted, according to a report just compiled by George N. Mannfeld, chief of the division of fish and game of the state department of conservation. The total number of arrests made in the state in the six months period was 801, and of these 750 were found guilty, his report shows. These were arrests made by salaried game wardens

Mrs. Melba Wyatt is home the guest of her parents a few weeks. Mr Wyatt is in Chicago on special work.

The Club Round-up is now in session at Purdue continuing until Friday. Miss Marguerite Milliman and Howard Renner, club leaders from Concord are in attendance with the following members: Hazel Storer, Ruth Schrader, Hildah Morr, Thelma Poper, Earl Woodcox, Robert Johnson and Keith Tomlinson.

County Agent And Attendance Officer To Be Elected

County Superintendent of Schools Clarence Green announces that he will call a meeting of the county board of education to be held Thursday afternoon, May 22

The purpose is to consider the election of county agricultural agent and county attendance officer. The terms of Earl E Stinson, county agent and Ed Koons, attendance officer, will expire August 30. Mr Koons told the township trustees at their monthly meeting Monday that he will be a candidate for re-election and it is expected Mr Stinson will also be a candidate for re-election

The trustees Monday looked after some details in preparation for the annual commencement to be held in June. Mr Green reported that 156 pupils have so far passed the final examination and are entitled to diplomas. The total number taking the examination was 185. Eighteen failed and eight are eligible to take the examination to be held May 15 The class will be smaller this year than usual.

The trustees decided to open the fall term of school on Monday, September 6.

A Correction

I wish to stand corrected on the presumption that Sheriff Morr was not in a condition becoming an officer of the law on the day he came to St. Joe to talk to the little boys in regard to breaking some windows, a presumption based on a firm belief that those boys knew whereof they spoke, but after consulting with some adults who also talked with Mr. Morr on that day, I am persuaded that they were mistaken. Also upon further inquiry of other reliable sources I find that Mr. Morr is not a drinking man.

Belle Woodcox.

Township Convention Next Sunday

Next Sunday, May 9th, will be the township convention, held in Christian church. The Sunday Schools will be conducted on the department plan. The adults meet at the Christian church, children at the M. P church and young people at the Lutheran church. At 10:30 all will meet for the Mother's Day service at the Christian church. H. G. Rowe will be speaker for morning and afternoon and the evening service will be given to young people.

A special officers council will be held in the Lutheran church Saturday evening, at 7:30 at which time Mr. Rowe will address the local workers.

H. G. ROWE
State Superintendent of Young People's Division
Who speaks at St. Joe, May 9.

Announcement!

We wish to announce to public that W. W. Zonker has sold out his drug stock in St. Joe, possession given May 1, to Geo. H. Keen, and that it will be the policy of the new firm to strive to render to St. Joe and community a real service in the way of supplying their wants.

Watch Our Window!

HOME, DAD AND THE BOY

By FRANK H. CHELEY

Fifty-Seven Varieties

WITH more than forty million Dads in America, the American Boy's best interests ought to be pretty well looked after—

But in that connection here is a sobering query:

"What sort of a crop of boys would there be if every Dad was a man like me?"

Of Dads there are fifty-seven varieties; good, bad and indifferent—just as there are boys.

Of course, if there were no Dads, there would be no boys, so after all, "a father is an admirable person to be a parent."

Every boy in the land is a magazine of energy which should be exploded upon some worth-while job, and it is Dad's privilege to act as the engineer.

Boys are like corks, some will pop of their own accord, but most of them will need to be drawn out. That's Dad's job.

The real Dad gets hold of his boy by as many handles as possible, and begins the long job of training him to get along without him.

Tailored Suit in Vogue for Spring

Outfit Is Now a Classic in Attire for Women Who Are Particular.

Fashions for spring in America this year are most interesting. There are many new ideas, important revivals and adaptations of former styles to the taste and requirements of today, and, most significant of all, writes a fashion authority in the New York Times, a fine sense of restraint and proportion evident in the designs by American artists for American women. The art of the world, the best in line, color and fabric from the fashion centers of Europe, are finding expression in the new models. There are fewer eccentricities, little that is startling, and the general tone of dress in all its phases is one of refinement. There is so much of beauty, of grace, and in some examples of distinction, that the whole aspect of our American styles this season is one of intriguing attraction to women and of interest to men and to all students of modern social life.

The tailored suit, which has come to be regarded as an American institution and is now a classic, so to speak, is the very first consideration in the equipment for spring. It is the response to climate and season and to the preference for that well-groomed appearance which is close to the heart of the American woman. Year after year, the tailored suit holds its own esteemed place. Repeated effort has been made to replace this type of street costume with the one-piece coat frock and dress of lighter material to be worn under a wrap. These have been until lately the prevailing styles for several seasons, making utterly demodee the old-time tailored suit which was adapted to the stiffly corsetted figure, with the curved waistline a point of great importance in the silhouette. This was the Parisian idea translated in terms to suit the American woman of fashion and having an enormous vogue on this side.

Gown and Wrap Fashion.

With the acceptance of crepes and voiles and light-weight silks, the fashion of wearing a gown and a wrap, in ensemble or separately has been almost universal. Only occasional individual preference has been expressed in an up-to-date version of the tailored suit. The crepe de chine, taffeta, satin or voile dress worn under a fur coat or one of cloth as the season advances is still considered correct, and is gratefully acknowledged for its comfort and convenience. When the wrap becomes burdensome, a scarf or fur piece somehow is insufficient with

Dress of Taffeta and Real Lace for the Young Miss.

the gown alone. Some women find the coat suit, which has been given fresh popularity with the new woolen materials this season, too difficult of adaptation to the varying moods of our climate in early spring. When the wind is cold and raw, a fur piece is not sufficient additional protection; and when the sun suddenly blazes out the heat is intolerable.

So the tailored suit has reappeared in ultra-modern variants as the distinct novelty of the season. Its acceptance will not be universal, and it will not take the place of the one-piece, the jumper and the modish ensemble, but it will be included in the wardrobe of many well-dressed women.

American fashions were never more definitely individual than they are at the moment. The first declaration of independence frees them from the French designs which are important, but not necessarily to be followed blindly. Parisian creators are looked to as authoritative and are now as ever the source of inspiration of the best we have in dress.

But American women of fashion no longer merit the comment that they follow the leader. Much thought and care are given to the study of dress; the laity are keenly interested in fabrics and dyes; and the designs as artistic results are achieved by American makers. The season's latest woolens are an absolute inspiration of the designers of street dress, sports clothes and wraps.

Most Suitable Materials.

These make the most suitable materials for the early spring models in tailored clothes; the skirt, with kilt or inverted plaits; the wrap-around or flaring skirt, jacket in the style of the norfalk; the military box or semi-fitted coat; or the model having a tendency toward the blouse. This two-piece is worn with separate skirt, or it is made as a dress, with a longer coat or cape to match. These lovely new woolens and worsteds of American make are being used in Paris more than ever before, reversing utterly the usual order of things in style; and the spring models, imported or adapted,

No Wardrobe Is Considered Complete Without a Tailleur.

display the latest variants of kasha, wool crepe, tweed, rep, covert and frisca, the rage of the season.

For sports clothes, these wool fabrics are the happiest medium conceivable. In the jumper suits—skirt and jacket with tunic blouse—the favorite skirt mode is plaited; more successfully done in these finer weaves than in the older style cloths. The Rodier fabrics and flannel are very fashionable, two materials being combined in some of the newest models. For example, a charming little ensemble copied from a French model is a symphony in gray and yellow. The skirt attached to a slip lining has a deep inverted plait in front. It is of gray worsted diagonal, with which is worn an over-blouse of pale gray crepe de chine made quite simple. The coat is a short military box model of canary flannel, the edges of which in the front, at the neck, and the wrists are embroidered in a geometric pattern with two shades of gray floss, pointed with silver colored metallic beads.

In the spring suits are shown many stylish models, one that is particularly well liked being that in which the coat and skirt contrast. Checks and plain goods are put together with chic effect, and a certain simplicity almost severe. An uncommonly smart little outfit has a skirt of black and white checked wool, cut after a plain wrap-around design. The coat is of plain black with deep lapels, double-breasted with side pockets, and is worn over a simple tailored shirt of white crepe.

Navy Blue Kasha.

Another model is built of navy blue kasha for the straight short coat which fastens with but two buttons and completes the suit with a skirt of navy blue and white checked wool. Navy blue, which is having a wide vogue, is used for the coat of another model, with a circular skirt of pale gray flannel. A particularly smart model is all of one material, a tweed mixture which we have adopted with enthusiasm from the Scotch and English. In this the skirt has two large inverted plaits, laid in the center front, and the same style of jacket—the straight, low-cut double-breasted which is exceedingly popular—is used

Apart from the first tailored things—for street wear, for sports, in suits and coats—this season will be opulent in silks and crepes and fine sheer materials. Taffeta has already been acknowledged as the sensation, and in numerable intriguing designs are being shown in this crisp, lustrous fabric in all of the new colors. Many models are, of course, inspired by creations from Paris, but others are the original designs of American artists. Very clever compositions are presented in which taffeta is combined with another material, either as trimming of for the main part of the frock, and the ruching, which is now considered so effective as a finish, is usually made of taffeta.

Crepe is, if possible, more fashionable than ever, and its variations are almost without number. There is crepe de chine, and Roma, Elisabeth, flat, Molly O, Mei-O-Dee, chamois crepe and printed crepe in countless patterns. These are all of the plain surface, the novelty being brocaded crepe which has the pattern defined with a contrasting weave—lustrous or dull, or vice versa, after the Chinese brocades. Pussy willow silk and satin carry on in new weaves and weights and will be popular, with the indestructible voiles, for early summer.

THE KITCHEN CABINET

(©, 1926, Western Newspaper Union.)

Methought I saw a robin's wing
Among the budding trees!
What need of chilly lingering
Mid winter reveries,
When life is at the edge of spring?
—Florence Converse.

GOOD EVERYDAY FOODS

An attractive salad is always a most welcome addition to a dinner or luncheon.

Sweetbread and Cucumber Salad.—Prepare the sweetbreads by parboiling and removing all the inedible portion, then drop into cold water to make firm again: add a tablespoonful of vinegar to the water. After standing an hour, drain and cut into pieces. Cut into cubes half the amount of cucumbers, mix all together with a highly seasoned mayonnaise which has been mixed with half its bulk in whipped cream. When well blended, heap lightly into nests of tender lettuce. Serve with toasted wafers.

Celery Jelly Salad.—Put two cupfuls of strained tomatoes, a tablespoonful of grated onion, a bay leaf and a pinch of celery seed into a saucepan; bring to the boiling point and set aside for fifteen minutes to keep hot. Add half a package of gelatin which has been soaked in half a cupful of cold water, one-half teaspoonful of salt, and the juice of half a lemon. Stand over boiling water until the gelatin is dissolved; strain, stir in a quantity of finely cut tender celery and set on ice to set, stirring occasionally until it begins to thicken. Mold in small cups and chill. Serve on beds of lettuce and mask with a rich mayonnaise.

Apple Lemon Pie.—Take two cupfuls of chopped apple, one cupful of sugar, the juice and rind of a lemon, one egg well beaten, half cupful of water, and the same of cracker crumbs. Bake in a two-crust pie in a moderate oven.

Peas, Pickles, Peanuts Salad.—Take an equal quantity of peas and peanuts with enough chopped sour pickle to add zest. Serve on slices of orange, garnished with parsley. Serve with a highly seasoned boiled dressing.

Tapioca Pears.—Cook tapioca and bake with canned pears, adding grated lemon rind and butter. A little lemon juice added to the sauce which may be made from the pear juice will add to the flavor.

Mock Duck.—Take pork tenderloins and split them lengthwise. Make a dressing as for turkey. Put dressing in the meat, sew it up, season, lard with strips of salt pork, add a little hot water and bake for forty-five minutes.

Luncheon Desserts.

For the noon meal, when dinner is served at night, the dessert should be a very light one. A dish of fruit a small cake or cooky, a gelatin pudding are all desirable desserts for a light meal.

Jelly Fluff.—Take half a glass of jelly and the white of one egg; beat until stiff and the mixture will stand up alone. Heap in sherbet cups and top with a little egg white mixed with sugar or a bit of whipped cream.

Another nice fluff which is well liked is prepared as follows: Grate a medium-sized apple and mix with sugar to taste, add an egg white and whip until stiff. This may be served with a thin custard sauce, ice cold, or the fluff heaped over small cup cakes.

Emergency Desserts.—Steam any leftover cake and serve with marshmallow sauce. Mix one cupful of brown sugar with three tablespoonfuls of flour, add one and one-half cupfuls of boiling water and cook until smooth, add a generous grating of nutmeg and two tablespoonfuls of butter with a dash of lemon juice and rind. Just before serving have the sauce boiling hot and add a few marshmallows cut into quarters.

Caramel Cornstarch Pudding.—Brown one-half cupful of sugar until it forms a sirup in the pan, then add a pint of boiling milk; stir until the caramel is dissolved—this will take time. Add two tablespoonfuls of cornstarch mixed with a little cold milk and cook until the starch is thoroughly cooked. Pour into sherbet glasses and garnish with a spoonful of whipped cream topped with a piece of preserved ginger for each glass.

Chicken Loaf.—Cook a fowl in water until the meat falls from the bones. Strain, put the broth into a saucepan and reduce to three cupfuls by boiling. Add one-half package of gelatin. Separate the meat from the bones and shred fine. Put the chicken into a well-rinsed mold, season the broth and pour over it. Set away to harden and serve on lettuce with mayonnaise dressing. A good imitation for a hurry-up dish is canned chicken with chicken broth or canned soup used instead of the fresh fowl.

Snowballs.—Spread cooked rice an inch thick over squares of coarse muslin wet in cold water. In the center of each place a canned peach or apricot, or pear. Tie carefully and steam ten minutes. Serve with a sauce prepared by thickening the fruit juice from the can, adding a little butter to make it richer.

Nellie Maxwell

INDIANA STATE NEWS

Announcement is made that the state convention of the Kiwanis club will be held in Marion September 30 and October 1.

Falling head first into ten-gallon crock half filled with water, Mary Elizabeth, two-year-old child of Mr. and Mrs. Samuel Robinson of Chili, was drowned.

Dr. Henry R. Kraybill, biochemist at the Boyce-Thompson Institute for Plant Research at Yonkers, N. Y., has been named commissioner for Indiana to succeed the late E. G. Proul.

Indianapolis wants to bring the 1927 convention of the Kiwanis clubs to the Hoosier capital. To arouse interest in the plan six state regional meetings will be held in May. These meetings will be May 5 at West Baden; May 5 at Wabash; May 6 at Muncie; May 10 at Crawfordsville; May 11 at Laporte and May 17 at Shelbyville.

Dr. Francis M. Williams, mayor of Anderson since January 1, was made defendant in a suit for $10,000 damages by Ralph Daly, who was city attorney of Anderson and was removed April 9 by a notice filed with the city clerk and city council. Daly charges Williams with libel and asserts he suffered professional injury by the mayor's notice concerning his dismissal.

Enrollment in the Indiana state reformatory at Pendleton is 1,720, nearly three times greater than when the institution was moved to Madison county from Jefferson in 1923, it was reported by Superintendent A. F. Miles. The prison head said the increase in the severity of laws covering vehicle taking and banditry was largely responsible for the increase in enrollment.

At least four Evansville attorneys, whose names are not divulged, face grand jury investigation for alleged "fixing" of the Circuit court juries. Conviction would mean disbarment with possible fine and prison sentence. Charles P. Bock, judge of Circuit court, said that there had been at least three cases in which he is reasonably sure juries were told what decisions to return.

Lawrence Robinson, eighteen years old, confessed in Circuit court in Evansville to setting fire to the boarding house of his alleged love rival, Conley Hunt, seventeen years old. According to Robinson's story, he believed if he burned down the house Conley would have to take up residence outside the neighborhood, leaving Robinson a free field in the wooing of Loraine Lamphere.

Occupation of the airport at the Indianapolis motor speedway is planned for early in June. Legal arrangements are nearly completed and work on preparing the landing fields and hangars is expected to begin within a few days. Present plans indicate that there will be about twenty-five planes at the airport when it is completed, and of this number it is understood that the one hundred and thirteenth observation squadron of the Indiana National Guard will have about ten ships. The remaining planes are to be for commercial use.

Parents who keep their children out of school without sufficient reason, hereafter will be placed in the county jail, where they will remain one day for every day their children have been kept out of school, according to a policy announced in Columbus by Julian Sharpnack, judge of the Bartholomew Circuit court, to be carried out in truancy cases brought before him. His decision was reached after hearing a case in which a boy of fifteen had been kept out of school by his parents forty-one days of the present school term at Newbern.

Edwin B. Steen of Ladoga will succeed Dr. Benjamin H. Graves as head of the department of zoology and biology at Wabash college next September. Doctor Graves was granted an indefinite leave of absence from the Wabash faculty and will take up research work in June at Woods Hole, Mass. He will later study at Yale, Columbia and Johns Hopkins. Professor Steen is a graduate of Wabash college and will receive his master's degree from Columbia university in June. He is at present a professor of zoology in a New York city high school.

De Pauw university for the first time faces a serious break with the Methodist church, the church of its faith. And the issue is the right of a professor of religion to interpret and teach the Bible from a liberal viewpoint. The North Indiana conference of the church has called upon the trustees of De Pauw to investigate the teachings of Dr. Walter Bundy, and to oust him from the faculty should their investigation prove what the conference alleges—that Doctor Bundy is a "dangerous teacher of religion." The trustees will convene in annual meeting on June 7. Roy O. West of Chicago is president of the board.

Statistics compiled by Prof. F. G. King of the Purdue animal husbandry department show that of the five lots of steers fed at the university last winter the one fed on corn, silage and soy-bean hay dressed 60.1 per cent, the highest of those marketed.

Raymond Powers, who testified against six others on the same charge, will spend ten years in the penitentiary for complicity in robbing two local banks in 1923 of $15,000. After deliberating eight hours, a jury in the Owen circuit court at Spencer found Peters guilty.

IMPROVED UNIFORM INTERNATIONAL

Sunday School Lesson

Lesson for May 9

ABRAHAM AND THE KINGS

LESSON TEXT—Genesis 14:1-24.
GOLDEN TEXT—In all these we are more than conquerors through Him that loved us.—Rom. 8:37.
PRIMARY TOPIC—Abraham Saves Lot From Danger.
JUNIOR TOPIC—Abraham Rescues Lot.
INTERMEDIATE AND SENIOR TOPIC—Abraham's Courage and Generosity.
YOUNG PEOPLE AND ADULT TOPIC—Victory Through Faith and Courage.

I. Lot Taken Captive (14:1-12)

Lot's misfortune was due to his selfishness in choosing the best land regardless of the moral risks in his associations (13:10, 11). The Jordan valley was very fertile, but a place of moral snares because Sodom was there. Frequently fine pasture for cattle contains poisonous growths. Lot's trouble was not primarily because he was a bad man, but because of his associations. The steps taken by Lot as shown in chapter 13 were:

1. He lifted up his eyes and beheld (v. 10).
2. He chose him all the plain (v. 11).
3. He dwelt in the cities of the plain (v. 12).
4. He pitched his tent toward Sodom (v. 12).
5. He dwelt in Sodom (14:12).
6. He sat in the gate of Sodom (19:1).

II. Abraham Rescues Lot (13-16).

1. News brought to Abraham (v. 13).

Abraham was in a place of safety. Just why the man who had escaped came to Abraham with the news we do not know. Perhaps Lot had requested him to tell Abraham of his misfortune, making known the fact of his kinship and through him appealing for help.

2. Abraham in pursuit (vv. 14, 15).

Abraham, the great-hearted, forgot Lot's selfishness and ingratitude, organized his servants and by a night attack defeated the enemy. Abraham might just have left Lot to his fate, but because Lot was his brother he forgot his wrongs.

3. Lot rescued (v. 16).

Not only was Lot saved, but the women and his goods were rescued. Because Abraham was separate from Sodom he was able to save his brother. The one who is separate from the world has power to overcome it, while the one who is joined to the world is helpless and is carried away with its ruin.

III. The Ministry of Melchizedek (vv. 17-20).

Melchizedek, a mysterious person, suddenly appears on the scene. His name signifies "king of righteousness." He was also king of Salem. Salem means peace. He is descriptive of his office, rather than a proper name. He is a type of Christ. The following features are suggested by A. T. Pierson:

1. He represents a primitive universal faith, antedating, outranking and surviving the Levitical.
2. He was the priest of the Most High God—a more comprehensive name than Jehovah.
3. His order of priesthood was not local or temporary, but universal and permanent.
4. He outranked even Abraham, who paid him tithes as to a superior.
5. He was prophet, priest and king—all in one, a sort of threefold personage.
6. He was not reckoned according to human genealogy nor limited course of service.
7. He was both king of righteousness and king of peace. Righteousness pertains to the name of the nation and peace, to the realm. Abraham gave tithes to Melchizedek, and this was the standard of giving in the Old Testament, but the New Testament puts giving on a higher plane. In I Corinthians 16:1 the believer is instructed to give as the Lord prospers.

IV. Abraham and the King of Sodom (21-24).

The king of Sodom offered Abraham reward. Abraham was quick to discern his peril in receiving gifts from him. He knew that what he had done was through the grace of God upon him. He would not use this grace for private gain, would not complicate himself with the world for the sake of money. He anticipated this temptation and had covenanted with God not to yield to it (vv. 22-23). Ministers and evangelists have made grievous mistakes in receiving and even seeking financial help from godless people. The God who is possessor of heaven and earth does not need the help of the world. The world must not have opportunity to boast.

Our Punishment

The seeds of our punishment are sown at the same time we commit the sin.—Heslod.

Tears

Tears are often the telescope through which men see far into heaven.

Beautiful Within

"I pray Thee, O my God, that I may be beautiful within.

GOOD ROADS

GENERAL TYPES OF HIGHWAYS IN USE

One of the most remarkable features of the gigantic road building program this country is engaged in is the diversity of road types adopted to meet varying conditions of traffic, location and available funds. The adoption of various types of roads marks the severance from Old world construction which has always held to one type of road; and ushers in a new era of road building where the road is adapted to the conditions it will be called upon to meet.

Generally speaking the present-day plan advocates the construction of the highest type of road possible, keeping the road, however, within the boundaries of its possible earning power.

Roughly, there are four types of roads now in use. These are the graded but unsurfaced roads, the lighter type surface with natural binder, the lighter type surface with artificial binder and the base type.

The mileage of roads in the country, some 3,000,000 miles, is so great and the traffic over many miles so light that building hard-surfaced roads over more than a relatively small percentage of the total mileage will be impossible for years to come. This does not mean that our road builders are neglecting these lightly traveled stretches. These roads are being improved through grading and draining so that as little trouble as possible with mud, dust, and impassability will be experienced. In the South and some other parts of the country sand-clay roads are coming into favor, the sand, packed with the natural surfacing, forming a fairly good surface.

While this lower type of road serves its purpose with some facility, traffic of any density necessitates large maintenance expenditures. The next higher type of road, the surfaced with natural binder, then becomes necessary. In this classification are gravel, water-bound macadam, and crushed rock. These surfacings may be put on and compacted under heavy rolls, or they may be laid with a water binder. Because there is little resistance to raveling and tearing action, traffic soon wears this type out.

The type of road composed of rock, gravel or macadam bound together with asphalt or some other type of artificial binder has found much favor on roads with only a moderately heavy traffic. In this type of road the surfacing material is laid and compacted and the binder material spread over the surface. Penetration of the binder ties the particles of surfacing together, forming a sheet which resists the wear and tear of traffic with reasonable ease.

Under careful vigilance this type of road has been found well suited to the secondary roads of the nation, but under main line traffic the maintenance is too excessive to make this type of road popular. This is especially true of roads where there is a great deal of bus and truck traffic, for the pounding of these heavy vehicles requires a hard-road surface which cannot be torn apart.

Mileage of Paved Roads in the United States

The mileage of surfaced roads in the United States is nearing the 500,000 mark, according to the bureau of public roads of the Department of Agriculture. Some time ago the state reports indicated that there were 128,347 miles of surfaced road on the state systems at the end of 1924, and subsequent reports indicated that mileage of surfaced county roads was 339,558, making a total of 467,905 miles. While it is probable that the estimate of county roads is not so accurate as that of the state roads, the above figure is probably not too large.

Since 31,541 miles of road was surfaced in 1924 by the states and counties and it is known that progress has been equally as good in 1925, it is probable that the construction season now drawing to a close will increase the surfaced mileage to more than 495,000.

Good Roads Facts

Concrete, bituminous macadam and macadam roads now form the bulk of roads being constructed and rebuilt in Connecticut.

• • •

An exchange recently said, "The question is no longer can we afford good roads, but can we afford to be without them."

• • •

Construction work has been started on the second causeway north of Ventura, reports the touring bureau of the Automobile Club of Southern California.

• • •

The need of superhighways is a crying need and must be taken seriously into account.

• • •

Many primary state highway systems are largely surfaced. But we are now facing the larger problem of handling the traffic flow which these roads have attracted.

• • •

Engineers who have devoted years to the study of modern highways have decided that the speed limit should be 50 to 60 miles an hour, with a minimum speed of 30 miles.

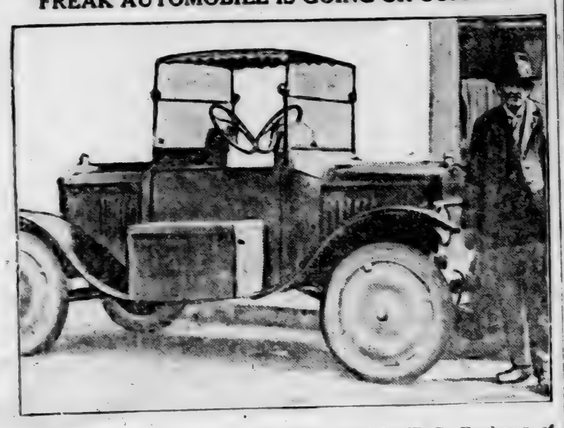
FREAK AUTOMOBILE IS GOING OR COMING?



Photograph shows a freak automobile owned by W. D. Henderson of Memphis, Tenn. The machine has double-gear controls, two steering mechanisms and two radiators and can be parked on either side of the street in perfect safety. Photograph shows Mr. Henderson, left, and the freak machine.

PAY ATTENTION TO CAR BRAKES

Failure to Hold Is Due Mostly to Neglect of Owner, Says Hayes.

Motorists who do not enjoy the latest improvements in brakes are missing a good opportunity and overlooking safety by not making a greater effort to get the most from their present brakes is the opinion of Charles M. Hayes, president of the Chicago Motor club.

During this period of transition in brakes, he says, there is an unnecessary tendency toward a double standard of stopping, which can be prevented by getting more out of the brakes on older cars and refraining from using the newer brakes excessively.

"In considering the details of so-called "brake failure" as a cause of accidents," Hayes explains, "the American Automobile association found most brake systems were not giving more than 75 per cent of their full efficiency by reason of owner neglect.

Both Kinds Neglected.

"This applied to four-wheel brakes as well as the two-wheel variety. One of the chief reasons for this low efficiency of so important a unit of the car is the failure of the average driver to take advantage of what is known as the wrapping action of the brake bands.

"When bands are of uniform clearance all the way round every square inch of lining comes into contact with the brake drum simultaneously. This causes the band to follow the drum, or to wrap around it. Brake effectiveness is greatly increased, and the car stops with far less effort on the part of the driver.

"Most car owners consider clearance uniformity, as simply a detail which provides for even wear of the linings. Rather than take the trouble to adjust the bands carefully they allow excessive clearance all around, which means that in wet weather the brakes may get water-clogged.

Equality Is Important.

"Equality of adjustment is an even more important feature. Two brakes, evenly adjusted, are safer in the long run than just one brake that makes the car stand on end. Experience demonstrates brakes are used during wet weather, and it follows if the brakes are not of equal adjustment under such conditions there is no advantage in having one good brake. The 100 per cent brake may reduce the resultant braking efficiency to nil, and cause a skid.

"Comparatively few car owners appreciate the effect of the weather and the elements on the brakes. In damp weather linings will be much more effective than in dry weather, yet few owners will remember to wash the brakes when there is very little natural dampness.

"If oil tends to work out on the right brake band of the rear wheel during hot weather the simplest remedy is to drive up on the crown of the road instead of allowing the axle to tip to the right so constantly.

Keep Carburetor Clean

The only attention necessary to the carburetor is keeping it clean. There is a drain pocket at the bottom of most of the carburetors which should be cleaned out once in a while by opening the little cock or taking the plug out at the bottom. Shut off the gasoline, remove the float and wipe the deposits out of the float chamber. No adjusting need be done to the carburetor after it has once been set.

Useful Screw Driver

The ordinary screw driver is not adapted to all classes of work. By making a heavy screw driver with the center portion in the form of a heavy square of metal a socket wrench may be placed on the tool so that all the leverage necessary may be obtained.

Poor Brakes a Menace

Inefficient brakes were the cause of 75 per cent of the 679,000 automobile accidents in the United States last year, according to reports reaching the public safety department of the Automobile Club of Southern California.

Conservation of Tires Requires Extra Caution

Conservation of tires, urged by Secretary of Commerce Herbert Hoover and indorsed by the American Automobile association, must be accompanied by extra caution in driving if the motorist expects to benefit by his plan of lowering rubber prices by saving rubber, according to Charles M. Hayes, president of the Chicago Motor club.

"There would be no gain if motorists failed to recognize the importance of driving with increased care when getting the last few miles out of old tires," declares Mr. Hayes. "There would be only disaster through front-wheel blowouts and skidding."

This is believed to be the first suggestion to automobile owners in general, to temper their economy program with common sense.

"A new tire is a safety device," Mr. Hayes adds. "Its strong carcass is a symbol of security. With it the driver is justified in running at higher car speeds in the country and in operating his car at normal traveling speeds over rough roads where excessive strains are placed on tires.

"The rough treads of a new tire save skids, provide better traction and assist in stopping. A driver need not consider himself at a disadvantage with old tires, however, provided he is provident enough to make his driving conform to his rubber.

"We cannot afford to stretch safety while stretching rubber. Something will snap unless common sense and caution are abundant enough to provide the necessary element of compensation."

Hood Should Be Removed During Warmer Spells

Don't forget to remove the cover from the front of the radiator when there is a thaw or the weather gets mild for a few days after being quite cold. When the temperature is away down it is of course very wise to partially—if not fully—cover the front of the radiator to prevent the bitter cold from getting the engine too cold for proper operation.

But having adjusted matters for such days, remember that when the warmer spells arrive the shutting out of the air may be too complete, and you will cause the power plant to overheat, often with serious results. The point is that the car driver must use discretion in controlling the radiator's cooling, and on the days when he feels warm he should not expect the engine to take a different view of the matter.

Handy Piece of Canvas

Few car owners realize what a convenient accessory is a little square of canvas, about eighteen inches over all. It saves trousers when you have to kneel to get at some inaccessible part. It keeps the jack from slipping on snow or ice. It keeps the inner tube out of the dust when this part is being inserted by the roadside. It will serve to strain gasoline through; it will keep tools from rattling; it will protect the hand in handling hot parts.

Harden Cast Iron Parts

At times it is desirable to harden medium or small cast iron parts. Here's how: Take a half pint of sulphuric acid, two quarts of common salt, one-half pound of saltpeter, two pounds of alum, a quarter-pound of prussiate of potash, quarter-pound of cyanide of potash and dissolve in ten gallons of soft water. Heat the iron to a cherry red and dip in the solution. If the parts are wanted very hard repeated heating and dipping will be necessary.

Handy Riveting Stake

A piece of one-inch round stock, heated and bent in the shape of the letter P, with the final loop not quite completed, makes an admirable bench vise riveting stake. This stake is handy in many riveting and bending jobs around the home garage, relining brake bands, bending pipe over, etc.

Making Friends on Road

Sharing the road with others makes friends. Blockading the road makes an unnecessary enemy. You can't afford to make enemies—they may prove expensive

DADDY'S EVENING FAIRY TALE

By Mary Graham Bonner

COPYRIGHT BY WESTERN NEWSPAPER UNION

RUNNER RABBIT'S ADVENTURE

At the edge of the woods lived Runner Rabbit and his family.

He had been well named, for he was one of the fastest runners the rabbit family had ever known.

That is saying a good deal, too, for the rabbits have always been famed for their powers of running.

Runner Rabbit was a very beautiful black-and-white rabbit. His eyes were pink and he stuck his ears way up in the air whenever he was interested in anything—which was pretty nearly all the time.

For Runner Rabbit was very glad he was alive, and he had many friends and exciting adventures.

Mrs. Runner Rabbit was white with only two black spots, and the children were like both their mother and daddy.

They were old enough now for Runner Rabbit to think they were worth noticing, though when they were little babies he might have eaten them up.

You see, daddy rabbits, can never remember that the little bits of creatures that the mothers are paying so much attention to will grow up to be fine animals—and so, when they are very small, the mother rabbits keep the daddies out of the way.

One day Runner Rabbit was taking a walk.

"It's a fine day," he said to a song sparrow he saw perched on a tree nearby.

The song sparrow trilled a little song and chirped that he agreed with Runner Rabbit that it was an extremely nice day.

"Nonsense," Said Runner Rabbit, "I'm Not Afraid."

"But where are you going?" he asked.

"Over to the vegetable garden back of the home you see yonder," said Runner. "There are carrots over there."

And Runner Rabbit's pink eyes looked very bright and happy over the prospect of having carrots for supper.

"I don't advise you to go there," said the song sparrow, "for they keep a big dog."

"Nonsense," said Runner Rabbit, "I'm not afraid. Besides, I've never heard him bark. Dogs always bark, you know."

"I know that, but I know one is there," said the song sparrow sadly, as he saw Runner Rabbit go on.

But later on he saw him coming running back for all he was worth, and Dash, the farmer's dog, chasing him.

Runner reached the brier patch just in time, and the dog, who couldn't get through the rough bushes, turned home.

"I'm so glad I can run," panted Runner, and Mrs. Runner Rabbit said:

"So am I, but don't go looking for trouble again!"

Runner Rabbit promised. Mrs. Runner Rabbit's children were very fine, and they were glad to have their daddy safe and sound. But their mother they loved best. She had cared for them when they were little.

She had watched over them and taught them to stay quite still in their nest of leaves when she went out for food.

She covered them over with long grass and warned them that they mustn't move, for the woods were full of dangers they still new nothing about.

She taught them how to stay perfectly still like statues when an animal appeared and how to give the stony stare which is one of the tricks of the wood creatures. They copied Mrs. Runner as she showed them how to brush their ears with their claws.

She taught them how to thump on the ground, which is the rabbits' way of signaling or telephoning to each other that danger is near, or that goods things to eat are close at hand.

She taught them how to drink dew water and water that has not become dirty. And she taught them how to know one kind of signal from the other.

Then, when all these lessons were learned, she rubbed her whiskers against each one in turn and said they were really well-schooled rabbits now.

Then they had met their daddy.

Unaware of Her Presence

Mr. Blank was out in his garage repairing his car one evening when little Eleanor and her father strolled in. The two men soon became engrossed in the work, Mr. Blank swearing in exasperation occasionally. Finally Eleanor spoke up quietly and with much dignity said, "Daddy, I don't believe Mr Blank knows I'm here."

Great Personages of the Bible

By REV. LEONARD A. BARRETT

Nebuchadnezzar

NEBUCHADNEZZAR was in many respects the greatest of the eastern kings. Though a pagan ruler, he had a strong personality, a courageous character, and a mind open to conviction.

Even before he ascended to the throne of Babylon, he won many victories. For eighteen months his strong army besieged the city of Jerusalem and finally won the victory. For thirteen years he waged war against Tyre, winning a glorious victory in the combat. His fame was rapidly spreading. The people everywhere began to know about this young ruler.

A still greater success awaited him. He was soon to fall heir to the throne of the mightiest empire in the world. From his father he inherited a vast estate and was soon to succeed him on the throne. In magnificence and splendor he reigned in the great city of Babylon. He truly was monarch of all he surveyed, for "All people, nations and languages trembled and feared before him; whom he would, he slew; and whom he would he kept alive; and whom he would he set up; and whom he would he put down." He led the entire nation in captivity to Babylon.

His ambitious attacks were not even spared against the houses of God. Into Babylon he brought all the holy vessels of the temple and put them in the heathen temples, which was in the land of Shinar.

The beautiful city of Babylon was probably entirely built up by Nebuchadnezzar. He planned the laying out of the parks and magnificent gardens which contributed to the fame of the city. He was surrounded by great wealth, pomp and power. His heart was big with pride. His boast was: "Is not this great Babylon which I have builded!" His dreams were dreams of a vivid imagination, influenced by the magnificence of his environment. The second year of his reign was especially marked as a year of dreams. His soul was greatly troubled and he could not sleep. He commanded the presence of the astrologers and wise men and exacted of them that in their failure to interpret the dreams they should be cut to pieces and their houses be made a dunghill. The rebuke of the wise men so angered Nebuchadnezzar that he declared that all the wise men of Babylon should be slain. But, like in all great crises of the world's history, when hope seems to be on the verge of despair some person comes upon the scene to guide the people over the difficulty. This person was Daniel, who interpreted the dream of Nebuchadnezzar as follows:

"Forasmuch as thou sawest that the stone was cut out of the mountain without hands, and that it broke in pieces the iron, the brass, the clay, the silver, and the gold; the great God hath made known to the king what shall come to pass hereafter; and the dream is certain, and the interpretation thereof sure."

The pride of Nebuchadnezzar, even in spite of his dream, was not subdued, for we find him now setting up a golden image for people to worship.

This idolatrous image he set up in the province of Babylon. He called before him the priests, the governors, and the captains and all who held any office in the administrative affairs of the government. The people were assembled. In the midst of the throng is heard the cry of the herald sent by Nebuchadnezzar, "O, people, nations and languages at the time you hear the sound of the cornet, flute and harp, fall down and worship the golden image which Nebuchadnezzar hath set up." There was a penalty attached for the disobedience to the command. Should any one dare to disobey they would be cast into the midst of the burning fiery furnace. Many obeyed the proud king's behest but Shadrack, Meshach, and Abednego, would not worship the image of gold. They were ordered brought before the king. In the king's presence they declared their loyalty to Jehovah. The decree was pronounced and they were cast into the burning fiery furnace. What is this we see—"Did we not cast three men bound into the midst of the fire—Lo, I see four men loosed, they have no hurt, and the form of the fourth is like unto the Son of Man." The king called to the three men he condemned, and in response to his demand they came out of the furnace and not even the odor of fire had passed over them.

One of the great faults of Nebuchadnezzar was his pride. He thought his kingdom was greater than the king of the Jews. His proud Babylon outshone in splendor and magnificence all the other nations of the known world. "Is this not proud Babylon which I have builded!" But, the day came at last when Nebuchadnezzar was brought to realise the power of the God of the Jews, and the crowning event which wrought the change was the incident of the golden image. Nebuchadnezzar at last was forced to realize that, "Those that walk in pride He is able to abase." Here is his decree:

"Therefore I make a decree, that every people, nation, and language, which speak anything amiss against God of Shadrack, Meshach, and Abednego, shall be cut to pieces, and their houses shall be made a dunghill; because there is no other God that can deliver after this sort.

The Cyclone a Providence

By MARTHA M. WILLIAMS

(Copyright.)

JOE HOPSON and Jean Graham had been romping comrades since the day they could toddle. Thus it had come to be said: "What a pity the boy wasn't the girl, the girl the boy"—he was so much the prettier, she much more the figure and temper that promised a man. Not exactly ugly—but with a thin face she could screw into ninety-seven shapes at pleasure, darkling eyes, and of a supple strength almost uncanny. Joe, just her height, had evolved from a rose-leaf baby, a fetching Cupidon, into a manly beauty he truly hated, notwithstanding he had his full share of sex vanity. Girls went down before him like grain before the sickle—Jean was the honorable exception proving the rule.

Therefore, such is human contrariness—he fought protective battles with her over everything she chose to approve. He had rather die than have her laugh at his loving—and laugh she would, being as to sentiment utterly hard-boiled. His trustiest shield was a pretended fear of being married out of hand—which she feigned to resent hotly. She grumbled openly: "Why can't you submit to Fate's decree, man? Why else do Hopson and Graham lands lie broadside one to another? Make the finest plantation in seven counties—and you know I'm a born land-lover—I'd manage so it would outdo any other in the state."

To which he countered: "Buy it if you want it so badly. You can have fifty years' time to pay for it—I'll feel like a freed bird with the wretched acres off my hands." The pair were, to speak the truth, in the grip of emotional static—so welded by use and wont they had vital need of each other, but withheld by prankish habit from admitting the fact.

This state might have run on indefinitely had not Mrs. Modred Mallinson blown across their path. Blown literally—a limited cyclone wrecked her car just at the boundaries of Graham and Hopson—so succor fell impartially to both houses. Joe helped first—pulling her half insensible from the shattered vehicle, then taking her to Jean, since even in disarray she was too young and pretty for a bachelor's guest. Her gratitude to both reached the height of fine art—even Jean could not discount it—for two whole days. Then she kept silence—but an appraising one, as Joe, also silently, discerned. A gossamer idea came to him through the discerning—it strengthened so fast by next day he chuckled at thought of it—though outwardly he held a countenance of grave anxiety.

Mrs. Modred Mallinson had intuitions—they made her sense rather than see in the cyclone a providence better than many cars. She kept the bed two days, the couch five more. By that time she had possessed herself of many leading facts—by help mainly of Mammy Charlotte to whom Jean had generously given her over. Mammy was in the main truthful—except upon the subject of Jean and Joe. Rich? Dee wus richer'n cream an' peaches—dee owned er bank and er railroad, sides deir lan'. Kep' hit dest 'cause it had 'longed ter de fambly frum way back. No'm, dee wusn't sweethearts—dest sorter begaged—had ter wait dey weddin' 'twell Jean gwine on twenty-th'ee—so she mought wa'ar de jewelry—pearls and dimonts an' sech like—Ole Miss her great-gramm had lef' datterway.

Sufficient, even more than sufficient, for a widow, whose fascination was her fortune, whose new weeds her weapon. Men she knew as she never knew books. Joe found himself elected the prop and stay of her faltering steps. Indeed, she almost clung to him, laughing a thought hysterically as she drooped against him at the least slacking of his arm. Slim, sinuous, yet curvey who shall blame her for refusing to grow stronger? She ate like a hurt bird, no matter how she was tempted. But Jean smiled gayly.

She also had intuitions—long ago she had divined Joe's case—and played him, using, however, in the playing Walton's caution as to the bait: "Use him as though you loved him." Now she saw as clearly through the wiles of her involuntary guest, and in her secret mind, rejoiced over them—they gave her the excuse she had wanted this year and more for a change of mood and mind. In gratitude she insisted upon leaving a laden tray accessible to Mrs. Modred the night through—Mammy said there must be sperits somwhars round. Eve'y grain and crum ob cake and biscuit, and all de chick'n bres' was gone. Cat! Hm! Cat mought a climb through de winder, but nebber could a climb back aga'n—too heavy after eating all dat—whereat Jean gave Mammy a silencing look, and ran clear to the lawn gate intent upon waylaying Joe.

"Behold a missionary!" she greeted him: "I've just found out I want and need something ever so badly—will you give it to me?"

"Life, fortune, honor—my skeered honor—all lie at your feet. Take your choice!" Joe cried gally. 'Say which—and when! Right quick."

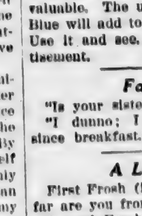
"Why—I believe all three—they fill the measure of—my husband." Jean answered with the faintest blush. Joe reeled in saddle—but next minute had her in his arms. She released herself after five minutes, saying: "How about tomorrow? So Mrs. Modred can see the great event?"

"I never welched yet—too late to begin," Joe grinned. "By the way—wasn't the cyclone a providence?"

MRS. BASSETT ALWAYS TIRED

Now in Good Health by Using Lydia E. Pinkham's Vegetable Compound

Lansing, Michigan.—"I have taken Lydia E. Pinkham's Vegetable Compound whenever I needed it. When I first used it I was so bad I could hardly walk across the room without crying. I was tired all the time. I think my trouble was coming on me for six months before I realized it. I read of your wonderful medicine in the paper, and * * * my husband bought me a bottle, and after the first few doses I felt better, so kept on taking it until I was well and strong. I take it at times when I feel tired and it helps me. I will always have a good word for your medicine and tell anyone what good it has done me. I recommended it to my neighbor for her girl, who is sixteen years old, and it was just what she needed. She is feeling fine now, and goes to school every day."—Mrs. E. F. Bassett, 216 South Hayford Avenue, Lansing, Michigan.



Do not continue to feel all run-down and half sick when Lydia E. Pinkham's Vegetable Compound is sold by druggists everywhere. It is a root and herb medicine and has been used by women for over fifty years.

Michigan Is Fourth

The latest federal statistics show that Michigan is fourth among all states in the number of hunter's licenses sold, being exceeded by Pennsylvania, New York and Ohio. Close to 5,000,000 hunting and fishing licenses were issued in the United States, of which number Michigan accounted for 282,828.

The war has made table linen very valuable. The use of Red Cross Ball Blue will add to its wearing qualities. Use it and see. All grocers.—Advertisement.

Fast Age

"Is your sister married, Willie?"

"I dunno; I haven't been home since breakfast."

A Long Way

Gorky Pays Tribute to the Written Word

"When I take into my hands a new book, a thing made in the printing shop by the labor of a little hero, the typesetter, and by the machine, created by another little hero, I feel that into my life enters something living, speaking, wonderful. Here is another holy writ by man about man, about a being beyond which the world has nothing finer, more puzzling, and more worthy of my love, a being whose toil and genius have made all that is great and beautiful on earth," writes Maxim Gorky in his preface to a work on "European Literature," which is being published in Paris and translated by Alexander Kaun.

"The book takes me into life, and however familiar it be to me, the book always tells me something I have not known, I have not observed in man. At times the whole book contains only one new phase, but it is this that brings one mysteriously close to man, showing another smile or grimace of his. . . . Books bring me in friendly and magnanimous contact with him, inspire me with respect for them, and even deepen my interest in man, master of the earth."

MIGHT BE ON HIS WAY

She—Wouldn't a nice little stroll please you about now?

He (eagerly)—It would indeed!

She—Well, what's holding you back?

Very Modern

Miss Alice Evans of the United State hygienic laboratory, who has discovered the germ of sleeping sickness, was recently the guest of honor at a luncheon in a Washington hotel.

After luncheon, taking coffee with her friends in the hotel lounge, Miss Evans studied with interest a group of aristocratic young girls at the other end of the room. These young girls sat in nonchalant attitudes smoking cigarettes, and their crossed knees were bare. Miss Evans nodded toward their bare crossed knees.

"The shins of society," she said.

Weary

"Funny, isn't it, the number of bees around this time of the year?" said a town sportsman. "I can't see them, but another one just went buzzing past my ear."

"Bees—the dickens!" returned Gap Johnson of Rumpus Ridge. "Them's bullets fired by a mess of hunters from up at Kay See. If they don't let up pretty deru' soon I'll just rip loose with a load of buckshot from my old scatter gun. I'm getting sorter tired of their foolishness."—Kansas City Star.

Little Sister's Share

Pat, the six-year-old son of a Kansas City man, was ill. So dad brought home jelly beans for compensation.

It was agreed that Betty Jane, three years old, was to have a well sister's share. The children were left alone to enjoy their sweets.

Presently Betty Jane's cry arose. Sobbing, she wailed:

"Pats eaten all of them!"

"But, sister," came Pat's pacifying voice, "I was going to let you pop the suck!"—Kansas City Star.

Improvement on Organ

Prof. Max Meyer of the University of Missouri has invented an organ with which it is possible to play music written upon a scale of 24 tones instead of the usual 12. The tip of each key is detached on the instrument and when depressed produces a tone halfway between that of the key of which it seems a part and the next lower one.

Low-Growing Fruits Require Protection

Burning Oil in Heaters Has Proven Satisfactory.

(Prepared by the United States Department of Agriculture.)

Burning fuel oil in lard pail heaters has proved a successful method of obtaining a rise in temperature on the cranberry bogs near the mouth of the Columbia river in Washington. Local weather bureau officials assisted in making a test of the efficiency of these heaters for the purpose. The flooding of the bogs for frost protection as is done in Wisconsin and the Atlantic coast cranberry sections is not practicable in Washington.

The heaters are set on metal tripods forced several inches into the ground so that the strong winds which sometimes blow in this district cannot overturn them. Forty ten-quart lard pail heaters were used on a half-acre plot. They were equipped one night with "soot arrester" or "spiders," and used one night without them.

The frost on the two nights of the test caused about 15 per cent damage in a check plot 300 feet distant, not equipped with heaters. There was no damage in the test plot. Both plots were similarly situated with regard to topography and atmospheric conditions. The fuel oil burned cost 6 cents a gallon in barrel lots, and the cost of the heating was 90 cents an acre per hour with the soot arresters in place. Without them the cost was $3 per acre per hour.

It is believed by the weather bureau men who made the test that similar good results can be secured in protecting other low-growing crops, such as strawberries, tomatoes and potatoes.

Tomato Wilts Prevented With Resistant Strains

The wilts of tomatoes, of which three forms are known, are caused by moldlike fungi or by bacteria which live in the soil and infect the plants through their roots. Wilting and yellowing leaves indicate the presence of these diseases.

Fusarium wilt, the form most widely distributed, causes the plants to wilt and die slowly, while bacterial wilt is frequently more prompt in its action. Efforts should be directed to the prevention rather than to the cure of these diseases. The planting of wilt resistant strains or varieties is advisable in order to control the Fusarium wilt. A variety of tomato known as Norton is highly resistant to Fusarium and well adapted to sections where the disease is prevalent.

Fusarium wilt should not be confused with another tomato disease prevalent in Rocky Mountain and Pacific Coast regions and variously known as blight, western blight and western yellow blight. This disease and Fusarium wilt frequently occur in the same fields. The Norton tomato is resistant to the Fusarium wilt but varieties markedly resistant to western yellow blight have not yet been developed.

Spraying or Dusting to Control Harmful Worms

The tomato fruitworm, also known as the bollworm (not boll weevil) of cotton and the corn earworm, causes heavy losses of early tomatoes in the Southern states by eating into the fruit and destroying its market value, says the United States Department of Agriculture.

A large amount of damage can be prevented by either spraying or dusting the tomato fruits with an arsenical. If a spray is desirable, use two pounds of lead arsenate to fifty gallons of water or bordeaux mixture. The dust should be used at the rate of one pound of lead arsenate to five pounds of hydrated lime or one pound of paris green to twenty pounds of hydrated lime. Calcium arsenate can be used at the rate of one pound to five pounds of hydrated lime. The first spraying or dusting should be applied when the earliest tomato fruits are beginning to form or when the first worm damage is noticed and the arsenical applications should be repeated at weekly intervals for about seven weeks. All sprayed fruit should be thoroughly wiped before it is marketed or consumed.

Windbreaks to Protect the Crops and Orchard

That windbreaks are, as a whole, an asset, particularly in regions with little rainfall and where strong, drying winds are frequent, is shown by studies made by the United States Department of Agriculture. Windbreaks protect grain crops and orchards from mechanical injury by the wind, reduce evaporation of moisture from the soil, protect farm buildings from the extremes of winter and summer weather, and may also be a source of wood for farm use or sale. The ideal windbreak would have the tallest trees planted in the central rows; on either side rows of shorter trees; and outside of these, low bushes or cedars.

Strong Ewe Best Buy

The ewe to buy is the strong, healthy ewe with a straight, broad back and sound udder, sound teeth and a heavy fleece of reasonable fineness. Such an ewe when bred to a good Shropshire or Hampshire ram may be depended on to produce a good lamb. Ewes four to six years old produce the best lambs and are easier to handle, but are not worth as much money as yearlings because they are too near the end of their usefulness.

Hurry Call Sent Out for Needed Fishhook

The Alaska halibut industry demands a selective fishhook which, when baited with herring and dropped overboard, will not be taken by a codfish. The idea is ages old, for Eskimos and Alaskan Indians possess ivory and bone fishhooks designed specially for halibut.

The codfish has a mouth which, when extended to seize food, is round. The halibut opens its jaws as in a mirthful grin. The native fishhook was made just for the wide opening and the cod never got hooked.

The modern barbed, shanked steel hook fits either fish's mouth the same. Last summer halibut ships invaded a new fishing bank off Popof island, near the Aleutians. Great quantities of halibut abounded, but the codfish between the bottom fish and the boats took the baited gear before the halibut had a smell.

What to do that the codfish may reject the bait and the lordly halibut be tempted is the problem.

Old People's Town Is Honor to Copenhagen

Where is there a "town" without an inhabitant under sixty-five years of age? This looks like a catch question, but it isn't, for in Denmark in the Old People's Town of Copenhagen, within a great city exists a little one whose town wall embraces just 23 acres, a church, homes and gardens, an assembly hall and even a motion-picture theater. Commenting upon this "town," the American-Scandinavian Review recently called attention to the fact that its distinctive feature is that it has nothing whatever to do with poor relief. Its citizens live at the expense of the Copenhagen municipality and the only conditions for "citizenship" are that those applying shall have attained a sufficient age and shall never have come under the penalty of the law nor been a pauper. Everything necessary to comfort is provided, even to a weekly allowance for pocket money, and no one loses civil rights or vote by living therein. People of all classes are to be found within its walls, as it is felt that every honorable aged citizen has a right to maintenance without obligation or loss of independence.

Provision Made for Deaf

The Guild theater in New York is trying to make life more pleasant for those who are afflicted with impaired hearing. There is no hardship in connection with poor hearing which is more difficult to bear than the loss of such entertainment as the theater provides. This theater has equipped a dozen choice seats with vacuum amplifiers. Any individual who is partially deaf may apply at the box office for seats in this section. He is provided with a set of small ear receivers which are connected with inconspicuous boxes attached to the rear of the seats just in front. Microphones on the stage pick up every sound, amplify them by means of vacuum tubes under the stage, and transmit them to the earphones.—Pathfinder Magazine.

"Mr. Zero's" Philanthropies

Urban Ledoux, who comes into prominence in New York city every winter as "Mr. Zero," has taken a leaf from the capitalists and is establishing a chain of "tubs"—restaurants where the unemployed are given for a nickel all the soup, bread and coffee they can stow away. Ledoux recently leased two five-story buildings on the Bowery that he intends to turn into 10-cent lodging houses.—The Argonaut.

Less Klondike Gold

In the Klondike district of the Yukon territory, northwestern Canada, gold was discovered in 1896. The new goldfield proved to be one of the richest in the world, and fortunes were obtained from placer mining. During the past ten years production has greatly fallen off, but hydraulic mining is still carried on by mining companies.

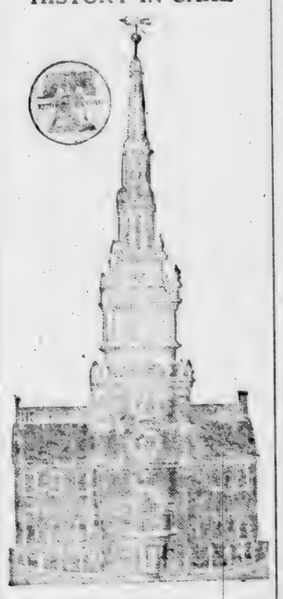
Hog Fasts Two Months

A prize hog on the Jennings farm in Maryland disappeared during the threshing season and two months later the family dog had made curious and frantic efforts to dig into a straw stack. The hog was found, very thin and weak, but still living. The animal had been covered with straw while rooting around during the threshing operation.

A REAL HEROINE

Edith May Adams of Barrington, N. J., the first American School girl to be entered as a candidate for the American Youth Award. The American Youth and Teacher Award was established by the Board of Directors of the Sesqui-Centennial International Exposition in Philadelphia as a tribute to the youth and teachers of the nation. Miss Adams is a candidate for the Golden Eaglette, the highest gift in the hands of the Girl Scouts. She was cited recently for exceptional bravery for remaining inside a blazing building helping [illegible] to give first aid treatment to injured firemen.

HISTORY IN CAKE



This replica of historic Independence Hall in Philadelphia is a fine example of the baker's art. It was made by the chef of one of Philadelphia's leading hotels to advertise the Sesqui-Centennial International Exposition, which will open in that city June 1 and run to December 1 to celebrate the 150th anniversary of American independence. The "State House" stands on a table at the entrance to the main dining room of the hotel.

Federal Commissioner

Rear Admiral H. O. Stickney, retired, who has been appointed by Secretaries Hoover and Kellogg as Federal Commissioner to the Sesqui-Centennial International Exposition commemorating the 150th anniversary of American Independence and which will be held in Philadelphia from June 1 to December 1. Admiral Stickney will be in full charge of the United States Government exhibit, which will be the largest of its type ever made.

[illegible] Come Back Into Prominence

When New York was still New Amsterdam the Dutch there played bowls on a bowling green, still known by that name as part of Battery park. The game that raged in England and other countries centuries ago—Ohio and six other states have Bowling Greens named after it—has been experiencing a revival. By way of Canada or Florida it has arrived in Buffalo, Boston, Cincinnati and other cities. President McGilvrey has now announced an intention to introduce it to the young ladies attending the state normal college at Kent, Ohio.

Played with wooden balls weighing about three pounds and not exactly spherical, one ball for each player, on level lawns of moderate extent, men and women participating without necessarily changing from street clothes, the game is said to have certain practical advantages over other sports and to provide moderate exercise along with a great deal of sociability, amusement and opportunity for skill. Indeed, we understand a determined man can become wrapped up in it almost as completely as in golf.—Cleveland News.

Trees and "Red Tape" Mixed Up in France

In France it is necessary to obtain government permission to cut down one's own trees. This is due to the important part played by scientific forestry in the national life and to a desire to prevent destruction of national wealth on even the smallest scale. Unless the tree be quite dead it is probable that the owner's request will be refused. Nor may he even have it clipped except by a person properly qualified, lest the tree be injured.

Trees that are municipal property or such as line the highways of France also may not be cut down, even when dead, without the permission of the local district council. The Paris municipal council has, however, just made a move to abolish this permit-seeking necessity as applied to the metropolis.

The proposal is not looked upon with universal favor. Suspicious Parisians contend that the council is trying to shirk some of its responsibility. Then, too, it is pointed out that the consequences, were all districts of France to adopt so loose an attitude toward the cutting down of trees, might be serious.

Germans Back to the Land

Business depression is causing a reflux of German people to the land. The country roads around the big cities are crowded with city people out of employment and seeking work. When told in the country that there is none they beg and threaten. The country folk who first thought to get rid of the job hunters by the process of calling the dog have learned that many of the hungry seekers for work carry leaded clubs and even firearms. The country police hardly know what to do with the problem. German excess population is returning to the land, but the land does not appear to want them.

Unwilling to Learn Welsh

John Williams, presiding at the Welsh Caerpilly school managers' meeting recently, referred to an examiner's report, which stated that the teaching of Welsh in Glamorgan, Wales, was a complete failure, and that the matter ought to be given serious consideration, says the Cardiff Times. He (the chairman) agreed with the report and said it was sad to reflect upon it. In his opinion they would never have Welsh properly taught until they had expert Welsh teachers.

Krupp Works Now Mint

The Greek government has placed its order for the minting of new small coins with the Krupp works of Essen, the converted ammunition plant, says the governments' commerce reports. Coins are to be minted to the value of 65,000,000 drachmas, the alloy to consist of 70 per cent copper, 20 per cent nickel and 10 per cent aluminum.

Saddle Valued at $5,000

G. S. Garcia, of Elko, Nev., owns a saddle that he values at not less than $5,000. Garcia is an expert saddle maker, and he made this one for his own use. The big value in the saddle outside of the workmanship, is the $4,000 worth of gold and silver worked into it.

AMERICAN YOUTH

Elizabeth ("Betty") Clark, 13, of Cedars, Delaware, is one of that state's girl candidates for the American Youth Award, established by the directors of the Sesqui-Centennial International Exposition, to be held at Philadelphia from June 1 to December 1 in observance of 150 years of American independence. If "Betty" is finally chosen to represent Delaware she will be given a week's trip to the Exposition and to Washington and the White House, where she will receive a medal from the hands of President Coolidge.

AID TO BEAUTY

Under this young woman's skillful hands the front of the Administration Building of the Sesqui-Centennial International Exposition Association quickly takes on a delightful aspect. She directs gardeners where to place the small trees and shrubs about the great stucco building. She is doing her share to make the big celebration of the 150th anniversary of the signing of the Declaration of Independence a success.

1ST AMERICAN YOUTH ENTRY

Edith May Adams, eighteen-year-old Barrington, N. J., girl, presenting her entry blank to Mayor Kendrick in his office at City Hall, Philadelphia. The American Youth and Teacher Award was established as a tribute to American youth and teachers by the Board of Directors of the Sesqui-Centennial International Exposition, through which the people of the United States and the world at large will celebrate the 150th anniversary of the Declaration of American Independence. The exposition will run from June 1 to December 1. Miss Adams' entry blank cited her for heroism display. I recently when she remained inside a burning building helping doctors render first aid to injured firemen. She is a candidate for the Golden Eaglette, the highest gift within the hands of the Girl Scouts. Each state will elect a girl and boy and one teacher to represent them and the successful candidates will be the guest of the Sesqui officials from June 28 to July 5 at the exposition. This will also include a trip to Washington where they will be received by President Coolidge and presented with medals.

The new spring McCall Quarterly is here and it is chuck full of splendid styles. Pictorial Quarterly also on sale and display at News office.

George Bleeks was in town Monday and is dividing his household goods among the three children, preparing to make his home with them. His eyesight is failing rapidly.

One day last week a bird was noticed perched on the edge of the barn roof of the Mrs. Jane Coburn farm, east of town. Mrs. Coburn asked a member of the family if it was a bird she saw there, was told that it was not, but only a loose shingle that the wind had loosened. Later it developed that it was really a bird, for Lester, a son, going to the barn found the bird the victim of a pet cat. Upon investigation, it proved to be a pigeon, presumably of the carrier variety; upon its leg was attached a band of silver, or aluminum which bore this legend Vic 19-1012.

Disinfection of Stables Urgent

Of Great Importance Following Outbreak of Some Contagious Disease.

(Prepared by the United States Department of Agriculture.)

The importance of disinfecting the premises following an outbreak of some contagious disease is not fully appreciated by the average stockman and farmer, according to the United States Department of Agriculture, this conclusion being based upon the experience of the bureau of animal industry of the department in dealing with infectious diseases of live stock. Disease germs, unless destroyed, have the power to maintain themselves indefinitely on the premises, insanitary stables in particular being a favorite rendezvous. Their presence is a serious menace to the health and life of farm animals housed in such places, and an epizootic of some infectious disease may at any time break out. In the disinfection of stables there are three essentials, namely, proper preparation of the building to facilitate reaching organism of disease, an effective disinfectant, and a method of applying the disinfectant that will assure thorough contact with the bacteria.

Clean Out Trash.

In the preparation of the building see that all cobwebs, dust, etc., are cleaned from the ceilings, partitions, doors, and floors, and remove all refuse including manure from the stable and barnyard to a place inaccessible to live stock. Such refuse should then be burned or treated with a solution of chloride of lime diluted with water in the proportion of six ounces chloride of lime to one gallon of water. In the case of an earth floor that has become contaminated for some depth, remove four inches or more of the surface soil, treating it with the same disinfectant as suggested for refuse and manure. Replace this layer of dirt with soil from an uncontaminated source or, better still, lay a floor of concrete, the most durable and sanitary material for a stable floor. Any woodwork that has become softened or that is so porous as to be a good medium for absorption of disease germs should be removed, burned, and replaced with new material.

It is highly important that the disinfectant used be effective. One of the best disinfectants is a mixture in the proportion of four ounces of a compound solution of cresol (a coal tar product) to one gallon of water. More detailed information relative to disinfectants and their use on the farm may be obtained from state agricultural colleges and the United States Department of Agriculture.

Applying Disinfectant.

The best method of applying the disinfectant is by means of a strong spray pump, although where the surface to be treated is limited a whitewash brush may be used. The pump should be equipped with not less than 15 feet of hose, there being attached to the hose a five-foot section of iron pipe of the same caliber with a spraying nozzle at one end.

Useful Articles

Scientists say the barrel is the most efficient container known to man. During the last year there have been 5,780,000 manufactured as against 4,725,000 the year previous.—Good Hardware.

CHAPTER XIV—Continued

—22—

"He jump on heem from de tree!" Michel pointed to the broken branches of a neighboring spruce.

"That's what happened!" groaned Steele. "He waited for Pete to come up, and dropped on his back. Game old Pete! He gave a good account of himself before he went."

"We not tell de Injun dis," advised David.

"No, but they're stampeded by this time. We can't hope to hold any Portage lake hunters after last night. I guess we're licked."

So, burying his staunch friend in the snow, Steele turned back, bitter with defeat, for his hope of aiding the St. Onges had lessened as the November days wore on.

On their return Steele and the Indians found the camp of the Ojibways already deserted. On a blazed birch was the message:

"We are going up the valley. You have not driven away the Windigo and we have fear to remain."

They crossed the river to their camp, where David, from whom no calamity, however dire, could banish appetite, was speedily cooking breakfast. There, also, they found Little Jacques, shamed of face, for with the return of the others, his courage had revived.

Eating the warm meal which David had cooked, the tired and sleepy men turned into their blankets. In the afternoon David and Steele waked to learn from Little Jacques that Michel had taken his rifle and ax and left the camp. As they sat by a huge fire, for the trees were snapping with the strengthening frost, like a shadow, the Iroquois slipped back across the river.

"Any sign of our friend?" asked Steele.

"No track on de ridge w'ere we set de beeg trap. Wind shift, eet grow cold."

The men ate in silence, and filled their pipes. For a time they sat and smoked, too dejected for conversation.

David had freshened the fire with a birch log and stood holding a blazing stick to his pipe, when he tilted his head. Steele watched the expression of the furrowed features in the firelight slowly shift from mild curiosity to sudden interest.

"You're not going to start us out again tonight, David?" said Steele.

"I hear somet'ing den," was the low reply. Steele rose and held his breath, ears straining.

Then from the ridge of the fox sets, hardly a half-mile distant, rose a scream.

"Hy gar! He's at de trap!" And David leaped for his shoes and rifle, and started for the ridge, followed by Steele and Michel.

As they crossed the river, the scream again lifted on the freezing air. The men had stopped to listen to locate the position of the beast, for the ridge was a long one, when, as the cry rose to its climax, it was cut short off—to leave the night again quiet.

"We go easee—no scare heem," cautioned Michel.

They were nearing the first fox-set, and still the voice in the night held its silence. Could the beast be waiting to rush them from cover, like a wounded grizzly, wondered Steele.

Separated for safety, with cocked rifles, they advanced to the bear trap masked in the snow beside the bait.

"What you see, Michel?"

"He bin here, but miss de trap!" muttered the Indian, doubled over the snow. Steele and David moved up to look at the tracks. The trail led down the ridge toward the second trap. The hopes of the three friends rose. But why was the Thing so silent? Was he waiting to leap on them as he had sprung on the hound?

With rifles loose in the crook of the left arm, for the fingers of the right hand would freeze if exposed, and spread like skirmishers, they stalked the position of the hidden bear trap.

Through the blue shadows, Steele strove to locate the position of the fox-set beyond them. Then the warning arm of the Iroquois held him tense in his tracks. He slipped his right hand from the mitten to the grip of the Mannlicher. What had Michel seen?

As if carved from stone the Indian kneeled, rifle leveled, while Steele waited breathless for the explosion. Then to the surprise of the man whose right hand was fast stiffening on his gun grip, Michel suddenly rose to his feet. Joining Michel, where the view was unobstructed, Steele gasped in amazement. There in the snow, by the fox-set crouched a black hulk.

"Shoot, Michel!" he whispered, leveling his Mannlicher.

"No use," came the muttered answer. "Pete, he rest easee—tonight."

"What! He's in the trap?"

"Ah—hah! He nevaire move; an' he face de odder way."

David joined them. "Dat Windigo froze stiff! Dis tam de trap stop hees howl queek!" But as they approached, three rifles covered the black shape in the snow.

Steele's heart beat high. Now that the crazed beast with the evil voice lay stiff in death, now that there was hope for Wailing River—and for her, the baffled scientist in Steele clamored for the key to the riddle. What breed of beast, mad or normal, could it be?

First at the trap, Michel turned to Steele with a wild oath.

"By gar! Look, look w'at we hunt all dis tam'!" And the infuriated Iroquois slashed savagely at the carcass gripped by the jaws of steel, till the knife blade snapped in his hand. Then with a heave he turned over the hairy body with the trap, and Steele stared, dumbfounded, into the twisted features, horrible in the grimace of death, of—Pierre!

"Good G—d! Pierre from Ogoke—Laflamme!"

In amazement, David and Steele bent over the distorted face etched with the frenzied despair of the moment when the steel fangs snapped, crushing the bones, and he measured

Michel Had Taken His Rifle and Ax and Left the Camp.

the minutes until the chill of the white death iced his blood. This Thing, stiff in its suit of bear-skin, with the huge feet lashed to the legs—this frozen masquerader, who, from Wailing River to the Feather lakes, from the Little Current to the Medicine hills, had filled the tipis with fear, had at last paid the price.

"So you de feller dat keel de man at Stoopin' riviere, an' poor ole Pete, ah—hah?" muttered the Ojibway, examining curiously the hood, framed from the scalp of a huge black bear, and the skinned-out paws, pieced into the great feet which had left the mysterious trail.

At length Steele found his voice. "To think of all that wailing and squalling being done by an Indian! What vocal chords! He was a marvel! Must have been trained for it by Laflamme! Poor old Pete! We've squared it for you. How did he kill him, Michel?"

"Shoot heem from de tree, den cut heem wid de knife!"

"How he run on de snow wid dem feet beat me," wondered David.

"He use snowshoe 'til he wan' to make Windigo track. He lose de shoe w'en Pete get heen trail."

Then the stored hate of weeks for the master mind behind this broken tool at their feet—the arch plotter, who, with such subtlety had planned to turn the valley of the lower Wailing into "forbidden country" which no hunter dared enter—a land under a taboo, spirit-ridden, shunned; was loosed in Steele.

"That crook at Ogoke shall pay for all this—pay with his skin, with every cent he owns," he stormed. "Give me your hands, you two!"

Slipping off their mitts the three friends gripped over their victim.

"We swear, here and now, that we will run Laflamme and his crowd out of this country, if we stay on the snow until spring. Promise!"

"No!" objected David, withdrawing his fist. "He ees for me—de odders for you!"

"Right! He belongs to David—the police can't have him!"

And the three half-frozen men left the thing in the trap and snow-shoed back to their camp where they found Little Jacques huddled by the fire bemoaning the fate of his misguided friends, who so rashly had followed the voice of the Windigo to their doom.

"What's the matter Jacques? Think you see ghosts?" asked Steele of the frightened Cree.

"You—you not eat up?" he asked. "You nevaire shoot de gun. I had fear de Windigo get you."

"No, we got him—in the bear trap. In the morning I want you to go up and see him so you can tell the people at Wailing River."

"No, no! I weel not look at heem!" protested the little half-breed, his face picturing the horror aroused by Steele's suggestion.

"The Windigo, Jacques, we found to be an old friend of yours, sent by Laflamme to frighten the Indians—Pierre, who was at the post in September. You must have a look at him for yourself before you take the news to St. Onge. In the morning we'll send for all the people in the district to come and see him."

"Pierre, from Ogoke, he mak' all dis trouble?"

"Yes. He won't scare any more hunters in this valley."

CHAPTER XV

In the morning Steele with difficulty persuaded fearful Little Jacques to accompany him to the bear trap on the ridge. The Cree, with much murmuring and many misgivings, cast a hurried look at the twisted features of the thing in the trap and turning, led Steele a mad pace back to camp. Then Jacques started with his dog-team for Wailing River with the news of the victory.

Before dawn, Michael and David had left for the scattered camps at the head of the lake to dispatch dog-runners east, south and west with the word that the dreaded Windigo lay frozen in a bear trap at Portage lake for the eyes of all who would journey there to see.

But what, after all, did this victory—this thwarting of Laflamme's scheme to terrorize and depopulate the valley—mean to him, Steele asked himself as he sat beside his fire of birch logs that late November morning. There was no doubt that the Indians, once they looked at the body of Pierre and learned that the Ogoke trader was at the bottom of it all—had loosed in their country a madman with orders, not only to drive them from their hereditary hunting grounds, but to kill—would be keen for vengeance. There would be no lack of volunteers among the trappers for a campaign against the free-trader. But there would be no help from the government until spring, and the situation at Wailing River demanded immediate action. No, there was nothing to do but pull Laflamme's teeth at once, and notify the government later.

But then the defeat of Laflamme did not mean the salvation of the post—far from it. Lascelles could close the post, even in the face of a profitable furure, for the loss of the fur canoe had put the place badly in debt to the company. So, with Laflamme eliminated, Denise St. Onge seemed no nearer. Whether he kept the post in operation or not, the inspector would never release her from her promise. The only solution was her father's breaking with Revillon Freres—but would he do it? Would she allow him to, knowing the hopeless alternative he would face?

Then the wind-burned features of the man who sat thinking by the fire contracted with pain as he realized the presumption, the futility, so far as he was concerned, of his solicitude for the future of those at Wailing River. Already she had thrust him from her. She had condemned him without hearing. In the end, if they won out for St. Onge, and, owing to what had been told the Revillon people at Montreal, Lascelles dared not close the post, he, Steele, would have her gratitude—her gratitude! when once she had come to him with her heart in her eyes—had vibrated like the string of a violin to his touch, had turned instinctively to him in her despair!

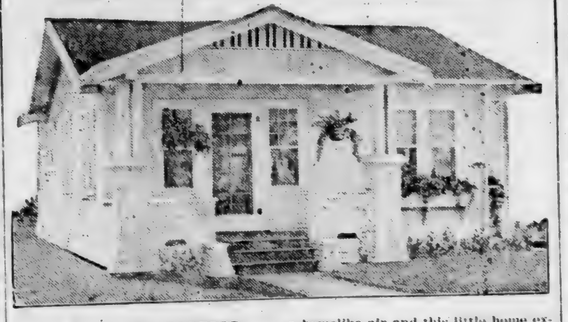
In two days Michel and David returned with hunters from the head of the lake keen for a look at the body of the masquerader who had left a trail of terror throughout the valley of the Wailing. And when they saw the thing which had been sent by Laflamme to drive them from their trap-lines to new and strange hunting country in the upper valley where their trade would go to Ogoke, there was a clamor for vengeance. Later when dog teams, from the Little Current to the Medicine hills, had answered the call of runners from Portage lake, Michael marshaled the Ojibways at the trap on the ridge and addressed them dramatically in their native tongue.

(TO BE CONTINUED.)

Tides in Inland Seas

There are tides in both the Mediterranean sea and the Gulf of Mexico. In the Mediterranean they are so slight as to be almost imperceptible; in the Gulf of Mexico they run from two and a half to four feet. A delta is an alluvial plain formed by a deposit of sand and mud carried down a river. As the stream enters quieter waters the deposit falls to the bottom and increases in area and height until it reaches the surface and is raised by floods and tides above the high-water mark. The delta of the Ganges and the Brahmaputra has an area of 50,000 square miles and that of the Nile is 200 miles wide and 100 miles long. The Mississippi delta, which encroaches at a rate of 360 feet a year, has an area of 12,300 square miles. Great deltas are only found in comparatively tideless seas, because the deposits would not otherwise have a chance of accumulating.

Well Selected Materials and Design Make Even Small House Attractive



By WILLIAM A. RADFORD

Mr. William A. Radford will answer questions and give ADVICE FREE OF COST on all problems pertaining to the subject of building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

A great many people have the mistaken idea that the very small house or cottage cannot be made so attractive nor so architecturally correct as a large house, but one glance at the accompanying picture will prove beyond doubt that this is wrong. Probably the reason for the growth of this idea is the fact that too often the wrong methods are used in the attempt to make the small house attractive. That is, it is ornamented with many fancy trimmings which have just the opposite effect from that which is desired.

Simplicity is a good rule in all house design, but it is absolutely essential in the design of the small house. Lines and materials are the means which should be used to make the small house attractive and this cozy little cottage illustrates what can be done along these lines. It is notable that not one strikingly "ornamental" feature is used.

The house measures 24 feet wide by 32 feet deep. At the front there is a projecting porch extending only part way across the house and at the rear the kitchen projects slightly from the rectangular form. The roof, which is covered with a composition roofing, extends out in moderately wide eaves and the plain rafter ends are allowed to show. The porch roof forms a simple gable and is supported by pillars which are broad at the base but relieved of any heaviness by a lighter construction above.

The walls are covered with a plain drop siding which extends down to the grade level with a slight spread just above the ground. The effect is to make the house sit closely down upon the lot as though an integral part of it. Six-paned upper sash are used in the windows to good effect while a window box at the front and trellis for training a beautiful vine add much to the front exposure. Well selected plantings about the foundations and the hanging baskets on the porch add a homelike air and this little home extends an invitation which is irresistible.

The front entrance, with windows at each side, leads directly into the living room and from it an arched doorway gives a view of the dining room beyond. Back of the dining room is the kitchen. It is a small kitchen, as might be expected, but is well arranged so that it affords ample and convenient working place.

Floor Plan.

Windows over the sink not only afford plenty of light but also make possible a view of the outdoors for whoever may be doing the kitchen work. The refrigerator is placed in a recess beside the back door. It could easily be arranged to be served from the back porch without entering the kitchen.

The two bedrooms, with a bathroom between, are placed at the other side of the house. These rooms all open off of a hallway which is reached from the dining room. Both bedrooms are provided with closets and that in the front bedroom is unusually large. A portion of it might easily be used to provide a linen closet.

Tension Is Relieved by White Woodwork

There is something about white woodwork in a house that seems to relieve the tension of the stern duties that compose the day's work, and this, too, may be used as a device to connect the various elements of the house. It fittingly frames other light tones in the background and contrasts pleasingly with the darker ones. It is neutral, for it goes with anything, but it is distinctive, too, and adds richness and spaciousness to the aspect of the home.

In general, light colors make the room seem larger and lighter, and give the effect of daintiness, cleanliness and cheer. If used to excess, an effect of barrenness may be produced. Light colors generally respond well to artificial light.

On the other hand, dark colors will decrease the size of the room, but produce an effect of richness and dignity. They are, however, hard to illuminate at night and may become gloomy or even dingy if used too hard.

Conspicuous contrasts in light and dark, such as dark walls with light woodwork, or light walls and dark woodwork, are restless and distracting. There should be only enough difference between walls and woodwork to avoid monotony.

Lay Shingles Properly and Use Good Nails

Straight-grained shingles, sawed from sound bolts, laid four and a half inches to the weather, nailed with two three-penny blued nails to each shingle, and no shingle more than six inches wide, will outlast two successive coverings of cheaper shingles, laid carelessly. Poorly nailed shingles, especially when laid in wide courses, too much exposed to the weather, will curl, split and decay from too much wet surface underneath. Inadequate nailing invites decay and ruin.

Cellar Waste

It has been estimated by architects that over $2,000,000,000 is invested in the construction of cellars for American homes, and the return on the investment is infinitesimally small. In fact cellars cost far out of proportion to the use they have been put to, and as a result a movement is under way to utilize attractively and healthfully the space heretofore used for the basements or cellars.

Chimney Is Important Part of New Residence

The matter of flashings is one that needs careful attention when a person is building a house in which he hopes to be comfortable and free from petty troubles. A most important place for proper flashing is about the chimneys. On a stucco home the chimneys usually are finished in stucco to harmonize with the rest of the house, but are of masonry construction, lined to conform with the rules of fire safety.

The stucco should be applied only after the chimney has been carefully covered with metal lath. Such a chimney always should have a cap of stone, cast concrete or other masonry which will overhang the metal lath and stucco and provide protection against water seeping in at the joint. Usually this is accomplished by providing a generous overhang and grooving the underside of the chimney cap well away from the stucco, so that the water will be carried to the vertical and unbroken portions of the chimney where it can do no damage.

Steel Braces for Scaffolds Practical in Stucco Work

Steel braces that are attached to the wall with four nails and have two legs that rest against it to keep them from shaking, have been found practical for stucco and other construction jobs. They can be set up in much less time than is required for the usual wooden staging, are made of steel that will not bend, and fold up for easy carrying. They are manufactured in two lengths, three and three and one-half feet, weigh less than 200 pounds the dozen and are said to last indefinitely if properly handled. A dozen or two of the brackets, it is said, will take care of the average stucco job.

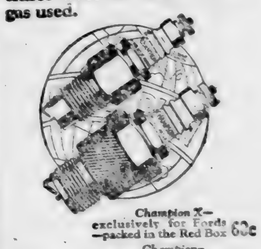
Smooth Bark Trees Need Heat Protection

A young tree, and more especially those with smooth bark, should be wrapped with a protective covering during the hot summer months of their first year. The sun, if hot, will burn into the tree, and in many instances kill or at least scar one side, which will affect the growth. A wrapping with burlap or rags will be sufficient and this should be done up to the point where the tree branches.

CHAMPION NATIONAL CHANGE WEEK
MAY 2 TO 9

Install CHAMPIONS Now!

Hundreds of thousands of motorists will make certain of better engine performance for another year by installing new Champion Spark Plugs during National Change Week, May 2 to 9. They will bring back engine power and speed, forestall tinkering and costly repairs; and save their cost many times over in less oil and gas used.



Champion X—exclusively for Fords—packed in the Red Box 60c
Champion—for cars other than Fords—packed in the Blue Box 75c

High and Low German

High German is so-called because it is spoken in the hilly and mountainous midland and southern districts. Low German is spoken in the low and level northern sections.

COLOR IT NEW WITH "DIAMOND DYES"

Just Dip to Tint or Boil to Dye.

Each 15-cent package contains directions so simple any woman can tint soft, delicate shades or dye rich, permanent colors in lingerie, silks, ribbons, skirts, waists, dresses, coats, stockings, sweaters, draperies, coverings, hangings—everything!

Buy Diamond Dyes—no other kind—and tell your druggist whether the material you wish to color is wool or silk, or whether it is linen, cotton or mixed goods.

Silent

"Do you ever have any difference of opinion with your wife?"

"Oh, yes, but she doesn't know it."

A Lady of Distinction

is recognized by the delicate, fascinating influence of the perfume she uses. A bath with Cuticura Soap and hot water to thoroughly cleanse the pores followed by a dusting with Cuticura Talcum powder usually means a clear, sweet, healthy skin.—Advertisement.

Diversion

"Harold, where are you going?"

"No place, mother; just out to see a few accidents."

Ends pain in one minute CORNS

One minute—that's how quick Dr. Scholl's Zino-pads end the pain of corns. They do it safely. You risk no infection from amateur cutting, no danger from "drops" (acid). Zino-pads remove the cause—pressing or rubbing of shoes. They are thin, medicated, antiseptic, protective, healing. Get a box today at your druggist's or shoe dealer's—35c.

For Free Sample write The Scholl Mfg. Co., Chicago

Dr Scholl's Zino-pads

Put one on—the pain is gone

Eggs covered with boiling water and allowed to stand for five minutes are more digestible than those allowed to boil for three minutes.

If you use Red Cross Ball Blue in your laundry, you will not be troubled by those tiny rust spots, often caused by inferior bluing. Try it and see.—Advertisement.

"Bluestocking" as a term for those going in for an overdose of learning, dates to an Eighteenth century literature.

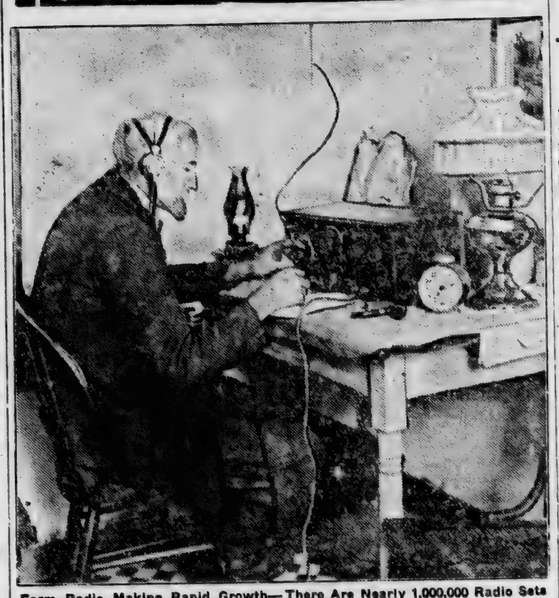
Nature's own body builder

"Six months ago life was unbearable, I was nervous and rundown. No sleep, no appetite. Since taking Tanlac I enjoy steaks, pastries, etc., sleep like a log, gained 10 lbs." Miss Helen Ferry, 1201 N. Broadway, Indianapolis, Ind.

Tanlac is Nature's greatest tonic and builder. Made from roots, barks and herbs after the Tanlac formula, it revitalizes the blood, tones up the digestive organs and puts the whole system in fighting trim.

Don't go about your work sickly and discouraged. Take the example of millions who have been helped by Tanlac. Stop at your druggist's today and get this wonderful tonic. You'll be surprised how quickly you improve. For constipation take Tanlac Vegetable Pills

RADIO



Farm Radio Making Rapid Growth—There Are Nearly 1,000,000 Radio Sets on Farms in the United States.

(Prepared by the United States Department of Agriculture.)

There are nearly 1,000,000 radio sets on farms in the United States, the Department of Agriculture estimates in a report on the growth of farm radio during the past five years.

In some states, the department says, there are radio sets on 25 to 40 per cent of all farms. Estimates made by the department in 1923 showed 145,000 sets in use on farms at that time; 365,000 sets in 1924, and 553,000 sets early in 1925.

Increased power and improved broadcasting, together with better receiving sets, the department believes, "will do much to aid in establishing the permanency of the use of radio for the benefit of agriculture.

"One station alone in a period of three months' broadcasting of market and weather reports, received more than 3,000 letters of commendation from farmers, country banks, shippers of live stock, and small merchants in the towns in 12 agricultural states surrounding the station."

Interference among stations may gradually be eliminated, the department believes, as many of the less active stations are being discontinued, and technical improvements are being made in both broadcasting and receiving equipment. Of 1,458 radio stations of all sizes licensed to broadcast since broadcasting began, only 536 were active on January 1 this year.

Co-Operative Arrangements.

The department has made co-operative arrangements with more than 100 stations for broadcasting official market news gathered by department representatives in leading shipping and consuming areas. Since the first of the year the department has made arrangements with about 60 stations to broadcast on a regular schedule four additional services dealing with general agricultural information.

Literally hundreds of stations have requested the privilege of handling the government reports, but many of the requests have had to be refused the department says, because the stations are remote from the department's market news branch offices.

"When the experimental radio market news service was announced on December 21, 1920," the report states, "those in the Department of Agriculture who were directing the new activity hardly anticipated the wonderful possibilities of radio broadcasting as we now know it. A laboratory transmitter at the United States bureau of standards on a 400-meter wave length, a few enthusiastic amateurs within a hundred miles of Washington, and a 5 p. m. schedule of about 500 words by radio telegraph, composing what was called the 'radio marketgram,' constituted the elements of the experiment.

"The practical results of this first experiment could hardly be called conclusive, but they gave encouragement to those in charge of it to push on in the quest of more and more evidence. On April 7, 1921, an announcement was made that arrangements had been completed with the air-mail radio service of the Post-Office department to transmit by 'wireless' market reports several times a day from post-office stations at Washington, D. C., Bellefonte, Pa., St. Louis, Mo., and Omaha, Neb.

Amateurs Were Enlisted.

"Assuming an effective radius of audibility of 300 miles about each station, licensed amateurs in the areas covered were enlisted to copy the reports and to furnish them to shippers' associations, county agents, state bureaus of markets, farm bureaus and other agricultural agencies, banks, newspapers and local telephone exchanges. A number of licensed operators offered to copy the reports. By January 1, 1922, the market reports were being relayed and broadcast by radio telegraph from seven post office stations in a chain across the country.

"During 1921, reports were furnished to three of the then very few radio [illegible] broadcasting stations. Since [illegible] service has grown by leaps and bounds until now there is practically no agricultural community in the country that is without official market reports on agricultural commodities. Well-established schedules of weather, crop and market reports are broadcast from more than 100 stations in all parts of the country."

Farmers, of necessity, the department says, have bought mainly high priced sets capable of getting distant stations. The average cost of radio sets on more than 1,000 farms widely scattered over the country in 1923 was estimated by the department at $175. Better and more easily operated equipment can be bought now for half this amount, the department says.

An authentic list of broadcasting stations the country over that broadcast market and crop reports has been prepared by the department for free distribution. Requests for the list should be mailed to the Bureau of Agricultural Economics, United States Department of Agriculture, Washington, D. C.

FOREFATHERS OF RADIO

By GEORGE LEWIS of The Crosley Radio Corporation.

Developments in radio transmission went ahead by leaps and bounds, but the reception of signals was hampered by the lack of proper means for detecting them. Many men worked upon this problem. J. A. Fleming, for instance, invented the "valve," which was the forerunner of the radio tube developed by DeForest in this country. But the detecting device which became most popular in the early days of radio was the crystal detector, as developed by Dinwoody and Picard and introduced in 1906. By means of the crystal detector the received electric current is so modified that it will operate a telephone receiver.

J. A. Fleming.

Up to this time there had been so few radio stations that there was little difficulty about the signals of more than one station being received at the same time and "interfering" with one another. However, such difficulties were anticipated by other factors which overcame them.

The length of waves sent out by the transmitting station depends upon certain constants of the apparatus, just as the length of a water wave depends upon the object which causes the disturbance in the water and is responsible for the waves. Thus a cork dropped into a pond will send out little, short, choppy waves, while if a big ocean liner overturns, the splash it makes will be followed by giant waves of great length. By adjusting certain parts of the transmitting apparatus the length of wave that it sends out may be controlled, and by adjusting similar parts of the receiving apparatus one may control the wavelength to which it will respond. This adjustment is called "tuning."

Thus, very early in the history of radio transmitting, stations near each other were tuned to different wavelengths, so that the operator of a receiving set could tune to any one of them.

HOW TO KEEP WELL

DR. FREDERICK R. GREEN
Editor of "HEALTH"

(©, 1926, Western Newspaper Union.)

RAISING ELKS FOR FOOD

PRIMITIVE man planted no seeds and reaped no crops. He got his food from the trees, with no thought of the future. The first man who proposed to plant seed for future harvests was probably looked on as inspired, as well he might be.

For a still longer period, the human race got its meat supply from wild animals. Then the commoner and gentler animals, as cattle, camels, goats and sheep, were tamed and raised for both milk and meat.

Having once domesticated these animals and becoming used to their meat as food, man and especially civilized races apparently paid little attention to any others. Other forms of animal life found in new lands as they were explored were apparently neglected. When America was discovered and explored, no attention was paid to the new food supplies found here nor was any attempt made to develop them. The English were used to beef as a meat supply and to cattle as a "source of milk." So the buffalo, elk, deer and other meat animals were slaughtered for their hides, hoofs and skins without any attempt to save and cultivate them for permanent use.

It is only through accident that the American buffalo was not totally exterminated.

The American elk, a still more valuable meat animal, which formerly existed by the million, was also nearly wiped out through senseless slaughter. In 1889 the federal government settled a herd of thirty-eight elk in Custer park in South Dakota. In 1901, Roosevelt, as President, started a definite program for protecting them. They are now, through protection, rapidly increasing in numbers and may soon be a source of meat supply.

In 1905, the Department of Agriculture issued Bulletin 303 on Deer Farming and a number of farmers took up this line of breeding.

In many ways elk farming is easier and more profitable than cattle raising. Elk will thrive on less food than any other member of the deer family, they can live on land fit for nothing else, they grow to large size, a mature male weighing from 700 to 1,000 pounds, and a female from 600 to 800 pounds. They mature early, they are unusually hardy and are free from most of the disease that afflict cattle. There are now about 70,000 elk in the United States and from this supply large quantities of meat could be developed.

OUR INSECT ENEMIES

MAJ. M. A. REASONER of the United States army recently delivered an address, in New York before a manufacturers' association. Coming from an army officer, you would naturally expect such an address to deal with the latest and improved methods of killing human beings and of new types of submarines, airplanes and long-range guns. But it wasn't. Major Reasoner is an officer in the medical corps and is consequently more interested in saving human life than in destroying it.

The enemies Major Reasoner talked about are not only enemies of this country, but of the entire human race. They are not other men, but insects. Today the whole world is talking about peace among men. This is not only sensible, but almost necessary. It is wise and desirable that human beings, the world over, should join forces against a common enemy, one which has been fighting human beings since time began and which will continue to fight and kill us as long as life exists.

Instead of being interested in life-destroying devices, Major Reasoner is interested in life-saving, and the one invention which he says has saved more lives than any other is the ordinary fly screen.

It is impossible, says Major Reasoner, to estimate the damage that insects have done. Small as they are, they have overthrown governments and even blotted out whole countries. Historians have long been unable to explain why such powerful civilizations as those of Greece, Rome, Egypt, Mesopotamia and Assyria were destroyed. In many cases this was due to insect-borne diseases which either wiped out the population or so weakened the people that they were easily conquered by some stronger nation.

With us, the common house fly is the most frequent carrier of disease. Typhoid, cholera and dysentery are spread by it. Mosquitoes carry malaria and yellow fever, as well as two tropical diseases, filariasis and dengue. Various kinds of flies carry other diseases as yaws and tularemia. Fleas carry bubonic plague and dum-dum fever. Lice carry typhus fever, trench fever and relapsing fever. Ticks carry Rocky mountain spotted fever.

For centuries no one suspected that insects carried these diseases from man to man. They were considered too small to be of any importance. So their very insignificance was their protection.

Now that we know how dangerous they are, they can be fought in the open. Man's strength will protect him from these little foes if he will use his knowledge. If not, he must pay the penalty.

DR. W. B. CALDWELL AT THE AGE OF 83

Mother! It's Cruel to "Physic" Your Child

To Dr. W. B. Caldwell, of Monticello, Ill., a practicing physician for 47 years, it seemed cruel that so many constipated infants and children had to be kept constantly "stirred up" and half sick by taking cathartic pills, tablets, salts, calomel and nasty oils.

While he knew that constipation was the cause of nearly all children's little ills, he did not believe that a sickening "purge" or "physic" was necessary.

In Dr. Caldwell's Syrup Pepsin he discovered a laxative which helps to establish natural bowel "regularity" even if the child is chronically constipated. Dr. Caldwell's Syrup Pepsin not only causes a gentle, easy bowel movement, but, best of all, it never gripes, sickens or upsets the most delicate system. Besides, it is absolutely harmless, and so pleasant that even a cross, feverish, bilious, sick child gladly takes it.

Buy a large 60-cent bottle at any store that sells medicine and just see for yourself.

Homely old Stepping Stones

WITHOUT doubt it would be a very spectacular thing to cross a creek in an airplane. It could hardly be employed however, by the everyday person.

Most of us are obliged to *step* across on the well worn stones. There is no royal road. The way across is like the road to prosperity, usually accomplished by slow and sure methods--by stepping securely on each successive stone until the goal is reached.

Not a stone should be missed.

Regular and systematic savings are these homely old stepping stones. Acquiring the habit of spending a little less than the amount earned and creating a stepping stone with the difference, will make each step easier and creates a feeling of faith and confidence which grows stronger with each successive step.

We have watched many take the first timid step-watched many finish the journey full of confidence. Will you let us help put your feet on the first stone?

The St. Joe Valley Bank, A STATE BANK

Why weren't the shades drawn at the Wedding of Laurel Dallas?

At the moment of a girl's greatest happiness WHY was the gaping, curious crowd permitted to press against the iron fence outside and peer through the window at this most sacred ceremony?

Only two women in all the world shared this secret—both of them mothers. The police ordered the shades drawn, that onlookers outside might be dispersed more easily. The butler started to obey the order. But the beautiful woman at the bride's elbow defied the police, that the mother of the bride, standing in the pelting rain, might see her little girl married.

Why couldn't Stella Dallas be present at the wedding of her daughter Laurel? As a mother, what sacrifice had Stella made to assure the happiness of her child? What was the strange bargain made between this outcast parent and the new mother of Laurel? Never before was there such a compact between two women.

These dramatic secrets are known to 200,000 persons in New York who have seen Samuel Goldwyn's presentation of the Henry King motion picture production "Stella Dallas," now in its fifth month at the Apollo Theatre, New York City.

But those who have learned these secrets, who have felt a tug at their heartstrings beyond human description, have not told these secrets to you. They would not rob you of an unparalleled emotional experience you are to have when you see this compelling heart story from Frances Marion's scenario of the famed novel.

Belle Bennett is Stella. Alice Joyce is the other mother. Lois Moran is the daughter. Ronald Colman is the father and twice a husband.

Small wonder this picture made Ethel Barrymore cry; that Douglas Fairbanks called it "a marvelous picture;" that Cecil De Mille regards it as "one of the few great screen achievements."

We think we know what you will say about "Stella Dallas." It will be shown at the Shrine Auditorium for one week starting Sunday May 9th with matinees on Sunday, Wednesday and Saturday at 3 P. M. and nightly at 7 P. M. and 9 P. M. The prices of admission will be 25c and 35c with a few reserved at 50c at the matinee performance and the prices at night will be 2 and 50c with a few reserved at To insure best seats we suggest dering reserved seats by mail now.

Honorable John Q Tilson, republican leader of the House of Representatives, has chosen Congressman David Hogg of the Twelfth Indiana District, to state the position of the republican party on the tariff. The subject is "The Tariff—What it does and How it does it." The address will be given over radio from W. R. C. Saturday evening May 8th at 7:45 eastern time.

"Sometimes the church that is not blessed with 'a gang' to run it is in hard luck. Most of these 'gangs' who 'run' churches would be glad to have others join them in their efforts to make the church a success. The 'gang' are usually the workers" Isn't it the truth? If a brother takes the church sincerely and loves its teaching to the extent of becoming active, a leader, if you please, why then he unconsciously becomes a part of the "gang." Wouldn't it be just wonderful if every member of a church —and all churches—was a living, acting "gangster?"

We Do STATIONERY PRINTING on HAMMERMILL BOND

Day Wyatt, age 61, who resides near Newville, passed away at his home Monday morning, following a brief illness from complications. He is survived by the widow, two sons, Glen at home and Robby at Elkhart, and one brother and three sisters. Funeral services were held Wednesday afternoon at 2 o'clock from the Christian church at Newville. Burial was made in the Newville cemetery.

Even if he did not save money (which he does) the average customer would still prefer to buy Sugar at the Isbell Wholesale Stores. This is because of convenience in location and service.

Isbell Wholesale Stores operate in 25 different cities. All of them have the same identical plan—"Cash and Carry." This does away with expensive overhead and the extra cost of doing business on credit.

Nobody who does not pay cash for Sugar can possibly buy at the Isbell price. And the saving offered is well worth taking advantage of.

Fifty-seven Isbell Wholesale Stores are now supplying the requirements of Sugar buyers. No need of going elsewhere for any kind of Sugar, or any quantity, no matter how large. Here you can buy a single case, or bag or a carload.

We like to have wholesale buyers of Sugar come in and make us prove that we sell for less.

ST. JOE NEWS.

VOL. XL | ST. JOE DeKALB COUNTY, INDIANA, THURSDAY MAY 13, 1926 | NO. 19

Philip Smith Writes About Death of Wife Last Week

Los Angeles, California.
May 5, 1926

Mr. Fred Leighty,
St. Joe, Indiana.

Dear Sir:—

I am sure it will be a shock to all the people of St. Joe and vicinity, to hear of the death of Fanny Milliman Smith, and know that the sympathy from those friends is manifold. It was a shock to myself, as well as a great surprise to Dr. Farnham, who was her doctor.

Fanny took sick on the thirteenth of April, but was apparently, simply not feeling very well; I got a trained nurse, Mrs Chaney, who lived a block from us to come up and she took hold and in a little while Fanny was feeling O K again. She didn't show any signs of feeling bad until the next afternoon and then I sent for Dr. Farnham, a very able and efficient physician, of Glendale, and he said she must go to bed and rest. He said she needn't go to the hospital, as he could take care of her very well at home. There was, as yet, no signs of anything unusual, and he thought it was the "flu" or grippe. But on the seventeenth, Fanny broke out all over, in tiny little pimples, and had all the appearances of measles or chicken pox; but Dr. Farnham said at once that it was the smallpox, and told me what to do; we were at once placed under quarantine, and treatment, under the direction of Dr Farnham, was begun. Fanny improved at once and gained steadily but slowly; the doctor was down once or twice a day and when he saw how she was gaining, he was almost as elated as I myself; Sunday, May 2nd, Fanny was so much improved that she got up in the morning and we had a great talk on our future plans; were both so happy, for she was getting well, although she had been so terribly sick, nobody can imagine just what the smallpox is, until they see the terrible disease; but about noon, she said she was so terribly tired, and would lie down again and rest, so she lay down on the davenport. I had Dr Farnham come at once and he told me she was so much worse that she would have to go to the hospital at once, where they could use the "Murphy drip tubes," in some process of giving nourishment, or something like that. So she went that night to the hospital and was greatly improved on Monday morning. About 11 o'clock A. M., she went to sleep and passed away at 1:30 P M.

She suffered a great deal the first two weeks, but when she started to improve, and was apparently getting well, she seemed to have no aches or pains, but rested easily, and seemed simply weak. She did not lose heart or give up, and the last thing she said when she went to the hospital was that she would be back in a couple of days.

Remember me to my friends in St. Joe and vicinity.

Very truly yours,
Philip F. Smith.

3008 Andrita Street,
Los Angeles, California.

P. S. The remains will be cremated and placed in the mausoleum at Forest Lawn Cemetery.

Decoration Day On The Place by James Whitcomb Riley

It's lonesome—sort o' lonesome—it's a Sund'y day to me,
It 'pears like—more'n any day I nearly ever see!—
Yit, with the Stars and Stripes above, a-flutterin' in the air,
On ev'ry soldier's grave I'd love to lay a lily there.

They say, though, Decoration days is ginerly observed
'Most ev'rywheres—espeshally by soldier-boys that's served—
But me and Mother's never went—we seldom git away—
In p'int o' fact, we're allus home on Decoration day.

They say the old boys marches through the streets in columns grand,
A-follerin' the old war tunes, they're playin' on the band—
And citizuns all jinin' in—and little children, too—
All marchin', under shelter of the old Red, White and Blue.

With roses! roses! roses—ev'rybody in the town!
And crowds o' little girls in white, jest fairly loaded down—
Oh! don't the boys know it, from their camp across the hill?—
Don't they see their com'rades comin' and the old flag wavin' still?

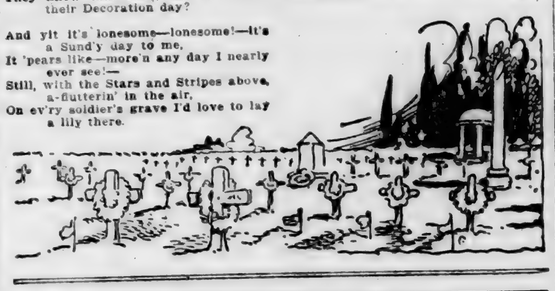
O! can't they hear the bugul and the rattle of the drum?—
Ain't they no way under heavens they can rickollect us some?
Ain't they no way we can coax 'em, through the roses, jest to say
They knew that ev'ry day on earth's their Decoration day?

And yit it's lonesome—lonesome!—it's a Sund'y day to me,
It 'pears like—more'n any day I nearly ever see!—
Still, with the Stars and Stripes above, a-flutterin' in the air,
On ev'ry soldier's grave I'd love to lay a lily there.

We've tried that—me and Mother—where Elias takes his rest,
In the orchurd—in his uniform, and hands across his breast,
And the flag he died fer, smilin' and a-rippliu' in the breeze
Above his grave—and over that—the robin in the trees!

Perhaps no poem ever written by James Whitcomb Riley contains more tender sentiment than "Decoration Day on the Place." From his own grave Riley speaks again on this Memorial day. He who wrote of the soldiers living and the soldiers dead held a warm spot always in his heart for the little children, too. And in his honor and to his memory, hundreds of Hoosiers are now engaging in a $2,000,000 building fund campaign for the James Whitcomb Riley Memorial Hospital for Children, to be erected in Indianapolis, but to be open always for the care of little children from all parts of the state.

—Reprinted From the Indianapolis Star



Baccalaureate Services Announced

Next Sunday evening at the Methodist church will be the baccalaureate services, and the pastor, Otis Jones will deliver the address. Special music by the choir.

Doubt That Continents Are Firmly Anchored

Are America and Europe drifting further apart?

This question, asked in a geological and not in a political sense, was set before the meeting of the British association by Prof. J. W. Gregory, who proposed to answer it by the use of wireless time signals for the determination of variations in longitude. Kept up for a few years, he said, these would afford a conclusive test of the theory recently advanced by Wegener, that the Atlantic ocean was produced by the drifting apart of the Americas on one side and Europe and Africa on the other.

The reality of a drifting motion of whole continents is now seriously accepted by many geologists. Recent investigations have shown that beneath the uppermost sixty miles or so of rocky crust there is a semi-molten layer of magma or lava overlying the earth's solid central core, and on this viscid mass the continental blocks find more or less uncertain footing. The idea of a drift also receives support from the rather suggestive reciprocity of the projections and indentations of the Atlantic shores of America and the Euro-African coast line.

Professor Gregory was not inclined, however, to admit the rapidity of drift postulated by the Wegener theory, and it is to get a critical test of this disputed question that he proposed the use of radio time signals.

Township Convention Last Sunday

Another helpful and interesting Sunday School convention was held in Concord township, Sunday May 9th.

The morning session opened at 9 30, with a union Sunday School held in the three churches. The Adult Department met at the Christian church, Ed Store acting as adult superintendent. The children met in the Methodist church Mrs Cora Price childrens division superintendent having charge. The young people met in the Lutheran church with Stanley Means superintendent. The adult department reports an attendance of 105 with $7.67 offering. Childrens department 85 attendance, $3 09 collection. Young people 69 attendance, offering $5 46, making a grand total of 259 in attendance and $16.22 offering. Following the Sunday School was the morning worship period; H. G. Rowe, state young peoples division superintendent, gave the address on the subject "Memories of Mother." Special music was given during this session by Reuben Koch, Mrs. Neer, Paul Hadsell and a male quartette from the Christian church.

The afternoon session opened at 2:30, H G. Rowe being the speaker. Mr. Rowe's subject for the afternoon was "The Small Sunday School." He gave a list of sixteen things which a small Sunday School could have, and emphasized the fact that a small school could be as good a school a the large school. A discussion followed. John N George of Auburn gave a short talk which was much enjoyed by all. The following division superintendents gave reports: Adult, J. R. Shilling; children, Mrs. Cora Price educational, Mrs. Arline Koch. Mrs. Koch has also started planning for a Vacational Bible School to be held in St. Joe in 1927 and has selected the following committee to work with her in promoting same: Mrs. Harriett Johnson, Ed Storer, Mrs. Ezra Kinsey, Mrs. Hollis Dilley.

The evening session of the convention was in charge of the young people, Miss Harriett Wasson being the speaker.

A workers conference was held in the Lutheran church Saturday evening at 7:30. Seventeen township and Sunday School officers were present with Harry G Rowe Mr. Rowe gave a short talk after which questions were asked and discussed.

Information As To Voting This Fall

Failure to participate in Tuesday's primary does not mean that a citizen is not registered to vote in the regular election next November, members of the election commission pointed out as they explained there was no connection between the primary and the requirement for registration.

Under a former law participation in a primary registered a voter, but that law has been changed. All persons who voted in the presidential election in 1924 and who have not moved out of the precinct in which they voted that year are qualified to vote this fall and need not register again.

Voters who have moved into a new precinct since the election in 1924 and those who have reached the age of 21 since then will be given an opportunity to register at the county auditor's office from 60 to 30 days before the regular election in November.

HOME, DAD AND THE BOY

By FRANK H. CHELEY

(© F. H. Cheley, Denver, Colo.)

The Conscientious Dad

MAY his tribe increase!

He is the one Dad in scores who really recognizes the full responsibility of fathering a modern American boy.

He is eager for constructive suggestions and is glad of help from anywhere.

Each year sees a larger number of such Dads and a correspondingly better crop of boys.

He is the man who is constantly seeking the best, physically, mentally, socially and spiritually in order that he may pass it on to his heir.

He knows that most boys live up to Dad's estimate of them! treat them contemptuously, they become contemptible; trust them, and they become trustworthy; recognize their growing manliness, and you multiply it.

The conscientious Dad probably will not have so many Lodges attend his funeral, but a real boy, well started toward manhood, will miss him mightily and hold him in fondest memory.

And when the One Great Scorer comes to write against Dad's name, he'll note—not money gained or lost, but how he played the boy-game.

Variety in Chic Spring Wardrobe

New Mode Expands to Meet Diversified Needs of Modern Woman.

Beginning with the silhouette and the chapeau and continuing to such an inconsiderable accessory as the purse, there is a lack of unanimity on practically every separate item of the new spring mode, asserts a fashion writer in the New York Herald-Tribune. You cannot dispute a lady who tells you that spring skirts must be long—attempt to temporize with her and she will point to Poiret as her authority. Advise some one that the proper hat to wear for the new season will have a narrow brim, and in a moment you will hear the name of some authority who prefers the grande dame type. And so it goes. One designer makes his waistline high, one normal, another low. One makes his silhouette flare, another's is straight, a third is kinetic.

It is interesting enough to contemplate, but the time for decision is at hand. We shall not attempt in this article to suggest what silhouette or waistline to choose for your new spring acquisitions. Instead, we shall attempt to translate the mood of fashion as it should be applied to the various components of the wardrobe. The fundamental struggle, if there be any, is between mannishness and girlishness, and for the moment each has its place—and each, as well, is de trop in the other's province.

Less Masculine.

The popular Worth model is less masculine than the extreme atrocities that were affected a year ago, but clearly it belongs to the masculine genre. Under what circumstances is this costume smart? Clearly for the morning or afternoon stroll, the shopping expedition, the spectator's role at golf links or tennis courts or similar occasions. But keep it away from the dansant, no matter what the temptation.

The Poiret evening gown is at the other end of the gamut. In it you have the contemporary absolute in femininity. The gentle nattier blue chiffon, the ingenuous silver embroidery, the bolero effect and the semi-bouffant silhouette are all represented. And the quaintly youthful longer skirt is the final touch of real girlishness. Not the merest hint of mannishness lurks about the costume—it would have been considered charmingly feminine even in those gentle prewar days.

We need go no further. What clearly appears is that for formal occasions milady is quite as deliciously feminine as her Victorian forbears, while for the rest of her infinite variety she becomes as informal, severe or sports-like, as the occasion demands.

There is no question of haphazard duality of tendencies. There is no deathless struggle between two hopelessly divergent types of dress. The modern woman is no creature of volatile moods who must always be one type or another. And the jeune fille will not develop into a concave man-

Scallops and the Combination of Rose and Black Feature Ensemble.

nish species merely because, when indulging in the recreations of her brother, she chooses to dress as sensibly.

It is simply that milady has added to her interests. Instead of being a cloistered bit of femininity all day, dressed in all the frills and furbelows of the late Victorian, she has become a sportswoman, a business woman and a clubwoman as well. And for each of these modern diversions naturally enough she requires a different type of dress. That is all that Patou means when he refers to duality of tendencies, and you need not let it worry you for an instant. The Paris collections must defer to every mood of the modern woman—they therefore include the various types of dress which are essential to each mood, and that is the why and wherefore of the dual mode, which is not really dual but has merely expanded to meet the increased demands of the modern woman.

Gowns for Every Occasion.

For spring Jeanne Lanvin has designed gowns that are suitable for every occasion and for every climate. The most exigent elegante with a wide variety of pursuits will find within her doors simple little suits for golf or yachting, smart ensembles, exquisite gowns for calling or bridge, languorous tea gowns of richest embroidery and garden party frocks of simplest organdie that are a marvel of handiwork, and perhaps better than anywhere else, lovely period gowns that are a delight to wear in the gracious setting of some rare old country house or historic castle.

This season's outstanding note, as far as everyday clothes are concerned, is the circular-cut skirt in the three or four piece ensemble. Jumper, skirt, short jacket and long or three-quarter length overcoat is the most popular interpretation. A light coat and skirt

Woolen Coat With Gray Fox; Two-Piece Dress, Black and White.

with a dark blouse or a blouse trimmed with dark material is a novel feature. There is a tendency also to introduce variety into the ensemble, making the coat or one item of the whole in a different color and material, yet giving a subtle sense of belonging to the same set.

Kasha, as usual, plays a large and important part in the Lanvin models. There is an apricot kasha coat worn over a navy blue skirt with a navy jumper spotted with white. A beige kasha coat embroidered with a large white motif, characteristically Lanvin, is worn over a black taffeta dress. A canary yellow alpaca coat with black and white-striped silk facings is worn over a white shantung dress. This season the Lanvin motif is placed on the right sleeve, on the large draped revers of a coat or dress or on the back of the coat. There are many other clever little individual touches, such as a tiny scarlet bow threaded through one revers of a navy coat frock with box plaits of navy and white polka dot and a scarlet leather belt. Another amusing finish is a narrow red cravette that appears under the collar of a beige suit at the back, forming a cross between the shoulders that is held in place with a red button in the center.

Lanvin uses buttons as a trimming, but she employs them with discretion. Wool embroidery is another form of decoration which she favors. Her new design for this season is a kind of overlapping shell-shaped scallop in shaded silks or wools which she uses on dresses and coats as well as jumpers.

Appliqued Panthers.

Wide, flat bias tucks are another form of decoration which has appealed to Mme. Lanvin this season. She uses these most effectively in three shades of geranium red to adorn the cross-over corsage and edge the wide sleeves of a black alpaca gown.

Animals and other fantastic designs appear on the large patch pockets of sports overcoats. There is one in navy blue leather with a wild boar in silver on the pocket. It is worn over a delightful little jumper dress in light apricot jersey cloth. Another in heavy brown leather has panthers appliqued on the pockets.

Taffeta is used both for the gowns that are suitable for everyday town wear and also for the exquisite picture costumes which this time hovers between the periods of 1827 and 1840.

Though Lanvin uses every possible color under the sun, she shows a distinct preference for blue of every shade, from sky and turquoise through pervenche and saxe to the navy, that seems likely to hold the forefront of the mode this year.

There is much beading on her evening gowns, and she often enhances them with shoulder capes. Some of them are two piece, and she is fond of a wide ceinture both for day and evening gowns that is laced at the side with a band of the material finished with tassels.

The evening ensemble is a factor of importance nowadays. Jeanne Lanvin equips it with a coat and gives it wide sleeves covered with iridescent embroidery that gives the effect of dragonfly wings.

THE KITCHEN CABINET

(©, Western Newspaper Union.)

Away with clocks and sundials!
Time and I
Have made a compact—this to be my boon—
To hear the evening thrush, and know the hour,
Yet feel it noon.
—Jean Dwight Franklin.

GREENS ARE GOOD EATING

The best of spring tonics are found in Mother Nature's own garden in the form of greens which are often weeds, but are much more wholesome than any tonic taken from a bottle.

This craving for green foods is gratified by serving the crisp, raw leaves, which are rich in iron, sulphur, lime and phosphorus, and at the same time because of their fibrous mixture afford a most effectual internal cleanser. If eaten with the snappy French dressing, this, too is a stimulant, exciting the digestive organs, particularly the pancreas. The oil is a lubricant, so, with the acid and greens, it is easy to see how necessary green food is in the diet.

When planting a garden the weeding out for thinning should always be planned as a salad. Such small plants as turnips, cabbage, onions, beets, when very young, are delicious served raw, or later cooked in the form of cooked greens.

Wild mustard, sorrel, dock, cress and milkweed shoots are uncultivated greens which are rich in vitamines. The young shoots of milkweed when cooked taste much like asparagus.

Dandelion Hot Slaw.—Take about three quarts of carefully picked and washed dandelion leaves. Fry out diced bacon in a hot skillet, then lay in the well-drained leaves, cover and simmer until the leaves are well wilted. Mix salt, pepper, a tablespoonful of sugar, two tablespoonfuls of cream, adding enough vinegar to add zest to the dressing, add two beaten eggs and stir until well blended—not directly over the heat; pour over the greens and serve hot.

Blanched dandelion leaves found under boards or in sheltered spots are delicious cut up and served with shredded green onion and a French dressing.

Black walnuts, a half cupful coarsely chopped, sprinkled over a custard pie makes a most delicious, rich pie, if one likes the black walnut flavor.

Baked Eggs With Cheese.—Break four eggs into a buttered baking dish and cook in a hot oven until they begin to turn white around the edges. Cover the eggs with a white sauce, and over this a cupful of cheese and over the cheese a cupful of buttered crumbs. Bake until the crumbs are brown.

Sweets From Honey.

Those who "keep a bee" these days will find it most profitable. There are so many delicious dishes which may be prepared from honey. For the children there is no sweet more wholesome. A hive of bees in every back yard will furnish honey for a year. They tell us that the average hive yields 60 pounds of honey.

Honey Candy.—To one quart of strained honey take six tablespoonfuls of butter, two tablespoonfuls of vinegar and boil until it hardens in water. Flavor with a teaspoonful each of almond and lemon extract, add one-half teaspoonful of soda and pour into buttered pans to cool. Mark off into squares before it gets too hard.

Honey Fruit Cake.—Warm one-half cupful of brown sugar and one cupful of honey until it hardens in cold water. Remove from the heat, add one-half teaspoonful of soda, and all the puffed rice, wheat or popcorn that can be stirred into it.

Honey Blanc Mange.—Moisten six tablespoonfuls of cornstarch with one-fourth of a cupful of milk, add two cupfuls of boiling milk, and cook eight minutes; then add a pinch of salt and one cupful of honey. Mold in cups and serve with honey and cream, adding sprinkled nuts over each mold if desired.

Cauliflower Soup.—With a cupful or less or more of cooked cauliflower, a most tasty creamed soup may be prepared. Put the vegetable through a sieve and add to hot milk, season well and bind with two tablespoonfuls of butter and one of flour cooked well in the soup.

Asparagus Rabbit.—Cook diced asparagus until tender. Cover buttered toast with the cooked sliced asparagus, sprinkled with grated cheese, salt, cayenne and a little worcestershire sauce. Place in a hot oven or under the gas flame for a few minutes to melt the cheese. Serve at once with a poached egg in the center if desired.

Lemons will keep for several weeks if put into a dish of fresh water and the water is changed occasionally, washing the lemons.

Honey mixed with orange or any fruit juice with a bit of lemon juice makes a good dressing for a fruit cocktail.

Honey in place of sugar for doughnuts adds to their flavor and they do not dry so rapidly as those made of sugar.

Nellie Maxwell

INDIANA BREVITIES

South Bend Free Masons will dedicate their new temple, which has been in process of building for two years, on Saturday, June 12. The grand lodge of Indiana will conduct the ceremony.

Albert Henry Simpson, sixteen years old, tried to kill his foster mother, Mrs. Minnie Freeman, at Johnson, "for no reason at all," the youth confessed to Sheriff John Hollen.

William Nattkemper of Terre Haute and William J. Peare, formerly sheriff of Parke county, both state game wardens, were drowned in the Wabash river, near Tecumseh, a small mining town.

Preliminary plans for the first annual Indiana horticultural products exposition, to be held next fall, are made in Lafayette by a committee representing all of Indiana's horticultural organizations. Tentative dates were set for November 10, 11 and 12.

William H. Remy, prosecuting attorney, said in Indianapolis that Ralph Lee, charged with the murder of Abner Peek, Speedway City grocer, will be tried May 11 in the Johnson county Circuit court, according to a tentative date agreed to by Elba Branigin of Franklin, deputy prosecutor.

William E. English of Indianapolis, owner of the English hotel block on Monument circle, a state senator and for nearly fifty years a conspicuous figure in political and civic affairs of Indianapolis and Indiana, died at his apartment in the hotel following a brief illness of pneumonia.

Thirty-eight of fifty-six members of the United Mine Workers of America charged with rioting during a strike in Warrick county were convicted in Circuit court at Boonville. Eighteen men were acquitted. William Stinson, district board member of the union, received the heaviest sentence, being fined $500 and sent to jail for 90 days.

Mrs. Walter Bent of Wabash was elected chairman of the Eleventh District Federated clubs at the eighteenth annual convention in Wabash. Mrs. W. J. Troutman of Peru, was made vice chairman and Mrs. Charles Signs of North Manchester, secretary-treasurer. Despite heavy rain more than 200 delegates outside of Wabash county were registered.

A state-wide meeting of sportsmen for the purpose of outlining a legislative program for the next session of the state legislature in order that conservation of game and fish in the state may have unified support will be held in the house of representatives at the statehouse in Indianapolis May 20 and 21, it was announced by H. H. Evans, Newcastle.

Mrs. Mary Huffman, one hundred and four years old, of Indianapolis, set what is believed by local flying officials to be a world's record for the age of a person riding in an airplane when she made a 15-minute flight. She was piloted by Farnam Parker of Anderson, fifteen years old, the world's youngest licensed aviator. In the plane with Mrs. Huffman was her five-year-old great-grandson Carroll.

Mrs. Edward Franklin White of Indianapolis and Mrs. Florence Riddick, eighty years old, of Plymouth, probation officer of Indiana, were the principal speakers at the Thirteenth district convention of the League of Women Voters in Michigan City. Mrs. W. J. Feullock, chairman of the Thirteenth district, presided, and Mrs. H. R. Misener, president of the local league, made the address of welcome.

Dr. F. R. Moulton of the University of Chicago will be the principal speaker at a joint meeting of the Indiana and Purdue chapters of the Sigma Xi and the Indiana, Wabash, Butler, DePauw and Rose Polytechnic chapters of the American Association of University Professors in Lafayette May 7. The Indiana section of the Mathematical Association of America also will hold its meetings at Purdue May 7 and 8.

After his wife fled from home to escape his wrath when she refused to divulge where she had hidden a shotgun with which he threatened to commit suicide, William Bennett, sixty-five years old, farmer near Seymour, searched the premises until he found the weapon, climbed in his automobile parked on the highway in front of the residence, set fire to it and then shot himself. The body, charred beyond recognition and still burning, was found by Sheriff Sherman Sneed and Deputy Meredith.

Leander Roe of Winslow, ten years old, was beaten to death and thrown into the Patoka river from which his body was taken, county officials declared. Their conviction came after a post-mortem examination which showed the boy's skull had been fractured, an ear ruptured and two ribs broken. The body found in the river at Ayrshire, three miles from Winslow, evidently had been in the water since Roe's disappearance six days before. Melvin Weyman, fifteen, is under arrest and has told several different stories about Roe's death.

Guy C. Goodhart, president of the Lafayette public school board, and a building contractor, was injured fatally when his automobile was struck by a Monon passenger train. Walter G. Snyder, his partner, was seriously injured.

Harry B. Roberts, fifty-one years old, county superintendent of schools is dead of pneumonia at his home in Newcastle. Mr. Roberts had been superintendent of the Henry county schools for more than 18 years. He was a former president of the State Superintendents' association.

Sunday School Lesson

(By REV. P. B. FITZWATER, D.D., Dean of the Evening School, Moody Bible Institute of Chicago.)
(©, 1926, Western Newspaper Union.)

Lesson for May 16

ABRAHAM AND THE STRANGERS

LESSON TEXT—Genesis 18:1-19.

GOLDEN TEXT—All nations of the earth shall be blessed indeed.—Gen. 18:18.

PRIMARY TOPIC—Abraham Is Kind to Strangers

JUNIOR TOPIC—Abraham Welcomes Three Strangers.

INTERMEDIATE AND SENIOR TOPIC—Abraham's Hospitality.

YOUNG PEOPLE AND ADULT TOPIC—Why God Chose Abraham.

I. The Lord Appeared to Abraham (vv. 1-8).

While Abraham sat in his tent door, he lifted up his eyes and lo, three men stood by him. His reception of these three men is a beautiful picture of oriental hospitality. These beings, while called men are also called angels (see 19:1). When the men arose to depart, Abraham according to custom, accompanied his guests some distance on the way. One of the men was the angel of Jehovah, or Jehovah manifest in human form. The Jehovah angel remained behind to commune with Abraham. This is clear from the fact that three started out—one talked with Abraham and only two entered Sodom (see 18:22 and 19:1).

II. God's Promise to Abraham Reaffirmed (vv. 9-15).

The Lord communed with him about his personal interests, showing how Sarah should have a son in her old age, according to the covenant promise. This conversation being overheard by Sarah from her place in the tent only provoked laughter on her part. Although she thus expressed unbelief, it doubtless was a great comfort to Abraham who had been awaiting the fulfillment of the promise for years. "Is anything too hard for the Lord?" is a striking rebuke to Sarah's unbelief, and shows that the Lord is able to discern even our inmost thoughts.

III. The Doom of Sodom and Gomorrah Revealed to Abraham (vv. 16-21).

The Lord now communed with Abraham about Sodom and Gomorrah. Though Abraham had no personal interest in Sodom, the Lord revealed unto him His secret purpose concerning it. He did not hunt up Lot to make known unto him his purpose concerning Sodom. He never goes to the persons who are entangled with the things of the world. The only way to know God's thought touching the age in which we live is to remain separate from it. "The secret of the Lord is with them that fear Him." (Ps. 25:15). The reason for this disclosure may be stated as follows:

1. Because he was his friend (Jas. 5:23; John 15:15). Friends confide in each other. The master reveals his purposes to his friends, not to his servants.

2. Because he was to be the head of a great nation (v. 18).

As such he was to be the medium of blessings to them. The interests of humanity were at stake in the destruction of Sodom. It was good that Abraham should know that he might be able to instruct coming generations.

3. Because of the responsibility of instructing his own family aright (v. 19). God is always careful that His judgments have a rational explanation, serving to deter others from the same sin. The Lord declared that His purpose was to go down and see whether the Sodomites had done according to the cry which had come up from it (v. 21).

IV. Abraham's Intercession for Sodom and Gomorrah (vv. 22-23).

The two men departed for Sodom, leaving Abraham alone in the presence of the Lord. He stood there as an intercessor. In this unselfish act Abraham represents our High Priest (Heb. 7:23-28; Rom. 8:34; I John 2:1). Jesus possesses the divine right to stand before the Father. Abraham made his plea on the ground of justice to the righteous who might be in the city. Because of the infinite sacrifice which Christ made by His blood for our sins, He can plead our cause before God on the ground of strict justice. He ventured his plea six times, each time diminishing the number. We should learn from this that petitions granted give encouragement to ask for others. Abraham's power as an intercessor was limited. He was afraid of overdrawing his account with the Lord. This is not the case with our High Priest. His credit and influence with the Father are infinite. He is able to save unto the uttermost those who come unto God by Him, seeing He ever liveth to make intercession for them (Heb. 7:25).

The Road of Life

It is not designed that the road should be made too smooth for us here upon earth.—Jane Porter.

The Stain of Sin

Besides the guilt of sin and the power of sin there is the stain of sin.—Nathaniel Culverwell.

To Be Converted

A man to be converted has to give up his will, his ways and his thoughts.—D. L. Moody.

Lame, Tired, Achy?

Are you tired, lame, achy—worried with backache? Do you suffer sharp pains, headaches, dizziness and disturbing bladder irregularities? Perhaps your kidneys need attention. When the kidneys fail to properly filter the blood, body impurities accumulate and cause poisoning of the whole system. Such a condition may lead to serious sickness. Don't neglect it! If you suspect your kidneys, why not give *Doan's Pills* a trial? *Doan's* have been used successfully over thirty-five years — are recommended the world over. *Ask your neighbor!*

An Ohio Case

L. J. Plum, prop. of meat market, 105 E. Main St., Van Wert, Ohio, says: "My back was lame and knife-like twinges went through my back. I was sure the trouble lay in my kidneys because the secretions passed so often. I used Doan's Pills and they drove away all signs of kidney complaint."

DOAN'S PILLS 60c
STIMULANT DIURETIC TO THE KIDNEYS
Foster-Milburn Co., Mfg. Chem., Buffalo, N. Y.

Initial Error

"How did it happen you never succeeded in business? You had a pretty fair start." "Yes," replied the failure, "I guess that was the trouble. You see, I should have started on a shoestring."—Cincinnati Enquirer.

For your daughter's sake, use Red Cross Ball Blue in the laundry. She will then have that dainty, well-groomed appearance that girls admire.—Advertisement.

Welcome Visitor

"There's a seedy looking fellow wants to see sister."

"Ask him to sit down; he must have money."

New health in Tanlac

"Long hours broke my health; I was physically "down and out." In constant pain from chest down, could not eat or sleep. Tanlac gave me new stamina, made me a new man." Earl W. Goodman, Indianapolis, Ind.

This statement merely backs up what over one hundred thousand grateful users have said about Tanlac. Our files are packed with such testimony.

If your system is run down, if you can't seem to eat or sleep, have lost weight or suffer from trying pain, why not let Tanlac start you back to vigorous strength and health.

No long, wretched wait to get results! Tanlac starts right in to build you up. It cleans the blood, revitalizes digestive organs, fixes up the liver and makes you feel like a new person. For constipation take Tanlac Vegetable Pills.

"BAYER ASPIRIN" PROVED SAFE

Take without Fear as Told in "Bayer" Package

BAYER

Does not affect the Heart

Unless you see the "Bayer Cross" on package or on tablets you are not getting the genuine Bayer Aspirin proved safe by millions and prescribed by physicians over twenty-five years for

Colds	Headache
Neuritis	Lumbago
Toothache	Rheumatism
Neuralgia	Pain, Pain

Each unbroken "Bayer" package contains proven directions. Handy boxes of twelve tablets cost few cents. Druggists also sell bottles of 24 and 100.

STOP THAT COUGH

with Boschee's Syrup—the old reliable family remedy that has been in use for 60 years. Loosens and brings up the phlegm and eases the dryness and irritation. At all druggists. 30c and 60c. If you cannot get it, write to J. G. GREEN, INC., Woodbury, N. J.

A New Instrument

An "Orpheus violin" is a new instrument that was recently exhibited in Paris. Music for the violin, alto and cello can be played on it. Air forced by an electric blower is emitted from 58 openings, and the sounds, it is said, have a peculiarly rich timbre.

Never tell people they are growing old. They know it and regret it.

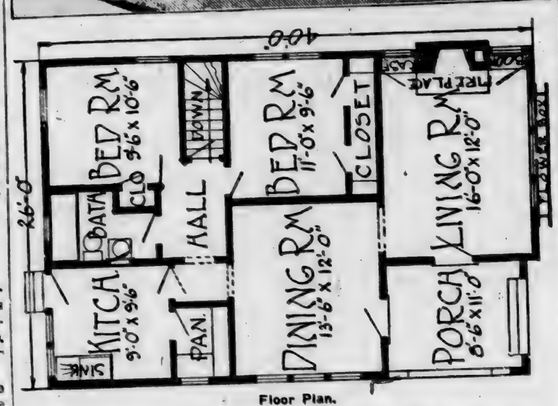
Spanish Style Has Qualities of Simplicity That Are Appealing



Floor Plan.

By WILLIAM A. RADFORD

Mr. William A. Radford will answer questions and give ADVICE FREE OF COST on all problems pertaining to the subject of building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

The Spanish style of architecture has taken a remarkable hold on the public taste of late years, particularly in California and in Florida where it has been developed almost to the exclusion of all other styles. Nor is it at all likely that this popularity will die out for, though the present extreme demand for the Spanish style may slacken, Spanish architecture possesses qualities which make for permanence and we may expect to see many such homes being built through the years to come.

One quality which particularly recommends this style is that because of its very nature it tends toward simplicity in outward design. Outward simplicity in the small homes means true beauty and a beauty of which people do not quickly grow weary. Solid, stucco-covered walls with squared contours characterize the Spanish style and ornament is found in the tiled roofs, simple and enduring, and the colors and texture of the stucco. In some cases the texturing has been carried to the extremes which go with any popular fashion, but for the most part it is only sufficient to be pleasing to the eye.

The same may be said for colors, for while some of the color combinations are really too vivid in their rebellion against the drabness of a bygone time, most of them are temperate enough to achieve a cheerful tone without overdoing a good thing. And what is more, colors are something which can be changed should the taste demand a relief from the extreme or a bit of variety. Simplicity is a conspicuous characteristic of the house shown in the photograph. This little Spanish style home is largely unadorned and depends for its attractiveness upon its line, its texture and color and the effective tiling over door and window, with the aid of flowers and shrubbery in window box and garden.

This solidly rectangular house extends its first appeal at the entrance and the broad arches of which suggest the cool opening of a mountain cave, most appealing on a hot summer afternoon. From the sheltered porch, a feature too often lacking in the Spanish style house, entrance may be had either to the living room or to the dining room, quite an advantage where a vestibule and reception hall must be omitted because of the space they would occupy.

The interior arrangement is compact. Across the front extends the living room with a great fireplace and built-in bookcases at one end. An arched doorway opens into the dining room, beyond which is found the kitchen with its service entrance. Between the dining room and kitchen is a short passage, an effective separation of these two rooms, which is formed by the provision of a large storage pantry.

This passage also serves as the entrance to the sleeping portion of the house, opening into a small hallway. Off this hallway there are two bedrooms and the bathroom as well as the stairway to the basement. In the front bedroom, which is directly back of the living room, there is an unusually large double closet and an ample closet is also provided for the other sleeping room. All these rooms are well separated from the living portion of the house, an example of the excellent designing which has been used throughout.

Landscaping Wrongly Done Spoils House

No matter how nicely a house is built the pretty picture the architectural style makes can be completely spoiled by landscaping totally inadequate to the home.

Many times owners are content to allow hedges to be planted where they do not belong and trees planted that are not suited to the others in the neighborhood. Proper plantings of the right kinds of trees, shrubs and flowers play important parts in the whole beauty of a house and grounds.

Take our public parks for example. They are not laid out in a haphazard fashion, but carefully planned by men who have devoted much time and study to landscaping. The landscaping gardener must know his subject.

Landscaping to most people merely means planting. This is wrong. The intelligent landscape gardener must be able to tell his customers where to place that rose trellis, the summer house, artistic fencing and the pergola.

He must be just as quick to discourage the purchase of those articles if the general picture does not need them, as he is to urge their purchase when a particular spot looks bare without. If a certain spot needs a sun dial, he, with true artistry, must know it.

There is little that makes a house more pretentious or increases its size in appearance than connecting pergolas and lattice work.

Water Piping

Water piping installed in most houses constructed today is much too small to provide adequate service, especially on the third and fourth floors of the larger type.

The Fireplace

A fireplace in any house, large or small, or in an apartment, gives a home-like appearance that beautiful decoration or the finest architectural design can't be hard to duplicate.

French Doors Impart Touch of Elegance

Between the dining-room and hall or living room we so often see French doors nowadays, and very good they are, too.

If one, happily, has this mode of shutting off the dining room, the curtains may be of tan or yellow net. If it is not possible to buy the shade wanted, home dyeing is an easy matter. Stretch this net tight across the glass, using brass rods at top and bottom of the glass.

This same net should be used against the windows, with the straight hangings of the blue or blue and tan material at the side of the windows.

If there are sidelights in this dining room, use yellow shades, and if candles are used on the table these may also be shaded with this color. There is a soft, sunshiny glow about yellow, as used on lamps, that is most satisfying.

There are delightful little parchment shades which might be used in this color scheme. Having the shade a deep yellow with blue flowers would be charming.

Choosing Fixtures

Plumbing fixtures should be chosen with thought for the years of use they will have. Bathtubs, closets, lavatories, sinks and the smaller appliances can be purchased in matching finishes and designs. Most every home owner, and especially the woman in the home, may have proper pride in the bathroom when it is equipped with modern fixtures.

Bathing Facilities

Although seldom thought of, ample and convenient bathing facilities add more attractiveness to a home than most other features of comfort or decoration. The most modern homes are built with ample bathing and toilet facilities, and because of this the property has increased value far beyond the cost of equipment

DADDY'S EVENING FAIRY TALE

By Mary Graham Bonner

COPYRIGHT BY WESTERN NEWSPAPER UNION

GARTER SNAKE FAMILIES

"I don't care about big families," said Mrs. Single-Striped Garter Snake, known to her friends in the zoo as Nellie.

"You like bigger families than I do," said her mother, known as Milly.

"And you both like bigger families than I do," said another Single-Striped Garter Snake, known as Lily.

"I don't care," she added, "to have so many that there might be danger of their eating all the food that would otherwise be given to us."

"That speech makes you sound more like a pig than a snake," said Nellie, hissing and wriggling in disgust.

"Oh, you mustn't mind what she says," remarked Milly. "She can't help it that there aren't so many little snakes around her, as she is pretending she only likes to have a few around."

"You only have two more than I have," said Lily, hissing angrily, "and I am not like a pig.

"I'm like a snake.

"Does a pig hiss and wriggle?

"I'd like to know that! Of course I know the answer to it, but I just would like to see you give any other

"You Mustn't Mind What She Says."

answer to it than the one I already know.

"I've put you in a hole, all right."

"You've not put me in a hole at all, I'm not in a hole and you can't put me in one."

"But I have trapped you."

"You haven't trapped me at all. I'm quite free of any trap."

"But I mean that I have given you no opening for any other answer than the one I already know."

"I don't need your gift of an opening, even if you would give me one, which you wouldn't."

Lily paid no more attention to this sort of talk, but went on, the way she had been talking.

"Can a pig crawl as fast as I can? No, a pig can't crawl at all.

"A pig grunts and squeals. A pig walks and never crawls."

"Why do you ask questions, if you know the answers to the questions yourself?" asked Nellie.

"That seems a foolish thing to do. When one asks questions it should be to gain more information and become wiser and more intelligent."

"Because I wanted to prove to you two snakes that you were wrong."

"I was the one who said you were more like a pig than a snake, so Milly isn't to blame," said Nellie.

"Besides I said that because you made a selfish, greedy speech like a pig, not because you looked or moved other than like a snake," Nellie ended.

These snakes were named the Single-Striped Garter Snakes because of a yellow stripe on their backs.

They were greenish-black in color, with yellow throats and yellow spots here and there on their skins.

The snake children they were talking about had greenish stripes, too.

"I have six nice little snake children," said Lily after a moment.

"To be sure you have," said Milly, "and I only have eight, only two more than you have."

"And you, Nellie, have fifteen or sixteen, I've forgotten the exact number, and that isn't really many. For, as you say, you like just your few children."

"I'm pleased," said Nellie. "No, I wouldn't want a big family.

"But let's not fight about it, for none of us really have big families."

For a snake thinks a family of from six to fifteen snakes is very, very, very small!

A Smart Boy

Freddie was sobbing bitterly in the road, and the kind-hearted old gentleman stopped to ascertain the cause of the trouble.

"What's the matter, my little man?" he asked.

"I've—I've lost my new ball," sobbed the youngster, "and I've no money to get another!"

"Never mind," said the old gentleman; "here's a shilling to go and buy a new one." And out came a bright coin which Freddie promptly pocketed. "Where did you lose your ball, sonny?" he inquired, as an afterthought.

"It went through your dining room window!" said Freddie, as he disappeared round the corner.—Tit-Bits.

Correct!

"Edwin," said the teacher, "use the word 'triangle' in a sentence."

Edwin: "If fish don't bite on grasshoppers, try angleworms."

Scraps of Humor

NOT THE SAME

The rookie had been at the naval training station two weeks and had spent most of that time in digging ditches, chopping trees, leveling hillocks and filling depressions. Finally he sought his immediate superior.

"You see, sir," he complained, "when I joined the navy they said I'd see the world, and here for two weeks I've done nothing but rearrange it."—American Legion Weekly.

GROUNDS OF DIVORCE

"On what grounds did she get her divorce?"

"Chicago, I believe."

A Plea for Information

Oh chemist, please investigate
And drop me just a line.
I'd like to know what carbonate?
And where did iodine?

Not So Keen

For months young Simpkins had been calling on the town belle, but with no marked success.

"I suppose," he at last suggested desperately, "that if we lived in the Stone age I'd hit you over the head with a club and drag you off and marry you."

"You'd have to," she responded sweetly, "in order to marry me."—American Legion Weekly.

Turn About

"But we were only 15 minutes getting here!" expostulated the passenger.

"I don't give a hang about that," snarled the taxi driver. "The meter says we've come 20 miles. Now you fork over!"

"All right," assented the passenger, paying. "Now get ready to come with me for driving 80 miles an hour. I'm a speed cop."—American Legion Weekly.

The Martyr

"Yes," said the bankrupt, "I lost my fortune reaching for an ideal."

"How noble! And what was the ideal?"

"A bigger fortune than I had."

LIQUID VENEER

More Buying Bird Cages

Four carloads of bird cages, believed to be the largest single order ever shipped of this commodity, passed through New York en route from New Haven, Conn., to Philadelphia. The use of canaries and cages has increased markedly lately, due, it is stated, to the increasing value of new varieties of nameled cages for interior decoration purposes. Easter and Christmas are the canary seasons.

One 50-cent bottle of Dr. Peery's "Dead Shot" will save money, time, anxiety and health. One dose expels Worms or Tapeworm. 372 Pearl St., N. Y. Adv.

Just His Way

Baxter—Thompson tells me he cleared $1,000 on a little business deal yesterday. Suppose he made that much?

Burke—No, if he had he'd have paid $10,000.

Proves Mother Is Your Closest Friend

Jersey City, Mr. J. Paull writes:—"I awakened each morning with an unpleasant taste and was often reminded by my Mother that my breath was disagreeable. I tried perfumed tablets, mouth washes and other camouflages which gave temporary relief. After consulting my dentist and finding my teeth in good condition, a friend suggested my trouble was constipation. After taking a few doses of Carter's Little Liver Pills my stomach and bowels were relieved, foul and impure gases eliminated." Druggists, 25 & 75c red packages.

"A God-sent Blessing"

is what one mother writes of Mrs. Winslow's Syrup. Thousands of other mothers have found this safe, pleasant, effective remedy a boon when baby's little stomach is upset. For constipation, flatulency, colic and diarrhoea, there is nothing like

MEMORIAL MESSAGE

Memorial day's message to the hero dead of all wars is always tenderly offered by Mrs. John R. Murphy of Brooklyn, at the grave of her son, Lieut. Frank Murphy in Sleepy Hollow cemetery, Tarrytown, N. Y., as her grandson pays his tribute to his brave "Dad."

TIME'S HAND WIPING OUT SCARS OF WAR

Veterans Would Hardly Recognize Vimy Ridge.

Premier Painleve unveiled a monument on Vimy Ridge, the place where the Canadian corps under General Byng made the most dashing attack of the war and where next to Ypres it suffered its heaviest losses, Pierre Van Paassen writes in the Atlanta Constitution. The monument is a lighthouse which can be seen for 30 kilometers and which at nights lights up the whole quiet ridge where eight years ago such sanguinary fighting took place. A Canadian official who was with the second wave in the attack on the ridge and who is now in France looking over the spot where he lost a leg, writes that the peace and serenity of the old battleground is complete. To the north stretch the plains of Flanders, a checkerboard of dark green meadows and golden yellow wheat fields. The old shell holes have been filled and blood-red poppies grow in their depths. Some of the craters made by the explosion of mines in this sector are miniature lakes and water lilies float on the surface. If you want to dig in the moss you might stumble on an old tin hat or a water bottle. "But," so writes the official, "if you recall the place down the road to the village where we halted in the rain after the Hun raised his barrage and started to give us hell, the three field guns are still there with their broken wheels and limbers. But they are covered with a mass of flowers. It is as if someone had hung garlands around their gray necks and I noticed an anxious mother bird in the cannon's mouth making hurried trips to the dark interior. Do you remember the spot where we came upon the last pill box, where we lost 30 men in half an hour? I strolled by there last night. A pair of lovers were sitting on the blocks of cement whispering in the moonlight."

Sectionalism Dead

Memorial day today is a day of devotion to the memories of Americans who have died in war. Prior to 1919 the day was almost entirely devoted to memorial exercises in honor of the Union soldiers, with the G. A. R. organizations conducting the ceremonials. Since the World war, however, the scope of federal Memorial day has broadened, and the day—made a holiday by the government—is devoted now to tributes not only to the heroes of the '60s, but to the heroes of every war in which lives were sacrificed to the cause of country.

In the South the day is observed as in the North, for the great United States of America today is a confederation of state units that knows neither North nor South nor East nor West. In the flag of the republic the star of each state is of equal size, and not one is designated by section.—Atlanta Constitution.

Pathos in "Unknown"

There is one thing that stirs the heart with tearful emotion, says a veteran—the 145,000 modest headstones at graves of those who lost their identity upon battlefields, the modest marble markers bearing the word "Unknown."

And loving eyes grew dim with tears
And hearts grew old with grief of years.
And here they sleep, as they have slept
Since legions o'er the country swept;
Where mothers wait before the Throne—
Their names are known, their names are known.

Inside Story of How Cassidy Won the V. C.

"Mike" Cassidy, the Irish soldier, the story of whose fame was once an inexhaustible topic in allied dugouts, rest billets and depot barracks, is dead. One morning when dawn tiptoed over a hushed front line at the Regina trench and the enemy was planning a big "push," Michael, who had obtained a jar of rum from the quartermaster's billet by using a glib and cunning ruse, felt the martial spirit of 10,000 Celtic ancestors steal over him and fire the sluggish night with romance. Armed with his accustomed Lee Enfield he climbed over the parapet, somehow kept his bearings in the mud of No Man's land and steered straight for the German trenches. Rumor has it that Mike ran into a patrol, but that he chased it back into the shadows. According to his own story, he stumbled and fell into an enemy trench. There a herr lieutenant and a platoon of musketeers were busy getting their morning repast. Mike ordered them to put up their hands, carry their machine guns and boxes of ammunition and started back home. When he and his 70 prisoners hove into sight of home, the boys opened fire and the whole front woke up. It took a stream of rip snorting Irish eloquence on Mike's part, who brought up the rear, to convince his comrades that things were all right, and to cease their blinking fire. Later in the day Mike had another jar of rum. But this one he obtained in an honest manner and the king gave him the Victoria cross.—Pierre Van Paassen in the Atlanta Constitution.

Had Waited Long for That Hour of Triumph

Rodney Eclair was being graduated from Mahanoise university. It admitted it on the program. It was the proudest moment of his life and all that. And in the audience sat a little old lady. Her eyes were bright with pride, too. The exercises sped on with all the efficiency of a college ceremony. Four hours later the main address was over and the diplomas had been granted.

The little old lady rose and hastened through the crowd to where Rodney was standing. A look of amazement spread over his face, like a Sennet pie.

"You here?" he queried in the approved fashion.

"Yes! You young skinflint, I'm here. I've been layin' for that board bill three years and I figgered I'd catch ye here!"—Notre Dame Jugglers.

Was It "Snow King's" Mate?

Even birds have their romances and tragedies. "Snow King," a mammoth white Canadian snow goose was hunted for three years before a Kansas man finally shot him down. It was a triumph for the hunter but it caused a love tragedy for what is believed to have been Snow King's mate. After Snow King's death another Canadian snow goose was observed paying frequent visits to the place where the first bird had made its fight for life. If it was love and fidelity that brought the second bird to the scene the tragedy has now been completed, for Snow King's mate has paid with its life.—Pathfinder Magazine.

Motor Bus Meals

Passengers of a motor bus line from Los Angeles to San Francisco are served with luncheon from a compact kitchen built as part of the vehicle. A button on the side of each chair summons the steward who takes orders for either hot or cold dishes. The bus also has a special compartment for women, another for smoking and a third for the driver. The entire rear panel of the smokers' room is a plate glass window which permits an unobstructed view of the scenery. Washroom space is also provided.—Popular Mechanics Magazine.

To Him Who Waits

A new moving picture machine was being set up at the Indiana state reformatory, replacing one recently destroyed by fire.

A representative of a sales company which sold the equipment suggested to the chief electrician that two machines be used to eliminate the obvious long waits between changes of film.

"Shorty," an inmate, and the electrician's helper, spoke up:

"Wait! Say, mister, these boys can wait. They ain't going nowheres."

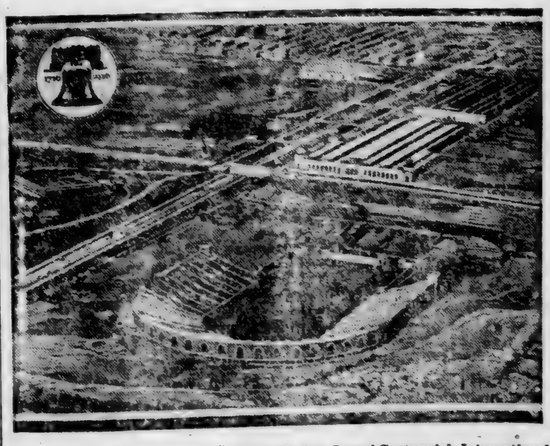
FROM PALETTE TO MORTAR BOARD

Young women artists turn from their jars of color and paint brushes to assist plasterers in setting ornaments in place atop huge pylons which adorn the main entrances to the Palace of Agriculture and Food Products, of the vast exhibition buildings which forms a part of the great Sesqui-Centennial International Exposition being staged in Philadelphia from June 1 to December 1 to celebrate the 150th anniversary of the signing of the Declaration of Independence. Climbing ladders and walking along rickety scaffolds is nothing new to these young ladies, but each time they do it they get a thrill.

SITE OF THE FIRST PHONE MESSAGE

Walter S. Gifford (left), president of the American Telephone and Telegraph Company, and Leonard H. Kinnard (right), president of the Bell Telephone Company of Pennsylvania and Associated Companies, are shown standing on the exact spot where Alexander Graham Bell first talked over his invention at the Centennial Exposition 50 years ago. In the background can be seen Memorial Hall, relic of the Centennial, and which is now being used as a museum. It was on this spot that Don Pedro, then Emperor of Brazil, met the 29-year-old inventor and exclaimed, "My God, it talks!" when he heard Bell's voice come over the wire. The exhibits to be staged by the organization these men represent will be one of the great features of the Sesqui-Centennial International Exposition, which opens in Philadelphia June 1 and continues to December 1 to celebrate the 150th anniversary of the signing of the Declaration of Independence.

THE SESQUI FROM THE AIR



An idea of the size and scope of the Sesqui-Centennial International Exposition, which will be held in Philadelphia from June 1 to December 1, to commemorate the 150th anniversary of the Declaration of American Independence, is given in this photograph. In the foreground is the great Municipal Stadium, which seats 100,000 persons. North of the stadium can be seen two of the vast exhibition buildings. The first is the Palace of Agriculture and the second the Palace of Liberal Arts. Opposite the latter building is the big auditorium, which seats 20,000 persons on a single floor. To the left of the stadium can be seen the world famous Indian building, the Taj Mahal.

Missouri's "Houn' Dog" Old Settler in State

Missouri's "houn' dog" has been a companion of rural Missourians since the days when Daniel Boone and his Kentucky hounds roamed the wilderness of the Femme Osage country in the Ozark hills north of the Missouri river. The breed has persisted. It has intelligence, a certain form of ugly physical attractiveness, a lazy manner, a faithful friendliness and a nose extraordinary.

In his native heath, the hill country, with his friend the farmer boy, the houn' is a familiar feature of the landscape. Taken away to city streets, he becomes at once a sad spectacle. His tail drags; his ears, slouchy at best, flop disconsolately, and he is a dog without a country, a stranger in a strange land.

It was of the Missouri houn' dog, according to best tradition, that a United States senator, George Graham Vest, paid his famous tribute "to man's friend and faithful companion." At all events, for more than a century the houn' of Missouri has been a part of the country's life and justifies the rural youth's lazy chant, "Makes no dif'rence ef he is a houn', Ye gotta quit kickin' my dog aroun'."—Christian Science Monitor.

THEIR HABITAT

"In what part of Mexico are these fellows they call 'greasers' found?"

"In the oil fields, of course,"

Tuning in on Heaven

Wilbur Sutton, editor of the Muncie Press, recently discussed the influence of the radio on home life at a meeting of the Indiana Republican Editorial association, and told this one to illustrate his point that the ether waves are making people stay at home:

"Dorothy and Ruth met on the street one Sunday and Dorothy asked:

"'Ruth, why aren't you in Sunday school this morning?'

"'Oh,' replied Dorothy superciliously, as she tilted her snub nose as a token of superiority. 'We don't have to go to church at our house any more—we've got a radio.'"

Must Close Old Bridge

The Kentucky state highway commission has closed the longest single-span wooden cantilever bridge, a romantic landmark across the Kentucky river. A steel or concrete structure soon will make a memory of one of the few remaining covered bridges. Located just beyond Camp Nelson, on the Lookout Mountain Airline highway, it was built in 1838. Only lately, when heavy busses began to cross the 240-foot span, were there pronounced vibrations.

Young Man's Champion

Clarence Dillon, who at forty-three, through his gigantic financial operations has been named "the coming man of Wall street," said at a luncheon:

"Some people object to young men in important posts, but I—well, I remember an anecdote.

"'Young men lack experience,' a septuagenarian once objected.

"'Pooh,' said an octogenarian. 'What's the good, after all, of knowing what the weather was like day before yesterday.'"

Times Have Changed!

Tut-Ankh-Amen's golden coffin is the most extensive piece of solid gold work archeological research has ever brought to light. It was borne on the shoulders of eight men to the railway station at Luxor—a strange contrast with the day some 3,000 years ago when it was conveyed with all the royal pomp of ancient Egypt to the tomb.

Embroidered Eggshells

N. K. de Scherviller, of Rouen, France, embroiders eggshells at $1,000 apiece, says the Pathfinder Magazine. From 600 to 2,000 holes are made in each shell and the embroidery is fastened through them. All knots are made on the inside of the shell. Sometimes dozens of eggs are used before one is embroidered perfectly.

MEADE MEMORIAL

EARLY IN HURRY TO REJOIN TROOPS

Confederate General Left Memento of Fact.

A dashing Confederate general, a spirited horse, a hurried departure—all are bound up in a relic of the Battle of Gettysburg which has come to light after having been forgotten many years.

A rapidly rotting, worm-eaten piece of wood, in which is imbedded a rust-covered staple and clasp, attached to which is a short piece of stiff, frayed black leather, bears mute testimony to a stirring bit of war-time drama enacted at Gettysburg while the Confederates were in possession of the town back in '63.

With the cutting down of a large gnarled maple tree the war-time relic was brought to light and the story told years ago about a gallant and chivalrous Southern officer was once more passed on for the benefit of succeeding generations.

When the maple fell, about four feet from the base of the huge trunk, woodchoppers found the staple imbedded six inches in the fast-decaying wood and attached to the piece of iron, a piece of leather strap, which extended out beyond the bark about an inch.

Older residents of Gettysburg recalled today that years ago the strap was much longer, that it hung down the trunk of the tree for several inches, but that in recent years it had been almost swallowed up as the great maple grew, adding layer and layer to its trunk.

With the discovery of the strap and the staple, the story is retold by persons who lived in Gettysburg at the time of the Confederate invasion, of how a famous Southern general, without waiting to unhitch his horse from the tree, drew his sword and with one downward stroke severed the strap by which his steed was tied.

General Early is accredited with being the officer who, in his haste to join his troops, as the tide of battle turned from what apparently was a Confederate victory to an overwhelming defeat, cut his horse loose from the tree to take command of his men and if possible turn the tide of battle.

It is recounted how the dashing officer, resplendent in his uniform of gray, literally hurled himself from his headquarters, crossed the pavement in a single stride, leaped to the back of his horse, and with a single stroke of his sword, cut the strap with which he had tied his charger to the maple.

In a flash the coal-black animal was away, its nose sniffing a fight that might make its rider famous. The reverse proved to be true. The horse and rider went into what afterward proved the last stand of the Confederate forces.

The piece of wood in which the strap and staple were imbedded is being preserved by Charles Wilson, Adams county detective and constable, who occupies a house on the site of General Early's headquarters.

Memorial Day Parade

They march with stately trend, these heroes of the half-forgotten wars. The younger ones, with caps atilt, achieve a certain jauntiness, but just beneath the surface of the eyes of each of them lie gruesome, hideous pictures, graven there in Belleau Wood, at St. Mihiel, or somewhere else in France. The portly business men, with graying hair and growing paunches, can these be those same slender youths who fared forth in '98, to fight with Aguinaldo? And last, the ancients, lame, halt and blind, who fought to save the Union, half a century and more ago. The load of years has taken heavy toll, but still the fire of victory flares forth in age-dimmed eyes. Salutamus! Soldiers, salutamus!—Chicago Tribune.

Opened Shiloh Battle

Daniel Kuhn, credited with firing the first shot in the battle of Shiloh, died at his home, North Webster, Ind., last December, following a long illness. He was a member of the Thirtieth Indiana infantry and fought with General Sherman.

For Sale: A Ford Coupe, in good condition. W. B Lucas, Spencerville, Ind. 19t1.

Mrs Rebecca Beams is spending the week with her granddaughter, Mrs. Helen at St Joe.

The Mother's Day program held at the Methodist church Sunday, was greatly enjoye by all. A Father's Day program will be given later.

About eighteen members of the C C. Club very pleasantly surprised Mrs. Lillian Steffey at her home Friday evening Potluck supper and a social time was enjoyed. Rev. Steffey and family will leave in about two weeks for their new home.

Mrs. Cleo Reed and the Misses Irene Webb, Ada Bowser and Virginia Goldsmith attended the Boys and Girls Round up at Purdue University last week. Ada Bowser was chosen yell leader of the DeKalb county delegates of 78 members.

The Home Bureau club met yesterday afternoon with Mrs. Dora Wilder.

Mrs. Ercie Shook and children were Sunday dinner guests of Ray Zimmerman and family.

Save your newspapers and magazines, tie them in bundles and The News will buy them.

Mrs. Beryl Brown will entertain the Home Missionary society of the Methodist church, Thursday afternoon

Cal Means and family and Walter Carr, wife and babe, were guests on Sunday for dinner of Mrs Dallas Smith.

Mr and Mrs. Emmett Armstrong Charles Armstrong, Vernon Stillman and Lem Farver, spent Sunday with Ray Farver and family.

Monday morning Arthur Mc Namara began erecting a house near the Spencerville Lumber Yards. The lots were recently purchased by R. U. Bowser from W. W. Martin.

Henry Markle entertained the Sophomore class of the high school, their friends and the teachers, at his home, Friday evening. Games and contests furnished the entertainment after which refreshments were served.

Quite a little excitement was caused Saturday morning when the rool of the Keyes property caught on fire The St. Joe Fire Department was called but the Bucket Brigade had the fire extinguished before they arrived.

James Reed and wife entertained the following guests for dinner on Sunday, Chester Wolfe and wife, Mrs. Mary Reed and children of South Bend, Wm Reed, wife and two daughters, Vera and Ida of near Rehoboth.

John Zimmerman and wife, Miss Marcella Zimmerman and August Baltzli of Fort Wayne, spent the weekend in the John Bachmann home. Sunday guests were Mrs. Baltzli and daughter, Arline, Alfred Bachmann and wife, Robert Bachmann, wife and daughter, Roseanne and Floyd Kaufel and wife, all of Fort Wayne.

Mrs. Lena Zimmerman and son, Dallas and Mrs. Del Smith, returned home recently from a visit with the former's brother, Corma Kelley and family at Wyandotte, Michigan.

W. S. Tyndall and wife entertained the following guests Sunday afternoon and evening, Mark Tyndall, wife and children of Woodburn, Mrs. Mary Reed and children of South Bend and Beeks Erick and family.

Alva Place, wife and son, Kenneth and Charles Kimes of Fort Wayne, were Sunday dinner guests of Vol Hay and family. Charles Brettian and wife were afternoon guests in the same home.

NEWVILLE

Harry T Smith and family were Sunday guests of Guy Smith and wife.

Burl Rude and family of St. Joe, were Newville callers Saturday evening

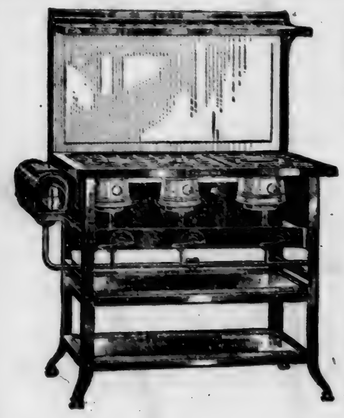
Mesdames Vera Miller and Belle Miller, with the former's two sons, were St. Joe visitors Saturday afternoon.

The infant child of Ray Antrup, west of town on the Newville-St. Joe road, died Wednesday morning and was taken to Auburn Friday for burial.

Elmer McDonald, who has had employment in the woolen mills at Mishawaka for the past three years, has been a visitor in the John Miller home for several days, and will be employed on the Day Wyatt farm this summer.

Mrs John Miller and Mrs. Dewey Miller and two little sons, went to Garrett Sunday afternoon to see Mrs. Harry Fuller, who is seriously ill in the hospital with pneumonia.

Forrest R. Clark, wife and son, Thomas and Mrs. Dorothy Clark of Fort Wayne, called on Mr. and Mrs John Miller Sunday morning, enroute to Hicksville where they spent the day with friends.



Florence Time!

It's time now to think about that NEW Florence Oil [Wickless Oil Stove) new Models and Prices. A new shipment just received. We now have **83 Satisfied Customers** since we started to handle this stove three years ago. Ask your neighbors, it may be they have one.

Don't forget we still can supply you with the famous Bradley fertilizer in four different formulas including the new Lime Basic.

A new stock of Lawn Mowers, Screen Wire and Screen Doors at right prices.

And of course, we now have our fresh supply of Leonard's Bulk Garden Seeds. You know their goodness.

We have a most complete line of Acme Paints, Oils, Varnishes, etc. We guarantee to save you money on your paint job.

A complete line of Dr. Hess's Poultry and Stock Tonics. We are exclusive agents.

A new shipment of Flower Pots just received, most any size.

Fence, Fence Posts, Barbed Wire, ect., all in stock now.

Kill Tapeworms in Farm Fowls

Powder Obtained From Indian Plant Found to Be Quite Satisfactory.

(Prepared by the United States Department of Agriculture.)

Kamala, a brownish powder obtained from a plant in India and long used there as a drug, has been found satisfactory for removing tapeworms from poultry. This announcement is made by the United States Department of Agriculture as a result of experiments carried on by Dr. Maurice C. Hall and Dr. J. E. Shillinger of the zoological division, bureau of animal industry.

Cause Disturbances.

Tapeworms cause serious disturbances in chickens, turkeys and other poultry, the injuries ranging from unthriftiness to conditions simulating paralysis, due to deficient diet, sometimes resulting in death. Up to the present time no satisfactory treatment had been known. The demand for a remedy has been insistent and was considered the more urgent in that the life histories of so many tapeworms are unknown that satisfactory preventive measures cannot be recommended as yet. Moreover, so far as life histories are known they involve such intermediate hosts as flies, earthworms, slugs, and similar animals which are themselves very difficult to control under farm conditions. The need for such a drug as kamala is therefore apparent.

The drug was tried out on 120 chickens and six turkeys, counts being made daily of the tapeworms removed, the birds finally being killed to determine whether any of the parasites were left. The result indicated that a dose of one gram to a chicken removed all the worms in approximately 19 cases out of 20, a much better result than has been secured with any other drug. The dose for turkeys seems to be two grams.

Way to Administer.

The investigators say the best method of administration appears to be individual dosing with pills, but that the use of capsules is also satisfactory. Flock dosing by the administration of the drug in feed is much less satisfactory. The dosing of individual birds is easily accomplished and fasting and purgatives do not appear to be important. At the present time it may not be possible to obtain kamala at all drug stores, but it is thought that within a short time manufacturers will have it on the market in convenient form. An estimate of the cost of the kamala itself for treatment of chickens is less than one cent per bird.

Destructive Attacks of Cutworms on Tomatoes

Among the most important insect enemies of the tomato are cutworms of various kinds, according to the United States Department of Agriculture. These smooth, plump, gray or brownish caterpillars attack the young tomato plants both in the plant bed and when set in the field, usually cutting them off near the surface of the ground. One cutworm can destroy many more plants in a single night than it can devour. By reason of their destructive attacks resetting is frequently necessary.

The best control measure is the use of what is termed poisoned bait, made as follows:

To one peck of dry bran, add four ounces of white arsenic or paris green and thoroughly mix. Then add two quarts of cheap molasses diluted with enough water to make a crumbly, wet mash. Allow the mash to stand for several hours and then scatter it thinly about the base of the plants late in the evening. Make applications as long as the cutworms are active and damaging the plants. In the control of cutworms it is a good plan to apply the poisoned bait before the crop is set out or before it appears above ground. Applications at such times will destroy many of the worms before the plants are susceptible to attack.

FARM NOTES

Go over fields and haul away stones the freezing and thawing have loosened.

* * *

Stop every crack in hog houses. Cold March winds are dangerous to young pigs.

* * *

Lime, legumes, and live stock is a trio that is becoming more and more popular.

* * *

In 1924 a daily average of 3,250,000 quarts of milk was shipped into the New York market.

* * *

What is known as the "New York milk market" includes a population of nearly nine millions.

* * *

This should be a good year for the cattleman but he deserves it as the beef breeder has had a lot of trouble for several lean, long years.

* * *

Look over the fences. There may be some posts loosened by the frost, or broken wires or boards. A little attention now will save hours later.

* * *

Well-placed windows in a hoghouse that runs east and west, will admit nearly twice the amount of light that would enter a similar house extending north and south.

Useful Articles

Scientists say the barrel is the most efficient container known to man. During the last year there have been 5,780,000 manufactured as against 4,785,000 the year previous.—Good Hardware.

Chinaman's Odd Profession

There are many ways of making a living in this land of many trades, but a Chinese coolie brought a new one to light at the international mixed court when he told the foreign assessor that he was by profession a morphine injector. He brought one of his patients, an elderly Chinese, to court with him to prove his assertion. The patient testified that he had received nine injections and when he bared his body the court discovered that it was covered with punctures. The professional injector was sentenced to a month in jail and his professional instruments were confiscated.

Snakes to Kill Themselves

Nothing more remarkable has been advanced since probibition than the plan of Charles Payne, naturalist, to rid Texas of poisonous snakes. He would have millions of porcelain nest eggs scattered over the plains for the snakes to swallow. The snakes, of course, would die of acute indigestion and their bodies rotting would expose the eggs again and again for other snakes to swallow. It is a wonderful scheme—if it will work.—Capper's Weekly.

Mussolini Is Superstitious

Mussolini, "the man who saved Italy," is of a strongly superstitious nature. As a lad he had the friendship of an old woman reputed to be a witch; she taught him some of her magic lore. Even today Mussolini has strange things to say about the moon, the influence of its cold light on men and affairs, and the danger of letting the rays shine on your face when you are sleeping; and he is an adept in interpreting dreams and omens, and in telling fortunes by cards.

Hen Fond of Speed

There are towns that lay claim to four-legged chickens and web-footed chickens, but South Woodstock, Conn., claims the only "speed-demon" hen in existence. Percy is the masculine name of this feminine fowl. She roosts constantly on the fender or hood of an automobile belonging to a resident of the town, and nothing pleases her more than to speed along country roads, wings ruffled, at a forty-mile-an-hour rate. —Boston Globe.

CHAPTER XV—Continued

—23—

"We have sent for you to look with your own eyes upon this robber of the trap-lines and defiler of the night; this dog whom Laflamme, the trader at Ogoke, sent to fill the hearts of your women and children with fear.

"At his great post on Lake Ogoke he would welcome you at the spring trade, but Black Baptiste, and Antoine and the others, would soon be among your tipis offering the water that burns and fills your heads with fire, to your women and your young men. You would trade the pelts which you toiled for through the moons of the long snows for this stinging water which steals your senses. And when he had your fur, he would give you a little flour and tea, and some shells for your guns and send you away. But," and the voice of Michel rose in hoarse crescendo, "your women and children would weep through the freezing moons for the trade goods and the flour which Laflamme cheated you out of with his magic water. This is why he sent Pierre, here, to drive you out of the country of your fathers."

"Atain! tiwe! It is so! He speaks the truth!" shouted the inflamed circle of swart-faced hunters.

"You ask why this white man," continued Michel, "comes to this country in the freezing moon and brings the dog with the great voice to hunt this Windigo," and the Iroquois kicked the frozen shape at his feet, "when he lives far in the South and will not suffer from what Laflamme does to the Ojibways. This is his answer:

"In the moon of the gathering of the wild rice, he, with David, here, journeying from Wailing River to Nepigon House, stopped at the post of Laflamme. There was trouble and because they were friends of M'sieu St. Onge and knew of the water of fire which the Fathers at Ottawa have forbidden the traders to give the Ojibways, Laflamme sent his men to murder them at the falls of the Jackfish. But these men you see here, who have trapped the Windigo of Laflamme, laugh at the white-water. They travel in a magic canoe, and because their shells were stolen by Laflamme, all except one, and their guns empty, they could not fight, but with that shell shot one of the dogs of the trader. Then they ran the great strong-water which the canoe of no Indian has ever passed."

An undertone of surprise and admiration followed the words of the speaker, for there were some in the audience who knew the Frying Pan on the Jackfish.

"This is why they ask for ten of your best young men to join them in avenging the death of your kinsmen. They and I, Michel, whom you know, have sworn an oath that this Laflamme shall not see the snows fade nor the ice rot at Ogoke in the moon of the breaking of the snowshoes. We have given our word, each to each, that not again shall he steal the pelts of the Ojibways with his magic water. If you are men you will send us ten of your young hunters with their dogs, that they may trap these wolves in their den and the skies above Ogoke may redden with the flames of the post where the Indian is cheated and turned out to starve."

"Atain! Enh-enh! Yes, yes, we will do it!" shouted the aroused hunters, at the conclusion of the appeal for aid.

Then the American addressed the Indians, while the man from Nepigon put his words into their native tongue.

"You have heard the words of the head-man from Wailing River. He is my friend and he speaks for me. My home is far in the country to the south, but I shall not return until this trader, Laflamme, who cheats the Ojibways with his whisky, is driven from Ogoke. He may have sent others to howl in the night and terrify your women. We must hunt them down. At Wailing River lives an honest trader who gives you full value for your pelts in flour and tradegoods. He is the friend of the Ojibway; Send us your ablest young men, who can shoot straight and do not fear the men of Laflamme, that we may rid the country of this wolverine, that you may trade without fear at the post at the rapids of the Wailing."

Back to their winter camps went the Indians with the tale of Laflamme's Windigo, Pierre, while the three friends waited for Little Jacques, and made their plans.

In three days the Cree arrived, driving a plodding six-dog team loaded with provisions. He handed Steele two letters. The American thrilled as he saw on one his name written in a feminine hand, but he opened the other first and read aloud to his friends.

As St. Onge narrated how Tete-Boule, Laflamme's spy, had lured him away from the post with the forged message from Michel, David raised his mittened fists in helpless rage. "By gar, an' I had heem een dees hands—een dees hands!" he cried, glaring at Steele.

As he read of the fury of Laflamme, culminating in the wreck of the violin, Steele's hands shook with his wrath—then pity for her swept him. "Poor, poor girl!" he murmured, "She has lost everything—she is indeed alone."

"Well," he said to the others, "the debt grows larger, my friends. Remember the violin, David, when your time comes!" Then Steele opened the letter from Denise, which ran:

"My dear Monsieur Steele:

"Our hearts are filled with happiness at your success. After the toil and the danger, you have won, and I thank you for your goodness to me and to my father—you, a stranger, who might have passed on, and forgotten. It was a house of despair that you found, and you brought hope. Already you may have guessed, monsieur, that we have feared all along that the Windigo was the creature of Laflamme. But there was no proof.

"You are going to Ogoke, Monsieur Steele, on a desperate venture. It may be that we shall never meet again. For this reason you will understand when I say that you are a very gallant gentleman—that we—I, shall never forget. Bon chance!

"Denise St. Onge."

Steele again read the letter, seeking what was not there. At last he folded it and turned away to hide his

The Three Friends Waited for Little Jacques and Made Their Plans.

disappointment from his curious friends. No, he mused, it is only too true. She has, as she says, forgotten nothing.

* * * * * * *

Shortly, each day was marked by the arrival of galloping dog teams from the east, south and west, driven by lean, wild-looking Ojibways, keen for the adventure—picked men, chosen by their people for their endurance on the winter trails, their proved nerve, and their "bush craft." When the last team had come in, Jacques was sent down river with a letter and orders to meet the party later on the Upper Wailing, with a sled-load of supplies. Steele then outlined his plan to the Indians.

Dividing into four parties they were to proceed up the Wailing valley by different routes to avoid betraying their purpose if seen by any of Laflamme's people. It was probable that the trader had sent more than one man to spread terror of the Windigo through the country, although there was small chance that he had at Ogoke another Indian with the marvelous imitative faculty of Pierre. Therefore on their way to the lake, the hunters were to visit the trapping camps to learn of the possible activity of other night howlers in the region, whom they were to hunt down.

Soon, when their man failed to return, the people of Laflamme would taste their own medicine. Fear of the unknown fate which had overtaken Pierre and the rest would slowly chill their blood. And when their search parties did not come back, their hearts would soften as the ice rots under the April sun, and the Indian and half-breed followers of the trader would steal away in the night as men shun the smallpox. Then it would be an easy matter to rush the post, take Laflamme, Big Antoine and Baptiste, and send them to the railroad for trial.

Including the Indians which David and Steele saw in October, they estimated that Laflamme had twelve or fifteen men at the post. As the success of the whole venture depended on secrecy, no Indian, sent with supplies to the Windigo down river, no member of a search party could be allowed to escape and bring the news to Laflamme. That would remove the element of mystery—spoil the plan which had for its object, first, the stampeding of Laflamme's "bush" Indians through superstitious fear concerning the fate of their friends.

Much as his two swart lieutenants would have welcomed open war with Laflamme, they agreed that the siege of Ogoke must be one of secrecy and craft. Once the Indians deserted, it would be possible gradually to pick up any hunting parties by closing in and sending men to watch the trails near the post, until Laflamme was driven in self-defense to leave, or they took him. With the post deserted, the Ojibways of the upper valley would bring their fur to Wailing River for the Christmas trade, and St. Onge's future was assured.

For two days the impatient men waited for a dog-team from the post, eighteen miles up the lake, to pass the outlet. Then Michel and David, taking Wagosh and two of the hunters, started through the forest to locate a camp near Ogoke, from which all trails taken by hunting parties to the back country could be watched for Laflamme would need much meat to feed his people.

Days passed with no news from Michel. Steele was disturbed, but he had three men out hunting meat and could not leave the outlet. Then, one afternoon at dusk, David came in behind his dogs. Ahead of the team breaking trail in the new snow, walked a sinister-faced half-breed and an Indian, shoulders and elbows thrust stiffly back, and Steele saw that their upper arms were bound together with rawhide.

"Where did you pick these up?" asked Steele.

"Dey hunt een de beeg spruce bush near de post."

Then Steele learned, while David ate his supper, that with the aid of their skinning knives as threats, the latter and Michel had finally forced the half-breed to talk. The failure of Pierre, who had been away a month, to return to the post was worrying Laflamme. Two men, one following the other, had been sent downriver to learn what had become of the two Windigo. The first scout now was long overdue. Already some of the Indians had left in the night with their families. The others were ready to stampede. Something was the matter in the lower valley of the Wailing.

As Michel desired to see his chief at once, Steele left in the morning with two men.

In the thick timber of a little valley five miles back of the post, Steele found the camp of Michel. A well-traveled trail to the country hunted by the post people ran within a mile, and was constantly watched. Here they had picked up the prisoners brought back by David, and, as the post depended for meat on the moose of the region beyond, here the crafty Michel knew he would get the searchers sent by Laflamme to find the missing men. And when, in time, the search party in turn disappeared into the mysterious maw of the wilderness, the Iroquois was satisfied that a nameless dread would enter the hearts of the people of Ogoke. Already six men had gone out from the post, never to return, and when they had got this search party, he told Steele, he doubted if an Indian would dare remain.

(TO BE CONTINUED.)

Love at First Hand Great Thing in Life

First love comes before the age of knowledge. It is the only love entirely unencumbered with ideas and preconceptions. How little it has to do with words, with talk! It knows no terms. It is the thing itself from which terms and institutions have grown up. First lovers get love at first hand, instead of getting first the idea of romance into which to try to fit themselves and other people, Louise Townsend Nicoll writes, in the Century. They seldom talk. They get acquainted in other ways—by being near each other, by looking at each other, by softly, shyly touching hands. They do things together—play games, run races. As watchful as small animals, they learn minutely each about the other. But they do not talk.

They give each other things, always in fair exchange, and wear them out with carrying about. When they must know facts to supplement their findings, they ask—short, blunt questions. Opinion and discussion have little play.

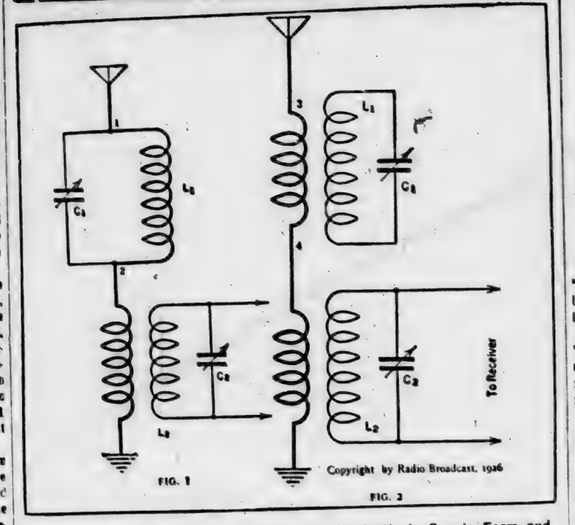
Made Millions Laugh

The real name of the famous circus clown, Dan Rice, was Daniel McLaren and he was nicknamed as a child for an old Irish clown. He began his professional career as an acrobat and clown with Seth B. Howe, circus owner, 1845. He was a partner in Spaulding's circus until the outbreak of the Civil war. After the Civil war he was financially unfortunate, but was engaged by Adam Forepaugh at a salary of $35,000 a year, afterward increased to $1,000 a week. He retired from the stage in 1882. He was exceedingly lavish with money for charity. On one occasion he gave President Lincoln $32,000 for the benefit of wounded soldiers and their dependents. He died in February, 1900.

Monkeys Popular Pets

In Pattani nearly every hut has one or two monkeys chained in the doorway, and the natives walk about followed by monkeys attached to long coir ropes

RADIO



Wave Trap Will Cut Out Loud Locals—The Conductively Couple Form and the Inductively Coupled.

Due to the widespread increase in power of many of our broadcasting stations, the need for some sort of apparatus capable of cutting out strongly interfering stations, is becoming felt more and more. There is not much fun in sitting through the program of one particular station night after night, especially when a better program is being offered by some other station which is drowned out by the nearer or more powerful transmitter. "Interfering signals," writes Howard E. Rhodes in the Radio Broadcast magazine, "sometimes are caused by direct pickup by the coils of the set so that its natural selectivity is of no avail in eliminating them. This occurs when the set is being operated in proximity to a broadcasting station, with the result that the field strength in the vicinity is great enough to induce currents directly in the various coils of the receiver. Under these conditions it will be found possible to hear the program with the antenna disconnected.

"The only practical methods to be used in eliminating this type of interference are either shielding of the receiver or using some form of closed-field coil, such as a toroid. If the set is to be shielded, it is necessary to line the entire inside of the cabinet, including the cover and the panel, with thin copper. Any joints in the copper sheet are soldered together and connection is finally made between the shield and the minus A terminal which, in this instance, is connected to ground. This puts the entire shield at ground potential, thereby excluding from the coils any external electrical fields. It should also be pointed out that this shielding will also eliminate any interference caused by power lines, motors, etc., provided they are causing trouble by setting up currents directly in the coils. However, if the interference is reaching the set by way of the antenna system, shielding will be no aid. The use of toroid coils is coming into very common use in instances where there is need of an inductor that is unaffected by external fields."

Why Toroid Coil Is Favored.

The gist of Mr. Rhodes' explanation why the toroid type of coil is recommended for use where ordinary coils will cause broad tuning by their pickup qualities, is as follows: Toroid coils will, as is the case with other coils, have induced in their turns currents which ordinarily would nullify the selective qualities of a receiver. However, the voltages induced in opposite halves of the coil, oppose each other, and the resultant effective pickup voltage is zero. This nullifying feature is apparent in several other types of coils, but is probably more so in the toroid. The article in Radio Broadcast continues as follows:

"There is a second type of interfering signal that causes considerable trouble, and against this type the two cures so far described are useless. If the signals being induced in the antenna are sufficiently strong, it is possible that a receiver may not have a selectivity sharp enough to eliminate them completely, although its selectivity under ordinary conditions may be perfectly satisfactory. For instance, the receiver might be operated at a location quite close to a powerful broadcasting station so that the signal strength from this station in comparison with the strength of the signals that it is desired to receive from other stations is so great as to produce considerable interference, even though the receiver is considerably detuned from the interfering signal. It is apparent then, that, in some way, this powerful signal must be impeded so as to decrease its strength. The most common piece of apparatus for use in this connection is the so-called wave trap which is actually a filter circuit tuned to absorb the interfering signals. These wave traps are very easily constructed, and cost little. They consist merely of an ordinary coil and a condenser. The traps are connected in the antenna circuit and are adjusted so that, at the frequency of the interfering signal, they have a very high impedance, the exact value depending on whether the unit is connected in series or parallel with the antenna. This high impedance prevents the signal from passing down through the primary of the antenna coupling and so into the receiver. At the same time, these wave traps offer a very low impedance to all other frequencies.

Methods of Operation.

"There are several methods by which these traps might be operated. Fig. 1 shows the most common method. In the drawing L_1 C_1 constitutes the trap circuit and L_2 C_2 the antenna coupler and tuning condenser of the receiving set. It will be seen that the trap is connected between the antenna post of the receiver and the antenna lead-in. Fig. 2 represents a slightly different method of connecting the trap in the circuit. In this latter method, the wave trap is inductively coupled to the antenna. This inductive coupling is obtained by winding a few turns of wire about one end of the coil L_2. One end of this new winding connects to the antenna and the other to the antenna post of the receiver. This circuit is practically equivalent to that of Fig. 1 with the difference that somewhat sharper tuning is obtained.

"Whether the trap circuit of Fig. 1 or that of Fig. 2 is used, depends to a considerable extent upon the characteristics of the antenna system. A well insulated antenna with a short lead-in and a short ground wire to a good ground, such as the cold-water mains, gives best results with the inductively coupled circuit. Every effort should be made to have as good a ground and antenna as is possible, but if it is necessary to use a long ground lead to a rather poor ground system, the direct coupled wave trap will probably give better results.

"When using the latter method of direct coupling, as illustrated in Fig. 1, some small change in the tuning of the antenna condenser will be noticed, whereas with inductive coupling practically no change in tuning takes place. This represents a slight advantage in favor of inductive coupling since it will be possible to continue to use the same old dial readings after the trap has been installed.

"If the trap is poorly made," says Mr. Rhodes in conclusion, "it may not only eliminate the interfering signals but will also decrease the strength of those signals we desire to receive. The most common cause of poor results with wave traps is due to the use of high resistance coils and low-grade condensers. It is therefore essential that the trap operate efficiently, and in order to obtain such operation, it is generally best to use a fairly small coil and a large condenser. With a large coil the elimination is usually more complete but the neutralized band is larger so that the trap interferes with reception on wave lengths adjacent to that wave on which the interfering station is operating. Most satisfactory results are obtained when low loss coils are used, such as space wound solenoids, while a toroid may be used in the inductively coupled circuit."

FOR THE NOTEBOOK

The ideal aerial is one which is away from all interference.

There is more static in defective grid leaks than in all the heavens.

In making a loose coupler, both coils are wound in the same direction.

A crystal can be tested by hooking it in series with a 22½-volt "B" battery and a milliammeter. The reading should be 1½ or 2 milliamperes or better.

When the receiver is located in the suburbs or some distance away from the broadcasting station, a long aerial upward to 600 feet can be used to advantage.

The average life of a vacuum tube is from 1,000 to 2,000 hours' constant use.

It is poor policy to experiment with a set that is believed to be in perfect working order. One is apt to throw something out of adjustment, or even entirely ruin many of the parts.

Storage batteries should be given a drink of distilled water occasionally.

CORNS

Lift Off—No Pain!

Doesn't hurt one bit! Drop a little "Freezone" on an aching corn, instantly that corn stops hurting, then shortly you lift it right off with fingers.

Your druggist sells a tiny bottle of "Freezone" for a few cents, sufficient to remove every hard corn, soft corn, or corn between the toes, and the foot calluses, without soreness or irritation.

Cement Railroad Ties Favored

The great and constantly increasing scarcity of wood has driven the railroads to the point of finding a substitute for timber in the laying of the roadbed. Various forms of metal ties have been experimented with, but as a rule they have been found faulty, but it seems that it is likely that the cement tie will be found to solve the problem.

A group of reinforced ties laid nine years ago at Eagle Pass, Texas, was recently taken up and each one was subjected to the closest examination and no evidence of impending failure was to be found. In fact it was the opinion of the engineers making the examination that the ties were just as good as when laid.

In addition they had overcome some of the shortcomings of the wooden tie. The success of this experiment has prompted the officials of the Southern Pacific railway to lay some ties of the same type upon that line.

BEAUTIFY IT WITH "DIAMOND DYES"

Just Dip to Tint or Boil to Dye

Each 15-cent package contains directions so simple any woman can tint soft, delicate shades or dye rich, permanent colors in lingerie, silks, ribbons, skirts, waists, dresses, coats, stockings, sweaters, draperies, coverings, hangings — everything!

Buy Diamond Dyes—no other kind—and tell your druggist whether the material you wish to color is wool or silk, or whether it is linen, cotton or mixed goods.

Ambition

It happened on the small-time floor of a vaudeville booking office. A team which came from the Midwest six months ago to "show them a real act" had been canceled after the first performance in seven different theaters, but could not be licked.

"We've got some new gags," timidly chirped the woman of the combination. "Give us another chance."

"Good Lord!" ejaculated a booker. "Are you still stage-struck?"—New York Graphic.

Shave With Cuticura Soap

And double your razor efficiency as well as promote skin purity, skin comfort and skin health. No mug, no slimy soap, no germs, no waste, no irritation even when shaved twice daily. One soap for all uses—shaving, bathing and shampooing.—Advertisement.

Slam Here, Somewhere

"A butcher was driving a cow to the slaughter pen," relates the Altoona Tribune, "when a stranger stopped him and asked, 'What are you going to do with that cow?' 'I am going to kill her,' said the butcher. 'Oh, I wouldn't do that,' said the stranger. 'You feed her for awhile and I think she will live.'"

Red Cross Ball Blue should be used in every home. It makes clothes white as snow and never injures the fabric. All good grocers.—Advertisement.

A Frequent Caller

"It's silly to say opportunity knocks only once."

"Why?"

"No less than eight men have been here today trying to let me in on the opportunity of a lifetime."—Detroit Free Press.

A car for every purse and purpose

IN THE automobile industry several distinct price classes have developed. General Motors is represented in each.

The General Motors line of passenger cars comprises 52 different models. They include every open and closed body type and range in price-at-the-factory as follows:

CHEVROLET
6 *Models*—$510 to $765

PONTIAC
2 *Models*—$825

OLDSMOBILE
9 *Models*—$875 to $1115

OAKLAND
6 *Models*—$975 to $1295

BUICK
16 *Models*—$1125 to $1995

CADILLAC
13 *Models*—$2995 to $4485

Quality is the first law of General Motors; and sweeping economies, possible to an institution with the resources of General Motors, are reflected in the prices of General Motors cars.

Select the car that suits you from the General Motors line. You may buy it out of income on General Motors' time payment plan (GMAC), which assures fair terms and low rates.

GENERAL MOTORS

CHEVROLET • PONTIAC • BUICK
OLDSMOBILE • OAKLAND
CADILLAC • GMC TRUCKS

Enormous Annual Loss by Erosion

Soil Resources Are Being Seriously Depleted by Gullying.

(Prepared by the United States Department of Agriculture.)

Erosion of farm land causes an enormous annual loss to American farmers. While a large outlay of cash and labor is being made for soil improvement, at the same time the soil resources of the country are being seriously depleted through gullying. Owing to the large yearly rainfall and to the extensive growing of clean-cultured crops year after year in the southern states, that section suffers a disproportionate share of this loss. Gullying does considerable damage, however, in nearly all parts of the United States.

When plants and soil are unable to retain all of the rain that falls on rolling or hilly land the surplus flows over the surface to a drainage channel at the foot of the slope. If there are no draws or depressions the water travels over the surface to the foot of the slope in broad, thin sheets. Where depressions exist, however, the water is led into the depressions. It gathers from above and from the sides of the depression and forms a stream with power to wash away the soil proportional to the stream's size and velocity. If the depression is not sufficiently protected by grass or other means to prevent erosion, a gully begins to form which enlarges with each succeeding rain.

Where Gullies Start.

Natural hollows are not the only places where gullies start. They may start at any place on a slope where opportunity is afforded by artificial means for the water to collect and form a small stream. Driving a wagon down a slope when the ground is soft leaves wagon tracks that may later develop into gullies. A gully may be started by dragging a plow down a slope. Mole holes and cattle paths down a slope are common causes of gullies. One of the commonest ways to start gullies is to plow or cultivate straight up and down a slope. A dead furrow extending down a slope may rapidly develop into a deep gully.

Means employed to prevent the formation of gullies are: deep plowing, plowing under organic matter such as manure, stubble and stalks, the use of cover crops, proper crop rotations, plowing along level lines across the slope, and tile draining. The construction of terraces also reduces erosion by carrying off the surplus water slowly. Information relative to terracing may be obtained from the state agricultural colleges and from the United States Department of Agriculture.

Plan Reclamation.

In reclaiming a gully, the work should be planned so that when completed the entire gully will be reclaimed. Too often a small section of a gully is reclaimed in a way which will not fit into any later scheme for the reclamation of the whole gully. In starting work attention should be first directed to the upper end of the gully where head erosion is going on. The brush dam is cheap and easy to build and is effective in filling gullies when carefully and properly constructed. The following method is recommended for building brush dams that are at times overflowed. The bottom and sides of the gully for a distance of four to ten feet are covered with a layer of straw that will be from four to six inches deep when pressed down by the weight of the dam. The brush, with the butts pointing up-stream, is laid close together on the straw and thoroughly tramped down, the fine brush being placed at the bottom and the coarser on top. The packed brush is held in place by cross pieces nailed to fence posts set in the line of the dam across the gully. Set the posts in the ground not less than four feet deep if possible. Make the middle of the dam lower than the sides so that the water will not have a tendency to wash around the ends. Satisfactory dams can also be made of other materials, such as stones, logs, concrete, or woven wire, where brush is not available.

Plowing in and seeding is a simple though sometimes rather expensive method of reclaiming gullies. Small gullies (one to three feet deep) having no well defined drainage areas can be entirely filled. They can be first partly filled with manure, straw, corn stalks or small brush, which should be covered with a foot or more of dirt by plowing and scraping from the edge of the gullies.

Start Plowing.

The plowing should be started in the bottom of the gully or as near the bottom as possible and the dirt thrown toward the center from both sides. The plowing is done in the same way as in breaking land and should be continued a few furrows beyond the edges of the gully. To push the dirt toward the center of the gully, an ordinary road drag or steel ditcher can be used to advantage.

The freshly plowed earth over the sides and bottom of the gully affords a good seed bed for plant growth. Grasses should be sowed or trees planted to hold the soil in place and temporary dams of some material such as brush or straw should be built to catch the soil that might otherwise be washed away by heavy rains. Some grasses that can be used for this purpose are bermuda grass, orchard grass, blue grass, red top, sweet clover, and lespedeza. Every [illegible] certain grasses best

Gasoline Is Source of Serious Danger

Keep Open Lights Out of Tractor Building.

(Prepared by the United States Department of Agriculture.)

Gasoline in uncovered receptacles, particularly when kept indoors, is a source of grave danger. Even at ordinary temperatures it gives off a very explosive vapor, the vapor from a single pint rendering the air in an ordinary sized room explosive. The vapor, being heavier than air, sinks to the ground or floor, and may be present without its odor being detected. For this reason it is especially hazardous to set a lantern on the ground or floor near a gasoline container of any kind, even out of doors, as the flame in the lantern may follow the vapor to the container.

Open-flame lights should never be allowed in the garage or building containing the farm tractor or gasoline engine. Automobiles are sometimes set on fire through ignition of gasoline or the vapor therefrom by sparks from cigars or cigarettes.

The use of gasoline inside the house for cleaning purposes has resulted in many destructive fires and numerous deaths. Often some cleaning agent that will not take fire can be used as satisfactorily as gasoline. Whenever gasoline is used indoors for cleaning it is important that there be no fire in the room and that the doors and windows be open so the vapor may escape. Never use as a container for this liquid a glass jar, bottle or other receptacle likely to break if dropped or struck accidentally.

Benzine and naphtha also give off very explosive vapors, and require the same precautions in handling as gasoline.

Two General Methods of Keeping Paraffin Liquid

There are two general methods of keeping paraffin liquid while painting the silo walls. The best method when it can be done is to keep the paraffin hot by means of a steam coil, using steam from a threshing engine. If the steam is under 100 to 120 pounds pressure in pipes surrounding the paraffin pail, it will easily keep the latter in a melted condition. In many cases this would be inconvenient for working in the silo. In such cases, the paraffin can be melted carefully over a slow fire, the paraffin pail set in a vessel of hot water, and taken to the work in that way. If the surface is dry and warm and one works rather fast, the paraffin can be put on fairly fast in this way.

The other way is to use about two gallons of kerosene to each three pounds of paraffin, heating the kerosene with a hot water bath and shaving the paraffin into it. This does not make so heavy a coating as the paraffin alone and two coats will be necessary where one would do with the paraffin alone. One must be extremely careful with fire around either paraffin or kerosene, as they catch fire easily. Where possible, the water should be heated and the fire kept entirely away from the kerosene.

Fertilizer for Young Orchards Must Be Rich

Fertilizer, rich in nitrogen, is recommended for the young orchard. If the trees are beginning to bear it is a good idea to omit most of the nitrogen and add more potash and phosphate. The quantity to be added will be determined by the fertility of the soil.

If one is planting the orchard with an inter-crop, the fertilizer should be added just after the first spring plowing. This will afford the fertilizer an opportunity to help the inter-crop as well as the young trees.

Experiments prove that it is not a good practice to apply heavy applications of commercial fertilizers in the immediate vicinity of the roots. It is far more desirable to broadcast the fertilizer among the rows. Good stable manure that is free from weed seed is always desirable. It may be applied any time with every assurance of success. Many practical orchard men apply it early in the spring and then disk it into the soil. Others simply put it on the ground and leave it there. From one to one and one-half tons to the acre may be used with no danger from injuries. If one does not have enough fertilizer to go around when applied heavily, it should be spread lightly. Better a half ton than none at all to the acre.

Protein Is Necessary

A certain amount of protein is absolutely essential in cattle feeding operations. Where alfalfa or clover hay is the sole roughage it is not necessary to use any protein food, but where alfalfa or clover is fed in connection with other roughages, the addition of one pound of protein per head per day will reduce the cost of grains materially. If no alfalfa or other leguminous hay is fed, two pounds of protein food per head per day will produce considerable cheap gains.

Weighing Milk Saves Feed

Dairy cows should be fed in proportion to the amount of milk they produce. This can be accurately done by using the milk record sheet as a guide. In cases where a person starts to weigh the milk from his cows he not only saves food but he also increases the milk production because he places the grain where it is needed, states J. H. Fitch of the Kansas State Agricultural college dairy department.

NO WOMAN CAN KEEP HOUSE EFFICIENTLY

Without Good Health

MRS. FRANK DINDORE
823 PIERCE AVENUE, LANCASTER, OHIO

Four Walls Can Make a House, but it takes a Woman to Make a Home

To be a successful homemaker, a woman must guard her health. When mother is not well, the home is upset. Women everywhere are learning through their own personal experiences, as these women did, the merit of Lydia E. Pinkham's Vegetable Compound.

Lancaster, Ohio.—"For ten years after my marriage, I had poor health. I was on a visit to my sister in Utica, Michigan, and she had taken Lydia E. Pinkham's Vegetable Compound. Her husband got me a bottle and I took it and felt so much better that I got a second one. Now, whenever I feel run-down I take the Vegetable Compound and soon feel all right again. I have had three little girls in the last six years and do all my housework, sewing, washing, and ironing. My time is pretty well taken up, but I will answer any letters I receive."—Mrs. Frank Dindore, 823 Pierve Avenue, Lancaster, Ohio.

Sturgis, Michigan.—"I am very thankful for what your medicine has done for me and have recommended it to others. I took it to give me strength before my baby was born. I would have to stop work and lie down sometimes all the afternoon. I felt as if I did not care whether anything was done or not. I got tired out so easily. One day I found a little book on my porch and that night I showed it to my husband and he went down town and got me a bottle of Lydia E. Pinkham's Vegetable Compound. The medicine has helped me so much that I was soon able to do my work, and when my baby was born, my nurse, Mrs. Forbes, said it was the easiest birth she had ever attended. I will be more than pleased if I am helping someone else by giving my testimonial."—Mrs. Edward Persing, 208 Surprise Ave., Sturgis, Michigan.

All Alone

"Who's that gloomy chap over in the corner?"
"He's the host."

You Tell 'Em

Little—"Great men often rise from small beginnings." Tattle — "Well, you've certainly started off right."

Children Cry for

Fletcher's CASTORIA

MOTHER:— Fletcher's Castoria is a pleasant, harmless Substitute for Castor Oil, Paregoric, Teething Drops and Soothing Syrups, especially prepared for Infants in arms and Children all ages.

To avoid imitations, always look for the signature of Chas. H. Fletcher. Proven directions on each package. Physicians everywhere recommend it.

A young doctor can often make up in sympathy what he lacks in experience.

Men are never very wise and select in the exercise of a new power.—Channing.

DR. W. B. CALDWELL AT THE AGE OF 83

Old Folks Need a Mild Laxative —Not a "Physic"

Most men and women past fifty must give to the bowels some occasional help else they suffer from constipation. One might as well refuse to aid weak eyes with glasses as to neglect a gentle aid to weak bowels.

Is your present laxative, in whatever form, promoting natural bowel "regularity"—or must you purge and "physic" every day or two to avoid sick headache, dizziness, biliousness, colds, or sour, gassy stomach?

Dr. Caldwell's Syrup Pepsin helps to establish natural, regular bowel movement even for those chronically constipated. It never gripes, sickens or upsets the system. Besides, it is absolutely harmless and pleasant to take.

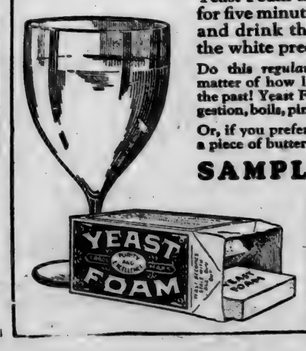
Buy a large 60-cent bottle at any store that sells medicine and just see for yourself.

Dr. Caldwell's SYRUP PEPSIN

We perceive justice very clearly where our interests are not involved.

Some men can't even hope to have brain fever.

Conquer Constipation *with* Yeast Foam!



For constipation try this: drop a cake of Yeast Foam in a glass of water; let stand for five minutes; stir with spoon; let settle and drink the milky water. Including the white precipitate.

Do this regularly and your constipation—no matter of how long standing—will be a thing of the past! Yeast Foam is equally effective for indigestion, boils, pimples, lack of weight and strength.

Or, if you prefer, eat the yeast with a cracker or a piece of butter.

SAMPLE CAKE FREE

When That Hungry Bunch

Gathers around the table, nothing can please them better than a nice steak or roast of meat. And then tell them you got it at St. Joe Meat Market and they'll know it's surely good—That's the only kind we sell.

We want to buy your Beeves, Veal or Hogs

We will deliver your ice-arrange for it now!

St. Joe Meat Market,

HARMAN & HELLINGER, Proprietors.

You are a Capitalist

DID you ever stop to think of that? The word "capitalist" refers to one who has wealth.

Wealth does not always refer to money or to worldly goods. Good health is wealth and so also is a sound mind.

Good health and keen intellect are sometimes more valuable than gold. If you have good health and a workable brain you are a capitalist.

A capitalist mixes good health and brains to accumulate material wealth.

Are you using your capital for this purpose?

The staunch oak grows from tiny acorn.

From small beginnings great fortunes have grown.

This bank has watched with keen interest the efforts of a great many people who have used their capital. Will you let our experience be of service to you.

PRONUNCIATION AID

June Webster, descendant of the famous lexicographer, Noah Webster presents a copy of her ancestor's work to the Publicity Department of the Sesqui-Centennial International Exposition Association to help them in pronouncing properly the name of the big events which opens June 1 to celebrate the 150th anniversary of the signing of the Declaration of Independence. There are many types of pronunciations heard but there is just one proper way Noah says. It is "Ses-Kwuh-cen-ten'-nial" with the accent on the first syllable of the "Sesqui" and on the second syllable of the "centennial."

"But each one, man by man, has won imperishable praise, each has gained a glorious grave—not that sepulcher of earth wherein they lie, but the living tomb of everlasting remembrance wherein their glory is enshrined, remembrance that will live on the lips, that will blossom in the deeds of their countrymen the world over. For the whole earth is the sepulcher of heroes; monuments may rise and tablets be set up to them in their own land, but on far-off shores there is an abiding memorial that no pen or chisel has traced; it is graven, not on stone or brass, but on the living heart of humanity. Take these men, then, for examples. Like them, remember that prosperity can be only for the free, that freedom is the sure possession of those alone who have the courage to defend it."—Pericles.

Marching Days Over for Wearers of Blue

The soldiers in blue did not march yesterday, a newspaper correspondent wrote from Macon, Mo., last year.

The Stars and Stripes were displayed on all the business streets, from the staff of the federal building and draped from the windows of many homes.

But the soldiers in blue did not march.

Girls with baskets of beautiful flowers were out in Oakwood's shaded cemetery with the dawn, placing their scented tributes on the mounds of the sleepers. And many cars laden with spring's fragrant product of rich colors glided along the smooth roadway to the quiet city, and added to the decorations until the cemetery was like a magnificent flower garden.

But the soldiers in blue did not march.

Here and there a gray-bearded man, with time's heavy markings about the eyes and cheeks, sat at a window or in a rocking chair on the front porch, and looked wistfully at those going by with flowers. Some saluted these men gravely, knowing what the day meant to them. Younger folks hurried by, not seeing the connection.

The day so long spoken of by orators had come at last. The "thinning ranks" had thinned out. No longer do the men who marched with Grant and Sherman and Rosecrans and Thomas meet at the post and plan for Memorial day. All the speeches have been made. The marching is over. The next reunion will be on the other side of the border.

Long Deserved Title of Phil Kearny's Men

Dashing Phil Kearny, riding into the darkness of the Chantilly battlefield in the summer of 1862, was shot by Confederates whom he mistook for his own men. A short time ago his brigade, the First New Jersey, passed in review before his statue in Newark and disbanded. We have an indication of the rapidity with which the Civil war hosts are slipping away in the statement that of more than 6,000 men who followed Kearny in the Peninsular campaign and at the second Bull Run fewer than 100 remain alive—the youngest an octogenarian. But the astonishing fact is that the brigade should not have lost its organization decades ago. That so large a body held intact while few Civil war regiments retained their individuality is a striking tribute to Kearny's power of imbuing his troops with his own cavalry fire and staunchness. This one-armed fighter of Churubusco, Solferino, and Seven Pines, always the first to lead a charge, was another illustration of what the personal magnetism of a Jeb Stuart, a Sheridan, or a Custer can accomplish. He died early in the war, but his men were Kearny's men till the last.—New York World.

National Doctors Specialists

Dr. Culver Associated

Licentiate of Indiana

brings the knowledge of our Organization and of our experience in the successful treatment of COMPLICATED CHRONIC CONDITIONS.

Expert Service Free of Charge.

The National Doctors is an Organization of Experienced Registered Physicians for the treatment of Stubborn Chronic Diseases

The National Doctors, Experienced Specialists, treat without surgical operations or hypodermic injections, diseases of skin, blood and internal organs, rheumatism sciatica, lung trouble, old ulcers, tape worm, asthma, eczema, chronic constipation, epilepsy, high blood pressure, bed wetting and other morbid affections of the body.

Years of experience and the complete records of great numbers of cases successfully treated prove that the methods of the National Doctors are very dependable.

The physicians of the National Doctors have at their command the knowledge and resources of the whole Organization.

Many people keep on suffering from ailments that might be greatly improved because they cannot afford to go to high priced specialists away from home, and few communities have sufficient numbers of such cases to support a local hospital.

The National Doctors have solved this problem by having their Specialists travel from town to town to meet the sick.

They instruct patients, recommend a course of treatment and teach ailing men and women how to take care of themselves at home.

To those having ailments of long standing, whatever the trouble may be, and not withstanding the poor results of former troubles, come and talk it over.

Examination and Advice FREE.

Ladies are requested to come escorted.

You can get transfer paper at News office in large or small sheets.

Writing tablets and envelopes at News office, also box stationery from 10c up.

All the late magazines at News office. Place your order—we will save one for you.

ST. JOE NEWS.

VOL. XL | ST. JOE DeKALB COUNTY, INDIANA, THURSDAY MAY 20, 1926 | NO. 20

Standard Oil Distributes Stock

Harry Kees and Ed Miser, local employees of the Standard Oil company, were called to Fort Wayne Monday, where distribution of the company's stock and cash was made.

Five years ago the company inaugurated a stock purchasing plan whereby all employees were invited to subscribe on the five year plan and the company agreed to put in half as much cash as the employee. All employees starting in and then quitting before the date of expiration, were given 6% interest on their cash paid in, but the money the company put up for each purchaser was left in the fund and then distributed to the stockholders at this time.

Mr. Kees received 43 shares of stock and Mr. Miser 10 shares. This week the stock sold on the market at $64.50.

This campaign covered ten states as controlled by the Indiana division and now makes 2,300 more stockholders.

In turning to our files of 1905, July 1st., we learnee that Mr. Kees began his work with the Standard Oil Company as tank wagon driver taking the place of Clarence Hart, and has been a steady employer ever since.

Sequestered Mortgaged Goods.

Fred H. Saylor of St. Joe, was boun over to the DeKalb Circuit court Monday night by E. A. McClintock, justice of the peace in Auburn, when he entered a plea of guilty to sequestering mortgaged property. His father, E. W. Saylor, went surety on the bond which was placed at $200 by the court.

Saylor was arrested on an affidavit sworn to by H. D Burkhalter, an authorized agent for the Mercer Motor Sales Company. In the complaint Mr. Burkhalter alleged that Saylor on or about May 17, 1926, at St. Joe removed and secreted in an unknown place a Ford one ton dump truck on which the plaintiffs had a mortgage. The act was committed without the knowledge or consent of the plaintiffs, the affidavit declared.

Deputy Prosecuting attorney H. S. Grimm appeared in behalf of the state. Arden Morr made the arrest as special constable.—Star.

Potted plants for Decoration at News office next Monday.

All members of the St. Joe High School Alumni are requested to be present at a business meeting of the Association to be held at the school house Friday eve, May 21st.

FRENCH WOMEN REMEMBER

"Rest ye in peace, ye Flanders dead,
The fight that ye so bravely led
We've taken up! And we will keep
True faith with you who are asleep,
With each a cross to mark his bed
And poppies blooming overhead
Where once his own life blood ran red.
So let your rest be sweet and deep
In Flanders fields."

Memorial Plans Announced

At a meeting of the eftizens of St. Joe last week, arrangements were made for the observance of Memorial Day and officers were elected for a period of three years:

Wm. Curie, Chairman.
F. B Leighty, Secretary.
Ed Leighty, Treasurer.

The usual plan of decorating will be carried out by the citizens at St. Joe at 9 o'clock and to be accompanied by the band and visit Bear Creek at 9:20; Morr's, west of Concord at 9:45; at the Jenkins cemetery, east of Concord at 10:00; Newville at 11:00 and Alton at 11:45.

At each of these places the band will play, graves will be decorated and prayer offered by an accompaning minister.

Persons who will join the procession with their automobiles, will be appreciated and should notify Mr. Curie.

The old veterans of St Joe will be arranged for so that they may make the trip in comfort.

At 2 o'clock in the Christian church the St. Joe services will be held. Next week will give details of program.

Club Camp For Summer

Committees from Steuben, Allen and DeKalb counties met at the county agent office in Auburn, Friday evening with Mr. Austin from the club office at Purdue. It was definitely decided that Purdue would assist in holding a boys' and girls' club camp in this district. A definite camp organization was perfected with County Agent Sam Colliver of Angola as camp director. He will be assisted by Mrs. Howard Gieseking of Arcola, Allen county. Mrs. Gieseking will be known as "camp mother."

A. J. Smith, vocational teacher at Spencerville, was made chairman of the sanitation committee.

Miss Ruth Abel of Orland will act as chairman of commissary department.

B. & O. Man Injured

Mr. Reynolds, the road man on the B & O., was struck by side of head by a piece of brick Tuesday, cutting a severe gash, while the men were unloading cinders east of town. The wounds were dressed by Dr. Sheffer and he was rushed to the Garrett hospital, fearing fracture of the skull.

Neither Tardy Nor Absent.

The following school children were awarded certificates of honor for not being tardy nor absent during the school term

SPENCER TOWNSHIP

Grades 1-2 Mrs. Lehr Wilder, teacher—Fred Steward, Erma Baltz Elizabeth Smith, Robert Betts and Dalias Zimmerman

Grades 3-4. Minnie Walker, teacher—Margaret Brown and Dorothy Markle

Grades 5-6. Mrs Dorothy Ellen Hart, teacher—Maurice Miller, Lloyd Laux, Albert Hollabaugh, Gerry Gloyd, Lanore Laub, James Butler, Paul Bice and Florence Steward.

Grades 7-8, William N. Lake, teacher—Fern Ward

CONCORD TOWNSHIP

Concord Township Consolidated School, Grades 1-2, Portia Halsell, teacher—Frank Monroe, Arden Inloe, Gerald Gee and Effie Bell Freeburn.

Grades 3-4, Pauline Wasson, teacher—Helen Hellinger, Lorraine Bleeks, Arlo Douglas, Eloise Braggoo, Merle Epler, Ethel Mae Freeburn and John Dilley.

Grades 5-6, Lois Murphy, teacher,—Ralph Keeler, Vivian Mason, John Woodcox, LaRue Reinhart, Dale Walter and Carlton Wilmot.

Grade 7-8, Miss Faye Bangs, teacher—Marguerite Wilson, Inez Kinsey and DuWayne Kinsey.

NEWVILLE TOWNSHIP

Newville School, Grades 5-8, Glen Hart teacher—George Baron and Lillian Hanna.

Grades 1-4, Hazel Kline, teacher—Dorothy Haupt.

Newville Center, H. Lehr Wilder, teacher—Evelyn Dermott and Mervin Conine.

Coletown, Mary E. Moore, teacher—Vesta Byers.

Checking Up On Use of Limestone

You will remember the limestone special demonstration held on the B. & O. tracks here last spring Prof. K. E. Beeson, of the soil and crop extension department from Purdue with County Agent Stinson, were checking up results last Friday. The gentleman stated that a very interesting limestone demonstration was on Ed Pflaumer's alfalfa field near Coburntown. Mr Pflaumer applied 4600 pounds of lime along the south side of a three year old alfalfa field. This south side was the poorest stand he had and the test indicated that he needed two tons of lime per acre. Friday the limed portion of the field showed better than two inches more plant growth. Upon applying the limestone test, the lime portion showed perfectly sweet top and subsoil test. This demonstration clearly proves that a person can apply lime to alfalfa after it has been planted and secure the benefits of the lime. If Mr. Pflaumer had not limed this piece, his alfalfa would have died out in a year or two.

SPORTING GOSSIP

The amateur base ball championship of St. Joe will be decided when the rub off game will be played Thursday at 2 P. M., at school house diamond, viz: West End Lions vs East End Tigers. Old regulars will be in the lineups.

Don't fail to be there because when the Lions and Tigers mix, well come and find out.

LUMBER YARD FOR ST. JOE

We are pleased to announce to St. Joe and surrounding country that we have taken a long time lease on the large hay barn that was formerly occupied by Hart & Lower of Hicksville, O. We will have a complete line of lumber and roofing, cement, and in fact everything that will make a modern lumber yard. We solicit your business and will be more than pleased to figure on bills for houses, barns or any other buildings. Remember this is something that St. Joe has needed for a good many years and we hope that St. Joe and community will support it so that it will be a permanent fixture in the town of St. Joe.

The St. JOE ELEVATOR

Samuel Keesler, Mgr. Grain Dept. — Bert Jackson, Mgr. Coal Dept.

NOTE—Pay your accounts. They are due now.

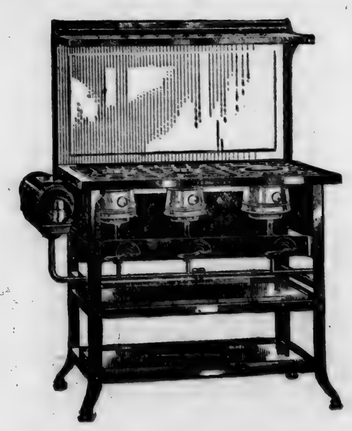
LEONARD Refrigerator's

With the splendid facilities for St. Joe securing ice delivered by the St. Joe Meat Market, there is no excuse for not having a refrigerator in that home of yours. We have two sizes on our floor, white enamel, side icers and self cleaner. At this low price:

50 pound Ice - $34.50
75 pound Ice - $37.50

NATIONALLY ADVERTISED AND GUARANTEED

E. R. KINSEY, Hardware Furniture



Florence Oil Ranges

cook with Focused Heat. The intensely hot, clean blue gas flame goes straight to the bottom of the kettle. This means quick cooking in a cool kitchen.

The Florence burns kerosene the modern way, by first converting it into kerosene gas. It has no wicks to trim and requires no priming. To light the burner you merely touch a match to the asbestos "Kindler". The flame can be set for any intensity, and will not creep or smudge.

Florence Oil Ranges are made in five sizes. Easy to use, easy to clean, and a credit to any kitchen, they have won the enthusiastic endorsement of millions of women.

More Focused Heat—Less Care.

Clever Fashions for Younger Set

Sports Dress Permits Wide Choice in Materials and Colors.

Springtime is a particularly interesting season for the younger set—especially the girls between thirteen and seventeen, when all mothers and chaperons are puzzled as to what to do with them, what to approve, what to withhold, and, among other important considerations, how to plan their dress. The girl who is growing up presents a problem, the solving of which, asserts a fashion writer in the New York Times, challenges wisdom, taste and tact. A girl of fourteen may either be just a little girl, loving still the junior frocks, or she may have to be reckoned with in a more sophisticated style of dress. Anticipating the activities of young people during the spring, modistes and shopkeepers have prepared countless attractive models to intrigue the fancy of misses and juniors.

This season the needs and longings of these young people have been most cleverly anticipated. Models of frocks, suits, coats, ensembles and millinery for every conceivable occasion have been presented in advance by the cleverest creators of Europe and this country. It is always stimulating to visualize a design for youth and prettiness, and the fashions for young women have become, through late seasons, quite as interesting as those for grown-ups, keeping pace with their new ideas and variants.

Sports dress is the first consideration for the spring wardrobe, and the models of this type have never been more attractive. The jumper suit carries on, more popular, if possible, than it was last season. This jolly, chic, wholly comfortable outfit has been found to be adaptable equally to a young girl, a sub-deb or the mother of both. The model has been so universally accepted that this season's version is in a way standardized.

Jumpers for Hard Wear.

These jumper frocks of wool are intended, of course, for the strenuous sports or general utility of the spring season, when they will receive hard wear, and for occasional use through the later months at seashore or mountain resort. They may be worn with or without a topcoat, most often with just a fur piece or with one of the scarfs of wool, taffeta or crepe in gay colors, so fashionable this season. For frocks of wide use crepes are more in demand than any other single fabric. They are now to be had in many different weaves and weights.

Nothing is so definitely suited to a greater number of occasions as the frock of some sort of crepe, from the heavy supple crepe satin to the sheerest crepe Elizabeth or georgette. Bengaline of the heavily corded sort, poplin and taffeta are also among the latest materials used successfully in the jumper frock. All of these offer much comfort because they are worn so easily under the coat, and those made of the more fancy materials, or embellished with needlework, are suitable for more formal occasions. One sees now jumper frocks distinguished from jumper suits because they are made of lighter materials—

Scalloped Cape Coat of Navy Twill Lined in Bright Red.

lame, lace, embroidery and the most fragile stuffs.

With this simple, matter-of-fact conception as a foundation a surprising number of different styles may be established. The boyish jumper is an intriguing thing. It is smart, easy and gives always a well-groomed appearance, especially to a girl of slim athletic figure. A sports jumper suit of American authorship built of plain and novelty wool goods combined has a blouse that extends well below the hips, with a narrow belt six inches above. A deep shirt bosom buttons down the front of the blouse with a cluster of narrow shoulder tucks. The skirt is plain with the requisite plaits arranged at one side. This shirt-bosom model is seen in the severely tailored suits made of two materials.

Another sports model is composed of jersey cloth in a lovely new shade of coral. The skirt of this is laid in its entire circumference in inverted box plaits, very flat and narrow in effect. The blouse of this slip-on type is sleeveless, with wide armholes, and the neck is cut with a deep V in front. This is finished all around with a stiff band of the goods and is worn over a shirt of white crepe de chine, buttoned high with a soft turnover collar and long sleeves that are finished with a narrow wristband.

Variants and Modifications.

Within certain limitations the blouse or jumper of this two-piece frock has several variants and modifications between that of the sleeveless model in lace over a skirt of

Navy Blue Blouse With Shoulder Cape Is Lined in White.

chiffon and the severe shirt-bosom blouse or norfolk made of stout goods. One point is especially varied in the latest suits—the length and treatment of the blouse. One model of the slip-on jersey type is embroidered in an amusing manner with a procession of little animals across the front. Another is decorated with a flock of birds and still another with baby elephants. These are not designed for nursery tots, but for young ladies between the ages of fourteen and eighteen.

Some exceedingly swagger jumpers from Paris are coat-like in character and others are patterned after the classic norfolk jacket, with one of the many new belts of kid, patent leather or suede. A few are shown with fullness brought out through a bias or side clusters of plaits below the belt. In an ultra-smart suit done by Lanvin the short skirt of crepe de chine is plaited so closely as to produce a punctuated ripple at the bottom. Some blouses of velvet flare sharply at the sides and have two little pockets with flaps and a narrow kid belt. These are worn as slip-ons and the neck, which is slit down the front for eight inches, closes at the throat with a soft turn-down collar. This is a somewhat sophisticated version of the two-piece, which is suitable for one of the seniors of the misses' class.

All of the costumes designed for girls and young women this season are not divided. There are one-piece frocks in diversified styles in all the new fabrics and beautiful colors. The flare and bias line so common last year is seldom attempted in the new models. Instead, there are the plaited skirt and flounces both plaited and gathered, creating the desired fullness in another way. The straight line is being used once more as the starting point by many designers. From shoulder to hip the silhouette is unchanged, with only two novelties in detail—the neck, which now varies from the bateau to the round or pointed, and the sleeve. For the last year the slogan has been a sleeve all the way or no sleeve.

Styles in Sleeves.

Among the new frocks are some elbow-length sleeves and many more of the very latest style, which is the short cape sleeve cut in one with the bodice, kimono fashion. Dresses for every occasion are made with the usual waist, hip length, with material gathered on in an entire flounce, or attached in different arrangements. One especially effective model is put together in two sections, each with a straight length of the goods from neck to hem.

Every jumper frock from Paris must have a plaited skirt. This requirement solves very cleverly the problem always before the Paris designer of wresting last year's garments from the clutch of the woman who has grown attached to their smart practicability.

The house of Cheruit has added a footnote to this general order, plaiting the jumper blouse as well; and Suzanne Talbot has joined them in urging that the blouse should be lengthened to within a foot of the skirt hem. This suggestion might be more intriguing if we had not already grown too familiar with the long, separate waist known as the tunic blouse.

THE KITCHEN CABINET

(©, 1926, Western Newspaper Union.)

A widespreading, hopeful disposition is your only true umbrella in this vale of tears.

Do the work you have to do
With a purpose streng and true,
Every day.

GOOD THINGS TO EAT

The simplest foods well cooked and served are the most satisfying to the majority of people for every day.

Claridge Beef Heart.—Wash and remove the arteries from the heart, wipe dry and fill with a good stuffing, tie up securely and roast in a moderate oven for three hours. Remove the strings before serving, and also pour a hot gravy around the heart.

Stuffing: Chop one ounce of suet fine, add two cupfuls of bread crumbs, one chopped onion, season with parsley, thyme, pepper, salt, and a grating of nutmeg. Mix well and add one beaten egg to bind it.

Spring Salad.—Grate or put through the fine knife of the food chopper enough carrots to make a cupful, add a little minced celery, a seasoning of onion and enough good salad dressing to season well. Serve on lettuce, dotted with spoonfuls of the dressing.

Rhubarb and raisins make a good combination for a pie.

Plain Custard Pie.—It would seem that any cook might make a most acceptable custard pie, but the proof of the pudding being in the eating, we know they can't. Line a pie tin with a good rich crust having the rim stand up well above the edge of the tin. Fill with a custard mixture, using for an ordinary pie two eggs, one-third of a cupful of sugar, a pinch of salt, and two cupfuls of milk, adding a generous grating of nutmeg or cinnamon if preferred. Set into a hot oven to bake the crust quickly—this avoids soaking it—then lower the heat to bake the custard, as that should not be cooked at a high temperature. Too hot an oven will make the custard whey, and become coarse grained. A perfect pie should be well baked on the bottom and have a filling of rich, creamy consistency. A custard is well baked when a knife thrust into the center comes out clean.

Tapioca well cooked and mixed with any bits of canned or fresh fruit, topped with whipped cream, makes a most delightful dessert.

Dumplings.—Delicious fluffy dumplings may be prepared as follows: Take one beaten egg, one cupful of buttermilk, two teaspoonfuls of baking powder, one-half teaspoonful of salt; sift in flour enough to make a drop batter. Drop from a teaspoon into a kettle of hot meat with plenty of bones to hold up the dumplings, cover tightly and cook eight minutes. Do not uncover during the cooking.

Everyday Good Things.

If one desires a large quantity of sandwich filling for company, the following recipe will be a good one to follow. For small amounts it may be divided.

Cheese Sandwich Filling.—Mix together one cupful of sour cream, three eggs, one tablespoonful each of butter and sugar, a few grains of cayenne, one teaspoonful of mustard, and one teaspoonful of salt. Heat all together until the eggs are broken, set over hot water and stir until it begins to thicken, then add three tablespoonfuls of vinegar (hot) to the cream mixture. Cook until it coats the spoon, add one and one-half pounds of finely cut cheese, two green peppers put through the meat chopper and two red peppers also chopped. Add the peppers after the mixture is slightly cool. Use on slices of buttered bread. The cheese and peppers may be used, adding enough dressing to make the right consistency; in this way the amount may be varied to suit the need.

Carrot, Pineapple and Nut Salad.—Put a carrot or two through the meat chopper; to one cupful of the carrot add a slice of finely minced pineapple and a tablespoonful of chopped nuts. Mix with a good salad dressing and serve on lettuce.

Curry of Mutton.—Fry one large onion, chopped fine, in two tablespoonfuls of butter. Mix one tablespoonful of curry powder, one teaspoonful of salt, one tablespoonful of flour, and stir into the onion and butter. Pour over slowly one and one-half cupfuls of stock. Cut two pounds of lean mutton into small pieces and brown them in hot fat; add them to the sauce and simmer until tender. Place the meat on a hot dish and arrange a border of hot cooked rice around it.

Liver Patties.—Scald a pound of liver and grind it with one-fourth of a pound of bacon and an onion through the meat chopper. Season well, form into small cakes and cook in a little hot bacon fat, browning on both sides.

Medley Sandwich.—Take two-thirds of a cupful of minced chicken, one-third of a cupful of minced ham and tongue; add cayenne and enough mayonnaise to make a smooth mixture to spread and spread on buttered brown and white bread made into ribbon sandwiches.

Nellie Maxwell

INDIANA BREVITIES

Construction of the new girls' dormitory at Indiana state normal school, eastern division, in Muncie, will begin June 1. It will cost $200,000 and will be large enough to house 110 girls.

Vocational and manual training students of Indiana high schools met at Purdue university as the guests of the engineering extension department. The occasion was the third annual roundup of the vocational and manual training pupils of the state.

The Indiana League of Women Voters will send speakers to the 25 leagues in the state within the next month to report the proceedings of the national convention recently held in St. Louis, Mo., to speed up league activities, and to talk over plans with the local league boards for the year's work.

An "air school" for Evansville's aspiring aviators will be the next step after completion of the Garrison air port there, construction of which has started. According to Ray Fortner, licensed pilot, two new planes, one a Curtis and the other a Lincoln, will be ready for service at the landing field soon.

Evidence to show that the abandonment of the Central Indiana railroad, between Muncie and Brazil, is justified on account of operating losses, was submitted before Clyde H. Jones, member of the public service commission, by representatives of the Big Four and the Pennsylvania railroad, joint owners of the line.

With contributions totaling $116,337 in 12 hours, Indiana university students have oversubscribed the university's war memorial building fund of $1,000,000. The total amount raised by alumni, students and friends of the university was $1,630,000 for the building of a stadium, women's dormitory and a $1,000,000 union building. The first two structures have been completed.

Efforts of farm organizations to obtain enactment of an income tax in Indiana are to be carried directly to the people. The agricultural bodies will attempt to secure a vote on income tax at the November election, when it would be submitted to the voters as a constitutional amendment. Previous attempts first were carried to the state legislature. Should the amendment be voted the legislature will be asked to voice its approval in a resolution.

Three Shelby county farmers, recently named by the board of commissioners of the county as viewers and to report on a petition which had been filed asking for the closing of a road west of Shelbyville, known as "Lovers' Lane," filed a report recommending that the highway be closed. The township trustee was notified of the action and within another month the place of petting parties will have been fenced off and made a part of the fields which now stretch to either side.

Fight for control of the Indianapolis Light and Heat company between various stockholders and the Samuel Insull interests became an open matter when a holding company, to be known as the Indianapolis Power and Light corporation, was incorporated under the laws of Delaware by interests opposed to the Insulls. Those forming the new holding company are headed by the Utilities Power and Light company, of which Harley L. Clark of Chicago is president. The holding company claims control of 71.5 per cent of the common stock of the Indianapolis Light and Heat company, while the Insulls are said to have only about 28.5 per cent.

Nomination of a United States senatorial candidate to oppose James E. Watson, Republican, confronts the Indiana Democratic state convention which will meet June 3. Six men sought party preference for the post in the primary, but none of them attained a majority as required by the state law. Watson, who has been in the senate since 1916, was given an impressive majority over his sole opponent, Claris Adams, an Indianapolis attorney. Senator Arthur R. Robinson, Republican, who seeks to fill out the unexpired portion of the term of the late Senator Samuel M. Ralston, was nominated as Senator Watson's running mate.

An interesting program for the two-day midsummer meeting of the Indiana Democratic Editorial association at Martinsville, May 21 and 22, was announced by Thomas McCullough of Anderson, president of the association. Mayor Sartor of Martinsville will make the address of welcome and Mr. McCullough will respond for the editors. Evans Woollen, Indianapolis, Democratic nominee for United States senator, short term, will make the principal address at the banquet. Mrs. E. P. Flynn of Logansport, vice president of the state central committee, will address the women at a breakfast on "The Price of Citizenship," and Mrs. L. G. Ellingham, Fort Wayne, also will speak.

Indiana is to have a new publication which, its author and publisher asserts, will be devoted to showing the good things about the state. L. S. Bowman, auditor of state, on the first day of each month will issue a bulletin which will contain facts of finance, statistics and other items of interest affecting the state, particularly the state government.

Because of an outbreak of whooping cough and a number of cases of scarlet fever in and near Culver, the Culver Military academy has been placed under quarantine.

IMPROVED UNIFORM INTERNATIONAL

Sunday School 'Lesson'

(By REV. P. B. FITZWATER, D.D., Dean of the Evening School, Moody Bible Institute of Chicago.)

(©, 1926, Western Newspaper Union.)

Lesson for May 23

ISAAC AND HIS WELLS

LESSON TEXT—Genesis 26:12-25.

GOLDEN TEXT—A soft answer turneth away wrath, but grievous words stir up anger.—Prov. 15:1.

PRIMARY TOPIC—Isaac Refuses to Quarrel.

JUNIOR TOPIC—Isaac Refuses to Quarrel.

INTERMEDIATE AND SENIOR TOPIC—Isaac the Peacemaker.

YOUNG PEOPLE AND ADULT TOPIC—How to Deal With Aggressors.

Isaac was a child of the covenant and given in the time of the old age of Abraham and Sarah in fulfillment of God's promise (Gen. 15:1-5). His name means laughter, a reminder of the gladness of the heart of his mother when she learned that she was to have a son. As to character he was gentle, meek, meditative and peace loving. He was a remarkable contrast to his father Abraham. Two things may have affected him to his disadvantage.

1. The shadow of his illustrious father.

Sons of great and rich men commonly do not make much of life. The necessity of struggle is not forced upon them.

2. He was brought up as the only child of his mother.

The tendency in such a case would be to shield him from the necessity of self-effort so that he would be unable to meet life's stern realities. Every child should be compelled to think for itself and to fight its own battles. While not a mighty man by nature's gifts, through the blessings of God's grace he became the inheritor of the covenant promise. He was not only a meek man, but a man of prayer as well (Gen. 24:63; 25:21; 26:23-25).

I. **Isaac in Gerar** (vv. 12-17).

1. The Lord appeared unto him (vv. 1-4).

Because of famine in the land Isaac went into the country of the Philistines. This distress should have moved him to call upon the Lord (Jas. 5:13). It were better to suffer in the land than to go among the enemies of God's people. The Lord graciously appeared to him there and directed him not to go into Egypt, thus avoiding the error of his father.

2. His lapse (vv. 7-11).

He fell into the same temptation as Abraham many years before (Gen. 20: 13). When one goes into the enemy's country he can expect to be tempted to do wrong.

3. His prosperity (vv. 12-17).

Isaac did not intend to make Gerar his permanent place of abode. He intended only to sojourn there. While there he sowed and reaped bountifully. This prosperity was no proof that God approved of his course.

II. **Isaac's Enemies** (vv. 18-22).

Isaac was not permitted long to enjoy this fruitful land. His prosperity incited the envy of the Philistines. Success in any calling in life will provoke envy. Ministers and Sunday school teachers sometimes become envious of each other. The Philistines ordered Isaac to leave them. Wherever envy has begun its deadly work there must be separation. They took as the method of getting rid of him the stopping up of the wells. Isaac did not contend with them but peaceably withdrew to another place where he proceeded again to dig the wells of his father. The Philistines again strove with him. He named this place Esek, which means contention, and again he removed from them. The second name he gave was Sitnah, which means enmity. This willingness to remove from the enemy shows his willingness to be imposed upon rather than to fight. The third time he dug wells there was no strife. The name given to this was Rehoboth, which means room. We should learn from his behavior that the way to have peace is to wear out our enemies with patience.

III. **Isaac in Beersheba** (vv. 23-33).

Immediately upon Isaac's going up from among the Philistines the Lord appeared to him. The Lord permits envy and strife in the world in order to get his children separated from them. Following this visitation by the Lord, Isaac built an altar and called upon His name. As soon as a meeting place with Jehovah was established he pitched his tent there. Following this his servants dug a well. No use going among the Philistines to get water.

After Isaac was established in Beersheba, Abimelech came desiring to make an alliance with him. He gained influence by peaceably withdrawing from them. Being thus convinced they desired to enter into covenant relationship with him. The way to gain influence with the world is to withdraw from it.

Noblest of All Victories

For a man to conquer himself is the first and noblest of all victories; whereas to be vanquished by himself is the basest and most shameful of all things.

Believing in Truth

Trying to have the courage of other people's convictions is a difficult task. One must really believe in a truth himself before he is willing to suffer for it.

Great Personages of the Bible

By REV. LEONARD A. BARRETT

Esther

VASHTI had left her Persian throne, and no queen reigned in the palace, so a decree was sent out ordering all the fair maidens in the land to be brought to Ahasuerus, and out of the number Esther, a Jewish maiden of the tribe of Benjamin, the adopted daughter of Mordecai, was selected as Vashti's successor. No jewel placed in Esther's crown shone with a brighter luster than the star which sparkled brilliantly in her name. Esther, thou truly hast come in a very timely hour. Vashti brought to Ahasuerus a high conception of womanliness and an exceedingly fine strength of character. Esther, thou shalt bring more. Thou hast come in a very timely hour.

The Jewish nation was about to suffer at the hands of Haman, the prime minister, who, having been angered at an insult which he attributed to Mordecai, decided to seek vengeance, and succeeded in securing from the king an order which commanded that on a certain day the entire Jewish race should be massacred. The news reached the ears of Mordecai, who abode near the residence of Queen Esther. He sought help from her hands and urged that she go at once to the king and intercede in behalf of her people. She consented to do this, but the task must be undertaken with great peril, for we read, "Whosoever, whether man or woman, shall come unto the King into the inner court, who is not called, there is one law for him, that he be put to death, except those to whom the King shall hold out the golden scepter, that he may live." Esther was strong enough and high principled enough to run the risk, and she made her way into the presence of the king. There cruelty looked into the eyes of kindness and love; there fickleness saw into the depth of constancy; there wantoness beheld restrained and mastered emotion; there pride viewed humility; there the debase in man saw the depth and height of a lofty womanly nature. Ah, what in that eventful hour appealed to Ahasuerus? What did he see in Esther that prompted him to touch her raven hair with the golden scepter? Was it the royal robes she wore? Not that. Was it her beauty—fairest of the East? Far more than that. Ahasuerus saw in Esther a woman, and those womanly qualities for the time mastered his capricious and cruel nature. Thus do we behold a woman holding the balance of power which controls the golden scepters of the world's history. What are you going to do with Ahasuerus, Esther? All honor to Vashti—perhaps she could do no more, but in Esther's time the conditions were different. There is a battle to be won, not only the triumph of one's individual's righteousness, but the welfare of a nation is at stake—and thou, O woman, hast come for just such a time as this. Esther did not win by the method which Vashti refused to adopt. She conquered by that power which infused into the life and heart of Ahasuerus those high qualities of her own nature. It was a crisis in the Jewish history. Esther won the victory. Mordecai was promoted to a place of authority next to the king, and the Jewish nation was spared.

There is a crisis in our own national conscience, and American womanhood must win. No charm could have brought victory to Esther at the court of Ahasuerus, especially if she came unbidden, except the high qualities of her womanly nature. This will alone raise the golden scepter. It is the only thing that will ever bring into the hands of womanhood those scepters of masculine strength and power, which will ever be a determinative force in the proper adjustment of our social and economic wrongs.

The day is coming, if it has not already come, when every married woman will have to meet this question—what will I do with the man into whose hands I have placed my destiny; what shall I bring to him. A weak, dependent nature with no ambition other than to be admired, petted, and loved? Oh woman of this new and enlightened century, you have come for an all-important hour, and it is your womanly character which holds the balance of power in the molding of a great national future. You have come into the life of today at an all-important time, even as Esther came into the life of the Jewish nation. What time? The time when social and economic wrongs are to be solved and mastered by your power to bring to yourself the touch of the golden scepter of masculine strength. What hour? An hour when a mother sends her son and daughter into the tasks of tomorrow with high ideals burning like beacon lights in their hearts. It is a woman's high prerogative to reincarnate herself into the life of the world through the life work of her husband and her child. What hour? An hour when there should be brought to the world's work that firm and well-balanced masculine strength attuned to the ideals which reflect the influence of Christian motherhood. The destinies of Christian civilization rest very largely in the hands of our American womanhood: for in the words of Goethe, "It is ever a woman's soul that leads us upward and on."

Farmers' Cöoperative Bottling Plant Assures Increased Income

By WILLIAM A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all problems pertaining to the subject of building work on the farm, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

In almost every large milk-consuming center you will find at least one distributor of milk and dairy products who has built up a conspicuously large business, retaining permanent customers who are glad to pay the top prices for the products which the company sells. Not only is his business large but top prices afford him that extra margin of profit which assures continued prosperity. The reasons behind these successful businesses are not difficult to find and they are ones which every farmer can apply to his own dairy business.

To start with, of course, the products which are handled are always of the best. Beyond this it is a question of handling these products as they should be handled and letting people know it. Every bit of milk is handled quickly to assure freshness and it is handled in the cleanest, most sanitary manner possible.

Cleanliness and sanitation in the handling of dairy products are worth while not merely because the laws demand it, but also because the consumer realizes their importance and takes pains to see that his milk supply is of the best in this respect. Supplying a quality product makes permanent customers who are quite willing to pay a little more for the assurance of quality and letting people know it brings new customers.

Of recent years many farmers have found it worth while to establish cooperative bottling plants. A central bottling plant can be maintained at a low cost and the products can be sold at top prices on the basis of assured quality. When such a plant is operated the first important consideration is a building which is properly constructed and equipped. Such a plant is pictured here; one which has proved to be a paying investment for its owners.

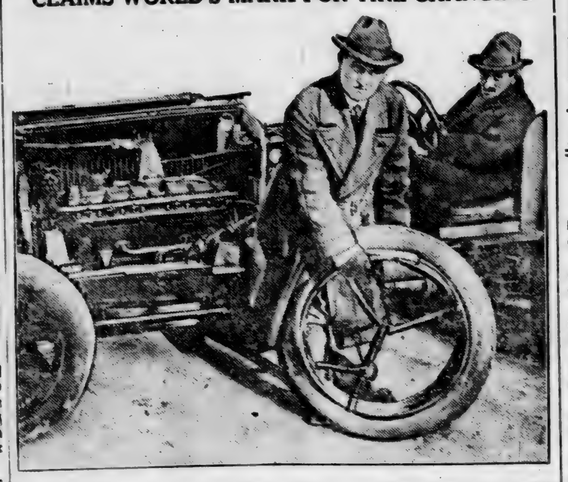
This building is constructed of concrete blocks on a foundation of concrete and is floored with concrete. This construction enables the owners to keep it absolutely clean with the least expenditure of time and effort, and the plan, though simple, shows attention to the economy of time and labor in handling.

The shorter wing of the L-shaped building contains an icehouse at the rear, a refrigerator and loading room. The other wing contains the workroom, while in the angle of the two the engine room is placed. An inspection of the layout of the workroom will show that the equipment is so placed as to reduce handling to the minimum from the time the milk is received until it passes out through the loading room on its way to the consumer.

If one might enter this building he would also find that all the equipment, tanks, cooler, separator, pasteurizer and bottler were the best to be had and of a size adapted to the economical handling of the milk with a reasonable allowance for expansion.

The points covered here are few and simple, it is true, but each is an essential consideration in planning such a plant and making it a profitable enterprise.

CLAIMS WORLD'S MARK FOR TIRE CHANGING



J. A. Kennedy, an automobile salesman in Paris, claims the world's record for single-handed tire changing, his mark being seventeen seconds. He is shown here with the tool which he invented for this extra-fast method of shifting shoes.

Points to Consider When Building Home

Three points are usually kept in mind in the design and construction of a dwelling. These are convenience of the occupants, artistic effect and first cost.

Of equal importance are various items commonly omitted or given but scant attention, which may be included under the head of "efficiency of plant." These relate to certain physical values, such as durability of material, workmanship, upkeep charges and annual expenditure for heating.

Of these various factors making for operating efficiency, that relating to the cost and operation of the heating plant is the most important and most frequently overlooked.

The average house-heating boiler, as commonly operated, has an efficiency ranging from about 40 to 60 per cent, depending upon the care which it receives.

Taking the highest of these means that out of every ten tons of coal burned, the heat contained in four goes up the chimney or is otherwise wasted, and that of the remaining six tons, from one to two are wasted through leakage and transmission of heat which might be prevented without difficulty and at a nominal expense.

An interesting fact in this connection is that statistics show less fuel is used per cubic foot of room space in the northern part of the United States and Canada than in the south (Texas, for instance), simply because greater care is taken in the construction of buildings, for the prevention of heat waste by leakage.

The point is often raised that the air leakage in the dwelling house of average construction is needed for ventilation, especially when heated with direct steam, hot water or hot air on the recirculating plan, and that reducing this by tighter building construction would be detrimental to the health of the occupants.

In regard to this, we may say that the modern theory of ventilation, which is based on extended investigations under municipal, state and government supervision, assumes that healthful conditions are dependent largely upon the physical characteristics of the other equipment, not the number of "cracks" in the house.

Paint Can Ruin or Make Home Handsome

Paint can do much to make an ugly house beautiful and can absolutely ruin a house of the best style of architecture and make it grotesque and a thing to be pointed out and laughed at.

In the first place, there is only a limited range of colors suitable for the painting of the exterior of houses. Brilliant colors are sure to conflict with some element of the surroundings as well as to be vulgar in their display. On the other hand, many of the soft tints that are appropriate indoors do not bear the rough usage of weather.

Window shades, shutters and trim add to the richness if they are painted a deeper, darker color than the body of the building. If the house itself is dark, these features should be done in a lighter shade of the same color or in a cream or light neutral tint. This is a very simple way to get contrast and avoid monotony.

Due regard should be had for the coloring of neighboring houses. Much good effect can be obtained with a little consideration in this direction instead of an indifference which tends to mar the whole outlook. The scheme of the house as viewed from the street should be one of quiet, well-selected colors, so that it may dwell in amity with its neighbors and convey an impression of good breeding and domestic refinement.

It is rare that a house should present more than two colors, and there should be nothing facetious or faddish about their choice.

Painting Stucco

The very rough course surface of cement stucco, such as is used for the finishing of certain types of buildings and dwelling houses, is of such a nature that hand brushes often cannot be used satisfactorily. The brushes are cut easily and the application is greatly retarded. In such instances the spray painting machine has proven most useful.

Heating Plants

Heating plants are nerve centers and their derangement often means acute discomfort to dwellers. The up-to-date builder makes it a point to be well informed on this subject.

SAYS MOTORIST IS BEST WALKER

Driving Has Taught Them Lessons of Safe Pedestrianism, Says Smith.

Whoever may be impressed with the idea that automobiling is making people forget how to walk will do well to revise that impression.

This is the conclusion reached by Ernest N. Smith, general manager of the American Automobile association, after gathering some statistics on the subject and making some personal observations.

Few Drivers Caught.

According to Mr. Smith, comparatively few automobile drivers are caught off their guard when walking, a majority of pedestrian accidents involving persons who have had no experience in handling cars.

"Automobiling is teaching people how to walk safely," he explains. "An active motorist is also an active walker, for in using the car he has additional need for walking in congested districts. He knows which way to look when he steps across a one-way street, and when crossing at crossings he is aware of the ever-present hazard of the car that is making a right-hand turn.

"When the automobile driver walks he does it in a competent manner, and when he crosses streets at policed intersections he makes allowances for the inability of the officer to look out for every one. Automobiling shows the motorist a perfect picture of the danger he faces as a pedestrian, and so when he walks he conducts himself accordingly.

No Judge of Distance.

"Persons who do not drive motor cars have no conception of speed or stopping distance. They see traffic from a narrow angle, being unable to see hazards in their proper proportions. The real dangers often escape their attention while they are busy worrying over things that would not be likely to harm them.

"Automobiling is not making people forget how to walk. On the contrary, it is making them learn to walk in a way that befits the modern age."

Reckless Driving Cause of Many Auto Accidents

The number injured and killed in auto and motor-cycle accidents is appalling. Most of these accidents can be accounted for by reckless driving. The worst of it is that the innocent suffer with the guilty, whether riding with the reckless driver or in the other car.

It is a great temptation when out on a fine country road to "let 'er out." The width of the road, the curves, the traffic, have everything to do with safety when going in a swift moving car. A safe speed in one place may be a very dangerous speed in another place not far distant. National prohibition will reduce accidents considerably.

Every driver ought to feel some responsibility for the safety of those riding with him and others using the highways. The day of regret is bound to come to every reckless driver. The intent to kill may not be there, and no jury can bring in a verdict of murder, yet the results are the same. Speeding ceases to be a joke when it ends in a permanent injury or a death. The guilty one can never get away from the remorse of that moment of careless driving.—Successful Farming.

Leak in Vacuum Feed

In cars using vacuum feed a leak in the line running to the inlet manifold may interfere with proper operation of the engine at high speed, though not at low. The reduced vacuum in the tank, caused by leak, results in less fuel being lifted than is ordinarily the case, and with a wide-open throttle, let us say, on a hard pull, the engine demand will be greater than the supply, which means spitting and possibly stopping of the engine.

Replacing Brake Lining Is Not Difficult Task

To replace a brake lining, the bands or shoes are taken off, the axle is placed in a vise, while the rivets are knocked off with a cold chisel or hammer. New strips of the lining fabric are cut to size. Beginning then at one end of the strip, two or three rivet holes are located with a blue pencil and cut with a punch, after which the fabric is put in position on the shoe.

Medium hard rivets, to prevent scoring of the drums, are passed through the holes and are then headed down securely at the back of the band. They must be sunk well into the fabric lining, so that no projections are left. With the strip held tightly to prevent wrinkling, and with the band at its original curvature, the next hole is marked, punched and riveted in the same way.

The operator simply keeps on around until the entire strip of lining is riveted down into place on the shoe. The braking systems of our modern cars are efficient enough under ordinary circumstances, but they are not powerful enough to allow a margin for slack maintenance. They must be kept right up to the mark, and systematic inspections and repairs when needed are dictated by common sense.

Lost Compression Quite Disagreeable to Driver

Do not allow your engine to lose compression. It is disagreeable to the good driver and creates a larger running expense, causing loss of fuel and power. The careful motorists will check up on compression in each cylinder at regular intervals, opening all priming cups or removing all spark plugs, one at a time, and revolving crank. If the cylinder which has its priming cup closed or plug inserted resists to a good extent his efforts to revolve the engine, that cylinder has good compression. All cylinders can be tested in the same manner, closing priming cups and replacing spark plugs in each cylinder when the test is completed. There are other methods for testing, such as listening for hissing noises on compression strokes of pistons, allowing the car to go down hill with ignition turned off and with transmission in low or second speeds to note the resistance of the movement of the car which each cylinder offers, or a compression gauge may be used.

Getting Out of Sand

When a car is driven into a sandy spot in the road and the rear wheels spin there is no use in keeping on spinning them. The more the wheels spin the deeper the car sinks in the sand and the more difficult it will be to get it out. If no rope or burlap is available, deflate the tires and with the gears in first engage the clutch slowly. If this doesn't help, get two wooden planks and place them behind the rear wheels.

Means Pep in the Engine

Did you ever wonder why the engine does not show the accustomed pep or why the lights burn dimly or the ignition seems poor? Unfasten the wires and bars at the battery terminals and notice if they are clean. They must be clean if current is to flow freely. Scrape off with a stick any green or white deposit you see, and spread a little cup grease over the parts to prevent corrosion.

Horn Saves Car

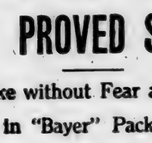
Sounding the horn upon approaching the crest is splended insurance against a head-on collision. The wise motorist is sensible enough not to be on the wrong side of the road in the act of passing another car at the crest of a steep hill, but he never knows but that the "other fellow" may be doing it on the other side. The modern motorist has to be his brother's keeper for his own safety.

Use for Old Files

Frequently it is necessary for the car owner who does his own repair work to file a piece of cast iron that has been subjected to friction and so has acquired a glaze or skin. The best way to get through this skin is to use the edges of an old file. If a new file is used on this sort of surface it is likely to be ruined.

Daddy's Evening Fairy Tale

By Mary Graham Bonner



PARADOXURE

"My name," said the white-whiskered Paradoxure, "is a name everyone can't have."

"Ah, good friend," said one of the other animals, "it is a name everyone doesn't want to have.

"Sonie would find it quite hard to go through life with a name like yours.

"Everyone would get it wrong and there would be so many mistakes and so much confusion.

"People and animals without a doubt must feel relieved that they haven't such a name."

"Well," said the white-whiskered Paradoxure, "it may be all very well for people and animals not to want my name.

"But let me tell you one thing—they couldn't have it!

"No, only a white-whiskered Paradoxure can own such a fine name."

"It's good you like it," said the other animal. "I'm glad to hedr you like something."

"Ha, ha," laughed the white-whiskered Paradoxure, and then turned

A Puma.

his laugh into a cough, for he did not want to be too pleasant.

"Of course I like my name, and I don't think much of anyone who doesn't like it," he said.

"There you are, cross again," said the other animal. "Tell me, Paradoxure, what makes you so cross?"

"Would you really like to know?"

"Yes."

"Really and truly?"

"Really and truly."

"Honestly?"

"Honestly."

"Then say 'please.' I may be cross, but you don't have to be."

"Please."

"Well," said the white-whiskered Paradoxure, "when one looks like a puma and isn't one that is enough to annoy a creature.

"I'm always being mistaken for a puma.

"Then my home is supposed to be in China and I'm not there.

"That's annoying.

"Then I have a name which, to tell you the truth (even though you know it)—but at least to admit the truth, is so hard for everyone to get.

"It is so hard they make mistakes in it all the time.

"That is trying, especially when one has such a fine and handsome name as I have.

"Then I am stared at without being introduced; well, it is all enough to make a creature cross.

"And so I snarl and I growl at the people who look at me, and I try to say to them:

"'Proud people, you are looking at the Paradoxure with white whiskers, who is known as the white-whiskered Paradoxure from China.

"'He doesn't look like every creature you see around the zoo or around the town or around the schoolhouses.

"'But you all look alike and there is nothing interesting about you.

"'So I am snarling at you and growling at you with disgust as I look at you.

"'That is what I am doing, I am.

"'I only hope you understand.'"

Try This

A certain college professor was apt to make his students drowsy when he lectured to them, and one day a student fell fast asleep.

"Wake that man next to you up," the professor thundered at the unfortunate student's neighbor.

"Wake him up yourself," the reply came back. "You put him to sleep."

Was Baby Paid For?

Doris Jean, aged five, had gone to the hospital to see her mother and the baby the stork had just left, and after a while she said, "Daddy, is this baby paid for already, so we can take him home?"

All's Well!

Mother—Johnnie, see what the baby has in his mouth.

Johnnie—It's all right, mother, it's only a safety pin.—Good Hardware.

A Juvenile

Pa—How old is that lamp?

Ma—Why, we've had it three years.

Pa—Turn it down, then. It's too young to smoke.—Good Hardware.

Many Legged Millennium

Instructor—Define millennium.

Bright Student—A millennium is something like a centennial only it has more legs.

"BAYER ASPIRIN" PROVED SAFE

Take without Fear as Told in "Bayer" Package

BAYER

Does not affect the Heart

Unless you see the "Bayer Cross" on package or on tablets you are not getting the genuine Bayer Aspirin proved safe by millions and prescribed by physicians over twenty-five years for

Colds	Headache
Neuritis	Lumbago
Toothache	Rheumatism
Neuralgia	Pain, Pain

Each unbroken "Bayer" package contains proven directions. Handy boxes of twelve tablets cost few cents. Druggists also sell bottles of 24 and 100.

The Valley of Voices

CHAPTER XVI

—24—

For two days the watchers of the trail waited in their ambush, but no hunters or search party left the post. Then, one morning, at daylight, from the thick scrub of the shore south of Ogoke, two men looked long through binoculars at the chimneys of the snow-blanketed cabins, and smiled into each other's wind-burned faces when they saw that from more than half there rose no smoke of cooking fires. Of the group of tipis of bush Indians which had dotted the clearing in October, but two now remained.

It was the turn of the old Ojibway and two young Indians to stand guard on the trail to the game country. Michel and Steel were too far to the south to overtake Laflamme's men, so they struck straight back to camp, confident of the outcome—for old Wagosh guarded the trail.

That morning, as the stars faded and dawn broke blue and bitter over the eastern ridges, an old man with hate in his heart prayed for the coming of one for whom he had waited long. With hoods pulled over frost-blackened faces from which rose the steaming columns of their breath, Wagosh and his two companions shuffled back and forth on their snowshoes, beating their shoulders with mittened hands, for the stinging cold pierced their caribou capotes.

"It may not be that he will come today," said the old Indian in his native tongue, "but if a Frenchman, short, with legs that curve like a bow, comes with others, they pass and we follow, until they separate to hunt. Then you will take the others, while I follow him alone—for he is mine. Wagosh, the fox, will know what to do."

The Indians nodded. They had heard his story.

But this morning the watchers of the trail had not long to wait. As the lifting sun filtered through the forest, stabbing the blue shadows with lances of light, Wagosh suddenly stopped the whispered conversation with:

"Bisnn! shish!"

Crouched in a thicket of young fir, their guns stripped of their skin cases, the three stiffened, listening. Presently to their straining ears drifted the faint click of snowshoes. Pushing aside some low branches the Ojibway peered down the trail in the direction of the sound. After a space of breathless waiting, his companions saw his arm tremble. Then, shivering like a man chilled to the bone, the old Indian turned a face fierce with passion, and whispered:

"Let them pass. He has come!"

Swinging rapidly up the trail moved the stocky figure of Black Baptiste followed by an Indian whose eyes shifted furtively to right and left as he walked. When the two had passed from sight, three shapes, leaving the trail, followed like shadows, on muffled shoes. Two miles beyond, where the fresh tracks of a moose crossed the path in the snow, and the hunters from Ogoke separated, Wagosh left his friends, to pick up the webbed imprints of the larger shoes of his man.

Then two still hunts started through the soundless forest—the stalk of moose, and of man. Over the new snow, as swift and as noiseless as a wolf after ptarmigan, the hunter of Black Baptiste closed in. Evidently in doubt of the direction of the movement of the air, the Frenchman stopped to test it with his bare hand. Then he went on, until the sudden lengthening of the stride in the snow indicated that the moose had scented danger and started to travel.

With a curse the hunter lifted both shoulders in a gesture of defeat. The shifting air had betrayed him. He turned from the trail he had followed and struck out in a new direction. Shortly, as he stopped and knelt on a knee to tighten the thongs of a shoe, a voice straightened him to his feet with a jerk, nervously fingering the trigger of his gun. His shifting eyes searched the inscrutable spruce that walled him in. Trapped, helpless, he flinched from the expected flash of the hidden rifle.

"Drop the gun!"

The fingers of the Frenchman relaxed. The gun slipped to the snow at his feet.

"Marche!" The command snapped on the frosty air like a whiplash.

Slowly the henchman of Laflamme obeyed the order of his concealed enemy. Then a crouching figure, with half-raised rifle, stole from a clump of young growth and followed.

A hundred feet from the gun, Baptiste, shaking with fear and rage, turned desperately on his captor. "What do you want?" he demanded in Ojibway.

The black eyes of Wagosh blazed with exultation. The lean face in the hood was pitiless. At last he looked into the face of his man.

"You know me—Wagosh—from Woman river?" He bit off the words as a drill bites steel.

The swart features of Black Baptiste went yellow at the words. He remembered the father of the girl at his cabin.

Stiff with fear, his staring eyes watched the black muzzle of the moving death slowly sighted on his heart. Then, as his nerves snapped and he leaped in desperation toward the crouched figure, there was a loud explosion. With a groan the Ojibway crumpled to the snow.

By GEORGE MARSH

(W. N. U. Service.)

The dazed Frenchman, stopped short in his rush, rocked on his feet—then stumbled forward, grasping his knife. As he hurled himself, with a downward slash, on the heap in the snow, he met an upward thrust which buried the blade of Wagosh in his body.

Then on the white floor of the forest, a man blinded by flame and powder, and one mortally hurt struck and slashed until strength left their arms and they lay together, hunter and hunted, motionless, on the crimsoned snow.

There Steele and Michel found them.

"Knife fight!" cried the Iroquois. "What happen to Wagosh gun?" He picked up the cheap trade-gun with its burst breech. "Ah-hah! He get snow een de muzzle an' she bust w'en he shoot."

"Too bad, poor old man! He could have shot Baptiste at the ambush, but he wanted to settle it alone—tell him who he was, I suppose."

"Yes, he mak' dis feller drop hees gun—den he stop heem for to talk," said Michel, examining the trail of Baptiste. "W'en Wagosh shoot an' de gun bust, de Frenchman jump on heem wid de knife."

Michel gently turned over the frozen body of the old Indian, expos-

The Dazed Frenchman Stopped Short In His Rush.

ing the face, powder-burned and torn, beyond recognition.

"By gar! He fight heem widout hees eyes!"

"Brave old Wagosh!" Steele looked, and turned away, sick at heart. He had liked the simple-hearted Ojibway.

"I tell you dat eet was all right. Old Wagosh watch de trail."

"Yes, the trail was safe with Wagosh. Now he can rest in peace. He did what he came to do."

"I wish heem moch game een de Happy Huntin' Groun'," added Michel.

And the two returned to their camp and sent a sled to bring in the body to be cached under logs until spring, when it could be buried.

* * * * * * *

Robbed of the joy and solace of her beloved violin; too restless to read, Denise St. Onge sat one evening with her father, her head resting on the back of her chair, her eyes closed. For a half hour the factor had brooded over his future, oblivious of her presence. Then, suddenly aware of her silence, he glanced curiously at the girl's averted face.

From the closed eyes tears traced their way down her cheeks while the sensitive mouth quivered with the misery of her thoughts.

"Denise! You poor child!"

"You must not mind foolish tears," she said. "I miss my violin so."

He shook his head at the subterfuge, then voiced the course of his thoughts. "If only they win at Ogoke and rid the country of that scoundrel, this will be a strong post. He will not dare to close it—I will defy him to. Steele has told them in Montreal."

"Yes, but what of me?" she groaned. "I have given him my promise."

The face of St. Onge flushed with passion. "The day you married that man I would shoot him and then myself."

She went to the factor and sitting on the arm of his chair, stroked his bowed head. "No, no; not that, not that, dear," she soothed. "I am not worth it."

He suddenly straightened, and asked: "You will show me that letter?"

"Yes, if you wish it." Denise took an envelope from her desk and handed it to her father, who opened the letter and read:

"Mademoiselle St. Onge:

"You may be interested to know that the American, Monsieur Steele, honored us with his presence on his way home to Nepigon in October. As he was drowned in the Jackfish rapids, I am at liberty to say that I found him irresistible and was preparing to accompany him to the railroad, when Monsieur Laflamme surprised us in his cabin. Rose Bernard."

Rising, the factor faced the girl, the hand holding the letter shaking from his emotion.

"And you believed this woman—took her word against his?"

"Why not? He admitted that Laflamme surprised them," she answered in a strained voice, avoiding her father's eyes. "What does it matter now? I have given my word."

"Will you tell me this?" he demanded. "You loved this man when he left for home in September? I know, for you were happy."

Her black eyes met his bravely. "When he left here I believed in a beautiful thing—but that, somehow, has died."

"If it died," he answered, "why, when you thought him dead, did you cry night after night—I heard you in your room; I knew from your playing—why was the shock—the joy, so great when he returned to fight for us?"

She did not answer.

"I believe you love him still, in spite of wha' you say. He has loved you from the first; I could see it. He is sacrificing much for us—proving his love for you every day, and yet you allow this lie of a low woman to poison your mind."

With a gesture of hopelessness, she rose to leave the room, avoiding his eyes.

"I do not know if they can save the post," said St. Onge. "I may have to leave the company—a ruined man. But I tell you this, that the woman who throws away the love of Monsieur Steele will live to be haunted by regret."

She turned a white face at the door, as she said: "You forget that I have given Monsieur Lascelles my promise."

* * * * * * *

It was a "poudre day" at Ogoke. In the gray dawn a tall figure had left the scrub of the shore, miles below and out of sight of the post, to examine the trail on the lake ice, which led south to the Rouge and the Jackfish. Michel had smiled with satisfaction to find that a sled had passed since the fall of snow two nights before. The mystery which ringed the doomed post, as the forest rings a clearing, was doing its work. Unnerved by the fate of those who had gone downriver and into the hunting country, never to return, the people were slipping away from Ogoke in the night as from a spot plague-ridden. The day of Laflamme was nearing its sunset. There could be few left, now, to drink his whisky. He was finished. The moment for walking in on the trader and Big Antoine was at hand.

As he backtracked to the camp, the bold features of the Iroquois, in his fur hood, lit with joy as he gloated over the victory they had won—won with the toil and sweat of two months' ceaseless effort. He smacked his lips at the thought of meeting Laflamme—the man who had murdered in cold blood—planned the ruin of Wailing River—who had dared insult Denise. It would be a sweet moment, that, when he looked into the faces of the pair of cutthroats, Laflamme and Big Antoine.

He swung along over his backtracks, his snowshoes raising the powdery snow like dust, engrossed in plans for the future. As he entered some timber, thick with young growth, a rifle flashed on his flank! The man in the trail took a step forward—swayed, as his gun slipped from his hands—then lunged headlong to the snow and lay motionless.

For a space, in the windless morning, the forest was without sound. Then a chickadee called, and curious, sailed down to inspect the still shape in the trail. Presently a moose-bird croaked. Again silence shut in.

After an interval there was a movement in the thicket of young spruce. Branches were parted, to make way for a swart face from which sinister eyes gloated on the stricken thing in the snow.

Gun thrust forward, hammer cocked, the assassin cautiously left his ambush. Standing over the still body, face down, with a knee curiously bent under, he laughed in triumph, as he kicked viciously with the toe of his snowshoe at the back of the hooded head. But at the movement, the lifted foot in its snowshoe was gripped and held, while the head and shoulders of the man at his feet lunged into his legs, carrying him with a cry of surprise backward to the snow.

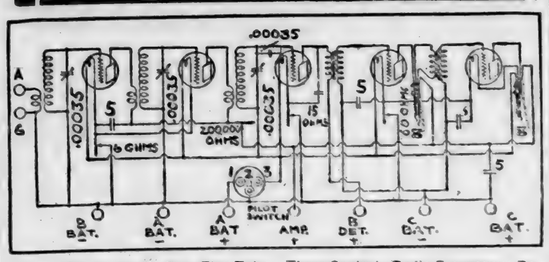
Hampered by the shoes which trapped and anchored their feet, the two fought; one, desperately for his life; the other, for the settlement of old scores—and this shot from the spruce. But the strength and fury of the raw-boned Iroquois soon wore down the man beneath him who frantically strained and twisted to break the grip on his throat.

(TO BE CONTINUED.)

Mythical Greek Hero

In Greek mythology Adonis was a beautiful young boy, beloved by Venus and Proserpine. They quarreled about his possession, but the dispute was settled by Jupiter, who decreed that Adonis should annually spend eight months with Venus in the upper world and four months with Proserpine in the lower world. Adonis was fatally wounded by a wild boar, during the chase, and was changed by Venus into an anemone. She yearly mourned him on the anniversary of his death. Shakespeare has commemorated the love of Venus for Adonis in a long descriptive poem entitled "Venus and Adonis."—Kansas City Times.

RADIO



Wiring Diagram of the Five-Tube, Three-Control Radio-Frequency Receiver Described in This Article.

By HARRY J. MARX
In New York Herald-Tribune.

Simplicity, efficiency and high quality, all combined, are the arguments for the receiver described in this article. The circuit was first worked out from a simplicity and efficiency angle. Trick features have been eliminated, but every possible little development for improvement in operation has been incorporated.

The circuit is shown in the illustration. Two stages of highly efficient tuned radio frequency amplification, a detector and two real stages of audio-frequency amplification certify to long distance range and the best of tone quality in reception.

Three low-loss pickle bottle coils, combined with high quality straight-line frequency condensers are the major factors in selectivity. The oscillation control permits operation just below the oscillation point of the tube and insures maximum performance with the best tone quality and a minimum drain on the "B" batteries.

One of the particular features of this circuit is the efficiency of the audio stages, not only in the selection of good transformers, but also in the proper use of by-pass condensers in order to filter out all stray radio-frequency currents and extraneous noises. There remains much that is still to be learned about the intelligent use of by-pass condensers.

"C" battery in the grid returns of the audio transformers is another factor in good audio amplification. The loud speaker can be plugged in on either the first or second stage jack of the audio-frequency amplifier. The last jack is filament control for the last tube, so there is no unnecessary current consumption when only the first stage is used.

Size of Set.

The use of a 24-inch panel makes the set a compact one without unnecessary crowding and interstage coupling, which would be detrimental to satisfactory operation. There is no overcrowding in the panel layout and each of the controls is so placed for convenience in tuning. The use of real vernier dials makes tuning a pleasure. The controls are by no means complicated or difficult to operate. A rheostat is used for the detector tube, another for the two radio-frequency amplifier tubes, and a third for the audio stages. The sockets are universal and therefore permit the use of either storage battery or dry cell types of tubes. A resilient spring action in the socket design assures a perfect contact and the elimination of microphonic noises by its non-rigidity.

Nine binding posts on a raised strip are easily accessible and make battery connections a simple matter. Everything is easily assembled and wiring is a simple, rapid operation, with none of those tricky inaccessible connections which are the bane of set constructors.

Apparatus Required.

The first question every fan asks before deciding on the building of a set is "What parts will I need?" The following is the list of apparatus selected by the writer for use in his set:

1 panel, 3-16 by 7 by 24 inches.
1 baseboard, ¾ by 8 by 23 inches.
3 Eastern classic coils, type EB.
3 National Equicycle SLF condensers, .00035 mfd.
3 National variable velvet vernier dials.
2 Multistage R-D meloformers.
5 Eby UX cushion sockets.
9 Eby "Ensign" binding posts.
1 binding post strip, 3-16 by ¾ by 17¾.
2 Carter "Imp" rheostat, IR-6, 6 ohms.
2 Carter "Imp" rheostat, IR-25, 25 ohms.
1 Carter "Imp" pilot switch.
1 Carter "Hold-Tite" jack, No. 104.
1 Carter "Hold-Tite" jack, No. 103.
1 Centralab radiohm, No. 200-M, 200,000 ohms.
1 Turn-it grid leak.
1 Turn-it panel control.
4 Dubilier condensers, type 650, 0.5 mfd.
1 Dubilier condenser, type 640, .002 mfd.
1 Dubilier grid condenser, type 640-G, .00025 mfd.
15 lengths Celatsite wire, No. 14 (black, red, green, yellow, brown).
1 cabinet to suit.
Miscellaneous screws, lugs, solder, etc.

In the selection of apparatus as listed above it would be well to just consider the reasons for their use. The pickle-bottle type of low-loss winding has become very popular because of its high selectivity features. The coils, when used with the condensers mentioned, cover the complete wavelength band as required for our popular broadcast reception. The vernier dials have the unusual feature of a variable vernier ratio. In other words, the vernier adjustment can be made course or fine, as desired.

Color Wiring.

The use of color scheme in wiring is based on some definite plan that is to be followed. In wiring the set this schedule should be followed:

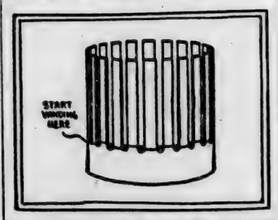
All negative "A" leads use black.
All positive "A" leads use red.
All grid leads use green.
All positive "B" amplifier leads use brown.
All positive "B" detector leads use yellow.

In building the function and potential of each lead can then be told at a glance.

Don't permit the wiring to run too close to the coils. Keep all the plate and grid leads as short as possible.

Winding Form Is Easy to Make From Tubing

The basket-weave form of winding is one of the most compact efficient methods known. With it most any kind of coil or inductive tuner can be made. It has the following features that make it desirable for most every use; compactness, low loss, low capacity, low or no dielectric losses and



Basket-Weave Winding Form With Uneven Number of Slots in Tube.

is easily mounted, being very sturdy and rigid when properly wound and sewed together.

These coils can be wound on any circular form having an uneven number of spokes. The main difficulty encountered is in removing the wire from the form after the winding has been made.

In the illustrated method this has been eliminated. The spokes in the bakelite tube are flexible and will bend in releasing the pressure on the windings and allowing their removal without mutilating them in any way. They are made by first marking the tube and then cutting the slots with a hacksaw. A slot on each side of the tube can be cut at the same time if the blade is set properly on both of the marked lines. Before the coil is removed it should be sewed together by running a piece of thread up and down through the slots in the coil. Do this twice around the coil and then knot tightly. The coil can now be removed and is ready for use. If the builder desires he may leave the coil on the form. It will always hold the coil in shape and serves as a mounting.—Cleveland News.

Variable Grid Leak

A suitable set of values for a grid leak would be 1 megohm, 2 megohms, 3 megohms, 5 megohms and 7 megohms. A means may be provided for bringing these values in action, which may be secured by wiring a tap switch so that it may be used to switch any one of a number of grid leaks into the circuit. This will provide a definite, positive value of grid resistance to suit the requirements of various groups of stations, according to their distance and power.

Of Interest to the Amateur

Much better results may be had from a homemade receiving set if all parts are bought instead of trying to make them. In many cases of trouble-shooting, it is necessary to rebuild the entire set, which costs more than building it right in the first place. There is also nothing gained in purchasing cheap material. Losses which show up in radio frequency work are what count and the difference between good and bad reception.

Loop One Foot Square

A loop one foot square will work with a sensitive receiver. Set the two cross-pieces in the shape of an X and attach the upright piece to one of them. Cut slots in the end of each of the four ends of the cross-piece to receive four pieces of hard rubber 7 by 1 by ¼ inch. Now wind 26 turns of loop wire or standard single lamp cord one-quarter inch apart about the rubber pieces set perpendicular to the frame of the loop.

Young vigor to old folks

"Six years ago bad nerves, sleeplessness, constipation, and headaches had me run down. "Tanlac sent my weight up fifteen pounds and now, at sixty-seven, I feel as fine as at forty." W. H. Stearn, 1211 North Ockland Ave., Indianapolis, Ind.

One of Tanlac's greatest blessings is the new life and vigor it brings to old folks. Every day men and women up in the seventies and eighties thank us for Tanlac's wondrous benefits.

Tanlac is a natural tonic, made from roots, barks and rare herbs. Harmless to man or child. It cleans the blood, stirs up the liver and puts digestive organs in working order.

If your body is weak and rundown, if you lack ambition, can't eat or sleep, you'll be delighted with Tanlac's results. Take Tanlac Vegetable Pills for constipation.

Sheer Luck

Pat—Say, Mike, did yez hear about that big fiddler dying? He thought so much of his violin he had it buried with him.

Mike—No, yez don't mane it? It's a dom good thing he didn't play the piano.

"DIAMOND DYES" COLOR THINGS NEW

Just Dip to Tint or Boil to Dye

Each 15-cent package contains directions so simple any woman can tint soft, delicate shades or dye rich, permanent colors in lingerie, silks, ribbons, skirts, waists, dresses, coats, stockings, sweaters, draperies, coverings, hangings—everything!

Buy Diamond Dyes—no other kind—and tell your druggist whether the material you wish to color is wool or silk, or whether it is linen, cotton or mixed goods.

Driven to It

Hub (who wishes he could stay at home)—What kind of an affair is this we're going to?

Wife—A reception, dear.

Hub—I see. The women will be there in force and the men by force.

Cuticura for Sore Hands.

Soak hands on retiring in the hot suds of Cuticura Soap, dry and rub in Cuticura Ointment. Remove surplus Ointment with tissue paper. This is only one of the things Cuticura will do. Soap, Ointment and Talcum are used for all toilet purposes.—Advertisement.

Improvements

Jack—Gladys married a self-made man, didn't she?

Nancy—Yes, but she was compelled to make extensive alterations.

Fresh, sweet, white, dainty clothes for baby, if you use Russ Bleaching Blue. Never streaks or injures them. All good grocers sell it.—Advertisement.

Sometimes Opportunity looks so imposing when you open the door that he frightens you.

WOMAN COULD NOT SLEEP

Her Mother-in-Law Knew A Remedy

Mrs. Belle Thompson was in a very weak and run-down condition for four years. She had great difficulty in getting to sleep at night and even then did not sleep soundly. She would wake up again and again. Besides this her appetite was poor. "My mother-in-law told me of Lydia E. Pinkham's Vegetable Compound and Lydia E. Pinkham's Sanative Wash," she writes. "I took six bottles of the Vegetable Compound and I was not the same woman at all. I could sleep and would get up in the morning singing and feeling fine. I am the mother of three children and always after the babies came I had to take treatments, but I can truly say that this last time I have only used the Sanative Wash. It does me more good than the treatments. It keeps me on my feet to care for my children and I do most of my work. I feel it my duty to let you know how both of the medicines have helped me." —Mrs. Belle Thompson, R. 2, Rossville, Georgia.

Are you on the Sunlit Road to Better Health? If Lydia E. Pinkham's Vegetable Compound has helped others, why shouldn't it help you?

Keep Right On

"Mam, I'm a traveling salesman."

"Well, then, just keep on traveling."

PREFERENCE

Of all the cars you see on the streets, two-thirds are equipped with Champions. This outstanding preference is very definite evidence that Champion is the better spark plug.

Certified Seed Increases Yield

Habit of Planting Culls and Inferior Potatoes Is Poor Practice.

(Prepared by the United States Department of Agriculture.)

A progressive corn farmer does not plant the nubbins left in his crib after he has fed or sold the bulk of his crop during the winter. He has long since learned the value of good seed corn. The same farmer, on the other hand, does not always use equally good judgment in selecting seed for his potato patch. Too often he plants the culls and inferior potatoes which are left in the bin after the good ones have been sold or eaten. He has not learned the value of good seed potatoes.

Demonstration of Formaldehyde Treatment of Potatoes—Removing the Potatoes for Drying.

First Requirement.

"The first requirement in good seed potatoes," says William Stuart, potato specialist of the United States Department of Agriculture, "is that they be as free as possible from disease, at least of those diseases which cannot be destroyed through treatment in either the hot or cold corrosive sublimate or formalin solutions." Good seed, he says, must also possess good vigor high productive capacity, and be true to name and to type of variety. While such factors as the preparation of the land, its fertilization, the proper spacing of the seed pieces, and the cultural care given the growing crop have an important bearing on the yield, none, he says, is of such prime importance as the character of the seed.

Perhaps the best way for the average farmer potato grower to be assured of good seed is to purchase "certified seed." There is abundant evidence that certified seed is improved seed, and that it will yield much more than common or uncertified seed. Reports to the department from a number of experiment stations in the United States and Canada, based on 11,027 tests, show an actual increase of 46.4 bushels per acre for certified seed over uncertified seed. Individual tests showed an increase of as much as 219 bushels per acre by the use of certified seed.

Yield Increased.

Increased yield is not the only favorable result from the use of such seed, says Mr. Stuart. The crop from good seed will invariably grade higher per cent of No. 1 stock than will that from poor seed. The difference may often be so great as 20 per cent, but even if it should be only 10 per cent it materially enhances the value of good seed.

More Chickens and Eggs Are Produced

Average Fowl Raised Worth Seven Per Cent More.

(Prepared by the United States Department of Agriculture.)

An increase of 4.7 per cent in the number of hens and pullets of laying age on farms January 1, this year over January 1, 1925, and a production of chickens on farms last year 4.2 per cent greater than in 1924, are estimated by the Department of Agriculture.

The total value of the chickens produced on farms last year was about 12 per cent greater than in 1924, and the average chicken produced was worth 7 per cent more.

The largest increase in the production of chickens last year was 14 per cent in the East North Central states, followed by increases of 13 per cent in the North Atlantic division, 12 per cent in the Pacific Coast and 7 per cent in the West North Central division. Decreases of 4 per cent are reported for the South Central states, and 7 per cent in the South Atlantic.

Total production of eggs in 1925 was slightly larger than in 1924, receipts at the five principal markets being about 15,000,000 cases, or about 1 per cent more than in 1924. The farm price of eggs in 1925 averaged 30½ cents a dozen, compared with 26.4 cents in 1924, and 27 cents in 1923. The total value of the 1925 egg crop increased about 17 per cent over that of 1924.

Incomplete returns from large commercial poultry plants indicate increases during the past year greater than shown for farm flocks.

Worms Infest the Roots of Cucumber or Melons

The worms that infest the roots of cucumbers and melons are the larvae of the striped cucumber or melon beetle. They are slender white worms that burrow into the roots and underground stems. The adult beetles eat the foliage. These beetles carry the bacteria wilt disease which is also very injurious to cucumbers. To control these insects, dust the plant with a mixture made of 1 pound calcium arsenate and 20 pounds gypsum or land plaster. Apply this mixture first when the plants come through the ground and repeat often enough to maintain a coating on the foliage for three or four weeks.

Bull to Head Herd

When buying a herd bull, pay enough money for it to secure an animal with satisfactory breeding and individuality, remembering that the better bred bulls, with high production records are scarce. The testing of cows is very costly and for this reason many good cows are not developed, therefore this contributes to the scarcity of bulls from record dams and has a tendency to keep the price for the more desirable herd sires higher.

Moderate Pruning Best in All Fruit Orchards

If you're an extremist, don't try to prune any fruit trees. No pruning at all is one extreme; pruning too much is the other. Both are unprofitable, experienced fruit growers will testify. The middle course is best.

Young trees thrive on light pruning. Bearing trees require more and more pruning as they get older.

In pruning apple trees one aim is to give all the branches breathing space and sunlight. The lower limbs and spurs won't develop and bear without sunlight.

Thin out by pruning the outer and upper portions of the tree, but do not prune to leave large holes that allow direct sunlight to strike large branches and induce sun scald cankers. Confine most of the cutting to small branches, well distributed, taking out large branches only where crowding exists, or to keep trees from getting too tall.

As peach trees come into heavy bearing begin pruning for an open center. Keep tall branches cut back to strong laterals, and where necessary do additional heading back on these laterals. Fruit is borne on one year wood; prune to keep a normal amount of vigorous growth well distributed through the trees.

FARM FACTS

To prevent gapes among your poultry, move their run to a new place this year.

• • •

Getting to market when the other man doesn't, is the secret of success in hog selling.

• • •

Raise your chicks as much as possible on clean ground and the risk from gape worms and all poultry troubles will be greatly reduced.

• • •

Many good farmers who used to grow oats alone now swear by oats-and-barley, or oats-peas-and-barley. Either combination beats oats alone and is worth a try.

• • •

Proper housing, sanitation, air, sunlight and conveniences are essential to maximum results in city factories. The farmer's barn is his factory; his animals his workers.

• • •

Salt is necessary for swine as for other farm animals. A convenient way to feed it is in combination with wood ashes. One part of salt to three parts of ashes is a practical mixture.

• • •

Improper feeding and not infection causes many of the losses of new-born calves. Guard against letting strong, vigorous calves get too much milk, and see that the weak, sickly calves get enough.

• • •

Sweet clover has too much work to do in soil building to thrive well in competition with other plants. Sow it in a clean seed bed, preferably disked cornstalk, cane, kafir, or any clean stubble

Just a Little Smile

THIS WAS A JOKE IN 1876

Young Man—People are talking about the new invention, the telephone. It is so wonderful that it is possible to hear a man's voice over a mile away.

Young Woman—Marvelous! And can a lady's voice be heard a mile away, too?

Young Man—Yes, my dear, but there was really no invention needed for that.—Telephone Review.

SERVES HIM RIGHT

Mike—Hould on, Pat! Don't yez come on the ladder till Oi'm down It's ould an' cracked.

Pat—Phwat ov it? It'll serve th boss right to have a new wan.

Secret of It

"To hold your husbands, wives," Remarks Bill Young, "Is easy if you'll learn To hold your tongue."

Pa Took the Air

"Father, freight is goods that are sent by water or land, isn't it?"

"That's right, son."

"Well, then why is it that the freight that goes by ship is called a cargo, and when it goes by car it is called a shipment?"

And then Johnny wondered why father put on his hat and sauntered outside to get the air.—Edison Topics

The Leader

Hard-looker (to passing motorist)—Hi, mister, I'm going your way!

Motorist—No, I see, but I'll get there before you do.—Pathfinder.

The Exception

"They say, professor, that you are master of all European tongues. Is that so?"

"Yes—except my wife's!"

Fast Speaker?

Friend—Does the baby talk yet?

Fond Parent—Oh, yes, but nobody can understand just what it is he's saying.

ON THE JOB

"That machinist is the most thorough man of his trade I know."

"What makes you think so?"

"He not only works all day, but bolts his food at meals, rivets everybody's attention and hammers every new idea advanced."

The Limit

The tightest man of all I know,
Goes to church by radio;
Thinks the hymns and sermon great
But tunes out while they pass the plate.

Sir Galahad!

Fair Motorist—Oh, I'm sorry, but I'm afraid I have cut off your right foot.

Chivalrous Male—That's quite all right, madam, I had a corn on it, anyway.

His Vacation

Dana—Cap'n, I've been two years before the mast.

Captain—Very well, Dana, you deserve a vacation. You may go aft for two weeks at half pay.—Yale Record.

One Advantage

Father—What! You wish to marry my daughter? You have no clientele. What could you offer her that she hasn't at home?

Medic—Well—er—free medical attention.—Illinois Siren.

Stinging

George—What are those black marks on your cheeks?

Edward—That's where Phyllis lashed me with her eyelashes last night.

Ask Your Dealer

ASK your local dealer to recommend a practical decorator. If you are unable to secure one you can do the work yourself, tinting and stenciling your walls to give beautiful results.

Alabastine

Instead of Kalsomine or Wall Paper

Buy Alabastine from your local dealer, white and a variety of tints, ready to mix with cold water and apply with a suitable brush. Each package has the cross and circle printed in red. By intermixing Alabastine tints you can accurately match draperies and rugs and obtain individual treatment of each room.

DR. W. B. CALDWELL AT THE AGE OF 83

Constipation! How to Keep Bowels Regular

To Dr. W. B. Caldwell, of Monticello, Ill., a practicing physician for 47 years, it seemed cruel that so many constipated men, women, children, and particularly old folks, had to be kept constantly "stirred up" and half sick by taking cathartic pills, tablets, salts, calomel and nasty oils.

While he knew that constipation was the cause of nearly all headaches, biliousness, indigestion and stomach misery, he did not believe that a sickening "purge" or "physic" was necessary.

In Dr. Caldwell's Syrup Pepsin he discovered a laxative which helps to establish natural bowel "regularity" even for those chronically constipated. Dr. Caldwell's Syrup Pepsin not only causes a gentle, easy bowel movement but, best of all, it never gripes, sickens, or upsets the system. Besides, it is absolutely harmless, and so pleasant that even a cross, feverish, bilious sick child gladly takes it.

Buy a large 60-cent bottle at any store that sells medicine and just see for yourself.

Dr. Caldwell's SYRUP PEPSIN

Don't be disagreeable because a man is trying to show off. Humor him and make him happy.

"O Happy Day" sang the laundress as she hung the snowy wash on the line. It was a "happy day" because she used Russ Bleaching Blue.—Advertisement.

The cynic works at it too much.

Protection Given to Child "Movie" Actors

The federal children's bureau says recent inquiries of the international labor office show the following facts: France has no special legislation regulating the employment of children in the motion-picture industry, but provisions of the general labor code apply; in Switzerland the cinema industry does not exist; in Germany an amendment to the child-labor law is proposed to cover the taking of public and private moving-picture films, and Berlin already has municipal regulations on this subject; in Great Britain there is no special legislation affecting children in such work, and such employment is not common, but certain provisions of the education act restrict the employment of children under fourteen and give local authorities power to make by-laws prohibiting the employment of children in any specified occupation or regulating their employment generally; in the United States the industry is concentrated chiefly in California and New York, where permits are required for the employment of children at this work.—Washington Star.

Chlorine Gas Is Used to Cure Horses' Colds

There is some dispute, it seems, about the efficacy of the chlorine-gas treatment for colds and other respiratory troubles, such as "flu," in human beings; but it is certainly good for horses. Horses are not less liable to "flu" than people; and epidemics of it at United States cavalry posts have been promptly checked by the use of chlorine gas.

It is administered by tethering each afflicted animal in such wise that his head is inclosed in a box, into which the gas is introduced in measured quantities, a rubber cloth being fastened about the horse's neck to prevent escape of the medicinal vapor. A horse suffering from "flu," or bronchial trouble may be entirely cured by this means after three or four treatments of an hour daily.—Fort William (Ont.) Times-Journal.

Obituary

Daniel Austin Hursey, son of William and Malinda Hursey, was born near Hamlin, Deleware Co., Ohio, May 16, 1849

At an early age he moved with his parents to Cromwell, Noble Co., Indiana, where he grew to manhood and on January 5 1873 he was married to Lydia Charlotte Barringer. To this union were born four children, viz Chas. Alonzo, who died in infancy; Ira Curtis, living near Concord; Bertha Majors, living near Antwerp, Ohio and Mrs. Elsie Hughes, with whom he made his home for several years. There were also two grand children, Oral Hughes and Goldie Vallieu, who departed this life January 18, 1926, leaving a little daughter, Jean Louise Vallieu, a great granddaughter of the deceased. Besides these there are many relatives and friends who share in the grief over the departed.

When he was a boy he attended regularly church and Sunday School at Indian Village. In 1890 he joined the Mt. Zion Christian church at Continental, Ohio where he made his home for a number of years.

His wife died in the fall of 1898 After the death of his son-in-law, Mr. Hughes, he purchased the home place here and came with his daughter, Mrs. Hughes to live in this community seventeen years ago.

He was a good father, friend and neighbor, who filled well his place in the community.

At eight o'clock in the evening of May 13, 1926 he quietly slipped away from his loved ones after but a few hours of serious illness at the age of 76 years, 11 months and 27 days.

The funeral service was held from the home, Saturday afternoon Rev J. C. Coons of Hanfield, Ind., and Rev Otis Jones, officiating. Burial was made at Fostoria, O., on Sunday.

Legumes Check Erosion by Heavy Root System

Legume crops may check soil erosion in three ways: (1) by furnishing a cover crop, (2) by the addition of a comparatively large amount of organic matter to the soil, and (3) by a heavy root system which tends to hold the soil, according to A. H. Karraker of the agronomy department, college of agriculture, University of Illinois.

Any legume may serve as a cover crop, but some legumes are especially adapted to forming a cover crop which will, to a large extent, prevent erosion on hill lands. Clovers such as red, alsike, mammoth, sweet and alfalfa make excellent cover crops. These cover and protect the land during the seasons when erosion is most likely to occur. These legumes are especially valuable in preventing sheet washing.

The above named legumes may be handled in such a way that they will add a large amount of organic matter to the soil and this in turn will help cut down the possibilities of erosion. The organic matter in the soil tends to absorb the water and in this way cuts down the volume of runoff. The organic matter also enriches the soil and reduces the hazard in growing cover crops.

The root systems of the legume crops play a big part in checking erosion. The roots hold the soil particles together, make the soil more retentive of moisture and add organic matter directly to the soil. The heavy root systems of sweet clover and alfalfa are well adapted to this function.

No Cure or Prevention of Dreaded Hog Cholera

No drug or combination of drugs is known that will cure or prevent hog cholera, says the United States Department of Agriculture, although some of the so-called "tonics" for hogs may have merits as condition powders for the general health of the animals. Many preparations put on the market from time to time have, in tests by federal and state institutions, been proven worthless in preventing or curing hog cholera. The only dependable agent for the prevention of this disease is the antihog-cholera serum prepared according to the methods originally worked out by the federal bureau of animal industry.

Notice of Administrat'n

3062

NOTICE IS HEREBY GIVEN, that the undersigned has been appointed by the DeKalb Circuit Court, of the State of Indiana, Administratrix of the Estate of GEORGE A. TUSTISON deceased, late of said County.

Said Estate is supposed to be solvent.

National Doctors Specialists

Dr. Culver Associated
Licentiate of Indiana

brings the knowledge of our Organization and of our experience in the successful treatment of COMPLICATED CHRONIC CONDITIONS.

Expert Service Free of Charge.

The National Doctors is an Organization of Experienced Registered Physicians for the treatment of Stubborn Chronic Diseases.

The National Doctors, Experienced Specialists, treat without surgical operations or hypodermic injections, diseases of skin, blood and internal organs, rheumatism sciatica, lung trouble, old ulcers, tape worm, asthma, eczema, chronic constipation, epilepsy, high blood pressure, bed wetting and other morbid affections of the body.

Years of experience and the complete records of great numbers of cases successfully treated prove that the methods of the National Doctors are very dependable.

The physicians of the National Doctors have at their command the knowledge and resources of the whole Organization.

Many people keep on suffering from ailments that might be greatly improved because they cannot afford to go to high priced specialists away from home, and few communities have sufficient numbers of such cases to support a local hospital.

The National Doctors have solved this problem by having their Specialists travel from town to town to meet the sick.

They instruct patients, recommend a course of treatment and teach ailing men and women how to take care of themselves at home.

To those having ailments of long standing, whatever the trouble may be, and not withstanding the poor results of former troubles, come and talk it over.

Examination and Advice FREE.

Ladies are reqnested to come escorted.

You can get transfer paper at News office in large or small sheets.

Writing tablets and envelopes at News office, also box stationery from 10c up.

MEMORIAL DAY, 1926

St. Joe Boy to Receive Degree

L. A. Pflaumer of St. Joe, Indiana, is a candidate for the degree of bachelor of arts to be granted by Wittenberg college June 10 The ceremony of bestowing the degree comes on the last day of a series of five which begins on June 6, and which comprises the assemblies marking the seventy-sixth annual commencement of the great Lutheran college.

Dr. Edgar Fahs Smith, provost of the University of Pennsylvania, and formerly chemistry professor at Wittenberg college, will give the principal address of the day under the oaks and maples of the campus.

Besides awarding a number of honorary degrees, Wittenberg will graduate 123, with the degree of bachelor of arts, eight with the degree of master of arts, and six with the degree of bachelor of music, making a total of 137 students to be honored with earned degrees. Thursday of commencement week will begin the procession of alumni who return to their college to meet former classmates, immediately followed by President Rees Edgar Tulloss, Ph. D., D. D LL. D., and his faculty of eighty-three members.

The ceremonies close at noon June 10.

Summer school with an enrollment of 700 students opens June 14

Card Of Thanks

We wish to thank the many friends and neighbors who so kindly gave their assistance in the sickness, death and burial of our father, also for the ministers consoling words, for the beautiful songs and for the floral offerings.

Florence Oil Ranges

cook with Focused Heat. The intensely hot, clean blue gas flame goes straight to the bottom of the kettle. This means quick cooking in a cool kitchen.

The Florence burns kerosene the modern way, by first converting it into kerosene gas. It has no wicks to trim and requires no priming. To light the burner you merely touch a match to the asbestos "Kindler". The flame can be set for any intensity, and will not creep or smudge.

Florence Oil Ranges are made in five sizes. Easy to use, easy to clean, and a credit to any kitchen, they have won the enthusiastic endorsement of millions of women.

More Focused Heat—Less Care.

Hardware RADIO Implements

Riverside cemetery, will, by Memorial Day, be a beautiful place. Great pride is taken, by the K. of P. Association, to keep this city of the dead, in the pink of condition at all times, and a great deal of pride is also taken by the lot owners as well.

Decoration at St. Joe, for the past years has taken on a broader view, and besides the old veteran graves being decorated, the lodges participate and every person far and wide, who have loved ones buried here, take a great interest in the decoration of graves. In order that the public can have flowers, The News has on display potted geraniums of various colors and at prices that no one can be without flowers.

Predictions are that this year will excell all others, in the beautifying of the graves The drive ways are being graveled and the lawn trimmed.

Should the weather be favorable a large crowd of visitors will be present to participate in this day's service.

The usual plan of decorating will be carried out by the citizens at St. Joe at 9 o'clock and to be accompanied by the band and visit Bear Creek at 9:20; Morr's, west of Concord at 9:45; at the Jenkins cemetery, east of Concord at 10:00; Coburntown 10:30, Rev. J. N. Scholes will deliver the address and the St. Joe crowd will join in the service here and assist in the decoration at Alton cemetery at 11:30.

At each of these places the band will play, graves will be decorated and prayer offered by an accompaning minister.

Persons who will join the procession with their automobiles, will be appreciated and should notify Mr. Curie.

The old veterans of St. Joe will be arranged for so that they may make the trip in comfort.

At 2 o'clock in the Christian church the St. Joe services will be held.

Rev. Otis Jones of Methodist church will deliver the address.

Let old glory be on display at every home and business house.

A special musical feature of the Memorial day program will be an arrangement of the beautiful old melody—"The Vacant Chair," it will be sung by a mixed quartette accompanied by the band. The accompaniment is a special arrangement for this occasion by C A. Woodcox, the instrumentation including—Baritone, Bernard Sechler; French Horn, Harry Hursh; Bass, George Beams; Saxophone, Joe Woodcox. The quartette singing will includ Jean Curie, soprano; Edith Widney, alto; Saxe Hadsell, tenor and Frank Baltz, bass This number will be the last on the program at the cemetery.

DeKalb Farmer Asks Removal Of Son

Samuel Hindman, an infirm person, has filed petition in the DeKalb circuit court for the removal of his son, Don P. Hindman as his guardian.

The petitioner states that his guardian has become hopelessly involved financially and is insolvent that he is collectin and converting to his own use the funds and property of the trust and is preparing to make unfounded charges against the trust sufficiently large to cover the amount which he is indebted on account of the trust.

The petitioner asks that the guardian be removed and that he be required to make a full and complete accounting.

Don Hindman was appointed guardian in 1917 and filed $2,000 bond, with Abe Culbertson and Frank E. White as sureties.

J. R Culbertson has been appointed guardian of Samuel Hindman of Jackson township, succeeding Don P. Hindman, who resigned after his father had asked the court to remove him. Mr. Culbertson's bond was fixed at $500 and Don Hindman was ordered by Judge Endicott to file a final report and settlement witnin ten days.

Local Briefs

The Best and the Cheapest—10c a pound while they last—Onion Sets at Curie's.

Miss Ima Bray left for her home at Indianapolis, Monday, after the closing of the school term.

The hearing on the supplemental report in the Daniel Hursey drain has been continued in the DeKalb circuit court to July 1. Russel R. Ridenour has succeeded the late Charles S. Smith as attorney for the petitioners.

Rev. Otis Jones and family, Mesdames Loretta Hull, DeLora Curie and Lora Leighty, are attending the Indiana Branch meeting of the W. H. and F. M. society of the M. P. Church, held at Hanfield, Indiana, Wednesday and Thursday of this week.

The Indiana K. of P. Grand Domain has approved the program recommended by committee on arrangements for the great twelfth district rally and Supreme Chancellor's Page Rank class to be held in Anburn on June 18. The occasion in honor of Supreme Chancellor John Ballantyne of Boston, promises to be the greatest fraternal event ever held in DeKalb county.

Wm. Lyons and wife and Leland Scott and wife of Branch, Mich., were in St. Joe Tuesday calling on old acquaintances. They had visited John Boger, a brother of Mrs. Lyons, who is in poor health and also Delphia Gustin at Ft. Wayne. Mr. Lyons states that they are farming 520 acres and doing fine. They are raising cattle quite extensively and being only 17 miles from Muskegon, they truck their grain and produce. He expects to return this fall for the Home Coming.

LUMBER YARD FOR ST. JOE

We are pleased to announce to St. Joe and surrounding country that we have taken a long time lease on the large hay barn that was formerly occupied by Hart & Lower of Hicksville, O. We will have a complete line of lumber and roofing, cement, and in fact everything that will make a modern lumber yard. We solicit your business and will be more than pleased to figure on bills for houses, barns or any other buildings Remember this is something that St. Joe has needed for a good many years and we hope that St. Joe and community will support it so that it will be a permanent fixture in the town of St. Joe.

Simplicity Marks New Sports Frock

Novel Fabrics Individualize Latest Golf and Tennis Outfits.

A few years ago we should have carefully apologized before presenting sports clothes that were only models from Paris. Indeed, says a fashion writer in the New York Herald-Tribune, it is well known that Paris' original sally into the sports field was undertaken in answer to a demand that came from without—there was no inner urge toward such clothes as far as the Frenchwoman was concerned. But times have changed—the city which once ran far behind New York and London in athletic prowess has now produced a Lenglen, a Borotra and a Lacoste—the French sports frocks, which were once almost pathetic with their awkward frills and furbelows, have now become smart, chic and quite as utilitarian as the most meticulous British sportswoman could wish.

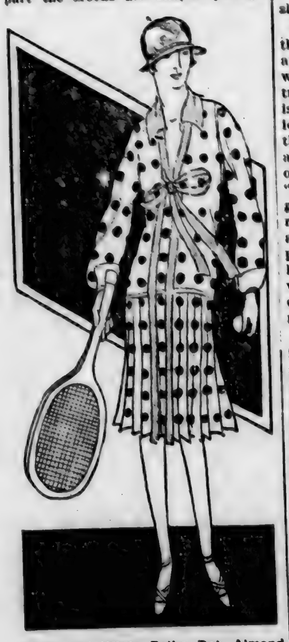
There was a lot of early season curiosity over the new spring sports clothes. So much had been said and written about the return of feminine fashions that nobody was quite certain as to just what type the sports frock would follow. In some quarters it was thought that, save for the fair athlete herself, the costume would be eclipsed—others temporized the question by sponsoring a modified sports costume—a hybrid affair that was faintly reminiscent of the gentle late Victorian. Each of these solutions is equally in error.

It is a fact that the sports costume had over-reached itself. Swept into a tremendous popularity in a single season, its vogue increased so spontaneously that it trod in paths which were clearly beyond its province. Smart demoiselles at Nice and Palm Beach wore the same costume for tennis as for the dansant. The Coconut Grove might have been a golf link a year ago, as far as costume was concerned; even the impeccable Riviera lost its sense of clothes balance. Indeed, you may trace the present jumper influence in the evening mode directly to the tremendous sports flare of last year.

Reaction Has Come.

Again such an unnatural fashion, a reaction was inevitable, and it has come. It affects, however, not the sports costume itself, but merely the extent of its vogue. Introducing the strictly sports frock into an afternoon dansant will not be considered smart this spring. As an indispensable item of every woman's wardrobe, it has also passed out of the picture—passed out amid the plaudits of many matrons who heartily disliked the style. It is no longer a prescribed item—its provinces are reduced, and yet in essence Paris has made the sports dress for the new season more appealing, more smart, more tasteful than ever before.

The few frills that are in evidence are necessary concessions to the flair for details so characteristic of the new spring mode. Yet for the most part the frocks are simple—perhaps



Black and White Polka Dot, Almond Green Crepe de Chine Bands.

trig, an excessive word found in no dictionary, better describes them. Interesting Lanvin models are arrayed for tennis—the costumes are a little more elaborate than those worn by Suzanne and Helen at Nice, but for the more casual and social racquet wielder they are in excellent taste. On one model the skirt is of plaited crepe de chine, and the jumper is of jersey kasha in the same shade. This particular outfit is green, but it would be equally attractive in any pastel hue. Another figure adds a striking landscape note which would be as much appreciated in the galleries as on the courts. Indeed, we should prefer it in the role of spectator. The background of the frock is white crepe de chine, the polka dots are black and the collar streamers and cuffs are of almond green crepe de chine.

Gabrielle Chanel shows a stunning golfing suit and a coat. While at first glance they may appear a little too elaborate for the ardent golfer, a closer analysis places them clearly within the pale. Striking they are, each developed in an unusual Rodier fabric, but they are entirely too tailored in atmosphere to be classed as of the new feminine variety.

One characteristic is shared by the majority of the French models—the short skirt. Whatever the tendencies to lengthen the skirt in other realms of fashion, for sportswear, be you player or spectator, you must insist on a hemline that goes no farther than the knees.

To the Parisienne, Chanel leads wherever sports clothes are worn. Crepella and jersey cloth are favorite fabrics with her. She has some delectable jumper frocks for the golf links in beige, wine red and lacquer red besides some in attractive shades of blue. They are made with a plain jumper blouse and plaited skirt and worn with a little straight leather jacket of a contrasting shade bound with the fabric of the dress.

A very pretty suit by Patou has a jumper in natural colored jersey wool

Golf Frock, Gray-Green Kasha, Silver Belt, Silver Flower.

made with a small plastron and narrow bow cravatte. The plaid skirt is in beige, tomato red and brown, and is plaited, the plaits being stitched to within six inches of the hem.

Low Bottier Heel.

No costume is smarter than its slightest detail, and as you fare forth these spring days do not neglect the never more important incidentals of the mode. Purses, bags, gloves, shoes, all are necessary elements of chic, and while fashion is rather liberal as to silhouette, color and material this season, with the lesser details it is showing some decided inclinations.

One or two-strap shoes of kid and the simple pump in the same leather are worn by the majority of French women. The plaited kid shoe, so attractive because of pattern and color, is also popular. Sport shoes are fashionable among women of all ages for the morning promenade. On morning and afternoon shoes fully two-thirds of the heels are low, a sign that the "bottier" type of medium height is gradually replacing the Louis XV. As regards evening wear, gold and silver are still to the fore, while some very pretty new brocades in crayon colors have been seen. In the case of day wear, colors must as a rule be discreet; but for evening footwear one may revel in brilliant color schemes.

The handbag the Parisienne carries in the morning hours now, to do her shopping or for a simple walk, may be made of leather and rather big. Some are made of buckleather and are as big as small traveling bags, and they are worn under the arm as a napkin is carried by a waiter. While handbags for morning are enormous, the bags worn with evening frocks are diminutive. They are just big enough to contain the most indispensable thing—a silk handkerchief, or the rouge, powder and lipstick.

Gloves, Turnover Cuffs.

Gloves are worn with turnover cuffs. The cuff one really can decorate at home, simply putting a stripe of bright silk on it or a strip of leather of a different shade. Walking shoes have always a sports character, with a low heel and a strong strap, with a buckle at the side.

Umbrellas, sadly needed so often in Paris, are very fanciful at present. The handles are made of ivory or wood, sometimes painted, sometimes carved in the shape of an animal's head. The handkerchiefs which a little while ago were so exceedingly tiny, go now to the other extreme and become huge.

The only evening coiffure one sees in these days is the classical bandeau which goes straight around the head. For young girls who dance a lot, a velvet ribbon with a bit of jewelry on it makes a simple and very tasteful headwear.

Bracelets are more than ever the fashion. You must wear quite a series of them, nearly from the wrist to the elbow. The smartest are shaded rings made of the same stone, as, for instance, of various shades of jade

THE KITCHEN CABINET

(©, 1926, Western Newspaper Union.)

People have to live first before they can see, and they don't think until they are fed, and one needs always to have had enough turnips to see in them anything except food.—Mrs. Wilkins.

FOOD FOR THE DAY

The French are wonderful cooks, but they look with dismay upon our huge juicy roasts and steaks. Mark Twain said: "There is here and there an American who will say he can remember rising from a European table d'hote perfectly satisfied; but we must not overlook the fact that there is here and there an American who will lie."

Onion Soup With Eggs and Cream.—Cut up six white onions thin and fry in a tablespoonful of butter until a light brown. Add a quart of water and a pint of milk. Season with a teaspoonful each of salt and sugar, a dash of red pepper and a pinch of mace. Cook slowly for an hour and strain; beat four eggs until light, add a cupful of cream and a tablespoonful of cornstarch, mixed with a little cold water; cook until the starch is well cooked before adding the eggs, as the soup must not be boiled after adding the eggs or it will curdle.

Jellied Chicken.—Dress, clean and cut up a four-pound fowl. Put in a saucepan with two slices of onion; cover with boiling water and cook slowly until the meat falls from the bones. When partly cooked add half a teaspoonful of salt. Remove the chicken, reduce the stock to three-fourths of a cupful, strain and skim off the fat. Decorate the bottom of the mold with parsley and hard-cooked eggs cut into slices. Pack in the meat, freed from skin and bones, and sprinkle with salt and pepper. Pour over the stock and place the mold under a heavy weight. Keep in a cold place until firm. In warm weather add a teaspoonful of gelatin to the stock.

Merridale Pie.—Take two cupfuls of drained crushed pineapple, one-half cupful of red currant jelly, one tablespoonful of confectioner's sugar, and one stiffly beaten egg white. Mix the pineapple, jelly and sugar and beat vigorously with an egg beater, then fold in the beaten egg white and turn into a baked pastry shell. Sprinkle with one-half cupful of grated cocoanut and place in the oven until brown.

Baked Chicken With Bananas.—Melt one-fourth of a cupful of butter, add one large onion thinly sliced, cut two young chickens into pieces for serving, cover and cook slowly, turning often; after cooking ten minutes add one cupful of chicken stock and cook until the meat is tender. Remove the chicken, put stock and cook until the meat is tender. Remove the chicken, put stock and onion through a sieve and add one and one-half tablespoonfuls each of butter and flour cooked together until smooth. Season with salt, pepper and a bit of cayenne. Arrange the chicken on a platter, pour the sauce around it and garnish the rim of the platter with sliced bananas which have been fried in butter. A teaspoonful of lemon juice and one-half teaspoonful of sugar may be used to baste the bananas while cooking.

Choice Cakes.

Wise mixing and careful baking are important points in successful cake making. If the cake is to bake an hour, watch the oven the first quarter or twenty-five minutes to see that it begins to rise; the second quarter it should finish rising and begin to brown; the third quarter it should finish browning and begin to shrink from the sides of the pan; the last quarter finishes the baking. If the cake begins to brown in the first quarter, it will not rise sufficiently, so careful following of this rule will insure a good cake, provided it has been well prepared.

A cake filled with large holes has too much of the rising agency—baking powder or soda and cream of tartar—or it has not been well blended. Careful mixing to thoroughly blend all the ingredients is vital in good cake-making. If a cake cracks open in the middle, humping itself up into an unsightly shaped loaf, it may be caused from too hot an oven or too much flour. The first five minutes in the oven a cake may be turned and shifted without injury, but after that leave it until it has fully risen before moving it.

Wedding Cake.—Take one cupful each of white sugar, brown sugar, molasses, coffee and butter. Six eggs, one teaspoonful of soda, two pounds of raisins, one pound of currants, one-half pound each of finely sliced citron and chopped dates, the same of figs, one pound of walnut meats chopped, one-half ounce each of orange and lemon extract, one teaspoonful of cinnamon, one-half teaspoonful each of cloves, nutmeg and allspice. Two cupfuls of chopped apples and salt to taste. Add four cupfuls of flour and steam three hours, then bake one. This fruit cake will keep for months and is better made at least two months before it will be served. Steaming the cake first insures a moist, good-flavored cake.

Nellie Maxwell

INDIANA BREVITIES

Sheibyville will be the starting place July 20 this year for the annual tour of Indiana poultrymen, which is conducted by the Indiana State Poultry association.

Authority to appoint all department heads in the campaign this fall was vested in Clyde A. Walb of Lagrange, re-elected state chairman at the reorganization meeting of the Republican state committee in Indianapolis.

Fairmount authorities, who have joined the statewide war on dogs, have rigged up an electric chair in the small cement jail just north of the town hall, where all untagged dogs are delivered and painlessly put to death.

Rochester finally is going to get a relic of the World war. American Legion officials there were promised a German field piece when United States Senator Robinson was there recently. The relic will be placed near the courthouse.

The twenty-sixth annual convention of the Indiana State Log-Rolling association of the Modern Woodmen of America will be held in Bloomington July 5 and is expected to attract 514 camps, representing 52,000 men. Drill contests will be a feature.

Guardians and administrators of estates who have been remiss in filing reports in Circuit court at Richmond hereafter will find themselves cited for contempt of court, says an announcement by Judge G. A. Hoelscher in which the jurist said that 48 hours will be the maximum limit of grace for the person responsible for filing a document of this kind.

Judgment of $28,008.43 has been allowed Mrs. Anna Snyder, widow of George Snyder, against Thomas L. Jetton of Mishawaka in the St. Joseph Circuit court as the fourth renewal of a forty-year-old suit for $2,500 damages filed by the Snyder heirs shortly after Mr. Snyder was slain by Jetton in a quarrel over strayed sheep on their adjoining farms.

The first unit cruise aboard the U. S. S. Hawk, Indiana naval training ship on the Great Lakes, will be that of the Seventeenth fleet division of Indianapolis, of which Lieut. Paul C. Denny is commanding officer, according to corrected orders received at the headquarters of the Third naval reserve area, Ninth naval district. This cruise will be made from July 11 to 25.

The recently completed school census of the Calumet region in Indiana shows rapid growth of population in the cities of that district during the last year. Gary is the largest, with 83,000. Next comes Hammond, with 75,000, or 88,000 if Calumet City's 15,000 is included. East Chicago is listed with a population of 63,000, making the total for the district 250,000, including Whiting.

Two and a half years after starting a life sentence for murder, Coy Gilland was granted a full pardon by Gov. Ed Jackson. The pardon exonerated him fully in the death in 1923 of Peter Schmidt of Posey county. A confession by Harlie B. White, now serving a sentence at the state prison, that he himself murdered Schmidt and that Gilland was not even at the scene of the slaying, led to a recommendation by the state board of pardons that Gilland be freed immediately.

Plans for a definite policy of cooperation between banking and agricultural interests in Indiana, in the hope of working out adequate farm relief, were outlined at a conference in Seymour called by Wilfred Lindstrom of Pleasant Lake, chairman of the agricultural committee of the Indiana Bankers' association, assisted by the extension department of Purdue university, local bankers, leaders of agricultural activities and county agents.

Only 7 per cent of the acreage of winter wheat sown last fall in Indiana was so badly damaged by the severe winter weather that it had to be abandoned, according to the May crop report issued by M. M. Justin, agricultural statistician for the Purdue university agricultural experiment station and the Department of Agriculture. This is much lower than has been generally anticipated because of the unusual weather of the fall and winter. Last year the abandoned acreage was 14 per cent.

Receipts of the fish and game division of the state conservation department for the first six months of the fiscal year, ended April 1, were $146,336.92, according to George N. Mannfield, superintendent of the department. This was an increase in receipts of approximately $10,000 over the same period a year ago. Disbursements for the first six months of the current fiscal year totaled $91,593.50. The department issued 148,266 hunting and fishing licenses, as compared with 140,003 for the same period a year ago. Game wardens made 839 arrests with 783 convictions, as compared with 973 arrests and 905 convictions a year ago.

Mrs. Edward Schad, forty-seven, attempted suicide at Michigan City by jumping from a bridge into the harbor. Henry Gruenberg dived in after the woman and pulled her to the pier. She was revived at the coast guard station.

Mr. and Mrs. Thomas Brown, residents of the northern part of Hamilton county, recently observed their sixtieth wedding anniversary with a dinner for their children, grandchildren and great-grandchildren. Mr. Brown is ninety-two and his wife is eighty-one years old.

IMPROVED UNIFORM INTERNATIONAL

Sunday School Lesson

(©, 1926, Western Newspaper Union.)

Lesson for May 30

JACOB AT BETHEL

LESSON TEXT—Genesis 28:10-22.

GOLDEN TEXT—I am with thee and will keep thee in all places whither thou goest.—Gen. 28:15.

PRIMARY TOPIC—Jacob Dreams at Bethel.

JUNIOR TOPIC—Jacob's Vision at Bethel.

INTERMEDIATE AND SENIOR TOPIC—A Young Man's Dreams and Visions.

YOUNG PEOPLE AND ADULT TOPIC—The Place of Vision in Human Lives.

I. Jacob's Flight to Haran.

He fled from an outraged brother. His deceit and cunning got him into trouble. His long exile from home was the result of his selfish ambition. "Whatsoever a man soweth that shall he also reap." Rebekah made her plea before Isaac for sending Jacob away, stating her fear of Jacob's probable marriage with a daughter of Canaan, when in reality she feared that Esau would kill him. Isaac at once recognized the wisdom of her suggestion. He knew that the success or failure of one's life is largely determined by his marriage. It was clear that if Jacob were to continue in the line of the covenant blessing care must be exercised in his marriage. Besides, it is a parental duty to see that children are well married. Among Christians only marriage in the Lord is allowable (I Cor. 7:39). Isaac, alive to Jacob's destiny, issued his command and bestowed upon him the covenant blessing which had come from God Almighty to Abraham (Gen. 17:1). The elements embraced in this blessing are:

(1) A numerous offspring (v. 3).

(2) Possession of the promised land (v. 4).

(3) And everything that is included in the Abrahamic covenant (Gen. 12:1-3 and Gen. 15:1-8).

We should learn from the experience of Jacob.

1. Be sure your sin will find you out.

Jacob deceived his father. He in turn was deceived by his children.

2. That wrong home life has its perils.

Isaac knew that the blessing was to be Jacob's, yet he planned for Esau to have the place of prominence. He was willing for the sake of a little venison to give to Esau that which God had planned for Jacob.

II. Jacob at Bethel.

1. The Lord meets Jacob at Bethel (vv. 10-15).

With a spirit clouded by homesickness on the one hand and by fear on the other, he had a dream that night in which God appeared to him. In this dream Jacob beheld a ladder or stair reaching from earth to heaven, upon which angels were ascending and descending. Above the ladder stood the Lord who spoke to him. This ladder suggests a means of communication between earth and heaven, between man and God. Jesus Christ is the ladder which provides us a means of communication with heaven (John 1:51; 14:6; Heb. 10:19-20). Jesus became a real ladder to us, bridging the chasm between earth and heaven. He was a real man that He might identify himself with the race. He is very God, really divine, that He might lift us up to God and secure a reconciliation with Him. Earth and heaven, man and God, were separated by the introduction of sin, but through Christ a means of intercourse is re-established. This vision suggested to Jacob that the only approach to God was through a mediator. The angels ascending and descending are heavenly messengers which are sent to minister to man through the mediatory work of Christ (Heb. 1:14). God spoke to him from the top of the ladder and assured him that He is the God who entered into covenant with Abraham and renewed the same unto his father Isaac (v. 13). This assurance embraced the following:

(1) The possession of the land (v. 13).

(2) A numerous offspring (v. 14).

(3) The promise of His personal presence and preservation (v. 15).

This promise was fulfilled in a marvelous way with Jacob and is still being fulfilled with his seed.

III. Jacob's Vow to the Lord (vv. 16-22).

He set up as a monument the stone which he had had for a pillow. He named the place Bethel, which means the house of God. Jacob now vowed that since God had so graciously obligated himself to perform all this for him, he would enthrone God as the Lord of his life and give back to Him one-tenth of all that was given to him.

Borrowing From God

Of all created comforts God is the lender; you are the borrower, not the owner.—Rutherford.

His Word Alone

One monarch to obey, one creed to own; that monarch God, that creed His Word alone.

Safety Valves

Tears are the safety valves of the heart when too much pressure is laid on it.

"BAYER ASPIRIN" PROVED SAFE

Take without Fear as Told in "Bayer" Package

BAYER

Does not affect the Heart

Unless you see the "Bayer Cross" on package or on tablets you are not getting the genuine Bayer Aspirin proved safe by millions and prescribed by physicians over twenty-five years for

Colds	Headache
Neuritis	Lumbago
Toothache	Rheumatism
Neuralgia	Pain, Pain

Each unbroken "Bayer" package contains proven directions. Handy boxes of twelve tablets cost few cents. Druggists also sell bottles of 24 and 100.

Fretwork

"We're going to learn fretwork at school, mother."

"Then I shall send you to another school, or you'll be growing up like your father. He works on Monday, and frets about it the rest of the week."

The Best Spring Tonic

ALL PURE FOOD

FATHER JOHN'S MEDICINE

OVER 70 YEARS OF SUCCESS

CLEAR YOUR SKIN of disfiguring blotches and irritations. Use Resinol

Small Catch

"He's a bird, that fellow."

"Well, his wife makes him quail, anyway."—Boston Transcript.

CORNS

Lift Off—No Pain!

Doesn't hurt one bit! Drop a little "Freezone" on an aching corn, instantly that corn stops hurting, then shortly you lift it right off with fingers.

Your druggist sells a tiny bottle of "Freezone" for a few cents, sufficient to remove every hard corn, soft corn, or corn between the toes, and the foot calluses, without soreness or irritation.

Handiest thing in the house

PROTECTS BRUISES

Cover bumps, bruises and other broken skin with "Vaseline" Jelly. Quickly soothes and heals. Takes away the hurt. Get some today.

LEAN MIXTURE IS CAUSE OF FIRES

Carburetor Gets Out of Adjustment and Then Mischief Is Done.

"How did your car take fire?" "I don't know—I heard it pop back at the carburetor, and suddenly discovered that it was on fire." "What made it backfire in the carburetor?" "I don't know. We can't find out because the car is a total loss."

This is no imaginary conversation because cars have burned in the past and will again in the future due to backfiring in the carburetor.

Cause Is Lean Mixture.

The most frequent cause is a lean mixture. This means more air in the mixture than usual. The carburetor gets out of adjustment in some way and the mischief is done. A lean mixture is slow-burning. It burns all during the power stroke, all during the exhaust stroke, and it is still burning when the inlet valve opens, admitting the fresh mixture. This takes fire and the flame runs back to the carburetor. If there is any gasoline dripping from the carburetor a heavy vapor is formed, extending under the engine, where it is held by the mud pan. The flame spreads under the engine and soon reaches the tank, melting the connections and releasing a flood of gasoline.

Lean mixture may be due to derangement of the carburetor or a leaky inlet manifold. Spray noxzle too far closed, auxiliary air valve spring too weak or valve stuck open or clogged fuel line are a few carburetor causes. A leaky inlet manifold may be detected by running the engine and injecting oil around the joints. Oil will be sucked in at the leak where the bolts must be tightened or a new gasket installed in place of the leaky one.

Inlet Valve Defects.

We now come to troubles of the inlet valve, which indeed are very rare. The valve lifter may be out of adjustment, leaving no clearance, or actually pushing the valve off its seat. If there is little or no clearance the valve will hold compression when the engine is cold, but will leak when the engine warms up, due to lengthening of valve stem, and, of course, popping in the carburetor occurs immediately. Set the clearance at about two thicknesses of newspaper. Occasionally this valve may become stuck, so that it cannot close. This may be seen from the outside, as there will be an unusually large space between the valve stem and lifter.

Electrical troubles now engage our attention. With a single coil and distributer system such as used on the majority of cars there would be some distributer trouble or a short circuit of the distributer wires. See that all wires are properly insulated and wipe all dust from distributer head. If you know how to open the distributer you should wipe out the inside occasionally, using a cloth dipped in gasoline. This will remove all accumulations of dust, which will cause short circuit if allowed to remain.

Sticker on Windshields One Cause of Accidents

Windshield stickers are made the object of the latest campaign conducted by the accident prevention department of the Chicago Motor club. "Chambers of commerce and trail associations, especially in the West, induce tourists to plaster stickers all over their windshields with the result that visibility is decreased and the driver is likely to cause an accident. The collecting of stickers from various sources has become a fad, and should be discouraged. Organizations using this form of advertising should discontinue it for the sake of safety."

The bulletin also condemns the use of stickers on rear windows, for the reason that these stickers disconcert the drivers following, and because unobstructed rear vision is needed by the driver in backing.

Good Way to Sling Hammock for Baby

The county agent in Walsh county, North Dakota, has found a solution for a problem that has perplexed many a mother—what to do with the baby when the family is taking an automobile ride. He describes his apparatus as follows:

"Take two pieces of three-eighth-inch rope, each long enough to reach from one top bow around back of the seat to the other. Into these splice two short pieces to make a rectangle about a foot wide and nearly as long as the car body is wide. Leave ends of rope at the four corners to tie to the four bows on the top.

"Over this rectangle fit a denim basket about two feet long. This will make a very satisfactory hammock and one that can be used at any time of the year. The baby carried in it will be happier than in the mother's lap and the mother will have a pleasant trip."

Adjustable Arm Support Rests Driver of Motor

Most drivers of closed-model cars rest the left elbow on the sash sill to lessen the fatigue incidental to long-distance driving. However, the sill is usually located just a little too high, and is too hard for comfort, and the adjustable padded arm rest shown in the drawing will be found much better. It is made of a piece of sheet metal, bent as shown, with a pad

Adjustable Arm Rest for Driver Lessens Strain of Long-Distance Driving.

top and a slot in the support. A sheet-metal bracket attached to the side of the body holds a bolt, which keeps the arm rest in position by turning down the wing-nut on the slotted part of the rest. This arrangement allows the rest to be raised or lowered to suit the driver.—G. A. Luers, Washington, D. C., in Popular Mechanics Magazine.

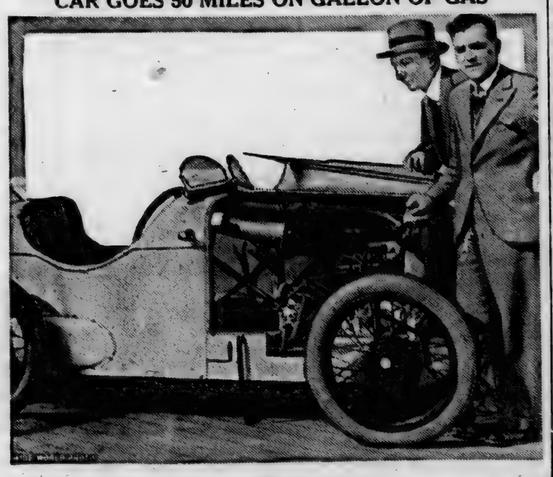
Loose and Rusty Rims Cause of Much Trouble

Loose, demountable rims cause a lot of tire trouble, if not watched carefully. When one of the wedges becomes loose, the rim starts "working" and gradually the other wedges become loose. A "creeping" rim is the result and the valve stem bears the whole strain until it is finally pulled off.

Furthermore, those wedges are often tightened up unevenly. This ends in what is referred to as a "wobbly" tire and the tread is worn down prematurely. At other times, motorists pound both the rim and the tire with a hammer to get the rim off or on. The pounding of the rim doesn't do any particular harm, unless it bends the rim, but every blow on the tire may cause a fabric break, and that is very serious.

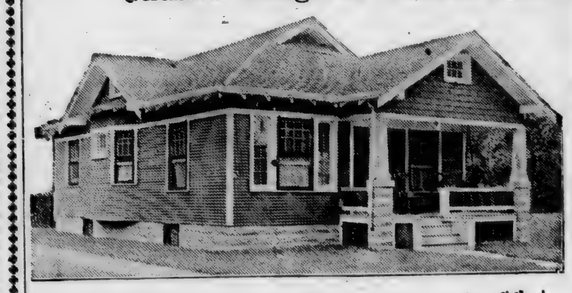
Rusty rims are dangerous, because they corrode tubes, make it hard to change tires and sometimes result in freezing on the tire. Rims should be cleaned at least once every six months. Ordinary paint sometimes placed on the rims after the cleaning process is not good practice, inasmuch as the heat generated by the tires melts the paint and the tire sticks to the rim.

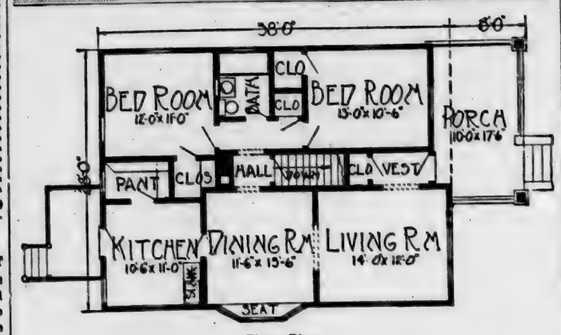
CAR GOES 50 MILES ON GALLON OF GAS



R. M. Rapellan and T. C. Copson of London have arrived in this country bringing with them their 7 horse power "Austin" motor car. It is claimed that the motor car will travel 50 miles on a gallon of gas and is capable of a speed of 80 miles per hour. The car carries only 5 gallons of gasoline and is reputed to be the smallest two-passenger car in the world.

Convenient Five-Room Home With Unusual Design of Central Space





Floor Plan.

By WILLIAM A. RADFORD

Mr. William A. Radford will answer questions and give ADVICE FREE OF COST on all problems pertaining to the subject of building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

The small house and bungalow are the backbone of American society for, even in our large cities, the great middle class is breaking away from the congestion of apartment house life and the dependence of the monthly rent bill to live in the more modest suburban regions where each family may own a home of its own. And not the least of these is the bungalow for, in spite of all that has been said against it, the bungalow continues to multiply, apparently thriving on the humor produced at its expense.

In the smaller centers this single-storied home holds an undisputed place which, thanks to its lack of wearying stairs, it will undoubtedly maintain for all time. For this lack of stair-climbing alone the bungalow has won a place in the heart of the American housewife who finds stair-climbing an unwelcome addition to the labors of her long and tiresome day.

This bungalow is one of the modest but thoroughly substantial type which we see being built wherever families of limited means are establishing permanent homes in order that they may have complete living comfort and independence. The frame structure set on a foundation of concrete blocks is sided with clapboards to the ceiling line above which shingles are used. The irregular roof line, while calling for some slightly greater cost of building, effectively breaks the low roof and relieves any tendency to undue flatness.

A front gable projects to cover the porch, that fast disappearing feature of the home which many people still desire for the comfort which it offers on warm summer evenings. From this porch entrance is had to an interior which presents some interesting features. The arrangement of rooms is highly compact, every inch of space being used to good advantage. The idea of a central hall, so frequently seen in the square type of house such as various colonial designs, has been adapted here to a more complete use.

The left side of the house is devoted to the living rooms while the right side contains the sleeping quarters and the two are separated by this central space extending the full length of the house. The front entrance opens into a vestibule which occupies the first portion of this space, and in it there is a coat closet where wraps may be deposited before entering the living room. The entrance to the living room is from this vestibule through an arched doorway.

Back of the vestibule the central space contains a hallway which serves as a passage from the dining room into the sleeping portion and also contains the basement stairway. Still farther back there is a closet opening from the rear bedroom and last of all a large pantry off the kitchen. Its position at the end of the space gives this pantry an outside window making it light and convenient. Between the hall and bedroom closet enough space is taken to provide for the chimney flue.

On the living side, the living room, dining room and kitchen appear in the order named with a door from the kitchen onto a small back porch. On the opposite side the rooms are grouped about a small hallway, a front bedroom and a rear bedroom, each with a good closet, and the bathroom and a linen closet between the two.

Finished Attic Is a Dividend Payer

Do the walls and foundations of your home yield you all the dividends you have a right to expect of them? They don't unless they afford you all the usable room they can carry. They are the main items in the cost of the house; they cost you almost as much if the upper half of the house is unfinished and empty as they would if it contained livable rooms.

If your home is a story-and-a-half high, with the upper portion unfinished, you are not getting the full return from your investment. Inexpensive remodeling will make it yield you more accommodation and more comfort. One or more bedrooms, or a play room for the children, even if it is low and has sloping ceilings, will add to the value of your property if you hope to sell. Or it will enable you to keep the old home longer before you must give up for more spacious quarters.

Turning a wasted half-story into play space or larger living quarters need not be an expensive project. A stairway, a floor, walls and ceiling are all that are needed. The stairs would best be built by a carpenter. The man of the house can lay the rough flooring himself, taking care to put it diagonally across the joists; but the finish flooring should be installed by a practical mechanic.

Watch Sanitation

A home may have a beautiful exterior, fine fixtures and furnishings on the inside—but if the plumbing is not of a high quality or if the unseen system of water supply, house drainage and ventilation of drains is incorrectly installed, then comfort, convenience and health protection are lacking.

Rubber Tile

Rubber tile flooring for the sun porch, bathroom or kitchen produces attractive effects in the home. This type of flooring is equally desirable for restaurant, store, office and public buildings.

Colonial Hall Should Have the Atmosphere

If there is an open doorway of the colonial type in the hall it is highly desirable to paint and decorate both stairway and hall in true Colonial fashion.

Most households have a few Colonial pieces—not enough to furnish an entire house, or even one of the larger rooms, perhaps—but enough to make a quaint and dignified Colonial hall if they are assembled together.

The necessary alterations are not very expensive and improve the atmosphere of the home out of all proportion to their cost, since the first impression of a home is the impression its hallway gives. Instead of the solid mahogany stair treads and hand rail, which our ancestors used to emphasize the good lines of the stairway, these, and also the molding of the paneling should be stained and varnished in a mahogany finish.

The walls, banisters, risers, wall paneling and front door should be white or an ivory that just misses being white. A Colonial door with its quaint paneling and pilasters and a parquet floor are good additional touches. A hooked rug on the floor, a bit of needlepoint tapestry on the wall, a grandfather's clock and a Colonial bench are all the accessories needed.

Veneered Door

Veneered doors, the National Lumber Manufacturers' association advises, are not satisfactory for outside use unless the veneering is very heavy. A painted soft-wood door, the association adds, is preferable to a hardwood door for exterior use in an exposed place.

Enhances Beauty

It is generally admitted that wood finished in its natural shade cannot be worked as successfully into color schemes of decoration as stained wood. It is also true that color brings out the grain and enhances the natural beauty of most woods.

THE MUD EEL

"They take pity on me, they do," said the Mud Eel.

Some of the insects stopped twisting and crawling about, looking from their little homes to the little home of the Mud Eel, and said, in insect language:

"Why do they take pity on you?

"And who are 'they?'"

"'They,'" said the Mud Eel, "are people."

"Children, too?" asked the insects.

"Children, too," the Mud Eel agreed.

"Well, now that 'they' have been explained to us you can go on with your story."

"But 'they' haven't been explained to you, for I don't understand them myself.

"How can I explain what I don't understand? People and children are a puzzle to me," the Mud Eel continued.

"I don't understand them at all.

"They talk queerly, they walk queerly, they eat strange food.

"They talk and giggle. They have funny ideas. Children go to places called schools—where they learn to spell and read and write.

"How can I explain all that?

"I can't.

"For the life of me I don't see why they want to know how to read and spell and write.

"What good are such things going to do them? They aren't given meals for writing things down on a slate.

"I know we never, never would be."

"Well," said the insects and snakes, "we meant that we knew who you meant by 'they.'

"We can't understand people ourselves.

"Certainly their ways are beyond our understanding. We don't know why they eat the food they do, why

"I Don't Understand Them."

children go to school, why they walk instead of crawl and talk instead of hiss and whisper, and sing.

"We don't know why they wear clothes and talk as they do and walk sometimes with their arms entwined with each other as they do.

"We don't understand people ourselves.

"But now tell us why the people pity you. None of us can really understand people it would seem.

"So you might as well go on with your story as best you can, leaving out such things neither or none of us can understand—such as people and their ways.

"And that includes children and their ways.

"So go on with your story, Mud Eel.

"Pray continue."

"I am put near the insects," said the Mud Eel, "and yet I belong to the snake family.

"I am a younger cousin, or distant relative of the Congo Snake, but I have no hind legs.

"And that is what bothers the people.

"The keeper tells them I have gills outside my body and they smile politely but are not much interested.

"Then he tells them that I have no hind legs, only a pair of front legs, and they say to each other:

"'How very queer. Isn't that odd? How very queer! Isn't that odd!'

"Yes, they pity me and I don't want their pity.

"No; I don't want it.

"I don't need it. I am not here to be pitied.

"Ah, how often I wish I could speak people's language instead of the language of the Mud Eel and I would say to them:

"'Oh, children and people, why do you think it is so queer, and pity me, because I only have one pair of legs?

"'You only have one pair of legs yourselves—and we think yours are queer.'

"I think that would quiet them all right. Yes, that would make them stop thinking we were so odd.

"At least I hope it would," the Mud Eel ended.

Jean Would Walk

Little three-year-old Jean went out for a walk with her father one day. As they started to return her father asked, "Shall we walk back, Jean, or take the street car?"

"Oh, I rusher walk, daddy," she replied, "if ou' will tarry me."

Funny Name for Pants

Teacher—An heirloom is something that has been handed down from father to son.

Bob Reese—That's a funny name for pants.—Exchange.

Builds up weak bodies

"I was worn out and dreaded a breakdown. Food lodged like lead in my stomach. I gave Tanlac a trial and the result was marvelous. I now eat and sleep like a farm hand." Mrs. Josie May Powers, Maywood, Ind.

From Mother Nature's storehouse we have gathered the roots, barks and herbs which are compounded, under the famous Tanlac formula, to make Tanlac.

If your body is weak and undernourished, if you can't sleep or eat, have stomach trouble or burning rheumatism, just you see how quickly Tanlac can help you back to health and strength.

Don't delay taking Tanlac another day. Stop at your druggist's now and get a bottle of this, the greatest of all tonics. Take Tanlac Vegetable Pills for constipation.

Hondurasian

British Honduras, to which Baron Bliss has bequeathed 25,000 pounds per annum, is one of the most backward of colonies, and has a long-standing reputation for free-and-easy ways, even in the administration of justice. Some years ago, the story goes, a man whose wife eloped with another, shot his rival and was sentenced to a term of imprisonment for murder. A friend in Jamaica, hearing of his plight, went to Honduras to see what could be done. He found the prisoner, accompanied by a gaoler, transacting his ordinary business at his office. On the friend explaining that he hoped to obtain his release because he had acted within the "unwritten law," the criminal became violently excited and exclaimed: "But no, that is impossible. I have let my house."—Pierre Van Paassen, in Atlanta Constitution.

Cuticura Soothes Baby Rashes

That itch and burn, by hot baths of Cuticura Soap followed by gentle anointings of Cuticura Ointment. Nothing better, purer, sweeter, especially if a little of the fragrant Cuticura Talcum is dusted on at the finish. 25c each.—Advertisement.

Comparison Resented

Feminists are much annoyed because the English press is inclined to commend any woman who does anything well as having a "masculine mind."

The Evening Standard praised the duchess of Athol for her fluent speeches in the house and suggested that "it seems unnecessary for her to read her speeches, as she always has a very clear idea what she wants to say, wherein she is masculine, and quite unlike Lady Astor." It also suggested that "she is not the least bit excitable, in striking contrast to Miss Wilkinson."

For true blue, use Russ Bleaching Blue. Snowy-white clothes will be sure to result. Try it and you will always use it. All good grocers have it.—Advertisement.

Business

"Some girls are mercenary," said the Countess Pierre de Valigen, at a Miami luncheon. "I overheard two girls talking on the beach this morning. The first girl said:

"'Susan tripped purposely so that young Coppers, the Montana millionaire, would rush forward and save her from falling.'

"'I see,' said the second girl. 'Yes, I see what you mean. A business trip.'"

Dr. Peery's "Dead Shot" not only expels Worms or Tapeworm but cleans out the mucus in which they breed and tones up the digestion. One dose does it. Adv.

Makes Huge Tires

The largest tires yet produced for commercial purposes are now being manufactured in England for the new giant air liners. The tire is seven and one-half feet in diameter and weighs about 25 pounds.

Mrs. Duren's Quick Start

Mrs. Henrietta Ducan Duren, Boston woman lawyer, has the distinction of trying a case in court less than an hour after she was admitted to the Massachusetts bar.

Says He Felt Drunk Most of the Time

Brooklyn, Mr. Fred G. Marquart writes:—"I felt drunk most of the time. My head was dizzy. I couldn't think clearly. One day I dropped a coin and when I stooped to get it I got so dizzy I almost fell. I later found out that the cause of this condition was constipation. This was overcome by a short course of Carter's Little Liver Pills. My appetite has doubled, and my dizziness has entirely left me."

Carter's Little Liver Pills move the bowels and relieve the system of its poisonous matter.

Druggists, 25 & 75c red packages.

PAYS OFFICIAL TRIBUTE OF NATION

The plain white stone that marks the grave of America's Unknown Soldier, lost in the World war, receives, each year, a wreath from the President of the United States. As the President pays this tribute, Mrs. Coolidge, the First Lady of the Land, and the military and naval aides stand at attention, while the whole world remembers and adds its homage.

BOY SCOUTS HONOR SOLDIER DEAD

Observing their annual custom, hundreds of Boy Scouts visit Arlington National cemetery and there place a tiny American flag at the grave of each soldier who gave his life for his country.

War Heroes' Graves in France Are Spots of Beauty

United States Cemeteries the Best Cared For in the World.

Relatives and "buddies" of the 30,420 American World war heroes who lie buried in Europe can find some meed of comfort in the assurances of Representative Guy U. Hardy of Colorado that "no graves anywhere and no cemeteries in the world are better cared for than these."

Relating in the National Republic, his impressions of a tour of the American war cemeteries abroad, Mr. Hardy gave an interesting description of the hallowed territory which forms the last resting place of American war dead.

"The American cemeteries are beauty spots in Europe and will be hallowed grounds to Americans for centuries to come," Mr. Hardy said. "I have seen hundreds of cemeteries where millions of the soldiers of the World war are buried. The English cemeteries are fairly well kept up. The French and German cemeteries have a sadly neglected appearance. The American cemeteries are in tip-top condition and the best cared for of all.

"We have in Europe now eight American cemeteries—six in France, one in Belgium and one in England."

War called him, and he would not wait for place,
But fell in ranks of those who sped their way
To where they met the Trumpeter's grim face
Within the dusk of Villers Cotterets.

Death called him, and within eternal deeps
He found the quiet ways of youth again,
Now all time is his own the while he sleeps
Under a cross beside the winding Aisne.

By Lieut. Col. Thomas J. Dickson, Chaplains Corps, U. S. Army, retired, delivered at the tomb of the Unknown Soldier last year.

The history of the First division is a closed book.
I am not worthy to loose the seals thereof!
In the Chancery of Heaven, known to God alone,
Is the record of those whose dust we cover with flowers,
Ours is a pilgrimage of love and reverence—
A pilgrimage safely guarded by unseen legions.
We see forms and faces from that place we call home;
Anxious for loved ones through long days and longer nights.
The dark Shadow fell on almost our every home.
Our homage to Woman who suffered most of all!
This is neither time nor place for us to acclaim.
Leave that to others! Leave it to pious pilgrims—
To those who dwell on mountains capped with emotion—
To those who smelleth the raging battles afar off.
Children will here clasp hands in prayer.
Silence! Profound veneration attend this presence!
Attend all from the valley of the shadow of death.
Attend the dim shadow of a once mighty substance.
Since all of Earth will come, will pause, will read—
It is well to speak the language God first gave man.
Oh, leaves of oak! Come from our winding sheet.
Leaves of strength! Come from the oak that defies the storm!
Come, rose leaves. See the place where dauntless valor sleeps.
Come, leaves of beauty. Leaves of beauty rest on Beauty's breast.
Come, leaves of laurel. Mount high this Unknown Soldier's brow!
Soldier! You rose from these ranks! Receive our homage vow.
Come, emblem of every hope. Come, light painted flowers.
Come, those who first told man there is a God.
Come, flowers of Easter. Come immortal Spring.
Come! Tell again the old, old story of His love.
Come, bless our leaning crosses. Come to our veiled Calvary.
Come! Tell loud the story. Let the earth rejoice!
Come! Oh welcome night. Cover us with the star cloth.
Catch every tear that falls—those beautiful bugles of Reveille.

Mr. Hardy continued. "The permanent cemeteries in France are located in picturesque spots near the great battlefields in which most of the men buried lost their lives. No two of the cemeteries are alike but all are uniformly beautiful, well arranged and are being given excellent care. They are all covered with blue grass and are as green as any Washington lawn. Trees and shrubbery have been planted, beauty spots laid out and developed. At the entrance gate of each is a caretaker's home and hostess house where relatives may find quarters. In the center is a tall flag pole from which an American flag flies always in the daytime.

Generals Beside Privates.

"The graves are marked by white crosses. At present the crosses are of wood painted white. The names and organization numbers are painted in black. Once a year or oftener the crosses are washed, repainted white, and the names restenciled. One thing that impressed me as I walked around reading the names on the crosses was the fact that there is no distinction given to rank or prominence. I found a brigadier general laid in an inconspicuous spot with a private on each of the four sides.

"The rows and rows of crosses stand out in the green field clean and prominent. From miles away over the rolling fields of France you can pick out an American cemetery with its flag flying and its field of even rows of snowy-white crosses. In the near future white marble crosses will take the place of the wooden crosses. Congress has now appropriated some money for the start and the change is well under way.

"The most important, so far as number of graves goes, is the Meuse-Argonne cemetery. In it are 14,026 graves. The name indicates the battle in which those buried there lost their lives. It covers 128½ acres. The graves are on a sloping hillside and the arrangement is in the shape of a great shield. Down at the bottom of the slope is a fountain and a lily pond. You can hardly imagine a more picturesque situation than this cemetery presents from the caretaker's home and its beauty will grow as the shrubbery and trees, so artistically arranged around the edges, develop with age."

The St. Mihiel cemetery, 180 miles from Paris, near Thiaucourt, with 4,-

book remembers "Sheridan's ride." This village of Middletown was at the end of the ride from Winchester, writes Grove Patterson in the Toledo Blade.

The house in which this is written is one hundred and twenty-five years old—an old house when General Sheridan pulled up at the gate. The general turned what looked like a Confederate victory into a rout, and saved the day—by coming from Winchester.

Up at Winchester is a house where General Washington stopped awhile during the Revolution. Between here and there is a ride—now a pleasant

135 graves; the Aisne-Marne cemetery, near Chateau-Thierry, with 2,202 graves; the Oise-Aisne cemetery, near Fere-en-Tardenois, with 5,934 graves, also are beautifully cared for, Mr. Hardy said.

Thousands Visit Suresnes.

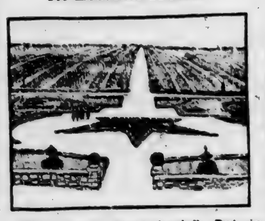
"Only seven miles distant from Paris is Suresnes cemetery which will naturally, because of its convenient location, be the most frequently visited of all. Already thousands of Americans who visit Paris have come here to pay their homage to America's dead. It has a beautiful location on a little hillside under the protecting shade of the historic old Fort Valeron. From the grounds one looks out over the River Seine and the Bois de Boulogne into the city of Paris—a magnificent view indeed. This cemetery lends itself especially well to decoration and, being one of the first located on a permanent basis, is the best developed.

"In Belgium there is Flanders Field cemetery, 35 miles from Brussels, containing 364 graves, and in England we have the Brookwood cemetery, 28 miles from London." The latter embraces about five acres of ground and contains the graves of 487 persons, some of whom died while in England on their way to France, Mr. Hardy explained.

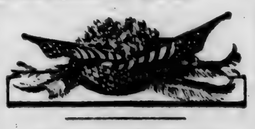
In conclusion, Mr. Hardy paid tribute to the work of the graves registration service of the army. Under the supervision of Lieut. Col. William O. Smith every possible courtesy is shown relatives of American soldiers buried in these cemeteries, he said.

"Both in the Washington and Paris offices of the service a complete record is kept of each grave. By inquiry it is easy to ascertain in what cemetery is any grave and its exact location—row and number. Where accommodations cannot be found easily near the cemetery the service is taking care of relatives who wish to visit the grave, at a moderate cost. Any mother can have a photograph taken of her son's grave without cost by asking for it, and relatives can arrange with Colonel Smith, whose office is located at 20 Rue Molitor, Paris, to have any grave decorated at special times or stated dates by providing the funds for the expenditures desired."

In Eternal Honor



"They never came back." But in this cemetery at Romagne, France, 25,000 American soldiers were buried with honor, and in their beautiful resting place their graves are honored by two nations and will ever be kept in the best condition.



The Only Sentiment

There can be but one sentiment on Memorial day—to the everlasting memory of the lads who have died for Old Glory.

Grant's Genius as Soldier Admired by War Students

But Always in His Heart Commander Was a Man of Peace.

Was Grant a great military genius? How often was that question asked in the days of storm and stress when, silent and unexplaining himself he went smashing through the best laid plans of technical military men—how often, too, in the after days when the experts and the memoir writers were dissecting his campaigns.

Knew War in All Its Phases.

Grant was a pioneer in the business of big driving and big pushing, and a past master, as well, of the patient art of attrition that we heard so much about in the late World war. Grant always knew what he wanted to do—behind all his big driving and

big pushing was Grant's clear and quick thinking brain that saw far and planned boldly, according to the rules of war that he had learned at West Point, supplemented by some rules that were peculiarly his own and which were of the very essence of common sense. Like Foch, Grant was the first man to put his finger upon the weak spot of the federal military organization in the early years of the war—the lack of centralized control and of co-operation among the different armies. His first great stroke was one that showed his exceptional genius for the strategy of war.

Not only did he grasp the importance of the capture of Vicksburg, but his execution of the campaign that ended in its downfall was characterized by the first real evidence of military genius that had developed in the war up to that time. He was the first of the American generals to perceive that in a comparatively fertile country it was not necessary to incumber his movements with commissary impediments, but that the thing to do was to let his army live on the country and to make its necessities a spur to quick and decisive action. It was a Napoleonic idea. All of Grant's plans for the Vicksburg campaign were novel and startlingly bold—new methods of warfare entirely to the men and the officers under him—yet he had the faculty of impressing them with their feasibility. Vicksburg stands unchallenged today as a master stroke of strategy, with Grant in the role of the master strategist.

Proof of Genius.

Grant's strategy at Chattanooga was another evidence of his genius that brought acclaim from the severest of his critics. The battle was fought out upon Grant's plans and under his immediate direction, and Grant's recognition of the "psychological moment" for the final attack that won the battle would have delighted the heart of Napoleon—that was an achievement after the great master's own teachings. And in those tremendous final campaigns that ender at Appomattox, the student of strategy will find much to interest him, to clinch his faith in Grant's genius. Here we begin first to hear of Grant's policy of "attrition"—the terrible attrition of the Wilderness, of Spottsylvania, of Cold Harbor, of battle after battle, without rest or ceasing, until Lee was worn down, nibbled away to nothing by Grant's merciless momentum. But it was not all "attrition," not all hammering. There were remarkable flashes of his strategic genius often evidenced—he was the one general who was always doing the unexpected. As, after the battle of Cold Harbor, when Lee was expecting him to cross the Chickahominy, Grant executed one of the most brilliant flank movements ever recorded of any army, when, with the Army of the Potomac, 115,000 strong, he crossed the James river at Wilcox Landing, entirely eluding Lee's observation and constructing for the purpose one of the greatest military bridges that the world has seen since the days of Xerxes, leaving Lee for nearly a week in absolute ignorance of his whereabouts. Here is what a distinguished foreign military critic has written of that campaign: "There were soldiers more accomplished, as was McClellan; more brilliant, as was Rosecrans; and more exact, as was Buell, but it would be difficult to prove that those generals, or indeed any others in the services, could have accomplished the task which Grant brought to complete success in that campaign."

His End Tragic.

And then the tragic close of that great career that was like the climax of a Greek tragedy, still too fresh in the memory for its poignant passages to be recalled—the struggle with sordid political environments, the wreck of fortune, the last sad days at Mount McGregor, with the nation's heart in its throat. Out of it comes forth in clear and resonant utterance his "Let us have peace," and his primal vision

of the coming of a day when "the nations of the earth will agree upon some sort of congress, which will take cognizance of international questions, whose decisions will be as binding as the decisions of our Supreme court are upon us"—a vision that paved the way for The Hague tribunal, the first step toward a parliament of the world. The man of war passed from the stage in a dream of peace—his last message to the people a prayer of thankfulness that peace had come, as he hoped, to permanently remain. "If it is within God's providence," he wrote, when his tongue was no longer able to utter words, "that I should go now, I am ready to obey. His call without a murmur. I am thankful for the providential extension of my time to continue my work, and because it has enabled me to see for myself the happy harmony which has so suddenly sprung up between those engaged but a few short years ago in deadly conflict."—Kansas City Star.

For One Who Died

He sleeps somewhere beneath the sod of France,
I think not even the angels know just where.
And there is only candlelight of stars
And sobbing winds to care.

I cannot deck his grave with wreaths of love,
Nor little songs, nor flowers of sunset skies,
Nor tell above him any beads of prayer,
Who know not where he lies!

O May, smother his bed in flowers for me,
Sing him a requiem when stars are dim,
And tell him all your beauty and your love
Is my heart's gift to him!

Wool From Waste

A new yarn with the warm, soft feel of lamb's wool now is being made from the waste product of the artificial silk industry, says Popular Science Monthly. United States Department of Commerce officials hold out a great future for the new fabric, which already is being manufactured in the United States as well as being imported from Italy, where it started. The new "wool" is shimmery and dyes in beautiful colors. Combined with real wool in making serge and other goods, it improves its appearance, as silk does.

Motion Pictures in Egypt

An Egyptian company in Cairo has obtained a government concession for the education of Egyptians in provincial towns and villages by means of motion pictures. Arrangements have been made to conduct performances in more than 100 inclosed markets throughout the country, the markets being under the control of another Egyptian corporation.

HISTORY MADE IN THIS SMALL TOWN

Middletown, Va., Saw Start of "Sheridan's Ride."

This is written in the tiny village of Middletown, Va. The town is so small that it hasn't even a drug store in which to buy a picture postcard. But there is more history to be read here and more tradition in its ancient landmarks than many towns of 100 times its size can boast of. Almost everybody who ever read a school

MAY 30, 1926

COLD HARBOR, JUNE 1, 1864

By Herman Wallace Spencer

"That day, that day, that dreadful day."
—Ballad of Chevy Chase.

From out the North that day
In whelming flood there drew,
Endless in their array,
Unceasing waves of blue
To crash in whitening thunder on unshaken cliffs of gray.
Meet is it, and your due,
That we recall that day,
Undaunted men in blue!
Unshaken men in gray!
And North and South bow reverent in memory of you.

More Than Sentiment About Memorial Day

Celebration of Memorial day by the nation's citizenship, including believers in different creeds and those of varied standards, was described by Dwight Davis, acting secretary of war, as "typical of the general life of America."

"Some heroes lie in official tombs," said Doctor Davis, speaking at the Hebrew cemetery at Washington, "and some on ground set aside by the congregations of separate faiths. Yet, everywhere the tribute is the same. The universality of the tribute to the soldier dead today is typical of the general life of America—where Jew and Catholic and atheist may frankly hold their separate beliefs, and yet live freely together and work side by side for the betterment of America.

"It is no mere chance that Anglican cavaliers, refugee Huguenots, evangelical Puritans, Catholic emigrants and emancipated Jews have contributed substantially to national life and national progress in peace and war. As all of our citizens celebrated Memorial day, so all of our citizens serve the nation. In fact, all of our citizens celebrate Memorial day because it is an American tradition to render service to the nation."

MEMORIAL DAY

Carry your gifts of flowers,
In memory of the brave.
Strew them thickly, like summer showers,
Over each soldier's grave.

Graves of American Soldiers in Mexico

Last summer when in Mexico City I visited a little cemetery maintained by the United States government in the environs of the city. The caretaker, an old soldier named Sergeant O'Shea, very courteously showed us the way among the graves. There is buried Colonel Slaughter, the old Confederate officer who defeated the federal forces in the last battle of the Civil war, fought after the peace of Appomattox, and then fled into Mexico, where he died, says a writer in the New York Times. A small granite shaft marks the spot where are buried 750 Americans who died in the Mexican war. Upon the shaft there is written: "To the memory of the American soldiers who perished in this valley in 1847, whose bones, collected by the country's orders, are here buried—750."

Joseph de Courcey, who accompanied James W. Coffroth and myself on this pilgrimage to the graves of our dead, stated that he believed there was a bill pending in congress to provide a suitable monument to the memory of those men who followed the flag and died in Mexico so many years ago.

EAGLE AT GETTYSBURG

IN MEMORIAM

There isn't a song on the driver's line
as the caissons roll today,
There isn't the jest of the roaring ranks
as the columns swing their way;
The old home street is a sunny street,
and far from the wrath of war,
But a flag leads on where he followed once—the man who will march no more.

The blue of the fleet that swept the seas, the brown of the wild Argonne;
The men of musket and Mauser days
come shoulder to shoulder on.

The caissons roll and the columns swing to the old "One, two, three four";
(And the ranks close in where the files are blank—the men who march no more);

The poppies bloom in the fields of France, and the North sea waves are gray;
The larks are singing in Normandy, and Morro is years away;
The grass is green where the crosses stand and the sky bends smiling o'er—
Should the world forget, your comrades won't, you men who will march no more.

—William F. McGurk in Kansas City Star.

Recalls Heavy Slaughter

T. J. Martin of Ponca City, Okla., Civil war veteran, eighty years old, says he participated in battles in which 17,000 were killed outright, says the Daily Oklahoman. He recalls the battles of Malvern Hill, South Mountain, the battle of Antietam, seven days of the Wilderness, Harper's Ferry and Gettysburg.

"It was at Harper's Ferry that I was wounded, and taken to Libby prison," Martin recalls. "That was a terrible hole. It was there that a friend of mine, who was sick, was not included on the exchange of prisoners when my time to leave the prison came. I took his name, allowing him to escape alive. It was nothing to do that for a friend when we fought in the Civil war."

"Some persons," he says, "are prone to think the Civil war had no great battles, because many were small in comparison to those of the recent World war. I recall that at the battle of Cold Harbor our losses were 3,000 in ten minutes."

HONORS AFTER YEARS

Brought back from their resting place in Rio de Janeiro, twenty-three sailors and marines who died of the influenza in 1918 were buried at Arlington National cemetery, November 2, 1923, with final honors by the navy. Flowers sent by Mrs. Coolidge from the White House were placed on the graves by members of the American Red Cross and War Mothers.

First G. A. R. Post

It was not long after the close of the war that the men who fought in the Union army began to consider the feasibility of forming an association. They talked together and sent out letters to other regiments until finally the Grand Army of the Republic was formed, Maj. B. F. Stephenson organizing the first G. A. R. post at Decatur, Ill., in 1866. Major Stephenson prepared the ritual of the organization and became its first commander in chief. He was born in Wayne county, Ill., in 1822. He studied medicine and when the war broke out was practicing his profession at Petersburg, Ill.

NONE FORGOTTEN

ON GETTYSBURG FIELD

GARFIELD ORATOR AT EARLIEST EXERCISES

Spoke at Services Held at Arlington in 1868.

At the first formal exercises, held at Arlington, Va., Mary 30, 1868, following General Logan's order to the G. A. R., the principal address was delivered by James A. Garfield, twelve years later elected President of the United States. As yet the term Memorial day, or Decoration day, had not been linked with the observance, and his address, afterward printed in pamphlet form in Cleveland, Ohio, was simply entitled:

"Oration of Hon. James A. Garfield, Delivered at Arlington, Va., May 30, 1868, on the Occasion of Strewing Flowers on the Graves of Union Soldiers."

But year by year the idea spread, and at Memorial day ceremonies held at Monument cemetery, Philadelphia, May 29, 1875, under auspices of Post No. 2, Department of Pennsylvania, G.

Decorating the Unknown Soldiers' monument at Arlington, on the first nationally observed Memorial day, May 30, 1868. The monument was erected to the memory of 2,111 unidentified dead found on the fields of Bull Run and the route to Rappahannock. (Illustration reproduced from a wood engraving in Harper's Weekly of June 20, 1868.)

A. R., it was recorded that "the annual floral decoration of the graves of our dead soldiers has become a national custom." Even in a short ten years after Appomattox time was doing much to heal old wounds, assuage old enmities. And on the eve of Decoration day, May 30, 1877, a throng assembled in the Academy of Music, Brooklyn, to greet as chief speaker Judge Roger A. Pryor, formerly brigadier general in the Confederate army. —Kansas City Times.

Generous Action Is Recognized by South

A beautiful evidence of our nation's reunited spirit is offered at Oak Bluff, Mass., on the isle of Martha's Vineyard, whose patriotic societies, including the Grand Army of the Republic, the Women's Relief corps and the American Legion, unveiled a memorial tablet to the soldiers of the Southern confederacy, says the Atlanta Journal. On the bronze are inscribed words that should warm every heart within the republic's bounds:

"The Chasm Is Closed."
In Memory of the Restored Union
This Tablet Is Dedicated
By Veterans of
Henry Clay Wade Post, 201, G. A. R.
In Honor of
The Confederate Soldiers.

For true chivalry and high Americanism nothing is comparable to this save the act of congress of the United States in unanimously authorizing the issuance of the Stone Mountain Confederate memorial coins "in tribute to the valor of the soldier of the South." Georgia and the entire South bow to Massachusetts in heart-deep gratitude for her generous sentiment so nobly expressed.

Obituary

Albert L. Gengnagel, son of Nicholas and Sophia Gengnagel was bor in Wines burg Holmes county, Ohio, December 22, 1860

When a child he moved with his parents to Port Jervis, New York From there they went to Millersburg, Indiana, where they remained six months, going from there to Butler, Indiana in 1866. Here he learned the harness making trade and operated a harness shop for several y ars

December 31, 1889 he was united in marriage to Miss Jennie Gramling. This union was blessed with one son, Frederick

After his marriage he reside in Baltimore, Maryland, for a short time, then returned to Butler, where he lived until 1906, when he moved to the farm southeast of Newville, where the death angel called him May 21, 1926 at the age of 65 years, 4 months and 29 days. He had been ailing for the past three years, suffering greatly at times, yet the end came calmly and peacefully He often stated that he was ready to go at any time.

He was confirmed in the Lutheran faith April 2, 1876 at Butler Indiana. After moving to Newville he transferred his church membership to the Newville U. B Church in 1913, under the pastorate of Rev. O. P. Givens, where he continued to worship as long as his health permitted.

He was a member of the William Hacker Free and Accepted Masons of Newville, where he served as Worshipful Master for two years. He was also a charter member of the Newville Chapter, Order of Eastern Stars, where he served as Worthy Patron for four years and also as Chaplain for one year. He later transferred his membership in both orders to Butler. He was also a member of the Modern Woodmen of America.

Politically he was a democrat, serving for sixteen years as precinct committeeman of Newville township.

He served as president of the Newville Rural Chautauqua for three years and vice president for two years.

He was a loving husband, a kind father and an obliging neighbor and friend, and leaves to cherish his memory, the widow, one son, Frederick Gengnagel, an adopted daughter, Mrs Esther Rymal and one sister, Mrs. Sophia Tombow, besides a host of other relatives and friends.

"We pause for a moment with reverent breath,
To speak of the Angel whom mortals call Death;
The gavel has sounded which none disobey,
And for friend tried and true, we sorrow today."

Funeral was held at the U B. Church Sunday afternoon at 2 o'clock. Rev. P. A. Hubbard officiating. Burial was made at Butler in charge of the Masonic lodge E. R. Kinsey funeral director.

Card Of Thanks

We wish to express our thanks to the people of Newville and vicinity for their kindness shown us during the illness and death of Mr Gengnagle.

Mrs. Gengnagle and Children

NEWVILLE

Dewey Miller and family were Auburn visitors, Saturday afternoon.

The Newville graduates this year are Lilly Hanna, Helen Richmond, Roy Warner, Ronald Tomlinson, and Clyde Killian.

Mrs. Mack Hatch went to Garrett, Thursday, and her mother Mrs. Belle Crum, accompanied her home Friday remaining over Sunday. Mrs. Crum is an invalid the result of a long sick spell.

Farmer's Attention!

The Imported Percheron Stallion

LARRONNEAU 101769

SERVICE FEE $15.00

COLOR and DESCRIPTION—Black; Stripe; Snip; Weight 2000 lbs. A good big drafty horse and a wonderful breeding horse. Careful inspection is invited.

SIRE—Houlenx 70490 (74223), by Lerida III (42847), by Lerida II, (32234), by Lerida 6969 (6780).

DAM—Roxette (63032), by Montargis 40107 (46166), by Jules (37987), by Villers 13169 (8081), by Briard 5817 (1630), by Brilliant 1271 (755) by Brilliant 1899 (756).

Usual Guarantee; Colt to Stand and Suck

All precautions will be taken to prevent accidents, but will not be responsible should any occur. Should any owner of mare dispose of same before consulting the undersigned, the amount of insurance becomes due and payable at once. In all cases the colt stands good for his insurance wherever found.

Stallion will stand the season of 1926 on what is known as the Joseph Koch farm, 2 miles north and 1 mile west of St Joe, 1 mile north and 1 mile east of Concord and 1 mile south of Coleman's Corners on Auburn-Newville road.

Forest R Clark and wife, Carl Clark and wife, of Ft Wayne; Harry Fuller, son Woodward, and daughter Maxine, and Willard Hull of Garrett; Nettie Mendenhall of Angola; Dewey Miller and family and Ira Mendenhall and son of Newville, were Sunday dinner guests of Mr. and Mrs. John Miller

Mrs John Miller and little grand daughter Elsie Mendenhall, and Mrs. Dewey Miller and sons attended the funeral of Mrs Harry Fuller at Garrett, Tuesday afternoon. The funeral was held from the Garrett Christian Church, of which she was a member. The remains were brought to Newville for interment, as deceased was a Newville resident many years before moving to Garrett. Besides her husband she leaves 2 sons and 2 daughters; a mother, Mrs. Carey, of Edgerton; and 5 brothers and 5 sisters. It is a mistake about her brothers being named Carey their name is Poper. She was the daughter of Ira and Viola Poper. Mr. Carey being a step-father to all the brothers and sisters as well as to the deceased.

Children's Program Being Planned For Township

Preparations are being made for the observance of Children's Week in Concord township, but will be more extensive than a week The date has been set for Monday, June 7 to July 3. Each church in the township will have charge for one week each. The meeting will begin at 2 o'clock each afternoon and those in charge will arrange a worship program and story telling hour.

Last year the program was a great success and the children enjoyed the hour immensely. Parents are asked to co-operate with the leaders and see that the children are sent to this meeting each day. Further announcement will be made as to leaders and place of first meeting.

SPENCERVILLE

Miss Marguerite Lake is visiting her parents, William Lake and wife.

Frank Baltz attended the Masons Grand Lodge at Indianapolis this week.

Rev. Steffey and family left on Tuesday evening for their new home at Walton, Indiana

R. U. Bowser and wife entertained their children at dinner. Roy Bowser and wife of St. Joe and James Reed and wife on last Sunday.

Mrs. Mary Ballyard and son of New Haven, Donald Kimes and family and Miss Ida Reed, were Monday dinner guests in the Vern Wilmot home.

Mrs. Flossie Rhoades will entertain the C. C Club on Friday afternoon.

Herman Reasoner and wife visited Mrs King of near New Haven, who is ill

The Ladies Aid of the Methodist church will meet today with Mrs. Ray Baker

The first quarterly meeting of the year will be held Sunday evening at the Methodist church

Miss Leone Widlifield returned home Monday after spending several days with Miss Nellie Baker at Hicksville

Mr. and Mrs. John Baughmann spent several days last week visiting their daughter, Mrs. August Baltzli and family.

Chas. Brattain and family attended the funeral of his mother, Mrs. Mary Brattain, which was held at Harlan Saturday.

The Boys' and Girls' clubs met Tuesday evening at the school house and were organized and entertained by Prof. A J. Smith.

Joel Betz and wife returned home Monday morning after being called to the home of Moses Price of near Harlan, who is quite poorly

Relatives from here attended the funeral of Kenneth Jenkins at Auburn Saturday afternoon. Mr. Jenkins spent several years at this place.

Henry Sechler of Butler, Ray Rodefer and wife and Mrs Jennie Moffett of Auburn, were guests last week of Mr. and Mrs Jacob Baltz.

Mrs. Lucile Fletcher, who has been quite ill at the home of her parents, Raymond Rhodes and wife, was taken to a Fort Wayne hospital Monday for treatment

Vol Hay returned home from Warsaw Sunday, where he went to attend the funeral of his brother, Samuel Hay. He was accompanied by his daughter, Mrs Ruth Place of Fort Wayne

The twentieth annual banquet of the Spencerville Alumni Association was held Saturday evening in the community hall The officers elected for the coming year are president, Auber Butler; secretary-treasurer, Mrs. Bernice Wilder.

Lewis Pervine, a former Spencerville boy, has instituted proceedings for divorce from Maude Provine They were married in June 1920 and seperated May 13, 1926 They have two children, Lavon 5 and Eugene 2. The wife ordered him to leave as she didn't care for him and would not live with him.

Last Sunday a very enjoyable birthday party was held at the home of Harvey Beam and wife, the occasion being the 84th anniversary of Mrs Nancy Rummell. A fine dinner was served at the noon hour. The rooms were beautifully decorated with spring flowers. The following guests were present: Mr. and Mrs Wm Lucas, Mr. and Mrs Wm. Erick, Mrs. E E Provines, Mrs. Milton Chaney, Mrs. J. E Keyes and Miss Pearl Shurts of Fort Wayne.

The Valley of Voices

By GEORGE MARSH

Author of "Toilers of the Trail," "The Whelps of the Wolf"

(W. N. U. Service.) (Copyright by the Penn Publishing Co.)

CHAPTER XVI—Continued

—25—

At length, by a supreme effort, the under man reached the knife beneath his back with the hand of a pinioned arm. With a heave the hand was free and the blade turned into the body above him. But in a flash the right hand of the Iroquois shifted from the throat to the menacing wrist. There was a wrench—a groan as the bone broke, and the knife slipped to the snow.

Then, like the fangs of a wolf, the teeth of Michel clamped on the throat of the man in whose bulging eyes alone the fear of the death he had incurred.

"Dis ees for her!" snarled the headman as he struck with his free hand at the crippled face. "Dees ees for me!" He struck again.

Slowly the bloodshot eyes of the Cree, who had so confidently shot from the ambush, filmed; for the last time his mouth gaped wide for the air denied him by the vise on his throat with a quiver he relaxed on the snow.

Picking up his rifle and slipping his hands into the rabbit-skin mittens which hung from his neck by thongs, Michel bent and closely scrutinized the knotted feature of his enemy. Satisfied with his work, he rasped: "Bo-jo'! Tete-Boule! You are poor shot! You mak' no more trouble een dis valley!" and started for camp.

He found his friends at breakfast. Silently he accepted the dipper of steaming tea and the heaped plate of fried moose and beans, and began to eat.

"Well, what luck, Michel? Are they still leaving?" asked Steele, when his eyes suddenly focused on the shoulder of Michel's capote. "Where'd you get that tear?"

The face of the Iroquois was wooden. "I meet old frien' een de bush. Ah-hah!"

Curious, Steele rose and examined his friend's shoulder. "Why, there's caked blood here! You have been shot at!" he cried. "Take off that coat!"

"W'en I feenish de moose and bean," laughed the stoic. "Hees gun shake w'en he fire!"

To his relief Steele found that the bullet had grazed the shoulder blade of his friend, barely breaking the skin. When the scratch was dressed, Michel gave him the story of the ambush.

With the sting of the bullet across his shoulder, the cool-headed Indian had sensed that he was not badly hurt, and made the only move that would check a swift second shot from a concealed foe—dropped as if killed or mortally hurt. Sprawled on his face, a knee drawn up to give purchase for a lunge, he had waited for the man in ambush to approach within reach. Had there been two, it would have been a knife fight, with the odds heavily against the man compelled to start from the soft snow.

"Good old Michel!" applauded Steele, as the Iroquois finished. "They can't beat you! He was scared when he fired. Had you ever seen this Indian before?"

Michel's black eyes snapped tantalizingly, as he played on his chief's curiosity.

"Wal, he look lak' man I see one time."

"Traded once at Walling River, you mean?"

"Ah-hah! he come to de post."

"When?"

"He was dere dis summer. He got leg lak' bow ov snowshoe. Hees eye look lak' de mink. He—"

"You mean—good Lord! It wasn't Tete-Boule?" cried the surprised American.

"Ah hah!" admitted the head-man, blowing a cloud of smoke from his mouth. "Eet was Tete-Boule. I t'ink Charlotte be happy squaw, now."

"He found your trail leading to the lake and took a chance you would backtrack—which you did." Delightedly Steele shook the hand of the Indian until the sore shoulder protested.

"Tomorrow night we go to de post."

"Yes," agreed Steele, his eyes reflecting the joy of victory, hard won. "Send one of the boys for David at once."

CHAPTER XVII

Behind the slab counter in the trade-room at Ogoke a man sat at a table. On the table stood a glass and two bottles—one empty. For hours the man had not moved, except to fill and drain the glass. Although it was barely three o'clock, candle lanterns dimly lit the room, for the sun had died in cloud banks and the light had failed early. In the air outside there was snow and the night would be thick.

The yelping of dogs aroused the man from his bitter thoughts. The door of the room opened and a bulky figure entered. The muscles of his hooded face, disfigured by a long scar, twitched nervously. In his eyes was fear.

"I found him," gasped the big man, a Frenchman, breathing hard, for he had raced the dusk to the post. "Choked! Not a mark on him—his tongue out and his eyes bulging like a pike's you squeeze in your hand! Ambushed!"

"So they got him, too?" nodded Laflamme, chin on chest.

"It's no good, I tell you," whined Antoine, his voice vibrant with panic. "That makes nine—nine who have gone out. It'll be our turn next. Tonight I leave for the Rouge."

The hard eyes of the trader, lined by worry and red from drink, lit with contempt. "You've gone like the rest. Why didn't you run away with Rose? Want to desert sixty thousand dollars' worth of fur, do you?"

The heavy features of the other filled with blood at the taunt. He leaned and struck the table with his fist, overturning the bottles.

"Soft, am I?" he snarled, "because I leave this hell before they close in and take us—hang us from the rafters here or cut our throats, you call me soft! I tell you we're done! They caught Pierre and the whole valley's after us. They're out there now, waiting." He pointed a shaking finger toward the forest. "It may be tonight—they come."

Ruined by the mystery—the menace of the inscrutable forest from which no man returned, which for weeks had ringed the post, sapping the nerve of his people until they fled in the night, Laflamme sat, numb with despair. Slowly the whisky from the overturned bottle dripped to the floor. Then he said: "That tale Tete-Boule brought from down-river was true. The men we sent to the Jackfish to stop him died."

Antoine nodded.

"Steele got through and came back on the snow," continued the trader. "The police are not in this. They'd come straight here."

"This Steele caught Pierre himself," added the other. "When the Indians learned how we had fooled them, they took the trail. The whole valley was ours—until he got the Windigo." Suddenly the speaker faced the door, listening. "What's that?"

As the two watched the door apprehensively, it opened to admit a half-breed with drink-sodden face.

"What you eat tonight, m'sieu?" The dull eyes of the cook shifted uneasily from Antoine to his chief.

"You here still, Philippe?" sneered Laflamme. "I thought you and Jean would hit the Rouge river trail when it got dark. All the rats have left."

"They'll hang on while the whisky lasts," muttered Antoine.

"You find Tete-Boule?" The face of the cook, mottled-gray in the half light, turned to the man who had gone out that morning on the trail over which none had returned.

"He found him—with his tongue out." Laflamme laughed bitterly. "You'd make a pretty picture, Philippe, hanging from that hook, with your throat cut. You'd bleed straight Scotch; you've lived on it for months."

The stark terror in the eyes of the half-breed seemed to appease his chief, who went on: "We'll have bacon and potatoes—if they give us time to eat them. Bring that jug."

The jug was placed on the table between the two men, and the cook, muttering incoherently, shuffled to the door.

"Two left, out of the lot; and they stay for the whisky!" commented Laflamme, filling a glass and shoving the jug across the table. "My friend, I'll give you a toast," he added, as the nerve-shattered Antoine gulped down his drink. "May that d—d American rot in h—l!"

Laflamme's glass was at his lips when a chorus of howls rose from the clearing.

The startled eyes of the men met across the table. "What's that?" demanded the trader, slowly lowering his glass, untouched.

"The dogs—hear something—out there!" The hoarse voice of the other quavered as he went to the door.

From the murk, the whimpering of the awed huskies reached the straining ears of the two at the door, who stood, nerves strung with suspense—one thought in their brains.

Then from the invisible forest beyond rose a wail—demon-like, blood-freezing, the voice of no clawed creature of the night—to die away, into silence.

"They have come!" warned Antoine, seizing the arm of his chief.

"Quick! Harness the dogs while I get the fur and the grub!" was the low answer.

The nerve of Laflamme had snapped.

Racing desperately against the closing in of a ring of ruthless foes, Antoine caught and harnessed the dogs. At the trade-house door, grub-bag, robes, and the precious pack of black fox were thrown on the sled. The whip cracked at the head of the lead-dog. "Marche, Pete!" rasped the Frenchman, and the team plunged into their collars at a gallop. Then the voice of a dog-driver out on the lake trail drifted back through the thick night.

"There go the last of the rats!" muttered Laflamme. "Now the ship can sink." And they lashed the swift, six-dog team out to the lake ice, and through the gloom that masked the Rouge river trail.

CHAPTER XVIII

From the blackness of the clearing at Ogoke rose a low whistle, which was answered from the gloom behind the trader's quarters, where the kitchen windows shone, yellow patches in the thick dark night.

The whistle was repeated and, simultaneously, swart faces appeared at the windows of both buildings. Eyes, glittering with hate and the pent excitement of the stalk, searched the rooms for signs of life. But they looked on emptiness—on a table splashed with spilled liquor, a jug, an untouched glass of whisky; on a stove from which smoked a frying pan with its burning bacon.

"I knew you would stampede them, Michel," said Steele, looking quizzically at the happy Iroquois. "They got out just ahead of us. You did that for David, you rascal!"

The hour of the man from Nepigon had struck. Like a hound at leash he yearned for the Rouge river trail—and the man who traveled it.

Steele gripped the hard hand of his friend in silence. There was nothing to say—no turning the Ojibway from his heart's desire. With a word to Michel, David left them to get his dogs.

"What shall we do with last year's hunt, if we find he hasn't shipped it?" queried Steele.

"Give eet to de Indian. Dey trade eet at Walling Riviere."

"Yes, he got most of it with his whisky—by fraud. It ought to go back to them."

To the surprise of the men as they reached the fur-storing loft, the candles lighted row on row of otter and mink, lynx and fox, marten and fisher pelts, hanging from the rafters.

"Here's his whole last year's trade!" cried Steele. "He's never shipped it!"

The yellow light of his candle lit eyes snapping with delight, as Michel looked at his chief. "Much fur here for M'sieu St. Onge! He be happy man, now. De pos' not close."

"Yes, they will trade it at Walling River, unless—" The Indian waited, wondering at the qualification—"unless Lascelles refuses to sign a certain paper."

"Ah-hah! He not get her—now!" The grave eyes of the Iroquois questioned Steele's.

"Not if I can help it!"

Satisfied, the Indian turned to examine the fur. Steele began counting the rows of rich pelts, in an endeavor to make a rough estimate of their value. He had reached the far end of the loft when the dim light of the candle fell on some bulky shapes on the floor in a corner. Curious, he bent over the lashed bundles. On the canvas covering of the nearest there was lettering. He lowered his candle to read it.

"R—F," he said aloud; then, with a gasp, "Walling River!"

"Michel!" he called, "Revillon Freres, Walling River! Well, I'll be—The fur-packs from the lost canoe! Murdered—ambushed, they were, for the fur!"

Michel knelt beside Steele. "By gar! our fur!" he said, peering at the wrappings, his voice hoarse with excitement. "Dey keel our men at de Devil's mile!" The muscles of his lean face knotted. "But Laflamme ees dead man now. Tonight Daveed take his trail."

They rolled out the fur-packs with the eighteen thousand dollars in pelts, which had left the post in the spring only to vanish on the lower Walling.

"M'sieu St. Onge be happy man dis night, eef he know dis."

"He'll know it as soon as one of the boys can reach him," replied Steele jubilantly. "We'll send him this present in the morning." After the gray days the sun was indeed breaking through. She seemed nearer—more possible of attainment, there in the dark fur-loft at Ogoke, than she had been for weeks, to the man who toiled for her.

In the morning Steele gathered his red henchmen together in the trade-room and talked to them, through Michel.

(TO BE CONTINUED.)

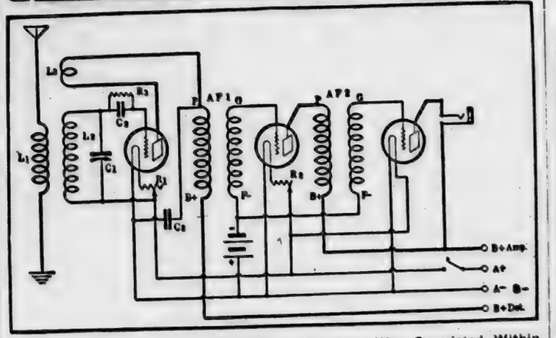
Cast Iron and Steel

To know the proper definition of everyday substances is sometimes very useful in argument. The latest for steel and cast iron are given us by a Japanese chemist in the Imperial University of Tohoku. Steel he defines as "an iron-carbon alloy with a content of carbon lying between 0.035 and 1.7 per cent." Cast iron is similarly "an iron-carbon alloy" but with a carbon content of "between 1.7 and 6.7 per cent."

Sunlit Minds

Studies by physicians and scientists in England reported at the congress of the Royal Institute of Public Health, held at Brighton, England, indicate that sunlight, "either natural or artificial, when properly administered, may have a definitely beneficial effect on mental activity." It was found that children handicapped in school work by illness, when cured with the aid of sunlight caught up with and even outdistanced their classmates.

RADIO



The Circuit Diagram of the Three-Tube Set That Was Completed Within One Hour.

By CHESTER CHARLTON
In Radio World.

The one-hour set is not one that simply lasts an hour, but one that it takes only one hour to make. It will last for many years and will render excellent service.

The radio side of the circuit consists of the justly famous three-circuit tuner. The audio channel comprises two stages of transformer coupled amplification. Hence the three tubes. All three sockets are a part of the detector-amplifier unit. Only the radio side need be wired. The only change I made was to cut the one-inch lead that comes from the F posts of the two audio transformers to insert a "C" battery (as shown in diagram).

Coil Information.

Any of the commercial three-circuit tuning coils may be used in this circuit. The one shown tunes with a .0005 mfd. variable condenser. It has a pancake tickler. However, some other sort of tickler will do as well. For instance, if you wind your own coil, you may use a 3½-inch diameter tubing for the stator, 4 inches high, placing 10 turns of No. 24 double silk-covered wire near the top (L1). Terminate. Leave ¼-inch space and wind 45 turns of wire in the same direction for the secondary (L2). The tickler would consist of as many turns of the same kind of wire as you can put on any tubing that will rotate inside the secondary. Remember that a shaft has to pass through the secondary, hence wind the tickler coil so as to leave anchorage room thereon for the shaft where it must be joined to the tickler form.

A straightline capacity tuning condenser was used. This has semi-circular plates. The fact that the condenser has an insulation end-plate does not mean that the condenser is not low-loss. It is. To make the tuning more convenient on the lower waves, and yet avoid crowding on any part of the dial, a converted dial was used.

The Parts Needed.

You need get only a 7 by 18-inch panel a .005 mfd. variable condenser, a dial vernier. If you use frequency condensers, or a converter, a 7 by 17-inch baseboard, a grid leak, and a knob.

The layout of the parts is very simple. As the condenser is the only real tuning element, it alone has a dial. The tickler coil is turned by means of a knob, even a rheostat knob, or, if desirable, a 2-inch dial may be used here. The rheostats, jack, and even the fixed condensers, including the grid condenser, are part of the detector-amplifier unit.

The wiring precautions include these: Connect the rotor plates of the variable condenser to the grid return side of the coil L2, the 43-turn coil. If you make your own. This is the connection made to "A" plus. Connect the aerial coil so that the ground and "A" plus connections adjoin. This accounts for two terminals, one each of primary and secondary, and the other connections of these windings go to aerial and grid condenser, respectively. The tickler or movable coil may be joined to the plate of the detector tube in either manner, that is, either terminal to plate.

Actual Time, 57 Minutes.

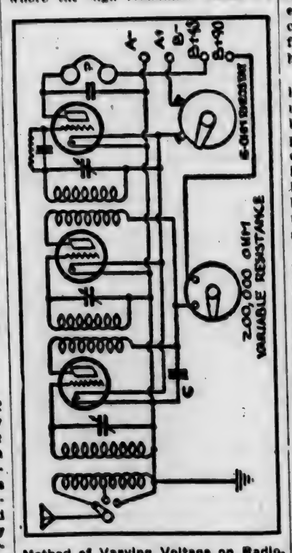
The set shown in the photographs was completed in 57 minutes, but we will call it an hour. This included the drilling of the panel and the mounting of the dial, two items that require a little care and hence took a good fraction of the time. There are only about a dozen connections to make. The leads are brought out to binding posts on the unit, and a marked battery cable should be used for convenience in establishing contacts at the batteries.

Standard Type of Tuned Radio-Frequency Outfit

The growing tendency to use high voltages in audio frequency amplifiers often results in the application of the same voltages to the radio frequency tubes, due to the fact that separate binding posts for the radio frequency and audio frequency "B" positive taps are not provided for in many sets.

The accompanying illustration shows a convenient and practical method of varying the voltage on the radio-frequency tubes, by the use of a high resistance.

The circuit shown is not new, but is a standard type of tuned radio-frequency outfit, illustrated to show where the high resistance should be



Method of Varying Voltage on Radio-Frequency Tubes.

connected in such a set. The same idea is applicable to intermediate stages of a superheterodyne or to other forms of radio-frequency amplification.

Where the amplification voltage is between 90 and 135 the resistance may be 200,000 ohms maximum, although much lower values usually will give the desired results. The principal point to be considered in choosing such a resistance is its ability to go down to fairly low values of resistance.

Note that the variable resistance is connected in series with the supply to the radio frequency tubes only, the 90-volt tap in the illustration connecting to the audio frequency tubes directly.

Any variable resistance of suitable value may be used in this manner to control voltage on R. F. tubes. The illustration shows the Centralab resistance. The Bradleyohm and the Clarostat are others which should serve satisfactorily.—Cleveland News.

Why Your Radio Tubes Need Filament Light

The fact that a radio bulb does emit light is entirely an incidental feature of its operation. What is desired in a tube is a flow of little particles of electricity called "electrons," and the easiest way to obtain it is to burn certain kinds of wires in glass bulbs from which the air has been exhausted.

The temperature must be quite high in order to make the flow copious, and most wires must be heated white-hot by the current from the A battery for proper operation. Of course, the incandescent wire, or "filament," as it is correctly called, emits considerable light, but this phenomenon has absolutely no connection with the functioning of the tube from the radio standpoint.

It is quite possible to obtain a stream of the minute electrons in a tube by the use of certain substances known as "radioactive" materials, but their expense and rarity make their practical application extremely limited. Radium and radium compounds are foremost in this radioactive group, so the cost of tubes equipped with filaments of this precious element can easily be imagined. No A battery incidentally, would be required for such tubes, as the flow of electrons from radioactive compounds is automatic and continuous.

Certain less expensive chemical compounds of high electron emitting properties have been successfully employed in radio tubes. The wire which ordinarily must be burned at white heat is coated with a layer of one of these compounds, and the tube is then operated at a mere dull cherry-red heat.

In many of the modern tubes, of both the coated and uncoated varieties, little or no light is visible through the glass, because of the inner coating of mercury which lines the bulbs. The heaviness of this coating varies considerably, as will therefore, the amount of light that penetrates through it, so no significance can be attached to the brilliance of the illumination.

LIVES ON FARM IN OKLAHOMA

Happy Woman Praises Lydia E. Pinkham's Vegetable Compound

In a sunny pasture in Oklahoma, a herd of sleek cows was grazing. They made a pretty picture. But the thin woman in the blue checked apron sighed as she looked at them. She was tired of cows, tired of her tedious work in the dairy. She was tired of cooking for a houseful of boarders, besides caring for her own family. The burdens of life seemed too heavy for her failing health. She had lost confidence in herself.

One day she began taking Lydia E. Pinkham's Vegetable Compound and her general health began to improve. She took it faithfully. Now she can do her work without any trouble, sleeps well and is no longer blue and timid.

This woman, Mrs. Cora Short, R. R. 9, Box 396, Oklahoma City, Okla., writes: "Everybody now says: 'Mrs. Short, what are you doing to yourself? I weigh 135 and my weight before I took it was 115. I have taken seven bottles of the Vegetable Compound."

Other women who have to work hard and keep things going may find the road to better health as Mrs. Short did through the faithful use of Lydia E. Pinkham's Vegetable Compound.

Ask your neighbor.

Not Lost

"Are you losing teeth, son?"

"No, sir. I know when they come out."

Primitive Ice Skates

The oldest ice skates in the world have been discovered in a museum in Prague. They date back to the Fifth century, B. C., and are fashioned from the bones of cattle, the bone being flattened off on one side along its length and perforated at each end to admit ankle thongs.

Tired, Lame, Achy?

Are you dragging around with a constant backache? Feel weak, worn and achy; so miserable you can't enjoy a moment's comfort? How about your kidneys? Well kidneys filter off body poisons. But when the kidneys slow up, poisons accumulate and upset the system. Backache is apt to follow, with sharp pains, dizziness and annoying kidney irregularities. Don't delay! If you suspect faulty kidney action, use *Doan's Pills*. *Doan's* have helped thousands—are recommended the world over. *Ask your neighbor!*

An Ohio Case

Mrs. Albert Winemiller, 106 E. Pearl St., Wapakoneta, Ohio, says: "When I stooped, sharp, stinging pains across the small of my back made it hard for me to straighten. My kidneys were disordered and the secretions passed frequently. After using Doan's Pills I was benefited and have had no more trouble."

If you want to buy a car on time

IT is to your advantage to buy the car that you can comfortably afford, on a payment plan that gives you a sure margin of safety.

General Motors has its own finance company, the General Motors Acceptance Corporation, operating the GMAC Plan. Through its service more than 1,000,000 families have purchased cars comfortably out of income.

On August 1 last, the price of this service, which had always been low, was further reduced. And the automobile-buying public is now saving millions of dollars annually as a result of this reduction and the influence of General Motors' leadership.

The purchase of automobiles on time is a universally accepted practice. The car is a utility and it is sound business to conserve capital and use credit. But buy on sound terms and at low rates. Any General Motors dealer will explain the advantages of the GMAC Plan.

Paper-Wool Twine for Tying Fleeces

Saving of 2 Cents Pound Made by Farmer on Wool Properly Prepared.

(Prepared by the United States Department of Agriculture.)

Although the wool trade has long complained bitterly against the use of binding twine in tying fleeces on the farm, the practice still continues to a large extent in many states, says the United States Department of Agriculture. The use of such twine is objectionable because small shreds cling to the wool and appear in the finished cloth, from which they can be removed only by expensive hand labor. The use of paper-wool twine manufactured especially for tying fleeces is advocated instead of sisal (binder twine), hemp, jute, or twine of similar fibers. One large wool producer reports a more ready sale and a saving of two cents a pound on wool properly prepared for market.

Chaff and Straw Hurt.

Chaff and straw, allowed to get into the fleeces through carelessness in feeding, from unswept floors at shearing time, or during storage, also make fleeces less valuable and unattractive to the buyer, and sometimes results in a loss to the grower—an avoidable loss—of as much as ten cents a pound. The appearance of a fleece is also improved if rolled up and tied with the flesh side out. Twine of moderate size is best for tying, and not more than two strands each way is advisable. To withstand the strains of handling and shipping use bags in good condition.

The practice of branding with lead paint or tar is a great detriment because these materials will not scour out in the manufacturing process. Where branding or marking is necessary, as small a brand as possible should be put on and care taken not to slap it on carelessly. If the undesirable paint or tar brands have been used they should be clipped from the wool at shearing time and packed separately or thrown away.

Desirable Marking Fluid.

A soluble marking fluid manufactured especially for branding purposes is most desirable and should be used in preference to common paint or tar.

More attention to the details of shearing, handling, storage, and preparation of the fleeces for market would mean a general improvement in the wool of this country, and make it compare more favorably with most of the foreign wools imported for manufacturing purposes.

Profitable Practice in Sweet Clover Culture

A profitable practice in sweet clover culture is that in which the clover is sown with the oats in the spring. As soon as the oats crop has been harvested, the clover takes on a rapid growth and soon furnishes a valuable hay crop. Soon after the hay has been made, the crop furnishes fall pasture and can be turned under early the next spring in time for a corn crop. A rotation such as this furnishes three crops—oats, sweet clover hay and corn—as well as fall pasture, in two years. In addition the system furnishes a legume every other year for soil improvement. The oats must be cut high enough so as not to injure the on-coming clover.

To Prevent Sheep Worms

It is most important to keep sheep and lambs as free from stomach and other worms, as possible. To accomplish that the ewes should be treated for expulsion of worms during summer and again before being bred, and when the lambs come, the ewes and their young should go to new seeding and should have a "fresh bite" of grass at short intervals during the entire period of grazing. Especially try to keep ewes and lambs off low, wet permanent pasture.

FARM NOTES

Give your chicks a good start and they will repay you with a good finish.

• • •

Everybody has an income of 24 hours to spend each day. Do you budget yours?

• • •

Sunlight is the cheapest and best disinfectant for use in the poultry flock.

• • •

Under good husbandry there would be no "marginal" land; if it can't grow field crops, or furnish pasture, let it grow tree crops.

• • •

One eternal triangle is commendable. It has for its vertices the farmer, the banker, and the farm bureau in the dairy community.

• • •

Sweet clover makes an excellent pasture and should be used more generally for this purpose. Sweet clover is also one of our best soil-improvement crops.

• • •

If it is impossible to use new ground for the chicks it is well to thoroughly clean up the old ground and sprinkle lime plentifully in order to kill as many of the bacteria as possible.

• • •

Hogs are the most efficient domestic animals found on the farm, since they will consume a greater diversity of feeds than other animals and since they will convert this feed into more [illegible] meat.

Good Shelter Given Pigs Helps Growth

Farrowing Pen Must Possess Many Good Qualities.

Many hog raisers have found that the farrowing house has much influence on the success of raising young pigs to maturity. The New Jersey State College of Agriculture enumerates several qualities that a good farrowing house must possess. They are warmth, air, isolation, sanitation, safety for the pigs, and nearness to pasture. These features may all be combined in a portable farrowing house built for one sow and her litter.

The individual portable house is small enough so that the sow can keep warm with her own body heat, yet it can be ventilated by completely opening the front in warm weather. Safety for the young pigs is provided by isolating the sow in a separate small lot or pasture so she will not be disturbed by other animals. Clean, sanitary soil is also obtained by the use of this portable house. The house, being small, can be thoroughly cleaned and sterilized before farrowing time and moved to fresh pasture whenever desired. Guard rails of 1¼-inch pipe are fastened to the walls for the safety of the very young pigs. These should be 8 inches above the floor and an equal distance from the wall.

Plans for such a portable one-family hog house may be obtained without charge from the agricultural engineering department, New Jersey State Agricultural college, New Brunswick.

Silage Very Convenient Feed for Dairy Farmer

Among the many different advantages of a silo for the average dairy farmer are the following:

1. In a silo all the corn crop is saved for feed. When not stored in a silo 40 to 50 per cent of the crop is lost.

2. Silage has a beneficial effect on the digestive system and therefore is worth more than its feed value alone.

3. Silage furnishes a succulent feed during the winter when there is no grass.

4. More feed may be stored in a smaller space and at less cost than any other way.

5. Silage is convenient to feed and is a cheap roughage.

6. The silo can be built during July when farm work is slack.

7. The dairy farmer who waits until August to think about building a silo usually does not have one.

8. Join with your neighbor to buy a silage cutter.

9. If a concrete silo is built it should stand at least a month after completion before being filled, to insure proper setting.

10. Ten milk cows or their equivalent in young stock—two yearlings equal one cow—justify a silo.

11. Japanese seeded ribbon cane makes nearly as good silage as corn. On most lands a greater tonnage of cane is secured.

12. Corn should be about fodder pulling stage when cut for silage. Cane should be ripe enough to make sirup.

New Edition of Feeding Handbook Just Issued

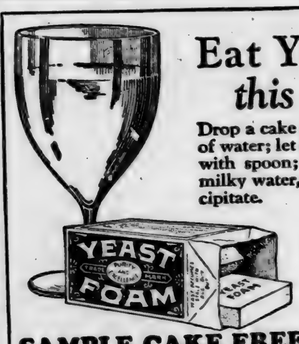
The "Handbook for Better Feeding of Live Stock" which has experienced a very wide demand since its issuance by the United States Department of Agriculture two years ago, has been reprinted in a revised edition. The new edition contains numerous photographic illustrations of feeding practices and presents some new text embodying late information. The handbook is intended especially for farmers who desire a handy-sized book with reference tables to be followed in feeding the various classes of farm animals. Persons having special problems are invited to apply for feeding-question sheets. These sheets are convenient blanks for describing problems in a manner which insures the most definite answers by federal and state specialists who analyze the problems and answer the questions.

Minerals Are Desirable for Chickens in Mash

Minerals are desirable for chickens the same as for the various kinds of farm animals. The most satisfactory method of supplying minerals is to add 5 per cent of bone meal and 5 per cent of ground shell to the poultry mash; there are other minerals that are being used for chickens but this method will take care of most flocks very nicely. Horses do not need minerals the same as other live stock for they are not used for artificial production of food products; that is they are not developed to produce large amounts of milk, like the cow, or any other product, all they do is grow and work; one-fourth pound of special deodorized steamed bone meal would be very good for each horse daily during the winter months.

Soy Beans as Cow Feed

Results of recent experiments conducted at the South Dakota State college indicate that ground soy beans can be fed with profit by dairy farmers for the high protein feed, thus decreasing the cost of milk production materially. Furthermore, in these tests, ground soy beans proved as palatable and seemed to have as desirable physiological effect on the cows as linseed oilmeal.



Eat Yeast Foam *this easy way*

Drop a cake of Yeast Foam in a glass of water; let it stand for 5 minutes; stir with spoon; let settle and drink the milky water, including the white precipitate.

Nothing could be easier or more palatable than this way of eating Yeast Foam. Yet you get its full tonic value.

Eat Yeast Foam for constipation, indigestion, lack of weight and strength, boils, pimples and run down condition.

"DIAMOND DYE" ANY GARMENT, DRAPERY

Just Dip to Tint or Boil to Dye

Each 15-cent package contains directions so simple any woman can tint soft, delicate shades or dye rich, permanent colors in lingerie, silks, ribbons, skirts, waists, dresses, coats, stockings, sweaters, draperies, coverings, hangings—everything!

Buy Diamond Dyes—no other kind—and tell your druggist whether the material you wish to color is wool or silk, or whether it is linen, cotton or mixed goods.

Famous Old Timepiece

Said to be the oldest working timepiece in England, the famous old clock of Rye parish church has been repaired by the generosity of golfers all over the world. One of the finest golf courses in England is at Rye, and many Americans who have played there answered an appeal for money to restore the old timepiece. It was erected in 1515. The pendulum, which may be seen swinging within the church, is 20 feet long. Cannon balls are used for weights.

Just say to your grocer Russ Bleaching Blue when buying bluing. You will be more than repaid by the results. Once tried always used.—Advertisement.

Elephant Her Pet

Daisy is the name of Honolulu's municipally owned elephant. Dorothy Mookini, age thirteen, is by right of proven prowess and by unanimous official consent, mistress of Daisy. She inherited her job when her father Haena Mookini, keeper of the menagerie at Kapiolani park, died several years ago. Every day it is her duty and pleasure to enter the cage where Daisy is chained and keep her pacified by petting while workmen clean. If she ceases petting for even an instant, Daisy starts after whoever else is in the pen.

Keep Going

DR. W. B. CALDWELL, AT THE AGE OF 83

A Child's Laxative Which Mothers Can Rely On

To Dr. W. B. Caldwell, of Monticello, Ill., a practicing physician for 47 years, it seemed cruel that so many constipated infants and children had to be kept "stirred up" and half sick by taking cathartic pills, tablets, salts, calomel and nasty oils.

While he knew that constipation was the cause of nearly all children's little ills, he constantly advised mothers to give only a harmless laxative which would help to establish natural bowel "regularity."

In Dr. Caldwell's Syrup Pepsin mothers have a regulating laxative which they can depend upon whenever a child is constipated, bilious, feverish or sick from a cold, indigestion or sour stomach. All children love its pleasant taste.

Buy a large 60-cent bottle at any store that sells medicine and just see for yourself how perfectly it cleanses and regulates the bowels of infants and children.

VOL. XL | ST. JOE DeKALB COUNTY, INDIANA, THURSDAY JUNE 3, 1926 | NO. 22

Edward Krafft Drowned In River

All Spencerville, in fact the entire community for miles, is sorrowing caused by the sad accident, resulting in the death of Edward Krafft.

Wednesday morning at about 10 o'clock he came up missing and upon investigation, by men at the gravel pit, it was learned that he had backed down over the river bank in his Ford truck with a load of stone. The word was spread and men hurried to the river to lend their assistance in removing the truck from the water, but as yet no trace of the body has been found.

For days, he had been working in hauling the stone from the gravel pit and unloading at the river bank west of where the dipper was stationed.

Members of the Fort Wayne police and county sheriff's office were called and helped in dragging the river during the afternoon

Mr. Krafft was born in September 1870.

Later: At six o'clock Wednesday evening the body was finally recovered from the river, being located about twenty feet from the bank. The body was badly bruised and had been hooked several times by the drag hooks. The funeral arrangements are not made as we go to press.

Second Death at Spencer Wednesday

Mrs. Lucile Fletcher, daughter of Raymond Rhoads and wife of Spencerville, died Wednesday evening, after an illness of several weeks Funeral arrangements are made for Saturday afternoon.

Children's Week Observances

As stated last week, the plans are now completed for observance of Children's Week in Concord township. As the week was so popular with the children last year it was decided that each church would furnish leaders for a week this year and the date for commenceing has been set for Sunday, June 6 and continuing until Sunday, July 4, each afternoon at 2 o'clock at the following places:

First Week
LUTHERAN CHURCH

Monday—Mrs. Agnes Monroe, Martha Miser
Tuesday—Mrs. Mabelle Thornton, Lucile Curie
Wednesday—Mrs. Ralph Sechler, Mrs. Harvey Hull
Thursday—Mrs. Daisy Woodcox, Mrs Iler
Friday—Mrs. Grace Dilley, Florence Hart

Second Week
METHODIST CHURCH

Monday—Phyllis Rickett, Edna Jackson
Tuesday—Mrs. Belle Barney, Mrs. Mayola Kinsey
Wednesday—Mrs. Lora Leighty Dorothy Ginther
Thursday—Rev. Otis Jones, Mrs. Hazel Renner
Friday—Mrs. Otis Jones, Mrs. Blanch Leighty

Third Week
CHRISTIAN CHURCH

Sunday—Priscilla Borthwick, Dorothea Scholes
Monday—Mrs. Gertrude Borthwick, Mrs. Belle Woodcox
Tuesday—Martha Woodcox, Mrs. M. Neer
Wednesday—Mrs. Nina Kees, Mrs. Estelle Baker
Thursday—Mrs Belle Keesler, Mrs. F. Hickman
Friday—Mrs. M. Maxwell, Mrs. Ed Storer

Fourth Week
METHODIST CHURCH

Monday—Mrs. Harriett Johnson, Mrs. Henry Culbertson
Tuesday—Mrs. Marie Draggoo, Mrs Jean Curie
Wednesday—Mrs. Otis Jones, Mrs. Henry Culbertson
Thursday—Rev Otis Jones, Mrs. Ethel Shilling
Friday—Rev. Otis Jones, Mrs DeLora Curie.

Memorial Day Was Observed Sunday

Decoration Day is again a matter of history for another year and the local committee feels, with a degree of satisfaction, that the community did its full share on Sunday, by the local support given, to perpetuate this one day, when we are called upon to express our appreciation of sacrifices and services rendered by the boys of the Civil War and to those of the wars of later years.

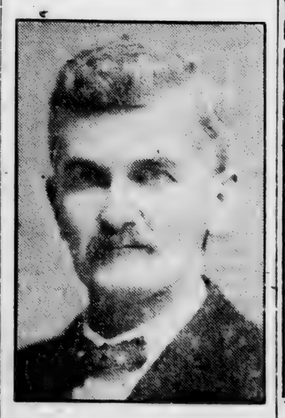
St Joe is to be congratulated upon this fine spirit of being willing to do this and doing it right.

Thinner and thinner grow the ranks of that once vast army that wore the uniform of blue, and once more, last Sunday, as this nation bowed in tribute to them we see the wide gaps in their ranks. More than half a century has passed since they went forth to defend the same starry flag we once again unfurl above the heads of the living and once again drape about the silent mounds that shield the dead. And the years that have passed since the day they marched forth with youthful hearts to defend that flag, have served to heal all wounds and scars and to unite all sections into the grandest and most glorious country the world has ever known.

Residents of St. Joe come to Decoration Day with loving tears for not only the men who wore the blue, but with loving remembrance of those who are now our brothers even though they fought for a lost cause. Their sons have shown themselves of our blood, and today on the fields of France and in every cemetery in this nation the sons of both the men who wore the blue and the men who wore the gray sleep silently side by side after laying down their lives for the same cause. They fought for the nation they loved, and they are loved by that nation because they were big enough to forget sectional lines and political differences.

So we again pay homage to our soldier dead, show them they are not forgotten and that their service to mankind shall never perish from the minds of this generation, and all generations to come. They paved the way for a nation that today stands as an example of greatness for all other nations to emulate. They made it possible for us to live in and to enjoy peace and plenty. And for this we return our sincere thanks with a cheer for those who still remain and a tear for those who have passed on, and with a renewal of our pledge to uphold the flag and the constitution they sacrificed for—a flag that has never touched the ground and a constitution that has never known dishonor.

Fourteen decorated automobiles, taking with them the band and citizens, made the rounds of the outlying cemeteries, starting with Bear Creek, Morr's, Jenkins, Alton, and at each place holding special services, decorating the graves of soldiers and assisting the people in the local communities. In the afternoon a large crowd participated in the St Joe services. Rev. Otis Jones delivering the address and members of the Choral Society furnishing the music, all of which was held in the Christian Church.



Wm. Curie, Chairman

The usual custom of marching to the cemetery headed by the band, the children, lodge members and citizens, while the veterans were cared for by automobile.

At the monument the service was concluded by the rendering of the beautiful old melody, "The Vacant Chair," as arranged by C. A. Woodcox, as a solo and mixed quartette with instrumentation accompaniment, being very appropriate and was received in an appreciative manner. The decorating of graves of the soldiers and lodge members was being done while this portion of the program was being carried out.

The old soldiers present were: Florence Buchanan, Isaas Meese, Geo. W. Wade, of St. Joe and Jas. May, Mahlon Baker, Chas. Freeburn, James Draggoo and Samuel Stafford of Auburn.

The following is the list of soldiers buried at the several cemeteries, whose graves were decorated by the local committee:

	Age	Year Died
BEAR CREEK		
Thomas Stafford	22	1862
Nathan Wyatt	97	1874
Israel Shearer	59	1881
MOORES		
John Boyle	93	1882

LUMBER YARD FOR ST. JOE

We are pleased to announce to St Joe and surrounding country that we have taken a long time lease on the large hay barn that was formerly occupied by Hart & Lower of Hicksville, O. We will have a complete line of lumber and roofing, cement, and in fact everything that will make a modern lumber yard. We solicit your business and will be more than pleased to figure on bills for houses, barns or any other buildings. Remember this is something that St. Joe has needed for a good many years and we hope that St. Joe and community will support it so that it will be a permanent fixture in the town of St. Joe.

(W. N. U. Service.)

CHAPTER XVIII—Continued

—26—

"My friends, we have worked together to drive from this valley the man who would destroy the Indians. We have won. He has gone. You have toiled, you have kept your promises and obeyed orders. You will take to your families what food and tradegoods your dogs can pull. Also, there is much fur in the loft, for which Laflamme paid the Ojibways in whisky. This the government will take, if it remains here. But it belongs to the Indians. You shall have it to divide equally among the hunters of this valley, but first it must be taken to the fork of the Stooping and cached. I am going on the long trail to Fort Albany. When I return I will meet you at the cache, divide the fur among you, and tell you where you are to take it to be traded—to Walling River or to Fort Hope, of the old company.

"In the loft we have found the fur that was lost this summer with the canoe on the lower river. Laflamme murdered the crew and stole the fur, to drive the honest trader, St. Onge, from this valley. This morning it goes back to him. Will you cache the rest of the fur at the Stooping and wait for my return from Albany?"

"E-nh, yes!" The Ojibways, delighted with their sudden wealth, readily agreed, surprised that the man who had caught the Windigo reserved nothing for himself.

The following morning, as Michel and Steele watched the last sled fade from sight on the white surface of Ogoke, bound with fur for the fork of the Stooping, a moving spot on the snow, far to the west, attracted their attention.

"It can't be David, so soon?" queried the American.

The Iroquois shook his head. "He not kech dem so queek. Dey drive dog hard to get away."

Steele went into the trade-house and returned with his binoculars.

"There seem to be two sleds," he said, adjusting the glasses. "The drivers are riding. I can't make them out. They may be police." He handed the glasses to Michel.

For a long time the Indian studied the distant spots on the snow. Then he said, drily. "Onlee one man—odder team hitch to front sled. Dogs tired." He returned the glasses to his chief, with a look which aroused Steele's curiosity.

"You think it's David, after all?"

"I t'ink," nodded the Indian.

The two men returned to the kitchen. The man who had spent two nights and a day on the trail would appreciate a warm breakfast. When they again looked down the lake, the familiar, blocky figure of David was urging the exhausted teams from the tail of the second sled. Shortly, the dogs turned into the post. Then the curious men who hailed with a shout the return of the Ojibway, saw, lashed to the pack on the rear sled, two rifles in skin cases.

In silence the two gripped the hand of the one who had left in the night on his grim quest—faithful to an oath and a memory.

To their questioning eyes he answered: "My brudder—he sleep soun' last night."

That was all. But Steele and Michel knew that somewhere on the Rouge river trail, two men had paid—somewhere, two bodies lay stiff in the snow.

CHAPTER XIX

All Walling River, women and children, were on the river ice to welcome the return of the men who had saved the trade. Leaving the chattering Indians, as the dogs, brave with bells and colored worsted, jingled down the trail, St. Onge hurried to meet his friends.

"My friends!" he choked, powerless to continue. Then, "My brave comrades! I can never repay you—but I will not forget."

Steele's eager eyes searched the group at the shore for a straight figure in fur coat and hood—then found her standing with the women. As the people surrounded the dog-teams, congratulating Michel and David, she came to meet him.

The sharp air had driven the blood to her cheeks. In the mink hood, her face had never so appealed to him as when she laughed up, with: "The conqueror returns for his triumph! Welcome, Monsieur Steele!" Then her dark eyes went grave. "We owe you everything—everything," she said, lowering her voice. "Thank you, oh, so much, for what you have done for my father."

"But—for you?" he protested. "You know—it was for you?"

She met his gaze frankly. "I thank you—for myself."

"You have been well?" he asked, chilled by the reserve in her level eyes. "The violin—Jacques brought word—I am so sorry."

"Yes, you would know what its loss has meant. But your catching the Windigo—surrounding them—driving them from Ogoke through fear! It was wonderful, monsieur. And David is with you? The Indians told us he had left in pursuit of Laflamme—he—"

"Yes, David's account is settled," said Steele, quietly.

The girl shuddered.

"The future of the post is safe," Steele went on. "We have much to be thankful for—finding that lost fur. Your f[illegible] will show a big profit this year. Montreal will not allow the post to be closed now."

He watched her face closely.

"Father wept at the news—it was wonderful," she calmly replied, as if ignorant of how great moment to her own fortunes was the rehabilitation of Walling River.

She had not changed; nothing would move her. She would go through with it, notwithstanding the assured independence of her father. She would keep her contract. That was clear. If she cared, she would have shown it there, on the river, when she met him. But she still believed he had been disloyal—made love to another woman, on his way home in October. Her pride had killed forever what she had felt for him that morning on the river shore.

At the trade-house he found Michel and David, narrating in detail the history of the campaign against the Windigo and Ogoke.

"It is unbelievable, my dear Steele," said St. Onge, "and I owe you and Michel a humble apology. I could not believe that Tete-Boule was dangerous—a spy. For me to leave her here at the mercy of Laflamme was unthinkable—and the violin! Poor girl, that was the final blow."

Michel glanced at David's stoic face, nodding grimly. "Wal, dat ees paid—dat leetle debt."

"It was uncanny—the way you three men caught Pierre and paid them with their own medicine. I can't believe now that it isn't all a dream. And this fur of Laflamme's, you say it is cached up river?" The Frenchman was puzzled.

Steele nodded.

"And you are to divide it among the Indians later?"

"Yes, when I return from Albany."

"From Albany? You are going to Albany?"

"Yes, David and I start tomorrow."

The factor was frankly bewildered. "But you need a rest, and you are apt to run right into a Keewatin northwester at this time, monsieur," objected St. Onge. What Steele's mission was he did not ask.

"Our dogs are good for it. We'll take six and go light. You can count on seeing us inside of three weeks."

"But why not send Michel and David? You do not flatter the poor hospitality of Walling River when you give us but a night. I've looked forward so to your return—and now you are leaving us," protested the mystified factor.

"It is a personal matter," said Steele, "and is urgent. We start at daylight."

* * * * * * * *

After reeling off the last miles of the lower Albany on an ice-hard trail, the swift dogs of Steele trotted up to the building of the Revillon Freres at the mouth of the river, two days before New Year's.

Leaving David to protect the team, Steele entered the trade-room. At the counter a half-breed clerk was busy with a hunter, but beyond, occupied at a desk, sat the man he had come three hundred miles to see.

At Steele's "Good afternoon, monsieur!" the trader looked up from his work. Slowly, as he recognized the frost-burned features of the man in duffle capote, the face of Lascelles went black with anger. He rose and faced the newcomer, his mouth twitching in vain effort to articulate.

"You remember me," went on Steele, casually, openly amused at the surprise and discomfiture of the other. "My name is Steele. I met you at Walling River."

"Yes, I remember you," exploded the inspector, finding his voice. "What brings you here?"

"I came on a little matter of business which we had better discuss in private," suggested Steele, nodding in the direction of the listening clerk.

"Come in behind the counter, then."

Steele passed to the rear of the counter and sat down.

"You come from Moose or Walling River?" demanded Lascelles, curious of the purpose of this strange call in midwinter.

"I come from Walling River. You may be interested to know what has happened in the valley since September."

Lascelles was interested. "You brought letters for me?" His tone dropped its surliness.

"Oh, no! I have no letters, Mademoiselle St. Onge and her father are well, however. In fact, St. Onge is a happy man. He's got the fur he lost last summer at the big rapids."

"Got his fur? How?"

"Why, Laflamme had it. By the way, the trade of the valley is in your hands. Walling River will pay big in the future." Steele added pointedly: "You can't close the post now."

"But Laflamme? He stole that fur?" demanded the astonished and mystified Frenchman. "How did St. Onge get it back?"

"Why, Laflamme bequeathed it to him—sort of a legacy. You see, Laflamme died—with a few others."

Lascelles stared at the man across the desk as if he doubted Steele's reason. "Laflamme dead! What's happened?" he gasped.

"Well, in the first place," began Steele, lighting his pipe, "the Windigo you scoffed at proved to be an Indian from Ogoke. We got him in a beartrap—then closed in on Laflamme and picked up half his people on the trails. When we walked in the rest had already stampeded from sheer fright. We missed Laflamme by minutes." The American enjoyed the play of mingled incredulity and amazement on the features of the man he faced. "He was found strangled on the Rouge river trail—later," Steele added. "A private affair, I imagine. Exit all competition in the valley for St. Onge."

"It's unbelievable—Laflamme dead. And his fur? It will come, of course, to Walling River," added the trader, with satisfaction.

The moment of the American had arrived. He deliberately knocked out his pipe, as he countered: "That depends on whether you sign this." The speaker fumbled in an inner pocket and produced an oil-skin envelope with an enclosure.

Lascelles scowled as Steele drew out the paper.

"What is this?" he demanded, his small eyes shifting suspiciously from the paper to the cold gaze of the American.

"This is your title to forty thousand dollars' worth of fur, your title—when you sign it and return it to me."

Mystified, on the defensive, Lascelles waited in silence.

"I'll read it to you," continued Steele.

"Mademoiselle Denise St. Onge:

"I hereby release you from your agreement to marry me.

"GEORGES LASCELLES.

"Inspector, Revillon Freres, Albany District."

"You dare to insult me in my own house!" raged the furious trader, getting to his feet and shaking his fists in the face of the man who sat coolly in his chair, looking up at him. "Why—you impudent scoundrel—I'll have you thrown out of the place—you and your dogs! You—" Lascelles, choked with anger, was unable to continue.

"You forget my man David," drawled Steele, "the Indian who laughed at you on the shore. You haven't got enough Swampy Crees at your post here to throw that Ojibway out."

The trader flinched from the threat in the wind-burned features, with the clamped jaw.

"Now, sit down!" snapped Steele. "At the Stooping River there is forty thousand dollars in fur under guard of my men. Sign this, and it goes to St. Onge; refuse, and it will be traded at Fort Hope, with the Hudson's Bay. Understand? Forty thousand in fur to the Hudson's Bay!"

"Did she send you with this?" sneered the patently worried inspector.

"We won't discuss Mademoiselle St. Onge, but she knows nothing of this—nothing. Furthermore, you may be glad to learn that this release will mean nothing to me. We have both lost, Lascelles—both you and I. Let's take our medicine like men."

"You expect me to believe you?"

"Believe me or not, one thing you're going to do; that is, sign this release."

"Suppose I refuse?"

"Well, read this." Steele handed the other man a paper bearing the letterhead of Revillon Freres and dated at Montreal.

Lascelles' hand visibly trembled as he took the paper. While he read, his high color slowly died.

"You understand that second sentence, don't you?" taunted Steele. "'Any attempt on your part to confuse the company's business with your private affairs will be summarily dealt with,'" he quoted. "How would you like to have the Montreal office learn that you had, for private reasons, turned over forty thousand dollars' worth of pelts to the Hudson's Bay?"

Limp in his chair, the man who had plotted for Denise St. Onge and beheld his victory near, now stared hopelessly on defeat. To Steele, confident of the answer—the answer which was inevitable from the character of the man he dealt with—the face of Lascelles reflected each stage of his mental struggle. Deep as had been his obsession for Denise St. Onge, his commercial future was his life. After an interval, he turned to the American.

"I could have you put out of the way easily, in spite of your man-killer outside; and get both fur and the girl."

Steele laughed. "You think me a child? If I don't come back, the fur goes to Fort Hope. I've fixed that. I've also written to your superiors telling them of your great fur haul on the Walling. However, I'm hungry for a good fight. Say the word and I'll begin with you. Any more threats?"

Lascelles was done. There was no alternative to a refusal to sign the release but the ruin of his career. He hurriedly wrote his name and returned the paper to Steele.

"You're a clever man, monsieur," he said in a voice broken with passion, "but in the future keep away from this end of the Albany. It would please me to look at you over the sights of a rifle."

"Now, I don't feel that way about you," flung back Steele as he moved to the door, followed by the venomous eyes of the other. "While I have a foot, I'll never waste good ammunition—on a cur," and he slammed the door behind him.

(TO BE CONTINUED.)

Miserable Despair

Despair makes a despicable figure, and is descended from a mean original. It is the offspring of fear, laziness and impatience. It argues a defect of spirit and resolution, and oftentimes of honesty, too. After all, the exercise of this passion is so troublesome that nothing but dint of evidence and demonstration should force it upon us. I would not despair unless I knew the irrevocable decree was passed, I saw my misfortune recorded in the book of fate, and signed and sealed by necessity. —Jeremy Taylor.

Easily Wed in Siberia

Marriage in Siberia is only a matter of taking out a license to wed; divorce is equally easy.

RADIO

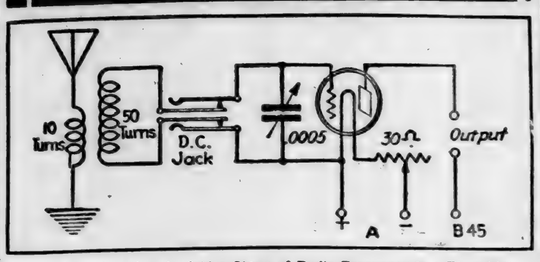

Diagram Showing How to Add a Stage of Radio Frequency to a Three-Tube Regenerative Set.

By C. J. KELLY
In New York Herald-Tribune.

More distance, greater selectivity and an all-around better set may be had by using a stage of tuned radio frequency with three-tube regenerative sets of the type utilizing a variable tickler coil to secure feedback. Although intended for this special type of receiver, the tuned radio-frequency stage may be used to advantage with almost any receiver that is not neutralized.

Aside from increasing the distance and selectivity of the set, the extra stage will permit the use of a loop antenna—a highly desirable feature these days when stations are only 15 kilocycles apart and selectivity is an all-important thing. As the loop has directional properties, interference from man-made static can practically be eliminated by operating the set with the loop in such a position that it picks up a minimum of interference.

Aerial for Best Results.

With an aerial and ground the set will be found to be superior in some ways to many five-tube radio-frequency sets. The combination of tuned radio frequency and regeneration will make for better distance records.

The radio-frequency stage may be built in a small cabinet and placed alongside of the three-tube set.

A double-circuit jack has been placed across the secondary tuning condenser to receive the plug to which the two leads from the loop are attached. By using this method it only will be necessary to insert the plug to use the loop, the double-circuit jack automatically disconnecting the secondary coil.

The loop will be found excellent for use where it is impossible to erect an aerial. The set can be installed in an automobile or motor boat and operated in a few moments, as it only is necessary to connect the battery leads and insert the plug.

The parts for the radio-frequency stage are all standard, and while most fans already have some of the parts around their workshop they may be obtained in any well-stocked parts store for very little.

List of Parts.

The following is a complete list of parts needed to construct the stage: One radio-frequency coil, one .0005 variable condenser; one panel, 7 by 10 inches; one baseboard 6 by 6 inches; one standard socket; one rheostat, 30 ohms; five binding posts, brackets and screws for coil and baseboard.

If the coil is to be purchased, any fixed coupler having enough inductance in the secondary to permit it to work over the broadcast wave lengths (from 200 to 600 meters) when tuned by a .0005-microfarad condenser can be used.

To wind the coil at home a composition or hard-rubber tube about six inches long and three and one-half inches in diameter is used, as it is a stock size and will be easy to obtain. A spool of No. 22 gauge double cotton-covered wire will be ample for winding the coils and connecting the set.

A 10-turn primary and a 50-turn secondary are wound on the same tube, separated by about one-quarter of an inch. Be careful to wind both coils in the same direction.

After the connections have been checked the rheostats on both the stage and the detector are turned on. Tuning will be the same as with any other set. The dials will differ slightly (usually a few degrees) because of the circuits not being matched, but both circuits will be in resonance when a station's carrier wave is received loudest.

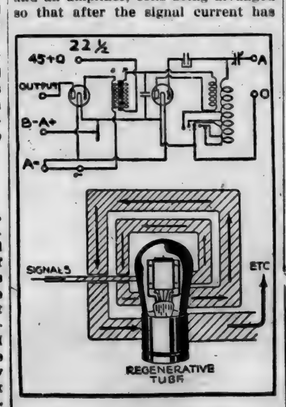
Excessive squealing or whistling may be caused by reversed primary leads or too high plate voltage. Reduce the plate voltage from 45 to 22 volts. If this does not stop the squealing reverse the leads to the primary on the detector coil.

FOREFATHERS OF RADIO

By GEORGE LEWIS
of The Crosley Radio Corporation.

While a student in the postgraduate school of Columbia university, New York city, Edwin Armstrong became interested in the development of receiving circuits for using the radio tube. Eight and nine-tube sets were coming into vogue, and it began to appear that soon the owner of a radio set would have to remodel his home in order to get it into one room. Armstrong invented a system whereby a single tube is used both as a detector and an amplifier, coils being arranged so that after the signal current has

Edwin H. Armstrong.



gone through the detector tube once, it is, in effect, sent back through that tube several times to be further amplified. The result is that one detector tube used in this way is equivalent to a detector tube and two or more amplifier tubes used in the old way. He called this system "regeneration."

Regenerative sets became popular very rapidly, since a regenerative set operates as efficiently as any other type of set using several more tubes. They are still the most efficient type of set today. In fact, regeneration is the technical principle which has made it possible to manufacture the best of radio sets within the reach of the average man's pocketbook.

Strong Battery Voltage Necessary for Speaker

Many good sets fail to deliver sufficient volume on the loud speaker because they are not supplied with the necessary power to do so. Forty-five volts on the plates of the amplifiers will not deliver enough current to the magnets of the loud speaker to produce loud signals. Ninety volts will give much better results, and is certainly worth the additional cost. An extra grid bias is sometimes necessary with higher voltage, and this is connected with 4½-volt "C" battery, which is connected between the F post of the transformer and the filament. The negative terminal of the battery connects to F and the positive terminal to the filament.

Audio Howl

It happens sometimes that a steady howl or loud hum will exist in a loud speaker, and one is at a loss to account for it. This howl or hum is unlike the regenerative squeals, in that it will keep up indefinitely unless the set is shut off. In the majority of cases this trouble is due to an audio howl and can be stopped by removing the loud speaker from the top of the set or placing the loud speaker in another position.

A Radio Log Dial

A dial upon which call letters can be marked at the point at which stations are received can be made by cutting a circular piece of cardboard one inch larger than the dial. Glue it to the back of the dial and extend the original dial markings perpendicularly on the cardboard, using these pen markings as pointers to the call letters to be written in as stations are received.

Using New Tubes

There is no advantage to be gained in using the new UX power tubes if the proper B battery voltage is not applied to the plate of the tube. These tubes were designed for power amplification and therefore the tube will not function as such if the correct "B" battery voltage is not applied. In addition to using the proper "B" battery voltage, it is also necessary to use the proper "C" battery

JUNE

ATTRACTED BY BOOKLET

Read of Other Women Who Found Health

Brooklyn, New York.—Mrs. G. Hegmann of 35 Central Ave., was in a run-down condition and could not do her housework. She could not sleep at night. Her story is not an unusual one. Thousands of women find themselves in a similar condition at some time in their lives. "I found your advertisement in my letter box," wrote Mrs. Hegmann, "and took Lydia E. Pinkham's Vegetable Compound and got relief." Mrs. Hegmann also took Lydia E. Pinkham's Herb Medicine and Lydia E. Pinkham's Pills for Constipation, with good results. She says, "I am recommending your medicines to all I know who have symptoms the same as mine, and to others whom I think it will help. You may use my statement as a testimonial, and I will answer any letters sent to me by women who would like information regarding your medicines."

There are women in your state—perhaps in your town—who have written letters similar to this one telling how much Lydia E. Pinkham's Vegetable Compound has helped them.

The Pinkham Medicine Company, Lynn, Mass., will gladly furnish other women with these names upon request.

Couldn't See a Reward

On New Year's eve, 1921, George Levy of Chester Pa., was robbed by a pickpocket in Philadelphia. The thief stole, among other things, a bunch of keys. A short time ago Levy received a brass name plate, which had been attached to the keys, from a Hamburg junk dealer, who explained that the brass check had been received in Germany in a cargo of junk from the United States. The junk dealer asked if there was any reward. There was not.

"Ah!" observed the silly mug, "then we must look for a man with receding gums."—Bucknell Belle Hop.

Certain

"Wot's it mean, Bill, when a married bloke keeps dreamin' 'e's a bachelor?"

"That 'e's goin' to 'ave some disappointment when 'e wakes up."

ONE MOTOR CAR FOR EVERY 5.8 PERSONS

Government Clerks Ride to Work in Washington, and They Ride in Their Own Machines. This Picture Shows the Rear of the Navy Building.

(Prepared by the United States Department of Agriculture.)

More than 20,000,000 motor vehicles were in use on the highways of the United States in 1925, according to the bureau of public roads of the United States Department of Agriculture. The total registration reported was 19,954,347, but there were in addition 90,929 state and federal government-owned vehicles not included in this figure.

The increase in registrations during the year amounted to 2,300,670 or 13.4 per cent. Florida reports an increase of 40.8 per cent, while Utah, Mississippi, Alabama, Arkansas, North Dakota and Texas all report increases of more than 20 per cent. Truck registration increased 14.5 per cent for the entire country.

New York Leads.

New York leads in total registrations with 1,625,589, followed by California, Ohio, Pennsylvania and Illinois in the order named, all with registrations of over a million.

There is now one motor vehicle for each 5.8 persons in the United States. California has only 2.0 persons for each motor vehicle, while Iowa has 3.0, Nevada 3.7, Kansas 4.0 and Oregon 4.0. At the other end of the list is Alabama with 12.0 persons per vehicle, but ranking among the highest in increase during the year.

The total revenue from registration fees, permits, etc., amounted to $200,610,621, of which $177,700,587, was made available for state highways, $10,124,014 for state road bonds and $48,396,471 for local roads.

The total motor vehicle registration by states, not including official state and federal cars and eliminating so far as possible re-registrations and nonresident registrations, was as follows:

Alabama	194,588
Arizona	68,029
Arkansas	183,585
California	1,440,541
Colorado	240,697
Connecticut	266,668
Delaware	40,140
Florida	286,388
Georgia	248,093
Idaho	81,500
Illinois	1,268,177
Indiana	725,410
Iowa	659,302
Kansas	457,893
Kentucky	261,847
Louisiana	207,000
Maine	140,498
Maryland	234,247
Massachusetts	646,153
Michigan	989,010
Minnesota	569,699
Mississippi	177,286
Missouri	694,166
Montana	94,654
Nebraska	278,711
Nevada	21,105
New Hampshire	81,498
New Jersey	680,554
New Mexico	49,111
New York	1,625,587
North Carolina	340,257
North Dakota	144,972
Ohio	1,346,409
Oklahoma	424,347
Oregon	216,55
Pennsylvania	1,230,432
Rhode Island	101,730
South Carolina	168,196
South Dakota	168,128
Tennessee	244,629
Texas	975,983
Utah	90,509
Vermont	69,576
Virginia	282,659
Washington	328,442
West Virginia	217,580
Wisconsin	594,386
Wyoming	47,711
District of Columbia	103,092
Total	19,954,347

LARGE FACTOR IN SPEEDWAY RACING

Drivers Strive for Split-Second Difference in Running Time.

By EARL COOPER, Noted Race Driver.

The most variable factor in speedway racing today is the driver. The performance of which the cars themselves are capable can be determined before each race almost in terms of exact science.

Earl Cooper.

To illustrate how scientifically exact the profession of speedway racing has become, it might be pointed out that drivers are striving continually for such a small difference in time as a tenth of a second per lap on the 1¼-mile ovals. They realize that their ability or inability to achieve this may mean the difference between winning or losing a race.

Engines Are Identical.

The engines, in fact the entire race cars of today, are practically identical. To achieve this split-second difference in speed, therefore, it is necessary that the race driver give vital consideration to factors which would be considered negligible even in most experimental work. Every detail pertaining to the car must be exactly correct, as near as human ability can make it, if the car is to perform to the standard of which it is capable.

It is a fact that a difference of a small fraction of a second in lap time may be traced to a slight difference in the spark plugs, or even in one spark plug.

That they may secure the maximum performance from their cars, practically every driver insists on a new set of plugs for each race, even though they may have been driven in some cases, not to exceed 100 or 150 miles. They realize that the terrific strains imposed on spark plugs under racing conditions are so great that they must have undergone some deterioration, even in the short distance they have been run. In fact, they consider that 500 miles on the speedway is equivalent to from 5,000 to 10,000 miles in a passenger car.

Spark Plugs Deteriorate.

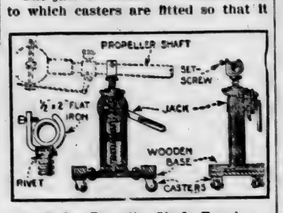
Instances have been many where, after a set of plugs has been through one severe race, the car, in its trials for the following race, actually was incapable of performing within a tenth of a second per lap of what it previously did. Sometimes this loss of speed has been even greater.

This being the case, it is evident that there is deterioration to spark plugs in ordinary passenger car service at least every 500 miles, the spark plugs in passenger cars certainly should not be run more than 10,000 miles without changing them for new ones. That applies to every spark plug I have ever used, whether in racing or for ordinary passenger car driving.

Propeller Shafts Very Difficult to Handle

Propeller shafts are difficult to remove and replace when reassembling the car after a rear-end repair job. Most repair men do this work by hand, although it is a back and arm-breaking proposition. A common screw-jack with rachet handle can be made to assist greatly not only in this but in other repairs.

The jack is bolted to a wooden base to which casters are fitted so that it may be rolled around. A special yoke, made to hold the shaft, fits in place of the usual jack top, as shown in the illustration. By having the yoke a loose fit on the screw top it is free to turn in all directions.



Jack for Propeller-Shaft Repairs.

To operate, the jack is placed beneath the shaft tube and is elevated until the yoke takes the weight of the unit. The set screw is then tightened and the outfit is ready to be pulled out. This also keeps the splined end of the shaft out of the dirt.—Popular Science Monthly.

Accidents Caused by Jay Walkers

Pedestrians are responsible for a great many automobile accidents. Some of them need guardians to escort them across the streets. Too many jaywalkers ramble about without restraint, crossing thoroughfares where it is most convenient for them to do so, getting in the way of motorists who have the right of way and generally clogging up traffic. Very often motorists have to suddenly pull into curbs to avoid striking jaywalkers endangering their own lives and property, only to be greeted with unkind words by the thoughtless pedestrians.

It is more important for the pedestrian to be careful than for the motorist, for it is usually the pedestrian who is injured in an automobile accident. Of the men, women and children killed by automobiles during 1925 two-thirds or three-quarters were pedestrians.

Death is so permanent!

COLOR IT NEW WITH "DIAMOND DYES"

Just Dip to Tint or Boil to Dye.

Each 15-cent package contains directions so simple any woman can tint soft, delicate shades or dye rich, permanent colors in lingerie, silks, ribbons, skirts, waists, dresses, coats, stockings, sweaters, draperies, coverings, hangings—everything!

Buy Diamond Dyes—no other kind—and tell your druggist whether the material you wish to color is wool or silk, or whether it is linen, cotton or mixed goods.

Log Formed "Gas Pipe"

A reminder of the first attempts at "modern conveniences" in Lincoln, Neb., was found when a hollow-log gas pipe laid in 1872 was unearthed recently in excavations for a new building. The pipe was made of an eight-inch log. The walls were two inches thick and had been soaked in pitch. According to gas-company officials, all of the gas mains were made of wood. The pipe unearthed was still in use and in sound condition. It was replaced with iron pipe and has been put in a local museum.

Cuticura Soap for the Complexion.

Nothing better than Cuticura Soap daily and Ointment now and then as needed to make the complexion clear, scalp clean and hands soft and white. Add to this the fascinating, fragrant Cuticura Talcum, and you have the Cuticura Toilet Trio.—Advertisement.

Clothes

"Say, sonny, you know what your clothes are made of?"

Beware of the chronic hand-shaker; he may have something up his sleeve.

ATWATER KENT IGNITION

for Fords

Don't give up your Ford

The Atwater Kent Type LA Ignition System for Fords is the best tonic for cars, old or *new*.

It makes motors run smoother, starting easier, and gives more power, and it is everlastingly dependable.

In general design, material and equipment it is the same as Atwater Kent Ignition Systems furnished as a standard equipment on many of America's foremost cars, and as carefully made as an Atwater Kent Radio Set.

It will last as long as your Ford, can be installed in less than an hour, and sells for only $10.80.

The Weary Round

"A magazine," said Charles Hanson Towne, the poet and essayist, at a reception in New York—"a magazine must come down to the popular taste, or else it must go up. That's why magazines accept the worst and reject the best.

"A talented novelist recently wrote a short story.

"'There,' he said, after reading it out loud to his wife, 'that's the best thing I've ever done. It's equal to Poe or Ambrose Bierce.'

"'Yes, darling, it is,' his wife agreed. 'Yes, it sure is. And what magazine will you submit it to first?'"

Talent repeats; genius creates.—Whipple.

Farms Given Names

It is estimated that at least 3,000 farms have been named. The Department of Agriculture favors the plan. Farms that have been given names are usually progressive and products bearing farm names are usually those that the farmer is proud to claim.

Out

"Doctor, I seem to have a chronic cold."

"Ah, yes. Your tonsils—"

"Wrong, doc. I have no tonsils."

Be thou familiar, but by no means vulgar.—Shakespeare.

A wrinkle is merely a nick of time.

DR. W. B. CALDWELL AT THE AGE OF 83

"Purges" and "Physics" Bad for Old Folks

While Dr. W. B. Caldwell, of Monticello, Ill., a practicing physician for 47 years, knew that constipation was the curse of advancing age, he did not believe that a "purge" or "physic" every little while was necessary.

To him, it seemed cruel that so many constipated old people had to be kept constantly "stirred up" and half sick by taking cathartic pills, tablets, salts, calomel and nasty oils.

In Dr. Caldwell's Syrup Pepsin he discovered a laxative which helps to "regulate" the bowels of old folks. Dr. Caldwell's Syrup Pepsin not only causes a gentle, easy bowel movement helps to strengthen the bowel muscles, shortly establishing natural "regularity." It never gripes, sickens, or upsets the system. Besides, it is absolutely harmless and pleasant to take.

If past fifty, buy a large 60-cent bottle at any store that sells medicine and just see for yourself.

HEARD AROUND THE CORNER

Telephone us your news items.

M. T. Bishop spent Tuesday at Auburn.

For Sale—Hay Tedder good as new. Chas. Koch. 22 t 1 p.

A new monument was placed at the grave of Jacob Sechler last week.

J. L. Rhodenbaugh has built an out-door sleeping room due to the ill health of his wife.

Only a few geraniums and porch box plants left. Come in and we will sell at a bargain to clean up stock on hand.

F. R. Leighty was in town Wednesday evening. He has been stationed at Cromwell for a couple of weeks and he reports game violators there as in other parts of Indiana.

Glasses made to fit your eyes and your pocket book by Griest, American Bldg., Hicksville, Ohio.

J. E. Thorpe and wife of Toledo, Mrs. Roy Koch and daughter, visited relatives at South Bend Sunday and Monday. Miss Hilda remained where she has employment at the Studebaker plant.

At Columbia City twelve merchants are under arrest for having sold cigarettes to minors. A new wave of enforcement is sweeping over Indiana and no telling when the effects will be felt locally.

A. L Anderson and wife of Chicago, were Saturday and Sunday guests of Howard Borthwick and family. Mrs. Borthwick and Mrs. Anderson are sisters. Both families spent Sunday in the O. E. Otis home at Hicksville.

B. T. Martin of Fremont and Miss Juanita Kinsey of St. Joe were united in marriage at the Methodist parsonage Tuesday immediately after noon by Bev. G. F. Hubbartt. Mr. Martin, who is an electrician, leaves soon to continue his electrical studies in Chicago —Star.

Stanley Koch and wife of Fort Wayne, Mr. and Mrs Chas. Koch, Reuben and John Koch, motored to Garrett Sunday afternoon to call on Mrs. John Geisinger, who suffered a stroke of paralysis early Saturday morning. Last report is that she is better.

Monday the first work was done on the school building for Concord township, when the excavating was commenced and now a number of teams are busy rushing this part of the work as rapidly as possible. Contractor Hershberger is getting his equipment on the grounds.

Mr. and Mrs. John Wineland entertained as Sunday guests, Mahlon Baker and wife, Mrs. Sarah Hendricks, Mrs. Simon Hendricks and son, Robert and Miss Katherine McBride of Auburn, A. R Cole, wife and daughter, Miss Fairie of Garrett, Simon Hendricks of Chicago and Frank Davis of Fort Wayne.

Tomato plants at News office—20c dozen.

Clean-up of Onion Sets—10c a pound at Curie's.

The Betz Restaurant is undergoing some repairing.

You can get transfer paper at News office in large or small sheets.

The Butler K. of P. lodge now has a band, under the direction of Robert D. Higley.

Chas. Jordan of Virginia, was home over Decoration Day, returning on Monday.

Mrs. Roy Maxwell and children are spending the week at Portsmouth, Ohio, guests of her parents

David Furnish and family of Detroit, Mich., were Saturday and Sunday guests of relatives here and at Spencerville.

Mrs. Chas. Fry is driving a Ford Coupe. This is her first car and she is enjoying it very much. She purchased the car from C. C. Woodcox.

A terrific rain and wind storm swept over Indiana Monday afternoon and evening and at St. Joe rain came in torrents. The storm seemed to center about Marion causing considerable damage to buildings, telephone and electric lines.

A bond issue of $35,000 for the construction of a gymnasium in Garrett to be paid for jointly by the school board and the city council was authorized Satureay by the state board of tax commissioners after a struggle of a year. The limit of expenditures is made at $35,000 The building is to be 104x134.

Receipt books on sale at News office.

Some folks would worry for trouble if they didn't have any.

Foster Gee was off work the first of the week due to the illness of his wife.

Joseph and Clare Hull were Sunday dinner guests of Harvey Hull and wife

Mrs. Burl Rude and children are at Goshen this week visiting her sister and husband.

The Best and the Cheapest 10c a pound while they last—Onion Sets at Curie's.

Harvey Hull and wife, F D Tope and wife and Miss Edna Martin, were Fort Wayne visitors Monday.

Vance Woodcox of Detroit, Mich, spent a few days visiting his parents and other relatives last week. Vance drove through in a new Chrysler 60 Sedan purchased of his father.

A tank of road oil was put on Main stre last week and it sure is fine While one application is not sufficient for the season, yet it helps wonderful If every lot owner would donate $1 00, arrangements might be made to secure more oil and give the sides of the road an application, which would mean much to the housewife in keeping her home in a respectable manner.

Among the Decoration Day visitors at St. Joe, who visited in the homes of relatives were: J O. Quance and son, Wayne, Chas Quance and wife, Walter Bowen and wife, Mr. and Mrs. C. A. Patterson, George Bartlett and wife all of Fort Wayne; Wm. Quance and family of Auburn; Jesse Copp and family of New Haven; B. V Widney and wife of Columbia City, Webster Stout and wife of Hamilton; Mrs. F. H. Langley and mother, Mrs. Alice Warner, L. O Tustison, wife and son of Defiance, Ruben Reichelderfer and wife of Harlan, Ralph Cole and wife of Garrett; Mrs. Chas. Bishop and children of Cleveland, Ohio Geo Wilson and family of near Auburn; Elmer Hart and family of Napoleon, Ohio; Fordyce Daub, wife and daughter of Hicksville; M. A. Hull and Chas Blue of Tiffin, Ohio.

Young At 60, Or Old At 40? Diet Decides

Women are as old or as young as their state of health. A woman may be young at sixty years or old at forty. It all depends on her physical well-being.

Youth and beauty have a foundation in sound health. And food is easily the most important item in health. In giving consideration to the subjects of diet and beauty, women should not forget the food essentials that make for the preservation of teeth, hair, figure and complexion.

Blame for round shoulders, flat chest and poor teeth among women is due in large measure to faulty diet, or, specifically, to a lack of lime and phosphorus. Milk, or evaporated milk, which is simply cow's milk with 60 per cent of the water taken away, is especially rich in lime.

Because of the concentration of evaporated milk, which is regulated by government standards, it is of

double the richness of ordinary market milk, as is shown in the following table:

Ordinary Milk.	
Fat	3.5 to 4 per cent
Sugar (lactose)	4.5 to 4.75 per cent
Proteins	3.5 to 4 per cent
Minerals	.7 to .75 per cent
Evaporated Milk.	
Fat	7.8 to 8.2 per cent
Sugar (lactose)	9.5 to 10 per cent
Proteins	7.5 to 8.2 per cent
Minerals	1.4 to 1.6 per cent

A quart of milk a day for adults is recommended by doctors not only because of its high mineral content, but for the reasons that it helps keep the digestive tract in proper condition, strengthens the body to resist disease, and gives proper balance to the diet.

Salads also play an important part in the dietary. Some sort of a salad, lettuce, tomato, fresh fruit, cabbage or vegetable, should be eaten at least once a day. Neither is the daily menu complete without a generous quality of coarse, leafy vegetables, valuable for their high vitamin content. Fruit juices also have very beneficial properties.

If a woman follows out the rules of diet, birthdays to her will be nothing more than an excuse for a celebration.

Purity of Milk Protected Now By Scientists

By KATHRYN ST. JOHN

Careful housewives constantly make it a point to ascertain the quality of each item that goes on their tables. Preparing food for the family is an extremely important job, for the proper selection and preparation of foods make in a large measure for the health and happiness of the family.

Milk is the most nearly perfect food, but it is a very delicate one as well. The keeping qualities of milk are slight. Danger from contamination is ever present. Evaporated milk, which is double rich because of the removal of 60 per cent of the water, is science's solution to these conditions.

Safeguarding evaporated milk is worked out as perfectly as man's ingenuity has been able to make the process. From cow to can, the milk which goes into the evaporated product is watched every step of the way.

Cows of the dairy herds are guarded with constant care and are subjected to regular inspections by veterinary surgeons. Herds are carefully groomed, and their yards and barns are kept scrupulously clean, as are all utensils. Milk condenseries are located in the heart of the big dairy regions to facilitate speedy handling, for this is essential if the milk is to be canned at "its moment of maturity." Canvas-covered trucks haul the milk to market, thus protecting the product from contamination on the way. Arriving at the condensery, the milk goes through tests for acidity, sediment, flavor and butterfat content before it is accepted.

Experts watch the progress of the milk through every step of its way. It goes into the evaporating machine; to the homogenizer, which breaks up the fat globules so that the milk may be easily digested by the consumer; by way of the almost human filling machine into sterilized cans; then into the sterilizer, where the cans are surrounded by steam and boiling water, destroying any possible bacteria. Inspectors handle the product at the last step to see that the canning job has been perfectly done. Labeling and packing follow. The housewife obtains the milk as fresh and sweet as when it came from the cow.

Says American Gave Rickshaw to Japan

The picturesque Japanese rickshaw did not descend upon Japan in a cloud of mysticism. It was made merely by an inventive Philadelphian for his invalid wife soon after Commodore Perry opened the doors of the country. And thus the Japanese took over the rickshaws for their streets and gardens, Harry Ostrander, traveler and lecturer, told a Milwaukee audience the other day, according to the Milwaukee Journal.

New Japan, he said, is symbolized by English tutors and a lack of illiteracy among the new generation. Japanese school children are eager to display their knowledge. One little Jap boy, according to Mr. Ostrander, took a look at his English grammar, put it behind his back and addressed him as follows: "Good morning, sir, or madam, as the case may be."

If Iowa were tilled and cultivated as extensively as Japan it could support the entire United States, Mr. Ostrander said.

REASON FOR STYLES

He—The women's styles are getting sillier and sillier every day.

She—Well, we have to cater to sillier men every day.

A Correct Child

A New York banker told a story about John D. Rockefeller, Jr., who has given $10,000,000 to Egypt for the building and maintenance of a new museum of antiquities.

"Mr. Rockefeller," he said, "hasn't got his father's genius, but from childhood he's been a miracle of exactitude and correctness. He'd perish rather than do the wrong thing.

"Once, when he was a little boy, a lady on a train gave him a chocolate cigar.

"'And what will you do with it,' she asked with a laugh.

"'I'll go into the smoking compartment and eat it,' he answered.

"And he thanked the lady with punctilious courtesy, put the cigar in his mouth, rose and departed."

Navy Pigeon Came Home

A navy pigeon, lost at sea more than a year and a half ago, turned up recently in the loft at Coco Sola, Canal Zone, and reported for duty. Examination showed that the bird's wings had been closely clipped, probably when it was forced down by a rainstorm and captured by a fancier who attempted to lure it from its navy allegiance. As soon as the clipped feathers had molted and a new crop grew out, the pigeon took wing for its home loft.

Deer Held Up Train

Days when great herds of buffalo halted trains crossing the Western plains found an echo when a herd of 500 deer held up a train near Hot Sulphur Springs, Colo. Heavy snows had driven the deer from the higher ranges and they settled down on the tracks. The train crew was forced to stop the train and chase the animals off the roadbed.

Lake Plan Century Old

The plan for reopening Lake Michigan's old outlet by the way of the Gulf of Mexico is not a new one. In 1673 the French explorers had the idea of opening the lake's outlet by building a ship canal connecting with the Illinois and Mississippi rivers. In 1822 the United States congress first authorized Illinois to open the canal.

Intelligent Cat

A cat disappeared from its usual haunts in Greenwich, Conn., some time ago and an advertisement, saying in effect, "Come home, all is forgiven," was inserted in the lost and found columns of a Greenwich newspaper. Hardly had the edition been circulated when Thomas walked into the newspaper office, to be returned later to his owner.

Milk Gives Most Food Value At Least Cost

Milk gives more food value for less cost than any other food known to man, according to Herbert C. Hooks, secretary of the Evaporated Milk association.

H. C. Hooks.

"Dietitians are unanimous in advocating the use of milk by men, women and children," said Mr. Hooks. "Milk and evaporated milk supply some of all the materials necessary for the growth and maintenance of the body; they furnish energy for work, play and warmth.

"Milk helps repair the wear and tear of the body. It is a good as meat for building muscle. Moreover, it is cheaper. A quart of milk will supply as much protein as seven ounces of sirloin steak or four large eggs. Milk, particularly evaporated milk, which has twice the mineral content of market milk, is one of the best and cheapest sources of lime, which is a form of calcium. Infants and growing children need lime to build bones and teeth. It is just as necessary for adults to keep their bones in good condition. One quart of milk, or one pint of evaporated milk, furnishes as much calcium as ten large oranges, thirty-two eggs or twenty pounds of beef. Milk also is a valuable source of phosphorus and supplies a certain amount of iron.

"By some authorities milk is said to be an aid in longevity. Dr. Herman Bundesen, health commissioner for Chicago, gives his prescription for long life as follows: Drink one quart of milk a day and mix with one hour of sunshine. Repeat ad infinitum.

"Due to the efforts of health officials to get across to the public the message of milk, its general use in the United States has advanced tremendously in the last decade. This is especially true of evaporated milk for reasons of its convenience and economy. Housewives know there is no fear of obtaining contaminated evaporated milk, because it is not only the best grade of market milk rendered double-rich by dehydrating, but it is sterilized as well."

Happy Wedlock Sure Thing If Bride Is Cook

By KATHRYN ST. JOHN

Haphazard meals yearly ruin thousands of marriages. Most marital ships would maintain an evener keel if brides knew cooking.

Many of the first year's troubles between newlyweds would be avoided if the wife were capable of preparing foods with an experienced hand. Wives are to blame for the failure of many business men in the final analysis. The business man's health depends a great deal on what he eats. And it's up to his wife to see that he gets the right kind of food. A healthfully balanced diet goes a long way toward making the tired business man less fatigued.

The expert home manager sees to it that her husband never comes home to a delicatessen lunch. There is a carefully planned meal waiting for him. The real housewife knows that an unbalanced diet means trouble and avoids it. Likewise, she appreciates the fact that variation in her menus is important. In this connection the following recipes have been selected as an aid to the home manager:

Frozen Salad.

½ cup mayonnaise dressing
½ cup candied cherries
½ cup diced pineapple
½ cup diced bananas
6 tbsp. pineapple juice
2 tbsp. lemon juice
½ cup cream
½ cup evaporated milk

Mix the fruit and juices. Combine milk and cream, chill and whip; then fold in the fruit and mayonnaise. Pour into a mold and pack in equal parts of salt and ice. Serve on lettuce leaves. This serves eight.

Orange Bavarian.

1 tbsp. gelatin
1-2 cup evaporated milk
¼ cup cold water
1 cup orange juice
1-3 cup whipping cream
3 tbsp. lemon juice
¼ tsp. salt
½ cup sugar

Soak gelatin in cold water, add fruit juices, sugar and salt. Heat in the top of a double boiler until gelatin dissolves. Strain and set in pan of cold water. When mixture begins to set, fold in the evaporated milk and cream which have been beaten stiff.

Banana Ice Cream.

6 very ripe bananas
2 cups evaporated milk
½ cup lemon juice
2 cups cream
2½ cups sugar
½ tsp. salt

Scrape off adhering fibrous portion on surface of peeled bananas. Mash and rub through a sieve. Add the rest of the ingredients in the order given and stir until all are well blended. Let stand for 20 minutes so that all sugar may dissolve. Freeze in a 1 to 6 salt-ice mixture. This recipe makes ½ gallon cream.

SPENCERVILLE

Mr. and Mrs George Dove of Auburn, were Sunday guests of B. L. Smith and family.

Mr. and Mrs. Moses Oberholtzer and son, Walter, were recent visitors of B. F Markle and wife.

Mrs. Ercil Shook and children, of near Harlan, were Sunday guests of Ray Baker and wife.

Rev. John Slater of Wittenberg College, will be the new pastor for the Lutheran church this summer

Straved from pasture, one heavy roan cow, with horns. Notify R. U. Rowser, Spencerville. 22 t 1 p.

Mrs. Lucy Kauffel, Alfred Bachmann and August Baltzli and family of Fort Wayne, Sundayed in the John Bachmann home.

Mr. and Mrs. George Brindle of Fort Wayne and Samuel Kelley of Woodburn, were Sunday dinner guests of Mrs Della Smith.

Mr. and Mrs. Greeley Wearley and grandson, Fred Steward, spent several days last week in the O D Wearley home at Toledo, O

Charles Boston and wife, Miss Florence Dunn and Clyde Benton of Battle Creek, Mich., were week-end guests in the Joel Betz home

Edward Billman and wife, R U Bowser and wife and Frank Wertman's took Sunday dinner with Gerry Wasson and wife, south of town.

Emmett Betz, wife and sons, Lester and Howard, spent Sunday afternoon in the Joel Betz home. Mr and Mrs. John Betz of St. Joe were evening callers.

Elizabeth, daughter of Mr. and Mrs. Alvin Smith of Spencerville, submitted to an operation for the removal af her tonsils and adenoids at Auburn Saturday.

Charles Brattian and family, Elgry Kimes, Alva Place, wife and son and Mr. and Mrs. Walter and baby of Auburn, were guests Sunday in the Vol Hay home.

Mrs. W. O. Lake and daughters, Margaret and Esther and Vinton Miller and family, visited W. O. Lake Saturday evening, who is a patient in the Lutheran Hospital at Fort Wayne.

The young people of the Lutheran Sunday School gave a farewell party Monday evening in the Lutheran church basement, Monday evening, in honor of Lillian and Kermit Steffey. After the games a delicious pot luck lunch was served.

NEWVILLE

Iven Smith has been seriously ill with influenza for the past week but is better at this writing.

Mrs. Effie Hutching of Fort Wayne, is the guest of Alfred Smith and family at the present time.

Ben Lyons and wife and Leland Scott and wife of Hesperia, Mich., were Newville visitors last week.

Samuel Stafford and Mrs. C. O Berry and children, were guests of Dewey Miller and family Sunday afternoon.

Mrs. Bessie Shaffer of Butler, with her two sons, Carl and Russel, were Saturday and Sunday visitors of Willie Miller and wife.

M morial Day was observed here Saturday afternoon, May 29th. Quite a good crowd assembled but not so many as in former years People were present from Auburn, Fort Wayne and Butler. The pastor of the Christian Church, Merle Neer, made the address. Rev P. A. Hubartt had charge of the program. Only two veterans of the Civil War remain, Elijah Inhoff, 79 and John Miller, 80 years of age. The rank is growing thin. A great many people visited the cemetery Sunday.

Local Briefs

All the late magazines at News office. Place your order—we will save one for you.

Rev G. M Richter and wife of Chicago and H M. Thornton and wife of Elkhart, were weekend guests of F. M. Thornton and family.

Mrs. Bessie Tustison and daughter, Miss Margaret, and Chase Willard Patterson, of Springfield, Ohio, were Sunday dinner guests in the F. M. Thornton home

The outlook for fruit in this section is fine. Leighty and Widney orchards have prospects for bumper crops. They are busily engaged in spraying for the third time this season.

"Overworked hoe no profit maker" is the heading of an article put out by Ohio Experiment Station Well, well, can it be Ohio folks are guilty of such a crime. Practically all the hoes that can be found in Indiana are as good as new.

Mr. and Mrs. Orange Herrick had as Saturday and Sunday visitors, Xavior Herrick and wife, Mrs. Chas. Herrick, Mrs. Russell Post and son, Wayne, of Cuyahoga Falls, Ohio, Chas. Thomas, wife and daughter, Kathryn, of Reading, Mich., Mell Herrick and wife of Auburn and Ray Herrick and family of Fort Wayne.

Thrift Clubs for Dogs

Thrift clubs for dogs are a pleasing counterpart in England of the Christmas clubs in this country. They were established by the People's Dispensary for Sick Animals of the Poor, in London, to save the lives of dogs that belong to people who cannot afford to pay the license fees. The clubs are composed of dog owners who think enough of their own animals to be willing to contribute 1½ pence—three cents—a week that those who are less fortunate may still have the companionship of a pet dog.—Youth's Companion.

From Ocean to Can

The canners say that they have hardly begun dipping out of old Father Neptune's abundance, and that as soon as the American people indicate a desire for additional sea foods in ready-to-serve form they will begin packing bluefish, halibut, bonito, eels and other deep-sea delicacies. As a matter of fact, such an unusual thing as whale is being canned now, and is proving an excellent meat substitute. It is interesting to note that the whale is really not a fish, but an ocean mammal.

The club work in Concord township is well under way with nineteen members to date. The clubs are Potato, Lamb, Corn and Pig. The fall round up will be in August at Auburn and at Garrett in October. Fine prizes are being offered for boys and girls who go in and keep up A careless record is worthless and has no chance to win.

A card was received from Mr. and Mrs. Harry Randall, now located at Chicago, on which they said:—"Just a word to let you know we are settled and like it very much. You never get in a place so large but what you run across some one you know. We were out walking and met Mr. Bert Bowman, he was pleased so were we. Give our regards to our St. Joe friends and don't forget the paper as we sure enjoy it. Send it to our house address, 403 N. State St., Apt. 5, Chicago, Ill."

The best time to cut most grasses is as soon as they are well headed, says the United States Department of Agriculture. The millets and Johnson grass should be cut as soon as the heads begin to show from the boot, but it is best for winter grains to stand until the seed is in the milk stage. Legumes like cowpeas and soy beans, in which the seed is an important part of the forage, should not be cut until the earliest pods begin to mature, but perennial legumes, such as alfalfa and the clovers, may be cut as soon as they are well in bloom. The best hay made from any crop is always that which is made the most quickly and with the least exposure to sun and air. Too much exposure to the sun bleaches the hay, making it less attractive when placed on the market and also less palatable and less digestible.

Aro You Satisfied

WITH YOUR

GLASSES?

Do they feel right?
Do you see right?

If you are not, we'll examine your eyes and show you what can be done. You will be under no obligations to buy glasses, but if you do we will do our best to please you—because you may have failed elsewhere is no reason you should become discouraged We specialize in fitting glasses and are well equipped to serve you. Our glasses will suit your pocket book and your eyes.

Page Boy Outfits for Women's Wear

New Silhouette Modernized Version of Costumes of Days of Henry II.

All the gossip in Fashion's realm centers about the "page boy outfits" and "smoking jackets," says a fashion writer in the Kansas City Star. Neither term conveys accurately a picture of these smart outfits. Martial and Armand brought out the page boy outfits in the spring opening, "as a novelty in boyish attire" was the half apologetic explanation of the offering. But the manner in which this house sponsored the page boy outfits indicates that it had faith in it as a best seller. You may come upon it in navy blue with brass bottoms or in lovely taffeta. This is from Martial and Armand, too, as if to show just how feminine the page boy may be. A red and green shot taffeta is really an ensemble. The sleeveless bodice of red and green crepe de chine has an embroidery of color on one side. The pert jacket of taffeta is softened by the finely tucked rolled collar. The flared hemline and flared peplum are the earmarks of this mode no matter what the fabric used.

The new silhouette is a modernized version of the costumes worn by the pages of Henry II. This new line is achieved by the addition of a flare at a low hipline. These flares are achieved through godets or plaits and are matched by similar treatments on the skirt. The jumper takes to this new silhouette with great ease; in fact last year's straight models could in this manner become "le dernier cri"!

The smoking jacket is perhaps at its best in a finely plaited skirt of crepe with vest of plain gold lame and coat of brocade in soft colors. That is its version for evening wear; for the street it may be a navy rep jacket and plaid skirt or any of the soft colors.

The Tailored Suit.

Time was when the strictly tailored two-piece suit was the foundation of every well dressed woman's wardrobe. Again this spring the tailored suit has achieved something of its old supremacy. Smart, brisk, it carries with it something of the very spirit of spring. But women who know how to dress realize that in its most tailored note it is not for all women. They say not only must its wearer be adapted physically, to its straight, slim lines, but she must be adapted psychologically as well. Certainly it may be the smartest of modes on the right woman, and on the wrong one—something else again.

But so firmly embedded in the feminine heart is the love for the two-piece suit that Fashion has not contented herself with designing merely the mannish type. There are many two-piece suits of more feminine interpretation, and softer lines that are quite as suitable for general street wear as those that ape brother's. And there are others so elaborate that they may be worn for the more formal afternoon occasions.

First in the mode, of course, is the strictly man-tailored two-piece model with its scant skirt, straight in line,

Page Boy Silhouette One of the New Spring Creations.

yet achieving fullness through plaits at front or side, or through "trouser creases." Occasionally, even in the better shops, one finds the wrap-around for the woman who looks better in the very straight models. Occasionally, too, there are skirts with so many plaits that they distinctly flare at the bottom. But these are in the minority.

The coat is quite short, finger-tip length, and may be cut square or rounded at the bottom. Its lapels may be pointed or square in outline, like a man's dinner or smoking jacket.

Even when this is done it is not necessarily a copy of a man's dinner jacket. The same cut often is affected in homespun, tweed, novelty mixtures or plain navy blue twill.

Variety of Colors.

Although this suit may be black navy blue, checked, jacquered, plaid, striped beige, gray, lavender, tweed mixtures, rose—anything one desires, almost. Sometimes it is bound in black satin, again in braid, or in a contrasting color. Or, if one wishes to be exceedingly smart and striking, a checked coat and man's vest may be worn with a navy blue or black coat. Or, again, the skirt may be plaid. Or it may be of a light color with a dark coat. For country wear the coat may be of navy or black twill or velvet and the skirt of flannel.

Dark blue with bits of red trimming, gray and black and white are very much in the lead for street wear; white, pink with black and chartreuse are perhaps the favorite colors for the evening, but there are wonderful greens for the street and for afternoon and evening wear, pinky beige parchment, a range of blues and several stunning reds for wear either in street costumes, sports or for afternoon and evening costumes. Gold and silver brocades with many colors in the patterns keep their place in evening colors and black is much seen with beige and pale pink, as well as in combination with white.

Here are some of the shades seen in the shops:

Blues—navy, pervenche, robin's egg, indigo, turquoise, powder, linen blue

Bows and Ties That Will Add to New Spring Outfit.

and a pastel blue called "Elizabeth," which is so named because it is a favorite shade of the duchess of York.

Greens—In pastel and bright tones, apple green, yellow green like chartreuse, nile green and spruce green.

Pink—Peach, coral and rose in every shade except the most vivid tones which appear only in flowers or flowered materials.

Reds in bright, light colors ranging to dark red. They include phantom red, paris red and "diable" with many deeper tones.

Gray—Gunmetal, natural linen, parchment, and a delicate and lovely grayish tan is soft, seductive and extremely feminine.

Generally colors are "pastel" rather than sharp, although brilliant bits of color are used in trimming.

With pastel shades so much in evidence it is well to look to the growing popularity of white. At the resorts white grew in popularity as the season drew to a close, white kasha coats, white jersey sport dresses, white chiffon evening frocks, white shoes with white hose, white silk sport frocks with bindings of polka dot silk to match a dotted scarf; all these are evidences of the vogue white may have this summer.

Blouses and Collars.

In the more informal suit that hinges on the sport variety the soft blouse, with turned-down collar and four-in-hand tie, may be worn. In the darker models a blouse, like a man's shirt, may be worn with a bow tie. But there is no hard and fast rule about this. It may be worn with any of the stunning overblouses in colors, usually with a high, plain collar. Or the scarf may be used, wrapped about the throat to form a collar, it may be worn merely with a vest and no blouse at all.

The frilly jabot softens the severity of the tailored suit; an overblouse may have a jabot that literally is "lace edged and very fine." Another element is the scarf, which is just now tied in a smashing bow at the back or draped in the style the cowboy wears his handkerchief on Sunday. The tie itself is a trim. If the long "pussy cat" tie does not catch your eye, then you have lost the gift of seeing what is before you. It is a big bow of taffeta in navy blue tied right in the spot where a neck tie should be tied.

The long, straight wool coat above a frock of crepe of harmonizing color and harmonizing may mean another color, you know, will be a smart outfit. The cape ensembles now so much made of in Paris include both the long and short cape. Short capes are wrist length or barely come below the waistline.

There are double breasted effects with four buttons or six buttons, or even just two. Or it may be single breasted, or it may be fastened with loops, like a man's tuxedo. This tuxedo coat may be worn with a white rep waistcoat and a plaited shirt front

THE KITCHEN CABINET

Give me no light, great heaven, but such as turns
To energy of human fellowship;
No powers save the growing heritage
That makes completer manhood.
—Elliot.

FOOD FOR THE SICK

Food is so often more important than medicine in illness that the study of invalid cookery should be a part of every girl's education.

To know how to make a good broth, beef tea and tasty gruel and a well-toasted piece of toast is knowledge which is invaluable.

For a convalescing patient who needs to be coaxed to eat, a tempting tray with the prettiest china and the daintiest linen should be used. When the invalid tray cannot be provided, use a large tray and support it on each side with books to hold its weight from the patient, and keep it from tipping.

Gruels are such important foods that it is fitting that proper thought be given to their preparation. Use two to three tablespoonfuls of cereal to a quart of water and cook for at least three hours, strain before serving; this is used in the liquid diet.

Chicken Broth.—A good broth may be prepared from the neck, wing tips and feet of the chicken. Scald the feet, removing the skin. Cover the meat with cold water, adding a stalk of celery for flavor; simmer for two to three hours. Season, strain. Often no pepper and very little salt is allowed.

Lemon Jelly.—Soak a tablespoonful of gelatin in three tablespoonfuls of water, add three-fourths of a cupful of boiling water, four tablespoonfuls of lemon juice and five tablespoonfuls of sugar. Stir until dissolved. Pour into a wet mold and put on ice to harden. This will make two servings. With the prepared gelatins of different flavor one may, with little labor have a dish of jelly always ready.

Baked Custard.—Beat lightly two eggs, add a pint of good rich milk and flavor with nutmeg, adding three to four tablespoonfuls of sugar. Pour into custard cups, set in hot water and bake just long enough to set. Thrust a knife into the center of the cup; if it comes out clean the custard is done.

Summer Salads.

Skill in garnishing and arranging colors is as important in salad-making as in arranging bouquets. Bright splashes of red, green or yellow give zest to the appetite by appealing to the eye.

Pimentoes, chives, and hard-cooked eggs, thinly sliced, make attractive garnishing, as do olives (stuffed, green or ripe), shaved, chopped or in halves. Capers, green peppers, tomatoes, chives, all add to the appearance and flavor of salads.

Lemon sliced in various shapes, sprinkled with minced parsley, makes most attractive garnishing for fish.

Beet and Potato Salad.—Take six beets and six potatoes, one cupful of chopped olives and chives with mayonnaise dressing. Cut the cooked beets into small balls with potato cutter, also the potatoes. Cover with mayonnaise dressing to which has been added the chives and olives. Dip the beets into vinegar and serve in mounds on lettuce.

Poinsettia Salad.—Take six tomatoes, a stalk of celery, a sweet green pepper, three apples, one-half cupful of nut meats, and one-half cupful of mayonnaise dressing. Scald the tomatoes, chill them and with a sharp knife mark five divisions from the top center over half way to the base. Carefully turn back the skin to form the petals, scoop out the pulp and fill with the apple, celery and nuts. Heap a little extra dressing on each and garnish with a ring of green pepper.

Jellied Egg Salad.—Take one quart of chicken jelly—this may be prepared from half a dozen pairs of chicken feet, or from the bones of a roasted fowl. If the feet are used, scald them, and the skin will peel easily; cover with cold water and simmer in a quart of water until the flesh falls from the bones. Slice the eggs—using six—and stir them gently into the cooling jelly, so they will be evenly distributed. When cold serve on lettuce garnished with mayonnaise and water cress.

Joe's Dressing—Take one teaspoonful of salt and mustard, two tablespoonfuls of sugar, a dash of cayenne, one whole egg, one and one-half tablespoonfuls of flour, two tablespoonfuls of corn oil, one-half cupful of evaporated milk, one-fourth cupful each of vinegar and water. Mix the dry ingredients and cook all together in a double boiler.

If the farm woman would realize that nine-tenths of her friends who come from small cities or large, would appreciate a farm dinner of fresh eggs, cream, butter and the vegetables that are so plentiful, fresh and delicious, and not try to prepare some fancy foods, both she and her guests would be happier. Such things as pickles, preserves, jellies and conserves are usually found in the fruit cellar of most housekeepers.

Nellie Maxwell

INDIANA BREVITIES

More than three hundred members of Kiwanis clubs from the thirteen cities of the Sixth regional district of Indiana were in Shelbyville for the annual district convention.

Dr. Andrew Harvey Young, seventy-four years old, for forty-seven years a professor of chemistry and biology at Hanover college, is dead after a brief illness.

John Newman Carey, widely known Indianapolis business executive and a resident of the city for more than sixty years, died at his home following an illness of several weeks.

The Hubbard Shovel company plant now located at Pittsburgh, Pa., and the Russell Shovel company plant, located at Aliquippa, Pa., are being moved to Montpelier.

Dr. Wilbur E. Neuenschwander of Fort Wayne was elected president of the Indiana State Dental association for the next year at the sixty-eighth annual convention of the organization in Indianapolis.

Dale J. Crittenberger, formerly editor of the Anderson Bulletin, suffered serious injuries and his daughter, Miss Juliet Crittenberger, was bruised and cut slightly in an automobile accident three miles east of Markleville.

Rabbits whose fur took fire when a large pile of brush over them broke into flames darted under an implement barn on the farm of Eugene Long, northwest of Warsaw, with the result that the structure and the contents were destroyed.

The geography department at Indiana State Normal school in Terre Haute has outlined its annual travel course so that it will not cost each student more than $180 this summer. The course is attracting considerable interest and is expected to be well attended.

A scholarship report from the registrar's office at DePauw university shows that more first-year men fail in their studies than do first-year women. At the end of the first semester of this school year there were 24 failures among the men as compared with 18 women.

Max Bretton of Hammond is no longer a rabbi. The young Jewish clergyman, who established the open forum in Hammond, resigned as rabbi of Beth-El temple and has gone to New York to scout for talent for the San Carlos opera company and be a part of its management.

Benjamin Johns, a contractor, owes his life to the fact that he is over six feet tall. He was buried up to his neck by earth and stones in a sewer he is constructing in Lebanon. His two sons worked frantically for 15 minutes before they could free him. "I'll never kick about being tall again," Johns said after his rescue.

Madison was chosen the 1927 place of meeting by the Indiana Haymakers' association in Seymour. State officers elected for the coming year were: Thomas Isbell, Bloomington, past chief haymaker; Russell Evans Spencer, chief haymaker; William H. Johnson, Muncie, vice chief haymaker; A. C. Pauley, Greenfield, keeper of bundles; Grover Exline, Jasonville, collector of straws; Ira Barbour, Kokomo, trustee.

Five hundred delegates, representing many towns and cities in central and northern Indiana, attended the annual convention of the Walther league of the Wabash valley zone at Arcadia. The welcoming address was made by Roy Bardonner of the Arcadia league and the response was by Carl Toepfer of Peru. The principal address was delivered by Lester Baade of Fort Wayne, president of the zone.

The challenge gift of $500,000 made several weeks ago by the Ball brothers of Muncie to the James Riley Whitcomb Hospital for Children in Indianapolis has been met and won in the state-wide campaign conducted by the Riley Memorial association. Announcement is made that the original goal has been oversubscribed, and that the total will be approximately $1,300,000 or $1,400,000 in addition to the Ball brothers' gift of $500,000, making a total of approximately $1,800,000.

The program has been announced for the thirty-first annual convention of the Indiana State Eagles, which will be held in Marion June 9, 10 and 11. Among the features of the program will be an automobile tour to the National sanatorium. Delegates will be received and registered the opening day, and addresses of welcome will be made by James H. McConnell, mayor; Louis Lindemuth, chief of police; Charles E. Hutchins, president of the Association of Commerce, and J. C. Stoebe, past president of the Eagles. Responses will be made by Otto P. Deluse, state president of the Eagles, and C. L. Vaughn and Paul Benson for the subordinate areas. In the evening a ball will be held in Civic hall. Addresses, committee reports and business sessions will be held the second and third days of the convention.

The annual joint encampment of the Grand Army of the Republic, department of Indiana; Veterans of Foreign Wars and their auxiliary bodies was held in Fort Wayne. Gary was selected by the G. A. R. as the 1927 convention city and John W. Spain of Evansville was elected department commander.

The One Hundred Thirteenth observation squadron of the Indiana National Guard, which was ordered transferred from its station at Kokomo to Indianapolis motor speedway is being reorganized and recruited

IMPROVED UNIFORM INTERNATIONAL

Sunday School Lesson

(By REV. P. B. FITZWATER, D.D., Dean of the Evening School, Moody Bible Institute of Chicago.)

(©, 1926, Western Newspaper Union.)

Lesson for June 6

JACOB AND ESAU

LESSON TEXT—Genesis 33:1-11.

GOLDEN TEXT—Be ye kind one to another, tender hearted, forgiving one another, even as God for Christ's sake hath forgiven you.—Ephes. 4:32.

PRIMARY TOPIC—Two Brothers Make Up a Quarrel.

JUNIOR TOPIC—Esau Forgives Jacob.

INTERMEDIATE AND SENIOR TOPIC—Brotherly Love and Forgiveness.

YOUNG PEOPLE AND ADULT TOPIC—A Lesson in Reconciliation.

I. Their Birth (25:21-26).

In answer to Isaac's prayer, seed was given unto him. Before the children were born God revealed unto Rebekah the fact that the elder should serve the younger. God reversed the ordinary law concerning the position of the elder son.

II. Esau Sells His Birthright (25:27-33).

1. It was right that Jacob should have the birthright and the blessing, for it was according to God's plan which had been preannounced, but his scheme to get them is to be condemned. He took advantage of a brother's weakness to drive a sharp bargain.

2. Esau the profane (Heb. 12:16, 17).

Many think that profanity is only swearing, but swearing is not the most common profanity. To be under the sway of appetite is to be a profane person. Esau was a supreme example. He sold his birthright for a bowl of pottage. This birthright was the right of being at the head of the patriarchal family, a position of honor and influence, as well as being the inheritor of a double portion of the father's estate. This being a gift of God, it should not be despised. In the moment of his distress he thought only of that which would bring him some carnal satisfaction. He was willing to relinquish all claims on the future if only his present desire could be gratified. A profane person, therefore, is one who for the enjoyment of the present will forfeit all claims upon the future.

III. Jacob Secures the Blessing (Gen. 27).

1. Esau requested to get venison for his father (vv. 1-4).

Isaac loved Esau because of his venison (Gen. 25:28). He ought to have loved him because he was his son. It is a sad commentary upon a father that his love for his son had such a sordid basis as that of his stomach.

2. Rebekah's scheme (vv. 5-33).

God had said to her that the elder should serve the younger. It was His plan that Jacob should be at the head, but God was able to bring His own plans to pass.

3. Esau's remorseful cry (vv. 34-36). When he came to realize that he had not only lost his birthright but the blessing, his conscience smote him and he earnestly begged for a blessing, even seeking it with bitter tears.

IV. Jacob Meets Esau (Gen. 33:1-11).

1. As a result of Jacob's cunning and deceit he was obliged to flee from home to save his life. In spite of his selfishness and sin God appeared to him at Bethel.

2. Prayer for deliverance from Esau's wrath (32:9-12).

He was about to meet his brother, whom he had wronged some twenty years before.

(1) He made his plea on the basis of God's covenant. Jacob came in line with the Abrahamic covenant, so he had a right to plead that relationship.

(2) He plead that he was in God's way. We should assure ourselves that we are going according to God's will, then make our pleas before Him on that ground.

(3) He made a definite plea. He told God plainly of his danger. He said, "Deliver me from the hand of my brother."

3. The angel wrestles with Jacob (32:22-36).

Observe that it was not Jacob wrestling with the angel, but the angel wrestling with Jacob. Jacob did not get the blessing because he wrestled, but he was not blessed until he had been crippled and in his helplessness clung to God.

4. Jacob gets a new name (32:27-30).

This experience at the ford of Jabbok wrought a mighty change in Jacob. "Jacob" with his cunning and deceit was left behind and "Israel," "a prince with God," entered the land.

V. Esau and Jacob Reconciled (33:1-11).

At Jabbok Jacob got right with God, so now he easily got right with Esau. It is easy to get right with our brother after getting right with God.

In a Trackless Wilderness

He who sees no star can never be stable. He wanders vainly in a trackless wilderness.—G. H. Morrison.

Ill Thoughts Leave a Trail

An arrow may fly through the air and leave no trace; but an ill thought leaves a trial like a serpent.

Tomorrow

Tomorrow!—I dare not ask; I know not what is best. God hath already said what shall betide.

POINTS ON KEEPING WELL

DR. FREDERICK R. GREEN
Editor of "HEALTH"

(©, 1926, Western Newspaper Union.)

HOW TO LIFT

STRENGTH is not entirely brute force. According to a recent writer in the Popular Science Monthly, ability to handle heavy weights is quite as much a matter of skill as of strength.

Dr. J. F. Williams, professor of physical training at Columbia university, has been studying this interesting question of lifting for many years and in his article gives some valuable suggestions as to how heavy objects can be lifted easily and safely.

The strongest muscles in the body, he says, are the thigh muscles. Whenever possible to do so, use the thighs and legs in lifting rather than the back. The shoulder muscles are also strong and can be well used in lifting. The weight at the ends of the arms is at the end of a long lever. In picking up a heavy object from the ground the fulcrum is at the pelvis and the strain and mechanical disadvantage are terrific. In picking up a weight, squat with the back straight, grasp the object and then straighten up, raising the weight with the legs.

Keep the weight as close to the body as possible. The farther away it is the farther it has to be lifted and the more lost effort there is.

Chinamen have learned from long centuries of experience to balance one weight against another. A Chinese porter will divide his load into two equal parts, balance one against the other on the two ends of a long pole and trot off with a load that a white man could hardly budge.

The expressman or trunk mover never strains his back. He doesn't have to. He moves the trunk on his thigh muscles. When he wants to carry it he gets under it. He also knows that it isn't necessary to lift a trunk clear off the floor in order to move it. He tips the trunk or the box on the edge and then onto one point and rolls it so as to move it with the least amount of effort. The weight of the trunk is really on the floor. The trunk mover is keeping it balanced and merely directing it, moving it without having to bear its weight.

Doctor Williams gives four rules for handling heavy weights easily and safely:

1. Keep the weight close to the body.
2. Use the leg muscles whenever possible.
3. Divide and balance the weight.
4. Get the weight on top of your own.

By following these rules heavy weights can be handled without danger of injury to the joints and muscles.

MORE TULAREMIA

AFTER a new disease has been discovered and its symptoms carefully described and published in medical journals, it is generally found that it exists much more widely and commonly than was at first supposed. This has been the case with tularemia, a peculiar disease that was first recognized only a few years ago.

To speak of any disease as "new" is, of course, not correct. No disease is literally new. So far as we know, every disease germ of any kind has been in existence for ages, just as every form of animal or vegetable life, so far as our present knowledge goes, has always existed. Theodore Roosevelt Jr., and his brother Kermit, went to far-off Tibet to get a head of the rare ovis poli, an animal that has probably never been seen outside of the Tibetan mountains. But the animal isn't new. The species has been living there for centuries.

So when the germ of tularemia was found in southern California, it wasn't new. Men and animals had been suffering from it for ages. But this infection is so like many others that until a special kind of bug was found as the cause there was no way in which this particular infection could be distinguished from any other. But this germ is different from the ordinary germs which, forty years ago, were found to be the cause of the ordinary forms of pus infection. It is what is called a spirochete or spiral growth, something in shape, perhaps, like a bed spring on a small scale. This is the family of germs to which the germ of syphilis belongs.

Now it has been found that these spirochetes for some reason are only affected by some form of arsenic. The form most generally used is neo-arsphenamine or 606 as it is widely called.

In a recent issue of the Journal of the American Medical association, Dr. John L. Lavin, city epidemiologist of the Kansas City (Missouri) health department reports five cases of tularemia in that city, all resulting from infection received in cleaning rabbits. In one case the patient, while cleaning rabbits, scratched his thumb with a sharp piece of rabbit bone. Another, a woman, had a sore spot on her hand which became infected while she was cleaning a rabbit. Two others were infected from sharp bones and the fifth patient had two sores on one hand. All these patients recovered after the administration of neo-arsphenamine

Hog Cholera Is Dangerous Today

For Safety Against This Ailment Certain Precautions Are Needed.

(Prepared by the United States Department of Agriculture.)

A recent investigation of the hog-cholera situation by the United States Department of Agriculture reveals surprising carelessness among farmers in dealing with the disease. The effectiveness of the preventive-serum treatment has given many swine owners a feeling of security which is not real. "Yet without proper safeguards," declares Dr. U. G. Houck, in charge of hog-cholera control, "the disease is just as dangerous today as it ever was."

For safety against this disease it is necessary to observe certain precautions. Isolate all new stock, keeping it apart from other hogs for a period of at least two weeks. This precaution applies especially to hogs purchased at public sales or other sources likely to spread infection. Permit no sick hogs to roam at large. Keep hog lots properly fenced and maintain the fences in good repair. Burn or bury deeply the carcasses of animals that die on the farm. Dead animals lying above ground attract dogs. Many outbreaks have been traced to portions of diseased carcasses carried from place to place by dogs. Do not attempt to hide the existence of the disease, since every hidden center of infection is a menace to surrounding farms.

The preventive-serum treatment is a dependable insurance against hog cholera, but this treatment, it should be remembered, is a preventive and not a cure. By adopting the foregoing safeguards swine owners may largely reduce the loss from hog cholera which last year exceeded $20,000,000.

Best Time to Purchase Different Dairy Feeds

A survey of the various feed markets indicates that wheat bran usually reaches bottom price in June, July and August; linseed oil meal in May, June and July; cottonseed meal in August, September, January and February, and gluten feed in May, June and July. By making out their feed budgets accordingly and buying what feed they need at the proper time, dairymen not only can make an important saving in feed costs but also will probably feed a better ration, it is pointed out by C. S. Rhode, dairy extension specialist of the college of agriculture, University of Illinois. Illinois dairymen should, and do, produce most of the feed that is necessary for their cows, but in most cases it is advisable to balance the home-grown grains with high protein feeds. It therefore is to the advantage of the dairymen to study the feed markets and determine when these feeds can be bought at the best price, he said.

Farm Shop as Important to Farmer as Railroad

The farm shop is just as important to the farmers as division point and terminal shops are to railroad managements, C. K. Shedd, rural engineer at the Kansas State Agricultural college, is convinced. "It looks as if higher prices for machinery have come to stay, and it will no longer be possible for farmers to follow the wasteful method of using a machine until it is out of repair, then throwing it away," says Shedd.

If the machinery is to be kept in service longer it must be maintained he points out. "A farmer cannot afford to go into the busy season with machinery that is just about ready to break down," he declares. "Suppose that one is using a cultivator with dull shovels and wabbly beams. If weather conditions are favorable through June and the ground stays reasonably mellow he can do good work with such a cultivator. On the other hand, if the weather is rainy for a week just when cultivating should be done, the ground is beaten down hard and has a healthy growth of weeds when it dries. Now with such a cultivator it is impossible to do good work.

"I have known a farmer to lose 22 bushels of corn per acre because of the work done by such a cultivator Probably most farmers of several years' experience have observed similar results—in a neighbor's field, of course."

Practical Suggestions for Pruning Grapevines

Prof. Joseph Oskamp of the Cornell College of Agriculture gives the following directions for training young grapevines:

"At planting time, and the year after, young grapevines should be cut back to two buds and tied to stakes for support. The second summer each vine should send out a cane long enough to be tied to the top wire of a trellis. This trellis, if the Kniffin system of training is used, should have two wires, one at a height of five feet and the other three feet from the ground. Number 9 or 10 wire is generally used and strung on posts set 25 feet apart.

"In the summer after the third pruning, canes will develop from the one tall trunk left, and all of these should be removed in the winter pruning except two at the top wire and two at the lower wire; these four canes should be tied to the wires to the right and left at right angles to the upright trunk, and should be cut back to four buds each."

Developing Implements for Use in the Orchard

It is always a problem to avoid barking the tree trunks and tearing the branches when plowing and disking an orchard. This is especially true when the work is done with teams and the ordinary field implements. To solve this problem, some of the manufacturers have given special attention to the development of orchard implements. When these implements are used with a tractor that may be kept under perfect control when used under trees very little damage is done.

Special plows for orchard use are built very low, without levers extending above the frame, with the axle on the underside of the beams and with a very narrow truck. The entire design is to reduce the barking of the trees to a minimum and make it possible to avoid catching limbs in operation. Both moldboard and disk plows may be secured for orchard use. In localities where the soil becomes extremely hard or in localities where there is a sticky gumbo type of soil the disk type of plow will give better results than the moldboard type.

LIMBERING UP THE HOME SEWING MACHINE

Is Your Sewing Machine in Good Order?

(Prepared by the United States Department of Agriculture.)

Every sewing machine needs cleaning at frequent intervals, even when in daily use, says the United States Department of Agriculture. If the machine has been closed and unused for any length of time, it will probably need a thorough going over. After wiping and dusting it thoroughly, fill your oil can with kerosene, and oil every part, including the treadle shaft and lower wheel axles, if it is a foot-driven machine. Run the machine vigorously without thread until you are sure the kerosene has had a chance to loosen every bit of old gummed-up oil and dirt. Then put good quality machine oil in your can and oil the machine with that. Use light mineral oil or sperm oil, or any special oil recommended by the makers of your machine. Wipe all accessible parts so there will be no likelihood of getting oil on your material. Thread the machine and work off on scraps some of the first thread that must pass through or near oiled parts. As an extra precaution to prevent accidental oil spots tie a bit of wool around the presser foot post just above the needle.

Look Over Details.

When the stitching on your scraps is clean you can safely start to sew, but first look over several other details. See if the stitch is right for the use intended, and adjust the thumb-screw that regulates the length of the stitch. Some women use the same stitch whether they are making furniture covers or party dresses, and wonder why their clothes never look as attractive as those made by some body else who uses a small stitch, fine thread, and a fine needle, on nice materials. You can save energy, however, on draperies, sheets, and other household articles, by using a medium stitch that covers the distance faster Notice whether your tension is right for the thread and kind of material on which you expect to start sewing Examine the belt to see if it is tight enough. Tired feet and aching backs are often due to working strenuously at the treadle when the belt slips. If the belt is slack, open it and cut off a half-inch or more, pinch the connecting wire back in place, and see what a difference this one change makes! If you expect to do a great deal of sewing this season, this is a good time to consider the possibility of investing in an electric motor.

Look to Needles.

Lastly, see if you have needles of various sizes, in good condition. Blunt and bent needles should be thrown away. Always use the correct needles for your make of machine, and keep a supply on hand to fit the sizes of thread you expect to use. Nothing is more discouraging to the home sewer than to break a needle and not find another of the same size to take its place. Strong coarse needles are needed for heavy work, but on thin materials they punch ugly big holes and spoil the appearance of the work.

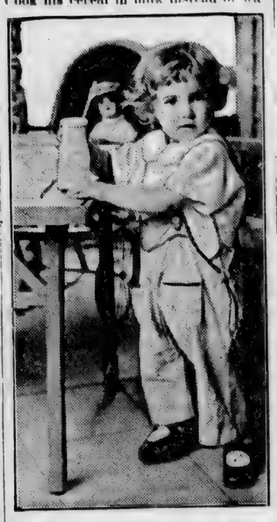
Get into the habit of closing up the machine when you stop work for the day. A little dust can undo all your efforts at cleaning up your machine and making it run easily.

MILK NEEDED BY YOUNG CHILDREN

Many Different Ways in Which to Serve Liquid.

(Prepared by the United States Department of Agriculture.)

To get a child to take enough of the milk needed in the daily diet, get some drug store "straws" and let him sip his milk through one of these occasionally. Make a milk shake once in a while with fruit juice or cocoa as the flavoring. Also try milk-vegetable soups. So many kinds of vegetables can be used in this way that you can get many different flavors. Cook his cereal in milk instead of water. Milk toast and a simple milk-cereal pudding vary the monotony also. Make junket now and then with a flavoring he likes or serve it with crushed fresh or canned fruit. Custards, soft, baked, or boiled, are another good way. Try all these methods of hiding the milk but do not overwork any one until the novelty wears off.



Drug Store "Straws" Make It Interesting to Drink Milk.

Best Sources of Iodine

Fish, particularly from salt water, oysters, clams, and other sea foods are among the best-known sources of iodine among the common foods. In regions where a regular supply of sea foods is not readily available, iodine is being given in chocolate-flavored tablets and iodized table salt.

ROAST LAMB WITH SPINACH STUFFING

Shoulder Meat Is Tender and of Good Flavor.

(Prepared by the United States Department of Agriculture.)

A good many housekeepers are unfamiliar with the possibilities of a shoulder of lamb, and the leg is considered too large or too expensive to serve very often. The shoulder meat is tender and of good flavor. The whole piece is generally lighter in weight than the leg from the same animal, and sells for less per pound Because of the number and location of the bones, carving a shoulder is not quite so simple as carving a leg and possibly this fact explains why the shoulder is not used as often One way of making the roast easier to carve is to have the butcher take out the shoulder blade. It is possible to bone the entire shoulder and bake it in a roll, but the meat will be juicer and of better flavor if the shoulder blade only is removed. The cavity is to be filled with a special spinach stuffing which is made of the following materials:

2 cups dry bread crumbs
½ pound cleaned spinach leaves
4 tablespoonfuls butter
2 tablespoonfuls chopped celery
1 tablespoonful chopped green pepper
1 tablespoonful chopped onion
½ teaspoonful salt
¼ teaspoonful pepper

Cut the spinach up as small as possible, after thoroughly washing it Put it in a pan with the pepper, also minced fine, the onion, and half the butter. Cook about two minutes enough to wilt the spinach slightly, stirring constantly. Then push to one side of the pan, melt the remaining butter in the empty part, and mix with it the bread crumbs so that they absorb the butter. This is simply an easy way of buttering the crumbs without using another pan. Mix the spinach and crumbs and stir until it is a little dry. The spinach, of course, will become more moist as the stuffing cooks. Put the stuffing in the cavity, sew the edges together, and place the meat in a baking pan. Rub seasonings and flour all over the outside, and brown the meat thoroughly in a little fat, in a hot oven. Pour half a cupful of hot water over the roast, adjust the cover of the roaster closely, and cook from two to three hours in a slow oven, bone side down.

Protein in Cow's Milk

Cow's milk contains more protein less sugar, and slightly more fat than woman's milk, and the fat globules are larger. Also it is said to form a tougher curd. Fortunately, most healthy babies thrive on good cow's milk or on cow's milk simply modified.

GOOD ROADS

BILLION DOLLARS FOR RURAL ROADS

Highway construction and maintenance in 1926 will equal and possibly exceed the progress made in any other year, according to estimates from the various states compiled by the bureau of public roads of the United States Department of Agriculture. A total of $1,080,286,948 is available for the construction and maintenance of all rural roads.

Fifty-eight per cent, or $598,590,948, is to be available to the state highway department, of which $461,515,400 is for construction and $137,075,548 for maintenance. Those funds will provide for the construction of 6,751 miles of asphalt, concrete and brick paving, 14,320 miles of sand-clay, gravel and macadam and 8,145 miles of improved earth road. The states also plan to maintain 234,582 miles of road.

The total expenditure by counties and local units for both maintenance and construction is estimated at $431,696,000, which is less than the similar estimate made one year ago by about $31,000,000. This reduction is more than offset, however, by the increase of more than $58,000,000 in funds estimated as available to the state highway departments. For a number of years there has been a trend toward placing control of all important state roads in the hands of the state highway departments.

The funds available as reported by the various states and the portion of the state funds derived from federal aid are as follows:

	Probable Expenditure by State Highway Departments	Federal Aid Available*	Probable Expenditures by Local Authorities
Ala.	$ 9,900,000	$ 2,547,911.69	$ 12,000,000

*Included in total probable expenditure by state highway departments.

Eastern 36-Foot Road Cost $100,000 a Mile

An instance of the excessive cost of paved highways is a road in Connecticut fifty miles long connecting with a famous New York route. The last link in it was completed recently. It is thirty-six feet wide and cost $100,000 a mile.

The average cost of the best type of highway in Ohio half that width is about $40,000 a mile. A gravel road upon a natural bed, eighteen feet wide, costs between $2,000 and $5,000 a mile. The differential is according to whether the gravel has to be hauled far or near. In some sections there are gravel beds within easy haul of roads to be built; while in others both rail and wagon haulage are to be figured.

Twelve-Mile Stretch of Brick Road to Be Model

A stretch of twelve miles of road is being built near Galesburg, Ill., which is intended to be the best brick road structure practical within the limits of rural trunk line expenditure.

The pavement is three-inch lugless brick, with sand cushion and asphalt filler, on concrete base, and it is in the finish of the base and in the cushion construction that perfection is being exhibited particularly.

The purpose is to prepare base and cushion so accurately that the brick wearing course will have to take care of no irregularities of surface or bearing. Structurally also the base is being made unusually strong and rigid.

Postal Savings Aid Roads

"It is a matter of record that increased services at lower cost in rural mail and parcels post has already made savings which go far toward paying the interest on every dollar of federal aid spent for highway construction." This is one of the answers given the critics of federal aid by A. M. Loomis of the National Grange. With the introduction of rural delivery mail service, the use of the highways by the government was greatly increased.

"BAYER ASPIRIN" PROVED SAFE

Take without Fear as Told in "Bayer" Package

BAYER

Does not affect the Heart

Unless you see the "Bayer Cross" on package or on tablets you are not getting the genuine Bayer Aspirin proved safe by millions and prescribed by physicians over twenty-five years for

Colds	Headache
Neuritis	Lumbago
Toothache	Rheumatism
Neuralgia	Pain, Pain

Each unbroken "Bayer" package contains proven directions. Handy boxes of twelve tablets cost few cents. Druggists also sell bottles of 24 and 100.

Called Hunter Cannibal

Although cannibalism is said to be extinct among the untamed Indians of northern Matto Grosso, in the wilderness regions of Brazil, Francis Gow Smith, an American explorer, recently was himself mistaken for a cannibal by the Bororo Indians there.

Writing in World's Work, Mr. Smith tells of having shot a deer shortly before reaching a Bororo village. Arrived there, the Indians, usually peaceful, threatened violence. Mr. Smith was rescued by a Catholic missionary, who explained that the natives regarded the deer as their ancestor, and a person who killed one for food as a cannibal.

There is nothing more satisfactory after a day of hard work than a line full of snow-white clothes. For such results use Russ Bleaching Blue.—Advertisement.

Humming Bird's Food

A humming bird will fly miles to find a gladiolus, as its flowers contain the minute insects which the bird craves. Perhaps it would be more poetic to be able to tell the little ones that the bird is "getting honey," but the fact is that it eats insects. According to authorities, the bright color of the "glads" is what attracts the humming bird, the creature knowing, through generations of instinctive thought (if we may so call it) that where it finds such colors it will discover its favorite food.

Matches and postage stamps are used for small purchases in some parts of Manchuria where copper coins are scarce.

Shake into your Shoes

And Sprinkle in the Foot-Bath

ALLEN'S FOOT-EASE

The Antiseptic, Healing Powder for tired, swollen, smarting, sweating feet. It takes the friction from the shoe, prevents blisters and sore spots and takes the sting out of corns and bunions. Always use Allen's Foot-Ease for Dancing and to Break in New Shoes. Sold everywhere.

Kill All Flies! THEY SPREAD DISEASE

Placed anywhere, DAISY FLY KILLER attracts and kills all flies. Neat, clean, ornamental, convenient and cheap. Lasts all season. Made of metal, can't spill or tip over; will not soil or injure anything. Guaranteed. Insist upon DAISY FLY KILLER from your dealer.

HAS BEEN FOUND BENEFICIAL TO GIVE FARM DISTINCTIVE NAME

Movement Fostered in Tennessee for Past Four Years.

(Prepared by the United States Department of Agriculture.)

"Name your farm home" is the slogan of a movement fostered by home demonstration agents in Tennessee for the past four years. More than 3,000 homes have already been named, according to a report received by the United States Department of Agriculture. This year the idea is again being stressed, as there are still many homes which have not registered a distinctive name either with the extension service or the state department of agriculture. The state recently passed a law permitting such registry.

Farm home owners are urged to give some thought and trouble to the selection of the right name. It should be dignified, suitable, lasting, not too common, easy to say, easy to read, and easy to remember. It should appear on the mail box or over it, or on a signboard, or on the gate. It is intended that it should be used on letterheads and on the label of anything sold from the farm.

The naming of the farm home is often the first step in general home improvement. There is an effort to live up to the spirit which has been embodied in the new name. The indirect effect of the name can often be seen in the grading and standardizing of products offered for sale.

FARM NOTES

Does your farm have a name?

• • •

Pure-bred sires should be judged by their progeny rather than by their ancestors.

• • •

Feeds are low, and farmers who have money or plenty of credit may profit by laying in a supply of feed for fall use.

• • •

Kansas now has more than 3,000,000 head of cattle and ranks fourth in the United States in beef cattle production.

• • •

Tuberculosis of fowls should be watched for at all times, as its influence in the control of fowl cholera is not to be ignored.

• • •

Baby chicks need no feed for the first 24 hours of their life. And after that time they must be carefully fed and tended if a large percentage of the chick crop is to be saved.

• • •

Do not feed brood sows for 24 hours after they farrow. They should have plenty of fresh, clean water all the time, but should not be back on full

Ventilation and Sunlight

Proper ventilation of farm buildings is necessary for profitable dairying and stock raising. Dark, ill-ventilated quarters devitalize the stock, stunt their growth and make them susceptible to the different animal diseases. A good supply of oxygen is important for the production of milk, beef, pork and for growth and vitality.

Sunlight is the cheapest disinfectant that you can find. Have plenty of it in the poultry house.

JUNE

BAND CONCERT

AT

St. Joe, Indiana

Wednesday Evening, June 9, 1926

and every Wednesday Evening for a period of

SIXTEEN CONCERTS

The Community Welfare Band, under the leadership of C. A. Woodcox, has been engaged by the business men, citizens and friends, to furnise weekly concerts for the season. Special features will be given from time to time as the director chooses and all we ask is that you spend Wednesday evenings in St. Joe and enjoy the concerts. They are FREE to you. The following officers were chosen to carry on the Summer Activities:

E. R. KINSEY, President. F. B. Leighty, Secretary. Wm. G. Harmon, Treas.

Children's Week Observances

The Children's Week program, or hour of biblical story telling, is now in progress at the Lutheran church, and the attendance has been fair. On Monday there were 22 and Tuesday 25 children in attendance. The leaders for the rest of the week are as follows:

First Week

LUTHERAN CHURCH

Thursday—Mrs. Daisy Woodcox, Mrs Iler

Friday—Mrs. Grace Dilley, Florence Hart

Second Week

METHODIST CHURCH

Monday—Phyllis Rickett, Edna Jackson

Tuesday—Mrs. Belle Barney, Mrs. Mayola Kinsey

Wednesday—Mrs. Lora Leighty Dorothy Ginther

Thursday—Rev Otis Jones, Mrs. Hazel Renner

Friday—Mrs. Otis Jones, Mrs Blanch Leighty

The parents of St. Joe ought to see that their children are present each afternoon, just for one hour. The committee is anxious for the support of parents and that the attendance might be more up to standard.

Big Picnic for June 26.

The St. Joe Fish and Game Protective Association, at its meeting last Friday evening, started making plans for the picnic, to be held at the Erick grove on Saturday, June 26, and the entire public is asked to participate. The several committees have been appointed to work out details for sports, stands, boating, bathing, with special prizes. A speaker will be secured, who is versed in game protection and it will be made of interest to all.

At noon, each person will bring their baskets, and enjoy the cool, shady grove, and spread their lunch as they see fit.

More information will be given out as the committees report.

Remember the date—June 26.

Milk Delivery

has been changed to mornings only and is now selling for 10c. per quart.

KOEPPE BROS.

New 3 and 4 Burner Stove

COMPLETE

An ideal range for the usual family—sturdy and designed to meet the cooking needs. The cooking top of cast iron grid work, is extra wide and entirely open, all space can be used. Roomy oven is adequately heated by a single burner This new model oven, with the door on the end, is more convenient for the cook; and, although it has an inside capacity as great as that of an ordinary two-burner oven, it occupies less space on the stove. And we are selling them too. Call and see them on display.

Mrs. Dr. Minnick Killed In Accident

The Evening News of Monday contained but a few lines, reproduced below, which leads St. Joe folks to believe that the doctor referred to is Dr. Minnick, who left here last fall and was located at New Albany.

"An auto driven by Dr. A. R. Minick, of New Albany, turned over when it struck a rut in the road near Hagerstown. Dr. Minnick's wife was pinned beneath the car and died before she could be extricated.

Dr. Minick was thrown clear of the machine and was unhurt"

Hardware Making Outside Improvements

The Kinsey Hardware is making improvements by putting in a new side walk and curb. The Scholes Construction company are contractors. The extreme width of the walk is to be used for the displaying of hardwares that are usually found on the outside, such as lawn mowers, wagons and tools of various kinds. The improvement is a much needed one as the water from the street had forced its way down the walk until it was completely ruined.

In Society

Glen Hart, son of Mr and Mrs. Fred Hart of Coburn's Corners and Miss Daisy Beree, daughter of Mr. and Mrs. Adrian Beree, of Five Corners, were married last Saturday at 10:30, by the Rev. J. N. Scholes at Lone Acre residence. Following the dinner in the Hart home, the young couple left for Toledo, where they visited for a few days, returning to Angola, where Mr. Hart will enter Tri-State for training. For the past few years Glen has taught school at Newville. The young couple have the best wishes of their wide circle of friends.

Lineman Falls From Pole

Victor Brown, lineman, of St. Joe, is in a South Bend hospital, as the result of a fall last Thursday, while climbing down a pole. He was working in the city and in bringing a cross arm down with him, it struck a wire and knocked his hand loose, throwing him to the ground a distance of about 20 feet He alighted on his right foot, crushing his heel and badly jamming him. John Hart visited him last Sunday and reports improvement, although he will not be able to work the rest of the summer.

Auburn Council Repeals Law

The Auburn city council repealed the old ordinance closing Sunday picture shows, Monday night Both the pros and cons were present and made speeches in their defense. For eight years the Auburn theatres have been closed Sundays

Mrs. Ella Smith is visiting her brother and family at Hicksville.

Foot and mouth diseases among livestock have been completely eradicated in the United States and June 10, all domestic quarantines on foot and mouth diseases will be lifted, Secretary of Agriculture Jardin announced recently.

Urges Farmers To Mow Roadside

A weedless roadside can be attained by mowing regularly twice a year for two or three years, according to A A Hansen, head of the Purdue Extension staff.

The secret of the weedless roadside according to Hansen, is to prevent the weeds from seeding and this can be done by mowing the spring-flowering weeds during early June and the fall bloomers during early August.

If weeds are not allowed to seed they cannot compete successfully with bluegrass, Hansen said A survey by the botany extension department of Purdue University has shown that bluegrass grows wild in practically every county in the entire state.

Glasses made to fit your eyes and your pocket book by Griest, American Bldg., Hicksville, Ohio.

Henry Renner and wife of near Waterloo and Orla Fee and family of Hamilton, were guests in the Howard Renner home Sunday.

Wm Quance and family of Auburn and Mrs. J. O. Quance and daughter, Mary, of Fort Wayne, were Sunday evening supper guests of J. C. Hull and wife.

The big K. of P. meeting to be held at Auburn on Tuesday, June 15, is open to the public. The program has been arranged with the idea of entertaining. Many from this lodge will attend.

Kain and Carpenter, the only bidders, were awarded the contract Saturday for the construction of the Ora Baker drain in Concord township for $4,800 96, which was the amount of the estimate.

Mr. and Mrs B. R Esley of Fremont, Ohio, in passing through St. Joe Monday called on a few of their acquaintances. Mr. Esley run the grist mill here a number of years ago.

Lester Pugsley and family are home after a couple weeks visit at Toledo. While there Lester had his tire stolen. A new tire and tools were gone when the car was located.

The state health commissioner makes a statement concerning Winona Lake, that the public in general will be glad to hear, that the assembly has complied with every request of the commission to the effect that the sanitation of the grounds is now permanent, and that not a single case of typhoid fever has been reported since July last year. Those who attend Winona activities commend them for the interest in their welfare.

LUMBER YARD FOR ST. JOE

We are pleased to announce to St Joe and surrounding country that we have taken a long time lease on the large hay barn that was formerly occupied by Hart & Lower of Hicksville, O. We will have a complete line of lumber and roofing, cement, and in fact everything that will make a modern lumber yard. We solicit your business and will be more than pleased to figure on bills for houses, barns or any other buildings. Remember this is something that St. Joe has needed for a good many years and we hope that St. Joe and community will support it so that it will be a permanent fixture in the town of St. Joe.

The Diary of A Fly

MONDAY

Have found a dandy boarding place. Mrs. Jones sure sets a fine table. Had chicken for dinner yesterday. Afterward took a bath in the milk and dried himself in the sugar.

TUESDAY

Living like a king. Went skating on a slab of butter today. Played with the baby awhile and then took a nice nap in the cooky jar.

WEDNESDAY

I had a narrow escape today. I woke Mr. Jones from a nap by taking my daily exercise on the tip of his nose. He chased me all over the house with a swatter, but I got away

THURSDAY

I had a fine time all day today. I had a fine physical work-out in the cottage cheese this afternoon and got into a good sweat. It sure was great sport sliding down the little lumps of cheese. I felt like a million dollars afterwards and then played tag with Mrs. Jones. That woman can get madder than any person I ever knew.

FRIDAY

After being housed all week, I've come outside for a little airing, but I find the indoors nicer—more places to sleep and loaf and more people to play with.

SATURDAY

Out of luck. Mrs. Jones bought some new window screens, screen doors and fly swatters and then chased me outdoors again. I'm starving to death. I hate those good screens of Kinsey's Hardware.

Use of Color in New Paris Gowns

Pleasing Shades Feature of Winsome Attire—Taffeta in Demand.

Refinement, taste, novelty in detail and an appreciation of color are apparent in the latest fashions, in the absence of anything revolutionary. Color, observes a fashion authority in the New York Times, has intrigued all of the designers and inspired some enchanting costumes. It is the gospel that is being preached by every contributor to the art of dress from the designer of fabrics to the couturier, who establishes a mode of importance. The older masters, and some of those who are swiftly rising this season, create gowns for women of all types and ages and of greater art value than have been shown for many a year. Materials are in themselves a delight, the soft, supple crepes, voiles, mousselines; the lustrous silks with pulsating tints and shades. Most of these have already made their place, but this season are shown in countless new variants, finer and more lovely. Taffeta has made such a wide sweep that the demand can scarcely be met, and, in the filmy weaves, mousseline de soie has returned after many years more charming than ever.

All of these are the latest things in fabrics for the evening gowns and wraps that are now presented. Taffeta is used most for the picturesque period gowns of wide skirts with crinolined effects. The softer styles are tremendously popular at the moment, such as the flounced, flaring and petal frocks that are so entrancing in the dance.

Whole groups of this type of gown designed in one mood or another are shown by the Parisian dressmakers. They are particularly happy in models for young women for informal evening frocks, dainty and chic, and in heavenly colors. In one of these models from Nicole Groult, a frock of subtle simplicity is made of pink mousseline de soie, the entire skirt of which from belt to hem is covered with flounces of silk lace dyed in the same shade. The sleeveless bodice, cut in easy blouse lines, has a deep oval decolletage, with tucker of the lace. A soft girdle of the mousseline marks a moderately low waistline, and a trailing garniture of roses with long sash ends of the mousseline forms a finish at one side.

Much Lace Is Used.

A great deal of lace is being used on these evening gowns, even Spanish lace, with which Jenny has illustrated a new and altogether interesting treatment. In one of her jeune fille models she has trimmed the skirt with ruffles of the lace gathered as full as ruching and sewn on, row after row. An enchanting little gown designed by a French dressmaker is of light green mousseline de soie. The decollete, sleeveless bodice is the inevitable straight model, to which the skirt is attached with several rows of shirring. To this is added a flounce of filmy lace in ivory tint, the pattern of which is traced with paint in delicate shades of green, rose and gilt. In a stylish but conventional evening gown from Molyneux two flounces are gathered in straight lines on the skirt of an all-over ecru lace frock over which is worn a sleeveless coat of the same lace.

Black lace is considered extremely smart this season, and in many attractive models is made over a colored lining of crepe or chiffon. Madeleine des Hayes has made an adorable little frock of unusually sheer black chantilly lace over pale rose crepe. The neck is cut round and rather high, and little narrow ruchings of the lace finish the arm-holes and outline the bottom of the skirt in scallops. In many of the evening gowns of sheer goods the edge of ruffles, folds and skirts is scalloped and one in a new-old idea is trimmed from top to bottom of the skirt with ruffles cut in points, in chiffon that shades from pale to deep rose, having the effect of myriad flower petals. Another dance frock is like a double marigold of yellow tulle, the ruffles gathered full on the outer layer of a triple skirt. These pretty frocks reflect the symbolism of gay gardens and bright fields in intriguing contrast to the all-black which is now the rage.

Black in any and all of the season's fabrics is exceedingly fashionable, but the craze of the moment is for sheer black—chiffon, mousseline de soie, tulle. From almost every house of authority in Paris are received black gowns for evening, and many other charming designs are from American dressmakers.

Jean Patou makes a gown of black crepe de chine, the bodice slightly bloused, the skirt with a cascade of the material on each side, beginning at the belt and dropping low, to form an irregular hemline. Bands of strass passementerie trim the front of the bodice from each shoulder to a deep point over the girdle, making the one brilliant high light. An original little frock from Jenny is entirely of black lace, over black satin, the skirt trimmed from top to bottom with nar-

Charming Crepe de Chine Afternoon Frock of Seashell Rose.

row ruffles of the lace and the long sleeves which are now so fashionable are plain at the top with rows of the lace ruffles covering the space between elbow and wrist.

For Evening Wear.

The bolero in different arrangements, shapes and lengths is shown on many evening gowns, rather more on those of sheer stuffs than on any other. Chanel is going in strong for them, and has presented a stunning creation in black chiffon, one of the few strikingly new designs of the late collections. To the short skirt she has added a long tail of the chiffon, and repeats the line with a pointed bolero swinging from the deep round decolete neck. The bodice is sleeveless and the gown is untrimmed.

The ensemble idea is presented in some attractive evening costumes in which a wrap is made to match the gown, with slippers, stockings and even a dainty bag and fan of the same color. A late model in ensemble from the des Hayes atelier is done in pale blue crepe Elizabeth embroidered in bands of delicate detail with silver thread and entredeux of silver lace. A long cape of the blue material, made on soft, simple lines, gathered at the neck, with cords to tie, is lined with silver cloth and trimmed around the bottom with deep points of silver lace. Slippers of silver and blue brocade and stockings of the laciest blue chiffon, are to be worn with this costume, and a fan of pale blue silk edged with a line of silver is painted in a pretty scene.

New Styles in Wraps.

There are countless new styles in evening wraps, those best liked on this side at this season being of crepe, taffeta and other light fabrics in contrast to the richer velvet manteaux. Fur is still used even on the spring and summer models, but in those varieties known, paradoxically, as "summer fur."

A wrap of a most lovely shade of green known by various names, one of which—leaf green—seems best to describe it, is of bengaline lined with crepe de chine, with a collar of the material shirred and padded into a roll shape and with a bottom trimming of baby skunk. This bottom band is not new, but has apparently a tenacious hold on fashion life. Another wrap in sea green has a collar of white fox dyed in the same shade. Quilted taffeta is much used in some of the new wraps, and in all of the latest coats and wraps from Parisian houses taffeta is given much attention in detail of needlework, stitching and tucking.

In some of the most important evening costumes that come from the other side, scarfs are worn as wraps with evening gowns. This has inspired a number of new styles of scarf to be used in this way. One is a reflection of the Spanish shawl, with the large conventional floral pattern printed on a long, wide scarf of chiffon or thin crepe. These are showy, colorful affairs, with the flowers reproduced in brilliant colors on the most fragile fabrics. Shawls of fine crepe in plain white and light colors are trimmed with deep silk fringe, on which the design is printed, and other evening scarfs of sheer stuff are effectively hand-painted with traceries of gilt.

Dainty Afternoon Frock of Apple Green With Wide Gypsy Girdle.

THE KITCHEN CABINET

(©, 1926, Western Newspaper Union.)

The men who are not satisfied
Are they who set the pace—
The men who do not meet defeat
With calm, contented face.

The men who labor on and on
With minds and fingers skilled,
They are the great unsatisfied
Who plan and fight and build.

SUNDAY NIGHT SUPPER

Dishes which may be prepared beforehand, or better, served from the chafing dish, are always popular for the Sunday night meal.

Scrambled Eggs.—If limited in the number of eggs and oversupplied with those who are to be served, to make a dish of scrambled eggs extend to meet the appetites, add to the frying pan a half cupful of rice that has been well washed and drained, add enough butter to cook it, stirring until the rice is a good color, then add water or milk or a mixture of both and cook the rice until perfectly well done. Now add three to four eggs, more if more rice is used, and with the usual milk or cream and butter with seasonings one has a most satisfying dish, saving one-half of the eggs ordinarily used for such a dish.

Jellied Chicken Salad.—Put into a saucepan three cupfuls of highly seasoned chicken stock, the whites of two eggs, three tablespoonfuls of gelatin and two tablespoonfuls of lemon juice. Boil two minutes, stirring constantly. Place on the back of the range for thirty minutes then strain through a double cheesecloth.

Cover the bottom of individual molds with liquid jelly and set on ice. When firm, decorate with red and green peppers cut into fancy shapes; cover with the jelly mixture. Moisten one cupful of cooked fowl with one-half cupful of mayonnaise dressing to which a teaspoonful of dissolved gelatin has been added. Shape into balls and put a ball in each mold; fill with the jelly. Chill, unfold on lettuce and serve with mayonnaise dressing.

English Monkey.—Soak one cupful of stale bread crumbs in one cupful of milk until soft. Melt one tablespoonful of butter, add a cupful of soft cheese and when the cheese is melted add the soaked crumbs, one egg slightly beaten, salt and cayenne to taste. Cook three minutes and pour over toasted crackers or toasted bread and sprinkle with paprika.

Onion Sandwiches—Chop fine a few slices of southern onion, add salt, pepper, a little olive oil or salad dressing, a dash of lemon juice, mix and spread on well-buttered bread, add a leaf of lettuce and cover with another slice of buttered bread.

Rice With Bananas.—Peel and scrape three well ripened bananas and mash them with a fork until creamy, add a few drops of lemon juice, stir lightly into one cupful of cooked rice and serve with cream and sugar.

Treasured Recipes.

A French preparation for soup seasoning which is considered very choice is this: Two ounces each of sweet marjoram, parsley and savory, thyme and lemon peel, and one ounce of sweet basil. The herbs are dried and ground, then all are sifted together until well mixed. This powder, if carefully bottled and corked, will keep for years. Use it sparingly.

Ever-Lasting Yeast.—Tie three dry yeast cakes in a cheese cloth, add one quart of potato water, three tablespoonfuls of sugar and let stand twelve hours. Remove the yeast and place in a glass jar well covered but not sealed. Use one cupful of the yeast for six loaves of bread. Once or twice a week fill the jar with cooled potato water, using the same amount of liquid as the amount of yeast removed each time. If not enough yeast is used each time take out some each time the potato water is added. This will keep for years as the potato water keeps nourishing new yeast buds.

Olive Oil Pickles. — Cucumber pickles are a bit early yet but it is well to have the recipes ready when the time comes. Take one hundred small cucumbers, three pints of small onions, one pint of olive oil, one ounce each of celery seed and white pepper, one-fourth pound of white mustard seed. Slice the unpeeled cucumbers, cover with one and two-thirds cupfuls of salt, let stand three hours. Slice onions, let stand in cold water to cover, drain and mix all together with spices and oil, pack in jars and fill the jars with good vinegar. Seal and keep very cold.

Mustard Pickles.—To a gallon of vinegar add one-half cupful of mustard, one cupful of salt, and two cupfuls of brown sugar. Drop the young cucumbers into the jar as they are gathered and washed each day. When the jar is full cover with horseradish leaves. They will be good to eat in two weeks.

A half cupful of cooked oat meal added to a small beef loaf improves it and adds bulk. When making oatmeal cookies or rocks, brown and grind the oatmeal; it makes a very different flavor and texture.

HORN ABUSED BY SOME MOTORISTS

Sound of Warning Is of Value When Approaching a Crossroad.

Never before in the history of the automobile has there been so much abuse of the automobile horn. Horns are better sounding and more reliable than they ever were, yet this appears to be of no advantage in regard to their use.

Unquestionably motorists are becoming a bit vain over the noise their horns make, because experience shows that the horn button is always overworked where cars are thickest and where horning is least necessary. That is because each driver is trying to outdo the other. Some one horns and the first thing you know they are all doing it. Conversely, because the audience along the highway is so scant by comparison the horn is silenced. No one on the road would jump a foot when it is sounded.

This business of burning the headlights in daytime during a long tour as a means of wasting some of the electric current so as not to overheat the battery would be unnecessary. The horn motor offers a means of wasting current, and, at the same time, of using it to good advantage. Headlights in the daytime are useless because their rays cannot be seen until one is looking straight into the reflectors. A warning then is unnecessary.

Horning at all the curves, crossroads, school houses, upon passing other cars and before reaching the crest of a steep hill where another car may be approaching on the wrong side of the road, furnishes an excellent way of not only forestalling damage to the battery but to the whole car as well—not forgetting the occupants.

Word of Caution.

In horning generously, however, a word of caution is appropriate. The careful driver never keeps his horn blowing constantly while rounding a curve or approaching a crossroad. To do so would be deafening himself to the sound of another horn which may be blown as a warning to him. In such cases the effect is the same as though neither driver sounded a warning; and the results are much more serious, because when a driver has given a warning he assumes that he has paved his way to safety and immediately puts on more steam.

When the cars suddenly appear face to face the drivers are caught off their guard. Their excessive surprise may occasion them to act less sensibly than if caught in the usual predicament as a result of not horning at all. The solution is to horn intermittently.

This matter of intermittent horning is of particular value when approaching a blind alley or a crossroad in the wake of another car. Many drivers have a habit of assuming that if the driver of the car ahead horns at a crossing that is sufficient warning for both. But experience proves that it is not. The motorist coming out of the side road hears one horn and naturally assumes there is but one car coming. He proceeds to cross the main road and precipitates a collision.

Coming From Side Road.

The man coming on from a side road seldom horns because he feels that he should give the right of way (not according to law, but for safety's sake) to the faster traffic of the highway. If two or more highway cars, therefore, begin relying upon the horning of the machine in the lead there is bound to be trouble sooner or later.

In the city horning is becoming a nuisance. A motorist who recently put up over night at a downtown hotel suffered insomnia because of the incessant horning of cars at the corner.

A motorist may think the pedestrian plays no important part in his motoring, but just the same the length of time he must wait at a crossing depends largely upon how long it takes for the pedestrian to cross. A blast of the horn may get the pedestrian "traffic dizzy" and so prolong the agony. There is a time to horn and a time to remain silent; and it only requires a little headwork to differentiate between them.

Best Driving Code Quite Simple One

Have you ever stopped to consider the signal code of the average driver? It is a very simple code and not difficult to acquire. It follows:

To indicate a right turn—stick out your hand.

To indicate a left turn—stick out your hand.

To indicate that you are about to stop—stick out your hand.

To indicate that you are about to back—stick out your hand.

To emphasize your conversation with your fellow passenger—stick out your hand.

To flick the ashes off your cigar—stick out your hand.

This is the generally accepted code. Under the circumstances, it is remarkable that accidents are not more frequent.

Windshield Wiper With Semi-Automatic Device

My car had only the ordinary windshield wiper operated by hand. This was rather inconvenient and tiresome, so I rigged up a semi-automatic attachment which proved entirely satisfactory. I took about six inches of spring from an old shade roller and fastened it to the right side of the windshield. Then I fastened the other end to the knob of the wiper, regulating the tension so that the wiper would be pulled over quickly. A pulley in the upper left-hand corner, through which is run a stout cord fastened to the knob, completes the device. When it rains I loop one end of the string around my hand, and when the windshield needs wiping a downward sweep of my hand pulls the wiper over and when I let go the spring pulls it back again. The cost was only ten cents for the pulley.—Dr. E. W. Henke, Newark, N. J., in Popular Mechanics Magazine.

Semi-Automatic Windshield Wiper Which Does the Work Automatically and Costs Only a Few Cents.

Safe Conduct on Roads Is Founded on Courtesy

"It is almost axiomatic," writes the manager of a traffic bureau, "that safe conduct on highways is founded on courtesy.

"A million detailed traffic rules cannot cover up that fact. There is no substitute for courtesy anywhere, least of all on a crowded highway."

There used to be more of it, this traffic man says, than there is now.

"That was in the days when automobiles were new and few. It was natural then for drivers to treat each other courteously, as they would do in meeting neighbors on the street, or touching elbows with them at theater or church.

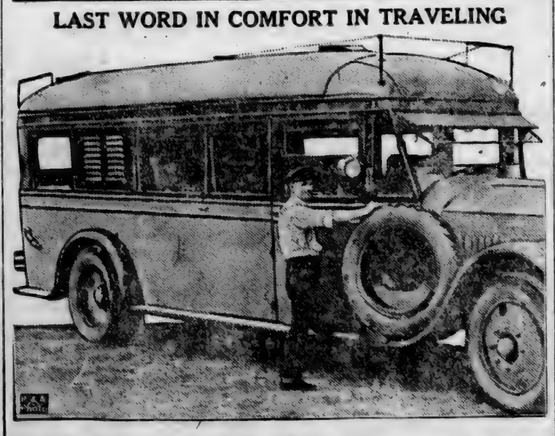
"But with the increase of traffic pressure on space and nerves they have lost that fine old spirit of mutual accommodation.

"It may be harder now not merely because there are so many more cars on the road, but because 'all kinds of people are driving them.'

"There may be a larger proportion of boors and thugs behind steering wheels than there were in the primitive traffic days of ten to fifteen years ago. Yet it is still true that courtesy is the great solvent.

"Gentlemanly—and ladylike—conduct is contagious, and tends to multiply itself on the road as it does anywhere else."

LAST WORD IN COMFORT IN TRAVELING



Ralph C. Caravan, retired business man from Chicago, who has been touring the country in this $20,000 de luxe car. This perior car has a kitchen tile bath, dining room and sleeping accommodations, and is the last word in comfort in traveling. Photograph shows the house on wheels.

INDIANA BREVITIES

The First National bank of Noblesville was closed "by order of the board of directors."

The Gas Utilities Corporation of Columbus, Ohio, has purchased the Brazil Gas company's plant for approximately $150,000.

Mrs. Catherine C. Ulrey, residing near Chypool, has filed suit for $10,000 against the Pennsylvania railroad. Her husband was fatally injured when struck by one of the company's trains.

William C. Geake of Fort Wayne was elected grand master of the Grand Lodge, A. F. and A. M. of Indiana, at the one hundred-ninth annual meeting in Indianapolis.

Mrs. Agnes Hampton, thirty-three years old, wife of Mayor John C. Hampton of Muncie, died following an operation. Mrs. Hampton had served as deputy city controller since January 1.

Gold medals have been awarded to William M. Toner, of Anderson, and Miss Leila Shelley, of Bloomington, both Indiana university students, by the Intercollegiate World for the best piece of prose and poetry written by undergraduates this year.

Eugene Lambert, twenty-four years old, of East Columbus, who was in charge of a gravel pit dredge boat for the Interstate Public Service company four miles north of Reddington, was drowned when he fell from the boat into the pit.

U. S. S. Hawk, converted yacht assigned to the Indiana naval reserve force, was taken to Chicago and placed in drydock for overhauling and reconditioning to get the ship in shape for the summer cruising schedule, beginning July 1.

Two buildings, which combined the nail mill, nail cleaning room, cooper shop and a section of the wareroom at the Kokomo Steel and Wire company's Kokomo plant, were totally destroyed by fire with an estimated loss of $250,000.

Teachers of Evansville schools have obtained the indorsement of presidents of twenty-one civic and industrial clubs and organizations in their fight to force the board of education to grant them a general salary increase. The board of education seeks to raise salaries on the merit system.

Dr. John Allen Bla.., of Philadelphia, a Wabash college graduate with the class of 1893, who has been selected to make the address at the annual commencement in June, is being prominently mentioned as a successor to Dr. George L. Mackintosh as president of the college, whose resignation was recently submitted, effective July 31.

More than fifty alleged bootleggers and roadhouse proprietors of Vincennes, and four "higher-ups," including attorneys and Knox county officials, were indicted on charges of violating the national prohibition law by the federal grand jury. Twenty-five of the number were indicted in one bill charging conspiracy to violate the prohibition law.

With the opening of the regular May term of the Indiana Supreme and Appellate courts, which ends the fourth Monday in November, David O. Myers of Greensburg became the new chief justice of the Supreme court, and Solon A. Enloe of Danville became chief judge of the Appellate court. Judge Willis C. McMahon is the new presiding judge of the Appellate court. Judge Myers succeeds Judge Lewis B. Ewbank as chief justice.

The state highway department has accepted the offer of Kosciusko and Elkhart counties to pay for one-fourth the cost of the construction of pavement in State Road 27 between Warsaw and Goshen and will make preparations to do this work as soon as possible, the state commission bearing the remaining three-fourths of the cost of construction. A survey will be ordered at once. It is estimated that the project will cost about $500,000.

The size of Indiana's state playground in the dunes east of Gary will be increased to 2,500 acres, Everett Gardner, chairman of the state purchasing commission, announced. Increasing extent of the park from 2,000 to 2,500 acres is to be made under authority of a ruling from Arthur L. Gilliom, attorney general, which will permit the state commission to receive gifts, both of land and of money, toward the additional 500 acres.

The Indiana Republican party, in one of the most harmonious state conventions in its history, flatly opposed participation by the United States in the "so-called League of Nations or its world court." The state ticket adopted is: United States senator, long term, James E. Watson; short term, Arthur Robinson; secretary of state, Frederick E. Schortemeier; auditor, Lewis Bowman; treasurer, Mrs. Grace Banta Urbhans, all incumbents.

Two unmasked bandits held up and robbed the Star theater in Muncie and escaped with $800, the receipts for the day. The girl who sold tickets, Edna Beckner, was knocked down and beaten by the robbers.

Vallie Hahn, thirty-one years old, of near Anderson; Homer Neff, twenty-two years old, of Daleville, and Charles Riggs, twenty-three years old, of Anderson, were arrested on a charge of holding up William Peoples, sixty-seven years old, near the Middletown fair grounds and robbing him of $57

BETTER KITCHENS HELP THE HOMES

Some Points That Make for Convenience Given.

(Prepared by the United States Department of Agriculture.)

In line with suggestions from many sources for making better homes are several points on kitchen planning from the bureau of home economics of the United States Department of Agriculture co-operating with Better Homes in America.

One of the first things the homemaker thinks about in a better home, is a well-arranged, well-equipped kitchen. That does not mean that she is kitchen-minded either. It means rather that she knows where convenience counts most in a house. In most family kitchens at least 1,000 meals are cooked during the course of every year. Surely for any job that comes as regularly and often as getting three meals a day, every step-saving, time-saving arrangement possible should be included in the plan and the equipment.

The points that make for convenience in the kitchen are as follows, according to the bureau of home economics:

First, last, and all the time in planning and equipping a kitchen, says the

View of a Two-Way Closet Between Dining Room and Kitchen.

bureau, think about the work to be done in it.

If building or remodeling a kitchen, make it oblong and with no more floor space than actually needed. A kitchen is a workroom. Spaciousness is paid for in miles of useless steps.

Study the relation of the kitchen to the rest of the house. Make a direct connection from kitchen to dining room in the common wall between them. See to it also that there is easy access to front and back doors, to the telephone, and to the stairs to the cellar and the second floor.

Arrange for adequate ventilation in all weathers and for good lighting at all work centers at night as well as during the day.

Screen windows and doors against household pests. Flies particularly are a menace to health.

Choose finishes for floor, walls, and woodwork that are durable, suitable in color, and can be kept clean easily.

Select furnishings that fit the wall and floor space and will pay for themselves in usefulness. Weigh the pros and cons of built-in or movable pieces, and compare prices carefully.

Make sure that there is an abundant supply of hot and cold running water and a sanitary drainage system.

Decide on the most comfortable height of working surfaces.

Group all equipment, large and small, into compact work centers for preparation of raw food, cooking, serving, clearing away and dishwashing, and any other activities done regularly and often in the kitchen.

Arrange these groups from left to right, following the order in which the various jobs are done.

The kitchen is above all else a place to prepare and serve food. Limit the kitchen to this use, if possible, and arrange for laundering and such work to be done in another place.

Vegetable Juices Are Rich in Mineral Matter

Do not drain off the juices from canned vegetables and throw them away. There is no reason for throwing away the liquor from canned foods unless there are evidences of spoilage, according to the United States Department of Agriculture. Then the solid contents should also be discarded. The idea that canned vegetables themselves are safe to eat if the juice from the same can is unfit, has no foundation in fact. The practice of draining probably goes back to the days when certain vegetables were put up in brine too salty to be served with the vegetables. They then had to be drained and sometimes soaked in clear water to make them edible. There is no excuse for this practice now. The liquor around canned vegetables contains valuable mineral matter and draining it off means important loss in nutritive value.

Ice Cream Consumption Shows Large Increase

The consumption of ice cream in the United States has increased from 1.04 gallons a year per person in 1910 to 2.8 gallons in 1925, the Department of Agriculture has announced. Per capita consumption in 1924 was 2.5 gallons. The total quantity of ice cream consumed last year is estimated at 322,720,000 gallons, compared with 285,550,000 gallons in 1924, and 260,000,000 gallons in 1920.

Increased consumption is said to be due largely to improvement in quality and to nation-wide educational campaigns on the food value of ice cream. The popularity of ice cream has increased rapidly in England, Germany, and some other countries. England is reported to have increased consumption more than 100 per cent in the past year.

TAKE PRECAUTIONS AGAINST HOUSE FLIES

This Model of a Fly Shows How Easily Filth Clings to Legs and Hairs.

(Prepared by the United States Department of Agriculture.)

The time to take precautions against house flies is before the first fly gets into your home in the spring and begins its egg-laying activities. A fly or two in May or June means hundreds of flies by midsummer from which there is no protection. It must be generally understood that if people were only sensible and would look for the breeding places of the flies, they could destroy the larvae before they become flies. In the country every householder practically breeds his own flies. In cities or towns it is distinctly the duty of the health officers to see that breeding places are cleaned up or treated. Where the health officers seem indifferent, citizens' clubs should be formed or existing organizations should take the matter in hand. Women's clubs have been very successful in this direction.

There are also certain precautions which the individual home may observe. Screens for the windows and screen doors should be looked over as early as possible in the season, to make sure that they are whole and fit well, and are otherwise in good condition. A screen having 14 strands to the inch will exclude flies but a finer mesh is necessary to exclude the smaller mosquitoes.

If flies have already succeeded in getting into your house organize a "drive" at once among the members of the family. Darken all rooms leaving one brightly lighted opening toward which the flies can be driven with swatters and towels. A good many flies can be excluded in this way. Sticky fly paper will help to catch the few that escape the "drive," or a weak solution of formalin may be placed in the various rooms. This should be put out of reach of children. To make it, add three teaspoonfuls of commercial formalin to a pint of milk or water sweetened with a little brown sugar. A convenient way of exposing this poison is by partly filling an ordinary drinking glass with the solution. A saucer or plate is then lined with white blotting paper cut the size of the dish and placed bottom up over the glass. The whole is then quickly inverted and a small match stick placed under the edge of the glass. As the solution evaporates from the paper more flows out from the glass, automatically renewing the supply. Many types of flytraps are on the market and good homemade traps are equally effective.

Improve Soil to Increase Crops

Several Middle West States Show Gains in Acreage of Legumes.

The concerted drive in the Middle West for improved soil fertility and better crop rotations is accomplishing its purpose as shown by figures compiled by A. J. Surratt, crop statistician for the Illinois Department of Agriculture. According to the census reports for 1924, as compared to those of five years before, the states of Illinois, Missouri, Iowa, Indiana, Ohio, Michigan and Wisconsin, all show a gain in the acres of legumes per 100 acres of cultivated crops. This is accounted for largely by the educational campaign put on by agricultural colleges, county agents, the press and other agencies.

Michigan Heads List.

This report shows that, of the states named, Michigan heads the list with an increase in legume acreage of 7.37 per 100 acres of cultivated crops; Missouri is next with 5.79 acres; then follow Wisconsin, Ohio, Indiana, Illinois and Iowa in the order named. Each of these states now has more than ten acres of legumes per 100 acres of cultivated, thus devoted to legume growing.

Legumes, per 100 acres cultivated crops, showed a gain in the last five years:

In Illinois, from 7.33 to 10.34, or 3.01 acres; in Indiana, from 9.59 to 14.15, or 4.56 acres; in Iowa, from 10.50 to 12.25, or 1.75 acres; in Michigan, from 22.65 to 30.02, or 7.37 acres; in Missouri, from 7.97 to 13.76, or 5.79 acres; in Ohio, from 12.98 to 17.63, or 4.65 acres; in Wisconsin, from 24.91 to 30.10, or 5.19.

Factors Increasing Profits.

Farmers generally have seen the advantage of better crop rotations and higher crop yields as factors in reducing costs and increasing profits. Inability to grow legumes because of soil deficiencies, principally of lime and phosphorus, has in the past discouraged many farmers from growing these crops. Educational work has shown how to grow better crops of alfalfa, clovers, soy beans and other high-yielding legumes through use of lime and fertilizers, inoculation and improved cultural practices. With the desire to grow more legumes and the adoption of proper methods of soil treatment, it is expected that the acreage of the soil-building crops will increase rapidly. Live stock and dairy farmers want such crops for their high-protein feeding value and grain and truck farmers want them for cover crops and manure crops.

Soy Beans Superior as Emergency Crop for Hay

About this time of year a certain number of dairymen find that they are not going to have enough good cow hay, clover or alfalfa. For such men, says the crops specialist of the New Jersey State College of Agriculture, there is nothing that will beat soy beans as an emergency crop.

Soy beans may be planted alone or in mixture with sudan grass or sorghum, advises the specialist. They should be inoculated if they have never been planted on the field before. Although they respond to lime, they will make a satisfactory growth on land which has not been limed for years. They are an easy crop to grow. They are the equal of alfalfa hay in feeding value and they leave the ground in good condition to sow wheat or other crops that follow.

Some farmers object to soy beans because they find the crop difficult to cure into hay. The experienced growers do not often have this difficulty. The principal source of trouble is in putting them into the mow before they are cured. The best method is to have the crop cured thoroughly in the field, letting most of the curing be done in the cock. Even though this may take a week or two soy beans seldom spoil in the field.

Where alfalfa can be grown there is no dairy hay that can come up to it in quantity, quality and low cost per ton, but not all farmers are ready to lay out the money for lime, nor have they the ground ready for alfalfa. For these men the soy bean is a good crop.

Well Prepared Seed Bed Favored for Many Crops

The cheapest and easiest time to cultivate corn or any other crop, is before the seed is planted. If the seed bed is thoroughly well prepared and all of the surface well pulverized, the crop is in the best condition to start growing. It will even pay, if weather conditions permit, to delay planting a few days for the sake of letting the first weed seeds start to grow, and then going over the field an extra time with the harrow to uproot them. When the seed is put into a warm, mellow, well cleaned soil, it has a real chance to start growing and to get ahead of noxious weed growth.

Get Barley Seeded Early

For a good crop of barley it is quite important to get it seeded early; in fact, it is best to seed barley before oats are seeded for best results. It is beneficial for oats and barley seed to remain in cold ground a short time before the soil and ground is found to be warm enough for growth. When sown very early, both oats and barley seed should be well-matured, or there is much danger of its rotting before growth starts.

See Potato Buyers Victims of Tricks

Much Substitution of Varieties by Dealers.

(Prepared by the United States Department of Agriculture.)

Potato growers who purchase seed potatoes do not always get the particular varieties they order. There is so much substitution of varieties by seed potato dealers that the growers are seeking the passage of control measures which will correct the evil. Substitutions, either careless or willful, are more apt to be made, says William Stuart, potato specialist of the United States Department of Agriculture, for the newer or less known varieties. Purchasers who order "fancy names" or "new and highly advertised" varieties are more likely to be victimized, he says, than those who stick to the widely known varieties.

Mr. Stuart ordered 139 different varieties last year from 61 different seedsmen. Many firms replied that they were "just out" of that particular variety. Of the 98 named varieties that were received, 25 per cent proved to be varieties other than those specified in the order. In one instance, three varieties were ordered from a dealer advertising himself as "reliable." Three different packages were received, all of which proved to be the same variety, but not of any one of the three varieties ordered.

Tomatoes Easy to Raise If Carefully Cared For

Tomatoes are easy to raise if they are carefully cared for. They can be planted in seed plots, kept in the basement near the furnace, and be replanted in the garden as soon as the danger of frost has passed. And early ripe tomatoes bring fancy prices on the market. They are one of the best paying vegetables that can be raised in the country over, says a writer in the Successful Farming.

When the transplanted plants have again taken root and begin to branch out, most varieties require frames about them to prevent the branches from being broken by the weight of the green tomatoes.

All that is necessary is a lot of light lumber of narrow widths, cut to the same lengths and nailed to stakes driven into the ground, there being four around each plant.

As the dry weather sets in, if it does, build small mounds of earth about the base of each stalk. This not only braces the whole plant, but places the roots deeper in the ground and there is less likelihood of any damage from drought.

Formalin Is Effective Against Scab of Potato

Formalin is effective against common potato scab and is used at the rate of 1 pint formalin to 30 gallons of water. Seed should be soaked from ½ to 1½ hours, then spread out to dry before replacing in containers. Either use new containers or be sure that the old ones are sterilized. Formalin treatment will not control black scurf.

Corrosive sublimate treatment will control both scab and black scurf. Use 4 ounces corrosive sublimate to 30 gallons water. Seed should be soaked ½ to 1½ or 2 hours, depending on the severity of black scurf infection.

Tubers should be whole and dormant when treated by either method.

Trees Are Valuable for Any Unproductive Land

The United States forest service during the years of 1910-11 planted 23 acres of western yellow pine and Douglas fir in the vicinity of Colorado Springs.

In 1926, just 16 years later, the forest service has realized $2,500 from this acreage in thinnings alone, and at the same time has left 500 trees to the acre for a future crop. These 500 trees which have been left will prove the most valuable financially for lumber purposes.

Farmers should plant those unproductive acres to trees and later realize a cash return from them.—Chester A. Lee, Extension Forester, Colorado Agricultural College.

Farm Hints

Alfalfa hay, home-grown grain, and pure-bred sires spell dairy success.

• • •

Screens around the dairy early in spring mean less flies later in the year.

• • •

The first grass is watery and poor feed for stock; and the stock are also hard on the first grass.

• • •

Legumes such as sweet clover and alfalfa cannot grow in acid soil. That is why farmers are putting lime on their soils.

• • •

Millet smut may be entirely prevented by giving the copper carbonate dust treatment, the same as for sorghum smut.

• • •

The junior club boy of today will be the farmer of tomorrow so why not watch with interest the way he cares for his calf, pig, or colt?

• • •

Farmers who notice the cream test decreasing needn't worry as that is logical with the heavily increased milk flow. They are just getting more milk and less butterfat.

POINTS ON KEEPING WELL

DR. FREDERICK R. GREEN
Editor of "HEALTH"

(©, 1926, Western Newspaper Union.)

SWIMMING POOL SANITATION

JAMES WHITCOMB RILEY sang of the "Ol' Swimmin' Hole" which our fathers and grandfathers used to enjoy. When it is possible, there is nothing that equals a natural, outdoor pool, whether in river, lake or pond. But this is, in most localities, a thing of the past. Our streams have been polluted and, with the filling up of the land and the clearing away of forests, the water supply has been so reduced that only those living near a great river or a large lake can hope to enjoy a nature-made swimming place.

Even in those lucky places where there are still natural swimming pools available, they can only be used during a part of the year. So there is a growing tendency to build artificial swimming pools, either indoor or out. Present-day concrete construction makes this comparatively easy. So that, today, practically all our colleges, many of our high schools and even some grammar schools are being equipped with swimming pools, while cities and parks are building them with increasing frequency. In a recent bulletin of the Iowa state department of health it is stated that, in 1925 alone, over four hundred outdoor swimming pools were built.

Many suggestions might be made as to the construction and management of these pools. But one thing, most important, should always be insisted on. They must be clean. The possibility of disease transmission in a pool in which hundreds and sometimes thousands of people bathe in a single day is too great to take any chance.

There are a number of diseases which may be transmitted from one person to another through common use of a swimming pool. Naturally, any person with a plainly marked case of any infection should not be allowed in a public pool. Any person with a plain case of any skin disease should also be barred. But many persons may be apparently healthy and yet carry on their body or in some of the body discharges germs which may produce disease in others. Not all germs which come from the body are harmful, in fact, many are harmless. But every bather before going into the pool should be required to take a warm bath and the water in the pool should be frequently changed, filtered and, if necessary, subjected to purification by means of ultra-violet light, copper sulphate, calcium hypochlorite or chlorine.

MAKING A FINGER FROM A TOE

EVERYBODY knows that our present-day surgical methods make it possible to do things to the human body which would have been considered miracles fifty years ago. Yet few realize the almost unlimited possibilities of the future. Ten years ago, Dr. Alexis Carrel of the Rockefeller institute, in a public talk, said that the day might come when every city would have an anatomical cold storage warehouse, in which would be preserved, in a condition of suspended animation, the arms, legs, toes and fingers of the healthy persons who have been killed by accident, just as spare automobile parts are now kept in machine shops; and that a man or woman who had lost a hand or foot, arm or leg by accident would go to this warehouse, pick out a missing part to suit them, and have it grafted in position.

We have not yet reached the point where this is possible, but we're on our way. In a recent issue of the Journal of the American Medical Association, a New York surgeon reported a case in which he mended a man's hand by grafting a little toe onto a middle finger, with perfect results.

The patient, a working man of thirty, while operating a bread-cutting machine, sliced off a third of the middle finger of his right hand. As the cut was clean and fresh, the surgeon proposed grafting a toe on in place of the finger. The patient consented. The man was put to sleep and a cut made through the upper part of the right little toe, through the joint, leaving the toe attached to the foot by the skin and tendons of the under side of the toe. The edges of the cut finger were then freshened and the toe and finger brought together and sewed together. Adhesive plaster and bandages held the hand and foot so neither could be moved. At the end of two weeks, the edges of the finger and the toe had grown together. The under flap, which held the toe to the foot, was then cut, freeing the toe from the foot and liberating the hand. The two cut edges of the finger and toe were then sewed together.

Healing took place without any infection, and the man now has a perfect hand. The little toe is of practically no use and its absence does not show. The man now has a hand which looks perfect and the fingers are all the same length, making it possible for him to do any kind of work. Even more extensive repairs on the body are now possible. It is only a matter of working out practical methods. What the future may hold, no one knows.

Help That Achy Back!

Are you dragging around, day after day, with a dull, unceasing backache? Are you lame in the morning, bothered with headaches, dizziness and urinary disorders? Feel tired, irritable and discouraged? Then there's surely something wrong, and likely it's kidney weakness. Don't neglect it! Get back your health while you can. Use *Doan's Pills*, a stimulant diuretic to the kidneys. *Doan's* have helped thousands, and should help you. *Ask your neighbor!*

An Ohio Case

W. E. Carr, 134 Clay St., Delphos, Ohio, says: "Mornings my back was stiff and sore and bending was almost impossible because of the pain in my back. My kidneys didn't act right, either. I had headaches and dizzy spells, too. After using Doan's Pills, I was rid of the attack."

JUNE

BAND CONCERT

AT

St. Joe, Indiana

Wednesday Evening, June 9, 1926

and every Wednesday Evening for a period of

SIXTEEN CONCERTS

The Community Welfare Band, under the leadership of C. A. Woodcox, has been engaged by the business men, citizens and friends, to furnise weekly concerts for the season. Special features will be given from time to time as the director chooses and all we ask is that you spend Wednesday evenings in St. Joe and enjoy the concerts. They are FREE to you. The following officers were chosen to carry on the Summer Activities:

E. R. KINSEY, President. F. B. Leighty, Secretary. Wm. G. Harmon, Treas.

GASOLINE OILS

St. Joe Filling Station

TIRES BATTERIES

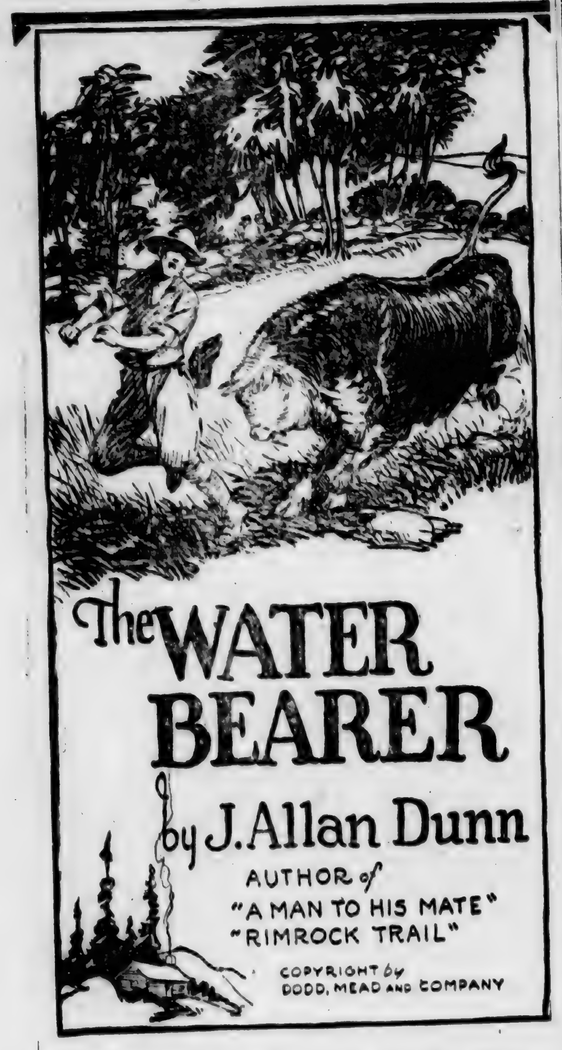
JUNE



AN UNUSUAL STORY which deals largely with the adventures of a young New Englander, an engineer, engaged in water development in the West. He comes into contact with various exciting phases of the life of the country and eventually has an opportunity to show the stuff that is in him when he is put up against the difficulties and problems of a gigantic enterprise involving the water supply of a large city. A stirring narrative by one who knows his West and has written some of its most fascinating tales.

Do Not Fail to Read This New Novel Starting

PUBLIC SALE!

The undersigned, administrator of the estate of the late Daniel M Hursey, deceased, will sell at Public Sale, at late residence, located 1 mile south of Concord, and 2 miles west of St. Joe, on

Wednesday, June 16

Commencing at 1 o'clock

Standard Bred Mare, sound and safe for lady to drive

Holstein Cow, 8 yr. old, fresh in April; Red Durham Cow, to be fresh in July

Spotted Poland Sow, registered, with 7 pigs 5 weeks old.

About 200 bushels Corn; 150 bushels Oats.

1-horse wagon, good as new; top buggy, in good shape; set double work harness; set single harness; farm sled; set sleigh runners; double shovel plow; iron kettle; tile scoop; spade; shovel; lard press; sausage grinder; post digger; 1 doz. potatoe crates; cross-cut saw.

7 cords of Stove Wood

Terms made known on day of Sale.

Rhodenbaugh & McNamara, Aucts. Frank Bowman, Clerk

Eat Less and Live Longer, Says Lawyer

By W. W. O'BRIEN

(Noted Criminal Lawyer of Chicago.)

W. W. O'Brien.

Business and professional men working under high nervous pressure do not live as long as men whose pursuits keep them out of doors and active. Examine the records of longevity and you will find that on the average the longest-lived men are soldiers, sailors and farmers, all avocations which tend to keep a man at his physical best.

Man, in general, rolls down the hill of life fastest when his figure is rotund. "Leanness and longevity" is a good axiom for business men to remember. If office workers would eat a little less, they would add years to their lives.

Overfeeding is as dangerous to adults as underfeeding is to children. Foods difficult to digest, or which overstimulate, should be avoided by persons whose work does not require any particular amount of physical exercise. Yet thousands of business men eat as much as or more than men who do manual labor. And, inevitably, nature rebels and sickness results.

Many of the country's foremost executives eat but two meals a day, breakfast and dinner in the evening. They seek to keep the organs of the body from becoming clogged. Thousands of other business men confine themselves at noontime to custards, puddings, soups and other sustaining dishes made with milk, or evaporated milk, which is milk in its most sterile form, from which 60 per cent of the water has been removed by evaporation. Such a diet is light and readily assimilated.

There is no more necessary lesson to be learned by the brain worker than how to keep well and healthy by proper attention to food habits.

Eating Greater Cause of Death Than Drinking

Drink is the second greatest cause of disease and death. Food comes first, then drink. Excluding alcoholic beverages, there are dozens of drinks on the market today whose effect is detrimental, particularly to children.

Milk is the best drink for children. Not only is it drink, but food as well—the most nearly perfect food known to man.

Milk is an all-the-year-round drink and for this reason the children often rebel against drinking it. This condition, however, may be overcome by the introduction of the mixed drink. Milk or diluted evaporated milk may be mixed with eggs or used in fruit juices or in some other way which will disguise the fact that the drink contains milk. In the hot summer months when the child naturally drinks more than in cooler weather, it is wise to vary the ways of serving milk, so as not to create a distaste for this important food.

In connection with mixed drinks, the following formulas for milk beverages may aid mothers in serving something new:

Iced Cocoa

2 tbsp. cocoa	1½ cups evaporated milk
2 tbsp. sugar	diluted with
½ cup hot water	1½ cups water
Few grains salt	¼ tsp. vanilla

Scald the diluted milk in a double boiler. Mix cocoa, sugar, salt and add the hot water. Cook over a low flame from 10 to 15 minutes, stirring occasionally to prevent burning. Add to the cocoa the scalded milk; return to the double boiler and continue cooking for 10 minutes. Add vanilla, chill before serving. Pour into tall glasses which contain a few small cubes of ice. Serve plain or top with whipped cream sprinkled with cinnamon. Serves four.

Egg-Nog.

1 egg	diluted with
Few grains salt	1-2 cup ice water
1 tbsp. sugar	2 tbsp. berry or cherry juice or
Few gratings nutmeg	2 tbsp. non-alcoholic sherry
1-2 cup cold evaporated milk	

Separate white from yolk of egg. Add salt to white and beat until stiff. Beat yolk until thick and lemon colored and add the fruit juices, nutmeg and sugar. Combine diluted milk with yolk mixture. Pour into a tall glass and put the egg white on top. Sprinkle top with chopped nuts and serve at once. Serves one.

Orange-Nog.

½ cup orange juice	1-2 cup evaporated milk diluted with
Few grains salt	
2 1-2 tsp. sugar	1-2 cup cold water

Add sugar and salt to orange juice and pour slowly into the diluted milk, stirring to mix thoroughly. Chill before serving. One-half tsp. lemon improves this drink for many. Serves one.

Obituary

Vivian Lucille, twin sister of Allien, daughter of Raymond and Minta Rhodes, was born May 26, 1901 and departed this life June 2 1926.

She was baptized February 8 1910 in the Methodist Episcopal Church by the Rev D A J. Brown. Lucille graduated from the Spencerville High School with a class of eleven in 1920.

She was united in marriage with Carl Fletcher September 19, 1925 They lived in Fort Wayne until twelve weeks ago, at which time Lucille came home sick with the flu. Complications following caused her death.

The funeral was held at the Methodist Church in Spencerville Saturday afternoon with Rev. Roy S Brown officiating, assisted by Glen Bryan who was a former pastor at Spencerville Interment was made in the White City cemetery

The girls passed their quarter century mark together just a few days ago. A week later Lucille slipped away to be with Him, who having not seen, yet she loved and trusted. Her Pastor spent the greater portion of the last day with her and the family and received her words of faith and trust in God and love for everybody.

The Pastor formed the following verse and attached it to the obituary for the comfort of the family.

Family circles soon are broken,
As the years go crashing by;
But our Lord has given a token
Of the union in the sky.

Let us then be true and faithful,
Following Him who leads the way;
Then when all of life is over
We shall dwell with them for aye.

Card Of Thanks

We hereby desire to express our sincere appreciation and thanks to all who so kindly assisted with sympathy, help and floral offerings in this time of our grief and loss

Mr. Raymond Rhodes and Family
Mr Carl Fletcher.

Mr. Edward Malon Krafft, son of Mr. and Mrs Edward Krafft was born September 27 1870, in Wilmington township, DeKalb county, Indiana.

He lived at home with his parents until his marriage with Miss Ina Crouse, of Butler, Indiana, November 16, 1893 To this union were born three children, one daughter, Mrs. Esther Johnson of Butler, Indiana; Harold, of Spencerville, Indiana and Ray, who lives on the farm north of St. Joe. Indiana.

Mr. Krafft spent his entire life in this county with the exception of four years, which he spent in Linconville, Oklahoma and also at Miama, Oklahoma, engaged in mining with his brother-in-law, John Ginder. After his return to this county he settled on the farm, where he lived until he took up his residence at Spencerville, three and one half years ago.

Mr. Krafft departed this life Wednesday morning June 2, 1926, at the age of 55 years, 9 months and 5 days. He leaves to mourn his death his wife, three children, one grandchild, two sisters, Mrs. Minnie Keller and Mrs. Ida Ginder of Butler, Indiana.

Edward Krafft was a dutiful son, a fine christian husband and father and a splendid citizen. He was held in high esteem by all who knew him.

He united with the United Brethren church about the time of their marriage and was a member of the Mount Pleasant church of the Newville Circuit, and he lived his christian life each day in his home, in his business and social relations with men. To know him was to admire his life.

Mr. Krafft was robbed of his mother's love by death when he was but a few hours old; when he was nine months old his father was united in marriage to Miss Eliza Maxwell, who was a faithful and devoted mother to the children, and for whom he cared with devotion to the time of old age and death.

Funeral service was held Saturday morning June 5, 1926, at 10 o'clock at the Lutheran church Interment took place in Newville cemetery.

Card Of Thanks

We wish to thank the friends and neighbors for their kindness shown, for the beautiful floral offerings and also the ministers and singers for their services during the death and burial of our loved one.

Mrs. Edward Krafft
Mr. and Mrs. Harold Krafft
Mr. and Mrs. Harold Johnson
Mr and Mrs Ray Krafft

Emma A Coburn, daughter of Chas M. and Almira Coburn, was born in DeKalb county, Indiana, September 16, 1850 and passed into the realms of rest June 3, 1926, aged 75 years, 8 months and 17 days.

In October, 1870 she was united in marriage to James W. Hart To this union was born six children, Henry Franklin who resides in El Centro, California; Effie A. Schoolmaster of Lansing, Mich; M. Almira Conine near Cole's Corners; Charles W of Los Angeles Cal., Johnathen C of Fort Wayne and Jesse J. who resides on the old homestead one mile south and one mile east of Coburn's Corners; all of whom are living, also the aged husband and twenty-six grandchildren.

Mrs Hart was converted to the Christian faith at the age of twelve and remained a faithful, consistent chistian throughout her life, being the oldest member of the Coburn's Corners congregation. She was a true christian mother, friend and neighbor Her life speaks for itself Those who knew her best, loved her most.

She was stricken with appoplexy January 13, while in the home of her niece, Mrs. Fred Hart and was moved to the home of McClellan Hart, the husband's brother, four weeks later, where she suffered a second stroke which resulted in her death June 3rd.

She leaves to mourn their loss numerous relatives: two brothers, six half brothers and one half sister and step mother, besides husband, children and grandchildren.

She has gone to the God who doeth all things well. She rests from her labors and her works do follow her.

"We count that life not lived in vain
With all its sorrow, sickness, pain,
If, when at last the fight is won,
There comes to her the call—Well done."

The funeral was held from the Coburn's Corners church Sunday afternoon, Rev. J. N. Scholes officiating. Burial was made in Alton cemetery.

Card Of Thanks

We wish through this means to thank the dear ones who with loving hands and hearts ministered to the needs of our mother and wife, during her last illness, and to all who added anything of joy and comfort to the deceased, also for the tributes of love in the floral offerings J W. Hart and Children.

Effie Schoolmaster
Mira Conine
John C. Hart
Jay J Hart

CHAPTER XX

—27—

One bitter day in the middle of January six lean dogs, heads down, limped painfully across the clearing at Wailing River. At the tail of the sled followed two men, whose haggard eyes and frost-cracked faces bore the scars of the barrage of the January blizzards.

"We have worried much, Michel and I," said the factor, as Steele and David thawed out before the trade-house stove. "You struck terrible weather. Did your rations hold out?"

"Yes, by cutting them in two," replied Steele with a grimace.

"We'll give you your fill as soon as it can be cooked. And your mission—it was successful?" hazarded the curious St. Onge, ignorant of the purpose of the six-hundred-mile midwinter journey.

"It was," and Steele handed the factor the oil-skin envelope. "Read that!"

St. Onge read the release in open-mouthed amazement.

"Man, man! How did you get it?" he gasped.

Steele described his meeting at Albany with Lascelles.

Unchecked tears slowly gathered in the eyes of the overjoyed old man. "My boy," he said brokenly. "It would be the proudest day of my life. You still care for her, don't you?" he demanded anxiously.

"You know I care for her," Steele gently answered, "but I went to Albany for her—not for myself. You must promise me that she hears nothing of this until I have left. She would think she had to pay—feel honor bound. I know her, monsieur. You must not tell her."

"But if she cares? I feel, in her heart, that she does," protested St. Onge.

"She must be a free agent," insisted Steele. "I go south as soon as the dogs are rested. I shall talk to her first."

"I'm sorry, but as you wish it, I shall not tell her."

That night, after what, to the hungry Steele, was a sumptuous meal, consisting largely of caribou, St. Onge left his guest and daughter alone.

During the meal the girl had furtively noted the frostbitten fingers of the American, the drawn cheeks, blackened and cracked by the wind of the Albany trail, the strained look in the gray eyes. Steele had warmed to the sincerity of her welcome, the evident pleasure in her greeting. Exhausted as he was, the days before his departure were too few to waste one evening by seeking rest, so he watched her with hungry eyes as they talked, wondering whether her heart had changed. But she gave no sign, and he was too proud to ask.

On the evening before he left with David for Nepigon, he again sat alone with the woman for whose welfare he had given the best that was in him—for whom he had toiled and planned, faced the sting of the norther and the pinch of the searing cold; the woman he loved too deeply to make himself the recipient of her gratitude.

"You have never told me, monsieur, why you took that terrible journey to Albany," she said, after a silence in which her black brows were drawn together in evident abstraction.

The man's eyes softened as they lingered on the clean lines of her profile, the masses of her dusky hair, for she had asked the question with averted face as if fearing his answer.

"I went to Albany," he said, "to test my judgment of human nature."

"And you found—?"

"I found—that I was a mind reader," he answered with a smile.

"Is it a very great secret?" she asked with a wistful look in the dark eyes that searched his.

"No, you will hear—tomorrow."

"But, tomorrow—you go?"

"Yes."

"And I am not to know until you have gone? So that is it?"

"You will understand—tomorrow," he put her off with.

For a long interval she sat gazing at the rug at her feet, then leaned toward him, her face tense with feeling. "What must you think of me?" she demanded. "You have planned and worked for us, my father and me—given—given—given! And we—we have sat with folded hands while you toiled—and won. Oh, I want you to know how fine you have been through it all—want you to sense my gratitude—before you go."

She had risen and was pacing the floor—restraint gone.

"I have been selfish—inhospitable," she stumbled on, her eyes avoiding his, "but I want you to know that there is nothing—nothing which I will not do—to prove my gratitude for what you have done." She turned from him and he knew by the convulsive movement of her shoulders that she was weeping.

"There are some things without price," he said gently. "What I have done, I have not done—for reward. I know—that I have your gratitude—it is enough."

She turned swiftly upon him with: "But if you knew—"; seemingly confused, checked by a surge of emotion she could not control, she stood for an instant, inarticulate; then left him alone.

* * * * * * *

Late in February, long after the last of the fur cached at the Stooping had been traded with St. Onge, a dog-team driven by a strange Indian arrived at Wailing River. To the surprised questions of the factor the driver answered that he had come from Nepigon station with a package and a letter addressed to Mademoiselle Denise St. Onge. The factor took the long, wooden box and the letter to his quarters, where he found his daughter with Charlotte in the kitchen.

"A packet has arrived from Nepigon," announced the excited St. Onge, "with a box and a letter for you, my child."

"A letter for me?" she said, a wave of color sweeping her face, while St. Onge watched her curiously.

In the living room Denise St. Onge opened the letter, postmarked Kenora, and read:

"Mademoiselle St. Onge:

"Wailing River.

"What I wrote you at Ogoke last autumn was a lie. I am sorry.

"Rose Bernard, formerly Laflamme."

The paper slowly slipped from the fingers of the numbed girl and fluttered to the floor.

"What is it? Who is it from?" demanded her father.

The face of Denise St. Onge was the color of chalk as she raised her hopeless eyes. "He went to Albany for

He Had Come From Nepigon Station With a Package and a Letter Addressed to Mademoiselle Denise St. Onge.

me," she said, as if to herself, "and would not tell me I was free, fearing my gratitude. And now—I receive this."

"But what is it?"

"Read for yourself, father," and the stunned girl walked to a window, and gazed with dry-eyed remorse out on the white valley.

"All, I deserve—all," she said, turning from the window. "But you are wrong when you think I did not know why he went to Albany—I knew. And I knew I was free the night before he left, when—when I tried to tell him that—I loved him. But he thought it was gratitude—thought I was trying to pay. He is proud—oh, so proud!"

"He is a gallant gentleman, and did not know you cared," murmured the old man. "But what is in this box?"

While the girl at the window gazed on the desolate hills as on the white ruin of her happiness, the factor opened the cover of the box. Removing the heavy wrappings of paper protecting the contents, he gasped in surprise.

"Mon Dieu, mon Dieu!"

The girl turned from her bitter retrospection. "What is it?"

"Come here!"

She joined him and bent over the box. In its wrappings lay the ebony case of a violin. On the lid of the case letters of gold spelled: "Nicolo Amati, Cremona."

"An Amati!" she cried in her joy. "A priceless Amati!" Then, brokenly, "Father, father! I am paying—I am paying!"

With feverish haste the key was found and the case opened. She tenderly lifted the rare handiwork of the world-famous maker from its bed of velvet and impulsively caressed it with her cheek.

"And he sends no word—no letter?" cried the perplexed St. Onge.

She smiled at his naivete. "There is no word to send, father. He is sorry there, in his gay New York, for the lonely woman he once knew in the wilderness. This," and she held aloft the violin, "is his anodyne for the desolate—the symbol of his pity."

* * * * * * *

It was May, and Brent Steele had been hard at work at the museum for three months. In March he had received two letters brought from Wailing River by the messenger sent with the violin. The letter from the factor was strained and self-conscious. Together with brief mention of the arrival of the fur from the Stooping, St. Onge had profusely thanked his friend for the costly gift which had made the long evenings again bright with music. But of Denise he said little, except that she was well and played incessantly. So much had happened that the winter seemed unusually long—was, in fact, a bit on their nerves, and the spring would be most welcome. Some day, St. Onge suggested, it might be possible for Steele to revisit the valley of the Wailing. He knew the way and his friends there would live for that day.

The other letter was shorter. It ran:

"Dear Monsieur Steele:

"A violin—and a Nicolo Amati! Your generosity and your thought of me make these words but feeble things. You, to whom gratitude is distasteful, must yet endure my heartfelt thanks, not only for the rare gift, but for the journey you made for my peace of mind through that terrible wind and cold. The violin will ever be a living memory of one who came, a stranger, to two lonely and hopeless creatures, and left them, facing the future with courage.

"Denise St. Onge."

If only the letter had given him a sign that she wanted him—needed him, instead of dwelling on her gratitude. She was so proud and so brave. If only he had taken her in his arms that last night, and learned from her eyes, the blood in her face, the beat of her heart, whether she was paying a debt of honor or—loved him.

Then, late in May, came a letter—addressed by a hand unused to the pen, and postmarked at Nepigon station on the Canadian Pacific. David doubtless had news and some one had written for him. Steele opened the envelope and read with increasing wonder and delight:

"Miseu Steele—

"Iv you weesh mamsel you burn up de trail to Wailing Reever queek. All de long snow she have play an play de sad museec an cry on her bed. Wen we go on hill first tam she lift her arm to de sout an say, Cum bak to me. Dat mean you. You cum lak de win. Michel tak dis to de railroad, he an me get marry wen meesnary cum in june. Charlotte."

It was from the faithful Ojibway woman who had for so long faithfully served Denise.

That night the Montreal sleeper out of New York carried a man whose gray eyes were strangely happy. A week later two friends were poling the nose of a canoe into the spring freshet of the Jackfish as if pursued by a Windigo. Farther on they recklessly ran in succession each white-water of the swollen Rouge. Down Ogoke, the measured churn-swish, churn-swish of lunging blades marked off the miles to the outlet. Then riding the flood water of the racing Wailing, one afternoon the canoe slid into the beach of the post.

In the trade-house Steele and David found St. Onge and his head-man. There were surprised greetings, then: "I have come for her," announced the American. "Where is she?"

"She has gone to the ridge," answered St. Onge with shining eyes. "You will find her with her violin—alone."

At the edge of the scrub, below the bare brow of the hill, Steele stopped, with a heart which jarred him with its beat. He wanted to watch her—listen to her playing—before making his coming known. With a shaking hand he parted the spruce and looked.

Silhouetted against the soft May sky, she stood with her violin, facing from him. Presently she tilted her head and drew the bow across the strings. Faintly drifted down to him the haunting minors of the "Elegie" he first heard at the rapids—the symbol of her fears and despair.

Then, of a sudden, the far call of errant Canadas broke in on the strains of the violin. The girl stopped short off and searched the sky for the wedge of geese. Out of the south she saw them coming and opened her arms. Then, as the violin changed its mood—broke into her own, "When Spring Comes North," he noiselessly approached her.

She finished, and as the last of the flock passed overhead, waved her bow. "Goodby! goodby!" she called, as the wanderers faded into the north.

"I have followed them back to you," spoke a low voice behind her.

The girl turned startled eyes on the man who stood smiling. Over her throat and face up to the dusky hair mounted the blood.

"You!" she faltered. "It's not a dream?"

"I have come back," he said, "for your gratitude."

"My gratitude?" She smiled through mist-veiled eyes, as he stood beside her. "You ask no more?" And she was in his arms, his face buried in the raven hair.

"Denise! Denise!"

She raised her flaming face to his and there on the hilltop they stood, oblivious of the world.

"Do you think this gratitude?" she murmured at length.

"No—paradise!"

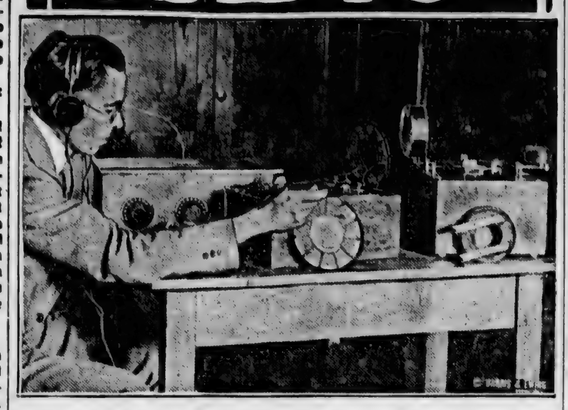
"At last—my spring—has come north," she sighed, "after the long snows."

[THE END]

No Mail for Him

The postal service is laughing at the story of a post-office inspector who went into the hills of Arkansas to check up a village post office. The neighbors said the P. M. had gone fishing. Finding him, the inspector asked, "Are you the postmaster?" After a minute the P. M. said, "Yep. What's your name?" "P. D. Smith." The P. M. reached into his back pocket, took out a bunch of letters and running over them for the addresses, said, "Nope. Nothing fer ye," and went on fishing.—Capper's Weekly.

RADIO



Morris S. Strock of the Government Radio Laboratory Has Designed and Built an Apparatus to Measure Frequencies of Stations.

With short wave radio transmission now emanating from practically every corner of the earth, a tremendous interest in this form of communication is being predicted for this summer.

According to the most recent list of the world's short-wave stations there are approximately 130 transmitters operating on regular schedules on wave lengths between 18 and 115 meters. The total is expected to be almost doubled by the end of the year.

United States Leads.

The United States maintains the lead in the short-wave stations, principally through its naval transmitters and the experimental stations of the low-wave pioneers among the radio manufacturers. General Electric company, A. H. Grebe & Co., the Westinghouse Electric and Manufacturing company, the Radio Corporation of America together operate practically one-fourth of the high-frequency plants.

Included in the list of stations on low waves are transmitters located in Germany, England, Java, Sweden, Holland, Russia, France, Hawaii, Samoa, Canal Zone, the Philippines, Japan and aboard the ships of the United States fleet scattered throughout the world.

In addition there are many others operated by amateurs who have received experimental licenses to broadcast within the low-wave bands assigned for that type of work. Through co-operation of the International Radio Amateur union, which was created last year, the low-wave communications, both in code and voice, are being relayed extensively throughout the world.

"Radio Boat" Experiment.

Among the interesting experiments to be undertaken soon in short-wave transmission is the "radio boat" to be launched by the Grebe company, and which is expected to cover the Bermuda races, not only for short-wave receivers but for broadcasting by the higher wave stations.

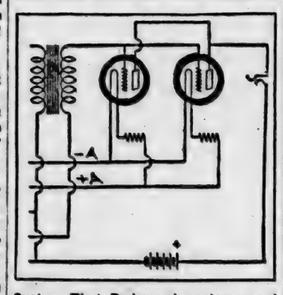
The extent to which the short wave is being used for re-broadcasting in other parts of the world was shown recently in the announcement by the General Electric company that a scheduled relay of a program for the annual agricultural show of the South African Union was received clearly and re-transmitted. Included in the two-hour program was an address by Secretary of Agriculture Jardine and a concert from Schenectady.

Parallel Tubes Reduce Impedance; Aid Output

In various set building experiments going on there appears to be an inclination toward the use of parallel tubes, that is, two tubes with their grids connected together to the input and their plates connected together to the output circuit.

In studying this type of tube connection it must be borne in mind that the push-pull combination is not a parallel tube arrangement. It is more of a relay system. One tube takes up the signal when the other lets go.

In connecting two grids together both grids are at the same voltage at



System That Reduces Impedance and Improves the Output.

the same time. Both plates, being connected together, are at the same voltage at the same instant. But an essential in smooth action is that both tubes must be alike, which seldom happens. It is the same situation with a team of horses. Unless they are matched there will be a difference in the work they do.

Aside from these considerations, putting the input circuits in parallel cuts the input impedance to one-half of its value. Likewise, plate circuits in parallel cuts the output impedance to half value. In the output circuit, therefore, to match the tube impedance, the transformer or choke or resistance would naturally have one-half the impedance it had when matching a single tube. In other words, smaller chokes and smaller primary inductances will give better results than the high values, assuming the latter to be correct for a single tube. But another way, the cheaper types which do not give such desirable effects on a single tube should be better on the parallel tube.

Tube Insurance That Is Worth Remembering

Probably many tubes are burned out every year by accidentally connecting a high-voltage "B" battery across their filament terminals. There are many ways to prevent such an accident from happening, and one of the easiest is to connect a high resistance in the negative lead to the "B" battery. An ordinary 10-watt electric-light bulb is one high resistance which may be used for this purpose. If the use of the lamp causes a howling noise to be heard, shunt it with a 1-mfd. condenser.

ETHER WAVES

Never touch the inside of a set when it is in operation.

The most common source of trouble within a radio set is in the tubes or in the sockets.

The direction in which the antenna points affects the loudness of the signals received.

An aerial is not essential with a sensitive set employing two stages of radio frequency amplification.

When using the variocoupler as a single circuit set reverse the tickler connections if it will not oscillate.

Coils for high frequency currents should always be wound with nonmagnetic material, preferably copper.

The ground is one of the most important portions of the radio circuit.

Crystal detectors operate as long as the detector is in good condition.

Excessive resin from solder can be removed with alcohol and a soft cloth.

If a listener is bothered by having the station programs fade the cause may be with the aerial of the receiving set. If the antenna becomes loose and swings in the wind it will often cause weak signals.

America's Importance in Great Radio Field

Until radio became a part of American communication service, this country was, in effect, reliant upon foreign countries, especially in time of war. Since radio has been developed, however, the United States has taken its place in the sun, so to speak, and within the last six years has, through its private and public enterprise and initiative, given America direct communication with Great Britain, France, Italy, Germany, Holland, Poland, Sweden, Norway, the Argentine, Japan, Java, Hawaii, Brazil, Chile, the Philippines, China, French Indo-China and Australasia. The American radio "network" is comparable only to the cable network of Great Britain.

Radiation Different From Regeneration

Many people have the mistaken idea that regeneration means radiation, or vice versa. This is not true. Regeneration and radiation are not synonymous, and should not be confused.

A radio set may contain regeneration in its circuit without offending by radiating. On the other hand, a so-called nonregenerating receiver may be, and frequently is, a most violent offender from radiation. A radio set radiates—sometimes improperly called "reradiates"—when the tube directly or magnetically connected to the antenna, oscillates and causes the antenna likewise to oscillate and give off energy.

Radio Transformers

If distortionless amplification is desired the transformer in the first stage of audio amplification should not have a ratio greater than 5:1. The second stage transformer should have a 3:1 ratio

What Radio Means to the Farmer

By A. ATWATER KENT

TICKING dollars out of the air was one trick of the old-time sleight-of-hand artist that never failed to give his audience a thrill. While it was recognized as a trick, the mere suggestion that dollars might, somehow, be plucked from the ether stirred the interest of the average spectator more than many other feats of legerdemain requiring much greater skill. It touched his money sense—and the "pocket nerve" has long been recognized as one of the most sensitive in the human makeup.

Today, however, government experts hold that the illusion of the magician has been changed into the fact of actual accomplishment. Dollars are being taken from the air. Official investigation, in fact, reveals the air as a potential source of wealth for the farmers of this country to an extent rivaled only by the productivity of the soil itself.

This transformation is being brought about by the development and extension of radio facilities and services to fit the special needs of agriculture. For it is in agriculture that radio seems certain to find its greatest development as a utility with a direct dollar and cents value to its users.

Secretary of Agriculture Jardine, who has given much study to the use of radio as an aid to agriculture, recently said:

"Radio is already a vital factor in the economic and intellectual life of the farmer. It is easy to foresee millions upon millions of dollars added to the value of agriculture through services provided the farmer by radio."

Folks on the farms and in the country towns where general prosperity depends on the prosperity of agriculture are particularly favored by radio. To the city man or woman, the use of radio is limited to recreation and the reception of general information. They enjoy the concerts, the dance programs, the lectures and other features that come to them by day and night over the air, but their pleasure and enjoyment is the principal recompense for their investment in radio equipment.

The same programs that entertain the city listener are received also by listeners-in on the farm, where they are received with equal pleasure and satisfaction. But in addition to the programs of entertainment and general information, of interest alike to city and country, radio is being used more and more to carry to the farmer special information of direct assistance to him in the production and marketing of his crops, the breeding and care of his live stock and the prevention of loss and damage from storms, pests and other emergency conditions.

It is this service that raises radio, for the farmer, out of the class of a mere instrumentality for pleasure and recreation alone, and makes of it a utility as helpful in the business of farming as the stock ticker and the telephone are to the broker or business man in the city.

The greater emphasis on radio as a practical dollars-and-cents investment for the farmer does not come from radio manufacturers or broadcasters or from any group primarily interested in the radio industry. It comes, instead, from the United States Department of Agriculture, whose prime interest is in the progress and prosperity of the American farmer.

The department began an experimental radio market news service in December, 1920. A laboratory transmitter at the United States bureau of standards was used to broadcast, on a 400-meter wave length, by radio telegraph from Washington, a radio marketgram and turn it over to the newspapers in their own towns, or give copies to the banks or stores to be posted on bulletin boards.

The practical results of this first experiment, I am told, encouraged government authorities to broaden the service, and in April, 1921, through arrangements with the Post Office department, wireless market reports were broadcast several times a day from air mail radio stations in half a dozen different cities. By January, 1922, ther market reports were being relayed and broadcast by radio telegraph through a chain of stations reaching from coast to coast.

Then came the era of radio telephone broadcasting and with it the government's radio service for farmers grew by leaps and bounds. Well-established schedules of weather, crop and market reports are now broadcast from more than 100 stations in all parts of the country and no agricultural community is out of reach of Uncle Sam's farm radio service.

A recent study by the department, through its 2,500 county agents, of the extent to which farmers are finding this service of direct help in their business brought what the government experts regard as convincing proof that a radio receiving set is now definitely recognized as a part of the agricultural plant of the up-to-date farmer. Typical of this view, as expressed by these farm experts, is one I have seen from Earl S. Miles, county agent for Washington county, Indiana.

"Farmers in this county," Mr. Miles reported, "now think of radio in terms of an investment that will return a profit through more intelligent selling of live stock. The most encouraging thing today is to see farmers, located 15 or 20 miles from a railroad, equipped with a radio and a truck. The radio keeps them informed as to the market, and when prices are right they can put their stock on the market within two or three hours. Before the day of farm radio they had to take chances on what the market would be when they reached the yards."

Gardner C. Norcross, county agent for Plymouth county, Mass., reported still another angle of advantage for the farmer equipped with radio. "Radio," he says, "has proved one of the most effective methods of teaching better farm practices and thereby appreciably increasing farm profits."

As a result of the thorough endorsement by county agents of the benefits being bestowed by radio and the appreciation voiced directly by the farmers themselves, four new farm features were recently put on the air by the Department of Agriculture, all designed to be of direct material advantage to the farm family. These are: A farm news digest, consisting of short items of agricultural news not accessible to the average farm reader; "Fifty Farm Flashes," a daily service of 50 timely, practical questions put by farmers and answered by agricultural authorities; the housekeeper's half hour, an informal program designed to supply both information and inspiration to housewives, putting at their disposal the great fund of facts interesting to homemakers which are developed by the government bureau of home economics and similar research agencies and the Radio Order of Junior Gardeners, a program especially for boys and girls but helpful also to grown-ups.

The latter, it seems to me, gives an authoritative discussion of timely gardening subjects. Boys and girls who enroll in the order are later furnished the talks and supplementary gardening material in printed form.

In addition to these programs, broadcast by the government for the direct benefit of farmers, I am told that agricultural information of a sort that returns dividends in dollars and cents is being distributed by radio through more than a score of state agricultural colleges. Many of these colleges are now using radio in broadcasting their college extension courses. One fine thing about this is that boys and girls financially unable to attend college are, through radio, enabled to enroll for these courses, take their examinations and receive college credit therefor. Radio owes a great deal to Secretary of Agriculture Jardine, formerly head of the Kansas State Agricultural college at Manhattan, Kan., who was the pioneer in the broadcasting of college extension courses. As a result of the extensive use by this institution of radio as an aid to agriculture, under Mr. Jardine's direction, Kansas claims a larger percentage of farms radio equipped than any other large agricultural state.

Of necessity, the dollars-and-cents side of radio on the farm is often the deciding factor as to whether or not a farmer can afford to equip his home with a radio. But, despite any direct financial return, it is to be doubted, after all, whether the money profit that the farmer receives through his radio, however great, respresents its greatest value to him.

Gas Beyond Reach

A volcano is not only a vast steam boiler, likely at any moment to blow itself up; it is also a vast gas producer, no doubt capable of supplying gas enough for many cities if we could collect and purify the inflammable gases which are given off.

Familiar

Maid (as phone bell rings)—Ah—that'll be your young man, miss. I'd know 'is ring anywhere.—London Opinion.

LITTLE BITS OF INFORMATION

The usual life of an airplane engine is estimated at from 400 to 800 hours.

A building 250 feet higher than the Eiffel tower is proposed in New York city.

In Ecuador there is grown a fruit, the cherimoya, which tastes like ice cream.

A Washington (N. J.) man recently unearthed a century-old pot of coins dated from 1732 to 1766.

Nero is said to have used $200,000 worth of perfume at an entertainment.

During the Seventeenth century all tea was imported from China and cost from $25 to $50 a pound.

The earliest mention of the "brain" of man is found in a medical document written in Egypt about 1700 B. C.

The death rate from diphtheria in 1900 was 43.3 a 1,000; now it is 9.4 a 1,000.

CHILDREN CRY FOR

Fletcher's CASTORIA

MOTHER:— Fletcher's Castoria is a pleasant, harmless Substitute for Castor Oil, Paregoric, Teething Drops and Soothing Syrups, especially prepared for Infants in arms and Children all ages.

To avoid imitations, always look for the signature of Chas. H. Fletcher. Proven directions on each package. Physicians everywhere recommend it.

DR. W. B. CALDWELL, AT THE AGE OF 83

Women Need a Mild Laxative —Not a "Physic"

Countless girls and women now know how foolish and needless it is to "purge" and "physic" themselves to avoid sick headaches, dizziness, biliousness, sallow skin, colds, or sour, gassy stomach.

They have found that Dr. Caldwell's Syrup Pepsin helps to establish natural bowel "regularity" even for those heretofore chronically constipated. Dr. Caldwell's Syrup Pepsin not only causes a gentle, easy bowel movement but, best of all, it never gripes, sickens or upsets the most delicate girl or woman. Besides, it is absolutely harmless and so pleasant that even a cross, feverish, bilious, sick child gladly takes it.

Buy a large 60-cent bottle at any store that sells medicine and just ask for yourself.

Dr. Caldwell's SYRUP PEPSIN

Strength and Energy *this easy way*

Simply drop a cake of Yeast Foam in a glass of water; let stand for five minutes; stir; let settle and drink the milky water, including the white precipitate. Or if you prefer, eat the cake with a cracker or a piece of butter.

Easy, simple, palatable. Yet you get the full tonic value of the marvelous yeast plant.

If you suffer from constipation, anaemia, boils, pimples, indigestion—don't fail to eat Yeast Foam *regularly*. Its beneficial effects will amaze you!

The fly family learns the shortest distance between two points

GERMS—6,000,000 germs on a single fly, says a noted health officer. Protect your family with Flit.

Flit spray clears your home in a few minutes of disease-bearing flies and mosquitoes. It is clean, safe and easy to use.

Kills All Household Insects

Flit spray also destroys bed bugs, roaches and ants. It searches out the cracks and crevices where they hide and breed, and destroys insects and their eggs. Spray Flit on your garments. Flit kills moths and their larvae which eat holes. Extensive tests showed that Flit spray did not stain the most delicate fabrics.

Flit is the result of exhaustive research by expert entomologists and chemists. It is harmless to mankind. Flit has replaced the old methods because it kills *all* the insects—and does it quickly.

Get a Flit can and sprayer today. For sale everywhere.

PROSPEROUS TIMES

What will bring prosperity to our people? That is a grave question, about which statesmen and politicians disagree.

But here is our answer. Prosperity will come through wise thinking, careful spending, hard work, right habits, methodical saving and safe investing. Think that over carefully and see if we are not right. Along with this, our Bank stands ready to help you. All your facilities are at your command.

Carl Hagenbeck Great Wallace Circus

Brilliant and highly colored posters throughout St. Joe and surrounding countryside proclaim the coming of the Carl Hagenbeck-Great Wallace Circus to Auburn for afternoon and night performances on June 15. Hagenbeck-Wallace is known universally as the "Highest Class Circus on Earth."

During the past week advance representatives have been in this community heralding the appearance of the big circus in Auburn for two exhibitions. Additional billposters and lithographers are headed in this direction as Hagenbeck-Wallace bills all towns and villages within a fifty mile radius of their exhibition stand.

Advance men state that the Hagenbeck-Wallace Circus this year has more novelties and features than ever before, and the exhibition will mark an epoch in trained animal feats and equestrian acts. A menagerie containing practically a specimen of every living animal today is being carried, while the performance is said to be the last word in gorgeous costumes, pretty ladies and beautiful horses.

During the winter months especial attention was paid to the wild animal portion of the program. A corps of trainers, including Clyde Beatty, the youthful American, and Bob McPherson, noted European subjugator, worked extra hours at the Peru, Indiana, winter quarters instilling new tricks, feats and stunts into the savage jungle beasts.

In the rings on the stage, as well as the hippodrome track there will be features of international reputation, including the Orrin Davenport Family of equestrians and the Ward-Kimball Troupe of daring aerialists. Noted clowns, such as the Art Borella Trio, the Three Brothers, Joe Coyle, Earl Shipley, Mickey McDonald and others will produce new pantomime stunts assured to bring laughter from all.

In view of traffic congestion there will be no street parade. But for the convenience of the public a city ticket office will be established on circus day at Auburn. Reserved and general admission tickets will be sold at exactly the same price as charged at the ticket booths on the ground.

If you have any grievance about your assessment, you can appear before the board Saturday, June 19 and so state. Spencer township taxpayers have been given June 21.

Mrs. C. R. Price and Mrs. Chas. Koch spent the week end with Ft. Wayne relatives and attended Ballet Gracieuse by two hundred pupils of Violet Reinwald, at the Shrine Auditorium, Friday evening and on Saturday attended the Romance and Wedding of Flowers, given at the Little Art Theatre by pupils of Virginia Philley Whitney.

Account of the Minnick Accident

Roy Kinsey and wife were at Albany Tuesday, attending the funeral of Mrs H. R Minnick, who was killed in an auto wreck Saturday night. The doctor and his wife were enroute to Cambridge to spend the evening and Sunday with the latter's daughter. The road they were driving was narrow strange and had some new gravel Suddenly they came to the end of the road, with a square turn, driving at fifteen miles an hour, the car turned over.

The doctor, after several attempts, loosened himself and then tried to lift the car from off his wife. He was unable to release her, so hurried to a farm house and no one responded, so he hurried back and a passerby stopped and helped move the car.

In the accident Mrs. Minnick was thrown face downward and the car lay across her back. Life was extinct in less than five minutes the doctor stated.

Just what he will do is not known. He has the sympathy of his many friends here.

Frank Akins had a cow killed by lightning Friday evening.

The annual meeting of the LaGrange county Old Settlers' association will be held at LaGrange this year on Thursday, June 24

Weekly Concerts Now In Progress

Last Wednesday evening was the first of the weekly concerts at St Joe. A good crowd was present and the concert was good also Come in each week and thus lend your encouragement to the band. Many new pieces are on the way for introduction to the weekly visitors and if you appreciate them, tell the boys Just "Honk" a little louder and longer.

As the weather warms the attendance will increase as the concerts prove to be most popular and a change from Saturday evenings will allow folks to come in from a distance We hope to have the program occasionally, should the director see fit to publish.

Infant Child Dies

Bobbie, the infant son of Mr and Mrs Foster Gee, born Wednesday, June 9, was buried Saturday Appropriate services were held from the home, Merle C. Neer, officiating. E R Kinsey, funeral director. Burial was made in Riverside Cemetery.

Card Of Thanks

We desire in this way to thank the friends and neighbors for their kindness and sympathy during the sickness and death of our darling baby Bobbie.

Mr. and Mrs. Foster Gee and Family.

The cost of the primary election held May 4 in DeKalb county was 82 cents a vote, figures compiled in the office of County Auditor. The number of votes cast was approximately 5,600 and the expenses amounted to $4,507. The claims, allowed by the county commissioners at their June term, include the pay of the election officials, pringing and other expenses.

To Make Men Think

by O. Lawrence Hawthorne

I'd rather make men think than rule a nation!
I'd rather touch their hearts with sentiment
Than govern all the peoples in creation
And try by force to quell their discontent.

To make men think and, thinking, reach decisions
That lift them from the dust toward better things—
Here surely is a program whose provisions
Outweigh the might of presidents and kings!

If I can stimulate a man's emotions
And so appeal to natural desire,
Then can I sway his thoughts and his devotions
Or thrill his very soul with ardent fire.

If I can make men think—if I may guide them
Along the only way to happiness—
If, as their friend, I walk and talk beside them,
My life will be a genuine success.

© 1925 O. Lawrence Hawthorne.

Victor Brown, who is in a hospital at South Bend recovering from fall from pole, is slowly improving. His foot was placed in a cast last week and will be left in that condition for several weeks. He is feeling fine although lonesome and would like to come home. Ye editor visited him Saturday evening.

Playing on the streets at this time of the year, when the children are engaged in their various outdoor games—coasting, roller skating, baseball, marbles, bicycle riding, etc.,—the streets and highways are a source of constant danger. It would be neither possible nor desirable to prevent such play altogether, for the children are entitled to their outdoor recreations, and have certain rights upon the streets; but that a stricter supervision should be kept by parents is not to be disputed. And it is up to every person who drives a car to exercise extreme care at all times when driving where children may be.

D. F. Benninghoff made a trip to Detroit Thursday and returned with a Dodge Sedan.

Mrs. Grace Dilley and son, John, spent over Sunday in the Marion Smith home at Auburn.

LUMBER YARD FOR ST. JOE

We are pleased to announce to St. Joe and surrounding country that we have taken a long time lease on the large hay barn that was formerly occupied by Hart & Lower of Hicksville, O. We will have a complete line of lumber and roofing, cement, and in fact everything that will make a modern lumber yard. We solicit your business and will be more than pleased to figure on bills for houses, barns or any other buildings. Remember this is something that St. Joe has needed for a good many years and we hope that St. Joe and community will support it so that it will be a permanent fixture in the town of St. Joe.

The Diary of A Fly

MONDAY

Have found a dandy boarding place. Mrs. Jones sure sets a fine table. Had chicken for dinner yesterday. Afterward took a bath in the milk and dried himself in the sugar.

TUESDAY

Living like a king. Went skating on a slab of butter today. Played with the baby awhile and then took a nice nap in the cooky jar.

WEDNESDAY

I had a narrow escape today. I woke Mr. Jones from a nap by taking my daily exercise on the tip of his nose. He chased me all over the house with a swatter, but I got away

THURSDAY

I had a fine time all day today. I had a fine physical work-out in the cottage cheese this afternoon and got into a good sweat. It sure was great sport sliding down the little lumps of cheese. I felt like a million dollars afterwards and then played tag with Mrs. Jones. That woman can get madder than any person I ever knew.

FRIDAY

After being housed all week, I've come outside for a little airing, but I find the indoors nicer—more places to sleep and loaf and more people to play with.

SATURDAY

Out of luck. Mrs. Jones bought some new window screens, screen doors and fly swatters and then chased me outdoors again. I'm starving to death. I hate those good screens of Kinsey's Hardware.

E. R. KINSEY, Hardware Furniture

New 3 and 4 Burner Stove COMPLETE

An ideal range for the usual family—sturdy and designed to meet the cooking needs. The cooking top of cast iron grid work, is extra wide and entirely open, all space can be used. Roomy oven is adequately heated by a single burner This new model oven, with the door on the end, is more convenient for the cook; and, although it has an inside capacity as great as that of an ordinary two-burner oven, it occupies less space on the stove. And we are selling them too. Call and see them on display.

Sports Fashions in Varied Types

Rich Materials and Winsome Colors Feature Duds for Spring Wear.

One type of dress in many variants is that which has come to be known as sports—suit, coat, ensemble clothes in general. It has been evolved in successive seasons from something crude and nondescript to a veritable synonym for chic, for service and for a certain distinction.

The interpretation given to sports togs by designers of different nationalities is entertaining, and this year is more than ordinarily important, asserts a fashion writer in the New York Times, because of the greatly elaborated models presented under the one classification. For the genuine sportswomen, English, French or American dress of a very practical sort is required. It is for those who motor, hike, ride or play at games.

For all such occasions there are new designs in suits, in two-piece frocks and in coats and capes of many materials; there are beautiful and satisfactory woolens and worsteds, flannels, tweeds in checks, blocks, stripes and plaids, coverts, hair-line twills, Cheviots, diagonals, frisca, wool velours and broadcloths. The last mentioned is the latest revival, especially appropriate for tailored suits of a more formal type. These fabrics are tailored in many simple, more or less mannish modes that make for style, utility and comfort. That "English" look which first intrigued American women has become one of the dependables of the wardrobe, and really has no rival.

Sports Dress De Luxe.

Sports dress de luxe as it is translated by creators on both sides of the water, particularly by the French, is obviously a costume to be worn in attending sports affairs. It is made of whatever material climate and season demand, but in any event it is a thing of style, even of elegance. Crepe, satin, taffeta, needlework, fine detail and beauty in color distinguish the models presented by Paris couturiers, who are making some unusual designs and emphasizing the importance of the short separate sports coat. This is cut straight, almost fitted, in half-length, coming down over the hips, and in all of the handsomer models is elaborated with embroidery of unusual design.

In some uncommonly smart coats of this description shown lately by Jaquet the material was satin or heavy crepe, embroidered or braided in silk cord, floss and metal in motifs and patterns taken from old illuminated manuscripts, tapestries or murals. In feeling they are Egyptian, Russian, Chinese, Italian, or whatever blends or combines in ways striking and artistic. Even the lines and composition of old ecclesiastic embroideries have inspired some of the detail in these original and altogether attractive designs. One model stood out among the many in the Jaquet display, a three-quarter coat of soft taupe satin crepe,

Semi-Sports Suit of Rose-Colored Canton Crepe; Scalloped Line.

the back of which was almost covered with a motif, square in outline and embroidered with self-toned floss and round silk braid into which threads of gold were stitched. A new detail of trimming, the triangular metal nailhead, was skillfully used to give richness and brilliance to the quiet taupe shades.

In another model, done in bronze crepe, scarlet was introduced in the embroidery of Byzantine character; and still another dashing coat was done all in black and white, the design of this decoration being modernistic. These separate, delightful sports coats are in reality happy extras to be worn over crepe or georgette frocks, and they fill most satisfactorily a want in the wardrobe of the fashionable American woman.

Dressy Separate Jacket.

The dressy separate jacket is only one medium for the display of many beautiful varieties of embroidery which is ultra-fashionable this season. It marks a definite swing back out of the plain and obvious rule of dress from which we have been gradually emerging for two years. Apparently as evening dress grows more simple, clothes for day wear and sports dress are paradoxically becoming more ornate. The little jumper suit, begun so naively and serving as a utility frock these several seasons, is now dignified with elaborate embroidery in classic designs, all done in the finest materials, even approaching the extravagant. Almost all these in late imported models show a skirt of some light-weight goods—crepe de chine, crepe Elizabeth, crepe Roma or georgette—plaited so fine as to resemble a rib or fluting. The scheme of elaboration is centered in the jumper, which, in some of the models, is varied to the line of a jacket close to the figure, or a tunic of knee length.

In a few of the imported suits the jumper is made of solid needlework, in designs of many sorts, with unde-

Sports Suit of Navy Blue Velvet and Cloth; Lace-Trimmed Blouse.

niably artistic workmanship and inspiration in color. In an imported model of sand-colored crepe de chine the bodice is cut like a slip-on sweater, but it is elaborated with an all-over design of darning, somewhat after the fashion of "shadow" embroidery as it was known years ago. This, in lovely shades of rose, blue and gold, has the effect of a bit of old rich brocade.

In pale gray crepe Roma the skirt of the suit is, as usual, finely plaited, with a row of fagoting above the hem. The jumper is marked with lines of the fagoting that form a shirt bosom pattern, a finish for collar and cuffs, and, between these, motifs in silver and scarlet in geometric detail. A jumper suit in geranium red and another in fuchsia are embroidered in delicate border trimming in which much gold thread is introduced.

In some of the models two materials are used. In one the tunic is made of taffeta stitched with silver thread in the manner of quilting, and the skirt is of plaited crepe Roma.

Line Vitally Important.

For those who demand a great deal of elaboration in dress there are many examples in types besides the popular jumper. In a two-piece frock printed crepe in beige and scarlet is used for the skirt, while the tunic is of plain beige crepe de chine embroidered down the front and back in panel effect, as well as around the bottom with a conventional small flower pattern which repeats the colors and scheme of the skirt. Much ingenuity is required in this costume to avoid confusion of pattern; the panel design introduced in the bodice only is used flat and straight from the neck to the bottom, serving to give the effect of a vest—unique, but adding little to grace of line.

Line has become vitally important as the best designers are illustrating in their late models. Some of these are strikingly original even in this day of great diversity and wide range of styles. Vionnet continues to devise subtly intricate lines, always in the slenderizing deep points that give a graceful flare to her gowns. She keeps to this ideal, varying it in different phases, and continues to make her skirt hem line a matter of moods. Jaquet is emphasizing the new panel back in the decollete bodice. In this an underbodice in flesh tint is cut quite low, the outer material higher but slashed to the waistline and tied across the shoulders with two sash straps. Louise Boulanger introduces this back V and panel in an evening gown of rose-colored moire, in which she illustrates her favorite bustle arrangement and long sash ends of the drapery. The peacock silhouette is established in one of the season's modes for evening—a trailing scarf drapery attached to a short skirted decollete gown, prophesying the possible return to vogue of the train.

In contrast to the peacock design, charmingly illustrated by Chanel and other Parisian couturiers, is the flat back shown in many of the new models. In gowns of this type the forward swing of drapery and the lifted front line, sometimes accomplished with a sash or tied strap ends, are shown.

THE KITCHEN CABINET

(©, 1926, Western Newspaper Union.)

Life is not so complex if we do not persist in making it so. We need faith; we need to be brave; we need chronically to keep the corners of the mouth turned up and not down. And, after all, it is only a step at a time.—Ralph Waldo Trine.

SEASONABLE FOODS

Those acquainted with only the cultivated and canned mushrooms, do not realize the rare flavor of the fried variety. They are found in abundance now and up to the time of frosts which kill them. It is better to buy them in the market, if you have no knowledge of the edible varieties, than to risk being poisoned. The field mushroom, if brushed and peeled, the cap dressed with a spoonful of butter and broiled over coals or under gas, is delicious. Served alone on buttered toast, the mushroom is at its best, as many food flavors confuse its delicate taste. Cooked in butter for five minutes, cream added and served as a supper dish, it is unsurpassed as a dainty.

Hash.—Take chopped beef either cooked or raw, add butter and a chopped onion to a hot frying pan, now add twice as much chopped cooked potato as meat, a teaspoonful of grated horseradish, or less, and salt and pepper to season. Add cream from time to time to moisten and cook until well blended. Serve like an omelet, rolled out on a hot platter and garnished with parsley.

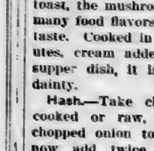
Cheese and Olives Canape.—Cut stale bread into one-quarter inch slices. Shape with a small oblong cutter with rounded corners. Cream, butter and add an equal quantity of soft rich cheese; season with salt. Spread the bread and garnish with one-quarter inch border of finely chopped olives and pieces of red and green pepper cut into fancy shapes in the center of each.

Moravian Apple Pie.—Core and peel six even-sized apples. Place in a covered pan with a teaspoonful of lemon juice, a little of the grated rind, a cupful of sugar and water enough to cover the bottom of the dish. Stew until tender. Line a deep pastry plate with rich pastry, place the apples in it, fill the center with peach marmalade and cover with latticed strips of pastry. Bake in a hot oven and serve with cream.

Berry Cake.—Sift together a teaspoonful of soda with two cupfuls of flour. In another bowl put one cupful of sugar, one-half cupful of shortening and warm it enough to cream it easily; add the yolk of one egg, one whole egg, beat well, add one teaspoonful of cinnamon and one-half teaspoonful of cloves. Mix well and add one cupful of canned berries, juice and fruit, stir well. Now mix with the flour mixture and bake in a loaf. Ice with the egg white left, using one cupful of sugar, one-fourth cupful of water and boil until it hairs, pour over the beaten white and continue beating until cool and stiff enough to spread over the cake.

Soups of Summer Fruits.

With those who are used to serving fruit soups they are considered a very important part of the menu. They are not much used in America, but we are beginning to like and appreciate them.



In the Old world the prince and peasant enjoy them summer and winter. Chilled with shaved ice they appeal to our taste, and serve an attractive beginning to a summer meal. With fruit soups the ingredients used with the fruit juice make them more or less nourishing.

Strawberry and Orange Soup.—Sprinkle a pint of strawberries with sugar and let stand on ice for an hour. Make a sirup with one and one-half quarts of water and a pound of sugar with a quart of fresh berries and the juice of a lemon. Mash and strain, add a cupful of orange juice and the prepared berries and serve ice cold.

Apple and Rice Soup.—Core and slice very thin eight unpeeled apples. Cook them with a half cupful of rice in two quarts of boiling water until both rice and fruit are soft. Put through a sieve, add spice and one-half cupful of orange or grapefruit marmalade. Serve hot.

Prune and Peach Soup.—Take one-third of a pound of dried prunes and two-thirds of a pound of dried peaches, soak over night. In the morning add a pint of cold water and let them cook until boiling, add two tablespoonfuls of sago and cook until the sago is clear. Add a cupful of cherry, cranberry or other tart juice. Serve hot or cold.

Cherry and Quince Soup.—Stem and stone a pint of deep-red cherries; place them in a saucepan with the juice and rind of a lemon, half a cupful of quince juice and a pint of water. Cook until the cherries are tender, then thicken slightly with cornstarch and cook until the starch is well cooked. Serve hot.

Wafers, sweet crackers and various small pastries may be served with such soups

DEADLY DANGERS OF EXHAUST GAS

Experts Tell of Carbon Monoxide Peril in Motor-Car Garages.

With more than 20,000,000 motor cars registered in the United States and a contemplated 1926 production of 3,000,000 more automobiles, various organizations are starting an educational crusade against carbon monoxide (deadly motor exhaust gas).

Insurance investigators and chemical authorities, not to mention government health officials, agree that this gas is one of the most deadly of all gases. The very fact that it attacks without warning and that but simple precautions are necessary to prevent its large life-taking toll demands, authorities believe, a widespread educational program comparable to the tremendous increase in the use of automotive vehicles.

Most Deadly in Garages.

It is estimated that millions of automobiles are kept in public garages. It is in the garage that monoxide gas, as it is commonly called, gets in its deadliest work. Automobile engines are constantly running in all public garages, and they release a deadly dood of this highly poisonous gas for employees to breathe. Without proper ventilating precautions this menacing practice eliminates the entrance of the lighter oxygen and results in practically a closed chamber with the air loaded with this gas.

A well-known insurance investigator aptly explains monoxide gas and its effect as follows: "There is no means of detecting its presence by smell, sight or other senses. Its attack is insidious and quick, and a perfectly well person may topple over unconscious without warning. While the automobile engine is in operation it constantly creates a flow of carbon monoxide gas through its exhaust, and experiments have shown that only a remarkably short time is necessary to fill a garage with sufficient quantities of this gas to cause instant death to occupants."

Overbalances Oxygen.

A representative of a national ventilating society declares that carbon monoxide "overbalances oxygen when breathed into the lungs." Explaining the effect of this poison on a person, he said: "There are two properties of the blood essential to proper respiration, the white and red blood cells. The latter absorbs oxygen, drawn into the lungs, and distributes it to all parts of the body. Now monoxide gas is attracted to the red cells 300 times more strongly than is oxygen, and it easily saturates the blood. This absorption of monoxide gas by the blood temporarily replaces the oxygen supply and quickly induces asphyxia."

A small leak in the exhaust of a closed automobile will cause headache and a tired feeling to the occupants, authorities agree. The same is true of confinement in a closed room where gas burners are in operation. This is directly due to the presence of carbon monoxide and the lack of oxygen through improper ventilation.

Look Out for Accidents When Parked on a Hill

When leaving the car headed downhill, even if the machine is in gear, the emergency brake set and the wheels turned in toward the curb, don't park it too close to the car ahead. In a recent case of this sort the car ahead, when pulling away bumped the other car sufficiently to throw the gears into neutral and change the position of the wheels. The emergency didn't hold, and had it not been for the fact that the machine struck the fender of another car parked along the street, thus attracting the attention of people passing, the car would have been smashed to pieces.

Accidents Likely When Brakes Are Water-Soaked

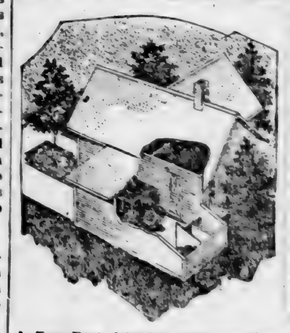
Brakes should be given special attention after a car has been washed or has been driven through water or splashy mud. In either case, water is almost sure to get into and soak the external brake bands, and under such conditions water is very much of a lubricant and will have much the same effect as oil in preventing the brakes from taking hold promptly. Hence the first time you need to stop in a hurry, you are very likely to find that they refuse to take hold promptly and a bad smashup may be the result.

The remedy for suspected wet brake bands is to drag the brake a few times immediately after leaving the washstand. The increased pressure on the brake bands forces out the water and allows it to dry off, so that when needed in an emergency, they will take hold promptly.

Where grease, oil, mud, dirt and so on have produced a sort of glaze on the brake bands, they cannot be expected to take hold as they should and accidents are likely to happen. About the only effective way to remedy this trouble is to take off the brakes and remove the glaze with a rough file or hacksaw blade or to wash the lining with gasoline and scrub it with a wire brush.

Double-Duty Garage Is Made for Convenience

By extending the floor dimensions four feet past the rear end, the garage shown in the illustration offers a storage place for the garden tools, coal, oil and gasoline. The kitchen door opens directly into the garage so that the storage space is readily accessible. The addition need only be a few feet high and the roof



A Four-Foot Addition Increases Usefulness of Garage.

can be made removable so that a good scratching shed can be provided for chicks during hatching time. In this case the regular top is removed and a frame covered with canvas or glass is substituted.—Popular Science Magazine.

Few Simple Regulations to Cut Motor Accidents

We have too much automobile law. The next trend must be toward the elimination of all unnecessary requirements and the enactment of a few simple rules and regulations that may be easily understood, easily enforced and, as nearly as possible, universally observed, says an official of an automobile organization. Such an elimination would in many instances do away with about three-fourths of our present laws.

Traffic rules and regulations are yet in their formative period. Much remains to be done before avoidable accidents may be reduced to a minimum. The principal difficulty is the unwillingness of the public to accept and obey such rules and regulations.

It is a matter of undisputed record that between 90 and 95 per cent of all accidents result from the neglect of the individual pedestrian and less than 5 per cent are caused by the direct fault of the motorist or the reckless use of the motor car. Lying between these figures somewhere are from 3 to 5 per cent of the accidents where both parties are responsible.

INSIDE OF A MODERN HOUSE ON WHEELS

It is a very long step from the gypsy caravan to this modern automobile home of W. K. Kellogg, manufacturer, of Battle Creek, Mich. The automobile home is as comfortable as a home or hotel. The sleeping quarters are shown in the photograph with electric fans, a radio loud-speaker and beds. On the left and in front may be seen the car's refrigerator.

INDIANA BREVITIES

The Union Bank at Crothersville was held up by two masked bandits, who escaped with $6,000 in currency.

Ernest Blickenstaff, fifteen, son of Mr. and Mrs. Levi Blickenstaff, was drowned in an abandoned stone quarry near Delphi.

Daniel Walsh, Sr., age sixty-eight, widely known business man and Democratic leader, died at his home in New Albany following a prolonged illness.

South Bend police hereafter will cover the city by automobiles. Ten cars, each carrying two officers and equipped with shotguns, will patrol the city day and night.

Contracts for the erection of a new building to house the Fort Wayne Settlement school have been let. The only other similar settlement in northern Indiana is at Gary.

Harry S. Elliott, president of the Elliott Wholesale Grocery company of Logansport, one of the oldest wholesale grocery firms in northern Indiana, died suddenly at his home.

Frank Brahan, forty-seven years old, was shot to death in Edinburg by Stanley Hedger, twenty-four years old, who interceded in a fight between Brahan and his father over a poker game.

Transfer of the One Hundred and Fifty-second regimental band of the Indiana National Guard from Portland to Fort Wayne has been ordered, according to a notice received by Capt. L. E. Klingman.

Sigma Delta Chi of DePauw university, mother chapter of men's national journalistic fraternity, has announced that an alcove of books, written by DePauw alumni, is being compiled and will be placed in the school's library next fall.

Two additions to the dormitories now on the campus at the University of Notre Dame are planned for this year. An addition to Lyons hall is expected to be ready for occupancy in September. The other expansion will be on Morrissey hall.

Joseph Harrington of Jeffersonville defeated candidate for the Republican nomination for Circuit court judge, was found guilty by a jury of slandering his successful opponent, James E. Taggart, by calling him a thief. He was sentenced to sixty days at the Indiana state farm and fined $200.

Dr. Stanley Coulter, retiring dean of men and head of the Purdue university biology department, will be succeeded in the latter office by Prof. J. E. Enders, widely known biologist. He will take over his new duties July 1. Prof. M. L. Fisher, assistant dean of agriculture, recently was elected dean of men.

Sanitary conditions at Winona Lake are now satisfactory to the state board of health, according to a statement issued by Dr. W. F. King, secretary of the board, who made an inspection at the Chautauqua grounds. The state board made numerous recommendations last summer, following an outbreak of typhoid fever.

A miniature cyclone struck Marion, uprooting more than two hundred shade trees, blowing down telephone and electric light wires, unroofing many outbuildings and causing immense damage in other ways. Fully fifty automobiles which had been left standing in the streets were badly wrecked by trees falling upon them.

The constitutionality of the "possession" clause of the Wright bone dry law was upheld by the State Supreme court. In denying a new trial for Matthew Cuetling of Evansville the court declared the possession of intoxicating liquor for personal use may be forbidden by a state without infringing on the constitutional rights of citizens.

Mishawaka found the stork a more frequent visitor, in proportion to its population, in 1925 than any other Indiana city. The birth rate there was 45.2 for every 1,000 population, the federal Department of Commerce statistics show. Bloomington was a close rival to Mishawaka with a rate of 34.6 per 1,000 persons. South Bend with 29.2 and Lafayette with 29.1 were high. Lafayette had the highest death rate last year, 19.4 per 1,000 persons, and Jeffersonville was second with 17.8.

The suggestion of William V. Rooker, Indianapolis attorney, that Arthur L. Gilliom, attorney general, withdraw charges he has filed in the Indiana Supreme court against three officials of the Indiana Anti-Saloon league for contempt of the court, will not be adopted by Mr. Gilliom. Gilliom's statement followed Rooker's action in filing a brief before the court in behalf of the three officials. Rooker has not been identified with proceedings thus far and his brief was filed as a friend of the court. His brief defended the alleged contemptuous statements of the three officials which formed the basis of the Gilliom charge, on the ground of freedom of the press and liberty of speech.

William P. Evans, former prosecutor of Marion county, has been appointed by the Republican organizations of Marion and Johnson counties as the party's nominee for joint state senator to succeed the late William E. English.

County fairs and chautauquas, as well as a corps of ten speakers, will be the agencies for distributing information to the general public in Indiana this summer regarding educational conditions in the state. The Indiana League of Women Voters will conduct the campaign.

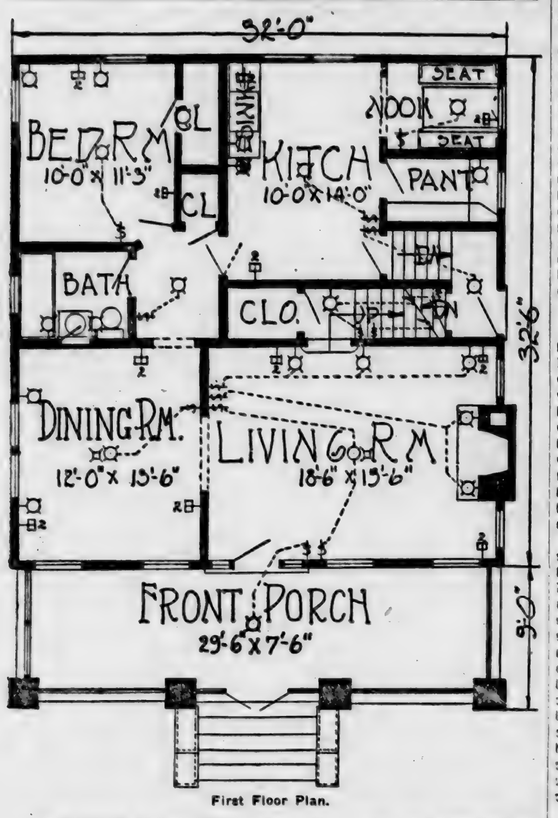
Design for Home That Permits of Variation and Future Expansion



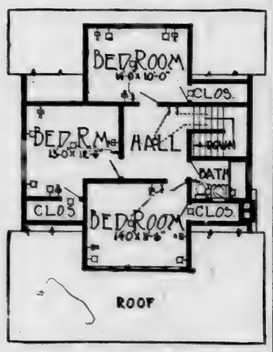
First Floor Plan.

By WILLIAM A. RADFORD

Mr. William A. Radford will answer questions and give ADVICE FREE OF COST on all problems pertaining to the subject of building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

In planning industrial buildings it is common practice to make ample provisions for future expansion to meet increased space requirements. In the planning of dwellings, on the other hand, the future need for increased room is seldom given any consideration. Very frequently the home owner finds, however, within a few years after building his home, that it is no longer large enough to meet his requirements. This means either selling the old home and building again or highly expensive remodeling.

While providing for possible future requirements in home building is a somewhat different problem from what it is in industrial construction, it is still entirely possible, and if ingenuity is used it can be done without great additional expense. The plans reproduced here fit in most ideally with such a purpose and allow a rather wide range of both present and future possibilities.



Second Floor Plan.

The small family may build this house leaving the second floor entirely unfinished, which of course is the least expensive way to handle it. If a single bedroom is insufficient, even at the start, the dining room space may be used as a second bedroom with a door at the corner of the living room opening into the hallway, replacing the large door between the dining room and living room. This is entirely in accord with present-day designing, for it is not at all uncommon to have merely a breakfast nook and no dining room. When a number of people are to be served at home the living room is used as a dining room also.

In case the builder is willing to spend a little more at the start, but does not need two bedrooms, he may utilize the second floor space or a portion of it as a playroom for the children, a billiard room, a workshop, or as a place where informal parties may be given. This does not involve a great deal of expense, as with a judicious use of wall board and paint this may be made both attractive and comfortable at a small cost. When finished it will add to the warmth of the floor below and effect a considerable saving in the cost of fuel. Such a saving will soon balance the small cost of finishing.

The plans show both floors completely finished, providing living room, dining room, kitchen, one bedroom and a bath on the first floor and three bedrooms and bath on the second floor; seven rooms in all. All the bedrooms have large closets and there is a linen closet in the lower hall and a large coat closet off the living room.

The exterior of this house also offers a number of alternate possibilities. As seen in the photograph, it is of stucco over frame construction with ornamental brick used in the porch pillars and chimney. The whole effect is good. For other tastes clapboard siding or shingles might be more attractive and stucco with a half-timbered effect would be equally appropriate.

The general lines of the house suggest the comfortable country or suburban home which is typically American. The large porch, partially screened, is a feature which should still prove attractive to many home-loving families in spite of the present vogue of porchless houses and will undoubtedly add much comfort on warm summer evenings.

There is, of course, a driveway leading to the garage at the rear which has become an essential part of the present-day American home. This drive also leads to the service entrance, which admits to both the kitchen and the basement.

Midsummer Is Better Time for Decorating

One of the old habits that have become almost superstitions in some communities is to have interior decorating done in the spring. As a matter of fact, midsummer being far warmer and drier than spring, is the preferable time in which to do interior decorating. It is also more convenient for the housekeeper, as spring cleaning is apt to occupy all of her time, and the dampness connected therewith is detrimental to paint and varnish.

Use Small Rugs

Use small rugs sparingly in living rooms, as they tend to break up floor space, which is better covered with a few large rugs. Small rugs look well between rooms, in odd jogs, in halls and in front of important pieces of furniture. A home study of furniture equips one to purchase intelligently.

Control of Bee Disease Is Seen

American Foul-Brood Can Be Controlled by Water-Formalin Solution.

(Prepared by the United States Department of Agriculture.)

Widespread interest has been aroused throughout the beekeeping industry by the apparent success of some recently discovered disinfectant methods in the treatment and control of American foul-brood. Disinfectants such as an alcohol-formalin solution are being used with fair success, and eliminate to a great extent the large losses previously caused by the necessary destruction of all combs infected with this disease of the brood of bees.

The use of the alcohol-formalin solution as a disinfectant is a step in advance in the control of the disease, says the United States Department of Agriculture, but apparently there is still room for improvement which will eliminate the danger of occasional cases of failure. For that reason, and because of the great interest in the subject, the bee culture laboratory started preliminary work early in 1924 for the purpose of making an exhaustive study of the efficiency of various disinfectants, including the commercial alcohol-formalin solution as well as water-formalin solutions.

Results of Tests.

A discussion of the results of the tests completed to date has been published in Department Circular 284, which is now ready for distribution. It was hoped that the results of the investigation by laboratory methods would form a basis for practical work in the apiary. As the work has developed, numerous difficulties have been encountered which indicate that the problem of the perfect sterilization of American foul-brood combs is neither simple nor yet fully solved.

The results obtained with various dilutions of alcohol and of a alcohol-formalin solution as the carrier for 20 per cent of their volume of formalin are not sufficiently complete to warrant conclusions as to their relative efficiency. All of these solutions are unsatisfactory, in that they do not completely sterilize all sealed cells in 48 hours. A 20 per cent solution of formalin in water, without alcohol, is slightly less efficient than the alcoholic solutions in sterilizing in 48 hours the contents of sealed cells, because of its failure to penetrate many of the cappings; but it sterilizes all open cells in that period.

Satisfactory Results.

In view of the cultural results obtained, however, a 20 per cent solution of formalin in water was found the most satisfactory disinfectant for sterilizing infected combs, with regard both to germicidal action and low cost, provided the proper precautions are taken. All honey should be extracted, all brood cappings should be completely removed, and the combs should be treated at least twenty-four hours, or forty-eight hours if it is found desirable to wash them in water after treatment.

Care must be taken not only with the process of disinfecting combs infected with American foul-brood, no matter what solution or method is used, but equal or greater care must be exercised in the treatment of the diseased colonies themselves to eliminate the danger of recurrence of disease from that source. The successful sterilization of the combs will otherwise be of little avail.

A copy of the circular may be secured, as long as the supply lasts, by writing to the United States Department of Agriculture, Washington, D. C.

Poison Bait Effective in Control of Cutworm

An inexpensive poison bait is usually very effective in controlling the cutworms in a newly planted strawberry plantation. The following formula is enough for about five acres and you can make up smaller quantities according to the same proportion:

Bran, 20 pounds.
Paris green, 1 pound.
Cheap sirup, 2 quarts.
Three lemons.
Three and one-half gallons water.

The bran and paris green are mixed dry. The juice of the lemons is squeezed into the water, and the peel and pulp is chopped to fine bits and added to the water, then dissolve the sirup in the water and fruit mixture and stir the liquid into the bran thoroughly in order to dampen it evenly.

It is suggested that the poison bait be applied in the evening, since cutworms are night feeders, and the bait will thus be fresher than if it is applied earlier in the day.

Raising Orphan Lamb

If the orphan lamb cannot be given to another ewe, it can generally be raised satisfactorily on a bottle. Of course it is better to get another ewe to adopt the lamb if possible. When necessary to raise a lamb on a bottle, it will need to be fed several times a day at first. The number of feedings can be reduced until, by the time the lamb is six weeks old, three or four times a day will be sufficient. A lamb creep should be provided where some ground grain can be kept for the lambs. They will soon learn to eat grain and this will help a great deal in getting faster growth.

Alfalfa Weevil in a New Picture Film

General Idea of How to Combat the Insect.

(Prepared by the United States Department of Agriculture.)

"Alfalfa Weevil Control," a new motion picture of the United States Department of Agriculture, gives a general idea of how to combat the insect and is of particular interest in the western states. Alfalfa is described as the foundation of agriculture in the West—"a hog's dream of heaven"—and as one of the world's most valuable forages. About 1904 or 1905 the alfalfa weevil, which belongs to the same family as the cotton boll weevil, was discovered in Utah. Since that time it has spread slowly but steadily until now it is found in seven states. Because of the importance of the alfalfa crop the alfalfa weevil constitutes a serious menace. Several states enforce quarantine restrictions to prevent further spread of the insect, and the luggage of automobile travelers is often examined.

Two measures of control are shown in the picture. Dusting with powdered arsenates is still in an experimental stage, but appears to have promise of proving effective. The use of poisonous sprays has proved its worth and is particularly recommended. Several types of sprayers are shown, including one with a very wide boom. Several scenes showing sprayed and unsprayed fields, side by side, are particularly interesting in depicting the benefits of this method of control. One spraying is usually considered sufficient to permit plants to make new growth, and protects the second crop as well as the first.

The film is one reel long and is a contribution from the bureau of entomology. It will be circulated through the film distribution system of the Department of Agriculture and the cooperating state institutions. Copies may be borrowed for short periods, or may be bought by authorized purchasers, at the laboratory charge.

Free Scouring Tests of Wool Samples Are Made

Wool growers may have samples of their wools graded and scoured, free of charge, by filing an application with the bureau of agricultural economics, United States Department of Agriculture, Washington, D. C., where a wool-scouring laboratory is now available for conducting such tests as facilities will permit. Applications should be mailed to G. T. Willingmyre, in charge of wool standardization. The applicant will be sent a parcel post mailing sack and instructions as to the proper method of drawing a sample so that it will be representative of any large lot of raw wool in the grease.

Experiments conducted in the laboratory during the past year have yielded valuable information on scour loss or "shrinkage" of a large variety of domestic raw wools. The results have proved of great interest to many wool growers and their practical application will enable any producer to obtain a reasonably accurate estimate of shrinkage of his wool.

Wool samples submitted to the department will be returned scoured, together with a report of the shrinkage and the grade in which the wool has been classified according to the official wool grades of the United States.

Grass and Grasshoppers Good for Young Poults

The Rhode Island experiment station demonstrated pretty completely that turkeys could stand all the green food and milk they would eat, but should be fed pretty sparingly on grain, given perhaps half or so of what one would naturally think they needed.

Turkeys should be kept in in wet weather, at least should not be allowed to get wet, but allowed as great range as possible as soon as they are old enough to take it safely. It is best to feed them around home so as to have them back every night, but the greater range they can have the more natural the food becomes, as in that case they eat greens and insects. Where grasshoppers abound, turkeys usually do well.

It is important to select healthy stock.

Farm Hints

The best grapes grow from pruned vines.

• • •

Lubricating oil is cheaper than machinery. Drain the crank case of your tractor often.

• • •

Potatoes may be kept in good condition for late planting by greening or sun-sprouting.

• • •

Sweet clover that was seeded this spring should not be pastured until the plants have made a growth of at least a foot.

• • •

Sweet clover requires as much lime as alfalfa on soils tested and found sour. It may be seeded in wheat like common clover or with oats in the spring.

• • •

The care of trees is quite similar to the care of domestic animals. As a cow must be fed, housed, and doctored, a tree must be planted in a well managed soil, pruned and sprayed.

ROAD BUILDING

MANY WILL DRIVE ON PACIFIC ROAD

What sort of roads are encountered in touring from New York to California?

This question, so frequently asked, usually is answered in glittering generalities, or according to the viewpoints of the tourist.

In an effort to get at the real facts for motorists contemplating a transcontinental jaunt, the Automobile Club of Southern California has prepared data on the national old trails from Los Angeles to New York city. As this is one of the favorite cross-country routes, it may be considered fairly typical of long-distance touring.

In traveling the 3,186 miles from Atlantic to Pacific coasts, the motorist will go nearly half way on pavement. This will be of various sorts, including brick, oil and macadam, and will total 1,450 miles of the journey. Those preferring gravel surface road to pavement will find 1,007 miles of this type of highway, including light and heavy graveling. Dirt surface road, including some sanded, totals 729 miles.

Second in importance to the transcontinental motorists are the mountains to be crossed. The highest of these on the national old trails is Raton pass, on the Colorado-New Mexico line, an elevation of 7,888 feet. Other high points on the long trail include the Grand canyon in Arizona, 7,150 feet, and Cajon pass, California, 4,250 feet. The highest altitude in the East is Cumberland summit in Maryland with an altitude of only 2,825 feet.

Transcontinental travel has increased so rapidly during the past few years that ample provision is made for the comfort of motorists. There are filling stations, garages, eating houses, hotels, tourist camps and similar conveniences at short intervals for the entire distance across the continent.

The only transcontinental road that is practically all paved is the Pacific highway extending from Vancouver through the states of Washington, Oregon and California to the Mexican line, a distance of more than 1,500 miles. This traverses some of the finest scenery in the world.

Illinois Given Largest Amount for Good Roads

The headquarters of the Lincoln Highway association at Detroit has received advice from the bureau of public roads, Department of Agriculture, Washington, D. C., relative to the distribution of the 1926 appropriation for federal aid to the states for highway construction.

The appropriation for the year beginning July 1, 1926, was authorized by the post office appropriation act, February 12, 1925. As a result of this appropriation $73,125,000 has been apportioned to the various states and will be used under the same plan of co-operation with the states which has been in successful operation for five years.

The bureau reports that approximately 10,000 miles of federal aid roads will be brought to completion during 1926 and that the indications are that next year will see at least as large a mileage completed.

Illinois gets the largest amount of any Lincoln Highway state, her share being $3,175,616.

Travel Is Heavy on the Chicago-Buffalo Road

One of the heaviest traveled roads through Ohio—probably the heaviest—is State Route No. 2, the Buffalo-Chicago road. It carries a large part of the traffic from New York to the northwest.

The road enters Ohio west of Erie, Pa., and passes through Ashtabula, Geneva, Painesville, Willoughby, Wickliffe and Euclid into Cleveland. Westward it runs through Elyria, Oberlin, Norwalk, Bellevue, Clyde, Fremont, Elmore, Millbury to Toledo.

The road is entirely improved in Ohio, is in excellent condition and is 263 miles long.

Railroad Crossings Are Fast Being Eliminated

Two hundred and fifty-nine railroad grade crossings were eliminated in the construction of federal-aid roads in 1925, bringing the total eliminations to 1,380, according to the bureau of public roads of the United States Department of Agriculture. This is the result of the policy of eliminating grade crossings wherever practicable adopted by the bureau and the state highway departments. Eight hundred and seventy-four of the eliminations have been made by relocating highways so as to avoid crossings while the remainder have been eliminated by underpasses and overhead crossings.

Great Highway Planned

Plans are being made for the construction of a "three-fingered" national highway to be known as the Great Southway. The highway would have sources at Detroit, Minneapolis and Omaha, passing through Chicago and converging at Terre Haute, Ind., thence through Kentucky, Tennessee, Alabama and Florida to its southern terminus at Key West. It is understood that the plans call for a hard-surfaced road the entire distance into Florida.

SHOULD HUSBANDS DO HOUSE WORK?

How Mrs. Dyer Solved the Problem.

Mrs. Mildred Dyer was lucky. She had a good-natured husband who helped her with much of her housework. Because she was in ill health for five years, it was often necessary for him to do this. But it bothered Mrs. Dyer. She felt that he had to work hard enough anyway. The time he spent in doing her work was needed for his own. She determined to find the road to better health.

She writes: "I think Lydia E. Pinkham's Vegetable Compound is simply wonderful. My health is better than it has ever been. I am getting stronger and gaining in weight."

She has solved her problem and her household is happier. The Dyers live at Redlands, Calif., Route A, Box 183.

How often does your husband have to do your housework? No matter how willing he is, no woman feels comfortable about it. Perhaps you, too, will find better health through the faithful use of Lydia E. Pinkham's Vegetable Compound.

Motors Bring Death to the Woodpecker

The bold and attractive red-headed woodpecker is a frequent victim of motor car accident, according to Prof. Homer R. Dill, of the State university of Iowa. Observations taken during one hundred and twenty miles of driving on a recent motor car trip showed 21 dead woodpeckers, while 82 were seen alive.

"Excepting in cases were the dead woodpeckers were too badly mangled, an examination of the crops and stomachs was made," Professor Dill reports. "As a result of this examination I found without exception they contained such food as bread crumbs, sweet corn, bits of doughnuts and pieces of apple. The stomach contents would seem to indicate that these birds are in part attracted to the street by waste from the lunch baskets of passing tourists and by chance garbage that has been carelessly thrown into the street.

"The red-head is a fearless bird. He will remain in the path of an approaching car until it is close upon him. Then the clumsiness of his feet, that were intended for clinging to the side of a tree, prevent him from making the quick get-away that saves the lives of many of the other species of birds that feed in similar manner. Moreover, the telephone and telegraph poles along the way, affording as they do excellent perching and nesting places, no doubt attract the woodpeckers to the highway."

Rather a Reflection on the Congregation

The intuitive power of the female mind may react to the disadvantage of all concerned, or at least place its possessor in an embarrasing situation.

In a fashionable new church in the Wilshire district, a recent Sunday evening service was suddenly interrupted when all the lights of the building went out. The minister, in his calm and soothing voice, continued, hoping perhaps that the lights would return as suddenly as they had vanished. However, darkness reigned, and he ceased to speak.

Hardly had the sound of his voice died away, when, in a very audible aside, an elderly lady in a front pew was heard to say: "Doctor, you had better tell everyone to watch their pocketbooks."—Los Angeles Times.

The First Telephone

It is appropriate enough that this year should see the triumphant exchange of wireless telephone messages between Long Island and Rugby, because it was just fifty years ago, in 1876, that Graham Bell constructed the first practical telephone.

He had been working out the idea for some years, and it was at the Philadelphia exhibition of 1876 that he exhibited it.

There is another link also, for Graham Bell went on from his original telephone to make experiments in the possibilities of wireless communication, and produced in 1880 his photophone, in which light was used to transmit sound. Graham Bell bridged 800 yards of space, over which he sent both words and musical notes.

A Vet's Memories

"Well, I see most of the young men are carrying lighters for their cigars and cigarettes," observed a war veteran. "Nice, polished lighters they are, too, all-metal suspended from a chain. But these lighters can hardly compare with the ones we used overseas. Yards of yellow punk cord, knitted and twisted, caught the spark from the flint. After considerable blowing this spark was fanned to a perfect glow. Then the lighter went the rounds to ignite the waiting fags. Those lighters were not tony—not a bit fashionable—but they certainly were reliable."—Detroit News.

Straw Shoes

A large overstock of Panama hats gave an Eastern dealer the idea for an innovation in footwear—shoes made of straw—says Popular Mechanics Magazine. The uppers are practically all straw save narrow trimmings of black leather. Soles and heels are of the usual shoe material. Besides being comfortable and readily adapted to the shape of the foot, the straw shoes afford the contrast desired in some costumes and are easily cleaned.

America Leads Nations In Use Of Ice Cream

If any one food may be considered as America's national dish, it is ice cream.

Ice cream is a food particularly adapted to the needs of individuals of all ages, giving as it does the best type of nutrients for the repair of bone, teeth, blood and muscles and for energy.

Today thousands of housewives make their own ice cream. As a consequence, the making of this highly nutritious food at a reduced cost, yet without in any way impairing the product, is of importance.

Home economists have found a means to this end in the use of evaporated milk. There are three important reasons why evaporated milk

makes the best ice cream, they point out. Because 60 per cent of the natural water in evaporated milk has been removed by evaporation, there is over twice the percentage of solids present in this type of milk than there is in ordinary market milk—and, since it is the solids that give ice cream its pleasing flavor, this fact is of moment.

Then, the composition of evaporated milk is constant, for the reason that it has been put through an homogenizing process, which breaks up the fat globules into tiny particles and distributes them evenly throughout the milk. This attribute makes for an ice-cream mixture of uniform quality and fine texture.

Finally, experts agree that the use of evaporated milk in ice cream contributes to its hygienic qualities, for the reason that evaporated milk is entirely sterile. Health authorities declare that milk and cream should be treated to a heat of 150 degrees F. for half an hour in order that a product may be produced free from infective organisms. Evaporated milk is processed at 240 degrees for 30 minutes, and, therefore, its introduction into an ice-cream mixture increases its purity in proportion to the amount of evaporated milk used.

Effective But Simple Dishes Now In Vogue

Something simple yet effective is the housewife's ideal for week-end dishes.

During the warm summer weather, women should not be compelled to spend hours in the preparation of meals, when minutes would accomplish the same purpose. Planning week-end menus should be a congenial task, not a bore. At this time of the year there are a variety of nutritious vegetables and fruits to choose from in preparing meals and the modern home manager takes advantage of them. The housewife plans her summer menus so that they will suggest coolness, while at the same time taking into consideration their dietary value. A delicious cream soup made from fresh vegetables, or an omelet, a fresh fruit dessert, or a custard, a dish of ice cream, or a pudding, are nourishing items that should find high favor in the week-end menu.

The home manager enjoys her weekends 100 per cent more when she has a few moments of leisure. And in this connection the following recipes may prove an aid.

Creamy Salad Dressing.

1 cup boiled or mayonnaise dressing	milk
¼ cup evaporated	¼ cup cream
	1 tbsp. sugar
	1 tbsp. fruit juice

Combine evaporated milk and cream, chill and whip. Add sugar and juice, then fold into salad dressing. Especially nice for fruit salads.

Chocolate Velvet Cream.

1½ tbsp. gelatin	1 tsp. butter
¼ cup cold water	½ tsp. salt
2 eggs, beaten separate	1 tsp. flavoring
⅓ cup sugar	½ cup evaporated milk combined with
2 squares (oz.) chocolate	½ cup whipping cream, chilled and whipped
¾ cup evaported milk diluted with ¾ cup water	

Soak gelatin in water five minutes. Mix beaten egg yolks and sugar, pour heated, diluted milk over slowly, put in double boiler with gelatin, butter and salt. Cook until the mixture thickens. This takes about 15 minutes. Strain, beat 2 minutes, let cool. Melt the chocolate over hot water, let cool a little, then add the chocolate and vanilla to the mixture after it has cooled. Fold in the stiff egg whites, then the whipped cream. Turn into a mold and chill at least 8 hours. It may be chilled in individual dessert glasses.

First 24 Hours of Life Baby's Hardest Time

By MARIE K. JOHNSON

Marie K. Johnson

Undernourishment is one of the most common of the causes of infant mortality, according to a survey recently undertaken in Chicago. Statistics show that of 4,522 babies under one year of age that died in 12 months, 988 died in the first 24 hours.

Eight hundred and seventy-six died in the first six days, exclusive of the first 24 hours, and 1,798 died from the seventh day to the sixth month. Eight hundred and sixty died in the last six months of the year. The survey indicated that a surprisingly large number of infants are artificially fed, which condition, doctors agree, had a marked bearing on their undernourished conditions. Naturally, no one food may prove satisfactory in every case, although the survey showed that evaporated milk in many cases had proved an excellent substitute for mother's milk. This may be explained by reason of the fact that evaporated milk is simply pure, concentrated cow's milk from which 60 per cent of the water has been removed. It contains practically every element necessary for good health and is consequently an excellent builder of bone and tissue.

Although authorities on health recommend evaporated milk as a baby food, like other substitutes for the natural supply, it should not be considered as a food complete in itself. Addition of orange or tomato juice, barley water or lime water is important in providing adequate diet for the infant.

For babies, milk of dependable purity is essential. Market milk will not keep for any length of time and is also liable to contamination, especially in hot weather, while evaporated milk, hermetically sealed in sterilized containers, remains as fresh and pure as on the day it was canned.

Sterility in evaporated milk, authorities agree, is one of the most important points in its favor. In processing, evaporated milk is subjected to 240 degrees heat for a half hour, thereby removing all possibility of bacterial life being present in the milk. Heat is the only preservative for this type of milk and the heat has the further beneficial effect of making the curds of milk more flocculent and easier to digest.

Know Your Cook Book, Girls, Advice of Diva

Margery Maxwell, prima donna with the Chicago Civic and Ravinia opera companies, and who enjoys the distinction of being among the first American girls to be recognized in grand opera circles, takes particular pride in her culinary skill. Cooking, in her estimation, is a fine art which is rapidly being lost.

Margery Maxwell.

"Doubtless one of the big reasons for this condition is that modern young men don't expect the girls they marry to know much about cooking," said Miss Maxwell.

"In the future, before man pops the question, he's going to find out whether the girl knows what calories are and whether she's wise to the elements of a balanced diet.

"A few questions before the minister asks, 'Do you take this woman?' would save a thousand recriminations later."

There are certain dishes to which Miss Maxwell is partial. As she explains them, they are readily prepared. Miss Maxwell uses for

Maryland Chicken.

Two 3½ lb. chickens (broilers)	1 cup water
	2 eggs
	Fine bread crumbs
Salt	Fat
Pepper	1-3 cup butter
1 cup evaporated milk diluted with	1 tsp. salt
	Dash pepper
	2 tbsp. flour

Dress, clean and cut up chickens. Sprinkle with salt and pepper, dip in crumbs, egg, and crumbs. Place in a well-oiled dripping pan, and bake twenty minutes in a 450-degree F. oven, then reduce the temperature to 350 degrees F. and cook until tender, about twenty minutes longer. Baste every ten minutes during cooking with ½ cup melted butter. Remove to platter and pour around a cream sauce made of fat in dripping pan, the flour, diluted milk, salt and pepper.

Asparagus en Fri.

1 bunch fresh asparagus	½ cup water
	2 tbsp. butter
6 rounds toast	2 tbsp. flour
6 poached eggs	1 tsp. salt
½ cup evaporated milk diluted with	Pepper
	½ cup grated cheese

Prepare a white sauce of the butter, flour, salt, pepper and diluted milk. Cook the asparagus in boiling salted water. Drain and add to white sauce. Place a poached egg in center of toast. Pour asparagus around the egg and sprinkle grated cheese over top of all. Serve at once. Serves six.

Modern Home Aided Byrd Pole Dash; Sugar Cane Fought Cold of North

The House in the Arctic.

Loading Ship for Trip.

Byrd in Airship and Doughnut Boat.

1—To prove that air navigation in the Arctic is feasible and that freight and messenger travel over the top of the world is certain to come.

2—To hunt for new land in the unexplored areas of the Arctic.

3—To conquer the North Pole from the air as a sporting adventure and as a demonstration of what a plane can do—not a geographical study, as the Pole was bagged for all time by Admiral Peary.

Probably no one knows more about Arctic flying than Commander Byrd. From the Greenland base of the MacMillan expedition at Etah last year he flew 3,000 miles over the Arctic, studying the behavior of oil, motors, compasses, and other navigation instruments at great altitudes over the Polar sea.

With him this time Commander Byrd took a noted fuel expert, who is Flying Commander G. O. Noble, as it requires great skill and pains to prevent the freezing of lubricating oil and stiffened action of the motors, if forced to work on the plane in the open at great altitudes with the thermometer at 60 to 70 below zero. The points which favored the month of May were that the Arctic fog had not begun to rise and heavy snows still covered the land and afforded many good landing places.

A factor of safety pointed out by Commander Byrd in connection with the use of the Fokker machine is that it carries a reserve engine. It has three engines. With a light load one is expected to be sufficient to maintain the plane in flight. With a normal load, two engines will do the work. If two engines break down at one time, when the plane is not too heavily loaded, it may fly with the use of one engine. The Fokker machine has a wingspread of slightly more than 64 feet. It is said to be a marvel of airship construction.

The other airplane—the Curtis Oriole—was to have been used chiefly in finding landing fields so that if the fliers found their main landing place covered with a fog they might go elsewhere.

The Chantier was equipped with a powerful radio transmitter to send back the news of the expedition. The Fokker also is equipped with a receiving and transmitting set. Commander Byrd not only kept the world informed of the progress of the expedition, but received through the Chantier weather warnings to guide him in his flight.

How Expedition Was Equipped.

Forty-five hundred pounds of whole beef were included in the rations of the Byrd crew of forty-seven fliers, seamen and technicians. Also four hundred pounds of pemmican (meat fats and raisins), huge quantities of bacon, dried milk, erbswurst (pea soup) and other supplies in proportion were carried along. Cod liver oil was included for its healthful properties. Herbert Griggs, who had charge of provisioning Peary's expedition in his famous dash to the Pole, worked out the rations for the Byrd explorers. Two pounds per man per day was the allowance to take care of all emergencies.

No amount of clothing is really sufficient when flying 1,000 or more feet in the air in the Polar regions, but every possible precaution was taken by Commander Byrd against exposure. The men were equipped with the warmest and lightest of reindeer suits and with fur parkas, a garment that reaches to the knees and has a hood covering the head. Plenty of goggles were found to be an absolute necessity to protect them against the glare of the snow.

In spite of all the precautions the undertaking was full of unseen danger. None of this equipment would be of the slightest avail against some unexpected and unprecedented situation which might arise. There is always the danger of snowblindness, exhaustion, freezing, some mishap to the engine. Lieutenant Byrd and his companions, however, were particularly fortunate in escaping with practically no ill effects except the exhaustion due to such a perilous trip.

Pick Up Ice Pilot.

The ship Chantier's first stop was at Tromso, Norway, where an ice skipper was taken on to pilot the Chantier and its crew through the ice-filled waters around Spitzbergen to King's Bay, where preparations for the first flight to the Pole were made. The planes, the instruments and the various oil mixtures used in connection with the airship tests, were carefully examined and tested. Lieutenant Byrd's original plans called for six flights as follows:

1—A 400-mile flight from Spitzbergen to Peary Land to unload oil, provisions and equipment at a place that looks promising for a landing.

2—A 400-mile flight back to Spitzbergen.

3—A second 400-mile flight from Spitzbergen to Peary Land base with further food, fuel and equipment.

4—An 850-mile flight to and around the Pole and back to the Peary base.

5—An 800-mile round trip flight to the northwest over unexplored areas in search of new lands.

6—A 400-mile flight from the Peary Land base back to Spitzbergen.

It was his plan in his second flight to attempt to discover new land, but when he received the report of the flight of Amundsen in his dirigible, in which it was stated that the Norge had failed to find any trace of new land, Lieutenant Byrd decided to abandon further flights and the trip over land on sleds he had planned in his search for new land in unexplored areas. Now he has decided to try to accomplish by airship at the South Pole what he did at the North. As he left the Spitzbergen base he stated that he would have just as well an equipped expedition for his southern flight as he had in his recent adventure in the North.

Sugar Cane Fights Polar North.

When Lieutenant Byrd left the Brooklyn Navy Yard on the ship Chantier he declared he had the best and most scientifically equipped expedition that ever had started for the North Pole. Special plans were made for the erection of his Arctic home. Boards of celotex insulating lumber made from bagasse (sugar cane fiber after all sugar juices have been extracted) were carried along with the latest inventions to aid in polar exploration. This building material is very light and is filled with millions of air cells, which give it great insulation value and resistance to change in temperature, especially the severe cold. One odd circumstance in connection with the use of this material is that the sugar cane of the south was utilized to fight the cold of the north.

Celotex was selected instead of lumber because tests made by the United States Bureau of Standards and its universal use in building construction all over the world, had demonstrated that this insulating lumber would keep the quarters of the explorers warmer and protect their living conditions more securely than ordinary building material.

It was only after careful investigation by the scientific men in the expedition that celotex was selected. These authorities pointed out that the protection afforded by its insulation efficiency was three times as great as ordinary lumber and nearly twelve times as great as that of brick and other masonry material. The ship Chantier also was lined with celotex as an added precaution to keep the ship warm while the explorers used it in the preliminary stages of the expedition.

In practically every other way this expedition was more scientifically prepared than any of its predecessors. These included inventions of Commander Byrd himself. A simple sun compass conceived by Byrd and developed by Mr. Bumstead of the National Geographic Society, superseded the complicated German device, developed three years ago for Amundsen. The drift indicator also was Byrd's invention. The bubble sextant by which the navigator obtains his bearings while in flight was another one of his inventions. Still another scientic development was a quick method of telling when one is at the North Pole. This has been worked out by G. W. Littlehales, the navy's hydrographic engineer.

Device Locates the Pole.

Byrd and others contributed to a chart of the magnetic lines flowing toward the magnetic North Pole, which is in Bolthia Land, 1,200 miles south of the Pole. Between Bolthia Land and the Pole the compass points south instead of north and over much of the Arctic it is badly disturbed by the discrepancy of position between the geographical North Pole and the magnetic North Pole.

This chart of the magnetic lines, flowing to the magnetic North Pole, although it was far from complete, was such as to enable the navigator to tell in what direction the compass should point from any spot in the Arctic. With this knowledge, the erratic behavior of the compass becomes orderly and it is once again a useful instrument.

A third type of compass used was a device of infinite sensitiveness—a revolving electrical coil, which is adjusted to a given relation with the magnetism of the earth. This, the sun compass, and the magnetic compass were each used to correct the other.

Lieutenant Byrd in his flight used a quick method of telling when he was actually at the Pole. This was the invention worked out by Mr. Littlehales, the U. S. Navy hydrographic engineer. It shows the sun's position from the North Pole at every hour of the day and every day of the year. When the flyer is near the Pole he can, by ascertaining the exact position of the sun, prove that he is near the Pole.

Flies 3,000 Miles Over Arctic.

The expedition, backed by such men as John D. Rockefeller, Jr., and Theodore Roosevelt, Jr., had two main objects.

The WATER BEARER

by J. Allan Dunn

AUTHOR of
"A MAN TO HIS MATE"
"RIMROCK TRAIL"

COPYRIGHT by DODD, MEAD AND COMPANY

AN UNUSUAL STORY which deals largely with the adventures of a young New Englander, an engineer, engaged in water development in the West. He comes into contact with various exciting phases of the life of the country and eventually has an opportunity to show the stuff that is in him when he is put up against the difficulties and problems of a gigantic enterprise involving the water supply of a large city. A stirring narrative by one who knows his West and has written some of its most fascinating tales.

Child's Health Maintained By WholesomeDiet

Modern educators are leaning more each year to the old Greek idea of rearing the citizens of the future. They are working on the principle of "a sound mind in a sound body."

Good health is built primarily on the foundation of right food. The sort of food the child has determines to a large extent the fitness of the man or woman.

Children have to be taught to like the foods that are good for them much in the same way that they have to be taught arithmetic and history. Boys and girls are not born with any particular desire for cereals or for bread. It's up to their parents to see that they learn the rudiments of a balanced diet and the reason for such a diet. Firmness and patience are often necessary in the teaching, but the job must be done.

Many mothers unconsciously put their children under health handicaps by allowing them to use their own discretion in the matter of eating candy, fruit, nuts and cookies. By so

doing they set a precedent in the matter of other foods and make the teaching of good nutrition harder.

One or two articles are not enough to supply a child's needs for a meal. In order that there be normal development, there must be variety.

Fresh eggs, whole cereals, fruits in season and leafy vegetables should occupy an important part in the growing child's dietary. Then, too, a certain amount of concentrated food is necessary for children, because rapid growth whets their appetites to a razor edge, so that they crave more food than their systems can well dispose of. Evaporated milk, diluted with orange juice as a drink, or in custards or other baked foods, is especially beneficial for the growing child for the reason that it is concentrated to double the richness of ordinary cow's milk and is entirely sterile as well. The can of evaporated milk solves the problem of obtaining perfectly pure milk, as well as the problem of lack of refrigeration facilities, since this type of milk will keep indefinitely in the can.

Foreign Dishes Bring Added Zest to Dinner

By MRS. WM. C. POST

Height of my culinary ambition always has been to make dinner each day a gastronomic poem, rounded and perfect like a stately rime. A meal that pleases eyes, nose and palate alike!

Mrs. Wm. Post.

A well-turned dinner is like a pretty woman in that it unlocks men's hearts with a magical key.

Exotic dishes give a tang of other lands to the dinner table. Things foreign awaken the romantic sense. Taste of codfish a la Benedictine transports one for the minute to the Montmarte in gay Paris, a dash of Piroski and we are supping in a quaint cafe on the Nevsky Prospekt in Leningrad, while the crunch of English tea cakes may bring visions of the rolling moors of Sussex.

As an aid to the housewife in carrying out this new and fascinating idea in cooking, the following of my recipes may prove of particular interest:

Italian Polenta.

2 cups hot-cooked rice or mush	1½ tbsp. butter or olive oil

Beat the butter into the mush while hot. Turn onto a hot serving plate and pour over the following cheese sauce:

Cheese Sauce.

2 tbsp. fat	½ cup evaporated milk diluted with
2 tbsp. flour	½ cup meat stock
½ tsp. salt	½ cup grated cheese
Dash pepper	

Melt the fat, add the flour, salt and pepper, and stir until the mass is smooth. Add the diluted milk and cook in a double boiler. Stir occasionally to keep smooth. Add grated cheese to the hot sauce and stir until melted or about three minutes.

Buffeten Kuchen.

1¼ cups sugar	2¼ cups flour
¼ cup butter	4 tsp. baking powder
2 eggs, separated	Grated rind of 1 lemon
1-3 cup evaporated milk diluted with	Chopped or sliced almonds
1-3 cup water	

Cream butter and sugar, add yolks of eggs and the lemon rind, stirring constantly. Mix flour and baking powder, add to the butter mixture, alternately with the milk and lastly stir in the stiffly beaten whites of eggs. Place in well-greased shallow coffee cake tins, sprinkle with granulated sugar, cinnamon and a few almonds, sliced fine or chopped. Bake in a moderate oven.

NEWVILLE

Mrs J H. Benner is visiting her daughter, Mrs A. C. Koeppe and husband at Melbourn, Ohio.

Mack Hatch and wife, went to Garrett Sunday, for a visit with the latter's mother, Mrs. Belle Crum, who is quite poorly.

Dewey Miller and family, went to McClure, Ohio, to visit over Sunday with the latter's parents Leroy Kinney and wife, and other relatives.

Father and Son Day was observed Sunday at the U B Church The program consisted of songs recitations and Sabbath School with an exchange of teachers and a sermon by the pastor, Rev. P. A Hubartt. The attendance was 110 and collection $5 50

The funeral for Mrs Joe Rhoads was held from the Christian Church Thursday afternoon. Had she lived until November she would have been 78 Those from a distance who attended the funeral were her son, Arthur Rhoads and family, a daughter, Mrs Minnie Fails of Pecria, Ill. Mr Rhoads died two months ago. Mrs Effie Hutching, a half sister of Fort Wayne, also attended the funeral.

The story is being reported that $15 in money has been found in various places and different containers in the late home of Mr and Mrs. David Griest. Both of these old people having passed away within the last year. Report has it that money was found in old cans, in the bed tick and some wrapped in an old rag under the organ. The story is unbelievable, for the old folks were seemingly destitute and depending on their two sons for maintenance. The little place was sold to Mrs Ruby Krabill last week

SPENCERVILLE

B. F. Markle and family attended the Wise-Getts family reunion at Kendallville, Sunday.

James Reed and wife, and Gale Bowser were Sunday dinner guests at the home of Wm. Reed and family of near Rehobeth.

On Sunday evening Mrs. Joseph Koch was taken to a Ft. Wayne Hospital. Mrs. Koch has been ill for the past week at the home of her parents, Raymond Rhodes and wife.

Garnett and Forest Beams, who have been attending Wittenberg College, returned home to spend their vacation with their parents, Mr. and Mrs. Geo Beams. Miss Mabel Rhodes, who spent the past week there, accompanied them home.

The following friends and relatives were present at the funeral of Mrs. Lucile Rhodes-Fletcher:

Burl Simon, wife and daughter, Mr. and Mrs Ben Simon and sons, Mr. and Mrs. Fletcher, Mr. and Mrs. Metse, Robert Baughmann and wife, William Meck, wife and daughters, Henry Klopfenstein and family, Mr. and Mrs. Stoneroak, and Wilbur Perry all of Ft. Wayne, Mrs. S. T. Galloway and daughters of South Bend, Mrs. Effie Koontz, Mrs. Vinnie Wearley of Brusley Prairie, Mrs. Joseph Howe of Ströh, Mrs. Howard Adams and daughter of Kendallville, Ind, Mr. and Mrs. Thome and Norbet Fuelling and wife of Fort Wayne, Mrs. Estella Gilbert of Detroit, Mich., Miss Bertha Thornberg of Columbia City, Rev. and Mrs. Glenn Bryan of Geneva, Ind., Mr and Mrs. A L. Lake and Mrs Roscoe Copp of Butler, Ind.

Farmer's Attention!
The Imported Percheron Stallion
LARRONNEAU 101769
SERVICE FEE $15.00

COLOR and DESCRIPTION—Black; Stripe; Snip; Weight 2000 lbs. A good big drafty horse and a wonderful breeding horse. Careful inspection is invited.

SIRE—Houlcnx 70490 (74223), by Lerida III (42847), by Lerida II, (32234), by Lerida 6969 (6780).

DAM—Rosette (63032), by Montargis 40107 (46166), by Jules (37987), by Villers 13169 (8081), by Briard 5317 (1630), by Brilliant 1271 (755) by Brilliant 1899 (756).

Usual Guarantee; Colt to Stand and Suck

All precautions will be taken to prevent accidents, but will not be responsible should any occur. Should any owner of mare dispose of same before consulting the undersigned, the amount of insurance becomes due and payable at once. In all cases the colt stands good for his insurance wherever found.

Stallion will stand the season of 1926 on what is known as the Joseph Koch farm, 2 miles north and 1 mile west of St. Joe, 1 mile north and 1 mile east of Concord and 1 mile south of Coleman's Corners on Auburn-Newville road.

J. C. STEMEN
Owner and Keeper Phone through St. Joe St. Joe, Ind.

Joseph Bice has erected a new garage.

John Betz and wife, of St Joe, were Sunday guests of Joel Betz and wife.

Miss Leone Widdifield went to Hicksville, Monday, where she has a position.

Harold Farver and Fay Gibson, of Columbus, Ohio, were Saturday guests at the Ray Farver home

The attendance at the Methodist Sunday School for June 13 was 112, collection $7.14; Lutheran, 83 collection, $3 53.

Albert Braeuer and family, and Mr. Braeuer, Sr., of Wayne, were Sunday guests of Thomas McNamara and family.

Mrs. Jennie Chaney went to Ft Wayne, Monday. She has been suffering with her eyes for several weeks and expects to have an operation while gone.

John Zimmerman and wife, Miss Marcella Zimmerman and August Baltzli, of Ft Wayne were week end guests in the John Bachmann home.

On last Sunday a Children's Day program was given at the Methodist Church. The Lutheran Church will render their Children's program on next Sunday evening.

The girls' sewing and canning clubs will be charge of Mrs. Claude Hafner, this summer. All girls between the age of 10 and 18 are invited to belong to one of these clubs

Oscar Bryan and family, and Fred Blessing and wife, of Toledo, came Saturday to visit at the home of Ray Farver and family. The gentlemen returned home on Sunday evening.

The Home Missionary Society of the Methodist Church will meet with Mrs Golden High, Friday afternoon. All members are urged to be present as there will be an election of officers.

Charles Kimes and family, Sam Bowerman and family, Vol Hay and wife, Alvy Place and family, Wm. Young and family, all of Ft. Wayne, were Sunday guests of Chas Brattain and family.

On Thursday June 24, at the Lutheran Church Basement the Old School Reunion will be held All members of the Old School are urged to be present. Basket dinner will be enjoyed at the noon hour.

The C C Club was very pleasantly entertained on Friday afternoon at the home of Mrs. Clara Hosler. Prizes were won by Mrs. Manda Beams and Mrs. Jennie Walters. The Club will meet on July 9 with Mrs. Daisy Butler.

A very enjoyable all day meeting of the Home Bureau Club met Wednesday at the home of Mrs. Metta Furnish on the County Line There was 18 members and 8 guests presents. Committees prepared the dinner which was greatly enjoyed. After dinner a business session was held at which time the ladies planned a picnic to be held at the Erick Grove on July 14. This will be a basket dinner.

The WATER BEARER

By J. ALLAN DUNN

Author of "A MAN TO HIS MATE" "RIMROCK TRAIL"

© By Dodd, Mead & Co. WNU Service

HERO AND HEROINE

Here's a new kind of story of the West—a romance of hydraulic engineering. Mining, ranching, lumbering and railroad building have been the favorite subjects of the fictionists and many a good story have they given us. Here's a new kind of hero—a young New Englander born under the zodiac sign of Aquarius and destined to be in very truth a "Water Bearer." The heroine is a "native daughter" of California. And around the water-bearing exploit of the Eastern man and the Western girl revolve fascinating adventures "by flood and field" and a story of true love that runs far from smoothly at times. As for the author—why, he's J. Allan Dunn, whose Western stories have deservedly won for him a wide popularity. And here East meets West—and a stirring romance grows out of the meeting.

CHAPTER I

—1—

The Canyon

Caleb Warner conscientiously fished every foot of the likeliest-looking hole he had seen on Hermanos creek, but there came no rise, no eager tug, no submerged gleam of a rainbow's shimmering flank.

He waded ashore, put up rod and tackle, climbed through the thick, tall ferns and brambly undergrowth to the narrow trail and turned upstream. All the day was his, the next, for that matter, and he fancied the fishing would be better higher up. Caleb walked with his coat tucked between the slings of his creel, his shirt open at the throat; lean, long, well-shouldered and slender-flanked, tanned of skin, springy of action, generally good to look at. By the canons of moving pictures and magazine illustrations he was not handsome. New England ancestry had made him too aquiline of feature, but he had youth and strength, his gray eyes were clear, his forehead high to his straight, close-cropped hair, his lips clean-cut and his chin well forward, not too narrow. His general make-up was typically American, Yankee-American, unmarred by inbreeding.

Below him Hermanos creek sang, half hidden by the undergrowth. His economic, New England brain saw potentiality going to waste. In Massachusetts Hermanos creek would long ago have been harnessed. Mills and factories would have sprung up along its banks. Here was water for steam, for turbines, for commercial and domestic use, for irrigation; all unused, its energy seemingly doomed, for there was a peculiar thing about the creek that Caleb, as an engineer, had noted. Contrary to the habit of most well-mannered watercourses, its volume diminished as it flowed.

He was twenty-seven, six years out of the college chrysalis that he had spun at Columbia. He had served in the war, hard, practical service in tasks that were low-grade but necessary, the crude, swift work of building and repairing war-roads and bridges, and in it Caleb Warner had, in large measure, found himself. He had acquired initiative, resource, command of men, if nothing else. And he had come out unscathed, unwounded, ungassed, reduced to an acme of coordination, sane mind and sound body. He had been granted wider horizons. So he had come west to find his oyster—and to open it.

Swiftly the woody cave of the canyon became a tunnel, the creek now far below him in a water-chiseled gorge. The tunnel became a gut. A suspension bridge, a shivery thing of wire rope and short planks, anchored with wire cables to high walls of rock, crossed the gorge. It shook under his tread and hung trembling as he stopped midway to look at the gush of compressed water surging through the gap, twenty feet down. There were signs on the rock that at times the creek rose close to the flooring.

Before him, to the south, lay Hermanos valley, a green bowl lipped by rolling hills, their crests bronzed by the summer sun, blazoned with great patches of golden poppies, with clumps of purple lupine, the lower slopes furred thick with wild oats waving in the wind, oats as high as Caleb's head, a shimmering sea of emerald and silver.

He stood for a while undecided whether to adventure on to the waterfall or to stay where he was until it was time to fish down the canyon with the hope of better results than the three trout his persistence had lured from the creek. He had a book tucked into his pocket but he was not tired. And he had lunched an hour before.

The view held him. Looking down, he saw that the stream was a vagrant, that, in the rains, one bed was not enough to convey its waters. A second course, now dry and partly grown over, erratically paralleled the actual creek. Willows bordered it.

Along this idle water-track, racing so fast it seemed a gray streak, head down, brush lowered, a coyote ran at top speed, pursued, not hunting, covering ground at a frantic pace, pressed to its utmost by fear.

After it, perhaps fifty yards away but gaining at every bound, sped a gallant, beautiful hound, white-coated, taper-muzzled, bearing its tail like a great plume, overhauling the coyote with tremendous leaps, going at a terrific rate, yet so smoothly that its speed seemed effortless—a Russian wolfhound.

Beyond the willow fringe came her mate, bound for bound, level with the bitch, unseen, though perhaps not unknown to the coyote.

Then, from a thicker growth of trees, outmatched but traveling fast, a pinto flashed into Caleb's view, a boy crouched low on the withers, welded to the horse, urging it on.

Caleb thrilled to the chase as it swept on beneath him, admiring the horsemanship of the figure in breeches, puttees and fluttering blouse, a little envious of it.

"Gad, he can ride," he muttered.

A cap blew off, a long tress of chestnut hair, ruddy as a flame, whipped out, was reached for and tucked in by its owner, only to stream errant again. The boy was a girl!

The bitch was almost up with the coyote, the dog, watchful through the gaps in the willows, came circling in, jaws agape, ready for the kill. The coyote made a last desperate effort. The bitch, with one enormous leap, came abreast. She lunged, her white neck like a snake's for speed and sinuousness, her teeth clamping down on the forefoot of the coyote. Caleb saw the latter checked, tumbling, heard a broken snarl of defiance, and then the second hound sprang in a white gleam of fury, too swiftly for him to catch the action. Its powerful jaws, bred for the work, crunched through the vertebrae of the coyote's neck. The hunt was ended.

The girl rode up at a gallop, checked the pony in midstride and slid to the turf while the two hounds thrust their muzzle at her. With one

The Boy Was a Girl.

hand she patted them while with the other she strove to coil up her hair, now fairly down her shoulders, reaching to her belt.

"Good boy, Saratof! Good girl, Siva!"

Caleb heard her faintly but plainly and shouted down his own meed of applause. He had left most of his innate reserve behind him in Europe and the stir of the hunt still held him.

"Bully for both of them!" he cried and waved his hat as the girl looked up. She smiled, waved back an ungloved hand at him in western friendliness, and finished the upwisting of her hair without embarrassment. Caleb started down through the oats. He loved dogs. He did not know so much about girls. But this one seemed different. And he had left the conventions behind in Massachusetts.

She smiled at him again as he came out on the level, half waded, half jumped the creek and went toward her. The wolfhounds looked at him with their dark brown eyes, sniffed, accepted his pats and turned their heads away, pointedly aloof. The girl laughed at his evident chagrin.

"They are disdainful beasts, my borzois," she said. "You must excuse them."

"They are marvelous runners. I did not suppose anything could overhaul a coyote. But it hardly seemed fair up there on the hill. Two to one, I mean."

She looked at him quizzically. She was frankly surveying him. He noted that she was about six inches shorter than he was—which made her five feet six—that she was at once slim and rounded, that she had a short straight nose and a mouth that was neither small nor large, neither full-lipped nor narrow, a round chin, a dimple in one cheek, and that her eyes were the exact color of the lupines. Also that there was no nonsense about her. A part of Caleb's curriculum, a majority of his experience, had consisted in the training of his powers of observation. In the brief glances he had permitted himself he had done very well.

"There are not very many coyotes where you come from?" she queried.

"How do you know?" She laughed and he added that and her teeth to the catalogue. Both were, to his taste, perfect.

"How do I know? I am sure now. Does anyone but a Yank reply to a question with another one?"

"Yank! Are you a southerner?"

"There you go again, Walt. I must answer your charge against my dogs. If you think it was not sporting to set Saratof and Siva against one coyote, how about my helpless calf that was butchered last night? And half a dozen others this summer. And a colt! There are probably fifty coyotes who make this valley their larder. Gabilan shelters scores of them. And these two have accounted for nine of them. It is sheer justice, administered mercifully. The coyote always has the start. It is killed instantly, not worried, not touched afterward. My borzois don't eat carrion."

"Acquitted," answered Caleb. "I beg their pardons. I am a Yankee from Massachusetts. I am a civil engineer come west to seek my fortune. My name is Caleb Warner. I live in Golden and I was recommended to Hermanos creek for trout fishing.

She had a trick of looking through long lashes that was a bit unfair, Caleb thought. But they did not hide a twinkle that lurked behind them.

"Did you catch any trout, Mr. Warner?" she asked. He showed her his basket.

"We have trout in New England," he said. "I was hoping to do better later in the afternoon. Did you say you were from the South?"

"I am a Californian." He was certain that she knew he had hoped she would give him her name in return. "The best fishing is in the canyon back of the waterfall at the head of our valley," she said. "You can easily climb the cliff."

"You own it? The valley?" She opened her eyes a bit in acknowledgment of his persistence and speed to take the opening.

"My father does. His name is Clinton." She had evaded it cleverly Miss Clinton. That was as far as she would go. Caleb bowed to his defeat.

"Well, then, Miss Clinton, do you think your father would have any objection to my fishing through his meadows, later, after I have been above the fall?"

"I am quite sure he would not. Perhaps you would like to meet him! The house is not very far from here." Caleb laughed and she with him.

"I should be delighted," he said "And I am very glad to have met you Miss Clinton." She took his hand and shook it as a boy might have shaken it. More strongly, with fingers that were firm and cool. There was nothing of coquetry about her. Her suggestion that Caleb meet her father held, he felt, no hint of flirtation. It showed that she liked him, a little, sufficiently to dispense a measure of hospitality that he had come to recognize as a western attribute.

"The house is there," she said, pointing. "Back of those eucalypts. Father planted them for a wind break."

The girl had left the pinto pony standing with its reins hanging straight from bit to soil, an effective haltering. Now she placed them about its neck, their buckle back of the saddle-horn and, as she and Caleb walked along the stream toward the house the pony followed as closely and sedately as the wolfhounds.

Evidently Miss Clinton is what we Americans call "a nice girl," with individual attractions. Does the Yankee measure up?

(TO BE CONTINUED.)

Colonies Classified

In 1690 the American colonies were divided under the following classifications: Royal, proprietary and republican. The classification is based upon the three different methods by which their governors obtained office. At this date the following colonies were royal: New Hampshire, Massachusetts, New York, Virginia and Maryland (temporarily). The proprietary colonies were Pennsylvania, Delaware, New Jersey and the Carolinas. Of the latter group only the first two remained proprietary. The rest became royal, while Maryland was restored to the Baltimore family. Rhode Island and Connecticut alone retained their elective governors and so may be classed as republican.

Transmitting Light Rays

The bureau of standards says that the transmission factor of smooth, clear glass is about 92 per cent in perpendicularly incident light, the lost being that reflected at the two surfaces. The amount of light transmitted varies with the angle of incidence and the refractive index of the glass. The reflector will absorb from 10 to 40 per cent of the light incident upon it, depending upon its surface.

IMPROVED UNIFORM INTERNATIONAL

Sunday School Lesson

Lesson for June 20

JUDAH'S PLEA

LESSON TEXT—Genesis 44:18; 45:15.

GOLDEN TEXT—A broken and contrite spirit, O God, thou wilt not despise.—Ps. 51:17.

PRIMARY TOPIC—Judah's Love for His Brother and His Father.

JUNIOR TOPIC—Judah's Unselfish Offer.

INTERMEDIATE AND SENIOR TOPIC—Standing True to Our Home Folk.

YOUNG PEOPLE AND ADULT TOPIC—Loving Devotion to Our Kindred.

The lesson subject should not be, as suggested by the lesson committee, Judah's plea, but rather Joseph's forgiving love. The emphasis should not be primarily upon the sinning and penitent brothers, but upon the magnanimous and forgiving brother, Joseph.

I. Joseph's Elevation to the Premiership of Egypt (41:14-44).

The circumstances which led to his elevation from prison to the position of prime minister were:

1. The dreams of Pharaoh's butler and baker (ch. 40).

These were two very important officers in Pharaoh's court. Their business was to provide the drink and food of the ruler and of his household. It was most important not only that proper food and drink be provided, but that the monarch should be protected against poisoning. These officers had disturbing dreams. He interpreted their dreams.

2. Pharaoh's dream (41:1-13).

For two full years Joseph remained in prison forgotten by the butler. Pharaoh's dream of the fat kine and the lean one and the full ear of corn and the blasted one brought to Joseph the great opportunity. The failure of the wise men of Egypt to interpret this dream caused the chief butler to remember what Joseph had done for him, whereupon Pharaoh brought Joseph out of the prison. He made known to Pharaoh that it meant seven years of plenty, followed by seven years of famine, and suggested that a part of the produce of the land be stored up during the years of plenty, that there might be food for the people in the famine period. The plan appealed to Pharaoh as feasible. Therefore he assigned the task to Joseph and invested him with authority to execute it.

II. Joseph's Harsh Treatment of His Brothers (42:1-4; 4:17).

Driven by sore need his brethren came to Egypt for food. To test them, Joseph

1. Accused them of being spies (42:9-17).

He cast them into prison and demanded that their youngest brother be brought as a proof of the truthfulness of their word.

2. He kept Simeon as a hostage. Because he feared God he sent the rest home with provisions for their families.

3. Benjamin's peril (44:2,12). By a clever device Joseph's cup was placed in Benjamin's sack and was used as an occasion for bringing them back on the charge of theft. Convicted of their sins Judah pleaded for the release of Benjamin.

III. Judah's Plea (44:18-34).

1. For turning away of Joseph's anger (v. 18). He recited the history of the family and their coming to Egypt and appealed on the basis of the effect upon Jacob, their father, if Benjamin was not permitted to accompany them home.

2. That he himself might be kept in slavery instead of Benjamin (v. 33).

IV. Joseph Reveals Himself to His Brethren (45:1-15).

1. He declares his identity (vv. 1-3).

This act on the part of Joseph troubled them. It ought to have made them glad. This not only affords a beautiful example of forgiving love, but most beautifully illustrates Christ's dealing with His brethren, the Jews.

2. He bids his brethren come near (vv. 4-8).

When he revealed himself to his brethren, the remembrance of their sins pierced them through. Joseph's first question was about his father, showing that his desire was to put their thoughts far away from their crime. He invited them to come near to him and assured them that God had overruled their crime for their salvation.

3. Joseph sends his brethren away with good news (vv. 9-15).

As soon as Joseph's brethren knew him and were reconciled to him, they were sent with the glad tidings to their father. As soon as the Jews come to know Jesus Christ as their Messiah, He will send them away to the ends of the earth with the good news of His saving grace.

The Accounting

God will not call you to account for the four or five talents you have not received, but He will ask a strict account for that one which He has entrusted to you.—The Maritime Baptist.

Selfishness

Selfishness expects love and sacrifice from all, and gives love and sacrifice to none. That is why selfish souls complain so of life.—Young People.

POINTS ON KEEPING WELL

DR. FREDERICK R. GREEN
Editor of "HEALTH"

(©, 1926, Western Newspaper Union.)

DANGERS OF GAS POISONING

THE old story, a prime favorite in comic magazines and burlesque shows of a generation ago, of the man from the country who went to the city and who blew out the gas, is now a back number. This for two reasons: first, every intelligent person knows the danger of illuminating gas poisoning and second, electric light has largely displaced gas. But even today, in many smaller towns and in older houses, gas is still the principal means of illumination.

Every one knows the danger of the open gas jet. Illuminating gas, carbon monoxide, as the chemists call it, is a deadly poison. Ordinary water gas contains about 30 per cent of carbon monoxide. Its danger lies in the effect which it has on the hemglobin in the blood. When breathed into the lungs, even in small quantities, the carbon monoxide unites with the hemglobin to form a stable compound and when this compound is formed, then the hemglobin will not unite with the oxygen in the air, so the victim dies from lack of oxygen just the same as he would if he were lying in twenty feet of water. And the trouble is that once the compound between the carbon monoxide and the hemglobin is formed, it is impossible to break it up no matter how much air is pumped into the lungs. This explained why, in cases of gas poisoning, the face is dark and the blood is so thick that it will hardly run through the vessels.

The danger of poisoning, by carbon monoxide gas, either from gas jets or from coal gas from stoves and furnaces, is well known. What is not recognized is the danger of slow poisoning by very small quantities of gas escaping from leaky pipes, burners or gas stoves. In a recent issue of the Journal of the American Medical Association Dr. A. M. Stevens of New York reports several cases, one fatal, of poisoning of young children from leaks so small as to be unnoticeable.

Doctor Stevens points out that the younger the child, the greater the danger, as older children who go to school and play outdoors are less subject to poisoning than younger children who are constantly in the house and often in the same room.

In the fatal case reported, a child, seven weeks old, was brought to the hospital in a dying condition. Inspection of the house showed a leak in the central gas fixture in the living room, where the baby's crib stood. The mother also showed some symptoms of gas poisoning, which disappeared when the leak was stopped.

ANGIONEUROTIC EDEMA

MOST disorders of the human body, from their symptoms, the effect which they produce and their evident connection with some cause, are at least partially understood. But some conditions are so rare, strange and mysterious that about all scientific men can do is to give them a name and describe them so that other investigators can recognize them, leaving it to future generations to learn their causes, if possible.

Among the strangest of these unusual conditions is what is called angioneurotic edema. Here, as in some other rare disease, the name sounds as though something definite was known about it. An edema is what is popularly called a dropsy or rather, to put it the other way round, what is popularly called dropsy is one kind of edema: that is, a collection of watery fluid from the blood in the loose spaces under the skin or mucous membrane. This particular form is a purely local swelling, coming on suddenly, lasting only a short time and covering only a small area and, apparently, without any cause or connection with other bodily conditions. In 1882, when Quincke first described it, he assumed that it must have some connection with the nerves and blood vessels, so he called it "dropsy caused by the nerves and blood vessels."

But giving a disease a name does not explain it, so Quincke and various authorities since his time have offered various explanations. Some said it was caused by nervous conditions, others that it was caused by some poison.

It may appear on the face, especially the eyelids, the lips, or the cheek. The backs of the hands or the legs may be attacked. Wherever it is, a sudden swelling occurs with itching heat and redness. It may last from a few hours to several days, generally disappearing without leaving a trace. Between attacks, the patient is apparently perfectly well.

Whether actually hereditary or not, it seems to run in families. Osler reported one family in which there had been twenty-two cases in five generations. Milroy had twenty-two cases in six generations. Doctor Wason recently reported a case of it in a fourteen-months-old baby, where the swelling developed in the throat and the baby choked to death before they could get her to the hospital. The mother said two other children had similar attacks. Nothing is known either as to cause or treatment.

PRICE

Only such a vast production as 40,000,000 spark plugs a year could build Champion superior quality at such low prices as 60 and 75 cents.

Champion X—exclusively for Fords—packed in the Red Box 60¢

Champion—for cars other than Fords—packed in the Blue Box 75¢

More important the citizen the larger wet blanket he can spread over civic improvement.

Be sure you are right before going ahead and somebody will crowd in in front of you.

A man cannot be said to succeed in this life who does not satisfy one friend.—Thoreau.

For one thing, one does not have to "pose" before an affectionate though practically worthless friend.

DR. W. B. CALDWELL AT THE AGE OF 63

Mother! It's Cruel to "Physic" Your Child

To Dr. W. B. Caldwell, of Monticello, Ill., a practicing physician for 47 years, it seemed cruel that so many constipated infants and children had to be kept constantly "stirred up" and half sick by taking cathartic pills, tablets, salts, calomel and nasty oils.

While he knew that constipation was the cause of nearly all children's little ills, he did not believe that a sickening "purge" or "physic" was necessary.

In Dr. Caldwell's Syrup Pepsin he discovered a laxative which helps to establish natural bowel "regularity" even if the child is chronically constipated. Dr. Caldwell's Syrup Pepsin not only causes a gentle, easy bowel movement, but, best of all, it never gripes, sickens or upsets the most delicate system. Besides, it is absolutely harmless, and so pleasant that even a cross, feverish, bilious, sick child gladly takes it.

Buy a large 60-cent bottle at any store that sells medicine and just see for yourself.

Dr. Caldwell's SYRUP PEPSIN

No More Sore Feet! Corns and Bunions Gone—

WHY suffer from tired, aching, swollen and sweating feet, painful corns or bunions, when you can get instant relief with **Allen's Foot-Ease?** Shake it into your shoes in the morning—then walk all day in comfort. For those who like to dance, hike, play golf or tennis, **Allen's Foot-Ease** is indispensable. It will increase your enjoyment and efficiency. RADIO

George W. Vinal, Government Authority on Batteries, in His Laboratory at the United States Bureau of Standards, at Washington.

When a radio receiver fails to give its customary volume the "B" batteries are almost invariably blamed. It is true that they are sometimes the cause of this trouble but it is advisable to measure their voltage before arriving at this conclusion. A good make of "B" battery of adequate size should last, even with a receiver consuming heavy "B" battery current, for at least six months and if it is a moderately economical receiver, from nine to twelve months, provided it is given the average use of about two hours per day. Failure to give such life is an indication, either that it is a battery of inferior make, or of inadequate capacity for the set used or that there is a defect in the receiver.

Causes of Short Battery Life.

Briefly, the factors most frequently causing short "B" battery life are:

1. Audio-frequency amplifier not equipped with "C" battery.
2. "C" battery exhausted.
3. Excessive plate voltage.
4. Tubes draw excessive current because of accidental displacement of grid and plate.
5. "B" battery of insufficient capacity for the drain placed upon it.

This last cause is frequently overlooked because the first cost of large batteries is somewhat more than that of small ones. But it is indeed a wasteful practice to use a battery of inadequate capacity; this is apparent if the cost is figured in cent per hour of use, rather than in first cost. On the face of it, certainly it seems more expensive to pay about 25 per cent more for a heavy duty "B" battery, but the economy is apparent when the heavy duty lasts twice as long in service as the "large" size battery. The savings are even greater when heavy duty "B" batteries are substituted for the small portable size batteries which are sometimes erroneously used for home receivers. There have been cases when "B" battery maintenance cost has been reduced from 12 cents an hour to 2 cents an hour by using a heavy duty or extra large "B" battery in preference to one of the portable sizes.

It frequently happens that receiving set owners replace their "B" batteries when volume fails. The slightly increased volume which new "B" batteries give may lead to the conclusion that an exhausted "B" battery was the cause of the reduced volume. A "B" battery voltmeter, however, might show only a normal fall in voltage which would not account for the reduction in volume.

In such cases it is advisable to inspect the antenna connections for a broken or corroded lead-in, loose ground connection, worn out "C" battery or lost magnetization of loud speaker unit. Still another cause of reduced volume is the loss of active material on the tube filaments. Quoting from the Technical News Bulletin, issued by the national bureau of standards:

Tubes Lose Sensitivity.

"Electron tubes in radio receiving sets eventually lose their sensitivity. This sometimes progresses to the point where the receiving set operates very poorly or not at all, even though the tube filament is not burned out. The user of the set frequently confuses this condition with that due to an exhausted "B" battery. If the tubes are of the thoriated tungsten (X-L) filament type, they can usually be rejuvenated to serve as well as new tubes in the receiving set."

A simple process of rejuvenation, which can be performed at home, consists in disconnecting the "B" battery from the set and burning the filaments at full brilliance for a half hour. Usually this restores the filaments to full activity.

The two major causes of reduced volume are exhausted "B" batteries and worn-out tube filaments. It is easy to determine which is responsible for the loss of volume. A good, reliable voltmeter will indicate the condition of the "B" batteries. If each 45-volt "B" battery registers 34 volts or more, the cause of reduced volume lies elsewhere, probably with the tubes. Lacking a reliable voltmeter to test "B" batteries, a good plan is to have on hand one or two spare tubes which are known to be in good condition. Substitute the new tubes for those in the set and if this makes a marked improvement in volume, it is an indication that the old tubes require reactivation or renewal.

By-Pass Condensers an Aid to Radio Receive

There are a number of places in a receiver where by-pass condensers should be used to help improve its operation. By-pass or blocking condensers keep the radio frequency currents in the part of the circuit where they belong. If the radio frequency or high frequency current strays into the audio frequency or low frequency part of the circuit, you will get howls and noises and generally poor performance from your set. In fact if very much radio frequency gets through to the audio you may not be able to operate the receiver at all.

By-pass condensers should be used across any part that has a high resistance or impedence to provide an easy path for the radio frequency current. A by-pass condenser should always be provided across the "A" and "B" batteries. When the batteries are new the resistance is not extremely high, but after they have been in use for some time this resistance rises rapidly and some means must be provided to counteract this effect. A fairly large capacity must be used from one-half to two mfd. The larger the better. Connect the condenser between the 45-volt plus and the negative filament and between the 90-volt plus and the negative filament. Even with a new battery these condensers will improve reception, but their effect will be particularly noticeable with batteries that have been used a short time.

Use good quality condensers and make sure they are not leaking. To test for leakage connect a 90-volt battery across the condenser for a few seconds, then, after setting aside for about 15 minutes, touch the condenser contacts with a pair of phone tips. If there is no click heard in phones then the condenser is leaking. If, however, you hear a click, it is O. K.

The next place a blocking condenser should be tried is across the primaries of the audio transformers. Very often a small amount of radio frequency current will get through from the detector and will pass through the primary of the transformer unless an easier path is provided for it. A condenser of from .0025 to .01 should be used. The best value will be found by trying various capacities.

R. F. Amplification to Give Volume and Tone

Radio frequency amplification is accomplished by the use of additional transformers preceding the detector. This will amplify the radio frequency signals to a value great enough to faithfully actuate the detector, thereby giving greater volume and clarity in the audio amplifier. Two stages of radio frequency amplification will generally be found to be sufficient and in very carefully designed receivers, even one stage will be found to be enough.

Rundown "B" Batteries Should Be Replaced

Even though enough plate voltage is available to supply the receiver, good results will not be obtained if an overdischarged B battery is in the circuit. Standard 22½-volt "B" batteries that do not register more than 17 volts, and 45-volt batteries that do not register more than 34 volts may be considered inefficient and should be replaced. If left in the circuit they are apt to cause noises to be heard in the set.

Improved Variable Condenser

New variable condensers are arranged in a brass housing that protects the plates from injury, keeps dust and dirt out and at the same time shields the condenser from body capacity and from magnetic spraying or other nearby instruments.

CHILDREN CRY FOR

Fletcher's CASTORIA

MOTHER:— Fletcher's Castoria is especially prepared to relieve Infants in arms and Children all ages of Constipation, Flatulency, Wind Colic and Diarrhea; allaying Feverishness arising therefrom, and, by regulating the Stomach and Bowels, aids the assimilation of Food; giving healthy and natural sleep.

Put one on—the pain is gone

Wyoming Great Game State

Wyoming this year has shown one of the greatest increases in game of any state in the nation. A census of game in the state taken by the fish and game commissioners shows at the present time 39,770 elk, 26,100 deer, 19,900 antelope, 4,275 moose, 2,830 mountain sheep and more than 2,000 bears. The annual increase in elk is so great that the game commissioner says 3,000 more bull elk should be killed during the hunting season of 1926 than were slain last year.

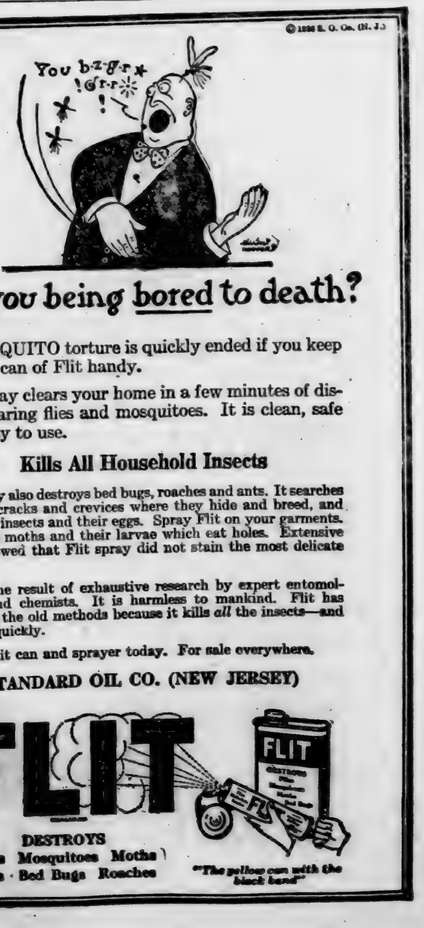
A thing seriously pursued affords true enjoyment.—Seneca.



Are you being bored to death?

MOSQUITO torture is quickly ended if you keep a can of Flit handy.

Flit spray clears your home in a few minutes of disease-bearing flies and mosquitoes. It is clean, safe and easy to use.

Kills All Household Insects

Flit spray also destroys bed bugs, roaches and ants. It searches out the cracks and crevices where they hide and breed, and destroys insects and their eggs. Spray Flit on your garments. Flit kills moths and their larvae which eat holes. Extensive tests showed that Flit spray did not stain the most delicate fabrics.

Flit is the result of exhaustive research by expert entomologists and chemists. It is harmless to mankind. Flit has replaced the old methods because it kills *all* the insects—and does it quickly.

Get a Flit can and sprayer today. For sale everywhere.

He Was Cool

"Were you cool while in battle?" was asked of one of the over-seas lads. He replied: "Sure I was. I was so blamed cool at times I actually shivered."

Of course he could joke about it after it was over. Many of the battles of everyday life cause people to shiver, too. It is not a pleasant sensation. One of the best friends along life's journey is money in the bank. Start today. No telling when the battles will come. Better be prepared.

This is the first year that a public clean up day has not been observed in St. Joe.

Two electric signals installed on the two business corners would stop this fast driving thru town.

Children's day services are being planned in all the churches of the county, during the next two or three weeks

Gray Woodcox and wife, of Garrett, and C. A Woodcox and family spent Sunday at the Erick grove In the afternoon C. T Bateman and family of New Haven were callers

Walter Horn of Minnesota, is here the guest of relatives and friends Some forty years ago he lived about Spencerville and was well acquainted with the older folks about St. Joe.

The Friendly Bible Class of the Methodist Sunday School was entertained in the home of H. J. Renner and wife, Monday evening. Mrs. Ray Koch was chosen as president for the year. Refreshments were served and a good social time was had.

Robert Johnson, a former St. Joe boy, is traveling this summer with Green and his band for the Community Chautauqua Co', and on July 7, they make their appearance at Garrett. No doubt Robert would be pleased to meet any St Joe folks who could arrange to go.

An auto wreck occurred on the grade near the Curie home south of town, about ten o'clock Monday night The car was from Garrett and was damaged but what it could be run. The Woodcox service car of Garrett was called and soon had the car on the road. One of the men was hurt considerable.

A total of 645492 children attended school in Indiana during the past school year, it was reported to the state board of education Monday by Miss Blanche Merry, state attendance officer Of this total 285,700 attended town and city schools and 360 892 attended county schools, including public, private and paroch al institutions.

New Jersey Klansmen have started a fund to rebuild a colored church burned down during disturbances at Carteret, N. J , recently, it was revealed today. At the time of the fire klansmen were blamed. John Hugg, a great titan of the klan, stated today that at a "klonvers." held Saturday night at Livingston, N. J , and attended by hundreds of klansmen and their families, a subscription was started to rebuild the church.

Teeth Turned Purple

Prof. J. Barcroft, Fullerian professor of physiology, Royal Institution, lecturing before the institution, said there were at present at least three cases in England of a very rare disease in which the patients suffered from the pigment porphyrin in the human system.

The porphyrin was to be found in the teeth, the bones and the skin. The teeth were turned purple by the disease, and the patient's skin became so sensitive that out of doors his hands must be gloved and his face covered by a veil.

Porphyrin was discovered in hen's eggs, but it was not known whether it came from the blood or was something which leaked into the system as blood was being made.

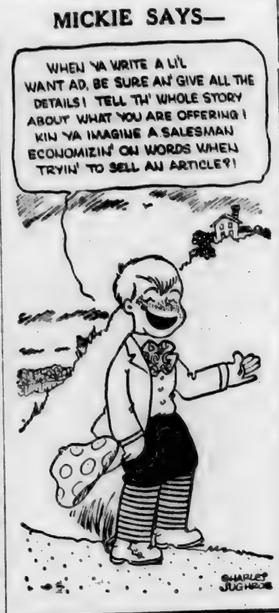
Bibles by the Leaf

The Gutenberg Bible for which Doctor Rosenbach recently paid $125,000 was a perfect copy, but even imperfect copies realize fabulous sums.

One of these, bought by Mr. Gabriel Wells, a New York book-dealer, had so many pages missing that it was beyond restoration, so he split it up and sold it leaf by leaf, or in small sections, to collectors who could not afford a complete Gutenberg Bible.

The highest prices were paid for the sections containing some especially famous passage—for example, the Ten Commandments or the Sermon on the Mount. Mr. Wells thus disposed of 593 pages, at the average price of about $150 a page.

MICKIE SAYS—



St. Joe needs some traffic laws.

Mrs. Wm. Lucas called on Mrs. Adam Shilling last week

Mrs. Martha Miser of Waterloo, visited in the home of her son, Ed Miser and family a few days last week.

Mrs. Dan Stumm and two daughters, and Bert Wiles of Corunna, the latter a brother of little Miss Lucile Wiles, visited in the Adam Shilling home Tuesday afternoon.

A meeting is called for Friday evening at eight o'clock at town hall, for the citizens to consider the Home-Coming plans. This is of sufficient importance that a good attendance is desired by the president, Ed Miser.

We Do BILL HEAD PRINTING on HAMMERMILL BOND

Saturday, June 26 To Be Gala Day.

As announced last week, the date of the 26th., has been set as public picnic, sponsored by the Fish and Game Club, to be held in the Erick grove, one mile south of St. Joe. The committee on games and sports make the following announcement:—

10 A. M—Horse Shoe Contest
12—Noon Hour
1:15—Band
1:30—Speaker
2:30—Monkey Climbing Contest
Relay race—8 yrs. to 12
Relay race—12 to 20
Fat Man Race
Cracker-eating contest
Nail driving contest—Ladies
Bait Casting contest
Water Polo game
Rowing contest

Remember this picnic is for all and refreshment stands will be provided for your comfort.

Plan for the 26th, and tell your friends to come.

Serum of Value in Treatment of Measles

The blood serum of adults who had measles in childhood may be used to modify the disease in children so that it will take only a mild form devoid of serious after effects, and yet will give immunity for life just as the normal form of the disease does.

This is the conclusion of Prof. R. Debre and Doctor Joannon of the University of Paris Medical school, reported to the health committee of the League of Nations. More than a thousand injections of serum have been given without any bad effects. The efforts of Dr. Leon Bernard, of the University of Paris resulted in the establishment of two prophylactic stations in Paris for the treatment of the disease.

"Up to the present time," Doctor Bernard said, "prophylactic methods have been used to some extent in the United States and Germany to secure temporary immunity. A serum from convalescent cases was used and injected in patients during the first six days after infection.

"But a durable immunity may be developed if the serum is not injected until the germs have had more time to incubate, as in the modified procedure of Professor Debre, where the injections are made only between the sixth and the tenth day after infection. A serum shortage problem was solved by the discovery that the serum of adults who have long since recovered from measles was as efficient as that taken from convalescent children.

Airplane Flight From Frisco to the Orient

In the one trans-oceanic nonstop airplane flight which has been made, Alcock and Brown crossed the Atlantic at a speed of about 120 miles an hour. They traveled only 1,960 miles. The distance from San Francisco to Hong Kong, via Honolulu, is about 7,050 miles. Maintaining the speed of the Atlantic flyers, this flight would require fifty-eight hours and fifteen minutes. From San Francisco direct to Shanghai the distance would be considerably shorter and might be made, perhaps, in about forty-two hours. No time would be saved because of the rotation of the earth, for the reason that the airplane also rotates; the atmosphere through which the plane travels, is as much a part of the earth as the land.

Hospital's Odd History

A hospital that has never had a patient is to be dismantled at Dundalk, County Louth, transferred to another town in the same county, and used as a sanitorium.

The hospital owes its existence to a panic 20 years ago. A foreign vessel coming into the harbor hoisted a flag for a pilot. By mistake a yellow flag was put up. The port authorities came to the conclusion that there was plague on board, and there was great excitement.

Publication of the facts of the mistake failed to allay altogether the fears engendered, and a port inspector suggested the erection of an isolation hospital. From the day the hospital was built the authorities have maintained it and a staff and paid $100 a year ground rent.—London Tit-Bits.

O. K Shull and wife, Wm Hamilton and Mrs. Frank Hamilton, were present at the graduation exercises on Monday and Tuesday of last week

Glasses made to fit your eyes and your pocket book by Griest, American Bldg., Hicksville, Ohio.

The Wisdom of Nature

— By O. Lawrence Hawthorne —

The one great lesson men should learn from Nature
Is that coöperation brings success!
We know that rain and sunshine work together
To fill the world with health and happiness.
Consistently the elements contribute
Their service for the benefit of man—
Each force, though great or small may be its duty,
Does well its part in God's unfailing plan.

The songs of birds, the colorings of flowers,
The blush of morning and the kiss of night—
These all combine to form the charm of Springtime,
And so caress our spirits with delight.
Without the aid of Winter's rest, all Nature
Would soon become exhausted and decay;
Just so does darkness give new strength and vigor
And fit creation for another day.

Let us, then, borrow wisdom from the seasons,
And knowledge that shall guide us as we go
Along the busy path of life's endeavor.
Let us remember that we all may know
Success when each is faithful in his service,
And mindful of the needs of other men;
For what we give in true coöperation
Will surely come to bless our lives again.

© 1926 O. Lawrence Hawthorne

LUMBER YARD FOR ST. JOE

We are pleased to announce to St Joe and surrounding country that we have taken a long time lease on the large hay barn that was formerly occupied by Hart & Lower of Hicksville, O. We will have a complete line of lumber and roofing, cement, and in fact everything that will make a modern lumber yard. We solicit your business and will be more than pleased to figure on bills for houses, barns or any other buildings. Remember this is something that St. Joe has needed for a good many years and we hope that St. Joe and community will support it so that it will be a permanent fixture in the town of St. Joe.

Hardware RADIO Implements

In Society

The home of Mr. and Mrs. Saxe Hadsell was the scene of a very pretty wedding Sunday, when their daughter, Portia was united in marriage to Wm. Hough of South Bend, Rev. J. N. Scholes officiating

The house was nicely decorated with roses, peonies and ferns. Preceding the ceremony, Paul, brother of the bride sang, "I Love You Truly" and "Oh Promise Me," accompanied by Hilda Koch at the piano. The couple was attended by Mr. and Mrs. Allen Haller of South Bend.

The bride wore a beautiful dress of pink georgette and carried a bouquet of sweet peas and snapdragons. Mrs. Haller wore a dress of rose georgette and carried a bouquet of roses and snapdragons.

After the ceremony a three course wedding breakfast was served to fifty guests. Doris Shull and Pauline Wasson, close friends of the bride, assisting with the serving.

The couple left on a wedding trip to places of interest in the east after which they will return to their home in South Bend.

They have the best wishes of their many friends.

Mr. Wayne Trostel of Willard, Ohio, son of Mr. and Mrs. Abner Trostel of east of town, and Miss Edna Starrett of Lima, Ohio, were united in marriage at Lima on Tuesday of last week. Wayne is working as brakeman for the B. & O. and has a regular run between Lima and Willard. They are now keeping house at Willard.

HEARD AROUND THE CORNER

Telephone us your news items.

John Barger of Bryan, Ohio, was in town Monday morning on business. He is now operating a garage.

Vernon Woodcox and family are moving this week from north of the railroad track into the former John Hart home. Son Billy is getting into the habit of calling on grandpa without the knowledge of his parents and they consider the crossing of the tracks too great a hazzard.

Miss Hilda Koch, who is working in South Bend, was home over Sunday.

You can still get those Wolverine Shoes that stay soft, at Beams & Co. Spencerville.

Miss DeVeta Bayman, a former St. Joe girl, now of New Haven, was married last Sunday, to Dr Lynn Reed of Ft Wayne. They will make their home in Dayton where he will practice dentistry.

F. H Langley and wife and Mrs Alice Warner are again residents of St. Joe, returning on Monday from Defiance, where they lived for the past winter. Mr. Langley has hired a man to manage his wholesale News business and he will start traveling next week selling tires.

A record worthy of mention is that attained by a brood sow on the Clarence Hart farm. She farrowed her sixth litter this week with 11 fine, healthy pigs, making a total of 77 pigs. Three litters she raised 11 each, two litters 14, and 7 and 9 in her first two litters. This mother hog is of the Duroc type and Mr. Hart says he would refuse $150 for her.

Thursday evening July 1st. Mrs. Leone Mason will entertain the R. H. C. in a patriotic meeting. Mrs. Nellie Perry entertained last Thursday and eight members, besides three guests, Mrs. Ruth Perry-Buss, Berniece Wilder and Mildred Gee, being present. Officers for the next six months were elected as follows:—President, Marie Trostel; Vice Pres., Nellie Perry; Secy., Minnie Gee, and Press Correspondent, Mrs. J. N. Scholes.

F. D. Tope & Co., store has been moved to Fort Wayne and is now located at 4224 Piqua Street in Lafayette Place. They will handle groceries only, just as soon as they close out the remainder of their drygoods left from their sale. Mr. Tope reports that he has purchased the Clem Grocery and that a good location has been found, where a good trade has been worked up and in an ideal community. We wish them well in their new location.

A pleasant gathering was held at the home of Mr. and Mrs. John Wineland on June 20th, in honor of the latter's birthday. Those present were Clarence Dorsey, wife and son Virgil of Scipio, Derwood Ridgway and family, Glen Freeburn and family, Glen Wineland and Marcellean Curie. Afternoon callers were Mr. and Mrs. A. R. Cole, Mrs. Ida Andress and Mrs Reiner of Garrett and Mrs. Sarah Hendricks of Auburn.

Blue and White, Black and White

Polka Dots, Stripes, Plaids Are in Fashion for Summer Season.

One style that has become almost a tradition is the navy blue and white polka-dotted frock. Its popularity, observes a fashion writer in the New York Times, may be dimmed by monotony after many seasons, but it comes back with unfailing regularity. There is a certain clean-cut freshness about a frock of this sort that is becoming to everyone and makes it a delightful possession. It is almost as much an institution as the black gown in the wardrobe of the average American woman; and, judging from the number of intriguing models that emanate from Paris, the wearers are much in agreement as to preference in dress.

That one black gown in this day has many variants, and just now is one of the dominating conceptions. The polka dot, especially in blue and white and in black and white, belongs essentially to the summer outfit and it is very much in vogue this season in New York. All the possible combinations of color, with white as the background or in reverse order, are presented in the latest designs. There are crepes, silks, voiles and chiffons, printed in soft tones of brown or beige; green, blue or red, in all shades; with the two-color plan carried through the ensemble. These are charming, but the polka dot that commands enduring popularity is that in some color combined with white.

Curiously enough, the matter-of-fact polka dot is one of the few patterns relatively independent of quality for its dignity. Handsome satins and silks are embroidered in dots, large or small, and somehow have little the advantage of muslin, especially if it is one of clear blue and white or black and white muslins with trimmings or accessories in white and, this season, a dash of scarlet in addition. This naive design is being shown in countless variants, within obvious limitations, some built to answer the requirements of a more or less dress occasion, while others are simple utility warm-weather frocks.

The most popular model of the better type is one in which plain material and a polka-dot pattern are combined. This is extremely smart in frocks done in black and white or navy blue and white. One dress copied from the French original is made of crepe in blue and white polka dots, with a flounce of plain blue chiffon added to the bottom of the tunic in the scalloped line now so fashionable. This additional band is wide enough to give the effect of godets and is extremely graceful. Narrower bands of the plain goods are used to finish the sleeves, forming a flare cuff, and a jabot of the chiffon placed at the V-neck tapers, fluttering, to the waistline.

Brown Velvet Ribbon Added.

This model is proving especially attractive, for it may be varied in many charming ways as to arrangement of lines in handling the materials, as well as in combinations of color. A crepe de chine, with dots of havana brown on a ground of sand color, is combined with brown georgette; and,

Top Coat of Checker Tweed Is Smart for Sports Wear.

in this particular gown, brown velvet ribbon is added, with the ensemble completed by a hat of brown neapolitan.

The little trotteur or jumper frock of polka-dotted stuff is altogether chic, the kind that will be of great service all through the summer and practically for all the year. In some of these the entire dress is of the dotted material, usually crepe, and the skirt is frequently plaited, while the jumper or tunic is simply tailored. In others, the upper part of the suit is of plain goods, the skirt of the figured, finely plaited, or in reverse order.

The ingenuity with which these polka-dotted materials are handled is both interesting and amusing and taxes the skill of the designer. Some of the French designers use a pattern of polka dots printed in different sizes on the same piece of fabric, an idea that was anticipated by the manufacturers in advance of the season.

This being a year for small patterns, the smaller the dot the smarter it is considered to be. But some very fashionable costumes from both French and American designers are in large disks—too large to be called dots. These are very effective in black and white, and even patterns which in colors would be flashy have a certain distinction in this combination.

One gown just brought out by an exclusive New York importer is of black georgette, with large spots of white, distributed in groups. This fabric, which was given a preliminary presentation last season, is much in vogue now and is made more striking by the addition of a contrasting color in plain sheer goods. In the crepes a model that is much liked is one in which the jumper tunic is of Brittany blue and white-dotted pattern, the

One of the Most Popular Models in Polka Dots.

short skirt of plain blue, laid in clusters of inverted plaits. The sleeves of this frock are long and cut to gather in a slight fullness at the wrist. Plain blue, in a band with upstanding battlements, is appliqued around the bottom of the tunic, and a collar, tie and narrow strap belt are also made of the plain blue.

The Craze for Red.

With the present craze for red, some dashing frocks are made of scarlet and white polka dot materials—some all of one pattern, others very effectively combined with a plain color—and a few uncommon and original costumes are shown in which a touch of black is added, as bright red is used in the frocks of navy blue and white. This little splash or line of brilliant color, geranium, flame or coral, has the effect of quite transforming an otherwise commonplace polka dot gown.

In the general feeling for plain fabrics this season, the bold plaids, figures and flower patterns have suffered eclipse, and most of the designs that are now in vogue are modest and concise, and in gentler tones. This background makes more striking the exception in checks, large plaids and stripes that are shown in models from some of the best houses. Black and white have inspired some very smart gowns and coats. The colors are combined to form large blocks in the arrangement of contrasts, most effective when done in satin.

The Rodier materials are displayed in some ultra-smart frocks and coats especially designed for sports and traveling, stuffs in which both Chantol and Chanel are having conspicuous success. One from Chantol—a long coat—is made of wool in reds and browns; and that from Chanel is in brown and beige, each of these wraps showing an enormous plaid pattern.

Among the frocks that are made of plaid materials, some in taffeta are fascinating in their quaintness. The first of this type were sent over by Vionnet in advance of our regular spring season and proved popular at once. Among these plaids are lovely combinations in cool greens with white and gold, copper and yellow, blues, grays and browns, the very type of design suggesting the old-fashioned dress with full skirt and wide sleeves. A somewhat fitted bodice and sometimes a kerchief are employed. It is a refreshing model that is attractive equally to youth and maturity.

Black-and-white, so very smart this season, is also charming in the plaids and checks of both worsted and silk. In the large patterns this combination has somewhat more dignity than the plaids in colors, and the small black and white checks. The shepherd plaid and others in various sizes of pattern are shown in some of the smartest models from France—Martial et Armand, Premet, Drecoll, Paquin. Check patterns in black and white have always been liked by American women and now that they are again modish they will probably last through several seasons.

A new note in sleeves is the short cape which had such a long period of favor several seasons ago when the sleeve disappeared altogether. Long sleeves, so especially becoming in sheer goods, are still regarded as better style; but the short sleeve will be chosen for its comfort in warm weather.

THE KITCHEN CABINET

(©, 1926, Western Newspaper Union.)

He is a poet, strong and true,
Who loves wild thyme and honey dew;
And like a brown bee works and sings,
With morning freshness on his wings,
And a golden burden on his thighs—
The pollen dust of centuries.
—Maurice Thompson.

WAYS WITH FISH

There is an old saying that "small fish should swim twice: once in water and once in oil," which we infer to mean that they should be fried in deep fat. When buying fish, select fish with a firm flesh, red gills and bright eyes. As soon as it is caught, if possible, scale it at once, place in a cold place and serve cooked within a short time. If the fish is bought in the market, give it the same treatment.

To Boil Fish.—Wipe the fish carefully, dust well with salt and wrap in a cheesecloth, well tied up. Drop into boiling water, add a teaspoonful of salt, a bay leaf, a sprig of parsley, a slice of onion and a bit of celery. Cover the kettle and just simmer ten minutes to the pound. Lift out carefully and turn the fish on a folded napkin on a hot platter. Garnish with lemon quarters and parsley and serve with drawn butter sauce.

Planked White Fish.—One may serve a planked fish at home in all its perfection. Secure a two-inch plank made from hardwood—hickory, maple or oak—a groove running round the edge two inches from the edge will hold the juices. A plank cut oblong a foot or a little more will be long enough. These planks may be purchased in any utensil store. Have the fish split open down the back and lay it skin-side down on the plank which has previously been heated so hot that it cannot be handled without a holder. Place in a hot oven and bake a half hour or longer. When the fish is done, garnish the plank with mashed potato, parsley and lemon. Set the plank on a hot platter and serve. The longer the plank is used the better the flavor. Scrape it after using, wrap carefully and it will keep for years, growing more valuable with use. If one wishes to cook the fish before an open fire, tack it on the plank and stand it before the fire.

Jellied chicken, sweetbreads and fish are all used as sickroom foods.

Fresh Haddock.—Trim and stuff the fish with buttered crumbs, sweet herbs, a bit of parsley and an egg. Tie up and spread with butter. Bake in a moderate oven until the fish falls from the bones. Serve with fried tomatoes and rolls of broiled bacon. Fresh trout are the most delicious of all eating. Fried in butter shortly after being caught, they are a fish fit for the gods.

Fruit Cocktails.

There can be no more appetizing beginning for a summer meal than a fruit cocktail. They should be served very cold in glasses or in fruit cups of lemon, orange or grapefruit. Tomato is one of the vegetables that is often served as a cocktail as it is so much like fruit.

In preparing fruits for cocktails two things should be remembered. The fruit should stand in the sirup or fruit juice until well sweetened. The sugar sirup is prepared by boiling together twice as much sugar as water, until a thick sirup is made.

The menu following should always be considered when preparing a cocktail. If a vegetable cocktail to which salad dressing is added is served, the salad for that menu may be omitted.

The small pear-shaped yellow tomatoes make most attractive serving; they may be combined with fruit which has a decided flavor, like pineapple, then with a little diced or cubed pear and a fruit sauce, the combination thus being well flavored.

A pineapple and raspberry combination is also good. It is hard to find any occasion when the flavor of pineapple is not enjoyed.

One of the most attractive cocktails to look at is made by using the heart of a well-ripened watermelon. Cut ball-shaped pieces with a French potato cutter, serve with a chilled lemon or pineapple sugar sirup. Prepared the same way, use muskmelon and canton ginger sirup; this is especially delicious to those who enjoy the ginger flavor. It is not wise to add a highly-flavored sirup or sauce to a fruit which has a delicate flavor which should predominate. A lemon sauce is good as it brings out the flavor of other fruits.

Equal parts of sliced peaches and stoned cherries, marinated in sugar sirup and garnished with frosted mint makes an attractive cocktail.

Diced peaches, twice the amount of ripe, large blackberries, treated with a lemon sirup and flavored with a bit of the rind if liked, makes another popular cocktail.

Such fruits as prunes, figs, raisins, persimmons, pawpaws have more food value than most other fruits, though the acids and minerals in all fruits are valuable in the diet. The addition of stock, egg or milk, of course, adds to the nourishment of the soup.

Nellie Maxwell

ENJOY MANY COMFORTS ON CAMPING TRIP

The Morning Toilet in "Tin Can Camp."

The question, "What shall we eat, and what shall we wear, on our camping trip?" is answered in a bulletin issued by the touring bureau of the Chicago Motor club. "The motor camper who subsists on a diet of canned, powdered and dehydrated foods, is not aware of the latest developments in camping," says this bulletin. "The camper has cereal, grape fruit, toast and coffee for breakfast at home, why not have the same breakfast while hitting the gypsy trail? The cream for breakfast comes out of the refrigerator basket, the butter comes from this same basket, or from the tonneau or runningboard ice box. As for toast, nothing is easier to prepare when the camper is equipped with a collapsible camp stove.

"Campers now go equipped not only with ice chests, but with kitchen cabinets as well. The portable kitchen cabinets contain a score of compartments where salt, pepper, mustard, coffee, tea, spices, and various condiments may be carried. Pots, pans, and kettles may also be carried in the portable cabinet.

"The matter of proper clothing is as important as proper food. Those who can should wear wool next to the skin at all seasons, for wool is the surest protection from every whim of the elements, and it is not uncomfortable in warm weather, in fact the contrary is true. Silk stockings and cotton underwear have spoiled as many camping trips as uncomfortable beds. A 60 per cent wool garment is the sensible thing to wear in summer, for the wool insulates the skin against intense heat and also against the sudden chill that comes on after the sun has gone down in high altitude camping. Women should wear knickers or riding breeches, with oxfords and middles. Men will find khaki breeches, wool shirts, and puttees ideal for the camp and for long distance driving."

STRAIGHT SHIELD IS ALWAYS BEST

Allows Light to Travel in Straight Line and Gives True Vision.

The strictly vertical windshield is best and safest.

That is the opinion expressed by Dr. Edwin H. Silver, president of the Columbia Optical company, and member of the motor vision commission of the American Optometric association.

"The laws of refraction and the laws of reflection should govern the construction of a windshield," Doctor Silver says. "Good vision, the ability to translate what is seen and the ability to act quickly are the three most vital factors in automobile driving.

Optics of Windshield.

"The optics of the windshield play an important part in the vision of the motorist. The surfaces of the glass must be parallel to each other and the thickness the same throughout, as otherwise you will get multiple images of an approaching object, especially a light.

"For this reason the windshield should be in a strictly vertical position, or at the utmost the slant should not be greater than 10 degrees. A greater slant than this causes the driver to see through an increased thickness of glass which, while small, serves to increase the internal reflections and to emphasize every defect or variation from parallelism of the surfaces of the glass.

"The prismatic effect binds the light rays, making the gauging of distance uncertain. Light travels in a straight line, which is broken by the slanting windshield and causes an approaching object to appear several feet distant from its actual course. The speed of the automobile makes the split second necessary to correct the effects of the false message to the eye of the most vital importance

Ideal Windshield.

"The ideal windshield is vertical in position, of the finest and most flawless plate glass and located so as to be about 20 inches from the eyes of the driver.

"The adoption of the narrow post on each side of the windshield is also one of the most forward steps taken by the manufacturers in recent years. You can obscure the sun with a pencil and see a baseball game through a knot hole. That explains, I think, why the wide post, with its greatly increased 'blind spot' is so much more of a menace than the narrower post."

Avoid Left Side of Car When Stopping on Road

When stopping along the road don't sit on the left side of the car to rest. One is likely to lean out of the car to stretch and get struck by objects protruding from trucks and other cars. Most drivers will pass closer to a car that is stopped.

If camping and using the battery for lighting, park the car on a slight downgrade and block the wheels. When you are ready to go crank by allowing the car to coast in gear, thus saving the battery and starter

Tampered Motor Numbers Detected by New Device

The police of Philadelphia the other day tested a device which makes it possible to detect whether the manufacturer's number of a motor has been

Testing for Tampered Number.

tampered with—after a chemical has been placed over the number, it is heated with an acetylene lamp, another chemical is then placed on it and in a photographic plate the original number can be seen.

Oil Hinges and Latches to Prevent Impairment

Automobile door hinges and latches are pieces of mechanism that, like anything else of the kind, require a certain amount of lubrication to prevent rust and the collection of dust and dirt in them. Squeaks are the result of nonattention to this detail at intervals. But due to these fittings being where clothing sometimes rubs against them, it is not desirable to squirt cylinder oil on them after the manner of lubricating other parts. This would soon run off, anyway. A good lubricant for these parts is linseed oil with which a small amount of powdered graphite is mixed. Linseed oil seems to have less of a tendency to run and spread than cylinder oil and when it collects dust and dirt, a gummy mixture results which has the effect of holding the graphite where it is put. Of course, a very small quantity of the graphited linseed oil is all that is needed at each point.

Traffic Is Overcoming the Smaller Cities Now

The National Automobile Chamber of Commerce reports that America's larger cities are handling the traffic problem with ease while traffic congestion is resulting in confusion and accidents on the streets of the smaller cities.

The small cities are just beginning to get the traffic problem and are unprepared to handle the situation which is causing an unproportional number of automobile accidents in cities of less than 100,000 population.

The National Automobile chamber is urging civic bodies in smaller cities to conduct an intensive safety campaign to solve traffic difficulties and to prepare the citizens for the time when a larger number of automobiles will be in use

INDIANA BREVITIES

The Garrett Ministerial association has filed with the city council a petition for an ordinance which would forbid commercial entertainments in the city on the Sabbath. The petition is aimed primarily at Sunday motion picture shows.

Members of the Greek orthodox church of South Bend, having raised sufficient funds with which to erect a church, are conferring with the Rt. Rev. Philaretos Johannides, D. D., of Chicago, regarding the proposed house of worship.

Opposition to the proposed section of a war memorial in Huntington county has been demonstrated by the Huntington farm bureau by filing of a remonstrance against the expenditure of funds from the county treasury for such a purpose.

A series of meetings of milk producers in eight counties centering about Marion county, for the purpose of discussing the operation and methods of conducting a milk pool, were called by the Indiana Farm Bureau federation, sponsor of the pool.

Lafayette is to have a new $100,000 library in place of the antiquated structure now serving that purpose as the result of a gift of Dr. and Mrs. Albert A. Wells of Indianapolis, former residents of Lafayette. The announcement of the gift was made by Mayor Albert R. Ross and Dan W. Simm of the local school board.

A painting of William Hendricks, who served as governor from 1822 to 1825, copied from a group painting in Washington, by Burtis Baker, has been received by the state historical commission. Hendricks' picture has been missing from the gallery of governors since the administration of his nephew, Thomas A. Hendricks, in 1877.

The appointment by Governor Ed Jackson of Charles Pangborn, prominent Charleston Republican, to succeed Dr. Edward J. Tansey of Monrovia on the state live stock sanitary board, completes the personnel of the board. Governor Jackson recently appointed Alvin Mellott of Etna Green to succeed Ralph Jenkins of Orleans on the board.

William Donaldson, foundry worker, who on April 8 confessed the murder of Joe Mullins in Gary that he might marry the dead man's wife, will seek escape from the electric chair on a plea of insanity. While Donaldson, who admitted firing the fatal shots, relies on an insanity defense, indications are that the widow will seek to escape heavy penalty through an attack on admission of her confession.

Young men and women living in Indiana will have plenty of opportunity to further their educations along most any line they choose this summer, for a dozen or more colleges and universities will be open. Schools which have announced summer courses includes Indiana university, Purdue, Notre Dame, DePauw, Butler, Valparaiso, Vincennes, Hanover, Evansville, Franklin and the two Indiana state normal schools of Terre Haute and Muncie.

Henceforth Jacks and Jills of Butler college will dance at their social functions or talk to the chaperons, as the result of an edict by Miss Evelyn Butler, dean of women, to the effect that "sitting out" dances in automobiles or other places of seclusion will be prohibited in the future. Miss Butler also forbids a coed and her escort to ride to an out-of-town dance unaccompanied. Furthermore, drastic measures will be taken if students insist on overloading their cars to an extent greater than their commercially announced seating capacities.

Reports of damage to corn by webworms are being received from all parts of Indiana. While the webworm is present every year, seldom does it become so generally abundant as the present year, according to Prof. J. J. Davis, head of the department of entomology of the Purdue university agricultural experiment station. The small brownish worms are active, but because they feed at night, and live during the day in a tunnel constructed along the underground stem of the corn plant, they seldom are seen and the source of the injury sometimes is a mystery.

The Order of Eagles in convention in Marion selected Hammond for the 1927 meeting and elected these officers: President, James O. Crim, Newcastle; vice president, Rev. Frank J. Mallett, New Albany, retiring chaplain; secretary, E. E. Cloe, Noblesville; treasurer, Dan A. Gutgsell, Michigan City, re-elected; chaplain, Irwin I. Fischer, South Bend; conductor, Henry F. Schroeder, Richmond, retiring inside guard; inside guard, William H. Miller, Indianapolis; outside guard, Louis Miller, Peru; trustees, John B. Faulkner, Michigan City, three years, and William McCartney, Marion, both re-elected; grand aerie delegate, Charles L. Vaughan, Lafayette, past state president.

Prof. M. L. Knapp, principal of the Martinsville high school for the last year, tendered his resignation to the school board to accept a position as principal of the high school at Michigan City.

Attorney George L. Xanders, Syracuse, conducted his recent campaign for the Republican nomination for prosecuting attorney of Kosciusko county by the expenditure of a 2-cent stamp, according to a report filed by him with R. H. Butler, county clerk. Xanders, however, lost to Elmer E. Kinsey, Claypool.

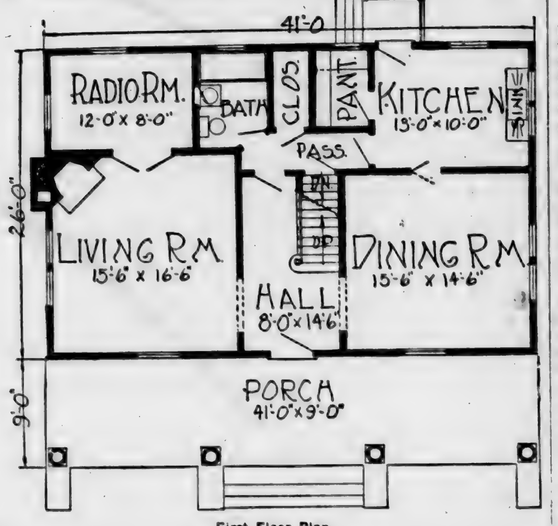
Home for Family Requiring More Than Average Amount of Space



First Floor Plan.

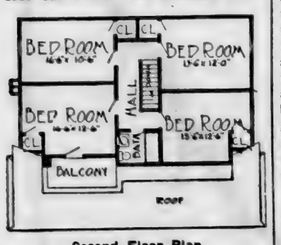
By WILLIAM A. RADFORD

Mr. William A. Radford will answer questions and give ADVICE FREE OF COST on all problems pertaining to the subject of building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

The present-day trend seems to be more and more toward smaller houses. Six and five-room houses are not infrequently seen. Such a house, however, will not do for every family. Some people feel that they want a bit more room and others require it for comfortable accommodation. There are still many seven and eight-room houses being built and the plans which are shown are for a house which might be said to be half way between the two. It has seven rooms and in addition a radio room.

This radio room is a small room, 8 by 12 feet, placed at one corner of the first floor adjoining the living room. Many people will find it highly desirable for the purpose named while others will be able to make better use of it for a library, study, or even as an office. Its wide doors make it available as an addition to the living room when entertaining a number of people at home.

The living room itself is nearly square, 15½ feet by 16½ feet with an attractive fireplace in the corner. It opens off a central reception hall with the dining room directly opposite. From the central hall is a door admitting one to a passage off which opens the kitchen, a large closet and a first-floor bathroom. The kitchen is provided with a large pantry, and from it there is a door directly into the dining room, and a rear service entrance.



Second Floor Plan

From the central hall stairs lead up to the second floor, which is simply arranged with four bedrooms and a bathroom. One bedroom is placed in each corner with the bathroom at the front end of the hall. The bedrooms are all good-sized rooms and each is provided with a closet. Each bedroom also has windows in two sides so that excellent cross ventilation is assured at all times. One of these bedrooms also has the advantage of a balcony, over the front porch, which could be used for a sleeping porch if so desired.

Looking at the photograph of this house it would be hard to imagine a home with a more solid and substantial air. This effect is contributed to by the low, sloping roof, the low, overhanging eaves, the heavy porch columns, the terrace up to the porch level and the heavy stone foundation about the steps and corners of the porch. The whole effect is most attractive and homelike and shows skill in handling, even to the small, square panes in the front windows.

The design is characterized by simplicity throughout, a simplicity which is almost severe but leaves no disagreeable taste because of the excellent valance and lines. The construction is completely in harmony with the design. Full frame construction with wide siding and wooden shingles seems the only appropriate thing for this house and the stone, already mentioned, effectively ties it to the ground, of which it seems a part.

The large porch used on this house is an attractive feature all too infrequently seen in the present-day houses and it is not hard to picture it as a gathering place for all the family and neighbors as well on warm summer evenings. It is an ideal spot in which to swing the old-fashioned hammock and place the easy chairs.

Architecture Is Now Essential Profession

It is all very well for the United States to lead the world in athletics, in industry, and in many other ways; but when all is said and done, these honors are passing; they are temporary at best, and in another hundred years or less will perhaps have been forgotten as some newer and more vigorous nation forges to the front. But there are other and more permanent monuments to the genius of the American nation, and one of the most important of these is our architecture.

Few people except those in the profession itself, or in professions closely allied to it, realize what great strides our architecture has made in recent years. So rapid and so excellent has our progress been that today we are virtually leading the world in architecture. Not, perhaps, that we can compare ourselves with the golden age of the cathedrals of England or the chateaux of France, but today we are far and away, when it comes to building, the most energetic and progressive of nations. Our public buildings, our skyscrapers, our churches, and, lastly, our homes, are improving each year.

Concrete Tile Is Good Support for Partitions

Concrete tile is being used more extensively every year for backup walls and partitions. They can be effectively tied into the masonry of the facing wall, making an exceptionally strong, fire-resistant wall.

Thousands of independent, profitable businesses are being built up all over the United States to supply concrete masonry products. All that is required is a plentiful supply of good clean sand and gravel, the necessary cement and molding equipment suited to local needs. Many builders require a sufficient supply of masonry products to make it profitable to have their own equipment for block and tile making.

Concrete products of today are far stronger and more uniform than those of even a decade ago. Much has been learned in regard to the selection of proper materials, the proportions to use, the proper mixing and curing. Precast units which are made from concrete carefully mixed, molded and cured by experienced concrete workers are nearly always superior in quality to monolithic concrete poured on the job.

IMPROVED UNIFORM INTERNATIONAL

Sunday School Lesson

(By REV. P. B. FITZWATER, D.D., Dean of Day and Evening Schools, Moody Bible Institute of Chicago.)

(©, 1926, Western Newspaper Union.)

Lesson for June 27

REVIEW: WHAT WE HAVE LEARNED FROM THE BOOK OF GENESIS

GOLDEN TEXT—We know that all things work together for good to them that love God, who are the called according to his purpose.—Rom. 8:28.

PRIMARY TOPIC—Favorite Stories From Genesis.

JUNIOR TOPIC—Stories of the Patriarchs.

INTERMEDIATE AND SENIOR TOPIC—Favorite Characters in Genesis.

YOUNG PEOPLE AND ADULT TOPIC—Permanent Messages of the Book of Genesis.

The method of review must always be determined by the department of the Sunday school and by the teacher's preferences. For the young people and adults, perhaps the best method will be to assign the task of finding the most important teaching of each lesson.

The following is suggestive of the method of review recommended:

Lesson for April 11—God created all things. The things which are come to be by the creative act of a personal God. God created man in His likeness and image, which means that man bears God's likeness morally and intellectually.

Lesson for April 18—The explanation of the ills and sorrows of the world can only be made on the basis of the historical fall of man as recorded in the Bible. The prime actor in this tragedy was the personal, cunning, malicious being called the Devil. Because man is a free being, possessing the power of contrary choice, sin entered through man's belief of the Devil instead of God.

Lesson for April 25—Because the human race is an organism, Cain and Abel through the law of heredity came into the world with sinful natures. God taught them that the way of approach unto Him was through a bloody sacrifice, typifying the supreme sacrifice made by Jesus Christ on Calvary. Abel believed God, took his place as a sinner and presented his offer accordingly. Cain in proud self-will brought the fruit of the ground, thus ignoring God's appointed way of approach unto Him. Cain's offering therefore was rejected because he did not recognize himself as a sinner and come to God in the way which God had appointed.

Lesson for May 2—Noah, coming forth from the ark, faced the responsibility of repopulating the new world. In recognition of that obligation and out of gratitude for God's grace in saving himself and family, he erected an altar and worshiped before the Lord. God responded and entered into covenant relationship with him.

Lesson for May 9—Lot's selfish choice involved him in trouble. Abraham, because of his separation from Sodom and unto God, was able to go against a mighty king and rescue his unfortunate nephew.

Lesson for May 16—God manifested Himself visibly to Abraham in the form of an angel. This angel was none other than the Son of God. Abraham thus met Jesus Christ. Christ no doubt referred to this when He said, "Abraham saw my day and was glad."

Lesson for May 23—Isaac, a child of the covenant given in the old age of his parents, was a gentle and peace-loving man. He suffered wrong rather than strive with his enemies.

Lesson for May 30—Jacob was chosen of God. Because of this God was with him. God will keep, protect and prosper His elect ones even in spite of their weakness and failure.

Lesson for June 6—Esau because of living under the sway of his appetite sold his birthright for a mess of pottage. He afterward repented and sought to undo his deed. Though sincerely regretting his act, it was impossible to change conditions. Our acts and choices are irrevocable.

Lesson for June 13—Joseph was peculiarly beloved by his father. Because of this Jacob unwisely expressed favoritism. This favoritism incited the jealousy of his brothers, who at the opportune time sold him as a slave to merchantmen going down to Egypt. Because of the false accusation of a wicked woman he was imprisoned.

Lesson for June 20—Because of Joseph's fidelity God raised him to a position of honor and power in Egypt. While in this position he made provision against an awful famine which came upon the land and became a means of saving from starvation not only the Egyptians, but his brethren who came down from Canaan. Though they had wronged him he graciously forgave them and provided for them in their need.

Neglecting Christ

Men who neglect Christ, and try to win heaven through moralities are like sailors at sea in a storm, who pull, some at the bowsprit, and some at the mainmast, but never touch the helm.—H. W. Beecher.

Worth Thinking About

Have you any compelling purpose in life? Is that purpose God's purpose for you? Are you co-operating with God in the carrying out of his purpose?—James F. Riggs.

ROAD BUILDING

WIDE ROAD DRIVE PLEDGED SUPPORT

Advocates of the popular but slow-moving wide-road campaign in the Chicago highway region have received unexpected support from two powerful road-building agencies, and cited Pennsylvania as a precedent in the proposal to use state bond issue funds in doubling the width of pavements on the existing main highways where heavy traffic warrants immediate improvement, writes J. L. Jenkins in the Chicago Tribune.

Following an official traffic survey and study of congestion on state roads corresponding to main arteries leading into Chicago, William H. Connell, engineering executive of the Pennsylvania highway department and former president of the American Road Builders' association, announced that the Lincoln highway pavement will be widened to a minimum of 40 feet entirely across that state as a departmental project.

Another champion of wide roads appeared in the person of Dr. L. I. Hewes, deputy chief engineer of the United States bureau of public roads. He declared that narrow pavements are a constant menace to transportation in the West and that motorists will not long tolerate the congestion on terminal gateway highways. Both authorities made their statements in connection with progress reports to the Lincoln Highway association.

"The present policy of the Pennsylvania department of highways," said Connell, "is to plan and build new work to suit the probable future traffice requirements in each instance. It would be absurd to say that all state roads require the same width of pavement as, for instance, does the Lincoln highway near Philadelphia and Pittsburgh. In 1925 a considerable mileage of 40-foot pavement was laid on this main trunk line west of Philadelphia and 40 feet will be the minimum pavement width of the road entirely across the state."

Making Brick Pavements Noiseless With Filler

Engineering knowledge and experience have developed the modern brick pavement from a common clay brick laid on the natural soil to the vitrified brick with an asphalt filler laid on a concrete foundation with a sand bed between the foundation and brick surface.

This produces a pavement surface which can be made as near free from construction defects as is possible. Every step in the manufacture of the material and placing it into the pavement is subject to correction before the next step is taken and thus insures against defects.

Modern heavy truck traffic has introduced an increased demand on pavements due to the enormous shock which it carries under its wheels. The vitrified brick pavement, made up of small units which are cushioned by the asphalt filler in the joints, absorbs this shock in summer as well as in winter weather. Furthermore, a smooth surface lessens the amount of shock and here again the vitrified brick pavement stands in the foreground, as its method of construction assures a smooth surface. The asphalt filler in the joints and a slight film of it on the surface creates a pavement which is noiseless.

Save Tire Expense

"The concrete highways of the Salt River valley cost close to $10,000,000, but that amount has been about saved already by auto owners," according to a local tire dealer. "The good roads have about doubled tire life, records of even 20,000 miles not being uncommon," he said, with addition that the tire man's salvation is the individual who will insist on starting and stopping with a jerk.

Good Roads Notes

A movement has been organized in Fort Wayne, Ind., to build a model highway from Limberlost cabin, on Sylva lake, to Luberlost cabin, near Lake Geneva, as a memorial to Mrs. Gene Stratton-Porter.

• • •

Rough roads cause considerable damage to the working parts of an automobile. Uneven roads are often unnoticed while driving as the body of the car does not shake with the axles and differential.

• • •

All roads are well signposted in France. Each bears a distinctive number preceded by a letter indicating its class—N for the main roads, D and GC for the secondary roads, and IC for the bypaths.

• • •

Secretary of Agriculture Jardine announces the apportionment of $73,125,000 to the various states for use in the construction of federal aid roads.

• • •

A total of $50,000,000 will be expended on highways in Florida in 1926 and the state will soon rank among the first of the Union in good roads.

• • •

A federal road to the top of Mount Haleakala, Hawaii, will enable tourists to drive cars to 10,000 feet above sea level to view the famous crater.

REVENGE

"Anything else, sir?" asked the barber of the customer who had been in a great rush.

"No. Wait a minute. Is that my wife waiting over there to have her bob trimmed?"

"Yes, sir."

"Give me all you got."—American Legion Weekly.

Breakage

"Why can't this important law be enforced?"

"Because," answered Senator Glum, "it is broke."

"You mean broken?"

"No I don't. There isn't any appropriation for its enforcement."—Washington Star.

IN A CHOPPY SEA

The boy stood on the swaying deck
Whence all but him had fled;
"This yachting stuff is mighty fine,
But home for me!" he said.

Interrupted Optimism

Investigation will not rest,
Strange stories are rehearsed,
And while we're hoping for the best
We still must learn the worst.

Double Order

"If you kiss me just once I'll scream," she said. "You really must be nice."

I didn't want to raise a fuss. And so I up and kissed her twice.—Brown Owl.

Sooner or Later

Mrs. Newlywed (to husband with spade and box of cigars)—Where are you going, dear?"

Mr. Newlywed—Oh—er—just going to get rid of a few weeds, darling!

A PEACHBLOW

"Must be a 'peach' tree from what's up in it."

"On the same principle, it would be a 'nut' tree if you were here."

The Caller

The sun puts on his shiny coat,
Across the skies to roam;
He hopes to call upon the moon,
But never finds her home!

Heavy Diet

"You're much heavier, aren't you?"

"Yes, the doctor ordered me to take iron."

Taking Them Out

"I sent a dollar to a firm that said they would tell you how to take out wrinkles in the face."

"Did they reply?"

"Yes; they said to walk right out in the open air every day and the wrinkles would go out with me."

Pale, Too

Mrs. Gander—The bride is pale, don't you think?

Gander—Yes; and I happen to know that the groom isn't very flush, either.

Striking an Average

"Is this a musical comedy?"

"Yes," answered Miss Cayenne.

"The music is rather tame."

"Don't you care. You'll be glad the music is tame when you see how wild the comedy is."—Washington Star.

Poor Advice

"Great Scott! What's the matter? Been in an automobile accident?"

"Naw! A fool told me to laugh at my trouble, and I took his advice and went home and laughed at her."

"BAYER ASPIRIN" PROVED SAFE

Take without Fear as Told in "Bayer" Package

BAYER

Does not affect the Heart

Unless you see the "Bayer Cross" on package or on tablets you are not getting the genuine Bayer Aspirin proved safe by millions and prescribed by physicians over twenty-five years for

Colds	Headache
Neuritis	Lumbago
Toothache	Rheumatism
Neuralgia	Pain, Pain

Each unbroken "Bayer" package contains proven directions. Handy boxes of twelve tablets cost few cents. Druggists also sell bottles of 24 and 100.

BURNS and SCALDS

Stop the throbbing and smarting at once with a soothing touch of

Resinol

Titled Woman Lawyer

Lady Ankaret Howard, a sister of the earl of Carlisle, is the newest English titled woman aspirant to legal honors, and her name appears among a list of successful students who have qualified in Roman law. Lady Howard, who belongs to the Inner temple, is the second daughter of the eleventh earl of Carlisle and was born in 1900. The only titled woman so far who has been called to the bar is the Baroness Clifton, of Leighton Bromswold, a peeress in her own right.

ALLEN'S FOOT-EASE

For Tired Feet It Can't Be Beat

At night when your feet are tired, sore and swollen from much walking or dancing, sprinkle two ALLEN'S FOOT-EASE powders in the foot-bath, gently rub the sore and inflamed parts and relief is like magic. Shake Allen's Foot-Ease into your shoes in the morning and walk in comfort. It takes the friction from the shoe. Sold everywhere. For FREE Sample and a Foot-Ease Walking Doll, address, ALLEN'S FOOT-EASE, Le Roy, N. Y.

The Ayes Have It

"The queen of Spain has begun a campaign to bring back the ankle skirt and the long sleeve, but I'm afraid she's going to be defeated," Jean Patou said to a New York correspondent.

He added with a chuckle:

"A world vote on the question Shall girls continue to wear knee skirts and no sleeves? would be bound to result in a victory for the eyes."

Cuticura for Pimply Faces.

To remove pimples and blackheads smear them with Cuticura Ointment. Wash off in five minutes with Cuticura Soap and hot water. Once clear keep your skin clear by using them for daily toilet purposes. Don't fail to include Cuticura Talcum. Advertisement.

Astounding

Wife—Today we have been married for 35 years.

Husband—Yes, it's wonderful what one can endure!

Visit the West this Summer

Spend your vacation this year seeing America's wonders in the glorious West—Puget Sound, Rainier National Park, the Pacific Northwest, California.

To see the most, go one way on the "Olympian"—the famous transcontinental train between Chicago and Seattle-Tacoma over the electrified Chicago, Milwaukee & St. Paul.

Low round-trip fares are now in effect. Return limit October 31. Stop-over privileges and free side trips.

Write, phone or call on our Travel Experts for full details and help in planning your trip.

Who will say the world is dying?
Who will say our prime is past?
Sparks from heaven, within us lying,
Flash and will flash, till the last.

COOL DRINKS

Many delicious summer drinks may be bought already prepared in bottles and with these and home-prepared grapejuice and shrub one has quite a good variety; but at times when entertaining one likes something a little different from the ordinary.

Fruit Punch.—Take one cupful each of the following fruits cut fine: Pineapple, raspberries, bananas and skinned grapes, if in season. To the juice of four lemons and eight oranges add a quart of freshly made and cooled tea. To two quarts of cold water add enough sugar sirup to sweeten. Mix all together and let stand until ready to serve (in the ice chest), then add two quarts of charged water and ice. Garnish with maraschino cherries.

Fruit Punch No. 2.—Take one can of grated pineapple and three cupfuls of water, boil together twenty minutes, then strain through a jelly bag, pressing out all the juice. Cool and add the juice of six lemons, ten oranges, one quart of strawberry juice or currant, or grape juice, three cupfuls of sugar sirup, one cupful of freshly made tea; cool and add four quarts of water and one bottle of charged water when ready to serve. Both of these punches serve two dozen people.

Punch a la Paris.—Take one quart each of ginger ale and grape juice, the juice of three lemons and three oranges, one cupful of sugar—more if needed—two tablespoonfuls of grated cucumber rind. Serve in tall glasses.

Serve iced coffee with whipped cream and powdered sugar; iced tea with any acid fruit like a slice of lemon, orange or pineapple.

Prepare chocolate, using four squares of chocolate, grated, to one pint of boiling water; melt the chocolate over hot water and cook in the boiling water ten minutes. Add one pint of scalded milk, one-fourth of a teaspoonful of salt and a teaspoonful of vanilla with one-half cupful of sugar. Beat well, chill and serve topped with whipped cream on which is sprinkled a bit of grated sweet chocolate.

In furnishing, not all expensive things are good, nor cheap ones all bad.

How many things, both just and unjust, are sanctioned by custom.

COLD DESSERTS

During the summer, the desserts which appeal to the housewife are those which are refreshing and easy to prepare.

Banana Whip. — Take six ripe bananas, two tablespoonfuls of lemon juice, two tablespoonfuls of sugar, one-half cupful of walnut meats and one cupful of whipped cream. Press the bananas through a ricer, add the lemon juice, sugar and walnut meats chopped fine. Chill thoroughly and serve in sherbet glasses with a spoonful of cream. A teaspoonful of finely-minced mint added to the fruit before mixing adds a nice flavor.

Lemon Snow.—Soak two tablespoonfuls of gelatin in one-half cupful of cold water and after ten minutes add two cupfuls of boiling water, one cupful of sugar, the juice of three lemons and the grated rind of one. Stir until dissolved and chill. When cold and beginning to set, beat with a whisk until frothy, then fold in three well-beaten egg whites. Heap by spoonfuls on a glass dish and sprinkle thickly with coconut. Chill and serve with a custard sauce.

Marshmallow Custard.—Beat two eggs slightly and add two tablespoonfuls of sugar, two cupfuls of thin cream and flavoring to taste. Place a marshmallow at the bottom of each custard cup and pour the mixture over them. Bake in a pan of hot water until the custards are set. Place in the ice box to chill.

Pineapple Compote.—Take one pineapple to five bananas. Slice the pineapple and cook in a heavy sirup until tender. Cool and arrange in a glass dish. Cover with sliced bananas, sprinkle with grated nutmeg and repeat. Serve with whipped cream and cake.

Cream Prune Pie.—Put through a sieve a cupful of stewed prunes; add a cupful of milk, one teaspoonful of cornstarch, one-third of a cupful of sugar, the yolks of two eggs, well beaten, pour into a pastry-lined plate and bake until firm. Cover the top with a meringue, made from the two whites, adding a little sugar and flavoring. Bake until brown in a slow oven.

Have Found Method of Melting Carbon

The long-sought-after process of melting carbon, whose lack has stood in the way of the manufacture of genuine diamonds, has been discovered by a group of German chemists, Drs. Alterthum, Fehse and Pirami, according to Science Magazine. Carbon has been one of the most heat-resistant substances known and for that reason it has been used in arc lights and carbon filament lamps where a powerful current sent through this substance found such resistance that it raised it to white heat without melting.

But the existence of diamonds which are pure crystallized carbon tantalized chemists for years, because it proved that at some time in the past carbon had been in a molten state before it formed the transparent eight-faced diamond crystal. Graphite has been known for a long time and can be made artificially, but unlike the diamond, it is softer, opaque and forms six-faced crystals.

Doctor Alterthum and his coworkers heated a graphite cylinder about 5½ inches in length, and an inch and a half in diameter, the thickened ends of which were set in copper electrodes, by means of an electric current. The various temperatures attained were measured at the middle of the cylinder through an opening. It was definitely determined that some degree of melting actually occurred within the bore of the carbon cylinder, and the melting point was determined as about 6,300 degrees Fahrenheit.

Possible to Stick too Literally to Truth

The railroad porter was a very careful and truthful man. In his youthful days he had been severely reprimanded for inaccuracy, and ever since he had been painstakingly correct.

An old gentleman approached on the platform and asked genially:

"Is this my train, porter?"

"No, sir," replied the careful one; "it belongs to the company, sir."

"Don't be funny!" snapped the old man testily. "You know I didn't mean that! I want to know if I can take this train to San Diego?"

"There's no need, sir," answered the porter; "that's what we've got an engine for."—Exchange.

We Need the Money

LOCAL ITEMS IN BRIEF.

St Joe Meat Market has made an addition to their market by putting in computing scales.

Thayer Northrup and family returned from Detroit Tuesday evening, where he has been in school for several months

Rev. P. A. Hubartt and wife are driving to Warren, Ind., today to bring his mother, Mrs. Melissa Hall, to spend the summer with them.

Elmer Hart and family of Napoleon, Ohio, and John Carnahan and Herbert Swartz and their wives of Allen county, were guests in the J. L Rhodenbaugh home.

Lee O. Tustison and family of Defiance, Mrs Frank Hamilton of Wyoming, O. K. Shull and family and Wm. Hamilton and family, were Sunday outers at Island Park, Hamilton Lake

The Young Peoples' class of the Newville U B. Sunday School, Mary Hablewets, teacher, were banqueted last Friday evening by the remainder of the school, because of their success in the recent contest, closing on the Sunday previous. The contest proved to be so popular that 100 people were present on the banquet night, to enjoy the good things. Besides the eats a program was prepared touching upon the local school needs and accomplishments.

Mr. and Mrs. Ruasch of Chicago, were Monday guests in the B. E. Widney home.

Miss Rachel Goings is at Marion this week attending the school of Methods of the M. P. Church.

Mr. and Mrs. Lyman Widney of Chicago, visited over Monday with H. M. Widney and wife and Merritt Seehler.

After a visit of two weeks in the Wm. Hamilton home, Mrs. Frank Hamilton of Sheridan, Wyoming, returned to her new home at Alliance, Nebraska, Monday.

Ed Miser and wife of this place and M A. Miser and wife of Waterloo, attended the Ash reunion at Bowling Green, Ohio, Sunday. They left Saturday and drove to Marion and visited the Harding tomb and then to Fremont to visit the Hays tomb. On Sunday Mrs. Martha Miser and grandson, Joe, drove to the reunion and joined her family.

Another improvement is being made in the Kinsey Hardware. The entrance has been made in the center instead of at either side and this gives ample room for two fine window display sections. By such arrangement Mr. Kinsey will have two distinct departments, right will be hardware and left, the furniture At the rear of the center section he has prepared a stove display room. The store, when completed will have the air of a city store.

Harry Hursh and wife took Sunday dinner with Wm Miller's west of town.

Mr and Mrs. Lafayette Bailey of Auburn, visited J. C. Bailey and wife Saturday afternoon and evening.

Mr. and Mrs. George Abbot of Marion, Indiana, are here visiting in the Harry Kees home and Vernie Monroe homes.

Mrs. H. C. Borthwick, daughter Priscilla and son Ronald, were Thureday guests of Mrs. Sophia Luce at Waterloo.

Lost—Miller Cord tire, 30x5, on rim. Finder return to St. Joe Filling Station.

F. W. Richardson.

Mr. and Mrs H. M. Widney and Mrs. Alice Copp, spent Sunday at Columbia City with their children, B. V Widney and wife.

Mrs. Hazel Monroe of Adrian, Mich., came Friday and remained until Monday morning visitng in the W. E. Henley home.

Mr. and Mrs. Allen Haller of Bend spent Saturday night and Sunday in the home of the latter's parents, O. K. Shull and wife.

Rev. Otis Jones and family are at the M. P. Camp Grounds at Marion, attending the school of methods and preacher's meeting.

Howard Renner and wife are at Lafayette this week visiting relatives and also attending a meeting of Vocational teachers held at Purdue.

J N. George, wife and daughter, Miss Dorothy, of Auburn and Frank George and wife of Goshen, called at the home of Craig Sheffer and wife Sunday afternoon.

The following guests were entertained Sunday in the C. B. Jackson home, Hol Jackson and wife of north of St Joe, Chas Jackson, wife and daughter and Ford Jackson and family of Concord.

George Dallas and family and Mrs. Dora Dallas of Wolcottville, Mr. and Mrs. H. E. Brandt and children of Montpelier, O., Mr. and Mrs. Vanderfuller of Stroh, Ind., and Richard Rodman and family of Fort Wayne, were recent guests of Rolla Brodbeck and family.

James D. Myers, a resident of Auburn for 36 years, passed away Tuesday morning at 9:20. Hemorrhages of the stomach and bowels with which he had been troubled for several years caused his death The deceased was well known among farmers of the county. Funeral will be held Thursday afternoon from his home.

Mrs. Cal Coburn of Hicksville, spent Saturday and Sunday here with her sister, Mrs. Vina Fish

Next week we will be able to give our readers some information on the Home-Coming plans as outlined by the meeting It will be our ambition to make it bigger and better than ever before, and of course that will mean work, as both years have been real successes.

Mrs. Lettie Waters of Lincoln, Nebraska and daughter, Miss Winnifred of Indianapolis, were guests in the Hart and Abel homes in the country last week, leaving Saturday for Ann Arbor to visit another daughter.

HOME, DAD AND THE BOY

By FRANK H. CHELEY

The No-Account Dad

HE IS the Dad who has always had trouble making the grade.

Of course, he always blames it on hard luck.

If he had only gotten a start in a different locality, and if they had let him take up engineering instead of law, or law instead of medicine, he would have shown the world.

He is the Dad who, according to facts and figures, lives on the dead level line of ordinary—the Dad who has never believed in himself sufficient to rise out of his rut.

He wasted his time at school; never believed in a higher education and was forever in fear that whatever he was to undertake was destined to be a failure.

The psychologist calls it an "inferiority complex."

His neighbors call it laziness.

His boy calls it pure cussedness.

He is everything his boy shouldn't be in both attitude and action, and thrashes the lad for copying him.

"They never did that when I was a boy," is his basis for all judgments.

He needs to learn that there is very little chance of boys going wrong when Dads go right and take their sons with them.

The WATER BEARER

by J. Allan Dunn

AUTHOR of
"A MAN TO HIS MATE"
"RIMROCK TRAIL"

COPYRIGHT by
DODD, MEAD AND COMPANY

AN UNUSUAL STORY which deals largely with the adventures of a young New Englander, an engineer, engaged in water development in the West. He comes into contact with various exciting phases of the life of the country and eventually has an opportunity to show the stuff that is in him when he is put up against the difficulties and problems of a gigantic enterprise involving the water supply of a large city. A stirring narrative by one who knows his West and has written some of its most fascinating tales.

Americans Not Keen Patrons of Artists?

In one of those extraordinary volumes of statistics it has been computed that we spend thirty cents per capita on mirrors and twenty cents on all works of art, says Walter Pach. If people could learn to derive as much satisfaction from being patrons of art as from looking at themselves in a glass, what a boon it would be to artists! One art dealer observes that people wander into his gallery, enjoy the works on the walls and go out again with words of enthusiastic praise. Praise alone cannot support the artists. Yet, of course, the public cannot be scolded into buying.

In purchasing contemporary works of art one must rely solely on one's own judgment. Not even the price gives a hint as to the value. This makes the quest of worth-while new things doubly fascinating.—New York Times.

SOLID IVORY

"These fellows with their Oxford bags and cretonne vests, I wonder what they can be thinking of."

"Why, nothing, of course."

Time for Explanations

This story is permitted to be published on the condition that no names be revealed. The reason is quite obvious.

A certain doctor of Indianapolis was notified several days in advance that he was to be the dinner guest of one of his clients. On the first of the month following, the family received a bill "for services, February blank." As this was the date of the dinner, the family realized that the doctor, in making out his bills from his date book, had mistaken a social engagement for a business call, and in order to save him any embarrassment, sent him a check for the amount.—Indianapolis News.

Ancient Homestead

Glenn C. Wellington, age nine, of Westmoreland, N. H., has the distinction which probably no other boy in New England shares, of living on the same place where his great-great-great-grandfather lived and died. Not only this, but his father, grandmother, great-grandfather, John Albee, and his great-great-great-grandfather, Ichabod Albee, also lived there. The Albee homestead was settled in 1787 and since that time has always been in the family. The old stone fireplace built when the first Albee homestead was erected, a log cabin, is still standing.

Out-of-Date

Mr. and Mrs. Zain, who recently came to Los Angeles from Boston, rented a new apartment on the edge of Hollywood and then Mr. Zain was called East for a few weeks, leaving Neva very much alone.

The other day Mrs. Ruth Reynolds, an eastern friend arrived, and was horrified to find that Neva had been reading the Old Testament to assuage her loneliness.

"I don't see anything so awful about that," protested Neva.

"My goodness," exclaimed Ruth. "The Old Testament is way out of date; they have a New Testament now."—Los Angeles Times.

Five Years Without Food

The remarkable case of a woman who has eaten nothing for five years is being treated in a nursing home at Saragossa.

The patient is Amalia Baranda Ruiz, who in a town near Burgos suffered a hysterical attack, accompanied by brain disturbance, in 1920. Up to February, 1921, she lived on a milk diet, but the treatment had to be abandoned owing to a serious stomach complaint.

Since that time she has lived entirely on daily injections of a reconstituent tonic.

SPENCERVILLE

Roscoe Walter is quite ill.

Mrs. Sylvia Furnish, of Fort Wayne, is a guest in the Gerry Horn home.

Orpha Silberg of Butler, spent the weekend with her grandmother Mrs Sophia Miller.

Miss Dorothy Brown of Hamilton is visiting her uncle, Rev. Brown and family.

Harvey Beam and wife were Sunday guests of Royal Timbrook and wife of near Hicksville.

Good line of Work Pants at $1.75 to $1.85 a pair. Beams & Co., Spencerville.

Joel Betz and wife, who spent the past week visiting relatives near Harlan, returned home Sunday evening.

The Old School Reunion will be held Thursday in the Lutheran church basement, with a basket dinner.

Mrs. LaVern Koch, who is a patient at the St Josebh Hospital at Fort Wayne, is improving and will be brought home this week.

Mrs Nancy Chaney, who spent the winter and spring at Auburn is visiting her sister and husband Mr and Mrs. Milton Chaney

Mrs. Della Smith and Mrs Verna Kelly and son, Victor, were Saturday and Sunday guests of Arville Gochanour and Jacob Showalter at Angola.

Mr. Kenook and family will move this week into the Walter property. Mr Kenook is the new manager of tne lumber yard at this place.

Prof Ashby arrived Monday and shipped his household goods to Indianapolis. Chas. Kimes and family will occupy the property vacated by Mr Ashby

Herman Reasoner has resigned his position with the Fort Wayne Branch of the Auburn Automobile Co., and is working with the F. W. Silberg Co., at Butler.

Vol Hay and wife, Mrs. Tressie Kelley and family visited the former's daughter and husband, Samuel Bowerman and wife, at Angola, Sunday. Mrs Hay remained for a longer visit.

Herman Reasoner and wife attended the Doyle-Cass family reunion at Coldwater, Mich., Saturday. They then visited Mrs. Reasoner's father, J W. Doyle and family at California, Mich.

Mr. and Mrs Jacob Baltz entertained the following guests at their home Sunday for dinner, William Summers and wife of Coburntown, Rolla Moffett and wife of Auburn and Paul Adams and wife of Fort Wayne.

The Home Missionary society of the Methodist church met Friday afternoon at the home of Mrs. Golden High and elected the following officers: President, Mrs Roy S. Brown; Vice president, Mrs. Lois Smith; Cor. Sec., Mrs. Louie Beam; Rec. Sec, Mrs Pearl Farver; Treasurer, Mrs. Ethel Bowser; Supply Sec., Mrs. Gertrude Wasson; Sec. of literature, Mrs. Louie Beam; Mite box sec., Mrs. Emila Gloyd; Junior sec., Mrs Goldeh High; Temperance sec., Mrs. Gertrude Smith; Sec of evangelism, Mrs. Ethel Bowser; Stewship sec., Mrs Pearl Farver; Membership sec, Mrs. Gloyd; Thanksgiving sec., Mrs. High; Sec. of missionary education, Mrs. Beryl Brown; Chairman program com., Mrs. Emma Keyes; Birthday sec, Mrs. Lois Smith. The next meeting will be held at the home of Mrs. George Watson.

THE CLINTONS

Synopsis.—Idly fishing Hermanos creek, in California, Caleb Warner, civil engineer, and a New Englander, is witness of the end of a coyote pulled down by two wolfhounds, urged on by a girl rider. Admiring the hounds, he introduces himself, and learns her name is Clinton. With western hospitality she invites him to the ranch to meet her father.

CHAPTER II

—2—

El Nido and Padilla

The Rancho El Nido, which means The Nest, was well named. Behind the lee of the tall eucalypts, planted in two rows at right angles, nestled the building of the ranch-house, built in old Californian fashion of adobe brick, red tiled, in the shape of a hollow square inclosing a patio-garden. It was on a rising ground above the stream that ran between trees heavily mantled with wild grapevines. About the house, and its barns and sheds and corrals, grew orchard trees, peach and apricot, almond, cherry, walnut. There were some orange and lemon trees and a few figs. There was a vineyard and the patio was a riot of flowers. A spring bubbled up in the exact center of the court and had been confined within a stone basin with one outlet out of which the overflow rippled and ran under an archway in the foundation of the house.

The place was above all a home, long-settled, deep-rooted, if a nest, built on the ground, as some nests are, may be fancied to have taken root. The place was well styled El Nido.

Back to it, in the twilight, at the urgent suggestion of the girl's father, a suggestion that was half command, holding such spontaneous invitation that it could not be refused without a touch of churlishness, came Caleb, returning from the stream above the waterfall, packing a well-filled creel.

The girl rose from an outer porch as he came up from the stream and met him at the steps. She was transformed. A soft gown of white had wrought magic and she received the homage of Caleb's surprised and frankly admiring gaze demurely. He opened the lid of the creel for her inspection.

"You know how to cast a fly in Massachusetts," she said. "They are beauties. We shall have them for supper. Wang!"

A fat and genial Chinaman, immaculate in white, appeared at the far end of the gallery, came forward and took the fish with a chuckle of approval.

"Suppeh leady twenty minnit, Miss Betty," he said as he waddled off.

"Betty—Betty Clinton!" He had her name at last and thought it suited her.

"You'll want to wash up. Maria will show you to your room."

"My room?"

"You are to stay here tonight. Father would not hear of you going. There is no moon. It is three miles down the canyon to the station at Heyward. Seven by the road. And there are no trains that you could catch conveniently."

She led the way in and delivered him to Maria, fatter than Wang, ample of breast, triple of chin, Spanish of look and accent.

"Maria," said the girl, "is the actual ruler of El Nido. You must pass inspection by Maria to be welcome here. You have fifteen minutes. We shall be in the big room at the north end. You can come in through the patio."

It was altogether a little astounding, Caleb reflected, as he made what toilet he could. He had come to the valley unheralded, without mutual acquaintance, without introduction, and here he was, pressed as a guest, almost as a friend. In Massachusetts—he laughed at himself in the mirror as he fussed with his tie. This was California, a country to itself, with very pleasant customs. And he was aware that his welcome would be as his behavior. But it was all very pleasant, very Western.

The big room ran the full length of one side of the house. At either end a quarter was raised by two steps, arched off, one part a library and study, the walls covered with books, the other end more distinctly feminine with a piano, flowers, inviting chairs of wicker and good rugs, some pictures on the walls. The intermediate space was common ground, dining room and living room combined. The place was lit with oil lamps in wrought-iron brackets and with candles in branching holders for the table. The meal, with the rustling, bestarched Maria, in black gown and white apron, superintending Wang, who served as well as he had cooked, was perfection.

The girl presided over the main dishes. Her father, tall, erect, gray-haired, gray of close-clipped mustache and goatee, had one sleeve tucked in the side pocket of his coat.

"I shall put the formal interrogation, sir," he said to Caleb. "How do you find the West?"

"I find it eager. And I like it. We bustle in the East but our ways and means are settled."

"Eager? I like your term. And I am glad you like the West. We shall hope to see more of you."

"You have lived here long?" asked Caleb.

"My grandfather settled here in eighteen-forty. He was one of Fremont's cavalry legion. He helped to take California from Pico. He was on the shores of Monterey bay when the British landed from their frigates and found they were too late. My father was then ten years old. I was one when he went back to Virginia and fought in the War of the Secession. For the South. I beg your pardon, sir."

Caleb caught Betty Clinton smiling at him.

"Not at all, sir," he answered. "My own grandfather fought for the North. But that was two generations ago. Now I know," he added with an answering smile, "why you, Miss Clinton, called me 'Yank' with such unction."

"My grandfather used to say," said Clinton, "that he was always cautious when he fought the Yanks but that he downright feared them when it came to business. But you are right, sir. That is all past. I fought in the Spanish war side by side with many gallant

The Trail Dipped Down Toward Water Level, Fording the Stream.

gentlemen from New England. One of them was major in my company. If it had not been for him I might have lost more than this." He touched his empty sleeve.

"You held rank, sir?"

"I was a captain. It was a volunteer rank. I do not use it now. My sword is a plowshare. I have sufficient souvenir."

Caleb thought he detected a little bitterness in the reference to the missing limb.

Caleb noticed that Clinton refrained from any query as to his guest's status in the war. Nor did he mention it himself. He was tired of talking about it. The states were full of men who had done as much as he had.

"What are you going to do in California?" asked the girl. "The term civil engineer is a wide one. What does it mean to you? Bridges? Railroads?"

"It was predestined," said Caleb. He struck a match and showed her a seal at the end of his watch chain. On the green stone two parallel zigzags were graven.

"The Zodiac sign of Aquarius, the Water Bearer. It is the eleventh sign and the sun enters it about the twenty-first of January, the day that I was born. So I am a water engineer, both by choice and by predestination."

She gave a little cry as she bent forward to look at the seal. The light of the swift-burning match brought her face out of the darkness like a cameo.

"Isn't that altogether curious and delightful," she said. "I wonder."

"I don't know what will offer," Caleb said. "I cannot wait too long. I have neither the means nor the inclination to stay idle. I have not had very much practical experience—as such things go—but I should rather tie up with a new enterprise than work with a completed project. Of course, I should like above everything to be able to inaugurate some scheme, plan it, develop it. I must look for my opportunity."

"That is what I should prefer, if I were a man," said the girl, and Caleb sensed a growing approval of him in her tone, and warmed to it. "To create something, to be a Water Bearer, to the thirsty earth or to thirsty people. To make a city grow where none has been, or render dry lands fertile."

"Do you expect to settle out West?" asked Clinton. "To make your home here?"

"I hadn't gone quite as far as that," answered Caleb with a smile. "It depends upon whether I get the chance to settle—I mean by that if work opens up. I like the West. I should like to make a home here, I think. I have none elsewhere," he added simply. "I have relatives in the East, and I even own a house out there—but it isn't a home any longer, since both my father and mother are dead."

There are silences that create an atmosphere more sympathetic than the finest choice of phrase. Caleb found himself talking of his plans in greater extension than he would have considered possible to chance-met, recent acquaintances. He had, he told them, a little money, he had a chance to sell his Massachusetts house that held open indefinitely. This, with his training, and his youth, constituted his capital. At the end of the evening, in his room, the windows open, admitting the fragrance of the patio garden, the subdued chuckle of the overflow from the spring basin, he realized that he had done little but talk about himself and his own affairs.

He wondered whether he had not been a bit of a prig, even a bore. He had shown no appreciation of the girl's femininity, had surely been lacking in even conventional gallantry. Girls, Caleb believed, liked that sort of thing—expected it. Yet, talking to her in the dusk of the veranda had been a good deal like talking to another man. Her intelligence was keen, her interest had not seemed feigned.

Meanwhile, in her own chamber, Betty Clinton came to a favorable conclusion in the same matter.

"For a Yank," she told herself, as she arranged her hair for the night in two great, shining braids, "he is quite agreeable—so far. I think I am going to like Caleb Warner."

* * * * * * *

Caleb decided not to outstay his welcome. He announced his intention at breakfast.

"We shall hope to see you again," said Clinton and Betty backed his invitation.

She seemed a little older this morning, appearing the well-poised hostess in her housegown. To Caleb, still new to western ways, it was hard to reconcile this housewifely person presiding over the silver coffee urn with the rider on the pinto, galloping hard after her hounds to the kill. Yet there was no real discrepancy, no loss of dignity of sex. And she made the girls that Caleb had grown up with seem suddenly constricted in his recollection.

"You are not to walk down to the train," she told him. "I am sorry that I cannot drive you but I have a lot to do. You shall ride the Don. Padilla will go with you and bring him back. And we are to see you again. Soon."

Caleb was not at all certain of his prowess in the saddle. To his relief the horse turned out to be a natural single-footer, racking along with a smooth motion that left him almost motionless in the saddle. The selection was, he felt, another indication of kindly tact.

Padilla, swarthy, bow-legged, agile, bore signs of battle that had come close to maiming him. The left side of his face was marked with a puckered scar, purple against his brown skin. It ran from eye to chin, a raking weal that showed where the flesh must have been laid open by a frightful blow. He wore no coat and his sleeves were rolled high. His left forearm was scored with cicatrices. His left side seemed shrunken between hip and shoulder. Caleb was conscious that all down the canyon, Padilla subjected him to a close scrutiny. When directly in front of him he could almost feel Padilla's black eyes boring between his shoulder blades. Despite the unworded recommendation that the Mexican held from his employment at El Nido, Caleb fancied him a better companion for high noon than a dark night.

The trail dipped down towards water level, fording the stream. Caleb reined in to let the Don drink the bright water and Padilla followed example. As they sat side by side the Mexican spoke for the first time.

"Eet was here, senor," he said, "that I got these."

He touched his cheek, his left ribs, and tapped his left forearm with a swift gesture.

"Eet was a puma, senor. A cougar, a lion of the mountains. Carrajo! Almost eet keel me, Luis Padilla. Knife against claws an' teeth, senor. And the knife ween. Thees knife."

With the same swift deftness he half drew a shining blade from a sheath that was tucked inside the belt of his trousers, then replaced it. The speedy excitation of the Latin convulsed his features. They twisted in a ferocious snarl, they looked as they must have appeared in the actual conflict, Caleb thought.

This Padilla seems to be an intense sort of person. What's his purpose with Warner?

(TO BE CONTINUED.)

Early Actresses

Actresses appear to have been unknown to the ancients in earliest times, female parts in dramatic performances being taken by males. Actresses appeared on the stage under the Roman empire. The first English actress is said to have been Mrs. Colman, who performed the part of "Ianthe" in Davenant's "Siege of Rhodes," in 1656.

Steady Increase in Pure Breds

"Better Sires-Better Stock" Campaign Shows Increase in Members.

(Prepared by the United States Department of Agriculture.)

One hundred and fifty new members a month is the average number of live-stock owners joining the "Better Sires-Better Stock" campaign fostered by the bureau of animal industry, United States Department of Agriculture. The members have adopted the use of pure-bred sires for all kinds of live stock on their farms, including poultry. This increase in membership is believed to be a good index of progress in live stock improvement in this country.

During the three months, January 1 to March 31, as shown by the report just issued by the bureau of animal industry, 450 live-stock owners signed enrollment blanks, thus affiliating themselves with the better-live-stock movement and bringing the total number of persons so enrolled to 16,560. Persons participating in this work receive from the department educational literature on animal breeding and feeding and also a lithographed sign, "Pure-Bred Sires Exclusively Used on This Farm." Many other agencies, also, are at work striving toward the same goal, but in most cases their influence is not so easy to measure.

Leading Counties.

In the report just issued a list of 43 counties shows that each of these areas has more than 100 persons who are using pure-bred sires exclusively for the improvement of their herds and flocks. In each of the three leading counties the number of persons active in this work exceeds 500. The relative standing of these counties follows:

County and County Agent	Pure-Bred Sire Users
Pulaski, Va.—E. C. Grigsby..	592
New Haven, Conn.—Raymond K. Clapp	552
Union, Ky.—R. O. Wilson.....	550

Special activity in live-stock improvement during January, February and March of this year centered in New Haven county, Connecticut, though participants were listed from 13 counties in 8 states.

Development of Movement.

The development of the better-sires movement during the last six years has been marked by a steady increase in the number of participants, by excellent support from the agricultural and city press, and by direct efforts of live-stock organizations and extension workers. County agricultural agents, representing the various states and the United States Department of Agriculture, have conducted most of the work in their respective counties. The Department of Agriculture keeps records of progress and furnishes suitable educational literature and information.

A recent development in the department's service is that of lending country newspapers electrotype cuts and furnishing illustrations and text matter for special editions devoted to live-stock improvement.

Plan for Success With Caponizing Operation

To be successful with capons and caponizing, it is absolutely necessary to keep the chicks free from vermin. Chicks infested by mites will not withstand the shock of the operation, while a vigorous chick will scarcely notice it.

While caponizing may be done successfully almost any time of the year, May and June are the better months for it. These, with proper care, should make eight or ten-pound capons by the holiday season. The later ones must be kept over till the latter part of the winter or early spring.

The correct weights for caponizing depend upon the breed—the Mediterraneans at about one pound, the American breeds at from one and three-quarter to two pounds, the Asiatics and English from two and a half to three pounds.

The chicks must be kept without feed or water for 24 or 30 hours before the operation. This makes the operation more successful and is better for the birds.

FARM NOTES

No farmer is genius enough to grow quality production on scrub land.

* * *

Sweet clover is one of the best pastures and is a great crop for improving the soil.

* * *

Pushing a soft team of horses to their limit is not the best way to get the most work out of them.

* * *

A clean-up day is often advisable on many farms. It gives an opportunity to put things away and makes the farm more attractive.

* * *

Even the baby chicks have self-feeders now. And they are practical, too, for farmers say that both bran and mash can be fed in this manner. Thus labor is saved and strong quick-growing chicks are produced.

* * *

"Get the gopher," is the slogan this spring. These farm pests are having a more difficult time than they did a few years ago when their chief danger was from the little rifles shot by farm youngsters. Now the farmer himself is "taking a shot" at killing the gophers.

Advise Shippers to Candle Market Eggs

Especially Urgent During Spring and Summer.

(Prepared by the United States Department of Agriculture.)

Candle all eggs before shipment, and especially during the warm spring and summer months when spoilage is most likely to occur," is the advice given to egg shippers by the bureau of chemistry, United States Department of Agriculture, which is charged with the enforcement of the federal food and drugs act. "The loss resulting from spoilage of eggs shipped to distant markets may be greatly reduced by this precaution," say the officials. Candling as near as possible to the source of production will not only save transportation charges but will prevent waste of a valuable food product."

Federal inspectors have been instructed to be on the watch for interstate shipments of adulterated eggs. Under the food and drugs act eggs which have yolks stuck to the shell, moldy eggs, black spots, mixed rots, addled eggs, and any other eggs that are filthy, decomposed or putrid are adulterated. When such shipments are found they may be seized and the individuals responsible for shipment prosecuted under the law.

Many eggs that are suitable for immediate consumption will not stand shipment to distant markets. By candling, these eggs may be taken out and sold for local consumption, leaving only those that have a good chance to reach the market in edible condition.

A bulletin on candling eggs tells just how to distinguish between a good egg and one that is likely to spoil in transit. Write to the Bureau of Chemistry, United States Department of Agriculture, Washington, D. C., for a copy.

Wide Variations in the Cost of Producing Pork

Wide variations in the cost of producing pork are shown in a survey made by the Department of Agriculture of farms in Henry county, Iowa, and Warren county, Illinois, said to be typical of corn-hog farms throughout the corn belt.

The gross cost of producing 100 pounds of marketable pork on 44 farms in one year ranged from $3.07 to $13.55, with an average of $5.49. Production costs on 39 farms in another year ranged from $4.80 to $10.02, with an average of $6.32. The figures are for the years 1921 and 1922 and are presented merely as showing the variation in costs.

The variation, the department says, indicates the influences of care and management in the hog lot. The farms were within a short distance of each other; it was possible to follow very similar methods within the region, and yet some farms shipped hogs to market costing more than twice what they cost other farms.

Detailed results of the survey have been published in Department Bulletin No. 1381, "Cost of Producing Hogs in Iowa and Illinois," copies of which may be had free, as long as the supply lasts, upon request to the Department of Agriculture, Washington D. C.

Sudan Grass Found Best Emergency Crop for Hay

At the Iowa experiment station sudan grass has proved to be the best nonleguminous emergency hay and pasture crop. It may be seeded after corn planting, as it is very drought resistant. About 15 to 20 pounds of seed per acre sowed broadcast or drilled is the general practice. The seedbed is prepared as for corn. If a seed crop is wanted, drill in rows wide enough to permit of cultivation and use 5 to 10 pounds of seed.

The crop is not available for pasture until about July 1 and ceases to be productive after the first frost. There is no advantage in seeding before the middle of May or later than July 26.

Two cuttings gave higher yields of hay of better quality but there was great difficulty experienced in drying it. The better way is to cut when the seed is in the soft, dough stage and pasture the aftermath. Cut with a mower and cure in the swath. A binder may be used successfully when only one hay crop is made. Sudan and soy beans grow successfully when mixed.

Scours in Lambs Caused Usually by Carelessness

Experience has caused many breeders to believe that scours in lambs, like the sore eye trouble, is generally the result of carelessness. Heavy feeding of grain, soon after lambing, may cause scours, but the main trouble is caused by failure to keep the ewe's udder milked clean while the lamb is small, too small to use all the milk. This old stale milk will poison the lamb and affect its digestive organs. It is easier to prevent than to cure. When a ewe brings a lamb, feed grain sparingly until the lamb can use all her milk, and keep the excess milk stripped from her udder, during this time, and you will seldom have scours in your lambs. In the first ten days of a lamb's life, it either gets a good start in life or a set-back. A lamb well started is about half made. About 90 per cent of the time a sheep is just what its master made it, but that covers a lot of ground and is another story.

Theater in Early Days

The theater originated with the Greeks and developed in that country together with the drama. At first the theater was simply a space near the temple of Dionysius, where the chorus danced about the altar of the god. Later set places were provided for the performances. During the Middle Ages, theatrical performances began with dialogue additions, acted out in the church service for Christmas and Easter. It developed in the Twelfth century into plays in the vernacular presenting the chief events in sacred stories. The first admission charge of which there is record was from 2 to 4 pence.

Blood Reveals Sex

Blood can reveal sex, according to experiments conducted recently by Dr. Dewey C. Steele of the University of Wisconsin. Doctor Steele used the blood of cattle and found that when the blood serum is diluted a hundred times and then properly treated with chemicals a few drops of methyl green dye can be introduced, turning the blood serum to green if it came from females and red if it came from males.

CHILDREN'S NURSE RESUMES HER DUTIES

Praises Lydia E. Pinkham's Vegetable Compound

"I have taken Lydia E. Pinkham's Vegetable Compound for some time and I would not be without it in the house. As I am a children's nurse, I have to be on my feet a great deal and your medicine has helped me wonderfully. I was hardly able to do my housework when I began taking it, and now I am a strong and well woman, able to do all that and go out nursing besides. I have also used the Sanative Wash and found it beneficial."—Mrs. Gertrude L. Stewart, 103 Davis St., Greenfield, Mass.

Valuable for Weakness

"I have found Lydia E. Pinkham's Vegetable Compound a valuable medicine for weakness."—Mrs. J. A. Pietsch, Box 397, Lancaster, Pa.

Hundreds of letters like these are received by the Pinkham Medicine Co., Lynn, Mass. Grateful women from Pennsylvania to Washington, from Texas to Illinois and from Rhode Island to Nebraska say that their health has improved since taking Lydia E. Pinkham's Vegetable Compound.

RADIO

C. Francis Jenkins, Washington Man, Who Invented Attachment That Reproduces "Movies," and Another That Draws Pen Pictures.

"Movies over the air is the next great achievement of radio engineers!

Moving pictures will flash across the continent at the dizzy speed of 180,300 miles a second, the speed of light. And they will appear on a screen in natural colors in the homes of millions of radio users.

The introduction of the radio-vision receiving set heralds a new era for radio science!

An unpretentious cabinet converts radio waves into light and shadows.

This remarkable transformation is accomplished by means of a lamp contained in the box. This lamp lights and extinguishes a half million times a second.

A disk or ring, containing small lenses around its outer edge, is contained in this box. The purpose of this disk is to chop up the light and shadows into lines and adjacent successive lines.

Motor in Set.

A small electric motor, likewise contained in this box, revolves the lens-carrying disk.

A white screen, which may be held in a small picture frame, is placed on the wall receiving the motion picture.

The light from the lamp inside of this box, or small cabinet, is reflected onto the miniature screen through a slit arrangement by means of a prism reflector, placed on top of the box.

In this way the receptionist can switch from hearing his favorite orchestra to watching it play. Or he may hear it and watch it at the same time.

C. Francis Jenkins is the inventor of the lamp which performs the wonderful task of transforming radio waves to light and shadows by lighting and extinguishing itself a half million times a second.

"Modern Aladdin Lamp."

This marvelous globe has earned for itself the name of the "modern Aladdin lamp."

The Jenkins radio-vision lamp operates on the Wheatstone bridge principle, whereby a little change in electric voltage gives a large change in light flux or flow.

This lamp bears a relation similar to the function performed by a sensitive mineral used at the radio-vision transmitting station.

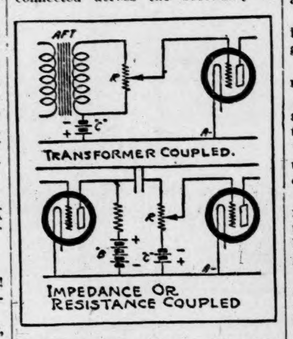
This sensitive mineral—potassium, for instance—converts the motion picture at the sending station into electrical values for transmission on a radio carrier wave.

The Jenkins radio-vision lamp reverses this process, changing the electric current back to picture values.

Once motion pictures by radio are introduced into thousands of homes, this lamp will be as commonplace as the electric light bulb or radio vacuum tube.

An Approved Method for Smooth Volume Control

For a smooth control of volume in amplifiers using transformers, impedances or resistances, the method shown in the accompanying diagrams is suggested. A variable resistance is connected across the secondary of



the transformer with the slider arm wired to the grid of the tube. In the case of impedance or resistance amplifiers, the grid leak is replaced by the variable resistance of .5 megohm maximum, such as the centralab modulator or others of the type.

Boy Walks Forty Miles to See Radio Artist

A striking illustration of the interest the general public takes in popular radio entertainers occurred recently when a thirteen-year-old boy walked and "hooked rides" all the way from Northfield, Minn., to Minneapolis, a distance of 40 miles, in order that he might see what Jack Little, who was broadcasting from WCCO that week, looked like.

The youngster, who gave his name as Richard Davis, fainted from exhaustion when he reached the WCCO studios. He was given first aid by Announcer Paul Johnson, who, in addition to his radio work, is a student of medicine at the University of Minnesota.

The lad was then introduced to Little, and judging from his expression, he felt that meeting this famous singer was worth his long trip. He says that he and some other boys have had very many arguments as to what Little looked like and he had decided to find out for himself. There being no school on Saturday, he started for the Twin Cities early in the morning. Because he had no money he was forced to walk part of the time and pick up rides the remainder of the way.

FOR YOUR NOTEBOOK

Use good insulators and solder all connections in the aerial.

Headphones should be bought for their ampere turns and not the resistance.

Buried metal plate or pipe driven in moist earth can be used as the ground.

Metal dials usually increase the microfarads.

A common cause of distortion in audio amplification is poorly designed transformers.

The length of the aerial is measured from the extreme end, and includes the lead-in and ground wire.

Radio signals are better 600 miles from a broadcast transmitter than they are 300 miles, because fading is less and the signal strength is slightly greater.

One way to stop a radio nuisance—a neighbor who permits his set to oscillate continually—is to have a petition signed and sent to the supervisor of radio in the district.

Nearly all interference producers are of the regenerative type in the hands of an inexperienced operator.

It is needless to expect good work from a set unless the prongs of tubes are making absolute and firm contact with the tube socket springs. The least looseness of contact means trouble.

Antenna and ground leads to the set should be as far apart as possible. Keep one at right angles to the other if you can.

When You Select New Tubes for Amplifiers

In impedance-coupled audio-frequency amplifiers, impedance-coupled radio-frequency amplifiers and resistance-coupled audio-frequency amplifiers, the amplification obtainable from the entire system is dependent upon the amplification constant of the vacuum tubes employed. Standard vacuum tubes with an amplification constant of approximately eight will not produce best results. Greatest amplification will be obtained when "Hi-Mu" tubes or high amplification constant tubes are used. Tubes with amplification constant of 20 are now available.

To Get Low Waves

When your set won't tune to the short wave lengths, try disconnecting the aerial at the point where it enters the house and using as an antenna the piece remaining. This cuts the fundamental wavelength of the antenna system, which also includes the ground.

POINTS ON KEEPING WELL

Editor of "HEALTH"

(©, 1926, Western Newspaper Union.)

ULCER OF THE STOMACH

WHETHER ulcers of the stomach are more common today than they were in our grandfathers' day is hard to say. We know more about them, our methods of examination are better and more exact and physicians today make far more careful examinations than in former years. No physician who has any regard for his reputation today will dismiss a patient with the vague and general verdict of "chronic dyspepsia" or "catarrh of the stomach" such as was common in former years. Nor will he be satisfied to give the patient a bottle of pepsin tablets and instructions to "take one whenever you have any pain."

While we know now that many cases of vague, long-continued discomfort and difficulties in digestion which were given various names in previous years are really due to ulceration in the stomach walls, we do not yet know what causes the ulceration, why some persons have them and others do not or why an ulcer should develop in the stomach of a previously healthy person. Infections elsewhere in the body, as in the teeth and tonsils, scratching of the lining mucous membrane, too strong gastric juice with too high a percentage of hydrochloric acid, a rundown condition of the patient causing an unusual sensitiveness of the stomach as well as many other possible causes have all been suggested. But what is the real cause of ulcer of the stomach we do not know. We do know that many of the cases in which for months or even years the patient has pains or discomforts after eating, gas, belching and "sour stomach" with constipation and possibly with soreness or tenderness over the stomach are really due to an ulcer on the stomach wall.

So long as the ulcer does not go deeper than the inner coats of the stomach, there may be much discomfort and poor nutrition with constant ill health but no real danger to life. If the ulcer eats through the outer walls, however, causing a puncture or perforation then there are all the dangers of internal and hidden hemorrhage and sudden peritonitis. This means an immediate operation and possibly death, in spite of every effort to save the patient. Sudden, violent pain, nausea and vomiting, with all the symptoms of hemorrhage and shock, such as collapse, cold sweating and rigid board-like abdomen are the usual symptoms.

To prevent perforation, don't neglect signs of stomach irritation. Dyspepsia doesn't mean anything. A healthy stomach causes no discomfort. If you have "stomach trouble" there's something wrong. Find out what it is and get rid of it.

PAINTERS' ITCH

IT HAS long been known that painters or those who worked with and handled paints of all kinds were particularly subject to eruptions on the skin, especially on the hands. In a recent issue of the Journal of Industrial Hygiene, Dr. J. A. Turner describes a number of cases of such skin eruptions among employees in the painting department of a large factory.

Five painters reported to the plant hospital, all complaining of a troublesome eruption on their hands. One had been a painter for 16 years and had had more or less trouble with his hands during this entire period. Another had worked as a painter for two years and had had an eruption on his hands for the last year. A third had worked as a painter for a year and a half and had had trouble with his hands for the last six months, while of two apprentices, one had been afflicted for only a short time and another, an apprentice in the pattern shop, had cleaned a machine with naphtha the day before he applied to the hospital for treatment.

In each case the eruption appeared on the hands and forearms only. The skin was dry and red, with small blisters which ran together forming larger ones, with considerable swelling. All the victims complained of much itching and burning.

Each patient was given a one to one thousand solution of permanganate of potash with which to bathe the skin daily. This immediately relieved the itching and burning and hastened healing. As the skin healed it peeled off, either in scales or in strips, leaving a new and healthy skin underneath.

Experiments on animals showed that it was not the paint substances themselves which caused the eruption, but the liquid in which the coloring matter was dissolved. In some cases this was turpentine, benzine or naphtha, which produced the inflammation.

In a number of outbreaks in different factories it was found that the solvent used was one of the newer products of wood distillation, commonly called "turpentine," but was really a form of wood alcohol, which caused an eruption on the hands of most of the workmen using it. In some shops the percentage was as high as seven out of ten men exposed.

As a means of prevention, Doctor Turner advises that workmen using paints clean their hands and arms promptly, using plain soap and warm water and drying the skin thoroughly after each exposure.

Children Cry for

Fletcher's CASTORIA

MOTHER:— Fletcher's Castoria is a pleasant, harmless Substitute for Castor Oil, Paregoric, Teething Drops and Soothing Syrups, especially prepared for Infants in arms and Children all ages.

To avoid imitations, always look for the signature of Chas. H. Fletcher. Proven directions on each package. Physicians everywhere recommend it.

DR. W. B. CALDWELL AT THE AGE OF 83

Old Folks Need a Mild Laxative—Not a "Physic"

Most men and women past fifty must give to the bowels some occasional help else they suffer from constipation. One might as well refuse to aid weak eyes with glasses as to neglect a gentle aid to weak bowels.

Is your present laxative, in whatever form, promoting natural bowel "regularity"—or must you purge and "physic" every day or two to avoid sick headache, dizziness, biliousness, colds, or sour, gassy stomach?

Dr. Caldwell's Syrup Pepsin helps to establish natural, regular bowel movement even for those chronically constipated. It never gripes, sickens or upsets the system. Besides, it is absolutely harmless and pleasant to take.

Buy a large 60-cent bottle at any store that sells medicine and just see for yourself.

Dr. Caldwell's SYRUP PEPSIN

EAT YEAST FOAM for Boils and Pimples

Don't endure an unsightly skin with this simple, effective remedy available!

Yeast Foam not only clears the skin but it overcomes constipation, relieves indigestion and most astonishingly builds up weight, strength and energy in run-down sickly people.

Drop a cake of Yeast Foam in a glass of water; let stand for five minutes; stir; let settle and drink the milky water, including the white precipitate. Or, if you prefer, eat the yeast with a cracker or a piece of butter.

NORTHWESTERN YEAST CO.
1750 N. Ashland Ave., Chicago, Ill.

Send me FREE and POSTPAID your book "Dry Yeast as an Aid to Health," also a sample of Yeast Foam, without obligation.

Slam! Wham! An' words that end with —!!

ENJOY days and nights free from flies and mosquitoes. Drive them from your porch. Destroy them indoors. Spray Flit.

Flit spray clears your home in a few minutes of disease-bearing flies and mosquitoes. It is clean, safe and easy to use.

Kills All Household Insects

Flit spray also destroys bed bugs, roaches and ants. It searches out the cracks and crevices where they hide and breed, and destroys insects and their eggs. Spray Flit on your garments. Flit kills moths and their larvae which eat holes. Extensive tests showed that Flit spray did not stain the most delicate fabrics.

Flit is the result of exhaustive research by expert entomologists and chemists. It is harmless to mankind. Flit has replaced the old methods because it kills *all* the insects—and does it quickly.

Get a Flit can and sprayer today. For sale everywhere.

PERSONAL PARAGRAPHS

Ninety per cent of the ocean is more than a mile deep.

The new July McCall's is now on sale at News office.

Save trouble by using receipts Get a book at News office.

Rev. Geo. Osbun and wife of Geneva, are here the guests of Mrs. Ann Dilley.

For Sale: Late Danish Baldhead Cabbage Plants.

Mrs. Adam Shilling.

Tom Abel and wife are at Crooked Lake this week with their son, Glen and wife from Peru.

Miss Janice Ridgway returned home Saturday after having spent the week with Dale Van Wagner and wife at Kendallville.

C. E. Rangler and wife of Findlay, Ohio, were guests of J. P. Buckingham a few days last week. Mrs. Rangler is a sister of Mr. Buckingham.

The W. C. T. U. will meet Friday afternoon at the Lutheran church. As this is Flower Mission Day each member is requested to bring flowers to be sent out to the sick and shut in.

Jesse W Camp, trustee of Smithfield township, Saturday awarded to George D. Weaver of Auburn, the contract for remodeling the school house in Ashley. The contract price is $5 490.

Things have changed, we are now launching into the summer days, but really you could hardly tell the difference. Monday was the first day, but now we have a right to expect some warm days, and must have them if the corn is to do much.

Family reunions are now the order of the day.

For Sale: Celery Plants. 30c-100. 24t2 Mrs. Howard Shilling.

Marshal McCann is getting scared of the dogs—one nipped him Monday knowing him to be the city marshal.

Lost: 29x4.40 U. S. Tire on rim with cover. Furnish Garage.

Wm. Keeler, J. H. Leighty, Harcourt Miser and Francis Hickman, spent Saturday afternoon and night at Hamilton lake.

Mrs. Chas. Grimm, Mrs. Wm. Smith and Mrs. Chas. Smith, of Waterloo, were Wednesday guests in the Paul Curie home.

Clark Sheffer, wife and daughter and Mr. and Mrs. Gurney of Kendallville, were Sunday afternoon guests of Dr. and Mrs. B S. Sheffer.

Bad checks are being circulated in near by counties. Don't cash a check for strangers unless identified by some one you know. Safety first.

The continued warmth following the recent rains is a matter of rejoicing. Crops are growing rapidly giving promise of a bountiful harvest.

Mr. and Mrs. Merle Dennis, Wayne Dennis and wife and Dale Burdeno and wife all of Toledo, Ohio, were Sunday guests of Wm. Staman and wife.

Victor Brown, of South Bend, who fell from pole injuring his left foot, was home the past week. He returned Wednesday to be under the care of his doctor.

Don Robert Hughes, 24, farmer of Delaware, Ohio, and Helen Renner, 23, school teacher of near Waterloo and a sister of H. J. Renner of St. Joe, were married Saturday.

Gooseberries, plums, rhubard and apples may be cooked as sauce with sugar and then canned while boiling hot. They need only five minutes processing in a water bath.

Mrs Nina Kees, attended the National Peony Show last week and report it as great. Mrs. Kees has some thirty species. Mrs. J. P. Buckingham and John Ulm and wife also attended this exhibit.

Lost—:Last week a lady's Purse containing $21.00 in paper, $10; two $5 and a $1 bill. Purse is valued as a keepsake. Also contained railroad pass and other valuables. Finder please return to Mrs. R. W. Brodbeck.

John R Leighty of Washington, was home Sunday and Monday, enroute from Chicago. John usually makes an inspection trip to his home at this time of the year to see how the apple orchard is shaping up for a crop. Great prospects for fruit are now in evidence.

Wanted—Man with car to sell complete line quality Auto Tires and Tubes. Exclusive territory. Experience not necessary. Salary $300.00 per month. Milestone Rubber Company East Liverpool, Ohio.

The Waterloo Oil and Gas company, in which a number of DeKalb county residents are stockholders, has purchased two hundred and sixty-eight acres of leases in Jay county with ten wells now producing. The company expects to start drilling within two weeks. The field is located in the same territory in which a sixty barrel a day well was drilled near Berne this week without being shot. Among the stockholders are Russell R. Ridenour of Auburn, Jay McIntosh, Louis Thibaut and Ora Crooks of Waterloo.

Pickled beets, which contain a high proportion of vinegar, are easy to can and may be processed in the water bath canner. For pickling, select young tender beets of uniform size; cook and peel them and pack in a mixture of hot vinegar and brown sugar in the containers. Process the pickled beets in the water bath for thirty minutes. Beets canned without vinegar should be processed in the steam-pressure canner at 240° F. and 40 minutes if packed in quart glass jars, or 35 minutes if in pint glass jars or No. 2 and No. 3 tin cans.
